APPARATUS FOR SUPPLYING WATER CONTINUOUSLY TO TREE STAND

Moises B. Lorenzana, 601 Lake Hinsdale Dr., Willowbrook, Ill. 60559, and Vance A. Lorenzana, 698 Spring Hill Cir., Naperville, Ill. 60540

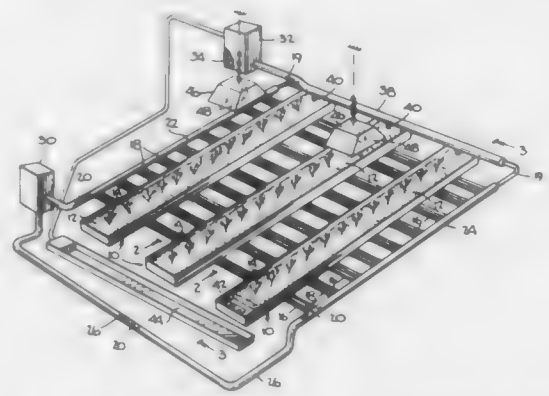
Filed Oct. 19, 1987, Ser. No. 109,860

Int. Cl.[5] A47G *33/12*; B67D *5/06*; A01K *7/00*

U.S. Cl. 47—40.5 1 Claim

1. A continuous watering apparatus for use with a tree stand which mounts a cut tree vertically with the severed trunk end immersed in water to prevent the tree from drying out comprising a reservoir having a base for supporting said reservoir on a horizontal surface adjacent said tree stand, said reservoir having walls defining an upwardly facing recess, means in said recess engaging and supporting in an upended position a water bottle, said bottle having a mouth which in said upended position is spaced above the bottom of said recess, an elongated flexible water supply tube connected to said reservoir at the bottom of said recess, said reservoir supporting the mouth of said bottle at a height equal to the desired water level in said tree stand whereby through a siphon action said reservoir will supply water continuously to said tree stand until the water is drained from said bottle, said recess having an upper portion of generally hemispherical shape and a lower portion which is generally cylindrical, terminating in said bottom of said recess, said upper and lower portions being sized to detachably receive said bottle, said bottle having a neck extending into said lower portion with the mouth of said bottle spaced above said bottom, a plurality of projections on said walls of said recess to space said bottle from said walls to permit air to enter said bottle as the water level drops below said bottle mouth in said lower portion of said recess, said projections comprise peripherally spaced ribs which extend from the top of said recess to the bottom.

5,009,029



CONDUCTIVE TEMPERATURE CONTROL SYSTEM FOR PLANT CULTIVATION

Seymour I. Wittlin, 4951 Debs Way, Oceanside, Calif. 92056

Continuation of Ser. No. 69,831, Jul. 6, 1987, abandoned. This application Mar. 10, 1989, Ser. No. 323,038

Int. Cl.[5] A01G *31/00*

U.S. Cl. 47—62 8 Claims

1. A method for growing plants which comprises the steps of:

(a) placing a plant growing medium and plants in a metal growing tray;

(b) flowing in a closed metal piping system a liquid which will absorb heat;

(c) placing said metal growing tray in metal to metal contact with said metal piping system by means of metal supports and disposed so that said metal piping system is external to and structurally supports said metal growing tray;

(d) controlling the temperature of the flowing liquid in said piping system;

(e) flowing a liquid plant nutrient solution from outside the growing tray onto the plant growing medium; and

(f) controlling the temperature of said nutrient solution from outside said growing tray and prior to flowing said nutrient solution onto said plant growing medium by placing in conductive heat exchange relationship with the nutrient solution said metal piping system containing the temperature-controlled liquid.

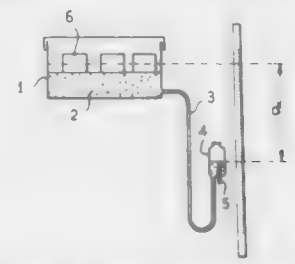
SUBSTRATE FOR SOIL-FREE CULTURE HAVING A CONTROLLED WATER CONTENT OVER ITS THICKNESS



Bernard Kafka, Rantigny, and Michel Baufume, Barbery, both of France, assignors to Isover Saint-Gobain, Aubervilliers, France

Filed Oct. 3, 1988, Ser. No. 251,831

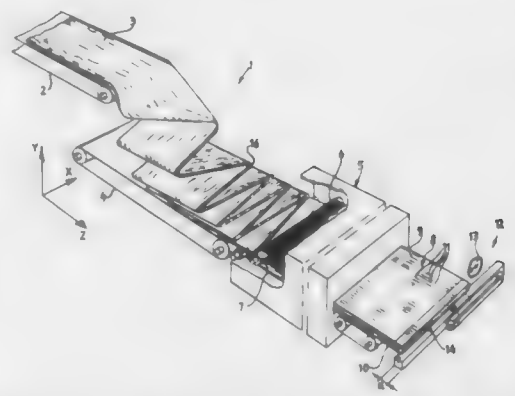
Int. Cl.[5] A01G *31/00*

U.S. Cl. 47—64 14 Claims

1. Substrate for soil-free cultivation formed from a felt of mineral fibres, suitable for the supply of water or an aqueous nutrient solution to plants, comprised of a porous, fibrous felt having opposed major first and second surfaces, said first surface being above said second surface when said felt is horizontally disposed as a substrate for soil-free cultivation, wherein said felt has a heterogeneous fibrous structure displaying a hydroretentivity gradient such that the hydroretentivity gradient decreases in the direction from said first surface to said second surface, such that said gradient is opposed to the direction of gravity when said substrate is horizontally disposed and employed as a substrate for soil-free cultivation.

5,009,031

GROW-MAT FOR CULTIVATING PLANTS AND A METHOD FOR MANUFACTURING SAME



Albert W. Knop, Herkenbosch, and Robert J. H. M. van Banning, Munstergeleen, both of Netherlands, assignors to Rockwool Lapinus B.V., Netherlands

Continuation of Ser. No. 145,615, Jan. 19, 1988, abandoned. This application Oct. 17, 1989, Ser. No. 423,620

Claims priority, application Netherlands, Jan. 27, 1987, 8700196

Int. Cl.[5] A01G *31/02*

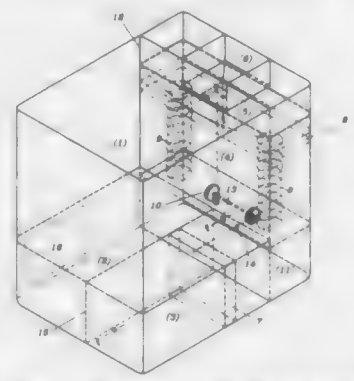
U.S. Cl. 47—64 13 Claims

1. Grow-mat for cultivating plants, comprising a layer of mineral fibres cross-linked to one another by cured binding agent and treated with hydrophilic wetting agent, characterized in that in said grow-mat the principal direction of said mineral fibres extending in said layer extends in the longest dimension of said mat and the subsidiary direction of said mineral fibres extending in said layer extends in the heightwise dimension of said mat.

5,009,032

PORTABLE AUTOMATIC WATER-RELEASING PLANT RECEPTACLE

Etheridge C. Hogue, 198 Pine Street, SW., Bessemer, Ala. 35020, assignor to Etheridge C. Hogue, Birmingham, Ala.



Filed Oct. 31, 1988, Ser. No. 264,994

Int. Cl.[5] A01G *25/00, 29/00*

U.S. Cl. 47—79 8 Claims

1. A portable automatic water-releasing plant receptacle comprising a receptacle housing integrally containing;

a liquid storage tank for holding water to be delivered to a planter portion integrally attached thereto;
an accumulation chamber having an inlet opening and a plurality of release openings and situated in the top portion of said storage tank to release water into said planter portion;
a dual chamber hydraulic system wherein a primary chamber of said hydraulic system integrally makes up the bottom portion of said storage tank and a secondary chamber is situated beside a storage compartment, separated by a common wall there-between, disposed beneath said planter portion;
a hollow base integrally supporting the bottom of said storage tank;
an elastic container attached to the inner walls of said storage tank to contain water as poured into said storage tank;
a water release apparatus contained within said accumulation chamber, and comprising a rigid float, fitted with a second buoyant flanged top-and-bottom float (embedded

with a first magnet to be attracted by a second magnet situated on the outside of said accumulation chamber) for the purpose of blocking and unblocking said release openings of said accumulation chamber as the result of a buoyant force applied to and removed from said second flanged float by said rigid float as the water level in said accumulation chamber rises and falls upon water accumulation and release;
a dual wheel-and-axle assembly and a plurality of springs contained within said primary hydraulic chamber to transfer energy between said primary and said secondary hydraulic chambers; and
hydraulic passages communicating between said primary chamber and said secondary chamber wherein said hydraulic passages comprise a first passage to allow fluid flow between said primary and secondary chambers therethrough and a second passage to allow movement of a secondary cable of said dual wheel-and-axle assembly therethrough.

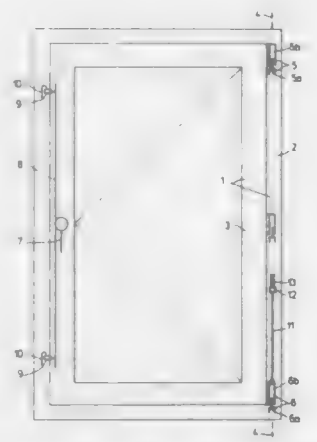
GROUND COVER SHEET

Leonard A. McCray, 20817 NE. 87 Ave., Battle Ground, Wash. 98604

Filed Nov. 16, 1987, Ser. No. 121,280
Int. Cl.[5] A01G *9/02*; **B32B** *3/10*
U.S. Cl. 47—80 **10 Claims**

1. A new and improved ground cover sheet for retaining bark dust and bark chips, comprising:
an elongated base sheet formed from a flexible plastic material;
an elongated cover sheet formed from a flexible plastic material and overlying said base sheet;
a plurality of spaced heat weld zones extending across the width of said cover sheet, securing said cover sheet to said base sheet;
a plurality of short slits in said cover sheet extending along a length of said cover sheet;
said slits arranged in rows of spaced slits across the width of said cover sheet; and



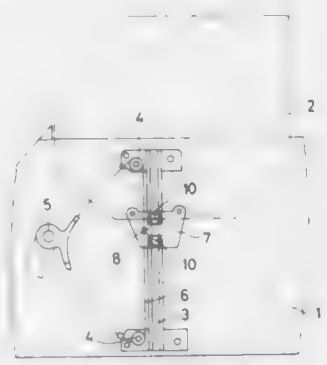
said slits forming a plurality of upwardly convex bows for engaging and retaining bark dust and bark chips.

5,009,034

CLOSURE SUPPORT

Alfred Schneider, Kreutzal; Horst Loos, and Karl H. Fischbach, both of Freudenberg, all of Fed. Rep. of Germany, assignors to Siegenia-Frank KG, Siegen, Fed. Rep. of Germany

Filed Jan. 23, 1990, Ser. No. 468,705
Claims priority, application Fed. Rep. of Germany, Jan. 24, 1989, 3901944; Mar. 23, 1989, 8903678; Jun. 22, 1989, 3920360
Int. Cl.[5] E05D *15/52*
U.S. Cl. 49—192 **11 Claims**



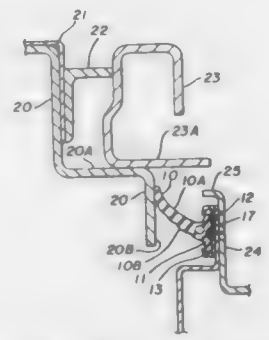
1. A window or door with a panel mounted on a fixed frame by hinge fittings near a vertical panel element, characterized by a brace engaged with the panel adjacent to the hinge fittings which comprise upper and lower corner hinges and anchored to the fixed frame against the force of gravity or direction of load of the panel wherein the window or door has a tilt panel and further characterized by the fact that the brace is located between the panel and the frame above, but near, the lower corner hinge.

5,009,035

WINDOW REGULATOR APPARATUS

Nobuyuki Kuki, Toyohashi; Yukio Isomura, Chiryu; Hirokazu Suzumura, Toyota; Yoshikazu Sakakibara, Anjo, and Hiroshi Ishihara, Kariya, all of Japan, assignors to Aisin Seiki Kabushiki Kaisha, Japan

Filed Mar. 28, 1990, Ser. No. 500,204
Claims priority, application Japan, Mar. 29, 1989, 1-35805[U]
Int. Cl.[5] E05F *11/48*
U.S. Cl. 49—352 **7 Claims**



1. A window regulator apparatus, comprising:
a guide rail having inner vertical surfaces;
a window glass;
a bracket movably supported on said guide rail and having outer vertical surfaces, said window glass attached to said bracket;
driving means for moving said bracket and thereby said window glass along said guide rail in an upward and downward direction;
resilient means positioned between said inner vertical surfaces of said guide rail and said outer vertical surfaces of said bracket; and
shoes interposed between said resilient means and guide rail for compressing said resilient means in two directions to reduce rattling of the window.

5,009,036

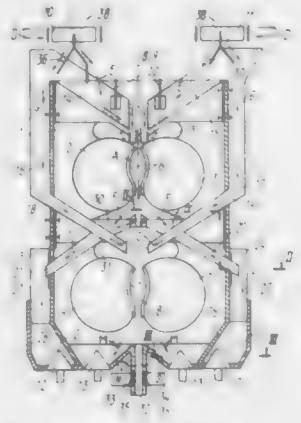
BOX CAR DOOR SEAL

Walter S. Ryan, Mercer, Pa., assignor to Pennsylvania Rail Car Company, Mercer, Pa.

Continuation-in-part of Ser. No. 410,273, Sep. 21, 1989, abandoned. This application May 11, 1990, Ser. No. 522,214
Int. Cl.[5] E06B *7/23*
U.S. Cl. 49—485 **1 Claim**

1. In the combination of a box car construction having a door frame including a vertically disposed sealing surface, a box car door having a vertical flange spaced with respect to said vertically disposed sealing surface of said box car door frame, the box car construction having a normal condition in which the door frame vertically disposed sealing surface is spaced from the box car door by a preset distance and a sprung condition in which the door frame vertically disposed sealing surface is spaced from the box car door by a distance which differs from the preset distance, and an improved sealing device for sealing the space between the vertical sealing surface of said box car door frame and said flange of said box car door, the improvement comprising: an elongated deformable resilient sealing member, a bifurcated base section of a known width on one longitudinal edge of said elongated sealing member forming oppositely disposed extending flanges on said sealing member, a continuous elongated cavity in said base section partially separating said flanges, a longitudinally extending bore in said sealing member at the point of bifurcation partially separating said flanges, means mounting said sealing member on said flange of said box car door with said elongated deformable resilient sealing member in engagement with said vertical sealing surface of said door frame, said sealing member extending outwardly and upwardly from said bore in a shallow curve and having a convex surface which contacts said vertically disposed sealing surface and forms a fluid tight seal, a substantial portion of said sealing member convex surface engaging said vertical sealing surface of said door frame when said box car construction is in the normal condition, said sealing member having a concave surface which defines a trough for directing liquid away from said vertical flange of said door frame, said longitudinally extending bore being sized so that there is only enough material in said deformable resilient sealing member and base surrounding said bore to provide the sealing member with sufficient flexibility to maintain enough of the convex surface in contact with the vertical sealing surface to maintain said fluid tight seal with the vertically disposed flange when the box car construction is in the sprung condition as well as maintaining said convex surface in flush contact with the vertically disposed surface when the box car construction is in the normal condition.

5,009,037



APPARATUS FOR DESCALING THE SURFACE OF A STRIP

Jury V. Lipukhin, ploschad Metallurgov, 5, kv. 15; Leonid I. Danilov, ulitsa Vereschagin, 51, kv. 8; Albert N. Ivoditov, ploschad Metallurgov, 5, kv. 13; Eduard A. Garber, ulitsa M. Gorkogo, 85, kv. 17; Anatoly N. Subbotin, prospekt Pobedy, 120, kv. 14; Valentin P. Pavlov, prospekt Pobedy, 57, kv. 30, all of Vologodskaya oblast, Cherepovets; Jury K. Zhukov, Serpukhovskoi val, 13, kv. 29, and Alexandr F. Pimenov, ulitsa Planernaya, 12, korpus 1, kv. 400, both of Moscow, all of U.S.S.R.

PCT No. PCT/SU88/00092, § 371 Date Dec. 21, 1988, § 102(e) Date Dec. 21, 1988, PCT Pub. No. WO88/08341, PCT Pub. Date Nov. 3, 1988
PCT Filed Apr. 20, 1988, Ser. No. 294,510
Claims priority, application U.S.S.R., Apr. 21, 1987, 4225033; Dec. 21, 1987, 4340096
Int. Cl.[5] B24B *19/00*
U.S. Cl. 51—7 **6 Claims**

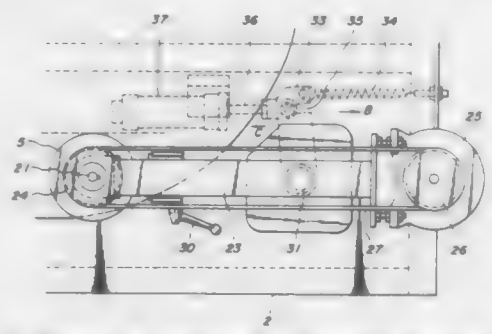
1. An apparatus for descaling the surface of a strip comprising a chamber to be filled with an abrasive powder accomodating at least first and second pairs of mechanisms for compacting the powder arranged one above the other, working members of said first and second pairs of mechanisms for compacting facing a plane along which the strip is conveyed to define work spaces between the working members and the plane of the strip, means for charging the abrasive powder from above to the chamber, and first and second gates for discharging the powder from the chamber provided at the bottom portion thereof, characterized in that said apparatus for descaling includes first and second systems of conduits for separately delivering the abrasive powder from the charging means to the work spaces between the working members of the powder

compacting mechanisms and said plane of the strip, and a third system of conduits for separately evacuating the powder from

said work spaces to the first and second gates for discharging the powder from the chamber.

5,009,038

AUTOMATIC CHAMFERING MACHINE



Akira Yoshikawa, Nagoya, and Setsuo Torikai, Konan, both of Japan, assignors to NKG Insulators, Ltd., Nagoya, Japan

Continuation of Ser. No. 318,420, Feb. 28, 1989, abandoned, which is a continuation of Ser. No. 88,519, Aug. 20, 1987, abandoned, which is a continuation of Ser. No. 837,262, Mar. 7, 1986, abandoned. This application Jul. 16, 1990, Ser. No. 552,836

Claims priority, application Japan, Mar. 20, 1985, 60-54169

Int. Cl.[5] **B24B** *9/00*

U.S. Cl. 51—126 **2 Claims**

1. A machine for chamfering workpieces which have a thinwalled ceramic honeycomb structural body with at least one end surface to be chamfered, comprising:

a machine frame;

a turntable supported by said machine frame so as to be rotatable about a vertical axis and having a horizontal upper surface which supports the workpieces in which a plurality of openings are provided, said turntable being driven intermittently to successively feed the workpieces to a predetermined position;

a clamping device connected to said machine frame and including a pair of vertically opposed discs for clamping each of the workpieces when at the predetermined position, such that there is a substantial radial overhang of each of the workpieces with respect to the discs, vertically deplacing each of the workpieces from said upper surface through the openings, and rotating each of the workpieces in one direction about an axis of rotation of each of the workpieces which extends substantially at a right angle to the end surface of each of the workpieces;

a grinder wheel for chamfering the end surface of each of the workpieces, said grinder wheel being detachably mounted on one end of a rotational shaft which is parallel to said axis of rotation and movable in a direction substantially perpendicular to said axis of rotation;

a tracer element for tracing the outer peripheral contour of each of the workpieces, said tracer element being smaller in radius than said grinder wheel and arranged coaxially therewith during chamfering so as to be movable in a direction substantially perpendicular to said axis of rotation, said tracer element being mounted on a bracket which is movable between an operative position in which said tracer element is located close to, and coaxially with, said grinder wheel and an inoperative position in which said tracer element is located remote from said grinder wheel permitting replacement of at least one of said grinder wheel and said tracer element;

biasing means including a lever loaded by a spring and a fluid cylinder device having a plunger which is connected to said lever, wherein said fluid cylinder moves said lever between an operative position, in which said lever is disengaged from said plunger to permit said spring to resiliently urge said grinder wheel and said tracer element toward each of the workpieces, and an inoperative position, in which said lever is engaged by said plunger to move said grinder wheel and said tracer element away from each of the workpieces, and

abutment means for limiting an amount by which said spring resiliently urges said grinder wheel and said tracer element toward each of the workpieces, said abutment means having a slit formed therein in which an end of said plunger is movably engaged, said slit having a least one closed end for preventing said lever from rotating beyond a position in which the end of said plunger abuts against the closed end of said slit;

wherein said grinder wheel and said tracer element are operatively associated with each other such that said tracer element, while tracing the outer peripheral contour of each of the workpieces, controls the movement of said grinder wheel toward and away from said axis of rotation of effect an autoprofiling chamfering of the end surface of each of the workpieces.

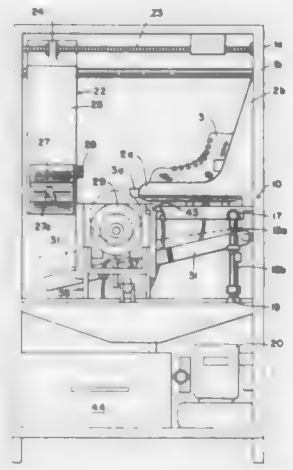
SKATE SHARPENING DEVICE

Kjell Lager, Österbybruk; Anders Tärnström, Storvreta; Olov Östlund, Uppsala, all of Sweden, and Joseph W. Driver, Hudson Heights, Canada, assignors to Svenska Skatebox AB, Uppsala, Sweden

PCT No. PCT/SE88/00379, § 371 Date Mar. 16, 1990, § 102(e) Date Mar. 16, 1990, PCT Pub. No. WO89/00443, PCT Pub. Date Jan. 26, 1989

PCT Filed Jul. 14, 1988, Ser. No. 458,624

Claims priority, application Sweden, Jul. 17, 1987, 8702909



Int. Cl.[5] **B24B** *49/12, 3/00, 19/00*

U.S. Cl. 51—165.77 **10 Claims**

1. A skate sharpening device comprising an automatic skate sharpening mechanism located inside a protective cover, including a skate loading device (2), which is pivotally mounted in an opening (9) in said protective cover (1), so that it can be pivoted between a skate loading position outside said protective cover (1) and a starting position for sharpening inside said protective cover (1), said skate loading device comprising:

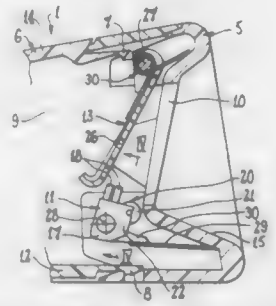
(a) gripping means (12, 15) for releasably gripping at least one skate (3) to be sharpened,

(b) first obturation means (11*a*) which substantially close said opening (9) in said skate loading position (FIG. 5), and

(c) second obturation means (11*b*) which substantially close said opening (9) in said starting position for sharpening (FIG. 6).

5,009,040

BLADE SHARPENER



Cvetan Petroff, Kew, Australia, assignor to McPherson's Limited, Australia

Filed Aug. 17, 1990, Ser. No. 569,084

Claims priority, application Australia, Aug. 28, 1989, PJ6017; Feb. 1, 1990, PJ8419

Int. Cl.[5] **B24B** *33/00*

U.S. Cl. 51—214 **18 Claims**

1. A blade sharpener including, a sharpening mechanism which is operable to sharpen the cutting edge of a blade engaging that mechanism and being moved longitudinally relative thereto,

sharpening defeating means connected to a support for movement relative thereto between an operative condition and an inoperative condition,

said defeating means being arranged to adopt said operative condition in response to longitudinal movement of said blade through the sharpener in one direction, said defeating means being operative to apply a force against said blade acting counter to a force causing said blade to engage said mechanism when said defeating means is in said operative condition,

and said defeating means being arranged to adopt said inoperative condition in response to said longitudinal movement of the blade in a direction opposite to said one direction, said defeating means not being operative to apply said counter force to said blade when said defeating means is in said inoperative condition.

WEIGHTED MEMBRANE STRUCTURES

Anderson B. Fly, Amarillo, Tex., assignor to Fly Enterprises, Inc., Amarillo, Tex.

Filed Aug. 3, 1982, Ser. No. 404,879

Int. Cl.[5] **E04G** *11/04;* **E02D** *29/00*

U.S. Cl. 52—2.19 **6 Claims**

1. A membrane covered permanent structure built on ground having

a. a peripheral wall connected to

b. a foundation on the ground,

c. a flexible membrane having a periphery connected to the wall,

d. the foundation having floor area below the membrane and within said peripheral wall,

e. said membrane being supported at an approximate desired membrane height above the floor area by fluid exerting internal fluid pressure under the membrane greater than fluid exerting external fluid pressure above the membrane,

wherein the improved structure comprises in combination with the above:

f. at least one weight connected to the membrane within the periphery,

g. said internal fluid pressure also supporting said weight by the intervening support of the membrane,

h. said weight depressing the membrane such that a radius of curvature of the membrane between the periphery and weight is less than the radius of curvature of a fully inflated condition,

i. whereby the membrane and weights move up and down from the approximate desired membrane height solely responsive to the changing fluid pressures above and below the membrane,

j. said membrane having restraining connection to the peripheral wall only.

5,009,042

MODULAR DISPLAY SYSTEM

Bruno Sacco; Johann Tomforde, both of Sindelfingen; Thomas Abb, Klingenberg, and Bruno Stenemann, Beckum, all of Fed. Rep. of Germany, assignors to Daimler-Benz AG

Continuation of Ser. No. 241,267, Sep. 7, 1988, abandoned. This application Nov. 30, 1989, Ser. No. 443,040

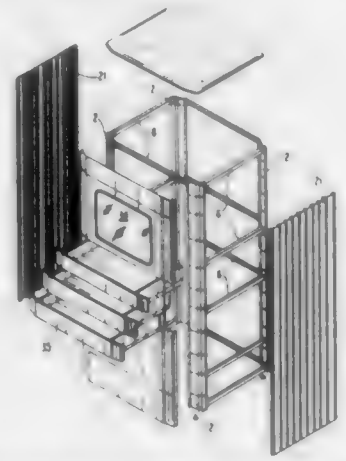
Claims priority, application Fed. Rep. of Germany, Sep. 7, 1987, 3729903

Int. Cl.[5] **E04B** *2/00;* **E04H** *1/00*

U.S. Cl. 52—36 **3 Claims**

1. A modular display comprising:

a wall element having vertical interior profiles arranged at lateral corner regions of the wall element and a horizontal elongated, profile extending between the vertical profiles;



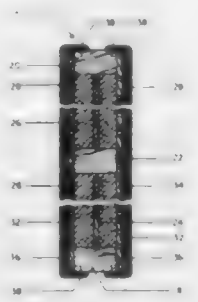
a first contact surface of each of the vertical profiles for contacting the horizontal profile, the first contact surface extending at a right angle to a longitudinal axis of the horizontal profile;

a second contact surface of each of the vertical profiles for contacting one of an additional horizontal profile and a mirror inverted vertical profile for forming a free standing wall, the second contact surface extending parallel to the longitudinal axis of the horizontal profile;

a housing channel of the vertical profiles facing outwardly

from the wall element and extending in a longitudinal direction of the vertical profiles; and

a rigid covering for attaching to the horizontal and vertical profiles to form an exterior of the wall element, wherein the rigid covering is formed by segments arranged superposed at a mutual interval, and wherein stirrups, which



are respectively attachable to a mid-region of each of the vertical profiles positioned between the first and second contact surfaces of each of the verucal profiles, pass through a gap present between the segments and are slidable on shelves attached to the wall element which each have at least one interior guide channel for this purpose.

5,009,043

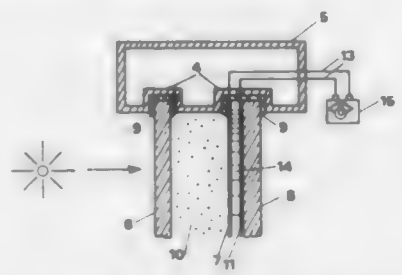
ACOUSTIC PANEL

Andrew J. Kurrasch, Saugatuck, Mich., assignor to Herman Miller, Inc., Zeeland, Mich.

Filed Jul. 12, 1990, Ser. No. 551,916
Int. Cl.[5] E04B *1/82, 1/84*
U.S. Cl. 52—145 22 Claims

1. In an acoustic wall panel comprising a peripheral frame having opposed sides and defining an opening, a septum mounted in said opening to restrict sound transmission therethrough, an inner sound-absorbing filling received within said opening, a rigid perforated facing secured to each side of said peripheral frame to permit sound to pass therethrough and to rigidify said frame, and an outer decorative fascia secured to said frame,

the improvement which comprises:



a sound-transmitting spacer layer overlying each facing and a thin gas impervious foil layer overlying said sound-transmitting spacer layer layer to provide fire retardancy to said panel.

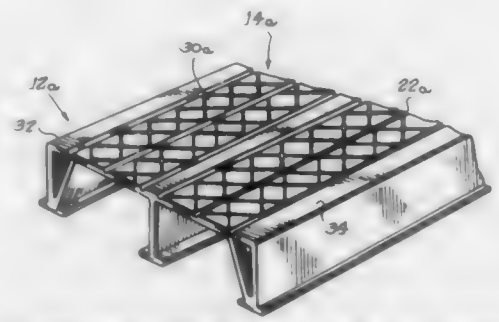
5,009,044

DUAL-PANE THERMAL WINDOW WITH LIQUID CRYSTAL SHADE

Ray H. Baughman, Morris Plains; Ernest D. Buff, Far Hills; Helmut Eckhardt, Madison, and Gerhard H. Fuchs, Far Hills, all of N.J., assignors to Allied-Signal Inc., Morris Township, Morris County, N.J.

Division of Ser. No. 425,263, Oct. 23, 1989, Pat. No. 4,964,251, which is a division of Ser. No. 398,599, Aug. 25, 1989, Pat. No. 4,899,503, which is a division of Ser. No. 350,808, May 12, 1989, Pat. No. 4,893,902, which is a division of Ser. No. 66,299, Jun. 25, 1987, Pat. No. 4,848,875. This application Apr. 26, 1990, Ser. No. 515,034
Int. Cl.[5] E04C *2/54;* G02F *1/133*
U.S. Cl. 52—171 1 Claim

1. A thermal-pane window unit resistant to radiative heat transfer as well as conductive heat transfer, comprising:



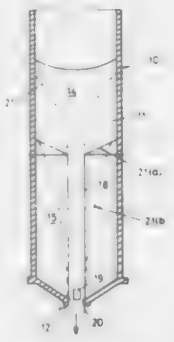
two substantially parallel, spaced window panes, mounted in a window frame, a first of said panes being composed of plastic, being adaptive to be electrically conductive and including, as a microdispersion within said plastic, an electro-optical liquid crystal material providing a selected light transmittance, and a second of said panes delimiting, said first of said panes, a space providing a thermal break.

5,009,045

PLANK STRUCTURE FOR BOAT DOCK AND THE LIKE

Dennis G. Yoder, Nappanee, Ind., assignor to CTB, Inc., Milford, Ind.

Filed Oct. 6, 1989, Ser. No. 417,827
Int. Cl.[5] E04F *11/16*
U.S. Cl. 52—177 13 Claims



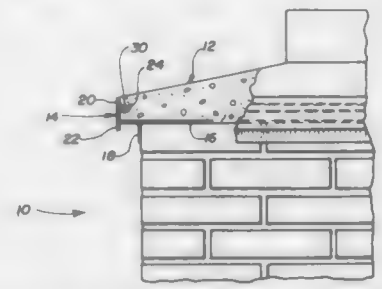
1. A plastic plank member for a deck or the like integrally formed of a plastic material having a coefficient of friction less than approximately 0.5, said plank member comprising: a top portion formed of a first material and tread means formed of a second material integral with said top portion, said tread means having a coefficient of friction generally greater than 0.5, fluid drainage means for draining fluid from said tread means and from said top portion of said plank.

5,009,046

REDUCING HOOP STRESS IN SILOS

Bruce L. Johinke, Kent Town, Australia, assignor to South Australian Co-Operative Bulk Handling Limited, Adelaide, Australia

Filed Apr. 23, 1985, Ser. No. 726,030
The portion of the term of this patent subsequent to Dec. 13, 2005, has been disclaimed.
Int. Cl.[5] B65G *63/34*
U.S. Cl. 52—197 9 Claims



1. Means for reducing hoop stress in a silo of the type having cylindrical walls upstanding from a base and defining therewith a cell, comprising a grain tube located centrally within the silo and having a tube wall upstanding from the silo base and extending part way up the silo cell, the grain tube having an open upper end and an open lower end, apertures through the wall of the tube near said lower end and symmetrical about the central vertical axis of the tube, a restrictor beneath the apertures for restricting flow of grain through the tube, a gate valve at the lower end of the tube vertically below the restrictor, and support means supporting the upper end of the tube from said cylindrical silo walls.

5,009,047

CHIMNEY CROWN MOLD

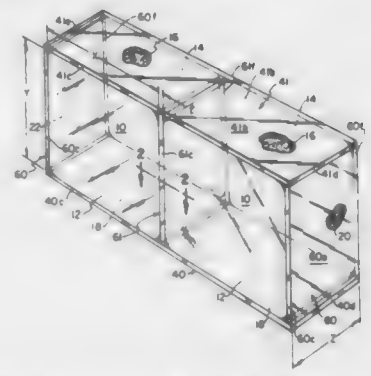
Michael Olding, 4 Gilmore Ct., Fairfield, Ohio 45014

Continuation of Ser. No. 277,880, Nov. 30, 1988, abandoned.
This application May 14, 1990, Ser. No. 523,014
Int. Cl.[5] E04H *12/28;* F23L *17/12*
U.S. Cl. 52—218 7 Claims

1. A chimney crown mold for use in combination with a chimney which includes a chimney shell and a chimney crown disposed on top of said chimney shell, said chimney crown mold being adapted for installation between said chimney shell and said chimney crown so that said chimney crown overhangs said chimney shell, and wherein said chimney crown mold deflects water which infiltrates said chimney crown away from said chimney shell thus reducing or helping alleviate water infiltration into said chimney shell, said chimney crown mold comprising:

a base which contacts and covers a top surface of said chimney shell, and a band extending downwardly substantially perpendicular to said base for contacting an outer side surface of said chimney shell, said base having an inner end and an outer end, said band being located between said inner and outer ends but closer to said outer end than to said inner end;

an upper leg extending upwardly from said base adjacent the outer end thereof without forming any notches, grooves or recesses between said upper leg and said base, said upper leg cooperating with said base to contain said chimney crown; and



a lower leg extending downwardly from said base adjacent the outer end thereof to prevent water that runs off said chimney crown from dipping underneath said chimney crown mold.

5,009,048

GLASS BLOCK WALLS USING ACRYLIC OR GLASS FILTERS

Stanley Paul, Long Island City, N.Y., assignor to Acrymet Industries Inc., Long Island City, N.Y.

Filed Aug. 15, 1989, Ser. No. 394,353
Int. Cl.[5] E04G *21/18*
U.S. Cl. 52—308 7 Claims

1. An array of translucent blocks, comprising:

a plurality of translucent blocks arranged in horizontal rows and vertical columns;

horizontal and vertical transparent plastic filler pieces between adjacent blocks, said plastic filler pieces extending at least across the entire length or height of the adjacent blocks, the width of said filler pieces being substantially equal to the width of said translucent blocks, each said plastic filler piece including at least one edge that is visible as part of said array, the edges of said plastic filler pieces that are visible being sufficiently smooth so as to be transparent, whereby the material between said blocks that is visible appears to be transparent; and

adhesive means for securing each filler piece to the contiguous surfaces of adjacent one of said translucent blocks.

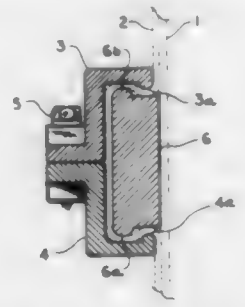
Patent Not Issued For This Number

5,009,050



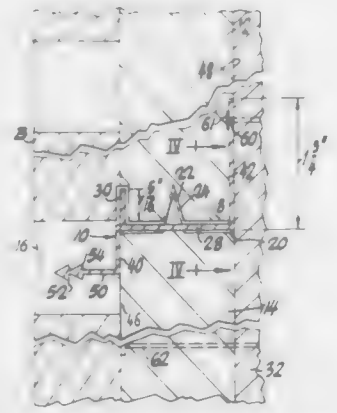
ROOFING CLAMP

Milan A. Gruber, Monaca, Pa., assignor to Ed. Shook, Jr., Pittsburgh, Pa.

Filed May 15, 1990, Ser. No. 511,753
Int. Cl.[5] E04D *5/14*
U.S. Cl. 52—408 3 Claims

1. In combination with an impervious flexible roofing sheet, a clamp for clamping said sheet to a roof in a rain-tight manner, comprising a pair of Z-like clamp halves, each having three legs att right angles to each other, one of the ends of each leg having an inward extending, substantially semicircular projection, a rectangular block attached to the roof and having a pair of outward extending, substantially semi-circular projections outwardly of said roof, machine screws for detachably fastening the other of said three legs in abutting relationship and in spaced surrounding relationship to said rectangular block

sufficiently to accommodate a portion of said flexible roofing sheet in surrounding relationship to the exposed surface of said rectangular block so that each of said block form an S-like path to said portion of said roof sheet, the spacing between the outer



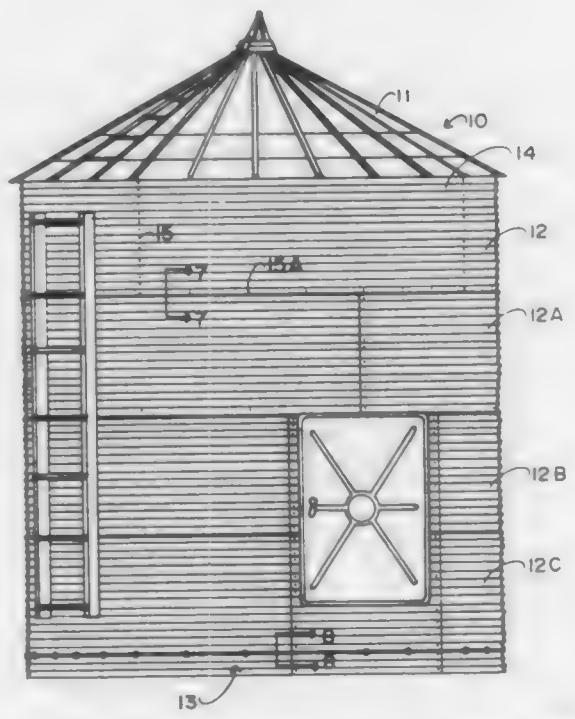
surface of said block and the inner surface of said clamp halves being substantially that of the thickness of said flexible roofing sheet throughout the entire inner surface of said clamp halves and the entire outer surface of said rectangular block.

5,009,051

CLIP CONSTRUCTION FOR ALIGNING SIDING SECTIONS

Ronald F. Trezza, P.O. Box 764, Melville, N.Y. 11747

Filed Oct. 20, 1989, Ser. No. 424,677
Int. Cl.[5] **E04B** *1/41*; **E04C** *5/18*
U.S. Cl. 52—410 **29 Claims**



1. A wall construction comprising a wall, siding sections on said wall and in coplanar end-to-end relationship and including abutting ends with nesting tongue and groove means to resist relative transverse movement between said sections, said siding sections having inner and outer faces, said tongue defining a passage extending transversely thereacross, a clip including a central portion between said sections and extending through said passage in said tongue, said clip including first and second further portions extending in opposite directions from said central portion along opposite sides of respective of the siding sections, protruding means extending outwardly from the first further portion, a suitable material adjacent the siding sections and in which said protruding means is embedded, and hold-back and alignment means extending from said central portion in opposite direction from said first further portion of the clip for holding one of the siding sections against the wall, said holdback and alignment means engaging the outer face of said one siding section.

5,009,052

METHOD AND APPARATUS FOR CONSTRUCTION OF GRAIN BINS

Herbert T. Welch, Calgary, Canada, assignor to John P. Welch, Alberta, Canada

Filed Aug. 15, 1989, Ser. No. 394,121
Int. Cl.[5] **E04B** *1/00*
U.S. Cl. 52—742 **18 Claims**

1. A method of constructing grain bins comprising the steps of:

(a) securing together a plurality of base wall segments to form a circular base wall section on the ground, said base wall section having an out-turned horizontal annular flange around the upper edge thereof;

(b) engaging a centre pin with the ground and extending upwardly perpendicularly therefrom within the confines of said circular base wall section,

(c) engaging a plurality of said ground engaging pins perpendicularly through pin retaining and supporting brackets extending inwardly from said segments with the upper ends of said pins extending above said brackets but not penetrating the ground surface, said pins being situated substantially equidistantly around said base wall,

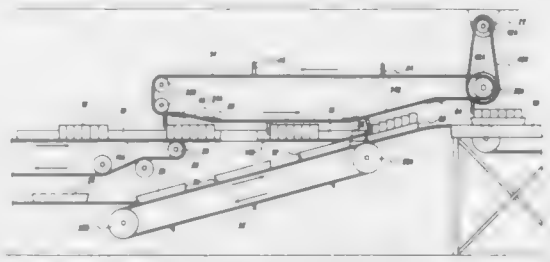
(d) extending a radius member between said centre pin and, successively, several of said pins extending perpendicularly through said brackets and then adjusting the position of said base wall section until it is substantially circular and the circumference is substantially equidistantly situated from said centre pin,

(e) engaging said pins in said brackets, with the ground to anchor said base wall section in position,

(f) horizontally levelling said out-turned flange of said base wall section by adjusting said base wall section vertically relative to each of said pins,

(g) securing said base wall section to said pins in said level,

(h) pouring gravel and then concrete into said base wall section and levelling the upper surface of the concrete by screeding same substantially level with said out-turned flange and,



(i) then erecting the grain bin upon said base wall.

5,009,053

STORAGE AND TRANSPORT TRAY AND TRAY PACKING SYSTEM

Keith A. Langenbeck, 4005 University Blvd., Dallas, Tex. 75205, and Jesse P. Kensinger, Richardson, Tex., assignors to Keith A. Langenbeck, Dallas, Tex.

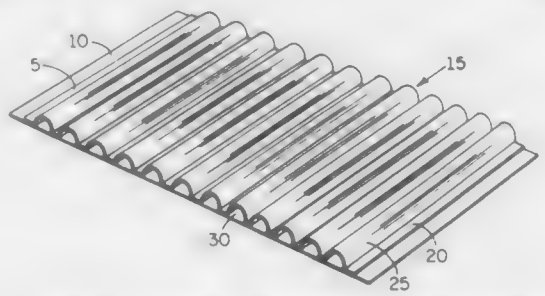
PCT No. PCT/US88/00290, § 371 Date Sep. 26, 1989, § 102(e) Date Sep. 26, 1989, PCT Pub. No. WO88/07478, PCT Pub. Date Oct. 6, 1988
PCT Filed Jan. 29, 1988, Ser. No. 435,540
Int. Cl.[5] **B65D** *6/34, 8/06*; **B65B** *5/10, 39/00*
U.S. Cl. 53—58 **57 Claims**

29. A system for pac king containers into corresponding trays, comprising:

first conveyor means for transporting said containers along a first track;

means for dividing said containers into selected groups, the number of containers in each group corresponding to the number of containers to be packed into each tray;

second conveyor means for transporting said trays along a second track, a portion of said second track being inclined with respect to said first track so that the first and second tracks converge at a predetermined location; and



a support member disposed adjacent to said predetermined location for journally supporting said containers as said containers are being packed into the corresponding tray, said support member being reciprocally moveable along an upstream-downstream axis between a first position at which said support member is substantially fully extended for introducing a corresponding group of containers into the corresponding tray and a second position at which said support member is substantially fully retracted for allowing the trailing edge of the corresponding tray to clear said support member as said tray is moved along the inclined portion of the second track after all of the containers in the corresponding group have been packed into the tray.

5,009,054

METHOD OF STORING THREAD IN AN EMBROIDERY THREAD-HOLDER

Roena B. Jons, Kerrville, Tex., assignor to Anthony E. Braun, Kerrville, Tex., a part interest

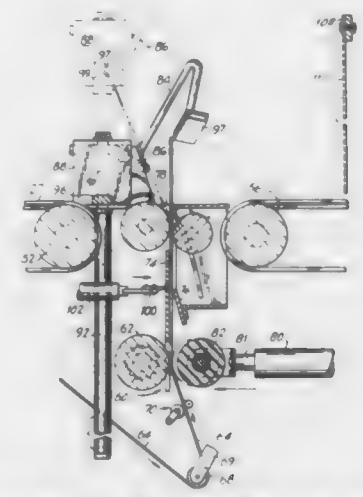
Filed Sep. 8, 1989, Ser. No. 405,149
Int. Cl.[5] **B65B** *27/06, 27/12, 67/00, 15/04*
U.S. Cl. 53—397 **3 Claims**

1. A method for storage and retrieval of thread for an embroidery thread-holder, which comprises:

placing an elongated tool at a distal end of a cylindrical compartment of said embroidery thread holder;

protruding a hook of said elongated tool through said cylindrical compartment and from a proximate end of said cylindrical compartment;

attaching a coiled bundle of thread to said hook at said proximate end of said cylindrical compartment; and



retracing said coiled bundle of thread to said hook at said proximate end of said cylindrical compartment such that semi-circular tips of said bundle of thread remain protruding from said proximate end and said distal end of said cylindrical compartment; cutting said semi-circular tips of said bundles of thread protruding from said proximate and distal ends of said cylindrical compartments to allow retrieval of said thread in lengths used for embroidery.

5,009,055

APPARATUS AND METHOD FOR WRAPPING BUNDLES OF NEWSPAPERS OR THE LIKE

Chris B. Simmons, 352 Meadow Rd., Kings Park, N.Y. 11754

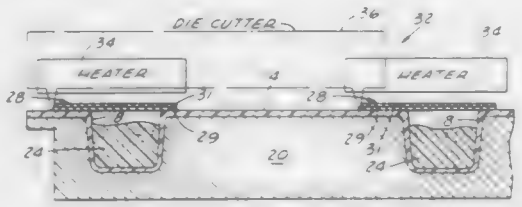
Filed Apr. 11, 1990, Ser. No. 508,064
Int. Cl.[5] **B65B** *11/08*
U.S. Cl. 53—397 **27 Claims**

24. A method for wrapping at least three adjacent surface portions of a bundle of papers such as newspapers or the like prior to tying the bundle, which comprises:

(a) conveying the bundle in a predetermined direction toward tying means;

(b) dispensing wrapping material from a location below and in a direction generally transverse to the path of the bundle at a predetermined dispensing rate;

(c) gripping said material at an upper marginal position and guiding said wrapping material upwardly int to path of the bundle at substantially the same rate as said predetermined dispensing rate so as to permit the bundle to thereby become wrapped with said material over at least two adjacent surfaces; and



(d) controlling the speed of said wrapping material dispensing means and the conveying speed of the bundle so as to be comparable and respectively sequenced to permit predetermined surface portions of the bundle to become overwrapped with predetermined surface portions of overwrap material prior to tying the bundle.

5,009,056

METHOD FOR PREPARING FINGER MOUNTABLE DISPENSING CUPS

Don D. Porteous, 2794 Moraga Dr., Los Angeles, Calif. 90024

Continuation-in-part of Ser. No. 278,570, Dec. 1, 1988, abandoned, which is a continuation-in-part of Ser. No. 140,303, Dec. 31, 1987, Pat. No. 4,844,308, which is a continuation-in-part of Ser. No. 4,543, Jan. 16, 1987, Pat. No. 4,717,057. This application Dec. 27, 1989, Ser. No. 457,889
The portion of the term of this patent subsequent to Jul. 4, 2006, has been disclaimed.
Int. Cl.[5] B65B *47/02, 61/14, 61/18*
U.S. Cl. 53—412 **8 Claims**

1 A method for preparing a substantially fluid impervious, sealed, dental paste dispensing cup having an integrated finger mount, which comprises:

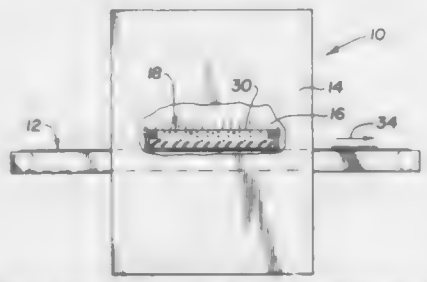
forming a portion of a substantially fluid impervious, yieldable, plastic sheet into a cup having an open end and a closed end;

adding dispensable, dental paste material to said cup through said open end,

placing a sealable closure over the open end of said cup and marginally beyond the periphery of said open end to provide an overlap area that includes a pre-determined, outwardly disposed, lateral rim section;

sealing said closure to the lateral rim section of said plastic sheet;

excising said lateral rim section, with its subtending cup, from said plastic sheet in a configuration that includes an elongated handle portion extending outwardly from the periphery of said rim; and



shaping said elongated handle portion into the form of an elastically yieldable finger mount to provide a slide-resistant grip on a support finger.

5,009,057

METHOD AND APPARATUS FOR SHRINK WRAPPING

Frank G. Wilkinson, 2276 Larson La., Dallas, Tex. 75229

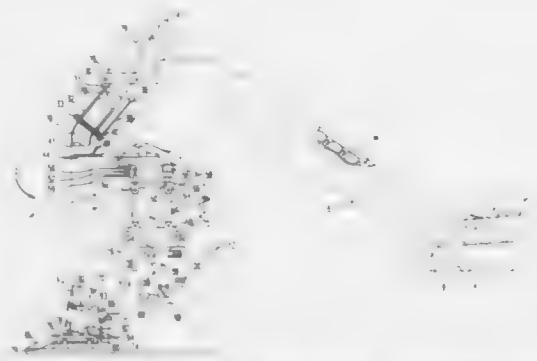
Filed Nov. 2, 1987, Ser. No. 116,001
Int. Cl.[5] B65B *53/06*
U.S. Cl. 53—439 **12 Claims**

1. A shrink package system for shrink wrapping an article with shrink film, comprising in combination:

conveyer means for conveying the article covered by the shrink film;

means for blowing hot air on the shrink film while the article and shrink film are on the conveyer means;

a plurality of rollers; and



means for supporting the plurality of rollers above the conveyer means wherein the article travels beneath the plurality of rollers as it is conveyed and wherein the covered article is in contact with at least one of the rollers during a substantial portion of the time in which it is subjected to the means for blowing hot air.

5,009,058

AUTOMATIC BALING MACHINE

Lawrence Ptaschek, Roanoke; James Bowman, Salem, and H. William Ferguson, Jr., Buchanan, all of Va., assignors to NSW Corporation, Inc., Roanoke, Va.

Filed Jan. 29, 1990, Ser. No. 471,459
Int. Cl.[5] B65B *9/16, 39/06*
U.S. Cl. 53—469 **36 Claims**

24. A method for automatically baling a plurality of items into a bale formed from a tube of flexible material utilizing a device having conduit means for conducting said plurality of items from an inlet at one end of said conduit means to an outlet at the other end, said tube being coaxially mountable on an outer surface of said conduit means, dispenser control means having a locked and an unlocked position for selectively dispensing a length of said tube when in the unlocked position, and base means for holding said conduit means, comprises the steps of:

A. coaxially mounting said tube about the outer surface of said conduit means,

B. dispensing a selected length of said tube under the control of said dispenser control means such that a free end of said tube extends beyond said outlet end of said conduit means;

C. sealing said free end to form a sock-like item receptacle;

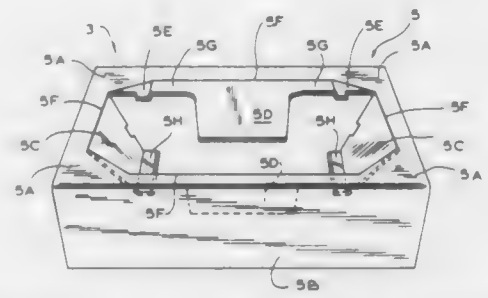
D. depositing a selected number of said items in said inlet;

E. capturing said items passing through said conduit means and out said outlet within said sock-like receptacle;

F. additionally sealing said tube at a position along the length of said tube proximate to said captured items and distal to said sealed free end to form said bale; and

G. cutting said tube immediately above said additional seal to free said bale from the remainder of said tube.

5,009,059



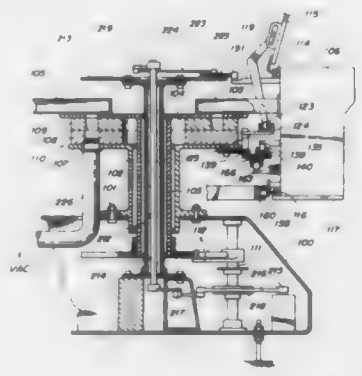
METHOD AND APPARATUS FOR PROTECTING THE FINISHED SURFACES OF SANITARY FIXTURES

Michael J. Cocciadiferro, West New York, and Robert J. De Serio, Bloomfield, both of N.J., assignors to American Standard Inc., New York, N.Y.

Division of Ser. No. 329,722, Mar. 14, 1989, Pat. No. 4,970,733.
This application Aug. 22, 1990, Ser. No. 570,747
Int. Cl.[5] B65B *11/00, 23/00*
U.S. Cl. 53—472 **3 Claims**

1. A method of protecting the finished surfaces of a sanitary fixture against damage, said sanitary fixture having a deck portion, an apron portion and a sump portion, said method comprising the sequence of steps:

(a) prior to delivering said sanitary fixture to an installation site, installing a first removable protective covering having planar deck and apron portions flexibly connected together over said deck portion and said apron portion of said finished surfaces of said sanitary fixture, said planar deck portion having a sump-defining opening formed therein surrounded by said deck, installing a second removably protective covering having a plurality of planar sump surface-covering portions flexibly connected together through said sump-defining opening and over said sump portion of said finished surfaces, said first and second protective coverings having a geometry which generally conforms to the surface geometry of said finished surface of said sanitary fixture, and having a construction sufficient to provide cushioning against and absorb impact of objects coming into mediated contact with a portion of said finished surface; and



(b) delivering said sanitary fixture and said installed first and second protective coverings to an installation site at which said sanitary fixture is to be installed so that said sanitary fixture can be installed at said installation site with said installed first and second protective coverings protecting said finished surfaces of said sanitary fixture against damage sustainable during installation and construction at said installation site, and thereafter said first and second protective coverings can be removed from said sanitary fixture so as to provide said finished surfaces of said sanitary fixture undamaged after installation and construction at said installation site.

VACUUM PACKAGING APPARATUS

Takao Furukawa, Onomichi, Japan, assignor to ECS Corporation and Furukawa Mfg., Co., Ltd., both of, Japan

Filed Aug. 7, 1989, Ser. No. 390,416
Claims priority, application Japan, Mar. 31, 1989, 1-83096
Int. Cl.[5] B65B *31/02, 43/30*
U.S. Cl. 53—512 **13 Claims**

1. An apparatus for vacuum packaging objects into bags, comprising:

chambers rotatable along a circular endless track and into which said bags are to be supplied through an opening,

drive means disposed in the inside of the circular endless track,

a pair of support means disposed in each of said chambers and relatively movable toward and away from each other and which have opposed faces large enough to grasp therebetween a substantial part of one of the bags as the bag is supplied into the chamber,

means for mechanically engaging the support means to each other and relatively moving said support means toward and away from each other by means of the power delivered from the drive means,

a plurality of suction holes formed on said opposed faces of said pair of support means,

suction means for causing a vacuum force or suction to be applied through said suction holes in order to suck opposite sides of the bag when the support means are relatively moved toward each other and open the mouth of the bag when the support means sucking the bag are separated from each other,

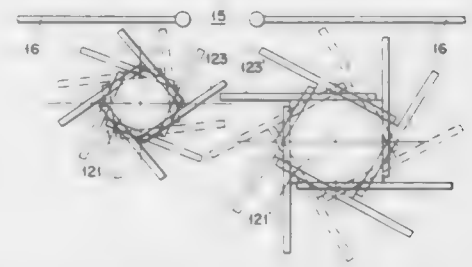
means for loading the to-be-packaged object into the bag when the mouth thereof is opened,

means for closing said opening of said chamber when the bag is filled with said object,

means for vacuumizing the chamber when closed,

means for heat sealing the mouth of the bag under vacuum,

a bottom opening of the chamber and a bottom plate operable to open and close said bottom opening, and



means for discharging a vacuum packaged product through the bottom opening from the chamber after the mouth of the bag has been heat sealed.

5,009,061

PROCESS AND APPARATUS FOR HARVESTING OF CROPS FROM STALKS AND CHOPPING THE STALKS

Ulrich S. Heuling, Tillmannstrasse 5, D-4410 Warendorf, Fed. Rep. of Germany

Filed Nov. 20, 1989, Ser. No. 438,042
Int. Cl.[5] A01D *45/02*
U.S. Cl. 56—104 **23 Claims**

1. In a process for harvesting crop clusters of tall plant stalks, wherein said stalks are introduced into a longitudinally extending intake path and are pulled through a gathering gap disposed in said intake path to strip said crop clusters from said stalks, the improvement comprising the steps of:

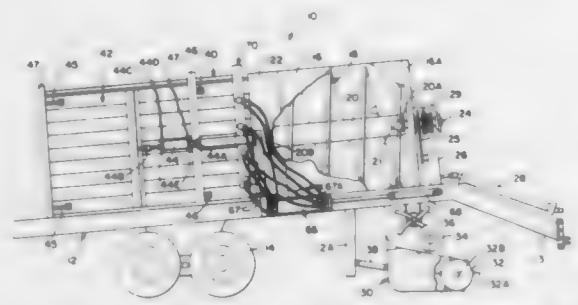
providing a pair of bladed rotary members having longitudinally extending axes disposed along opposing sides of said gathering gap,

rotating said members in opposite directions such that opposing blades of said members define a stalk contacting zone having an inlet situated proximate said gathering gap and an outlet situated remote from said gathering gap, said opposing blades having different tip speeds whereby stalks are fractured and severed by said opposing blades, said opposing blades radially overlapping during travel through said stalk contacting zone.

7. In a harvester attachment for gathering crop clusters of tall plant stalks including means defining a longitudinally extending stalk intake path in which stalks are received as said attachment is advanced, and means for pulling the stalks through a gathering gap disposed in said intake path to strip crop clusters from the stalks, the improvement comprising:

a pair of bladed rolls having longitudinally extending axes of rotation disposed along opposite sides of said gathering

gap, said rolls arranged such that opposing blades of said rolls define a stalk contacting zone having an inlet situated proximate said gathering gap and an outlet situated remote from said gathering gap, said opposing blades radially overlapping while traveling through said stalk contacting zone, and



drive means for rotating said rolls in opposite directions and such that opposing blades have different tip speeds whereby stalks are fractured and severed by said opposing blades.

BALING APPARATUS

Oren D. Urich, Windsor, and Vernie G. Meyer, Fort Collins, both of Colo., assignors to Colorado National Manufacturers, Inc., Windsor, Colo.

Filed Feb. 7, 1989, Ser. No. 307,846
Int. Cl.[5] A01D *39/00*
U.S. Cl. 56—341 **18 Claims**

1. Apparatus for forming fibrous bulk material or the like into a baled unit and binding it, said apparatus including a wheeled frame and comprising:

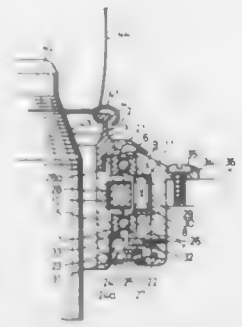
(a) rotatable auger means having first and second ends;

(b) a tubular housing surrounding said auger means; wherein said housing has first and second ends; wherein said second end is open;

(c) feed means adjacent said housing for feeding said bulk material to said auger means;

(d) die means having first and second ends, wherein said first end communicates with said second end of said housing;

(e) a packing chamber communicating with said second end of said die means; wherein said chamber includes a top, a floor, and opposing side wall members; wherein said side wall members are adjustably movable inwardly and outwardly to adjust the packing tension on said bulk material in said chamber; and further comprising control means for moving said side wall members inwardly and outwardly in response to a predetermined tension value;



(f) binding means adjacent said packing chamber; wherein said auger means urges said bulk material through said housing and said die means and into said packing chamber; wherein said die means shapes said bulk material; wherein said binding means encircles said shaped bulk material with a flexible binding member and then secures said binding member so as to form said baled unit without cessation of rotation of said auger means; wherein said auger means is able to move axially with respect to said tubular housing, wherein said side wall members are connected to a hydraulic cylinder for movement inwardly and outwardly, wherein said control means comprises a switch operably connected to said hydraulic cylinder, and wherein said auger means activates said switch when said auger means moves axially.

ROTARY RING SPINNING DEVICE PROVIDED WITH A RING MOTOR

Hiroshi Yamaguchi, 9-7, Ooyamada 4-chome, Kuwana-shi, Mie, Japan, and Masashi Yamaguchi, 12-7, Shimizuoka 1-chome, Sumiyoshi-ku, Osaka-shi; Osaka, Japan, assignors to Hiroshi Yamaguchi, Japan; Niroshi Kimura, Japan and Masashi Yamaguchi, Japan

Filed Nov. 8, 1989, Ser. No. 433,342
Claims priority, application Japan, Nov. 8, 1988, 63-282854; Apr. 26, 1989, 1-107060
Int. Cl.[5] D01H *7/58*
U.S. Cl. 57—124 **10 Claims**

1. A rotary ring spinning device utilized for a ring and traveler spinning machine provided with a conventional ring rail lifting mechanism and spindle driving mechanism,

said rotary ring spinning device comprising,

a horizontal annular holder rigidly mounted on said ring rail,

a horizontal annular ring body rotatably mounted on said horizontal annular holder by way of a bearing,

a spindle arranged coaxially in an inside space of said horizontal annular rotary ring body, said spindle being driven by said driving mechanism,

an inner motor coaxially disposed between said rotary ring body and said holder with respect said spindle at a central position of a coaxial line of said rotary ring body and holder,

said inner motor comprising,

an annular rotor made of a permanent magnet material and rigidly and coaxially mounted on an outside peripheral surface of said rotary ring body at a central axial position thereof,

an annular armature rigidly and coaxially mounted on an inside peripheral surface of said holder at a central axial portion thereof, to provide a small annular space between said armature and an outside peripheral surface of said annular rotor,

said inner motor being driven by an external electrical power source input thereto.

APPARATUS FOR MEASURING THE PARTICULATE MATTER IN THE FLUE GAS OR EXHAUST GAS FROM A COMBUSTION PROCESS

Ferdinand Grob, Besigheim; Dieter Kienzler, Stuttgart; Ernst Linder, Muehlacker; Roger Potschin, Marbach, and Heinz Stutzenberger, Vaihingen/Enz, all of Fed. Rep. of Germany, assignors to Robert Bosch GmbH, Stuttgart, Fed. Rep. of Germany

Continuation-in-part of Ser. No. 254,623, Oct. 7, 1988, Pat. No. 4,922,714. This application Oct. 20, 1989, Ser. No. 424,463
Claims priority, application Fed. Rep. of Germany, Nov. 23, 1987, 3739622; Nov. 22, 1988, 3839348
Int. Cl.[5] F01N *3/00*
U.S. Cl. 60—276 **21 Claims**

1. An apparatus for measuring a particulate matter in a flue gas or exhaust gas of a combustion process, having an optical transmitter containing a light source for emitting a beam of light to be transmitted to an optical receiver embodied as a photodetector, said beam of light passes through two diametrically opposed light slits in a wall of a tail pipe (15), each slit being closed off by a transparent body embodied as a first glass rod (69) and a second glass rod (70), the light emitted crosses

a flow of exhaust gas carried in the exhaust pipe between the opposed light slits, said first and second glass rods (69, 70) including faces which are acted upon by the exhaust gas, and includes means for heating said faces of said transparent bodies to a temperature above a soot burn-off temperature.

5,009,065

TUNED EXHAUST PROCESSOR ASSEMBLY

Michael G. Howe; James C. Arthur, and Robert T. Usleman, all of Columbus, Ind., assignors to Arvin Industries, Inc., Columbus, Ind.

Continuation-in-part of Ser. No. 319,069, Mar. 6, 1989, Pat. No. 4,961,314, which is a continuation-in-part of Ser. No. 232,023, Aug. 15, 1988, abandoned. This application Oct. 23, 1989, Ser. No. 425,308
Int. Cl.[5] F01N *3/02*
U.S. Cl. 60—288 **30 Claims**

1. An exhaust processor assembly comprising

a housing formed to include an inlet and an outlet,

partition means positioned within the housing for dividing an upstream portion of the housing into first and second flow passages,

a muffler situated in a downstream portion of the housing in close proximity to the outlet to attenuate noise generated by combustion product passing through one of the first and second flow passages toward the outlet,

a main filter substrate situated in the first flow passage to lie intermediate the inlet and the muffler and configured to collect particulate matter entrained in combustion product introduced into the first flow passage through the inlet, and

an auxiliary filter substrate situated in the second flow passage and configured to collect particulate matter entrained in the combustion product introduced into the second flow passage through the inlet.

5,009,066

AUTOMOTIVE POWER STEERING SYSTEM

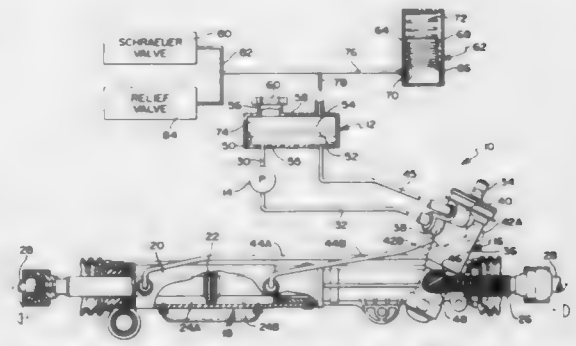
David H. VanGorder, Saginaw, and Kenny R. Wilson, Fairgrove, both of Mich., assignors to General Motors Corporation, Detroit, Mich.

Filed Nov. 13, 1989, Ser. No. 434,394
Int. Cl.[5] F16D *31/02*
U.S. Cl. 60—415 **4 Claims**

1. In an automotive power steering system including

a pump,

a servo-valve,



a steering assist fluid motor,

a reservoir having a reservoir chamber therein,

a plurality of fluid ducts interconnecting said reservoir and said pump and said servo-valve and said fluid motor, and

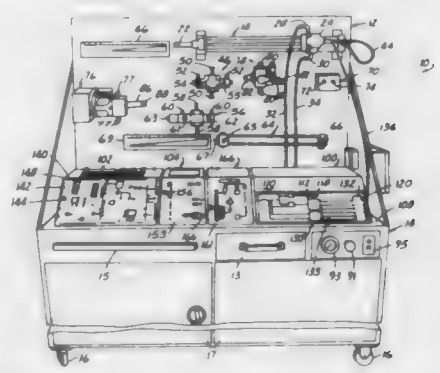
a volume of hydraulic oil in said power steering system establishing a fluid level in said reservoir chamber which varies between a minimum cold level when said working fluid is at a minimum operating temperature and a maximum hot level when said working fluid is at a maximum operating temperature and above which in said reservoir chamber is defined a gas chamber portion thereof, the improvement comprising:

means defining a fill port on said reservoir opening into said reservoir chamber at a location above said maximum hot level of said hydraulic oil,

a cover on said reservoir closing said fill port and defining a gas-tight seal between said reservoir and said cover to isolate said gas chamber portion from the atmosphere surrounding said reservoir,

means connected to said reservoir for introducing into said gas chamber portion a quantity of gas under pressure to establish an above-atmospheric pressure in variable volume gas chamber portion, and

a gas accumulator having an expansible chamber connected to said gas chamber portion,



said expansible chamber expanding in response to decreases in the volume of said gas chamber portion resulting from thermal expansion of said hydraulic oil to thereby minimize the increase in gas pressure in said gas chamber portion.

5,009,067

POWER TRANSMISSION

Raymond J. Bonnell, Waterford, Mich., assignor to Vickers, Incorporated, Troy, Mich.

Filed Oct. 6, 1988, Ser. No. 254,402
Int. Cl.[5] G09B *25/02*
U.S. Cl. 60—484 **33 Claims**

1. Apparatus for training an operator in use of electrohydraulic systems comprising:

a plurality of differing electrohydraulic devices responsive to electronic control signals for performing hydraulic

operations, each said device having associated operating characteristics which differ from those of other of said devices,

electronic control means including means for selectively generating a plurality of differing electronic control signals, a plurality of preassembled electronic control assemblies, means enclosing said assemblies to form separate control modules, and means on said enclosing means for selectively electrically interconnecting components of said assemblies within each said module and connecting said modules to said devices,

said enclosing means including an operator panel and fixed indicia on said operator panel coordinated with said assemblies for indicating options to an operator for said selective interconnection of components within said modules and to said devices, said indicia comprising electrical schematic diagrams of said electronic control assemblies contained within each said module,

said selectively-connecting means comprising electrical connectors on said operator panel positioned within said indicia and electrically preconnected within said modules to corresponding locations in said assemblies to provide control inputs and outputs to and from said assemblies, and means for selectively interconnecting said connectors,

means for selectively feeding said plurality of control signals to said devices, and

means for generating a visually observable indication of operation at said devices, such that an operator can observe effects of said differing electronic control signals on said devices.

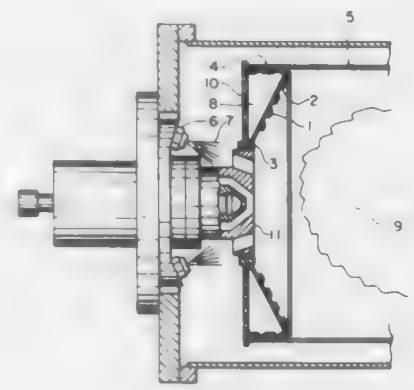
COMBUSTION APPARATUS FOR GAS TURBINE

Nobuyuki Iizuka; Fumiyuki Hirose, both of Hitachi; Naotatsu Asahi, Katsuta, and Yoshitaka Kojima, Hitachi, all of Japan, assignors to Hitachi, Ltd., Tokyo, Japan

Continuation of Ser. No. 946,775, Dec. 29, 1986, abandoned, which is a continuation of Ser. No. 690,190, Jan. 10, 1985, abandoned. This application Apr. 9, 1987, Ser. No. 36,181

Claims priority, application Japan, Jan. 13, 1984, 59-3474

Int. Cl.[5] F02G *3/00*



U.S. Cl. 60—753 **5 Claims**

1. A combustion apparatus comprising:

a liner cap means for closing an open end of a liner sleeve body of the combustion apparatus, the liner cap means including a first member having a plurality of cooling air holes therein and having formed on a first surface thereof, which is adapted to be subjected to flame radiation heat, a ceramic coating for thermally protecting said first member from flame radiation heat to which it is to be subjected, and having formed on a second surface thereof, opposite said first surface thereof, a corrosion resistant metal material, the heat conductivity of which is relatively high compared with said ceramic coating;

a fuel nozzle coupled with said liner cap means for supplying fuel through the combustion of which said liner cap means is subjected to flame radiation heat; and

wherein said liner cap means further comprises an outer sleeve surrounding said first member for defining an air

passage with said first member and an end plate of said liner cap means.

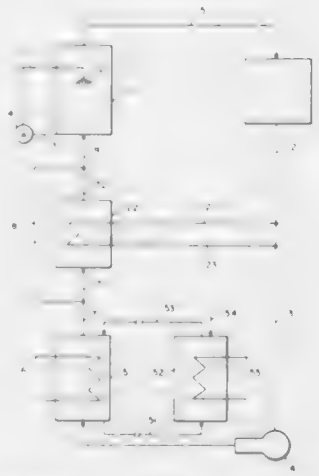
PROCESS FOR ADSORPTION COOLING/CONDITIONING BY MEANS OF LOW-TEMPERATURE HEAT



Norbert Schwetje, Hanover; Rudolf Sizmann, and Noureddine Khelifa, both of Munich, all of Fed. Rep. of Germany, assignors to Kali-Chemie AG, Hanover, Fed. Rep. of Germany

Filed Oct. 13, 1989, Ser. No. 421,051

Claims priority, application Fed. Rep. of Germany, Oct. 21, 1988, 3835872

Int. Cl.[5] F25D *5/00*

U.S. Cl. 62—4 **10 Claims**

1. A process for adsorption cooling conditioning of rooms by adsorption/desorption of water by a working medium comprising a liquid hygroscopic salt solution, said process comprising the steps of

(a) producing a dry air stream by adsorption of water from a water-containing air stream into an initial working medium to produce a water-enriched working medium,

(b) conditioning via evaporative cooling with water absorption by said dry air stream, and

(c) regenerating the water-enriched working medium by desorption of water using low-temperature heat and ambient air;

wherein said initial working medium is a salt solution comprising:

40 to 43% by weight of calcium chloride,

15 to 25% by weight of calcium nitrate,

0.5 to 5% by weight of an organic polyhydroxy compound, and

water to make 100% by weight.

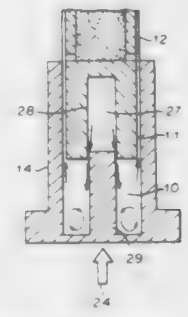
REFRIGERATOR



Masashi Nagao, Amagasaki, Japan, assignor to Mitsubishi Denki Kabushiki Kaisha, Tokyo, Japan

Filed Jan. 31, 1990, Ser. No. 472,849

Claims priority, application Japan, May 26, 1989, 1-133224

Int. Cl.[5] F25B *9/00*

U.S. Cl. 62—6 **10 Claims**

1. A refrigerator which comprises:

a cold accumulator,

an expansion chamber which includes a convex portion and a recessed portion which surrounds said convex portion,

a movable member which is provided in the expansion chamber, and which can move to change the inside volume of the expansion chamber,

a compressed operating gas which is introduced into the expansion chamber through the cold accumulator, the gas being expanded under the action of the movable member to generate cold, and being exhausted from the expansion chamber through the cold accumulator,

a recessed auxiliary expansion chamber which communicates with the expansion chamber through a narrow flow passage formed between said recessed portion of auxiliary expansion chamber and said convex portion of said recessed expansion chamber, and

an auxiliary movable member which is associated with the movable member, and which can be provided in the auxiliary expansion chamber to change the inside volume of the auxiliary expansion chamber.

FAST CYCLE CRYOGENIC FLEX PROBE

Dale J. Missimer, San Anselmo; David T. Fyfe, Jr., Novato; Joseph J. Housman, Sebastapol, and Scott M. Forrest, Half Moon Bay, all of Calif., assignors to Marin Tek, Inc., San Rafael, Calif.

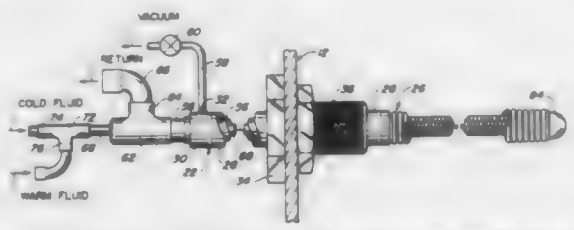
Filed May 1, 1990, Ser. No. 517,325

Int. Cl.[5] F25B *19/00*

U.S. Cl. 62—51.1 **14 Claims**

1. An elongated fast cycle cryopump probe device for use within a vacuum chamber having a wall section with a pass-through opening, said device comprising:

a rigid head end section adapted to be mounted on said wall section of said vacuum chamber while extending within a



pass-through, said head end section having a feed tube and a return flow passage;

valve means connected to said feed tube means for selectively receiving either a relatively cold refrigerant or a relatively hot refrigerant during different phases of operation;

a flexible probe section connected to said rigid head end section which is capable of being shaped in different ways to assume a preselected or variable configuration within the vacuum chamber workspace, said probe section including a flexible feed tube connected to said feed tube means of said head end section for carrying said refrigerants passing through said head section outwardly to the end of said flexible probe section;

a flexible outer tubular member surrounding said flexible feed tube for providing a return passage for said refrigerants along said probe section and through said head section;

whereby when said cold refrigerant is flowing in said probe during a vacuum cycle within said chamber, water vapor is condensed on the outer surface of said flexible probe section and at the end of said cycle when said hot refrigerant is flowing in the probe, condensed water vapor is released from the flexible probe section to the surrounding atmosphere.

LOW REFRIGERANT CHARGE PROTECTION METHOD FOR A VARIABLE DISPLACEMENT COMPRESSOR

Ronald J. Goubeaux, Lockport, and Edward D. Pettitt, Burt, both of N.Y., assignors to General Motors Corporation, Detroit, Mich.

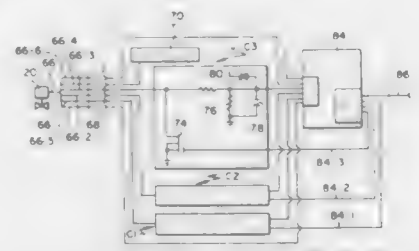
Filed Aug. 2, 1990, Ser. No. 562,100
Int. Cl.[5] F25B *49/02*
U.S. Cl. 62—115 **6 Claims**

1. In a vehicle air conditioning system including a refrigerant compressor, the displacement of which is controlled to maintain a measured refrigerant vapor pressure at a desired value, a control method for protecting said compressor from damage due to continued operation with insufficient refrigerant charge, comprising the steps of:

controlling the compressor to a minimum displacement once the vapor pressure of the refrigerant reaches the desired value, to thereby initiate a set-up period in which the measured vapor pressure is permitted to increase;

controlling the compressor to a maximum displacement once the measured vapor pressure reaches a first reference pressure, thereby to terminate said set-up period and define a pull-down period in which the measured vapor pressure is decreased by the compressor at a maximum rate;

measuring a pull-down time required for the measured vapor pressure to decrease from the first reference pressure to a second reference pressure lower than said first reference pressure; and



indicating the detection of an insufficient refrigerant condition if the pull-down time is shorter than a reference pull-down time characteristic of a sufficient refrigerant condition.

5,009,075

FAULT DETERMINATION TEST METHOD FOR SYSTEMS INCLUDING AN ELECTRONIC EXPANSION VALVE AND ELECTRONIC CONTROLLER

Ronald W. Okoren, Holmen, Wis., assignor to American Standard Inc., New York, N.Y.

Filed Apr. 20, 1990, Ser. No. 511,706
Int. Cl.[5] G01M *19/00*
U.S. Cl. 62—127 **9 Claims**

1. A method of testing in a refrigeration system an electronic, stepper motor driven expansion valve with an end-of-stroke indication and an electronic controller including a stepper motor drive circuit, said method comprised of:

setting said drive circuit to an "OFF" condition;

measuring a voltage V_C in said "OFF" condition;

comparing said voltage V_C to a predetermined voltage V_B;

indicating a test "FAIL" condition when said voltage V_C is less than said voltage V_B; and alternatively

setting said drive circuit to an "ON" condition;

measuring said voltage V_C in said "ON" condition;

comparing said voltage V_C to a predetermined voltage V_O;

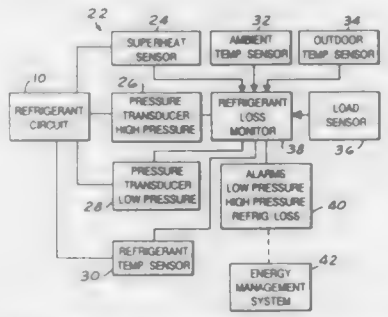
indicating a test "FAIL" condition when said voltage V_C is greater than said voltage V_O and indicating a test "PASS" condition when said voltage V_C is greater than said voltage V_O.

5,009,076

REFRIGERANT LOSS MONITOR

James G. Winslow, Detroit, Mich., assignor to Temperature Engineering Corp., Sterling Heights, Mich.

Filed Mar. 8, 1990, Ser. No. 490,367
Int. Cl.[5] F25B *49/00*
U.S. Cl. 62—129 **2 Claims**



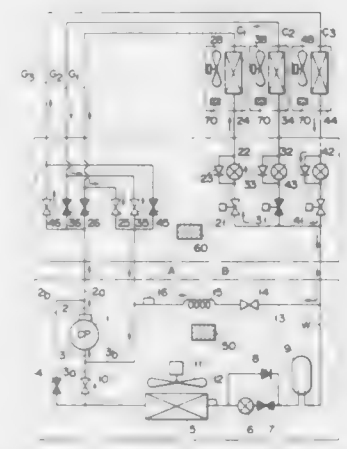
1. A method of monitoring the refrigerant within a refrigerant circuit, including the steps of:

(b 1) sensing an environmental condition;

(b 2) cyclically sensing a refrigerant condition;

(b 3) utilizing at least the sensed environmental condition to determine an expected refrigerant condition; and

(b 4) comparing the expected refrigerant condition to the actual refrigerant condition and actuating an alarm should the two differ by more than a preset amount and wherein steps 1-14 4 are cyclically repeated even when the refrigerant circuit is shut down.



5,009,077

MULTI-SYSTEM AIR CONDITIONER

Seiji Okoshi, and Eiji Kuwahara, both of Fuji, Japan, assignors to Kabushiki Kaisha Toshiba, Kawasaki, Japan

Filed Jul. 26, 1990, Ser. No. 558,152
Claims priority, application Japan, Jul. 28, 1989, 1-195684
Int. Cl.[5] F25B *13/00*
U.S. Cl. 62—160 **9 Claims**

1. A multi-system air conditioner comprising:

an outdoor unit including a compressor for sucking, compressing and delivering a refrigerant and an outdoor heat exchanger for making an exchange between heat in an incoming refrigerant and heat in outdoor air;

a plurality of indoor units including an indoor heat exchanger, each, for allowing an exchange between the heat in the incoming refrigerant and the heat in the indoor air and requesting at least one of a cooling operation mode and cooling power level and heating operation mode and heating power level;

means for determining a cooling operation mode when a total of a cooling power level or levels requested from one or more indoor units is greater than a total of a heating power level or levels requested from one or more remaining indoor units;

means for enabling a refrigerant which is delivered from the compressor to pass through the outdoor heat exchanger, when a cooling operation mode is determined, and to be returned back to the compressor via one or more indoor units calling for a cooling operation mode;

means for enabling one stream of the refrigerant which is delivered from the compressor to pass through one or more indoor units calling for a heating operation mode and to meet a refrigerant flowing into one or more outdoor units calling for a cooling operation mode;

means for determining a heating operation mode when a total of a heating power level or levels requested from one or more indoor units is greater then a cooling power level or levels requested from one or more remaining indoor units;

means for enabling the refrigerant which is delivered from the compressor to pass through one or more indoor units calling for a heating operation mode, when the heating operation mode is determined, and to be returned back to the compressor via the outdoor heat exchanger;

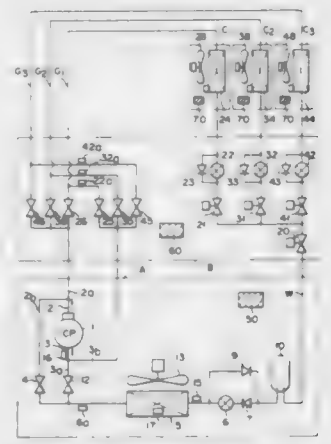
means for enabling one stream of a refrigerant which passes through one or more indoor units calling for a heating operation mode to circulate through one or more indoor units calling for a cooling operation mode, when a heating operation mode is determined, and to be returned back to the compressor;

first detecting means for detecting a temperature in the outdoor heat exchanger;

means for determining a stop mode of the outdoor heat exchanger when a difference between a total of a heating power level or levels requested from one or more indoor units and that of a cooling power level or levels requested from one or more remaining indoor units falls within a predetermined range;

means for enabling a refrigerant which is delivered from the compressor to pass through one or more indoor units calling for a heating operation mode, when the stop mode of the outdoor heat exchanger is determind, and to be returned back to the compressor via one or more indoor units calling for a cooling operation mode;

second detecting means for detecting a saturation temperature prevalent in the refrigerant flowing through the indoor unit, when the stop mode of the outdoor heat exchanger is determined; and



recovering means which, when the stop mode of the outdoor heat exchanger is determined, enables a refrigerant which is accumulated on the outdoor heat exchanger to be recovered back to the compressor if a result of detection by the second detecting means is higher than a result of detection by the first detecting means.

MULTI-SYSTEM AIR CONDITIONING MACHINE

Seizi Ohkoshi, and Eiji Kuwahara, both of Fuji, Japan, assignors to Kabushiki Kaisha Toshiba, Kawasaki, Japan

Filed Feb. 23, 1990, Ser. No. 483,654
Claims priority, application Japan, Feb. 27, 1989, 1-45738
Int. Cl.[5] F25B *13/00*
U.S. Cl. 62—160 **11 Claims**

1. A multi-system air conditioning machine comprising:

an outdoor unit including a compressor for drawing, compressing, and delivering a refrigerant, and an outdoor heat

exchanger for exchanging heat of the supplied refrigerant and heat of outer air;

a plurality of indoor units each including an indoor heat exchanger for exchanging the heat of the supplied refrigerant and heat of inner air, for requiring a cooling operation mode and a cooling capability or a heating operation mode and a heating capability;

means for supplying the refrigerant delivered from said compressor to said outdoor heat exchanger, supplying the refrigerant to one or said plurality of indoor units which request a cooling operation mode, and returning the refrigerant to said compressor when a total cooling capability requested from one or said plurality of indoor units is larger than a total heating capability requested from the remaining one or plurality of indoor units;

means for supplying a part of the refrigerant delivered from said compressor to one or said plurality of indoor units which request a heating operation mode to cause the part of refrigerant to join the flow of the refrigerant to one or said plurality of indoor units which request a cooling operation mode, when a total cooling capability requested from one or said plurality of indoor units is larger than a total heating capability requested from the remaining one or plurality of indoor units;

setting means for setting an amount of refrigerant supplied to said outdoor heat exchanger to be relative to an amount of refrigerant supplied to one or said plurality of indoor units which request the heating operation mode in accordance with the total heating capability requested from one or said plurality of indoor units when the total cooling capability requested from one or said plurality of indoor units is larger than the total heating capability requested from the remaining one or plurality of indoor units;

means for supplying the refrigerant delivered from said compressor to one or said plurality of indoor units which request a heating operation mode, supplying the refrigerant to said outdoor heat exchanger, and returning the refrigerant to said compressor, when a total heating capability requested from one or said plurality of indoor units is larger than a total cooling capability requested from the remaining one or plurality of indoor units;

means for supplying a part of the refrigerant supplied from one or said plurality of indoor units which request a heating operation mode to one or said plurality of indoor units which request a cooling operation mode, and returning the refrigerant to said compressor, when a total heating capability requested from one or said plurality of indoor units is larger than a total cooling capability requested from the remaining one or plurality of indoor units; and

setting means for setting an amount of refrigerant supplied to said outdoor heat exchanger to be relative to an amount of refrigerant supplied to one or said plurality of indoor units which request the cooling operation mode in accordance with the total cooling capability requested from one or said plurality of indoor units when the total heating capability requested from one or said plurality of indoor units is larger than the total cooling capability requested from the remaining one or plurality of indoor units.

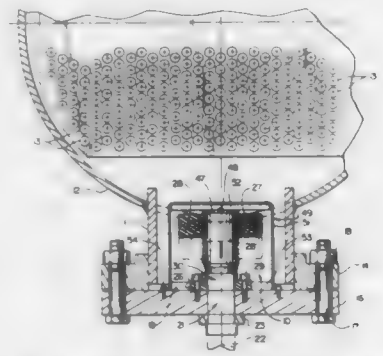
REFRIGERANT FLOW CONTROL DEVICE



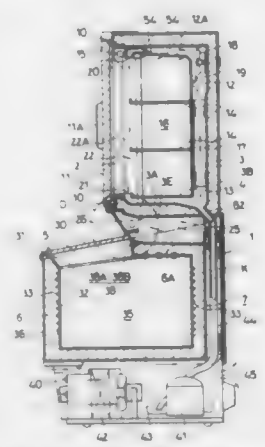
Thomas M. Zinsmeyer, Pennellville, N.Y., assignor to Carrier Corporation, Syracuse, N.Y.

Filed Dec. 26, 1989, Ser. No. 457,228
Int. Cl.[5] F25B *41/04*
U.S. Cl. 62—218 **13 Claims**

1. An improved refrigerant flow control device of the type having a float which is responsive to the liquid level of refrigerant in a condenser sump to control the flow of refrigerant from the sump comprising:

a standpipe extending upwardly from a lower portion of the sump, said standpipe having its upper end closed and having near its lower end at least one opening formed to provide fluid communication from the lower portion of the sump to a refrigerant return line below; and

a float device slideably disposed on said standpipe in such a way that when the liquid level of refrigerant in the sump is below a predetermined level, said float device is caused to rest at a vertical height on said standpipe such that it covers said at least one opening, and when the liquid level



of refrigerant rises above said predetermined level, said float device is caused to slide upwardly to uncover said at least one opening and allow liquid refrigerant to flow from the sump; wherein said float device has an undercut portion surrounding said standpipe such that the amount of surface contact between said float device and said standpipe is reduced.

LOW-TEMPERATURE SHOW CASE

Hiroshi Naganuma; Kenji Sato; Masashi Yamamoto; Toshiaki Kubota; Hiroshige Hayashi, and Yoshirou Ishizaka, all of of Gunma, Japan, assignors to Sanyo Electric Co., Ltd., Osaka, Japan

Filed Feb. 13, 1990, Ser. No. 479,390
Claims priority, application Japan, Feb. 16, 1989, 1-36551; Feb. 27, 1989, 1-47958; Mar. 9, 1989, 1-57341; Mar. 28, 1989, 1-76928
Int. Cl.[5] A47F *3/04*
U.S. Cl. 62—256 **10 Claims**

7. A low-temperature show case comprising:

a thermally insulated box having an opening on one side of the box;

a partition board lined along the inner surface of said thermally insulated box;

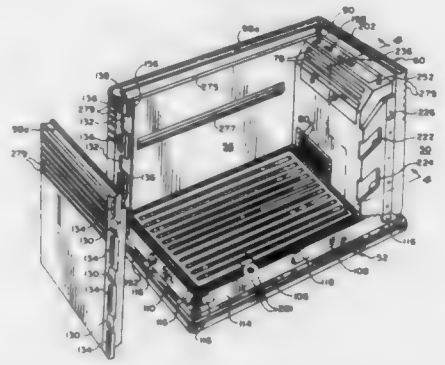
a first cold-air passage formed between said thermally insulated box and said partition board, and having

an outlet and an inlet of said first air passage, said outlet and inlet facing with each other at opposite ends of said opening, respectively, and

a refrigeration apparatus and a blower for circulating cold air in said first passage;

a goods-storing room surrounded by said partition board;

a cold-air curtain being formed across said opening when said refrigeration apparatus and blower operate, wherein the width of said outlet is greater than that of said opening; and



angular walls, which are at least partially transparent, formed on the front ends of the opposite side-walls of said thermally insulated box, said angular walls narrowing towards the opening and being in contact with opposite edges of the air curtain.

MODULAR MECHANICAL REFRIGERATION UNIT

Richard W. Kruck, Sodus Township, Berrien County; Omer N. Cur; Douglas D. Leclear, both of St. Joseph Township, Berrien County; Steven J. Kuehl, Royalton Township, Berrien County, all of Mich., and Ralph R. Burin, Milton Township, DuPage County, Ill., assignors to Whirlpool Corporation, Benton Harbor, Mich.

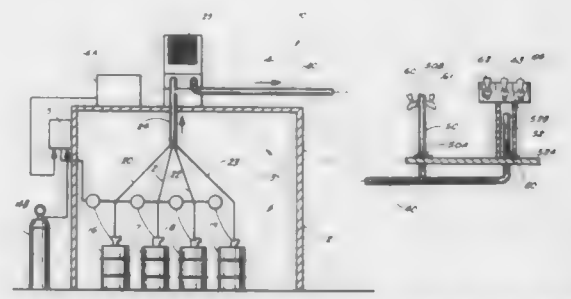
Division of Ser. No. 218,233, Jul. 12, 1988, Pat. No. 4,907,419.
This application Mar. 12, 1990, Ser. No. 489,441
Int. Cl.[5] T25D *23/06*
U.S. Cl. 62—264 **3 Claims**

1. A mechanical refrigeration unit adapted to form a relatively thin wall portion of a refrigeration apparatus, comprising a molded plastic divider wall having a layer of insulating material on one side thereof, an evaporator mounted on said one side of said divider wall, a condenser mounted on the other side of said divider wall, first fan means mounted on said divider wall for moving air over said evaporator and into the space to be cooled, second fan means mounted on said divider wall for moving air from the exterior over said condenser, a light source mounted on said divider wall, means for energizing said light source during periods when said mechanical refrigeration unit is energized and means for directing light from said source through an opening in a wall of said refrigeration apparatus, thereby to provide a visual indication of said power-on periods.

5,009,082

SYSTEM FOR COOLING BEER FOR REMOTE DISPENSING

Martin J. Abraham, III, 857 Timber Bend St., Lacombe, La. 70445



Filed Jul. 3, 1989, Ser. No. 379,480
Int. Cl.[5] B67D *5/62*
U.S. Cl. 62—390 **4 Claims**

1. A system for cooling beer to be dispensed from a container comprising:

(a) a cooled housing with an interior having a preliminarily air-cooled housing with an interior having a preliminarily air-cooled environment that is cooled to a first temperature below ambient temperature with a primary heat exchanger; p1 (b) a first flowline for dispensing beer from the container;

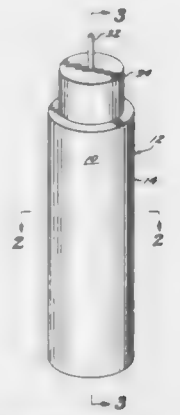
(c) an auxiliary heat exchanger having a glycol reservoir for receiving the first flowline, and the first flowline including multiple stacked coils of the first flowline within the reservoir in heat exchange relation therewith;

(d) a second flowline comprising at least a pair of internal bores including a first bore in fluid communication with the first flowline downstream of the glycol reservoir and a second bore carrying glycol from the reservoir in close

proximity and in heat exchange relation with beer in the first bore, the second flowline being extended in length so that beer and glycol can travel to remote positions away from the container;

(e) a spigot for dispensing beer at the remote position that has been transmitted thereto via the second flowline;

(f) means for returning the glycol to the reservoir; and



(g) the first flowline having one or more fittings forming connections between the container and the reservoir that produce substantially laminar flow between the container and the reservoir.

DOUBLE HOOK-BOLT UNIT LOCK
Emily M. Y. Lin, No. 112, Sze Chuan Rd., Sec. 1, Panchiao City, Taipei Hsien, Taiwan
Filed Oct. 31, 1989, Ser. No. 429,610
Int. Cl.[5] E05B *63/14*
U.S. Cl. 70—114 **4 Claims**

1. A double hook-bolt unit lock, including:

a lock casing (60) having an upper L-shaped guideslot means (611) and a lower L-shaped guide slot means (611'), each guide slot means having horizontal slot portions and vertical slot portions;

a rotary cam wheel assembly (50) located within said lock casing for rotational movement around a horizontal axis, said wheel assembly comprising a swingable arm (52);

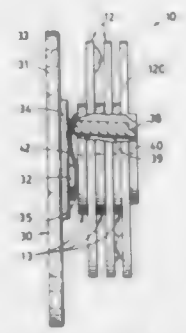
a stop frame assembly (40) that includes a vertically movable wall mechanism having a curved cam surface (44) slidably and camingly engaged with said swingable arm, whereby swinging motion of said arm around the aforementioned horizontal axis causes said wall mechanism to reciprocate vertically, said wall mechanism including a stop key means (43) located below said curved cam surface;

a brake frame assembly (30) slidably mounted within said lock casing for rectilinear horizontal motion at right angles to the cam wheel assembly rotational axis; said brake frame assembly comprising a vertically oriented plate means (33) having an upper cam slot (335) and a lower cam slot (335'), said cam slots being acutely angled to the horizontal midplane of the plate means in an arrow configuration; said brake frame assembly having two drive notches (332 and 342) registering with said swingable arm,

and three latching notches (at 333) in registry with said stop key means;

two L-shaped lock bolts (20, 21) slidably mounted within the lock casing for movement between retracted positions located entirely within the lock casing and extended positions projecting from the lock casing; each lock bolt having a horizontal leg and a vertical leg, the lock bolts being arranged one above the other, with the vertical legs thereof facing away from each other; each lock bolt having lock pin means (201 or 211) extending from the respective horizontal leg through the associated cam slot in the brake frame assembly and the associated guide slot means in the lock casing;

the drive notches and latching notches in the brake frame assembly being oriented so that when the cam wheel assembly is rotated the stop key means (43) is released from the associated latching notch before the swingable arm interacts with an associated drive notch to import motion to the brake frame assembly;



the lock pin means on the lock bolts being in simultaneous engagement with the L-shaped guide slot means in the lock casing and the angled slots in the brake frame, so that when the brake frame assembly is moved to a point where said lock pin means reached the vertical slot portions of the L-shaped guide slots, further motion of the brake frame assembly enables the angled slots to guide said lock pin means into and along the vertical slot portions, whereby the lock bolts are moved vertically away from each other.

COMBINATION LOCK ASSEMBLY

Patrick J. Beattie, West Henrietta; Andrew L. Oliveri, and Richard J. Sylvester, both of Rochester, all of N.Y., assignors to John D. Brush & Co., Inc., Rochester, N.Y.

Filed Jan. 2, 1990, Ser. No. 459,451
Int. Cl.[5] E05B *15/14*
U.S. Cl. 70—326 **15 Claims**

1. A combination lock assembly for installation in a safe or strong box, comprising:

an integrated resin structure with a mounting plate portion for receiving fasteners for installing the assembly and a bushing portion having a cylindrical bearing surface with an axial keyway and a step at its outer end;

a plurality of tumbler wheels, including a drive tumbler wheel, separated by a spacing washer between each, said drive tumbler wheel having a plurality of angularly spaced holes and all of said tumbler wheels and washers being supported on the bearing surface of said bushing portion;

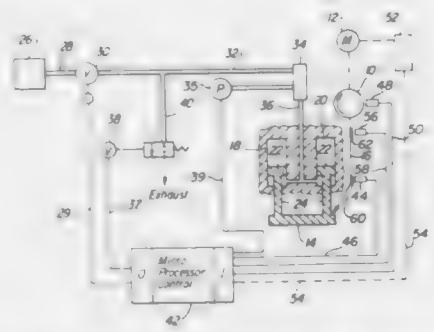
a retaining cap fixed to the stepped end of said bushing portion;

a spring for biasing said tumbler wheels and washers away from said mounting plate portion so that said drive tumbler wheel is pressed against said retaining cap;

a lock spindle passageway through said mounting plate and bushing portions of said integrated structure;

a drive cam having a projecting drive stud; and

a rotatable spindle positioned in said passageway and fixed to said drive cam so that said drive stud is received into one of the angularly spaced holes in said drive tumbler wheel;



the bias of said spring being predetermined to allow said tumbler wheels and washers to be moved together as a unit away from said retaining cap and back toward said mounting plate so that the surfaces of said tumbler wheels and washers remain substantially parallel relative to each other when so moved.

PRESS COUNTERBALANCE SYSTEM

William H. Hinterman, G-5034 Fenton Rd., Flint, Mich. 48057, and Timothy W. Hinterman, 2104 Cadillac St., Flint, Mich. 48504

Continuation-in-part of Ser. No. 331,242, Mar. 31, 1989, Pat. No. 4,969,344. This application Sep. 5, 1990, Ser. No. 577,886
Int. Cl.[5] B21D *24/02*
U.S. Cl. 72—21 **7 Claims**

1. In a press which engages a flywheel to impart energy to reciprocate a ram through interconnected drive components, said press having air-operated cylinder means for automatically counterbalancing the downward working force of said ram, an improved system for adjusting the counterbalancing air pressure in said air cylinder means according to the energy level of the flywheel comprising:

sensor means for detecting the speed of said ram which is indicative of the energy level of said flywheel; and

control means for comparing the speed of said ram detected by said sensor means to a predetermined value and increasing or decreasing the air pressure in said air cylinder means according to said comparison to overcome under or over counterbalancing of said ram.

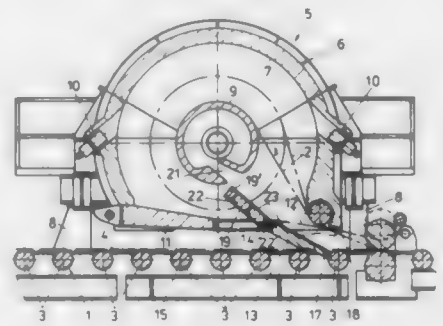
COILER ARRANGEMENT

Rudolf Buchegger, Florian, assignor to Voest-Alpine Industrieanlagenbau GmbH, Linz, Austria

Filed May 16, 1990, Ser. No. 525,161
Claims priority, application Austria, Jun. 8, 1989, 1413/89
Int. Cl.[5] B21C *47/04*
U.S. Cl. 72—148 **7 Claims**

1. In a coiler arrangement for coiling hot metal rolling stock comprising a coiler mandrel rotatably mounted within a housing having a peripheral opening through which rolling stock is guided for coiling around said mandrel,

said arrangement also including a roller table cooperatively disposed relative to said housing and formed of a plurality of table rollers defining a roller way upon which said rolling stock is transported to said coiler via said opening in said housing and guided to said mandrel by means of a pivot flap cooperatively associated with said roller table,



said pivot flap extending from said roller table to the vicinity of said mandrel,

said pivot flap being provided with means for actuating said flap into a position for guiding said rolling stock to said mandrel,

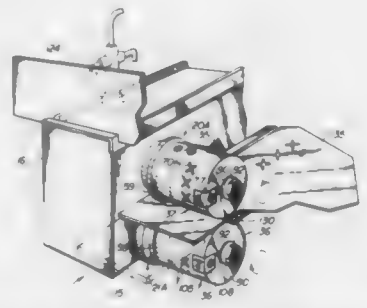
the improvement which comprises:

a pivot flap assembly pivotably mounted on said housing by axle means located adjacent the peripheral opening thereof,

said pivot flap assembly extending across said peripheral opening and having a first flap portion with its free end

extending forwardly of said axle means and a second flap portion extending rearwardly thereof,

said flap portions cooperating one with the other for closing off said opening and providing sufficient space to allow for passage of said rolling stock to said mandrel,



and pivot drive means cooperatively associated with said housing for actuating said pivot flap assembly from an open to a closed position and vice versa.

APPARATUS AND METHOD FOR ROLL FORMING AND MARKING SHEET METAL

F. Dillard Quinn, Jr., 775 Beech Valley Rd., and Anthony W. Quinn, 3611 Briar Dr., both of Lithia Springs, Ga. 30057

Continuation of Ser. No. 424,730, Oct. 20, 1989, abandoned. This application Nov. 5, 1990, Ser. No. 610,337
Int. Cl.[5] B21D *35/00*
U.S. Cl. 72—177 **3 Claims**

1. Apparatus for roll-forming sheet metal into air duct pipe having a predetermined part size, comprising:

a pair of opposing and substantially parallel roller support frames spaced from one another;

a plurality of first shafts rotatably mounted to and along each of the opposing roller support frames, the plurality of first shafts extending inwardly from each of the opposing roller support frames towards the opposite roller support frame;

a plurality of second shafts rotatably mounted to and along each of the opposing roller support frames, the plurality of second shafts extending inwardly from each of the opposing roller support frames towards the opposite roller support frame, each of the plurality of second shafts positioned juxtapositional to a corresponding first shaft;

a plurality of first forming rollers mounted on corresponding first shafts;

a plurality of second forming rollers mounted on corresponding second shafts, each first forming roller being positioned juxtapositional to a corresponding second forming roller so that there is a nip between each of the juxtaposed first and second forming rollers, the juxtaposed first and second forming rollers forming a pair of opposing roll forming lines;

a first embossing roller mounted on one of said first shafts and extending inwardly from the first forming roller mounted on the one of said first shafts to a substantially exposed forward end, the first embossing roller being separate from the first forming roller mounted on the one of said first shafts, the first embossing roller extending beyond each of the first forming rollers in the associated roll forming line towards the opposing roll forming line, the first embossing roller having an outer surface and a relief pattern extending outwardly therefrom, the relief pattern including an indication of the predetermined part size of the air duct pipe;

a second embossing roller mounted on the second shaft positioned juxtapositional to the one of said first shafts on which the first embossing roller is mounted, the second embossing roller extending inwardly from the second forming roller mounted on the associated second shaft to a substantially exposed forward end, the second embossing roller being separate from the second forming roller on the associated second shaft, the second embossing roller extending beyond each of the second forming rollers in the associated roll forming line towards the opposing roll forming line, the first and second embossing rollers juxtaposed so that there is a nip therebetween, the second embossing roller having an outer surface which has an engraved pattern for receiving the relief pattern, the engraved pattern being substantially identical to the relief pattern; and

means for rotating the first and second shafts so as to draw the sheet metal through the nips between the first and second forming rollers and the first and second embossing rollers,

whereby the sheet metal is simultaneously roll formed into air duct pipe by the first and second forming rollers and embossed with the identifying relief pattern by the first and second embossing rollers.

5,009,094

METHOD OF ROLLING H-SHAPED STEELS

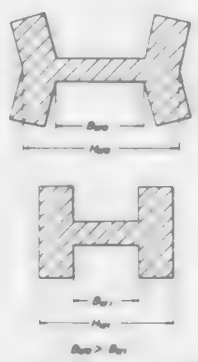
Hiroyuki Hayashi, Chiba; Tsuneo Seto, Kurashiki; Hironori Miura, Kurashiki, and Yoji Fujimoto, Kurashiki, all of Japan, assignors to Kawasaki Steel Corporation, Kobe, Japan

Filed Jun. 19, 1989, Ser. No. 367,947
Claims priority, application Japan, Jun. 27, 1988, 63-156828; Jun. 29, 1988, 63-159518; Sep. 20, 1988, 63-233393; Feb. 10, 1989, 1-29995
Int. Cl.[5] B21B *13/08, 41/06*
U.S. Cl. 72—225 **3 Claims**

1. A method of manufacturing H-shaped steels comprising the steps of:

subjecting a workpiece to break down rolling by passing the workpiece at least once through a break down rolling mill, the work piece after break down rolling composed of a web portion and a pair of flange portions;

subjecting the workpiece to rough universal rolling by passing the workpiece at least once through a rough universal rolling mill;



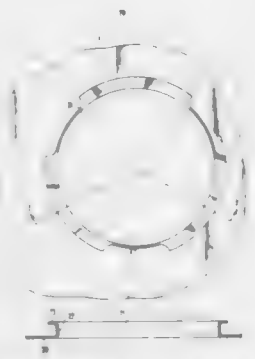
subjecting the workpiece to finish universal rolling by passing the workpiece at least once through a finish universal rolling mill;

subjecting said workpiece to web-reduction universal rolling in any position ranging from final pass of said rough universal rolling to said finish universal rolling, wherein the inner width of said web of said workpiece is decreased by

an amount within a range not exceeding $80 \times T_W^2/B_W$, wherein T_W is the thickness of said web portion of said workpiece and B_W is the inner width of said web portion of said workpiece;

wherein concurrently with said reduction of said web inner width, the thickness of said flange of said workpiece is reduced;

wherein said step of web-reduction universal rolling at any



position ranging from final pass of said rough universal rolling to said finish universal rolling comprises the step of passing the workpiece at least once through a universal rolling mill, where the rolling mill comprises a pair of upper and lower width variable horizontal rolls and a pair of left and right vertical rolls, and wherein the roll width of each of said width variable horizontal rolls is set to a smaller length than said inner width of the web of said workpiece.

5,009,095

METHOD FOR FORMING A COLLARED HOLE IN SHEET MATERIAL

Harlan F. Voss, Punta Gorda, Fla., assignor to Tridan Tool & Machine, Inc., Danville, Ill.

Filed Jan. 9, 1990, Ser. No. 462,618
Int. Cl.[5] B21D *28/26*
U.S. Cl. 72—335 6 Claims

1. A method of producing a collard hole in a sheet of material comprising the steps of:

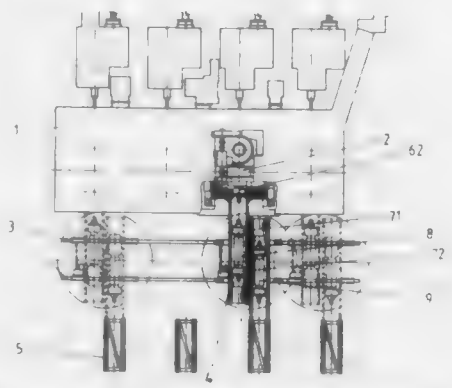
moving a sheet through a die;

sequentially stopping said sheet at multiple stations;

forming with a plurality of first punches a plurality of first holes in said sheet in a certain size and configuration for each collared hole to be formed in said sheet while leaving said first holes spaced apart so material of said sheet extends between said first holes;

removing with a main punch some of said material from between said first holes to transform said plurality of first holes into a single main hole having a center and with portions of material extending inwardly and terminating a distance from said center of said main hole;

extending a straightening punch through said single main hole after said removing step to draw said sheet around said main hole forming a collar of a predetermined height which extends perpendicularly from said sheet; and,



controlling and varying said predetermined height by keeping said certain size and configuration of said first holes fixed while selecting the radius of said main punch (1) to increase said distance with a large radius of said main punch providing a small height of said collar and (2) reduce said distance with a small radius of said main punch providing a large height of said collar.

5,009,096

METHOD AND APPARATUS FOR THE REPLACING OF WORKING ROLLS IN A ROLLING MILL

Matti Mäenpää; Teuvo Lehtoluoma; Kauko Henttinen; Pertti Jokipalo; Aimo Saren, and Seppo Pirinen, all of Hämeenlinna, Finland, assignors to Rautaruukki Oy, Oulu, Finland

Filed Dec. 21, 1989, Ser. No. 454,757
Claims priority, application Finland, Dec. 22, 1988, 885953
Int. Cl.[5] B21B *31/07*
U.S. Cl. 72—239 14 Claims

1. A method for replacing an installed working roll in a rolling mill having a roll stand receiving the installed working roll, a roll track, a car which runs parallel to the roll track and is alignable with the installed working roll, and a storage rack near the roll stand; the method comprising:

(a) providing a replacement working roll in the storage rack;

(b) providing guiding means, for guiding working rolls, rotatably mounted on the car;

(c) simultaneously transferring the installed working roll from the roll stand and the replacement working roll from the storage rack, to the guiding means;

(d) rotating the guiding means to interchange the positions of the installed and replacement working rolls; and

(e) simultaneously transferring the replacement working roll to the roll stand and the installed working roll to the storage rack, from the guiding means.

5,009,097

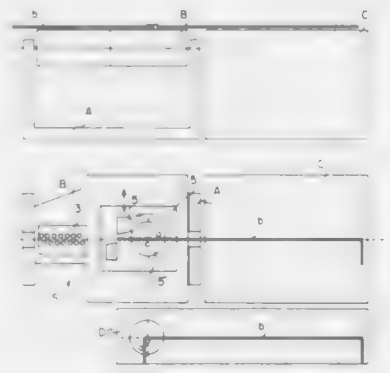
PLANT OR APPARATUS UTILIZING A UNIVERSAL STRAIGHTENING-BENDING MACHINE

Marcello Del Fabro, and Giorgio Del Fabro, both of Reana Del Rojale, Italy, assignors to M.E.P. Macchine Elettroniche Piegatrici S.p.A., Italy

Filed Nov. 17, 1989, Ser. No. 438,771
Claims priority, application Italy, Nov. 23, 1988, 83532 A/88
Int. Cl.[5] B21D *7/024*
U.S. Cl. 72—387 6 Claims

1. A straightening-bending apparatus for wire stock feed comprising in combination, a working table pivotable about a table horizontal axis including:

advancing and straightening means with opposed rolls to straighten and longitudinally advance the wire stock on said working table including guiding means for guiding the feed stock along the working table;



cutting means receiving the wire stock feed from said advancing and straightening means provided on said table for cutting said wire stock feed

bending means for bending said stock material receiving said wire stock feed from said cutting means

wherein the working table is pivotable at an angle β from a generally vertical orientation about said table horizontal axis:

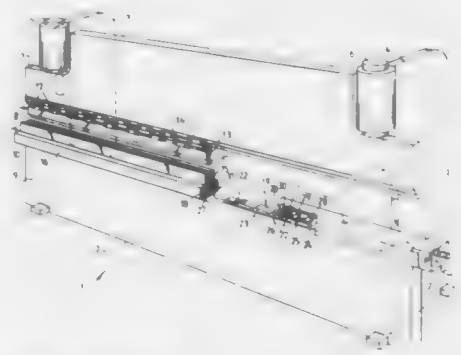
from a first generally horizontal position ($\beta^\circ = 90^\circ$) where the table faces upwardly

to a second positive inclined position ($0^\circ < \beta^\circ < 90^\circ$) in which the working table faces forwardly and upwardly with respect to said longitudinal feed path;

to a third vertical position ($\beta^\circ = 0^\circ$) in which the working table faces forwardly with respect to said longitudinal feed path;

to a fourth negatively inclined position ($0^\circ < -\beta^\circ < 90^\circ$) in which the working table faces forwardly and downwardly with respect to said longitudinal feed path,

and wherein:



the respective working table is displaced downwardly with respect to the longitudinal feed path when the working table is moved to said third vertical position and said fourth negatively inclined position so that wire stock can free fall downwardly from said straightening means, cutting means and bending means.

5,009,098

PRESS AND CURVE-FORMING MEANS THEREFOR

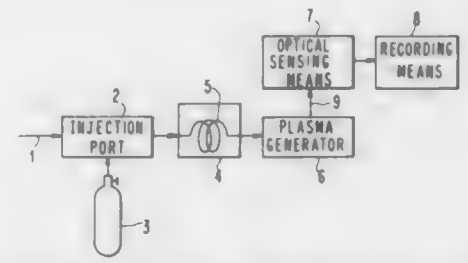
Jacobus L. van Merksteijn, Stad Delden, Netherlands, assignor to Machinefabriek Wila B.V., Lochem, Netherlands

Filed Nov. 27, 1989, Ser. No. 441,106
Int. Cl.[5] B21D *5/02*; B21J *13/03*
U.S. Cl. 72—389 18 Claims

1. A press, comprising:

a frame which bears bending means, the bending means including an upper tool and a lower tool which can be moved in a mutually reciprocal matter;

curve forming means associated with the bending means for forming a curve on the bending means, the curve-forming means including curve-forming members slidable over each other in a lengthwise direction and in a transverse direction relative to the bending means and making contact with each other, the contact surfaces of the curve-forming members in the lengthwise direction and the transverse direction possess respective determined angles of slope α and β; and



means for adjusting the curve-forming members in the lengthwise direction and the transverse direction.

5,009,099

BACKGROUND CORRECTION METHOD FOR USE IN GAS CHROMATOGRAPHY

Gregory J. Wells, Suisun, and Barbara A. Bolton, Albany, both of Calif., assignors to Varian Associates, Inc., Palo Alto, Calif.

Filed May 9, 1989, Ser. No. 349,201
Int. Cl.[5] G01D *18/00*; G01N *21/73*
U.S. Cl. 73—1 G 3 Claims

1. A method of correcting for changes in background radiation in a plasma emission detector comprising a plurality of sensors associated with specific emission frequencies including a sensor associated with at least one principal carbon emission frequency and another sensor associated with a frequency of emission of another element,

each time a new source of helium is connected to the system generating a calibration curve which correlates the response at the said other sensor in the absence of the other element of interest with the response at said carbon sensor,

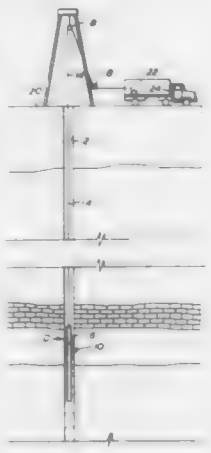
storing said calibration curve in system memory,

thereafter, measuring the signal response at said carbon sensor,

simultaneously measuring the signal response at said other sensor,

subtracting from the signal from said other sensor an amount determined from the calibration curve stored in said system memory.

5,009,100



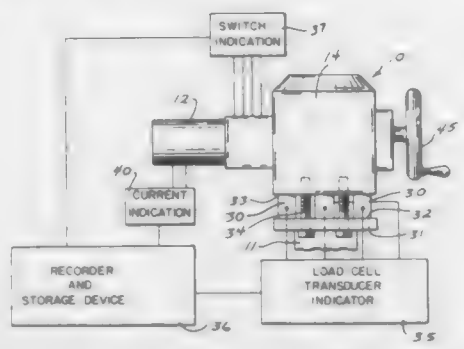
DOWN HOLE RESERVOIR FLUID SAMPLER

Norman G. Gruber, and Owen T. Krauss, both of Calgary, Canada, assignors to Western Atlas International, Inc., Houston, Tex.

Filed Nov. 16, 1989, Ser. No. 437,687
Claims priority, application Canada, Nov. 17, 1988, 583396
Int. Cl.[5] E21B *49/08*
U.S. Cl. 73—155 30 Claims

1. An apparatus, suspended in a bore hole from the surface of the earth, for taking a sample of a fluid from the bore hole, comprising in combination: a housing having at least one port and an interior volume, means for opening the port thereby placing the volume in fluid communication with the fluid in the bore hole, means within the volume for accepting the fluid from the bore hole at a predetermined rate so as not to alter the

fluid, means within the volume for agitating the bore hole fluid received therein, and means within the housing for closing the



port, sealing the bore hole fluid within the volume once the volume is full.

5,009,101

METHOD AND APPARATUS FOR MONITORING AND MEASURING DYNAMIC LOADS IN THRUST INDUCING SYSTEMS

Timothy R. Branam, Manitowoc; Jeffrey J. Roberts, Michicot, and Jack O. Schoenberger, Two Rivers, all of Wis., assignors to Westinghouse Electric Corporation, Pittsburgh, Pa.

Division of Ser. No. 144,949, Jan. 19, 1988, Pat. No. 4,856,327.
This application Jun. 8, 1989, Ser. No. 363,048
Int. Cl.[5] G01M *19/00*
U.S. Cl. 73—168 **5 Claims**

1. In a valve and valve operator assembly including a valve body, a valve plug within the body movable to and between the valve open position and a valve closed position, a valve stem attached to the valve plug, the valve operator assembly including a source of motive power, an operator housing attached to the valve body to provide an attachment interface therebetween, and power transmission means operatively connecting the power source and the valve stem and disposed to transmit an operating load from the power source to the stem for effecting movement of the valve plug, and limit switch and torque switch means operatively attached to the power transmission means and power source for terminating the output of the power source at the valve open position and the valve closed position, a method for monitoring and analyzing the operation of the valve and valve operator assembly comprising the steps of:

(a) attaching load sending means to the attachment interface for continuously measuring a directly proportional part of the actual valve stem operating loads as the valve plug is moved between its open and closed positions;

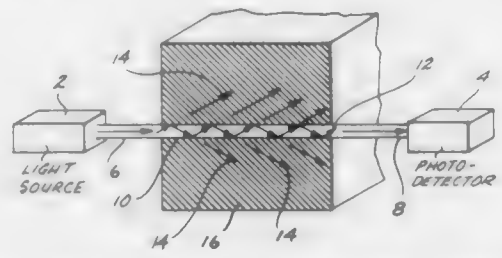
(b) converting the measured loads into the actual valve stem operating loads;

(c) generating an output indication of the actual valve stem operating loads as a function of valve plug position;

(d) concurrently with step (a), monitoring the operation of the limit switch and torque switch means;

(e) generating an output indication of the limit switch and torque switch means operation as a function of valve plug position;

(f) correlating the output of steps (c) and (e); and



(g) utilizing the correlation from step (f) to analyze the operation of the assembly.

5,009,102

METHOD OF MONITORING SOLIDIFICATION OF A LIQUID COMPOSITION

Martin A. Afromowitz, Seattle, Wash., assignor to Board of Regents of the University of Washington, Seattle, Wash.

Division of Ser. No. 147,234, Jan. 22, 1988, Pat. No. 4,904,080.
This application Dec. 1, 1989, Ser. No. 444,754
Int. Cl.[5] G01N *29/20*
U.S. Cl. 73—596 **8 Claims**

1. A method of monitoring a process wherein a liquid composition passes from a liquid phase to a solid phase comprising the steps:

(a) dispersing particles having an acoustic impedance Z_1 in the liquid composition having an acoustic impedance Z_2, such that Z_1 and Z_2 are unequal, the solid phase of the liquid composition having an acoustic impedance Z_3 that is substantially equal to Z_1;

(b) providing a solidifying composition by subjecting the liquid composition containing the particles to conditions that cause the liquid composition to solidify;

(c) introducing acoustic waves into the solidifying composition containing the particles; and

(d) detecting the introduced acoustic waves scattered by the particles.

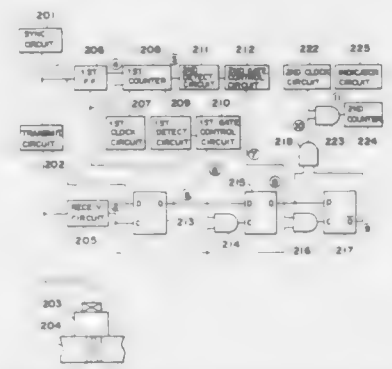
5,009,103

ULTRASONIC THICKNESS MEASURING METHOD AND APPARATUS

Izumi Sato, Yokosuka; Koji Saito, Kawasaki, and Takashi Inoue, Tokyo, all of Japan, assignors to Tokyo Keiki Co., Ltd., Tokyo, Japan

Filed Jan. 31, 1989, Ser. No. 304,445
Claims priority, application Japan, Feb. 1, 1988, 63-21681; Feb. 1, 1988, 63-21682; Feb. 4, 1988, 63-14063
Int. Cl.[5] G01N *9/24*
U.S. Cl. 73—597 **8 Claims**

1. An ultrasonic thickness measuring method in which an ultrasonic pulse is transmitted from a probe into a material having a thickness to be measured, and resulting multiple reflection pulses from the material are detected to obtain a time interval between the reflection pulses to derive the thickness of the material, said method comprising the steps of:



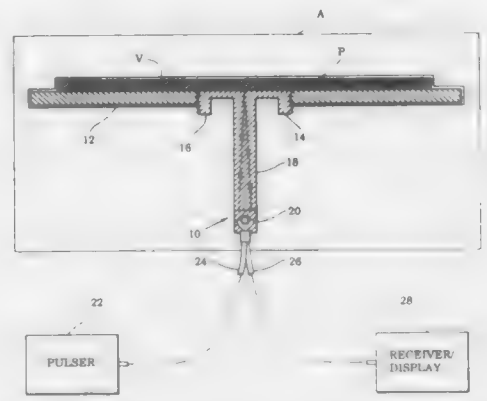
transmitting an ultrasonic pulse into a material whose thickness is to be measured;

detecting a first reflection pulse from a bottom surface of said material;

measuring a first time period from the transmission of the ultrasonic pulse to reception of said first reflection pulse;

detecting a second reflection pulse received within a preset period of time occurring after said first reflection pulse has been received, said preset period of time ending immediately prior to the end of a second time period corresponding in duration to said first time period, said second time period beginning immediately after detecting said first reflected pulse; and

measuring a third time period between the reception of the first reflection pulse and the reception of the second reflection pulse whereby said third time period corresponds to a measure of the thickness of the material.



5,009,104

ULTRASONIC CURE MONITORING OF ADVANCED COMPOSITES

Delwin O. Johnson, San Diego, Calif., assignor to General Dynamics Corporation, San Diego, Calif.

Filed Nov. 30, 1989, Ser. No. 443,637
Int. Cl.[5] G01N *29/16, 9/24*
U.S. Cl. 73—597 **15 Claims**

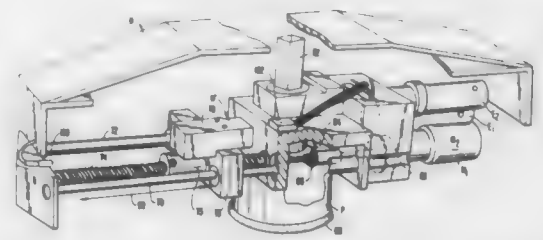
1. A non-destructive method for monitoring the time dependent curing of an advanced composite positioned within an autoclave where it is subjected to varying pressure and temperature over a predetermined period of time, which metnod comprises:

positioning an uncured advanced composite secured within a vacuum bag and carried by a tool within an autoclave;

varying the heat and pressure within the autoclave over a predetermined period of time to cure the composite;

coupling an acoustic waveguide to one side of the uncured advanced composite by extending said acoustic waveguide through an aperture provided in said tool so that the wave guide may be directly coupled to a surface of the composite;

directing a pulse of ultrasound energy through the waveguide to the side of the advanced composite; and



analyzing the ultrasound energy reflected from the side of the advanced composite to determine the modulus of the advanced composite at a particular point in its curing.

5,009,105

APPARATUS FOR ULTRASONIC EXAMINATION OF BWR SHROUD ACCESS COVER PLATE RETAINING WELDS

David L. Richardson, Los Gatos; Jack P. Clark; Balasubramanian S. Kowdley, both of San Jose; Peter M. Patterson, Livermore; Richard W. Perry, and Thurman D. Smith, both of San Jose, all of Calif., assignors to General Electric Company, San Jose, Calif.

Division of Ser. No. 293,158, Jan. 3, 1989, Pat. No. 4,966,746.
This application Feb. 7, 1990, Ser. No. 476,086
Int. Cl.[5] G01N *29/04*
U.S. Cl. 73—621 **1 Claim**

1. An apparatus for the submersed inspection of a cover plate welded over an access hatch in a remote submerged location in a nuclear reactor, said apparatus comprising:

an elongate housing having a top side, a bottom side, and two sides;

the top side of said housing having at either end thereof upwardly exposed support points for raising and lowering of said housing;

said housing at the bottom side having an attached protruding pedestal, said pedestal provided for resting rotative support of said housing thereon;

a first motor operably connected between said pedestal and housing for causing said housing to rotate relative to said pedestal;

said housing bottom defining between said pedestal and one end of said housing an elongate slot for permitting sound waves to pass therethrough;

a ultrasound mount mounted to said housing for reciprocal movement along said slot;

a focused ultrasound transducer mounted to said mount for acoustical interrogation through water of metal disposed below said housing;

a second motor operatively connected between said housing and mount for causing relative excursion of said mount and transducer along said elongate slot of said housing whereby said housing and rotate and acoustically interrogate metal disposed about the pedestal.

FLOW TUBE DRIVE CIRCUIT HAVING A BURSTY OUTPUT FOR USE IN A CORIOLIS METER

Paul Kalotay, Lafayette; Robert Bruck, Boulder; Arnold Emch, Estes Park, and Donald Martella, Louisville, all of Colo., assignors to Micro Motion, Inc., Boulder, Colo.

Filed Dec. 6, 1989, Ser. No. 446,614

Int. Cl.[5] G01F *1/84*

U.S. Cl. 73—861.38 **15 Claims**

1. A Coriolis meter having a drive circuit for supplying energy to a drive coil used within the meter and wherein the meter has at least one flow conduit, said meter comprising:

a drive mechanism, having a drive coil, affixed to a flow conduit for causing said conduit to move about a pre-defined bending axis; and

energy providing means, connected to said drive coil and responsive to a signal representing motion of the flow conduit, comprising:

means for measuring said signal so as to produce measured values thereof;

means, responsive to said measured values, for determining whether the signal has an amplitude value that is less than a limit value at a pre-defined point on said signal; and

applying means, responsive to said determining means, for providing a pre-defined burst of energy to said drive coil at a pre-defined point in a cycle of oscillatory movement of said flow conduit in the event said amplitude value is less than said limit value and for providing substantially no energy to said coil during said cycle other than when said burst occurs, wherein said applying means provides substantially no energy to said drive coil anytime during said cycle in the event said amplitude value equals or exceeds said limit value such that said flow conduit oscillates with a peak amplitude that remains substantially within a prescribed range.

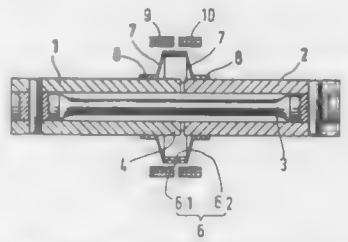
TORQUE SENSOR, IN PARTICULAR FOR ELECTRIC STEERING MECHANISM

Armin Lang, Schwäbisch Gmünd, and Bernhard Schweizer, Böbingen/Rems, both of Fed. Rep. of Germany, assignors to Zahnradfabrik Friedrichshafen, AG., Friedrichshafen, Fed. Rep. of Germany



PCT No. PCT/EP88/00063, § 371 Date Jul. 12, 1989, § 102(e) Date Jul. 12, 1989, PCT Pub. No. WO88/05742, PCT Pub. Date Aug. 11, 1988

PCT Filed Jan. 29, 1988, Ser. No. 381,406

Claims priority, application Fed. Rep. of Germany, Feb. 3, 1987, 3703102

Int. Cl.[5] G01L *3/10*

U.S. Cl. 73—862.33 **27 Claims**

1. A torque sensor particularly for electric steering mechanisms and which has a torque bar (3) with input means (1, 2) (21, 22) (31, 32) secured thereon; output means (6, 6.1, 6.2) (12, 13) (26); connecting means connecting each said input means to said output means and comprising a respective array of flexible elements secured to respective input means and the output means; the improvement comprising:

a lost motion connection between said input means; said flexible elements comprising a conical array of plastic spokes (7) carrying said output means; wherein spokes (7) on one side of respective the input means are circumferentially slanted in an opposite direction to the spokes on the other side whereby relative bi-directional rotation between said input means effects a respective axial opposite movement of said output means; and means responsive to said movement of said output means to effect torque measurement.

DIFFERENTIAL FORCE BALANCE APPARATUS

Paul West, Glendale; Mirik Hovsepian, and Ronald Thomas, both of Pasadena, all of Calif., assignors to Quanscan, Inc., Pasadena, Calif.

Filed Aug. 31, 1988, Ser. No. 239,365

Int. Cl.[4] G01L *1/08;* **G01P** *15/13*

U.S. Cl. 73—862.61 **20 Claims**

12. A force measurement apparatus which comprises:

a first element incorporating a first electrode;

a second electrode in a spaced-apart relationship to said first electrode;

means for causing a current to exist between said first and second electrodes by non-contact electron transfer mechanisms;

first distance maintenance means for maintaining the distance between said first and second electrodes at a constant value, said first maintenance means having a measurable electrical property when maintaining the distance at the constant value;

a second element incorporating a third electrode;

a fourth electrode in spaced apart relationship to said third electrode;

means for causing a current to exist between said third and fourth electrodes by non-contract electron transfer mechanisms;

second distance maintenance means for maintaining the distance between said third and fourth electrodes at a constant value, said second maintenance means having a measurable electrical property when maintaining the distance at the constant value; and

means for measuring the electric properties of said first and second distance maintenance means.

METHOD AND APPARATUS FOR CONDUCTING FIELD DISSIPATION AND LEACHING STUDIES

Lowell J. Lawrence, Lexington, Ky.; Luis O. Ruzo, Berkley, Calif., and Gene L. Olson, Lexington, Ky., assignors to Pharmacology & Toxicology Research Lab., Richmond, Ky.

Filed May 5, 1989, Ser. No. 351,916

Int. Cl.[5] G01N *1/00*

U.S. Cl. 73—866 **15 Claims**

1. A method for conducting field dissipation and leachate studies of a test substance utilizing boundary means to define a soil test zone and collecting means for collecting leachate from said soil test zone, comprising the steps of:

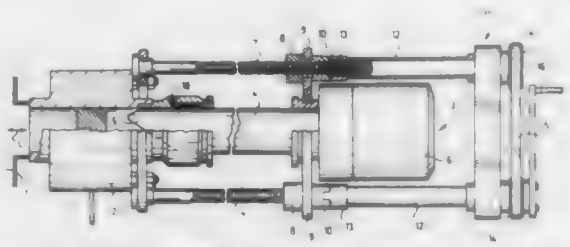
positioning said boundary means into the ground;

exposing, a bottom end of said boundary means which remains undisturbed in place in said ground substantially without disturbing said soil test zone;

collecting leachate from said soil test zone within said boundary means; and

analyzing said leachate.

9. An apparatus for conducting field dissipation and leachate studies of a test substance, comprising: p1 boundary means for positioning into the ground to define a soil test zone, said boundary means being a column that is driven into the ground substantially without disturbing or compacting soil in said soil test zone; and



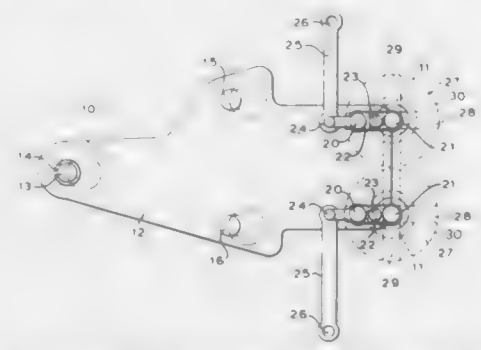
means for collecting leachate from a bottom end of said boundary means left undisturbed in place in said ground.

5,009,113

ARRANGEMENT FOR DISPLACING A MEASURING HEAD OF A MEASURING MEANS INTO AND FROM A PROCESS SPACE

Esko Kamrat, Vantaa, Finland, assignor to Janesko Oy, Helsinki, Finland

Filed Mar. 6, 1990, Ser. No. 489,000
Claims priority, application Finland, Apr. 20, 1989, 891894
Int. Cl.[5] G01N *17/00*
U.S. Cl. 73—866.5 4 Claims



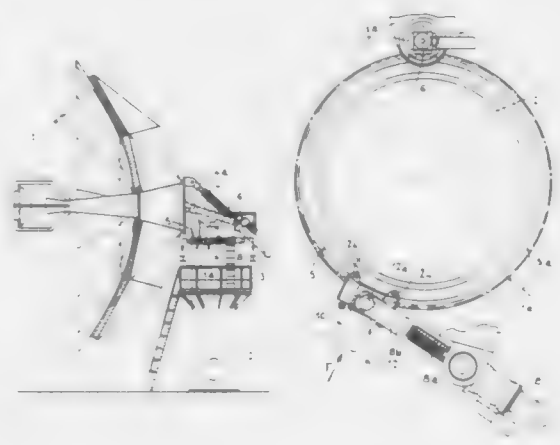
1. An arrangement for displacing a measuring head of a measuring means into and from a process space, which arrangement comprises a valve element to be fastened to a wall of the process space and a measuring means to be fastened to the valve element, which measuring means comprises an oblong tube, at one end of which is a measuring head, the measuring means being arranged to be moved through the valve element to a position in which the measuring head extends into the process space and back again to a position in which the measuring head is not in connection with the process space, said arrangement comprising at least two threaded bars parallel to the displacement direction of the measuring means and fastened directly to the valve element and at least two threaded stop elements in the form of bushings rotatably mounted on a flange located on the measuring means and arranged to directly cooperate with the threaded bars, the threaded stop elements being provided with joining elements for the fastening of a device for the rotation of the stop elements, and displacing motion of the measuring means being provided by relative motion between the threaded stop elements and the threaded bars.

5,009,114

MECHANISM FOR TRANSMITTING ROTATIONAL MOTION FROM ONE SHAFT TO ANOTHER

Bryan N. V. Parsons, Stoney Stanton, United Kingdom, assignor to Jaguar Cars Limited, England

Filed Nov. 21, 1989, Ser. No. 439,786
Claims priority, application United Kingdom, Nov. 24, 1988, 8827432
Int. Cl.[5] F16H *21/00;* F01L *1/00*
U.S. Cl. 74—15.63 10 Claims



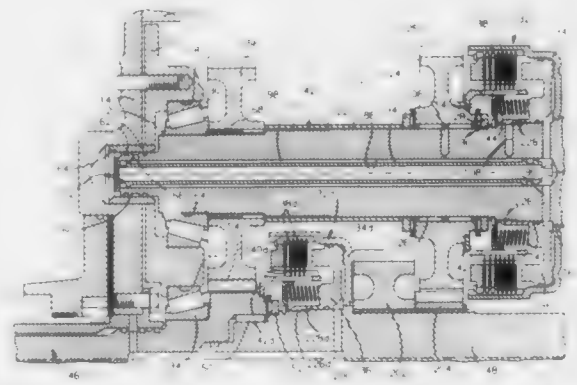
1. A mechanism for transmitting rotational motion from an input shaft to an output shaft comprising a link constrained to move in an orbital path, the input shaft being coupled to the link so that rotation of the input shaft will move the link in its orbital path; and the output shaft being parallel to the said input shaft and coupled to the link so that orbital motion of the link will rotate the output shaft; the coupling between at least one of the shafts and the link including interengaging components the relative positions of which vary as the link moves in its orbital path, one of said components being mounted on the said one of the shafts for rotation therewith and another of said components being mounted on the link for pivotal movement relative thereto, the component mounted on the link being positioned such that as the link moves in its orbital path, and axis of the pivotal movement will describe a circular path concentric with the axis of rotation of the said one of the shafts, a lever being pivotally connected at one end to the component mounted on the link and at its other end to a pivot which is isolated from the movement of the link.

5,009,115

DEVICE FOR DRIVING IN ROTATION A STRUCTURE OF LARGE DIAMETER PARTICULARLY AN ANTENNA

Patrice Ringot, Grenoble, and Parendel Marc, Moirans, both of France, assignors to Neyrpic Framatome Mecanique, Paris la Defense, France

Filed Mar. 9, 1990, Ser. No. 491,174
Claims priority, application France, Mar. 10, 1989, 89 03431
Int. Cl.[5] F16H *27/020, 57/020;* F16M *11/120;* H01Q *3/000*
U.S. Cl. 74—89.150 12 Claims



1. An apparatus for rotating a structure such as an antenna wherein the structure is mounted to a support pedestal having a ring gear mounted therebetween and wherein the ring gear includes a plurality of teeth comprising, a first adjustment means including a motor having a drive shaft, pinion means mounted to said drive shaft and engaging said teeth of said ring gear so as to rapidly rotate the structure about an axis taken through the ring gear when said motor is activated, a second adjustment means for enabling a slower exacting rotation of the structure about said axis, said second adjustment means including a jack means having an extensible member, a coupling member carried by said extensible member, said coupling member including shiftable engaging means for selectively engaging said teeth of said ring gear and for disengaging said coupling member from said ring gear in order to permit the rapid rotation of the structure by said first adjustment means.

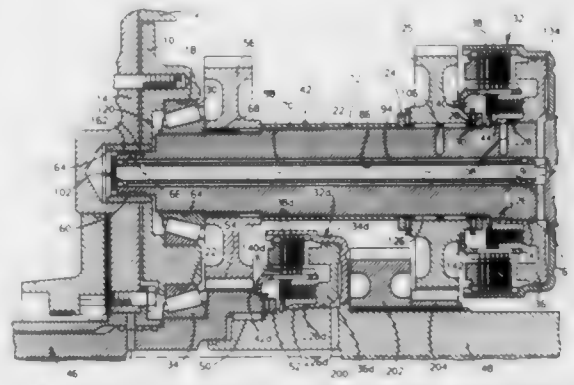
POWER TRANSMISSION

James P. Ordo, Plainfield; James A. Raszkowski, Indianapolis, and Donald Klemen, Carmel, all of Ind., assignors to General Motors Corporation, Detroit, Mich.

Filed Mar. 30, 1990, Ser. No. 502,195
Int. Cl.[5] F16H *3/08*
U.S. Cl. 74—331 3 Claims



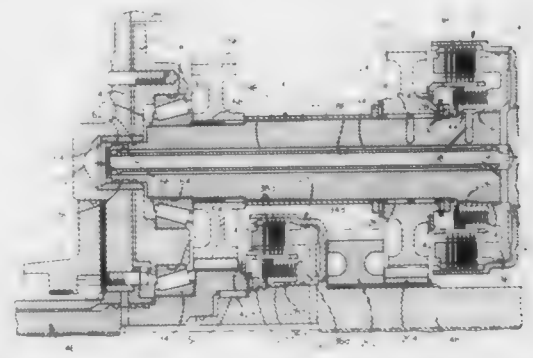
1. A transmission comprising: a housing having first and second end covers; an input shaft rotatably mounted in the first end cover; an output shaft rotatably supported on the input shaft and in said second end cover; first and second countershafts rotatably supported in said end covers for rotation on respective axis parallel with said input shaft and said output shaft; a first head gear continuously rotatable with said input shaft; second and third head gears meshing with said first head gear and continuously rotatable with the first and second countershafts respectively; a plurality of ratio gears rotatably supported on each of said countershafts including a first ratio gear on said first countershaft and a second ratio gear on said second countershaft; reverse gear means including a first member rotatable with said first ratio gear and a second member rotatably supported on said second countershaft; synchronizer clutch means selectively and alternatively connectible with said second ratio gear and said second member of said reverse gear means; output gear means drivingly connected with said output shaft and including a first ratio output gear meshing with said first ratio gear and a second ratio output gear meshing with said second ratio gear; first selectively engageable friction clutch means for connecting said first ratio gear with said first countershaft for completing a low forward drive ratio between said input and output shafts; and second selectively engageable friction clutch means for selectively connecting said synchronizer clutch means to said second countershaft and cooperating therewith to selectively alternatively complete a reverse drive ratio between said input shaft and said output shaft and another forward drive ratio between said input and output shafts, said reverse drive ratio being transmitted to said output shaft through said first ratio gear and said first ratio output gear.

5,009,117

COUNTERSHAFT POWER TRANSMISSION WITH DOWEL PIN AND SEAL RING STRUCTURE

James P. Ordo, Plainfield, and Harry E. Latshaw, Danville, both of Ind., assignors to General Motors Corporation, Detroit, Mich.

Filed Mar. 30, 1990, Ser. No. 502,196
Int. Cl.[5] F16H *3/08*
U.S. Cl. 74—331 2 Claims



1. A multiple countershaft power transmission comprising: a casing including a bell housing, an outer housing, and an end cover; an assembly support plate having bearing locations for supporting bearings; an input shaft rotatably supported on one bearing in said support plate; a pair of countershafts rotatably supported on second and third bearings in said support plate, each of said countershafts having a centrally disposed clutch engagement passage and an annular clutch lubrication passage; a dowel and seal sleeve member secured in the bell housing for each countershaft including a surface for locating the support plate for positioning of said support plate during securement with said bell housing; a radial passage for communicating fluid with said annular lubrication passage; and an axial end opening for communicating fluid pressure with said central clutch engagement passage.

5,009,118

POWER TRANSMISSION WITH PARALLEL IDENTICAL COUNTERSHAFTS

James A. Raszkowski, Indianapolis, and Donald Klemen, Carmel, both of Ind., assignors to General Motors Corporation, Detroit, Mich.

Filed Mar. 30, 1990, Ser. No. 502,198
Int. Cl.[5] F16H *3/08*
U.S. Cl. 74—331 2 Claims

1. An improvement in multiple countershaft transmissions including: a housing having a casing, a first end support and a second end support; an input shaft rotatably mounted in the first end support; an output shaft rotatably supported on the input shaft and in said casing; first and second countershafts

rotatably supported in one of said end supports and in said casing for rotation on respective axis parallel with said input shaft and said output shaft; a first head gear continuously rotatable with said input shaft; second and third head gears meshing with said first head gear and continuously rotatable with the first and second countershafts respectively; a plurality of ratio gears rotatably supported on each of said countershafts including a first ratio gear on said first countershaft and a second ratio gear on said second countershaft; reverse gear means including a first member rotatable with said first ratio gear and a second member rotatably supported on said second countershaft; synchronizer clutch means selectively and alternatively connectable with said second ratio gear and said second member of said reverse gear means; output gear means drivingly connected with said output shaft and including a first ratio output gear meshing with said first ratio gear and a second ratio output gear meshing with said second ratio gear; first selectively engageable friction clutch means for connecting said first ratio gear with said first countershaft for completing a low forward drive ratio between said input and output shafts, and second selectively engageable friction clutch means for selectively connecting said synchronizer clutch means to said second countershaft and cooperating therewith to selectively alternatively complete a reverse drive ratio between said input shaft and said output shaft and another forward drive ratio between said input and output shafts, and third and fourth selectively engageable clutch means for selectively establishing two additional forward drive ratios between said input and output shafts; wherein the improvement comprises: said countershafts having identical dimensions from end to end and having centrally disposed clutch mounting structure for mounting respective selectively engageable friction clutch means for selectively connecting said gear means with the respective countershafts.

5,009,119

BRAKE CONTROL APPARATUS FOR BICYCLE

Masashi Nagano, Izumi, Japan, assignor to Shimano Industrial Company Limited, Osaka, Japan

Filed Oct. 4, 1989, Ser. No. 417,031

Claims priority, application Japan, Oct. 7, 1988, 63-132123[U]

Int. Cl.[5] **B62K** *23/06*; **B62L** *3/02*

U.S. Cl. 74—489 **7 Claims**

1. A brake control apparatus for a bicycle, comprising:

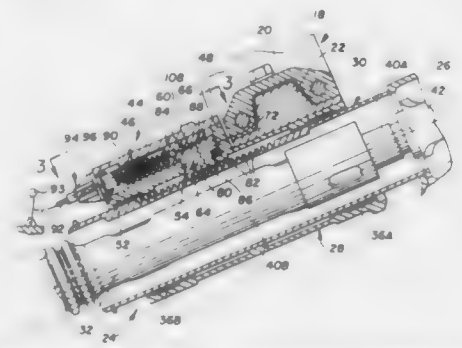
a bracket;

a brake lever pivoted to the bracket via a lever shaft; and

a lever spring for urging the brake lever to its home position relative to the bracket;

wherein said lever spring includes a pair of spring legs respectively coupled with said bracket and said brake lever and a coil portion disposed between said spring legs, at least one of said pair of spring legs being movable with respect to one of said bracket and said brake lever, said coil portion being arranged such that return movement of said brake lever to its home position relative to said bracket is realized by flexion of a radial center line of said coil portion of the lever spring.

5,009,120



MANUAL CONTROL FOR ADJUSTABLE STEERING COLUMN

Stanley J. Iseler, Midland; Howard D. Beauch, Frankenmuth; Benjamin H. Everett, II, Saginaw, and John P. Sutorik, Frankenmuth, all of Mich., assignors to General Motors Corporation, Detroit, Mich.

Filed Feb. 23, 1990, Ser. No. 483,617

Int. Cl.[5] **B62D** *1/18*

U.S. Cl. 74—493 **5 Claims**

1. In a steering column including an outer member and an inner tubular member movable relative to said outer member in the direction of a longitudinal centerline of said steering column so that said steering column is lengthwise adjustable,

a manual control comprising:

means defining a plurality of rack teeth on said inner member oriented at a predetermined angle to said longitudinal centerline.

a housing on said outer member,

a clutch element mounted on said housing for radial bodily shiftable movement relative to said longitudinal centerline between a lowered position and a raised position and for lateral bodily shiftable movement relative to said longitudinal centerline,

means defining a plurality of rack teeth on said clutch element oriented at said predetermined angle relative to said longitudinal centerline and meshing with said rack teeth on said inner member in said lowered position of said clutch element to immobilize said inner member relative to said outer member in the direction of said longitudinal axis and disengaged from said inner member rack teeth in said raised position of said clutch element,

means defining a first inclined ramp on said clutch element,

means defining a second inclined ramp and a third inclined ramp on said clutch element on opposite sides of said first inclined ramp,

a first spring means on said housing biasing said clutch element toward said raised position,

an actuator on said housing movable in the direction of said longitudinal centerline toward and away from said clutch element and engageable on said first inclined ramp when moving toward said clutch element to drive said clutch element from said raised to said lowered position,

a second spring means biasing said actuator toward said clutch element,

manual operating means connected to said actuator and operative to move said actuator away from said clutch element against said second spring means,

a first side bar on said housing movable in the direction of said longitudinal centerline toward and away from said clutch element and engageable on said second inclined ramp when moving toward said clutch element to drive said clutch element laterally in a first direction,

a third spring means biasing said first side bar toward said clutch element,

a second side bar on said housing movable in the direction of said longitudinal centerline toward and away from said clutch element and engageable on said third inclined ramp when moving toward said clutch element to drive said clutch element laterally in a second direction opposite said first direction,

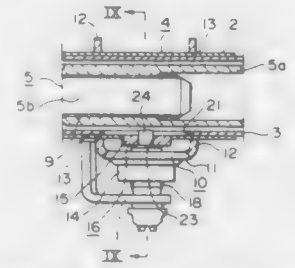
a fourth spring means biasing said second side bar toward said clutch element,

means operative to move each of said first and said second side bars away from said clutch element as a unit with said actuator, and

blocking means on said clutch element operative to prevent engagement of each of said first and said second side bars on the corresponding ones of said second and said third inclined ramps until said clutch element achieves substantially said lowered position.

5,009,121

TELESCOPIC STEERING COLUMN DEVICE



Sakae Matsumoto, Takasaki, and Mitsuo Ichikawa, Maebashi, both of Japan, assignors to Nippon Seiko Kabushiki Kaisha, Tokyo, Japan

Filed Jul. 2, 1990, Ser. No. 546,838

Claims priority, application Japan, Jul. 7, 1989, 1-174064; Jul. 7, 1989, 1-174065; Mar. 27, 1990, 2-30559[U]

Int. Cl.[5] **B62D** *1/18*

U.S. Cl. 74—493 **3 Claims**

1. A telescopic steering column device comprising:

a drive-side steering shaft an end portion of which is connected to a steering wheel;

a driven-side steering shaft connected to said drive-side steering shaft in such a manner that said drive-side steering shaft can be expanded/contracted and the rotation of said drive-side steering shaft can be transmitted;

a cylindrical inner column rotatably supporting said drive-side steering shaft and having an elongated hole elongated in the axial direction;

a cylindrical outer column having an opening in the side surface thereof corresponding said elongated hole in said inner column, fastened on the outer surface of said inner column so as to be telescopically combined with said inner column and positionally fixed in the axial direction with respect to said driven-side steering shaft;

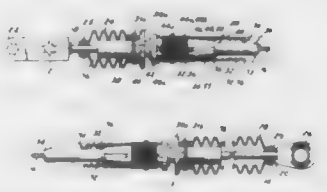
a lock bracket having a thread hole at its portion corresponding said opening in said outer column and secured to said outer column;

a lock member having a through hole at the central portion thereof and the inner surface thereof which is brought into contact with the outer surface of said inner column, said lock member being arranged to be fitted within said opening in said outer column; and

a lock screw having the inner portion which is engaged with said lock member and a projection which is formed at the central portion of said inner portion, which is rotatably inserted into said through hole of said lock member and which is inserted into said elongated hole in said inner column so that the axial displacement of said inner column with respect to the position of said outer column is allowed while the rotation of said inner column with respect to said outer column is prevented, said lock screw being driven into said thread hole in said lock bracket, whereby

said inner column is secured to said outer column by abutting said inner surface of said lock member against the outer surface of said inner column by adjusting said lock screw and said inner column can be expanded/contracted with respect to said outer column by releasing said abutment.

5,009,122



SEALED CABLE CONTROL SYSTEM

Adam W. Chaczyk, Sterling Heights, and John M. Baumgarten, West Bloomfield, both of Mich., assignors to Babcock Industries, Inc., Fairfield, Conn.

Filed Jan. 4, 1990, Ser. No. 461,032

Int. Cl.[5] **F16C** *1/10*; **F16J** *15/50*

U.S. Cl. 74—502.6 **6 Claims**

1. A cable control system including respective first and second sealed protective boots,

a sealed conduit connected therebetween,

a pair of air transfer fittings comprising a first fitting and a second fitting,

said fittings being sealingly connected to said respective boots and conduit and constructed and arranged to provide a passage from the interior of said boot and through said fitting and along a portion of the exterior of said fittings, and said portion adjacent the exterior of said conduit,

a tube encompassing said conduit and at least said portion of said fitting,

said tube providing a sealed chamber forming a passage around said conduit and at least said portion of said fitting,

said chamber being sealingly connected to each respective end of said tube to each respective one of said pair of air transfer fittings, and

said passage and said chamber being sealingly connected and constructed and arranged to provide a continuous passage from the interior of said first boot, through said first fitting and along said portion then through said chamber forming a passage, to said second fitting and along said portion of said second fitting and through said second fitting and then through said interior to said second boot,

each said air transfer fitting being in the shape of a cylinder adapted to be sealed at one end to said first boot and having another end which is tapered and is sealingly connected to said conduit,

a pair of ports in said cylinder, each of said ports extending from the surface of said cylinder and radially inwardly and through said cylinder to an interior channel within said cylinder constructed and arranged to form a passage between the interior of said boot and the exterior of said cylinder,

a pair of slots formed by grooves cut along a portion of the surface of said cylinder,

said slots extending generally axially along said portion of the exterior of said cylinder and disposed about 90° to said radially extending ports,

said slots being constructed and arranged with respect to said ports to form a passage from the interior of said boot to the exterior of said cylinder and axially along said portion of the exterior of said cylinder.

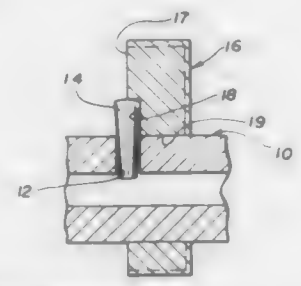
CAMSHAFT

Takeshi Hiraoka, Saitama; Shunsuke Takeguchi, Tochigi, and Satoshi Kawai, Kuki, all of Japan, assignors to Nippon Piston Ring Co. Ltd., Tokyo, Japan



Filed May 4, 1989, Ser. No. 347,224

Claims priority, application Japan, May 23, 1988, 63-66898[U]

The portion of the term of this patent subsequent to Mar. 12, 2008, has been disclaimed.

Int. Cl.[5] F16H *53/00*; B25G *3/28*

U.S. Cl. 74—567 1 Claim

1. A camshaft comprising

a steel shaft,

at least one pin-receiving hole formed in the outer surface of said shaft and perpendicular to the axis of said shaft,

cam pieces made from a sintering alloy material and secured to said shaft by sintering,

a pin-receiving groove formed in the side surface of each of said cam pieces,

a positioning pin having a lower portion inserted into and tightly held by each of said holes and an upper portion fitted in said pin-receiving groove to define the axial and peripheral portions of said cam pieces on said shaft when said cam piece is sintered,

said positioning pin having a tapered configuration and said pin-receiving hole having a straight configuration.

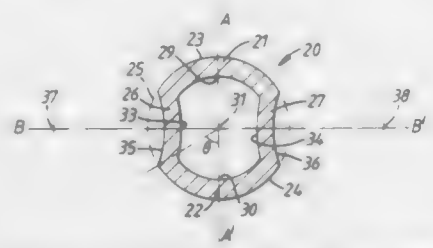
WRIST PIN



Olivier Beaurepaire, Annecy, France, and Frederick H. Thompson, Bradford, England, assignors to AE PLC, Rugby, England

Continuation of Ser. No. 325,048, Mar. 16, 1989, abandoned, which is a continuation of Ser. No. 9,897, Feb. 2, 1987, abandoned. This application Feb. 27, 1990, Ser. No. 485,885

Claims priority, application United Kingdom, Feb. 13, 1986, 8603582

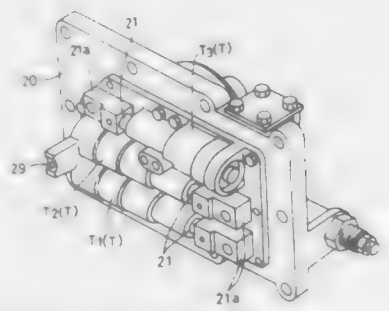
Int. Cl.[5] F16C *3/04*

U.S. Cl. 74—595 11 Claims

1. A wrist pin comprising an elongate, substantially hollow member having two spaced-apart convex portions each having a substantially cylindrical outer form and which co-operate with corresponding surfaces in wrist pin bosses of an associated piston and in the small end of an associated connecting rod wherein said convex portions are connected by walls of greater radius of curvature than the radius of curvature of said convex portions.

5,009,125

SPEED CONTROL STRUCTURE



Satoshi Machida, and Akio Hattori, both of Osaka, Japan, assignors to Kubota Ltd., Osaka, Japan

Filed Nov. 1, 1989, Ser. No. 431,019

Claims priority, application Japan, Jan. 26, 1989, 1-19309; Jan. 27, 1989, 1-18293; Feb. 3, 1989, 1-26278

Int. Cl.[5] F16H *57/02*, *5/12*

U.S. Cl. 74—606 R 3 Claims

1. A speed control structure comprising;

change speed means including a hydraulic clutch,

a transmission case for housing said change speed means having an opening to expose said hydraulic clutch,

a lid for closing said opening, and

hydraulic control means for controlling said hydraulic clutch, said hydraulic control means including;

hydraulic actuator means for effecting change speed,

a speed control valve for controlling said hydraulic actuator means,

a pilot operated switch valve mounted on an oil line extending to said hydraulic clutch and operatively connected to said hydraulic actuator means for disengaging said hydraulic clutch to start a change speed by said hydraulic actuator means, and engaging said hydraulic clutch upon completion of the change speed, and

a pilot control valve for controlling pilot pressure for the switch valve in response to the operation of said hydraulic actuator means,

wherein said lid carries said hydraulic actuator means mounted on an inside face thereof, said switch valve and said speed control valve mounted on an outside face thereof, and said pilot control valve mounted inside said transmission case.

HYDROSTATIC-MECHANICAL DRIVE SYSTEM

Erwin Meisinger, Hauzenberg, and Jürgen Zimmer, Passau, both of Fed. Rep. of Germany, assignors to Zahnfabrik Friedrichshafen AG, Friedrichshafen, Fed. Rep. of Germany

PCT No. PCT/EP88/00889, § 371 Date Apr. 5, 1990, § 102(e) Date Apr. 5, 1990, PCT Pub. No. WO89/03320, PCT Pub. Date Apr. 20, 1989

PCT Filed Oct. 5, 1988, Ser. No. 469,572

Claims priority, application Fed. Rep. of Germany, Oct. 13, 1987, 3734622

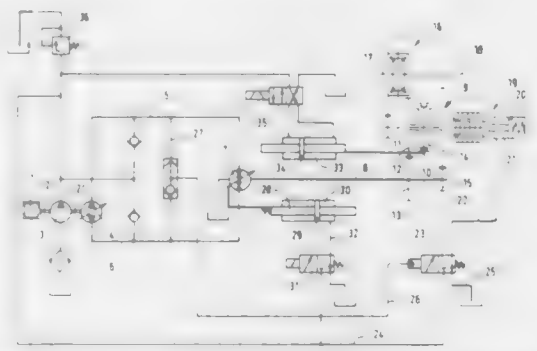
Int. Cl.[5] F16H *47/06*

U.S. Cl. 74—733.1 3 Claims

1. A hydrostatic-mechanical drive system particularly for agricultural and construction vehicles, said system comprising:

an adjustable hydrostatic gearbox including a servohydraulic pump, said gearbox employing for control a hydraulic pressure medium operating in a hydrostatic cycle, said cycle including a high-pressure segment;

a mechanical two step gearbox subsequently serially connected to said adjustable hydrostatic gearbox, comprising:



a driven shaft; and

a mechanical parking brake acting directly upon said driven shaft, said brake including a cylinder;

a pressure duct leading away from said adjustable hydrostatic gearbox;

a 3/2-way valve communicating with said pressure duct and said cylinder;

a pressure-free return duct communicating with said 3/2-way valve and said pressure duct; and

wherein said parking brake is actuated by a branching off of said pressure medium from said high-pressure segment of said hydrostatic cycle through said pressure duct to switch said 3/2-way valve either causing actuation of said cylinder of said parking brake with pressure from said servohydraulic pump or causing connection of said parking brake with said pressure-free return valve.

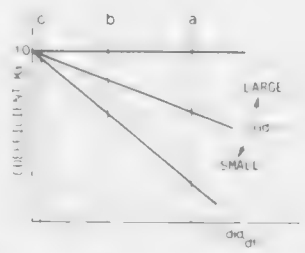
TRANSMISSION RATIO CONTROL SYSTEM FOR A CONTINUOUSLY VARIABLE TRANSMISSION



Yoshihiko Morimoto, Mitaka, and Tetsushi Kohno, Musashino, both of Japan, assignors to Fuji Jukogyo Kabushiki Kaisha, Tokyo, Japan

Filed Oct. 6, 1989, Ser. No. 418,188

Claims priority, application Japan, Oct. 14, 1988, 63-260185

Int. Cl.[5] B60K *41/14*

U.S. Cl. 74—866 3 Claims

1. A control system for a continuously variable transmission for transmitting power of an engine mounted on a motor vehicle, the engine having a throttle valve, the transmission comprising a drive pulley having a hydraulically shiftable disc and a hydraulic cylinder for operating the disc, a driven pulley having a hydraulically shiftable disc and a hydraulic cylinder for operating the disc of the driven pulley, a belt engaged with both pulleys, the control system comprising a first hydraulic circuit having a pump for supplying oil to both the hydraulic cylinders, a transmission ratio control valve for controlling the oil supplied to the cylinder of the drive pulley to change the transmission ratio of the transmission to a desired transmission ratio, the system comprising:

transmission ratio control means for operating the transmission ratio control valve;

a drive pulley speed sensor for producing a drive pulley speed signal;

a driven pulley speed sensor for producing a driven pulley speed signal;

a throttle position sensor for sensing an opening degree of the throttle valve and for producing a throttle opening degree signal;

first calculator means responsive to the drive pulley speed signal and the driven pulley speed signal for producing an actual transmission ratio signal;

means responsive to the throttle opening degree signal and to the actual transmission ratio signal for producing a desired transmission ratio signal;

second calculator means responsive to the desired transmission ratio signal for producing a desired transmission ratio changing speed signal;

third calculator means responsive to the actual transmission ratio signal and the desired transmission ratio signal for calculating a difference between both the ratio signals and for producing a ratio difference signal;

coefficient setting means responsive to the desired transmission ratio changing speed signal and to the ratio difference signal for producing a correcting coefficient;

correcting means responsive to said actual and desired transmission ratio signals for producing an actual transmission ratio changing speed signal using the correcting coefficient; and

driving means responsive to the actual transmission ratio changing speed signal for operating the transmission ratio control means for controlling the transmission ratio.

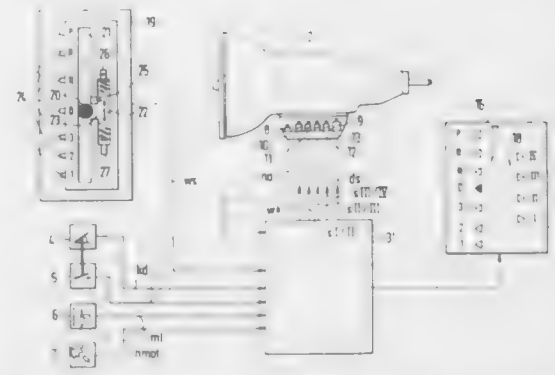
INDICATING SYSTEM FOR AN AUTOMATIC MOTOR VEHICLE TRANSMISSION



Willi Seidel, Eberdingen-Hochdorf; Roland Ehniss, Pforheim; Klaus Skabrond, Leonberg-Warmbronn; Ulrich Sauter, Tiefenbronn; Ulrich Maier, Freiberg, and Roland Ebner, Villingen-Schwenningen, all of Fed. Rep. of Germany, assignors to Dr. Ing. h.c.F. Porsche AG, Fed. Rep. of Germany

Filed Sep. 28, 1989, Ser. No. 413,757

Claims priority, application Fed. Rep. of Germany, Sep. 29, 1988, 3832971

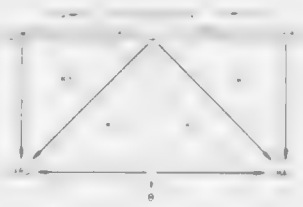
Int. Cl.[5] F16H *59/00*; B60K *20/02*

U.S. Cl. 74—866 15 Claims

1. An indicating system of an electronically or electrohydraulically controlled motor vehicle multi-speed transmission, said transmission having a selector lever for the preselection of a driving position in which are engaged individual or several automatically shiftable driving gears in a fully automatic operating mode and a semi-automatic operating mode in which the driving gear may be selected manually, said indicating system including:

first displaying means for displaying the preselected driving position corresponding to the selector lever position by means of first indicating elements marked by alphanumerical symbols, and

second displaying means for displaying an indication of a driving gear that is currently engaged, said second displaying means including second indicating elements



which are viewable separately from and simultaneously with the first indicating elements;
wherein the first and second indicating elements are spaced from one another; and
wherein the second indicating elements are controlled only during the semi-automatic operating mode with a manual selection of the driving gears.

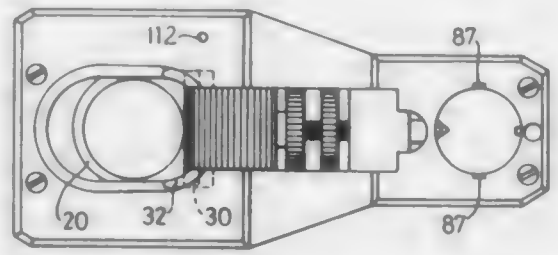
TRANSMISSION RATIO CONTROL SYSTEM FOR A CONTINUOUSLY VARIABLE TRANSMISSION

Yoshihiko Morimoto, Mitaka, and Tetsushi Kohno, Musashino, both of Japan, assignors to Fuji Jukogyo Kabushiki Kaisha, Tokyo, Japan

Filed Oct. 6, 1989, Ser. No. 418,187
Claims priority, application Japan, Oct. 14, 1988, 63-260183; Oct. 14, 1988, 63-260184
Int. Cl.[5] B60K *41/14*
U.S. Cl. 74—866 **4 Claims**



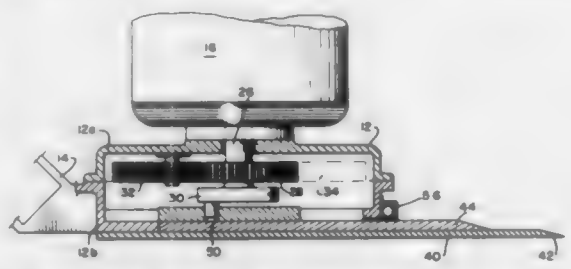
1. A control system for a continuously variable transmission for transmitting power of an engine mounted on a motor vehicle, the engine having a throttle valve, the transmission comprising a drive pulley having a hydraulically shiftable drive disc and a hydraulic cylinder for operating the drive disc, a driven pulley having a hydraulically shiftable driven disc and a hydraulic cylinder for operating the driven disc, a belt engaged with both of said pulleys, the control system comprising a first hydraulic circuit having a pump for supplying oil to both of the hydraulic cylinders, a transmission ratio control valve for controlling the oil supplied to the cylinder of the drive pulley to change a transmission ratio of the transmission to a desired transmission ratio, the system comprising:
transmission ratio control means for operating the transmission ratio control valve;
a drive pulley speed sensor for producing a drive pulley speed signal;
a driven pulley speed sensor for producing a driven pulley speed signal;
a throttle position sensor for sensing an opening degree of the throttle valve and for producing a throttle opening degree signal;
first calculator means responsive to the drive pulley speed signal and the driven pulley speed signal for producing an actual transmission ratio signal;
means responsive to the throttle opening degree signal and to the actual transmission ratio signal for producing a desired transmission ratio signal;
second calculator means responsive to the desired transmission ratio signal and to the actual transmission ratio signal for producing a transmission ratio changing speed signal;
third calculator means responsive to the throttle opening degree signal for producing a throttle opening degree changing speed signal;
coefficient setting means responsive to the driven pulley speed signal as a vehicle speed signal and to the throttle opening degree changing speed signal for producing a correcting coefficient, wherein the correcting coefficient represents an increasing function of the throttle opening degree changing speed signal and a decreasing function of the driven pulley speed signal as said vehicle speed signal in a low vehicle speed range lower than a predetermined vehicle speed;
said second calculator means comprising correcting means for correcting the transmission ratio changing speed signal with the correcting coefficient so as to provide a higher transmission ratio changing speed in a low vehicle speed range; and
driving means responsive to the transmission ratio changing speed signal corrected by the correcting means for operating the tranmission ratio control means, for controlling the transmission ratio.

5,009,130

COAXIAL CABLE STRIPPER

Zdzislaw Bieganski, "Brushwood", Kinsbourne Green, Harpenden, Hertfordshire, United Kingdom

Filed Dec. 13, 1989, Ser. No. 449,993
Claims priority, application United Kingdom, Dec. 22, 1988, 8829895
Int. Cl.[5] H02G *1/12*
U.S. Cl. 81—9.4 **14 Claims**



1. A tool for stripping a coaxial cable comprising a body having an opening therein; a blade carrier accommodated in said opening for sliding movements along a path relative to said body; a plurality of spaced apart, parallel blades supported by said blade carrier and projecting different distances beyond said carrier; means for supporting a coaxial cable in said body transverse to the path of sliding movement of said blade carrier and in a position to be engaged by said blades in response to movement of said blade carrier in one direction along said path; and ratchet and pawl means reacting between said body and said carrier for releasably latching said carrier in a selected position relative to said body.

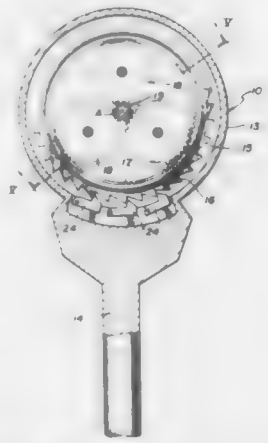
5,009,131

ROOF SHINGLE STRIPPER APPARATUS

Brian J. Alto, 382 Morris Ave., A3, Summit, N.J. 07901, and Gregory F. Alto, 68 Runnymeade Rd., Berkeley Heights, N.J. 07922

Filed May 4, 1990, Ser. No. 519,406
Int. Cl.[5] E04D *15/00*
U.S. Cl. 81—45 **9 Claims**

1. Roof shingle stripper apparatus, comprising:
a housing having a longitudinal axis;
nail-cutting means slidably mounted in said housing for movement, relative to said housing, perpendicular to said axis; and



a prime mover, mounted to said housing and coupled to said means for moving said means in such perpendicular movement; further including
means immovably fastened to said housing for lifting portions of shingles; wherein
said nail-cutting means is slidably disposed upon said lifting means.

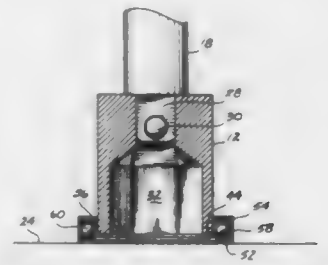
5,009,132

TORQUE DEVICE

Daniel G. Gilberto, Newington, Conn., assignor to Robert A. Grant; Douglas A. Bourque and Mildred T. Felt, all of Fitchburg, Mass., a part interest

Filed May 31, 1990, Ser. No. 531,114
Int. Cl.[5] B25B *17/00*
U.S. Cl. 81—57.3 **10 Claims**

1 Torque device, comprising:
(a) first and second outer housings located in spaced relationship,
(b) a third intermediate housing lying between and joining the first and second housings, the intermediate housing having means for rotating it about a main axis,
(c) a ring lying within the intermediate housing and rotatable therein about the said main axis, the ring being formed with ratchet teeth on its outer periphery and with gear teeth on its inner periphery,
(d) a cluster of planetary gears carried within the ring and engaging the gear teeth of the ring, and
(e) a sun gear located within the cluster for rotation about the main axis and extending axially into engagement with both the first and second housings,
wherein each of the first and second outer housings has an output element centered on the main axis and extending axially in the direction away from the intermediate housing.



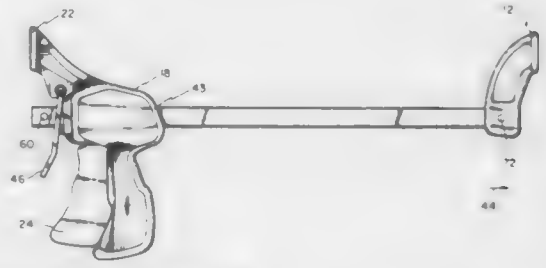
5,009,133

SURFACE PROTECTIVE FASTENER TOOL

David R. Carey, 17052 - 4th NE., Seattle, Wash. 98155

Continuation-in-part of Ser. No. 219,088, Jul. 14, 1988, abandoned. This application Jun. 7, 1989, Ser. No. 362,760
Int. Cl.[5] B25B *13/58*
U.S. Cl. 81—180.1 **48 Claims**

1. Apparatus for protecting an underlying surface from abrasion by contact with a tool used to rotate a threaded fastener, comprising:
a sleeve having a resilient cushion disposed at one end, said sleeve being sized to fit over the tool so that the resilient cushion is proximate a portion of the tool that is used to engage the threaded fastener and extends beyond a distal end of said tool, preventing it from contacting the underlying surface;
means for retaining the sleeve on the tool, including bearing means for supporting the tool to prevent it contacting the underlying surface and permitting the sleeve to remain stationary against the underlying surface as an operator turns the tool within the sleeve to rotate the threaded



fastener, said resilient cushion carrying any force directed through the tool against the underlying surface during use of the tool, so that the underlying surface is protected from abrasion that would otherwise occur due to the tool contacting said surface.

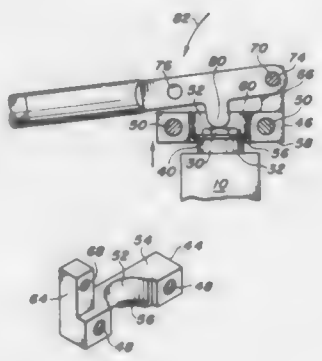
5,009,134

QUICK-ACTION BAR CLAMP

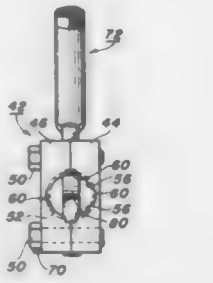
Joseph A. Sorensen, and Dwight L. Gatzemeyer, both of Lincoln, Nebr., assignors to Petersen Manufacturing Co., Inc.

Continuation-in-part of Ser. No. 234,173, Aug. 19, 1988, Pat. No. 4,926,722. This application Feb. 15, 1990, Ser. No. 480,283
The portion of the term of this patent subsequent to May 22, 2007, has been disclaimed.
Int. Cl.[5] B25B *5/02*
U.S. Cl. 81—487 **8 Claims**

1. A hand tool comprising
a fixed jaw;
a movable jaw, said fixed jaw and movable jaw facing in opposite directions;
a slide bar, said movable jaw being mounted on one end of said slide bar, said slide bar being movable to bring said movable jaw toward and away from said fixed jaw;
support means for supporting said slide bar, said fixed jaw being connected to said support means;
one-way drive means for releasably engaging and, when engaged, for advancing said slide bar and attached movable jaw, said movable jaw being subject to advancement away from said fixed jaw when said one-way drive means is disengaged;
said one-way drive means having a driving lever, and a braking lever normally engaging said slide rod, said braking lever when engaging said slide bar preventing motion of said movable jaw toward said fixed jaw, said braking lever having an engaging portion extending outwardly from said support means,
a trigger handle pivotably mounted to said support means rearwardly of said breaking lever and contacting said driving lever,
said engaged driving lever moving said slide rod and said movable jaw away from said fixed jaw, said support means including a handgrip, a trigger-type relationship existing between said trigger handle and said handgrip, said bar clamp being holdable at said handgrip, said braking lever and the trigger handle being selectively operable



by the same hand in such a manner that one of the index and middle fingers is positioned on the engaging portion of the braking lever to actuate the braking lever, while the other fingers encircle and contain the trigger handle and the handgrip.



5,009,135

BRAKE ADJUSTMENT TOOL

Lawrence J. Arnold, Eagle Harbor, N.Y., assignor to Edward Arnold, Hilton, N.Y.

Filed Sep. 26, 1989, Ser. No. 412,515
Int. Cl.[5] B25B *9/00*
U.S. Cl. 81—488 **26 Claims**

1. A tool for restoring retracted locking collars for brake adjusting screws to their original positions comprising:

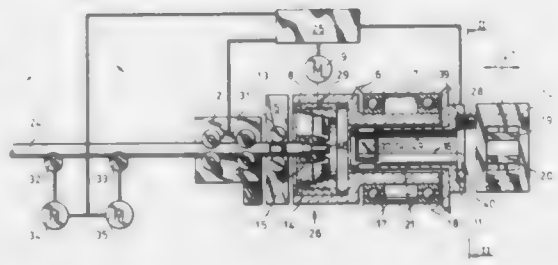
an adjustable clamp having jaw portions for gripping a peripheral surface of the locking collar;

each jaw portion forming a load bearing surface against an end rim of the locking collar;

means for adjusting spacing between said jaw portions for releasably securing said adjustable clamp to the locking collar;

a pivot support mounted on a top surface of said adjustable clamp defining a pivot axis;

a lever arm mounted about said pivot axis having a handle formed at one end and a cam extension located along said lever arm in a position that may be pivoted into contact with a head portion of the adjusting screw; and



said load bearing surfaces being defined by projecting edges formed adjacent to a bottom surface of said adjustable clamp.

5,009,136

TURNING MACHINE

Reiner Glomb, Velbert; Peter Maresch, and Ralf Wagner, both of Solingen, all of Fed. Rep. of Germany, assignors to Th. Kieserling & Albrecht GmbH & Co., Werkzeugmaschinenfabrik, Solingen, Fed. Rep. of Germany

Filed Dec. 8, 1989, Ser. No. 447,742
Claims priority, application Fed. Rep. of Germany, Dec. 22, 1988, 3843257
Int. Cl.[5] B23B *5/12*
U.S. Cl. 82—127 **3 Claims**

1. Turning machine having a frame for turning rods, pipes, or the like which comprises the following features:

(a) infeed means operatively mounted on the inlet side of the turning machine for infeeding a pre-cut rod into said inlet side;

(b) rotating cutter-head means operatively mounted in said turning machine downstream from said infeed means for turning off a peripheral layer of said rod;

(c) said rotating cutter-head means being mounted adjacent to the upstream end of a hollow shaft which is rotatably coaxially mounted in the frame of said machine;

(d) a rear guide mechanism for approximately centering the rods, pipes or the like operatively coaxially mounted in said machine downstream of said cutter-head means;

(e) the rear guide mechanism is operatively mounted on said machine frame and extends axially into said hollow shaft adjacent to said cutter-head means;

(f) withdrawal means for withdrawing the finished turned workpiece from said turning machine mounted downstream from said rear guide mechanism;

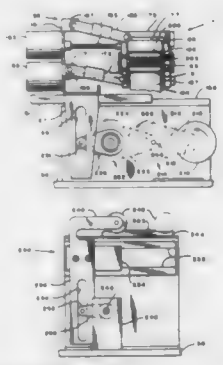
(g) said rear guide mechanism includes a plurality of individually spring biased guide elements operatively mounted therein which abut against said rod;

(h) said rear guide mechanism includes central adjustment means operatively mounted in said machine for simultaneously adjusting all of said guide elements;

(i) said central adjustment means includes spring biasing means whereby said spring biasing means selectively actuates said central adjustment means to simultaneously adjust all guide elements;

(j) for each of said individual guide elements there are arranged two stops on said adjusting means;

(k) a first stop of said two stops is rigidly mounted on said adjusting means, whereas the second stop of said two stops is spring biasedly mounted on said adjusting means whereby said rear guide mechanism may adjust to affect appropriate centering of the rod being turned;



(l) the first rigid stop limits the spring deflection movement of each individual guide element which coacts with the second stop.

5,009,137

CUTTER MODULE FOR A MODULAR MAILING MACHINE

Hugh S. Dannatt, Bethel, Conn., assignor to Pitney Bowes Inc., Stamford, Conn.

Continuation of Ser. No. 135,107, Dec. 18, 1987, abandoned.
This application Jan. 8, 1990, Ser. No. 463,882
The portion of the term of this patent subsequent to Dec. 12, 2006, has been disclaimed.
Int. Cl.[5] B26D *5/22*
U.S. Cl. 83—209 **3 Claims**

1. A combination comprising:

a mailing machine having a base and support walls extending therefrom; a tape module including a tape track, support means for supporting said tape track in a generally cantilevered manner, tape positioning means for selectively positioning said support means in a first position and in a second position laterally displaced from said first position, said tape positioning means having a track formed along one of said mailing machine support walls,

a rail slidable mounted on said track,

a first bracket fixably mounted to said rail, said support means being pivotally mounted to said first bracket,

a second bracket fixably mounted to said rail, said second bracket having an elongated slot formed therein

a motor fixably mounted to said base of said mailing machine,

a crank rotatably mounted in said mailing machine and having a pin slidably mounted in said slot of said second bracket such that rotation of said crank causes said second bracket to displace said rail along said track,

means communicating said motor to said crank such that actuation of said motor causes rotation of said crank,

tape feed means for selectively feeding imprinting tape to and through said tape track; and,

a cutter module having a cutter support member slidably mounted to one of a mailing machine support walls such that said cutter support member can be slidably displaced laterally with respect to said tape track, a rotary cutter blade rotatably mounted to said cutter support member, said means for communicating further having means for reciprocally displacing said cutter support member traverse to said tape track of said tape module, and means for providing a cutting surface coactive with said rotary cutter blade.

5,009,138

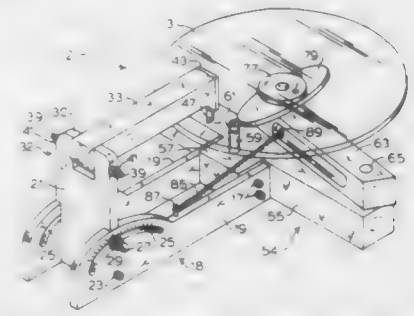
ROTARY CUTTER DEVICE

C. William Rettie, 306 Hickory Dr., Chapel Hill, N.C. 27514

Filed Apr. 6, 1990, Ser. No. 505,725
Int. Cl.[5] B27C *5/02*
U.S. Cl. 83—413 **17 Claims**

1. A rotary cutter apparatus, comprising:

(a) a base;



(b) an articulated cutter arm assembly, comprising:

(i) a main cutter arm; and

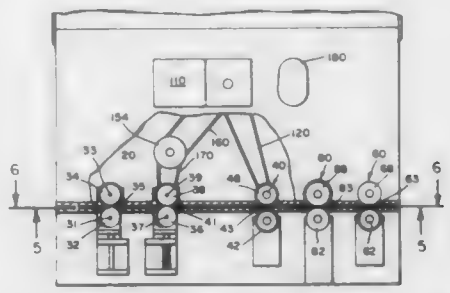
(ii) a support arm having first and second ends, with the first end being coupled to the base so as to allow pivotal movement of the first end, and with the second end being coupled to the main cutter arm so as to be pivotally movable with respect thereto, such that the main cutter arm is translatable along a longitudinal direction;

(c) an elongate swing arm having first and second ends, and coupled at its first end to the base so as to be pivotally swingable about a first axis;

(d) a rotatable table assembly, rotatable about a second axis parallel to said first axis, mounted on the second end of the swing arm and arranged to accommodate rotation of the table assembly concurrent with pivotal swinging of said swing arm about said first axis;

(e) a template cam coupleable to said table assembly and rotatable therewith about said second axis;

(f) a bearing member attached to said base; and



(g) biasing means interconnecting (i) a portion of the swing arm other than its first end, and (ii) the base, for maintaining said template cam in contact with the bearing member during rotation of said rotatable table assembly about said second axis, concurrently with pivotable swinging of said swing arm about said first axis to the extent required to maintain said contact.

5,009,139

CHECK DESTRIPPER

Yosi Nissim, 23509 Spires St., West Hills, Calif. 91304

Filed Mar. 31, 1989, Ser. No. 332,525
Int. Cl.[5] B26D *1/22, 5/22*
U.S. Cl. 83—419 **3 Claims**

1. An apparatus for separating a check which has attached to it a corroborating paper strip in a manner such that the corroborating paper strip is aligned along the bottom edge of the check and the two are attached together by means which creates a line of joinder between the lower edge of the check and the upper edge of the corroborating paper strip, comprising:

a. an opening in said apparatus through which said check and attached corroborating paper strip is inserted;

b. a horizontally aligned plate;

c. means for orienting the check and attached corroborating paper strip such that the bottom edge of the corroborating paper strip is adjacent said plate, and the check and corroborating paper strip are approximately perpendicular to said plate, further comprising,

(i) a first pair of wheels which are parallel to each other and touch each other at an adjoining point along their respective circumferences, the pair of wheels aligned at an angle relative to said plate, and caused to rotate such that one wheel rotates in the clockwise direction while the other wheel rotates in the counterclockwise direction,

(ii) a second pair of wheels which are parallel to each other and touch each other at an adjoining point along their respective circumferences, the pair of wheels aligned at an angle relative to said plate and separated from said first set of wheels by a horizontal gap, and caused to rotate such that one wheel rotates in the clockwise direction while the other wheel rotates in the counterclockwise direction;

d. means for separating said check and corroborating paper strip along said line of joinder and causing said separated check to be transported to a first location and causing said separated corroborating paper strip to be transported to a second location, further comprising,

(i) a first set of wheels including,

(a) a pair of upper wheels which are parallel to each other and touch each other at an adjoining point along their respective circumferences, the pair of wheels aligned parallel relative to said plate, and caused to rotate such that one wheel rotates in the clockwise direction while the other wheel rotates in the counterclockwise direction,

(b) a pair of lower wheels separated from said pair of upper wheels by a vertical gap, with a respective one wheel from said pair of upper wheels and one wheel from said pair of lower wheels being supported on the same shaft, the pair of lower wheels which also parallel to each other and touching each other at an adjoining point along their respective circumferences, the pair of wheels aligned parallel relative to said plate, and caused to rotate such that one wheel rotates in the clockwise direction while the other wheel rotates in the counterclockwise direction,

(ii) a second set of wheels separated from said first set of wheels by a horizontal gap, including,

(a) a pair of upper wheels which are parallel to each other and touch each other at an adjoining point along their respective circumferences, the pair of wheels aligned parallel relative to said plate, and caused to rotate such that one wheel rotates in the clockwise direction while the other wheel rotates in the counterclockwise direction,

(b) a pair of lower wheels separated from said pair of upper wheels by a vertical gap, one of the lower wheels having two sections and one of the lower wheels have one section, with an upper wheel and the lower wheel having two sections supported on one shaft while the other upper wheel and the lower wheel having one section are supported on two separate shafts, the pair of lower wheels also parallel to each other and touching each other at an adjoining point along their respective circumferences, the pair of wheels aligned parallel relative to said plate, and caused to rotate such that one wheel rotates in the clockwise direction while the other wheel rotates in the counterclockwise direction,

(c) the lower wheel having two sections including an upper section of smaller diameter than the lower section aligned relative to the other lower wheel having one section such that the upper surface of the lower section of the two section wheel comes in contact with the lower circumference of the other lower wheel having one section to thereby create a knife which can cut the check and attached corroborating paper strip at the location of the point of touching of the two wheels;

(b) a pair of lower wheels separated from said pair of upper wheels by a vertical gap, with a respective one wheel from said pair of upper wheels and one wheel from said pair of lower wheels being supported on the same shaft, the pair of lower wheels also parallel to each other and touching each other at an adjoining point along their respective circumferences, the pair of wheels aligned parallel relative to said plate, and caused to rotate such that one wheel rotates in the clockwise direction while the other wheel rotates in the counterclockwise direction,

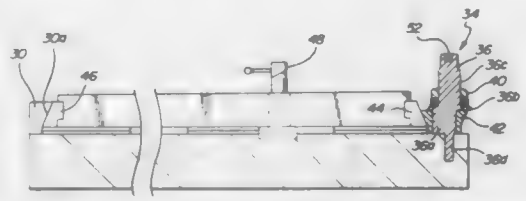
(c) one of said pair of lower wheels having two sections, with an upper section of smaller diameter than the lower section and aligned relative to the other lower wheel such that the upper surface of the lower section comes in contact with the lower circumference of the other lower wheel to thereby create a knife which can cut the check and attached corroborating paper strip at the location of the point of joinder of the two wheels;

(iii) a third set of wheels separated from said first set of wheels by a horizontal gap, including,

(a) a pair of upper wheels which are parallel to each other and touch each other at an adjoining point along their respective circumferences, the pair of wheels aligned parallel relative to said plate, and caused to rotate such that one wheel rotates in the clockwise direction while the other wheel rotates in the counterclockwise direction,

(b) a pair of lower wheels separated from said pair of upper wheels by a vertical gap, with a respective one wheel from said pair of upper wheels and one wheel from said pair of lower wheels being supported on the same shaft, the pair of lower wheels also parallel to each other and touching each other at an adjoining point along their respective circumferences, the pair of wheels aligned parallel relative to said plate, and caused to rotate such that one wheel rotates in the clockwise direction while the other wheel rotates in the counterclockwise direction; and

d. the three sets of wheels in means for separating said check and corroborating paper strip aligned relative to said first and second pair of wheels of said means for orienting said check and attached paper strip such that each of the upper pair of wheels comes in contact with said check along the point of touching between each pair of upper wheels and each of the lower pair of wheels comes in contact with said corroborating paper strip along the point of touching between each pair of lower wheels;



e. whereby when said combination check and attached corroborating paper strip is inserted into said apparatus through said opening, said first pair of wheels pulls said check and attached corroborating paper strip into said apparatus by causing said check and attached corroborating paper strip to be guided between said first pair of wheels along their point of joinder and pulled toward said plate with the leading edge of said corroborating paper strip being pulled toward said plate and said second pair of wheels continues the process of pulling said check and attached corroborating paper strip toward said plate to orient the lower edge of the attached paper strip along the surface of said plate and cause said check and attached paper strip to be aligned perpendicular to said plate, and when said check and attached corroborating paper strip leaves the second pair wheels of said means for orienting the check and attached corroborating paper strip, said first set of wheels pulls the check and attached corroborating paper strip horizontally between the pair of wheels and guides, it to the second pair of wheels, the upper pair of wheels of the second pair of wheels pulls the check and corroborating paper strip such that the lower pair wheels cuts the check and corroborating paper strip along their line of joinder, and the separated check and corroborating paper strip are guided to the third pair of wheels wherein the upper pair of wheels causes the separated check to be guided to one location outside the apparatus while the lower pair of wheels causes the separated corroborating paper strip to be guided to a second location outside the apparatus.

5,009,140

CLAMPING APPARATUS FOR CUT-OFF DIE SET

John H. Nolan, Mt. Clemens, and Dennis H. Skvarce, Wixom, both of Mich., assignors to Alpha Industries, Inc., Novi, Mich.

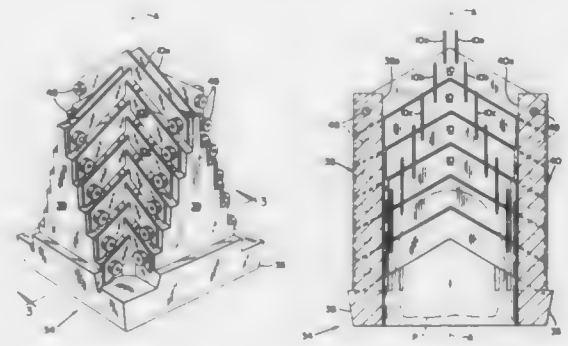
Continuation-in-part of Ser. No. 417,033, Oct. 14, 1989, abandoned. This application Dec. 12, 1989, Ser. No. 449,594
Int. Cl.[5] B26D *1/60*; B23D *21/00*
U.S. Cl. 83—698 **15 Claims**

7. A clamping apparatus for securing die components to the carriage of a cut-off press comprising:

a platen having two outwardly beveled opposite edges;

die components secured to the platen;

stop means fixed to said carriage having an inwardly beveled edge to coact with one of the outwardly beveled edges of the platen; and



rotatable eccentric clamping means, including a bracket mounted to the carriage and an axial member, having an inwardly beveled eccentric portion, journaled at one end in the carriage and journaled at the opposite end in the bracket, located on the carriage to coact with the outwardly beveled edge opposite the stop means to wedge said platen between the stop means and the eccentric clamping means.

5,009,141

BLADE ASSEMBLY FOR SLICING FOOD PRODUCTS

John C. Julian, Tualatin, and David S. Phelps, Tigard, both of Oreg., assignors to Lamb-Weston, Inc., Tri-Cities, Wash.

Filed Sep. 23, 1985, Ser. No. 779,209
Int. Cl.[5] B26D *1/02*
U.S. Cl. 83—857 **11 Claims**

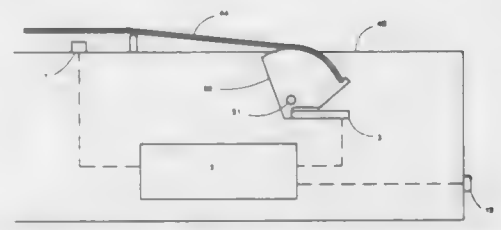
1. A food slicing apparatus for slicing vegetables into strips, comprising:

a first set of cutting elements, each having a first edge of chevron configuration and an apex, and a second sharpened edge of chevron configuration opposite said first edge;

a second set of cutting elements, each having a first edge of chevron configuration and an apex, and a second sharpened edge of chevron configuration opposite said first edge of said second set for slicing vegetables;

the cutting elements each having two angled blade segments with knife edges thereon meeting at a downstream knife edge convergence;

cutting element mounting means for mounting said first and second set of cutting elements in a substantially pyramidal configuration such that (1) said cutting elements of said first set are substantially parallel to one another, and (2) said cutting elements of said second set are substantially parallel to one another and substantially perpendicular to said first set of cutting elements, the pyramidal configuration having an apex at a downstream end thereof;



said cutting element mounting means further mounting both said cutting elements of said first and second sets in axially staggered, transversely spaced pairs such that each successive downstream pair of cutting elements is disposed incrementally closer to the axial centerline of the apparatus.

5,009,142

MEANS AND METHOD FOR AUTOMATIC RESONANCE TUNING

Noel T. Kurtz, 186 Besemer Hill Rd., Ithaca, N.Y. 14850

Filed Mar. 26, 1990, Ser. No. 498,728
Int. Cl.[5] G10G *7/02*
U.S. Cl. 84—454 **18 Claims**

1. An apparatus for adjustment of resonance frequency of a filament, comprising:

(a) a piezoelectric actuator that changes in length as an electric field is applied thereto and is connected to said filament either directly or through means for amplifying the movement of said piezoelectric actuator such that a change in the length of said piezoelectric actuator changes the tension of said filament,

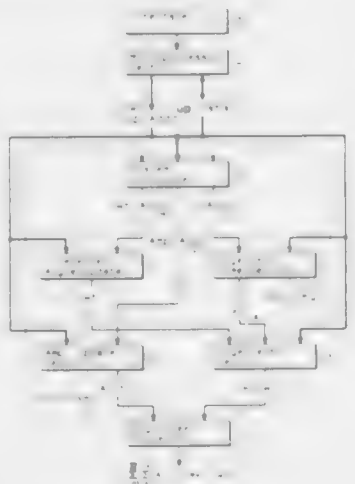
(b) means for measuring frequency of said filament,

(c) means for controlling resonance frequency adjustment connected to said means for measuring resonance frequency and said piezoelectric actuator such that said means for controlling frequency adjustment adjusts the resonance frequency of said filament by varying said electric field applied to said piezoelectric actuator.

5,009,143

EIGENVECTOR SYNTHESIZER

John V. Knopp, 10407 SE. 174th Apt. 1207, Renton, Wash. 98055



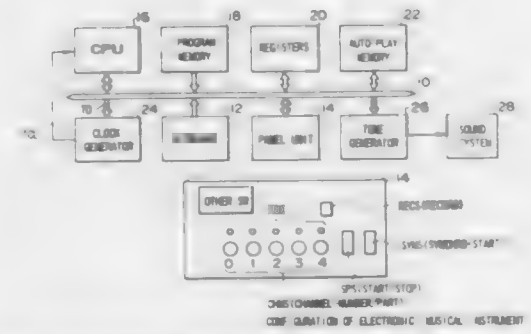
Continuation of Ser. No. 42,109, Apr. 22, 1987, abandoned. This application Dec. 26, 1989, Ser. No. 456,063
Int. Cl.[5] G10H *1/08, 7/02*
U.S. Cl. 84—604 **11 Claims**

1. An eigenvector synthesizer comprising:

(a) means for storing in digital representation multiple eigenvector waveshape sets in which each eigenvector waveshape set has been calculated from a covariance matrix which specifies the interaction among related waveshapes of musical instruments and/or sounds,

(b) means for selecting said eigenvector waveshape sets and

eigenvector waveshapes having a time dependent angle within one of said eigenvector waveshape sets,
(c) means for addressing a position on said eigenvector waveshapes with said time dependent angle and thereby obtaining eigenvector waveshape amplitudes,
(d) means for storing in digital representation said time dependent angle,
(e) means for updating said time dependent angle,
(f) means for scaling said eigenvector waveshape amplitudes by multiplying said eigenvector waveshape amplitudes by scalar multipliers and thereby obtaining scaled eigenvector waveshape amplitudes,



(g) means for storing in digital representation said scalar multipliers,
(h) means for selecting said scalar multipliers which are associated with said eigenvector waveshapes,
(i) means for updating said scalar multipliers,
(j) means for summing said scaled eigenvector waveshape amplitudes within one of said eigenvector waveshape sets and thereby producing a signal which can be used to generate a musical sound and,
(k) means for summing said signal with another signal and thereby producing a complex signal which can be used to generate multiple musical sounds.

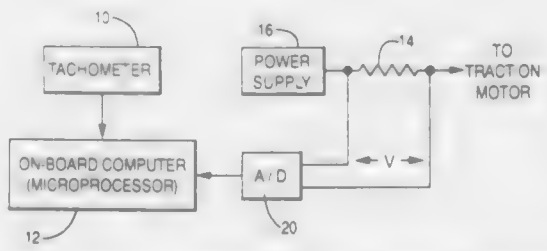
SOUND GENERATING UNIT SYSTEM FOR ELECTRONIC INSTRUMENTS

Takenori Yamamori, Hamamatsu, Japan, assignor to Roland Corporation, Osaka, Japan

Filed May 23, 1989, Ser. No. 356,308
Claims priority, application Japan, May 25, 1988, 63-127486; Jun. 23, 1988, 63-153652
Int. Cl.[5] G10H *1/057, 1/42, 1/46*
U.S. Cl. 84—618 **19 Claims**

1. A system of electronic musical sound generating units for an electronic musical instrument system that comprises at least one device for generating performance controlling messages,
said sound generating units each being responsive to performance controlling messages received from the performance message generating device, and
each of said sound generating units comprising
recording means for recording preferential orders that determine a sequential order by which each sound generating unit receives performance controlling messages;
selecting means for selecting performance controlling messages to be received by said sound generating unit in



accordance with preferential orders recorded by the recording means; and
tone-generating means for generating musical tones based on performance controlling messages that have been selected by the selecting means.

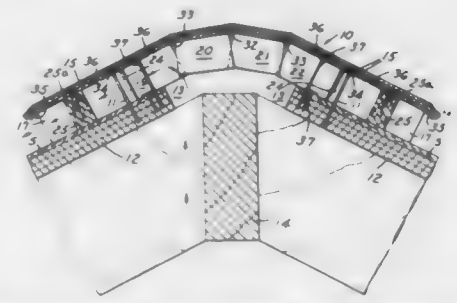
VEHICLE AIR EXCHANGE ACCORDING TO PASSENGER LOAD

Kenneth A. Karg; Carl K. Hvozda; Robert N. Neddermeyer, and Alexander Feld, all of Pittsburgh, Pa., assignors to AEG Westinghouse Transportation Systems, Inc., Pittsburgh, Pa.

Filed Dec. 1, 1989, Ser. No. 444,787
Int. Cl.[5] B61D *27/00*
U.S. Cl. 98—10 **10 Claims**

1. In a ventilation system for a vehicle powered by an electric motor, the improvement comprising:
means for detecting the velocity of the vehicle;
means for detecting the current of the electric motor supplying power to the vehicle;
at least one variable speed fan; and
means connected to the variable speed fan for controlling the speed of the fan in proportion to the electric motor current detected when the velocity of the vehicle reaches a preselected range.



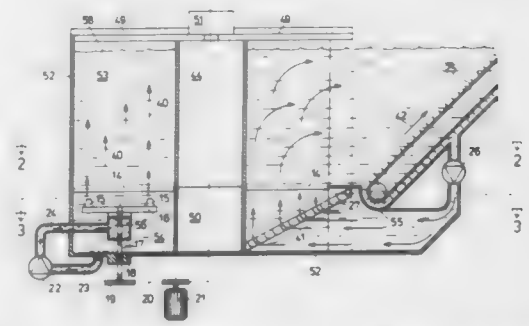
5,009,149

ROOF VENT

Richard J. MacLeod, Milford; Norman L. Chubb, Dearborn, and Charles E. Schiedegger, Metamora, all of Mich., assignors to Tapco Products Company, Inc., Detroit, Mich.

Continuation-in-part of Ser. No. 293,946, Jan. 5, 1989, Pat. No. 4,924,761. This application Dec. 18, 1989, Ser. No. 452,239
Int. Cl.[5] F24F *7/02*
U.S. Cl. 98—42.21 **11 Claims**

1. A roof vent comprising
a one-piece plastic body including a base wall having transversely spaced sets of rows of integral vanes extending from one surface thereof,
each vane having a free end adapted to engage the roof when the vent is in position on a roof,
the vanes in each row of vanes of each set of vanes being longitudinally spaced from one another, parallel to one another, and extending at an acute angle to the axis of the wall and the vanes of the other row of each set of rows being longitudinally spaced from one another, parallel to one another and extending at an oppositely directed acute angle to the longitudinal axis of the wall,
each outermost row of vanes being arranged such that the general plane of each vane intersects the general plane of an adjacent vane of an inner row,
each vane having an outer free edge and an inner free edge,
each vane having the inner free end thereof generally curved such that the free edge of said free end extends outwardly,
a layer of porous material positioned between adjacent rows of vanes,



said layer having a height greater than the height of the vanes such that when the vent is positioned with the vanes engaging the roof and the base wall spaced from the roof, air is vented through sinuous paths defined by successive rows of vanes outwardly and water and snow are prevented from entry beneath the vent into the building by the vanes and the layer, and
tubular projections on each vane forming nail openings, said projections being formed with integral membranes closing the openings therein.

5,009,150

DEVICE FOR THE HEATING OR COOLING OF FOOD-STUFFS

Niels J. Andersen, Broby, Denmark, assignor to Cabinnovent ApS, Harby, Denmark

Filed Jan. 30, 1989, Ser. No. 303,858
Claims priority, application Denmark, Feb. 17, 1988, 825/88
Int. Cl.[5] A23L *3/00, 3/04, 3/18;* **A47J** *27/122*
U.S. Cl. 99—360 **12 Claims**

1. Apparatus for treatment of softly packaged food-stuff objects by immersion of said objects into a body of liquid, said apparatus comprising a vessel, said vessel comprising an essentially horizontal bottom wall and at least one essentially vertical side wall, said bottom wall and said at least one side wall being essentially fluid-tight and being joined in an essentially fluid-tight fashion in order that said vessel is adapted to hold a body of liquid, a floor for supporting said objects within said body of liquid at a level above said bottom wall, said floor comprising a grid or a grate with openings, jet means arranged below said bottom wall and above said floor, said jet means

being adapted to eject liquid from a level within said body of liquid and in a generally upward direction so as to agitate said body of liquid, and means to move said jet means while ejecting liquid in a generally oscillating or revolving pattern.

5,009,151

BARBECUING PROTECTIVE FOOD SUPPORT

Robert E. Hungerford, 116 Lake Desire Dr., N., Renton, Wash. 98058

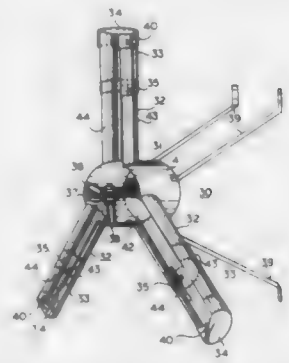
Filed Apr. 14, 1989, Ser. No. 339,059
Int. Cl.[5] A47J *37/06*
U.S. Cl. 99—445 **13 Claims**

1. A protective food support comprising a plurality of substantially parallel troughs joined at spaced crests, said plurality of troughs having a first side and a second side, the first side of said plurality of troughs being a substantially inverted image of the second side of said troughs, said spaced crests on the first side being arranged to support food over said troughs and said spaced crests on the second side arranged to support the food support on a primary grill when the first side is the upper side, said plurality of troughs being invertible so that said spaced crests on the second side of said plurality of troughs are arranged to support food over said troughs and said spaced crests on the first side are arranged to support the food support on a primary grill when the second side is the upper side, wherein said plurality of troughs on the first side have integral first end dams to prevent food juices from flowing from one trough to another trough when the first side of said troughs is the upper side, said first end dams blocking less than substantially the entire ends of said troughs, and further wherein said plurality of troughs on the second side have integral second end dams to prevent food juices from flowing from one trough to another trough when the second side is the upper side, said second end dams blocking less than substantially the entire ends of said troughs.

5,009,152

REVERSE DIFFUSING BAFFLE FOR APPLYING SPROUT INHIBITOR TO STORED POTATOES

Charles R. Morgan, 4659 Enterprise St., Boise, Id. 83705



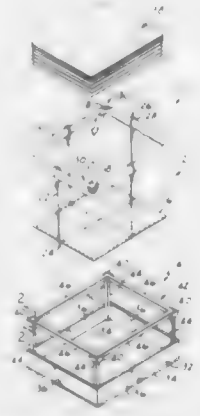
Continuation-in-part of Ser. No. 447,612, Dec. 28, 1989, Pat. No. 4,977,825. This application Sep. 5, 1990, Ser. No. 577,488
Int. Cl.[5] A23B *7/00*
U.S. Cl. 99—476 **4 Claims**

1. A diffusing baffle for use in applying sprout inhibiting chemicals to potatoes stored in a potato storage facility having an air supply plenum, a fan for discharging air into the air supply plenum, and a plurality of ventilation pipes open to the air supply plenum for delivering air to the stored potatoes, which comprises:

a central plenum receiving baffle having a convex outer surface and a concave inner surface;

means for introducing a sprout inhibiting chemical into said central plenum receiving baffle;

a plurality of elongated channel shaped radial arms having convex outer surfaces and concave inner surfaces attached to and extending radially out from said central plenum receiving baffle so as to form radially extending channels for the transport of sprout inhibiting chemical from the introduction means to the ends of said arms; and



means for centrally positioning the central plenum receiving baffle and the radial arms in front of the discharge of the fan with the convex outer surfaces facing the fan.

5,009,153

DEVICE AND METHOD FOR BUNDLING

Joel T. Kaji, 27519 Gateway N., #204, Farmington Hills, Mich. 48018

Filed Feb. 20, 1990, Ser. No. 482,189
Int. Cl.[5] B65B *13/02*
U.S. Cl. 100—2 **16 Claims**

16. A method for binding a stack of items, such as newspapers, the method comprising the steps of:

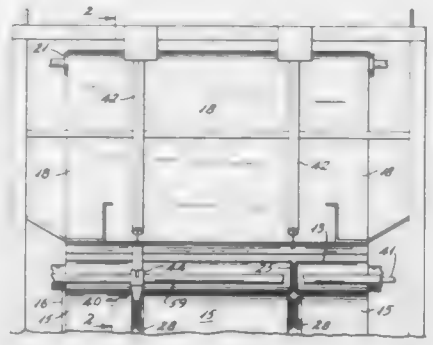
providing a bundling device having a tie assembly including a seat member, a drawband forming a closed loop, and a plurality of ties, each tie having a base end attached to the seat member and a draw end forming a loop slidably encircling one thickness of the drawband, and having a receptacle including a tray having a horizontal bottom to support the seat member and further having sides extending upwardly from the bottom;

inserting the tie assembly into the receptacle so that the seat member of the tie assembly rests upon the bottom of the receptacle;

forming the drawband into a generally horizontal loop disposed above the bottom and outside the receptacle, the ties being draped over the sides, thereby supporting the drawband;

stacking the items to be bound upon the seat member;

pulling upwardly on the drawband at two points separated by the loop in the draw end of at least one tie, thereby simultaneously and equally tightening the ties about the stacked items and forming, of two respective portions of the drawband, elongated loops; and



tying the two elongated loops together to secure the ties in their tightened positions.

5,009,154

TWINE FEEDING APPARATUS FOR ROUND HAY BALERS

Rudolph Boes, P.O. Box 112, Big Falls, Minn. 56627

Filed Feb. 7, 1990, Ser. No. 476,167
Int. Cl.[5] B65B *63/04;* **B30B** *5/06*
U.S. Cl. 100—5 **5 Claims**

1. In a baling machine for baling round bales of incoming hay wherein the machine includes a feed press roller mounted to a roller drive shaft so as to be in substantially parallel relationship to a main belt drive drum which is rotatably carried by a drum drive shaft and wherein a plurality of spaced hay rolling belts are drivingly engaged to the main belt drive drum in spaced relationship to one another and wherein the machine includes a source of twine from which twine is directed to a twine feed means so that the twine may be selectively urged between the hay feed roller and the main belt drive drum the improvement comprising, forming each of the hay feed press roller and main belt drive drum with at least two-spaced cylindrical segments which are aligned along their respective drive shafts, a first sheave means freely rotatably mounted about the roller drive shaft intermediate said segments of said hay feed press roller, second sheave means freely rotatably mounted to said drum drive shaft and intermediate said sections of the main belt drive drum, said first and second sheaves being aligned in space relationship with respect to one another, the twine feed means including a feed element adjacent said first and second sheaves, said feed element being engageable with the twine, means for urging said feed element toward said first and second sheave means so that an intermediate length of the twine is aligned between said first and second sheave means so as to be engageable by incoming hay, said intermediate portion of said twine being guided between said first and second sheaves so as to expand into a loop about the incoming hay ■ the hay is rolled, and a knotting and cutting means for knotting the twine to form a continuous loop about the rolled bale of hay and therafter to cut the twine whereby the rolled and tied bale may be discharged from the baling machine.

5,009,155

CAN CRUSHER FOR HOUSEHOLD USE

Konrad A. Christianson, 190 Cutler Dr., Durango, Colo. 81301

Filed Mar. 30, 1989, Ser. No. 331,642
Int. Cl.[5] B30B *7/00, 1/02*
U.S. Cl. 100—233 **7 Claims**

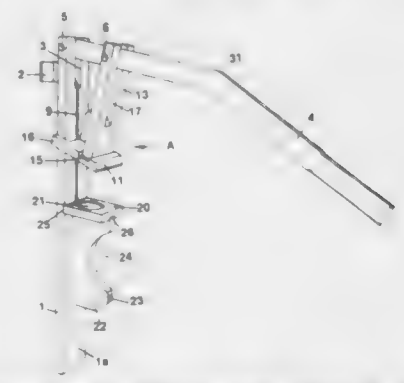
1. A device for crushing common cylindrical beverage cans comprising:

an elongated flat back plate having a front face and a center plane parallel to its front face,

lever means having one end pivotably attached to said back plate at said center plane near one end of the back plate and having a handle at the other end of the lever means,

a stationary compressor base plate fixedly mounted on said back plate near the longitudinal center thereof and perpendicular to said back plate, said compressor base plate being essentially flat and having two opposite sides,

one of said sides having a surface for engaging an end of a common cylindrical can,



a movable ram assembly comprising an elongated drive member with a flat compressor drive plate rigidly connected to one end of the drive member, wherein a can is crushed between said base plate and the drive plate of said ram assembly,

the other end of the elongated drive member of said ram assembly being pivotably fastened to said handle at a single point therealong, said drive plate being slidably fastened to said back plate,

said back plate and said compressor drive plate further comprising longitudinal guide means to direct the sliding movement of said ram assembly with one portion of said drive plate sliding along a face of said back plate in a linear path and said ram assembly pivotably moving relative to said back plate,

the drive plate of said ram assembly having a substantially planar face to contact the other end of a can positioned against the stationary compressor base plate,

said ram assembly being movable, by manual operation of said lever means using a single stroke, between an open position for receiving a can to be crushed and a closed position in which the can is fully crushed,

the face of said ram assembly being parallel to and spaced from said stationary plate with the can crushed therebetween when in the closed position,

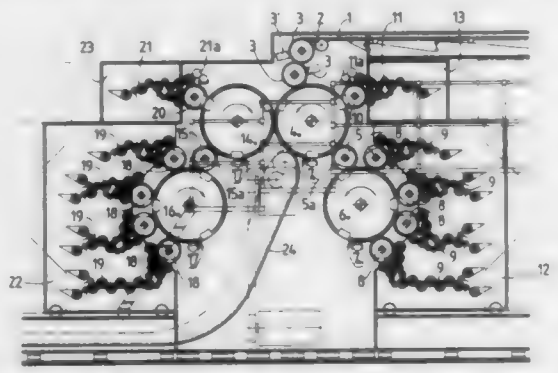
said ram assembly face being substantially inclined to said base plate when the ram assembly is moved into initial contact with the end of a can to cause initial collapse of the can at one side of the can,

said lever means comprising two straight lever arm portions angularly joined to each other at a bend which lies about midway along the length of the lever means, said bend being opposite the compressor drive plate in the closed position of the ram assembly, the handle of said lever means lying opposite the other end of the elongated back plate in the closed position of the ram assembly,

said compressor base plate being further supported relative to said back plate by a brace portion at said side of the compressor base plate opposite its can-engaging surface,

said brace portion being provided with a stop located substantially beyond the compressor base plate and engageable with said lever means at a point spaced from aid bend and near said handle to prevent movement of the handle beyond a position corresponding to a fully crushed can.

5,009,156



MULTI-COLOR ROTARY PRINTING MACHINE FOR SIMULTANEOUS RECTO-VERSO PRINTING

Albrecht J. Germann, Wurzburg, Fed. Rep. of Germany, assignor to De La Rue Giori S.A., Lausanne, Switzerland

Filed May 4, 1989, Ser. No. 347,402
Claims priority, application Switzerland, May 18, 1988, 1887/88
Int. Cl.[5] B41F *5/16, 5/22;* **B41L** *15/10*
U.S. Cl. 101—177 **7 Claims**

1. A multi-color rotary printing machine for simultaneous recto-verso printing, especially for printing the safety back-

ground on security papers, means for feeding paper through said printing machine, with two interacting blanket cylinders (4, 14), between which the paper (1) to be printed runs through, thereby being printed on both sides, two plate cylinders (5, 15), each of which carries a respective collect-printing plate (5a,15a) and is in contact with one of the two blanket cylinders (4, 14), several color selector cylinders (8, 18), two color-collecting cylinders (6, 16) which are arranged at a distance from one another and each of which is in contact on the one hand with one of the plate cylinders (5, 15) and on the other hand with a respective one of said several color selector cylinders (8, 18), each said color selector cylinder being inked by an associated inking unit (9, 19), each color-collecting cylinder transferring all the colors obtained from the color selector cylinders in contact with it onto the respective collect-printing plate, at least one additional printing unit having a plate cylinder, wherein at least one of the two blanket cylinders (4, 14) interacts with said at least one additional printing unit (10, 11, 11a; 20, 21 21a), the plate cylinder (10; 20) of which is in contact with the respective blanket cylinder (4; 14), the blanket cylinders (4, 14) and the color-collecting cylinders (6, 16) being of the same size and having a diameter which is an integral multiple of the diameter of the plate cylinders (5, 15, 10, 20) and of the color selector cylinders (8, 18), the two color-collecting cylinders (6, 16) being arranged symmetrically underneath the two interacting blanket cylinders (4, 14) and respectively offset obliquely outwards relative to these and being at a distance from one another which is at least as large as their diameter, the collect-printing plate cylinders (5, 15) being arranged on the top of the color-collecting cylinders (6, 16) and the underside of said color-collecting cylinders being freely accessible.

5,009,157

ROTARY PRESS COMPRISING AN ENDLESS BLOCK BELT

Dieter Rogge, and Wilfried Wallmann, both of Lengerich, Fed. Rep. of Germany, assignors to Windmoller & Holscher, Lengerich, Fed. Rep. of Germany

Filed Apr. 19, 1989, Ser. No. 340,204

Claims priority, application Fed. Rep. of Germany, Apr. 19, 1988, 3813112

Int. Cl.[5] **B41F** *5/18, 13/00*

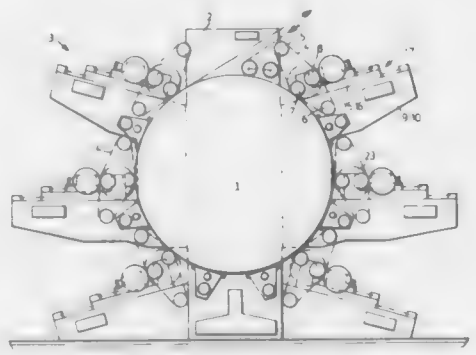
U.S. Cl. 101—178 **11 Claims**

1. A rotary press comprising:

at least one impression cylinder; and

a plurality of printing units around said impression cylinder, each printing unit comprising:

an inking unit,



four printing unit cylinders disposed relative to each other substantially at corners of a parallelogram, said four cylinders being comprised of two diametrically opposite printing cylinders and two diametrically opposite tensioning cylinders,

an endless block belt extending around and in engagement with said four cylinders,

a first one of said printing cylinders being adjacent said at least one impression cylinder and the other of said printing cylinders being adjacent said inking unit,

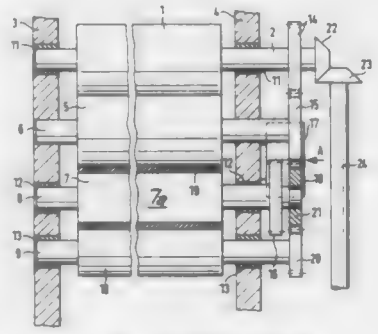
track means,

means for mounting said tensioning cylinders in said track means for movement toward and away from each other; and

means for mounting each printing unit so that said first printing cylinder engages said block belt against said at least one impression cylinder and said other printing cylinder engages said block belt with said inking unit.

5,009,158

OFFSET PRINTING MACHINE SYSTEM



Thomas John, and Georg Bock, both of Augsburg, Fed. Rep. of Germany, assignors to MAN Roland Druckmaschinen AG, Offenbach am Main, Fed. Rep. of Germany

Filed Jun. 25, 1990, Ser. No. 542,879

Claims priority, application Fed. Rep. of Germany, Jul. 8, 1989, 3922559

Int. Cl.[5] **B41F** *5/04*

U.S. Cl. 101—219 **13 Claims**

1. Offset printing machine system having

a rubber blanket cylinder (1, 30), having a blanket cylinder shaft (2, 34);

a plate cylinder (5, 31) having a plate cylinder shaft (6, 35);

an ink application cylinder (7, 32) having an ink cylinder shaft (8, 36);

a yielding surface covering (19, 48) on said ink application cylinder;

means (14, 15; 40, 44) for driving said blanket cylinder shaft and said plate cylinder shaft at the same speed, including plate cylinder gear means (15, 44) secured to the plate cylinder shaft (6, 35),

said cylinders being engaged against each other and rolling off against each other, and defining engagement regions at the respective nips between said cylinders,

wherein, in accordance with the invention,

the diameter of the ink application cylinder (7, 32) differs from the diameter of the plate cylinder (5, 31) when said cylinders are engaged against each other; and

wherein said drive means includes

means for driving the ink application cylinder (7, 32) at a circumferential speed corresponding to the speed of the plate cylinder (5, 31) to cause the engagement region of the ink application cylinder and of the plate cylinder to move at the same speed,

and wherein said ink application cylinder driving means compensate for differences in effective diameter at said engagement region between the ink application cylinder and the plate cylinder, while maintaining said corresponding circumferential speeds of the ink application cylinder (7, 32) and the plate cylinder (5, 31).

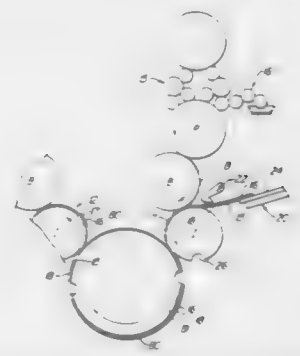
TRANSFER CYLINDER FOR PRINTING PRESS



Eduardo Duarte, 528 Rawls Cir., Irving, Tex. 75061

Continuation-in-part of Ser. No. 191,322, May 9, 1989, Pat. No. 4,967,661, which is a continuation-in-part of Ser. No. 58,892, Jun. 5, 1987, Pat. No. 4,836,104. This application Aug. 30, 1989, Ser. No. 400,694

Int. Cl.[5] **B41F** *13/08*

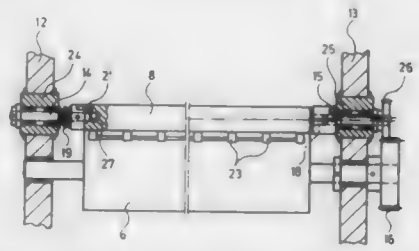
U.S. Cl. 101—422 **16 Claims**

1. A transfer cylinder for a printing press comprising: a film of polycarbonate bonded to the surface of the transfer cylinder, said film having a roughened surface on one side and a matte finished surface on the other side, said roughened surface being bonded to the surface of said transfer cylinder; and a film

of silicone on the matte finished surface of said film forming an ink repellant surface.

5,009,161

DEVICE FOR CLEANING SHEET-TRANSFER CYLINDERS IN ROTARY PRINTING PRESSES



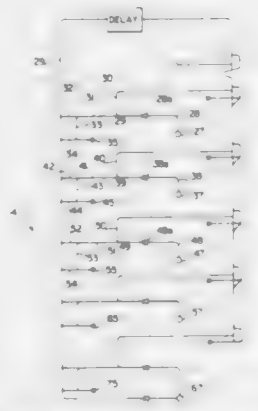
Arno Wirz, Bammental, Fed. Rep. of Germany, assignor to Heidelberger Druckmaschinen AG, Heidelberg, Fed. Rep. of Germany

Filed Apr. 17, 1989, Ser. No. 339,065

Claims priority, application Fed. Rep. of Germany, Apr. 16, 1988, 3812678

Int. Cl.[5] **B41F** *35/00*

U.S. Cl. 101—425 **6 Claims**



1. Device for keeping an outer cylindrical surface of a sheet-conveying cylindrical member clean for the purpose of conveying sheets with freshly printed surfaces in a sheet-fed rotary offset printing machine, comprising a roller having an outer cylindrical surface continuously in engagement with the outer cylindrical surface of the sheet-conveying cylindrical member at regions thereof free from engagement by the sheets, the outer cylindrical surface of the sheet-conveying cylindrical member being textured and having means for, respectively, transferring and repelling ink, said surface of said roller continuously in engagement with the outer cylindrical surface having means for removing and storing ink, and including means at least partly carried by said roller for replacing said roller when its means for removing and storing ink ceases to function, said replacing means include, at both ends respectively, of said roller, parts of quick-fitting couplings, and complementary parts of said couplings incorporated in bearings supported in side walls of the printing machine.

5,009,162

EXPLOSIVE LOGIC RESOLVER NETWORK

Denis A. Silvia, Aberdeen, Md., assignor to The United States of America as represented by the Secretary of the Navy, Washington, D.C.

Filed Dec. 28, 1981, Ser. No. 334,849
Int. Cl.[5] F42B *3/10, 15/00;* F42C *19/08*
U.S. Cl. 102—275.9 10 Claims

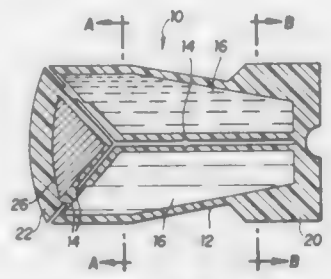
1. An explosive logic network for resolving a first detonation signal from a plurality of detonation signals, comprising:
detonation signal means;
explosive trail means propagating the detonation signals from the detonation signal means; and
resolution means extinguishing all detonation signals in the explosive trail means except for a first detonation signal.

5,009,163

NON-ELECTRIC SIGNAL TRANSMISSION DEVICE CONNECTION, METHOD AND APPARATUS THEREFOR

Kendall H. Robins, Bloomfield; Dennis K. Austin, and Richard W. Spraggs, both of Simsbury, all of Conn., assignors to The Ensign-Bickford Company, Simsbury, Conn.

Filed Apr. 19, 1990, Ser. No. 511,077
Int. Cl.[5] F42B *3/00;* C06C *5/04*
U.S. Cl. 102—301 14 Claims



12. The method of detonating an explosive column with a consumable, low-residue producing blasting system having a detonator adjacent to the bottom of the explosive column, the method comprising the steps of:
providing a length of detonating cord between an initiating point of the system and the top of the explosive column;
providing a length of shock tube between the explosive column top and the detonator;
providing a length of heat-shrinkable tubing;
inserting said detonating cord through said tubing;
axially aligning an end of said shock tube and an end of said detonating cord at the explosive column top at a sufficiently close distance from one another for reliable signal propagation therebetween;
sliding said tubing over said aligned ends; and
heating said tubing, thereby shrinking said tubing for providing axial compressive and radial compressive forces on said ends.

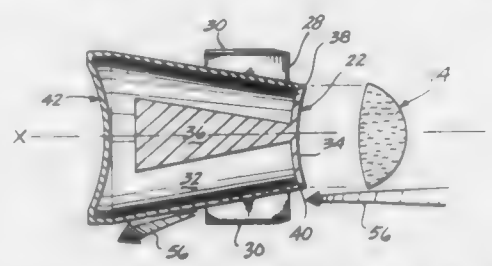
NON-PENETRATING PROJECTILE AND MEANS THEREFOR

Oded Grinberg, Mazkeret Batya, Israel, assignor to MNY Holdings and Agencies Limited, Tel-Aviv, Israel

Filed Dec. 29, 1988, Ser. No. 291,502
Claims priority, application Israel, Jan. 11, 1988, 85079
Int. Cl.[5] F42B *5/145, 8/14, 12/40*
U.S. Cl. 102—502 14 Claims



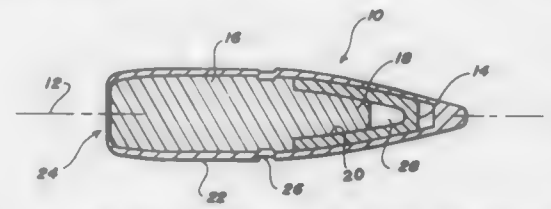
1. A projectile for impact upon a surface, comprising a housing defining at least two substantially sealed chambers wherein said housing comprises a plurality of walls of a first thickness which include a plurality of portions of a second thickness thinner than said first thickness, at least one of said walls being of a double leaf construction, said second thickness portions being located on said wall in order to provide points of stress which will fracture when the projectile impacts with a surface.

5,009,165

JACKETED PAINT PELLET

James K. Morris, 7004 S. 12th, #2106, Tacoma, Wash. 98465

Continuation-in-part of Ser. No. 273,850, Nov. 18, 1988, abandoned. This application Mar. 26, 1990, Ser. No. 499,556
Int. Cl.[5] F42B *12/40;* A63B *65/02*
U.S. Cl. 102—513 23 Claims



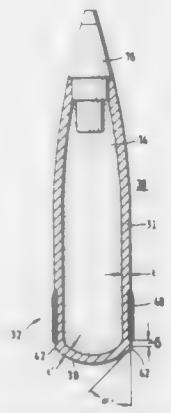
1. A jacket for holding and stabilizing a gelled pellet of paint as it travels through the bore of a gun barrel and in flight, the jacket comprising:
a body formed of lightweight nonmetallic material having a leading end and a trailing end, the leading end having a forward-facing substantially concave mounting surface
means connected to said body for supporting said body within the bore of the gun barrel and means connected to said body for guiding the body through the air in flight.

5,009,166

LOW COST PENETRATOR PROJECTILE

Stephen J. Bilsbury, Bethlehem, Pa.; William G. Dennis, Jr., Florissant, Mo., and Stephen K. Kernosky, Godfrey, Ill., assignors to Olin Corporation, Cheshire, Conn.

Filed Jul. 31, 1989, Ser. No. 388,178
Int. Cl.[5] F42B *12/06*
U.S. Cl. 102—516 7 Claims



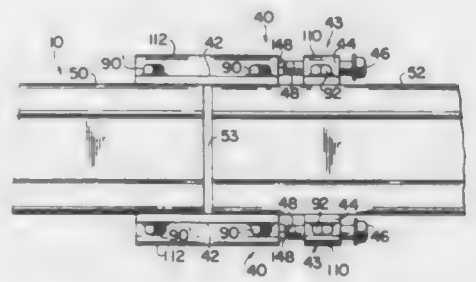
1. A small caliber hollow cone penetrator projectile comprising:
a hard strip metal carburized penetrator core having a generally hollow conical shape, said core being formed in a series of progressive dies from a strip of low carbon steel and then carburized to a uniform Rockwell hardness of at least C50;
a generally soft heavy metal slug body behind said core, said body having a portion extending centrally within said hollow core; and
a metal jacket over said body and said penetrator core enclosing said core and at least a portion of said body.

5,009,167

HIGH-EXPLOSIVE PROJECTILE

Achim Sippel; Heinz-Josef Kruse, both of Ratingen, and Wilfried Becker, Düsseldorf, all of Fed. Rep. of Germany, assignors to Rheinmetall GmbH, Düsseldorf, Fed. Rep. of Germany

Filed Jan. 12, 1989, Ser. No. 296,150
Claims priority, application Fed. Rep. of Germany, Feb. 12, 1988, 3804351
Int. Cl.[5] F42B *12/20, 14/02*
U.S. Cl. 102—524 18 Claims



11. In a high-explosive projectile including a projectile body having a forward region and a tail region which transitions to a base, an explosive charge disposed within said body and detonated by a suitable fuse, and a driving band disposed on the outer circumferential surface of said projectile body in said tail region, the improvement wherein:
the wall thickness of said tail region of said projectile body is substantially the same as the wall thickness of said forward region of said projectile body;
said tail region of said projectile body has a cylindrical shape up to its transition to said base and forms a circumferential edge at said transition;
said projectile base has approximately the same wall thickness as said projectile body;
said driving band has a width of at least twice said wall thickness; and
the rearward, gas pressure receiving side of said driving band is located a distance from said circumferential edge which is no greater than twice said wall thickness.

5,009,168

TRACK EXPANDER AND METHOD OF USE

Richard Kuchta, Tolland, Conn., assignor to Gerber Garment Technology, Inc., Tolland, Conn.

Division of Ser. No. 429,205, Oct. 30, 1989, Pat. No. 4,967,669.
This application Jul. 19, 1990, Ser. No. 555,929
Int. Cl.[5] E01B *25/22;* B65G *23/44*
U.S. Cl. 104—172.1 3 Claims

1. A method of spreading apart adjacently disposed ends of two track sections to accomplish tensioning of an endless chain traveling through said track sections in a conveyorized transport system, said method comprising:
providing a splice capable of being separately connected with each of said adjacently disposed ends of said track sections;
mounting said splice to said adjacently disposed ends of said track sections;
providing an expander body and fixing it to one of said track sections adjacent said splice;
providing take-up means between said expander body and said splice;
securing said splice against movement at the other of said track sections such that the splice moves relative to said one track section;
manipulating said take-up means to move the expander body and the splice relative to one another to create a gap between said adjacently disposed ends of said track sections; and
securing said splice against movement at said one track section to maintain said gap achieved by said take-up means.

TWIN AXLE RAIL BOGIE FOR CONVERTIBLE RAIL-HIGHWAY VEHICLES

Jacques Viens, 1486 Bellemare, Roxton Pond, Quebec, Canada J0E 1Z0

Division of Ser. No. 333,053, Apr. 4, 1989, Pat. No. 4,938,151.
This application Apr. 20, 1990, Ser. No. 512,224
Int. Cl.[5] B61F *3/12*
U.S. Cl. 105—4.1 3 Claims

1. A motorized unit for driving a train on rails in which the train is made up of a plurality of standard convertible rail-highway semi-trailers carried by rail bogies and hooked thereto through a fifth-wheel means including a coupling king pin, said motorized unit comprising: a power semi-trailer of a convertible rail-highway type having a coupling king pin arrangement at one end for connection with a rail bogie of one of said standard semi-trailers; a rear bogie solid with the other end of said power semi-trailer and provided with a pair of railroad driving wheels operatively connected to said power semi-

trailer to be driven thereby, said rear bogie having an upper surface that projects rearwardly of said power semi-trailer and is provided with a fifth wheel, said rear bogie fifth wheel being

sized and positioned to receive and interlock with a coupling king pin of one of said standard semi-trailers to be driven, and wherein said rear bogie is further provided with a pair of retractable road wheels

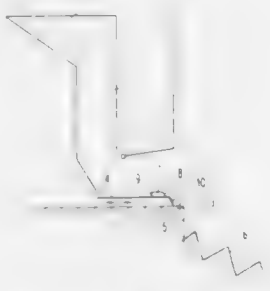
PORTABLE BODY MASSAGE TABLE

Eli G. Spehar, Huntington Beach, Calif., assignor to Rodney B. Smith, Escondido and Ernest L. Ostic, Orange, both of, Calif.

Filed Feb. 10, 1989, Ser. No. 309,784
Int. Cl.[4] A47B *3/00*
U.S. Cl. 108—36 4 Claims



1. A portable, folding table comprising
a pair of rectangular table top sections,
a peripheral border flange depending from each of said sections,
hinge members interconnecting said flange bottom edges of adjacent sides of said sections to enable folding of said table top sections from a working configuration, wherein said table top sections are coplanar, to a portable configuration, wherein the bottom edges of said flanges are juxtaposed;
two pairs of support legs of rectangular cross section;
a first means hingably securing a first end of each said pair of legs to the underside of each said table top section to fold toward said hinge members within said border flange;
a first rigid cross brace secured between the legs of each pair thereof;
two pairs of support arms of rectangular cross section, each said arm comprising a first and a second section pivotally interconnected by a second pivot means securing facing sides of each to the other;
a third pivot means hingably securing a first end of each said pair of arms to the underside of each said table top section to fold toward said table top section within said border flange;
a fourth pivot means securing a second end of each said pair of arms to said pair of legs to fold toward said table top section into the receptacle formed by said border flange;
a second rigid cross brace secured between the arms of each pair thereof;
a pair of first flexible, non-stretchable cables, one of said cables being pivotally secured between each opposing pair of said second pivot means, each said cable being of length to be in tension when said table top sections are coplanar and when said legs are fully unfolded;
two pairs of flexible, non-stretchable second cables, each individual said second cable being pivotally secured between said first and said second pivot means, each said second cable being of length to be in tension when said table top sections are coplanar and when said legs are fully unfolded.

FEED DEVICE WITH FILLING HOPPER AND ADJOINING FEED CHUTE FOR FEEDING WASTE TO INCINERATION PLANTS

Johannes J. E. Martin, and Walter J. Martin, both of Munich, Fed. Rep. of Germany, assignors to Martin GmbH fur Umweld-und Energietechnik, Munich, Fed. Rep. of Germany

Filed Jul. 18, 1989, Ser. No. 381,540
Claims priority, application Fed. Rep. of Germany, Jul. 29, 1988, 3825930
Int. Cl.[4] F23K *3/12, 3/16*
U.S. Cl. 110—109 18 Claims

1. A feed device comprising a filling hopper and adjoining feed chute, feeding pistons being provided at the lower end of the feed chute for conveying waste to an incineration plant, retaining and compression means being arranged on the upper side of at least one feeding piston for preventing waste fed into the filling hopper from sliding over the feed pistons in an uncontrolled manner and for compressing the waste

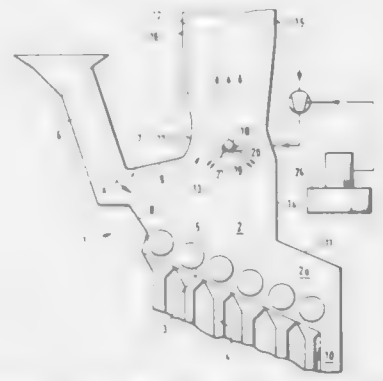
METHOD FOR AND APPARATUS OF THERMAL TREATMENT OF HUMAN WASTE

Shigeyuki Koga, and Shigeki Sugiue, both of Takamatsu, Japan, assignors to Kabushiki Kaisha Toyoseiakusho, Japan

Filed Jul. 25, 1989, Ser. No. 384,345
Claims priority, application Japan, Jul. 29, 1988, 63-191532
Int. Cl.[4] F23G *5/00*
U.S. Cl. 110—242 4 Claims



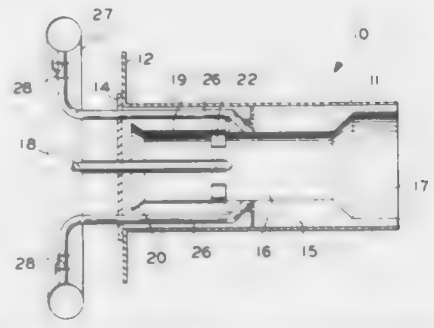
1. Apparatus for thermal treatment of human waste comprising: an inner barrel partitioned by a wall having a space in its upper part into a reservoir chamber for reserving human waste through an inlet and a flash chamber having an outlet for feeding said human waste from said space by a drawing water barrel to decompose said waste into a gaseous smelling water vapor component and a residue; an outer barrel in which said inner barrel is disposed in an upper part and partitioned by a wall penetrating said inner barrel in an upper part thereof provided with a through hole for intercommunicating in a lower part thereof into a smell removing chamber for removing said gaseous smelling component fed from said outlet; a discharge gaseous chamber having an outlet for discharging gas fed from said smell removing chamber through said through hole for intercommunicating after removal of said gaseous smelling component; and a heat intake port from a burner wherein said inlet is adjacent thereto for burning said gaseous smelling component and heating said flash chamber.

5,009,173

APPARATUS FOR INCINERATION OF REFUSE

Sedat Temelli, Erkrath, Fed. Rep. of Germany, assignor to Mullverbrennungsanlage Wuppertal GmbH, Fed. Rep. of Germany

Division of Ser. No. 172,085, Mar. 23, 1988, Pat. No. 4,940,006.
This application Jan. 16, 1990, Ser. No. 465,392
Claims priority, application Fed. Rep. of Germany, Apr. 9, 1987, 3712039; May 14, 1987, 3716088
Int. Cl.[4] F23G *5/00*
U.S. Cl. 110—244 8 Claims



1. Combustion vessel for refuse incineration or the like, comprising:
a furnace space with a grate for receiving refuse to be burned;
a refuse feeder located above the grate;
the furnace space having an afterburning zone at an upper part above the grate for receiving the flue gases formed by combustion of the refuse, the afterburning zone having a throttled area facing in the direction of the oncoming flue gases to dam the flue gases before entering the afterburning zone so as to increase the retention time of the flue gases in a uniform temperature zone of the furnace space;
a flue gas exhaust located downstream from the throttled area;
the throttled area comprising a venturi symmetrical in cross section perpendicular to the longitudinal direction of the flue gas exhaust so as to accelerate the flow of flue gases in a venturi-like manner in the afterburning zone while creasing a laminar flow of the flue gases and then to decelerate the flow of flue gases in a venturi-like manner in the afterburning zone without increasing the turbulence of the flue gases; and;
a nozzle bar located across and immediately upstream from the throttled area and having plural nozzle openings operative to inject jets of secondary air forming a substantially continuous grid pattern across the entire cross section of the flow of flue gases before the flue gases enter the throttled area, and in a direction opposite to the flow of flue gases flowing toward the afterburning zone so that no stream of flue gas can penetrate into the throttled area without coming into intimate contact with the injected secondary air,
so as to further increase the retention time of the flue gases in the furnace space and thereby completely burn out the combustible constituents entrained in the flue gases before entering the afterburning zone, so as to reduce the unwanted gaseous components in the flue gases.

5,009,174

ACID GAS BURNER

Bob Polak, Toronto, Canada, assignor to Exxon Research and Engineering Company, Florham Park, N.J.

Continuation of Ser. No. 403,258, Dec. 2, 1985, abandoned. This application Nov. 17, 1986, Ser. No. 931,136
Int. Cl.[5] F23D *1/02*
U.S. Cl. 110—264 8 Claims

1. A burner for combusting a waste gas comprising:
a throat section;
a fire tube downstream from said throat section in communication therewith;
an air duct section upstream from said throat section in communication therewith;
a centrally located nozzle means for introduction of a fuel in said throat section in a downstream direction toward said fire tube;
means upstream from said throat section for forming a downstream directed swirling combustion air stream substantially in an annular ring along the sidewalls of the throat section;
means for introducing a waste gas stream into the throat section downstream of the nozzle means in a forwardly biased but swirling direction opposite to that of said swirling combustion air stream.

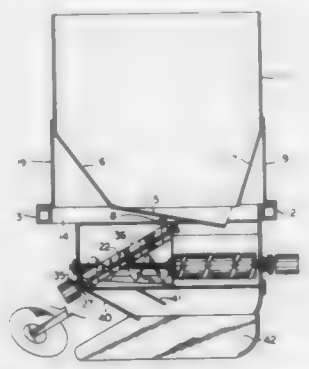
POTATO PLANTER



David A. Pember, P.O. Box 132, and James R. Schrader, P.O. Box 996, both of Glenns Ferry, Id. 83623

Filed Jan. 24, 1990, Ser. No. 469,228
Int. Cl.[5] A01C *5/06, 9/08*
U.S. Cl. 111—173 6 Claims

1. An improved potato planter having a perimeter frame supporting a seed hopper, a hopper drop chute, and shaker plate to prevent the bridging of seed potato pieces in the drop chute and axle and wheel means, wherein improvement comprises:
a generally horizontally oriented auger housing divided into a forward section and rear section by an attached transverse intermediate support plate, and with the forward section open at the top, and a downwardly opening discharge chute at the rearmost end, for receiving pieces of seed potato from the hopper drop chute through the open top of the front section;
a primary single blade auger disposed longitudinally within said auger housing for axial rotation within said auger housing;

a secondary filler blade auger disposed within the front section of said auger housing in interfitting parallel axial relationship with said primary auger so as to interfit the blade of the secondary auger between the reach of the blade of the primary auger on one side of the primary auger;

means for rotating both the primary and secondary augers in synchronized, but opposite directions so as to create traveling compartments for transporting pieces of seed potato

between the reaches of blade of the primary auger and the adjacent side of the auger housing;

means for returning pieces of seed potato ejected from the said traveling compartments from the rear section of the auger housing to the front section of the auger housing.

plow means for forming a seed furrow attached to the planter forward to the discharge chute; and

disking means for covering seed in the furrow attached to the planter behind the discharge chute.

5,009,176

SEWING DATA FORMING METHOD AND DEVICE FOR SEWING MACHINE

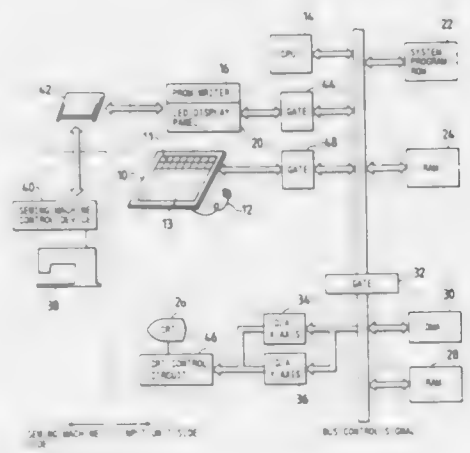
Katsunori Shigeta, and Haruyuki Nakamura, both of Aichi, Japan, assignors to Mitsubishi Denki K.K., Tokyo, Japan

Filed Jan. 17, 1990, Ser. No. 466,182

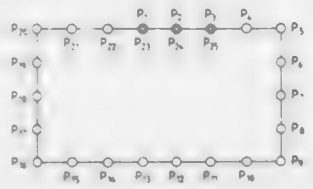
Claims priority, application Japan, Jan. 24, 1989, 1-14809

Int. Cl.[5] D05B *21/00*

U.S. Cl. 112—121.12 **15 Claims**



12. A device for forming sewing data for a sewing device, comprising:



coordinates input means for inputting coordinate values of a needle position;

operation means for controlling the coordinate values successively inputted from said coordinates input means to obtain first needle position data for a sewing machine;

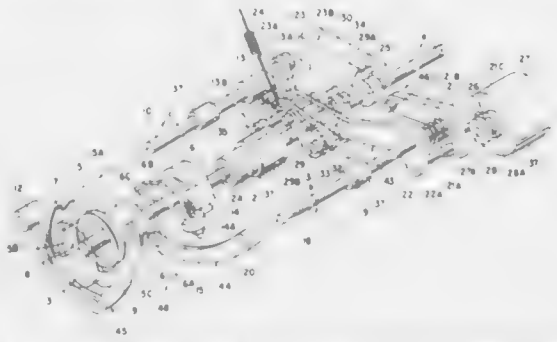
detection means for detecting whether said first needle position data input is within a predetermined range from second needle position data which has been already inputted and

conversion means for replacing said first needle position data by said second needle position data when it is detected by

said detection means that said first needle position data is within said predetermined range.

5,009,177

THREAD CUTTING UNIT HAVING A ROTATABLY DRIVEABLE CUTTING KNIFE AND LOOP SPREADING PLATE FOR A SEWING MACHINE



Shuichi Sato; Yoshimi Koguchi, and Yoshiharu Kobayashi, all of Tochigi, Japan, assignors to SSMC Inc., Edison, N.J.

Filed Sep. 22, 1989, Ser. No. 410,789

Claims priority, application Japan, Oct. 21, 1988, 63-137558[U]

Int. Cl.[5] D05B *65/02, 69/00, 65/00*

U.S. Cl. 112—292 **4 Claims**

1. A thread cutting unit in a sewing machine having a bed and comprising:

a lower shaft rotatably supported below the bed;

a needle movable vertically and held at a side of the bed;

a throat plate mounted on the bed;

a hook fixed to the lower shaft for cooperating with the needle, said neeille extends beyond the throat plate at the time of stitching operation;

a thread cutting knife and a loop spreading plate respectively rotatably supported on the lower shaft and positioned adjacent to the hook, the thread cutting knife and the loop spreading plate crossing each other in the space between the hook and the throat plate for cutting a sewing thread after completion of a series of stitching operations; and

a thread cutting driving unit for driving the thread cutting knife and the loop spreading plate;

wherein the thread cutting driving unit comprises:

a thread cutting knife driving shaft and a loop spreading plate driving shaft respectively rotatably supported below the bed of the sewing machine;

a rotational motion transmission device for respectively transmitting a rotational motion of the lower shaft to the thread cutting knife driving shaft and the loop spreading plate driving shaft;

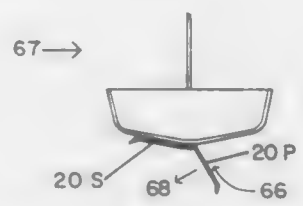
a thread cutting supporting member having the thread cutting knife and rotatably supported below the bed;

a first turnable interlocking mechanism having interconnections at four different locations and having a driving body fixed to the thread cutting knife driving shaft and a driven body integrated with the thread cutting supporting member;

a loop spreading plate fixing member rotatably supported below the bed of the sewing machine and having a loop spreading plate; and

a second turnable interlocking mechanism having interconnections at four different locations and having a driving body fixed to the loop spreading plate driving shaft and a driven body intergrated with the loop spreading plate fixing member.

5,009,178



SELF ACTIVATING KEEL

Henry P. Geffken, RR1 Box 29-13, Hereford, Ariz. 85615

Filed Nov. 14, 1989, Ser. No. 437,454

Int. Cl.[5] B63B *41/00*

U.S. Cl. 114—143 **9 Claims**

1. A self activating stabilizer for a craft operating in a fluid medium, comprising:

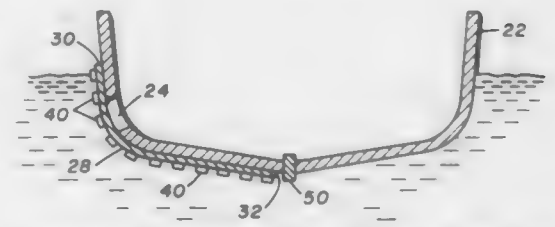
(a) a fin means, which is pivotally mounted to the body of said craft such that said fin means swings on an axis that is approximately parallel to the intended direction of travel of said craft, and

(b) a limiting means such that the movement of said fin means relative to the body of said craft is restricted to a pivotal arc that is defined by said body and an acute angle to the direction of deviant fluid flow that is to be controlled by said fin means, and

(c) an activating means, shaped into said fin means, that offers a surface of the unacceptable angles of fluid flow across said body causing said fin means to swing away from said body to the acute angle defined by said limiting means thereby stabilizing said craft against undesireable angles of attack, and

(d) a deactivating means, shaped into said fin means, that offers a surface to the acceptable angles of fluid flow along said body causing said fin means to swing against said body thereby reducing the resistance to the foreward progress of said craft.

5,009,179



OIL SPILL CONTROL

Roscoe F. Johnson, 5650 N. Century Blvd., Century, Fla. 32535

Continuation-in-part of Ser. No. 380,881, Jul. 17, 1989, abandoned. This application Mar. 26, 1990, Ser. No. 498,920

Int. Cl.[5] B63B *43/16*

U.S. Cl. 114—229 **5 Claims**

1. Apparatus for stopping oil from leaking from a vessel having a hull, said hull having an outer surface and having a laden waterline, said hull having a rupture, said apparatus comprising:

A. an imperforate oil-impervious sheet-like flexible curtain having a top edge, a bottom edge, and first and second opposed lateral edges, said curtain having a length from said top edge to said bottom edge, said curtain having a width from said first to said second lateral edge;

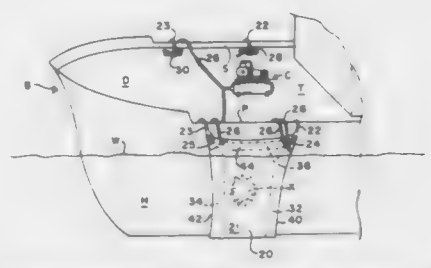
B. said length being greater than the height of said rupture and said width being greater than the width of said rupture;

C. top sealing means for sealing said top edge to said outer surface of said hull above said rupture; and

D. lateral sealing means for sealing said lateral edges to said outer surface of said hull on opposite sides of said rupture from levels below said rupture upwardly to said top edge;

E. said bottom edge remaining mechanically unsealed to said hull, said curtain forming with said hull a downwardly-facing open pocket means for containing said oil and preventing further leakage after said pocket means is filled while permitting water to enter between said bottom edge and said hull.

5,009,180



HULL HOLE CLOSURE FOR AN OIL TANKER

William T. Holt, 4610 Ellendale Rd., Memphis, Tenn. 38135

Filed Sep. 7, 1990, Ser. No. 579,365

Int. Cl.[5] B63H *43/16*

U.S. Cl. 114—229 **23 Claims**

13. A hull hole closure, for use with an oil tanker having a hull hole, said closure comprising:

a. a flexible, substantially waterproof sheet, shaped substantially similar to the bow of the tanker, for covering said hull hole and for extending under the keel and around the bow of the tanker from the port side to the starboard side of the tanker, said sheet comprising:

i. an aft edge, for location toward the stern of the tanker and passing under the keel of the tanker, said aft edge comprising a first end and a second end;

ii. an upper portion for location substantially above the water line of the tanker, said upper portion extending

substantially from the first end of the aft edge to the second end of the aft edge;

iii. an inner surface for placement substantially adjacent the hull of the tanker; and, iv. an outer surface for placement away from the hull of the tanker;

b. an aft belt, attached to the sheet substantially adjacent the aft edge of the sheet, said aft belt extending substantially from the first end of the aft edge to the second end of the aft edge, said aft belt comprising:

i. a longitudinal reinforcing strap attached to the sheet; and,

ii. a first longitudinal high pressure hose for inflation, located substantially parallel to the longitudinal reinforcing strap, and attached to the longitudinal reinforcing strap on the inner surface of the sheet;

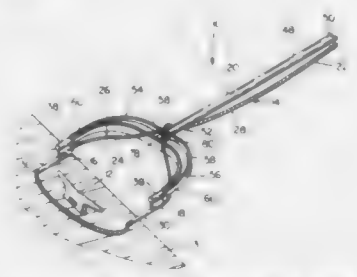
c. an upper belt, attached to the upper portion of the sheet, comprising:

i. a transverse reinforcing strap attached to the sheet, and

ii. a transverse inflatable bladder attached to the upper belt on the inner surface of the sheet for inflation to substantially seal the upper portion of the sheet to the hull; and

d. means for securing the hull hole closure to the tanker.

5,009,181



LINE HANDLING DEVICE

Paul E. Upchurch, P.O. Box 1529, Oak Harbor, Wash. 98277

Filed Jul. 12, 1990, Ser. No. 551,927

Int. Cl.[5] B63B *21/04*

U.S. Cl. 114—230 **42 Claims**

1. An apparatus to assist a user in tying a boat to an object, comprising:

a line having a first end portion attachable to the boat, a second end portion forming a loop positionable around the object, and a length of line extending between said first and second end portions;

first and second spreaders, each said spreader being disconnected from the other and having an aperture through which said second end portion of said line extends to independently, slidably mount said first and second spreaders thereon for selected movement of said first and second spreaders to opposite sides of said loop, each said spreader further having a connection recess; and

a handle having an elongated shaft with a proximal end portion for grasping by the user and a distal end portion, and further having a pair of spreader arms, each spreader arm having one end rigidly attached to said shaft distal end portion and a free end spaced apart from said free end of the other of said spreader arms by a predetermined distance, said free end of each of said spreader arms being releasably insertable into said recess of a different one of said first and second spreaders with said first and second spreaders positioned to opposite sides of said loop and spaced apart by about said predetermined distance to selectively hold said loop in an open position, said free ends of said spreader arms being releasable from said recesses of said first and second spreaders in response to the user pulling said handle in a direction away from the object with a predetermined separation force with said loop in place around the object to allow said loop to assume a closed position around the object uninhibited by said first and second spreaders or said spreader arms, whereby the user, while located at a distance from the object and holding said proximal end portion of said shaft, can easily place said loop around the object, and the user can selectively disconnect said first and second spreaders from said spreader arms by pulling on said handle so said loop can assume a closed position around the object for tying the boat to the object.

SUBMARINE TORPEDO TUBE SHUTTERWAY LAUNCH MODE ADAPTER

Paul E. Moody, Barrington, R.I., assignor to The United States of America as represented by the Secretary of the Navy, Washington, D.C.

Filed Aug. 15, 1990, Ser. No. 568,304

Int. Cl.[5] B63G *8/00*

U.S. Cl. 114—238 **9 Claims**

1. A shutterway for a torpedo tube, said torpedo tube housing a torpedo of diameter d and having a centerline axis and an exit flow area, said shutterway comprising:

a means for creating a first passageway through said shutterway, said first passageway means having a flow area of diameter D and a line of axis passing through a center of said shutterway, wherein D>d when said first passageway line of axis is aligned with said torpedo tube center line axis;

a means for creating a second passageway through said shutterway, said second passageway means having a flow area of diameter d and a line of axis passing through said center of said shutterway, said second passageway line of axis oriented at an angle of 60° with respect to said first passageway line of axis, wherein said second passageway flow area of diameter d is equal to said torpedo tube diameter when said second passageway line of axis is aligned with said torpedo tube centerline axis; and

a means for closing off said torpedo tube exit flow area, said closing means having a line of axis passing through said center of said shutterway and oriented at an angle of 60° with respect to said first passageway line of axis and at an angle of 60° with respect to said second passageway line of axis, wherein said torpedo tube exit flow area is closed off when said closing means line of axis is aligned with said torpedo tube centerline axis.

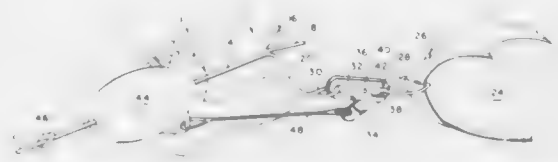
TOWLINE AND RELEASE SYSTEM FOR WATER SPORTS ADJUNCT DEVICES

Frank R. Naypaver, 351 Florine Ave., Leavittsburg, Ohio 44430

Filed Dec. 14, 1989, Ser. No. 450,322

Int. Cl.[4] B63B *21/64*

U.S. Cl. 114—253 **11 Claims**



1. A towline and release system for water sports adjunct devices as inflated air tubes comprising:

a towline having a first portion thereof connected to a user handle and a second portion thereof adapted for connection to an adjunct device,

said second portion including releasable latch means for said adjunct device, and,

release means for said latch means, said release means being usable while said towline and adjunct device are under tow,

said release means including a manually actuated length of flexible lead extending from said latch means, with said flexible lead having means for slidable association with

said towline, and said means is slid with respect to said towline to release said latch,

wherein said slidable means is a bulbous member having a bore therethrough for reception of said towline therein whereby when mounted on said towline the bulbous member is carried thereby for engagement to release said latch means.

BOAT COVERS

Thomas Voldrich, 1014 Brookview, Parma, Ohio [illegible]134

Filed Dec. 6, 1989, Ser. No. 446,658

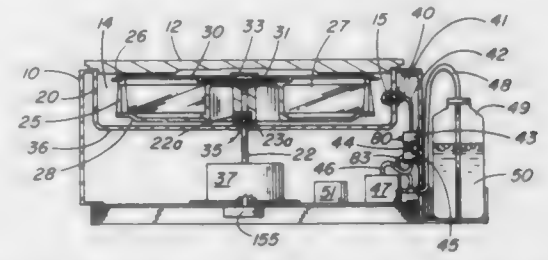
Int. Cl.[5] B63B *17/00*

U.S. Cl. 114—361 **5 Claims**

1. A canopy for an open boat comprising a frame, the frame consisting of a pair of reversely L-shaped fixed angled tubular supports mounted on either side of the boat said supports having substantially horizontal and substantially vertical portions, means for connecting the supports to opposite sides of the boat, which accommodates a swiveling action about the gunwale and about the transverse axis of the boat, a hinged connection connecting each pair of supports, a cover being disposed over the supports and functioning as a member of the frame for frame support, the said hinged connection providing peaking at the centerline of the cover to afford side to side drainage of water.

5,009,185

APPARATUS FOR APPLYING A CONTROLLED AMOUNT OF REAGENT TO A MICROSCOPE SLIDE OR THE LIKE



Barry O. Stokes, Logan; Gary D. Bradshaw, Wellsville, and Wayne K. Barlow, Providence, all of Utah, assignors to Wescor, Inc., Logan, Utah

Filed May 9, 1989, Ser. No. 350,106

Int. Cl.[5] B05C *11/02*

U.S. Cl. 118—52 **8 Claims**

1. Apparatus for applying a controlled amount of reagent to a microscope slide, comprising a spray chamber; carousel means for holding a plurality of slides to be sprayed and rotatably mounted in the spray chamber; nozzle means located in the spray chamber adjacent a portion of the carousel means for directing spray of reagent toward the slides held in the portion of the carousel means adjacent the nozzle means; means for rotating the carousel means at predetermined speeds in the spray chamber so as to move the slides mounted in the carousel means past the nozzles means; reagent reservoir means for storing a supply of reagent; pump means for pumping reagent from said reservoir means to said nozzle means; flow line means extending between said pump means and said nozzle means through which reagent can flow between said pump means and nozzle means; control valve means located in said flow line between said pump means and said nozzle means to control flow of reagent between said pump means and said nozzle means, the portion of said flow line extending between said valve means and said nozzle means being configured to eliminate pressure that would cause continued flow of reagent

from the flow line through the nozzle after closing of the control valve whereby spray of reagent into the spray chamber stops substantially immediately upon closing of the control valve; means to determine and monitor the angular position of the carousel means in the spray chamber; and control means responsive to the means to determine and monitor the angular position of the carousel means to coordinate operation of said pump means, valve means, and carousel means to accurately cause spray of reagent during predetermined known passage of the carousel means past the nozzle means whereby spray of reagent onto the slides is accurately controlled as the slides pass the nozzle means.

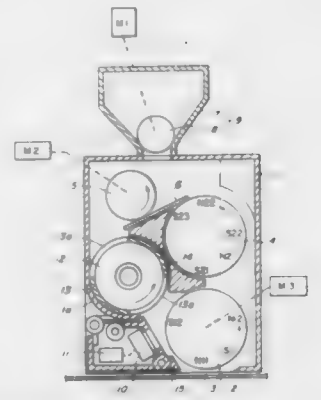
DEVELOPING DEVICE WITH SHUTTER



Masato Asanuma, and Masatoshi Kaneshige, both of Nara, Japan, assignors to Sharp Kabushiki Kaisha, Osaka, Japan

Filed Aug. 4, 1988, Ser. No. 228,527

Claims priority, application Japan, Aug. 25, 1987, 62-129478[U]; Aug. 25, 1987, 62-129479[U]

Int. Cl.[5] G03G *15/09*

U.S. Cl. 118—658 **10 Claims**

1. A developing device comprising

a developing region where development takes place,

a toner receiving region,

a toner supplying means for supplying toner into said toner receiving region,

a toner supply route along which toner is delivered from said toner receiving region to said developing region,

a toner recycling route along which used toner is returned

from said developing region to said toner receiving region,

a shutter disposed in said toner supply route for selectably opening and closing said toner supply route,

a magnetic toner recycling roller disposed entirely in said toner recycling route for delivering used toner through said toner recycling route,

a partition member which is disposed between said shutter and said magnetic toner recycling roller and separates said toner supply route from said toner recycling route,

a sensor disposed along said toner supply route between said shutter and said developing region for detecting toner concentration, and

a timer circuit for effecting timing control on said toner supplying means such that a specified amount of toner is supplied into said toner receiving region after said shutter is closed if said sensor detects a specified toner concentration level.

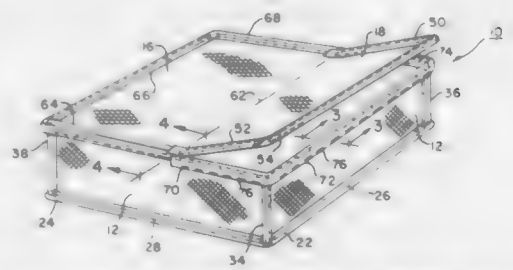
AQUATIC CAGE AND METHOD



Gregor N. Neff, 85 Myrtle Ave., Dobbs Ferry, N.Y. 10522

Filed Jun. 25, 1990, Ser. No. 543,674

Int. Cl.[5] A01K *61/00*

U.S. Cl. 119—3 **13 Claims**

1. An aquatic animal cage, said cage comprising, in combination, an upwardly-extending side-wall made of a flexible netting material, a bottom-wall connected to said side-wall and forming, in combination with said side-wall, an aquatic animal enclosure, a plurality of upwardly-extending receptacle means secured to said side-wall and spaced apart from one another, each of said receptacle means being elongated and constructed to receive an elongated upwardlyextending support member which is stiff relative to said netting material of said side wall, and is adapted, when said receptacles contain such support members, to support said side wall above the ground when said

bottom-wall is on the ground, and to allow said side-wall to fold and collapse when said support members are removed.

TANK COVER III

Richard A. Gordon, 95 W. 3rd St., Freeport, N.Y. 11520

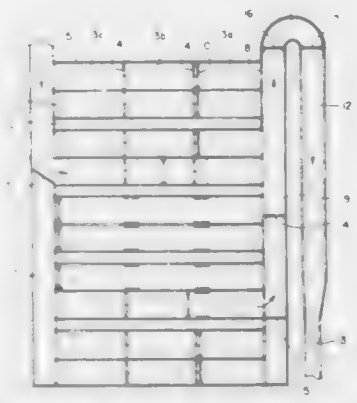
Filed Aug. 14, 1989, Ser. No. 393,575

Int. Cl.[5] A01K *63/02, 1/03*

U.S. Cl. 119—5 **4 Claims**

1. An adjustable cover for use with an animal tank or the like of several sizes, each of said tanks having an open top provided with edge portions having an exterior lip, said cover comprising two telescoping rectilinear tray-like sections each having a screen peripherally surrounded by a unitary flat frame member and depending skirt formed along three of the sides of each of the frame members, each of said tray-like sections being identical with one of said trays being narrower in the transverse direction, each of said trays having a flat rib extending transversely between the longitudinally extending portions of the frame members said flat rib being spaced from the open side, each of said flat rib and the portion of the frame member along the open side, having a row of holes formed therein, each row extending transversely to the direction of telescoping of said trays, at least some of the holes in one row of each tray being aligned with some of the holes in a row in the other of said trays along a line parallel to the direction of telescoping of said trays, so that the holes in one of the trays register with the aligned holes in the other tray, said cover including fastening means for insertion into the registered holes for securing said trays together in a selected one of at least two predetermined telescoping positions, the cross section of said secured tray defining a horizontal wall adapted to rest upon the top of said tank and a continuous peripheral wall adapted to fit about the exterior lip wherein each of the frames comprises a rectangular border having transverse and longitudinal reinforcing ribs.

5,009,191



SYSTEM FOR THE STALLING OF ANIMALS

Tage W. Joergensen, Copenhagen, and Leif Christensen, Vaerlose, both of Denmark, assignors to Slagteriernes Forskningsinstitut, Denmark

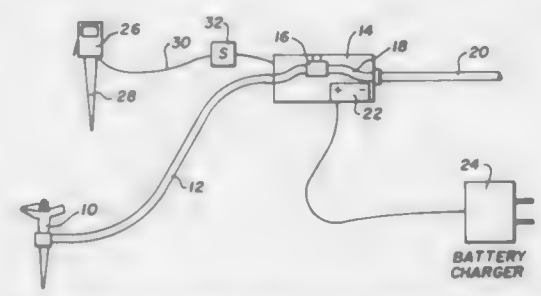
Filed Sep. 27, 1989, Ser. No. 413,340

Int. Cl.[5] A01K *1/02*

U.S. Cl. 119—20 **7 Claims**

1. System for the stalling of animals, said system comprising: partition means for defining a driving-in passage, a driving-out passings, an elongate pen disposed between said passages, a pen entrance for communication between said pen and said driving-in passage, and a pen exit for communication between said pen and said driving-out passage; an entrance gate for opening and closing said pen entrance; an exit gate for opening and closing said pen exit; a driving gate movable longitudinally of said pen; and at least one stationary intermediate gate disposed in said pen at a predetermined distance from said entrance gate and said exit gate to divide said pen into a plurality of sections of predetermined size; said driving gate and said stationary intermediate gate extending transversely of said pen from one side of the pen to the opposite side.

5,009,192



ANIMAL DETERRENT APPARATUS

Barry A. Burman, RR #6, 592 Cheryl Place, Victoria, B.C., Canada U8X 3X2

Filed Sep. 18, 1990, Ser. No. 584,237

Int. Cl.[5] A01K *15/00*

U.S. Cl. 119—29 **10 Claims**

1. An apparatus to deter animals comprising in combination:

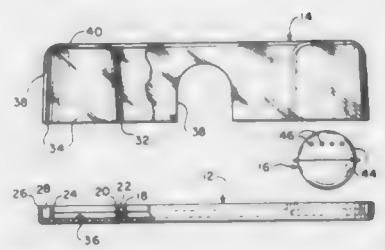
a water sprinkler with connection line to a water supply,

a low voltage electrically operated shut-off valve in the connection line,

low voltage power supply means for the shut-off valve, and

infrared proximity sensor for sensing a presence, the sensor powered by the power supply means, adapted to open the shut-off valve in the connection line to the sprinkler when the sensor senses a presence.

5,009,193



CIRCULAR CAT TOY

Richard A. Gordon, 95 W. 3rd St., Freeport, N.Y. 115[illegible]

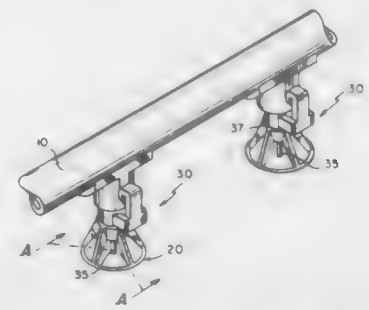
Filed Sep. 27, 1989, Ser. No. 413,162

Int. Cl.[5] A01K *15/02;* **A63H** *33/00*

U.S. Cl. 119—29 **5 Claims**

1. An animal plaything comprising a torroidal housing defining an enclosed circular raceway and a hollow ball freely movable in said raceway, said housing having a bottom surface adapted to rest on a planar, substantially horizontal surface, an upper surface, and inner and outer side walls, the inner side wall being continuous, the upper surface being provided with a plurality of substantially oblong openings permitting entry of the animal's paw but preventing passage of the ball therethrough, said oblong opening being sufficiently elongated to permit the animal to manipulate the ball over an extended arc, said outer wall being provided with a plurality of circumferentially spaced portal openings, all but at least one permitting entry of the animal's paw but preventing passage of the ball, said at least one portal opening also permitting passage of said ball for its removal, said ball being porous and being filled with an attractive lure for the animal, said oblong openings and portal openings being arranged in uniformly-spaced, alternating position about the center of said torroidal housing to permit said animal to manipulate said ball from opening to opening and cause its removal from only said at least one portal opening through entry of its paw in a selected one of the adjacent oblong openings.

5,009,194



DRINKER SHIELD

Eldon Hostetler, Middlebury, Ind., assignor to Ziggity Systems, Inc., Middlebury, Ind.

Continuation of Ser. No. 149,404, Jan. [illegible], 1988, abandoned. This application Jan. 19, 1990, Ser. No. 469,735

Int. Cl.[5] A01K *7/00*

U.S. Cl. 119—72 **15 Claims**

1. A shield apparatus attached to a trigger drinker watering unit with a trigger pin and a base portion, comprising:

a partially open shield surrounding said trigger pin such that said trigger pin is protected from inadvertent lateral activation by an animal;

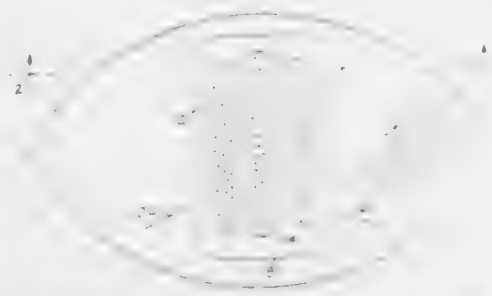
said partially open shield surrounding said trigger pin and extending radially outward from said base portion of said trigger drinker water unit;

said partially open shield having a top portion and a bottom portion;

said bottom portion of said partially open shield located below or level with a bottom portion of said trigger pin when said trigger pin is in a substantially open position; and

a connection means for attaching said shield apparatus to said trigger drinker watering unit.

5,009,195



ANIMAL GROOMING DEVICE AND PROCESS

Hiltraut M. Damm, 42 Butler Rd., Scarsdale, N.Y. 10583

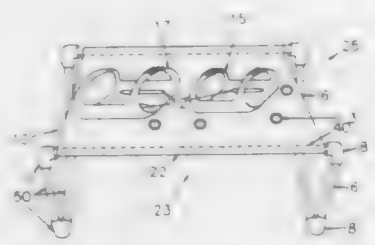
Filed Feb. 12, 1990, Ser. No. 478,463

Int. Cl.[5] A01K *13/00*

U.S. Cl. 119—86 **10 Claims**

1. A device for grooming the coat of fur-bearing animals which comprises a substrate sheet of pliable material having dimensions suitable for snugly enfolding the human hand, said substrate sheet having affixed thereto on at least one of its surfaces a plurality of bristles, the shafts of which are nominally perpendicular to said surface and at least some of said bristles having a hooked configuration, said bristles being positioned on said substrate in a manner such that they can be brought into contact with an animal's coat by pressing said substrate sheet against the animal using the palm or fingers of a hand enfolded therein, said substrate sheet having a fastening means to maintain it in snug enfoldment of a human hand, and containing at least one aperture through which the thumb of said human hand can protude while said hand is enfolded in said substrate sheet with the bristles covering the palm area.

5,009,196



CAT RESTRAINER

Ruby Y. Young, P.O. Box 1094, Kerrville, Tex. 78029

Continuation-in-part of Ser. No. 238,493, Aug. 31, 1988, abandoned. This application Dec. 1, 1989, Ser. No. 449,505

Int. Cl.[5] A61D *3/00*

U.S. Cl. 119—101 **5 Claims**

1. A cat restraining apparatus comprising the combination of a harness apparatus and frame assembly for securing and supporting cats and other small domestic four legged pets for bathing, treating, breeding, transporting and surgical procedures, wherein the combination comprises:

a harness apparatus unit including a base member having four leg openings and supported horizontally on the frame assembly and, wherein the base member is composed of a durable, and flexible sheet of material with its longitudinal edge portions attached to longitudinal members of the frame assembly;

the harness apparatus wherein said base member is generally rectangular and of sufficient size to accommodate four leg openings for a cat or other small animal;

the harness apparatus wherein an upper and lower body harness member is fixedly secured to said base member and further includes a pair of openings that receive the legs of an animal;

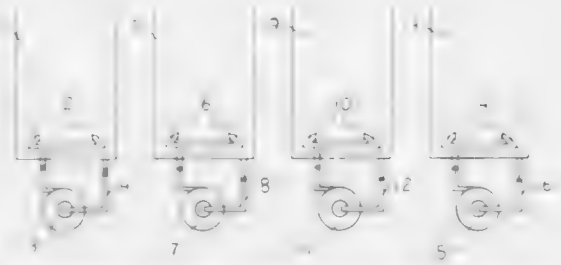
the harness apparatus wherein said upper and lower body harness member has a lower body encircling element and has a fixedly secured fabric support panel member provided at the base of and between a plurality of interconnecting strap elements;

said upper and lower body harness member wherein said plurality of interconnecting strap elements are provided with cooperating securing means adapted to captively surround the torso of a cat;

a frame assembly associated with said harness apparatus including upper longitudinal side members approximately the length of said base member, lower transverse members approximately the width of said base member, and a plurality of elongated support members of equal length;

the plurality of elongated support members of equal length and means to detachably connect said elongated support members to said longitudinal side members and to said transverse members normally, or at right angles.

5,009,197



METHOD OF REMOVING OIL FROM BIRDS AND ANIMALS

Eric C. Cottell, Windermere, Private Dr., Bayville, N.Y. 11709

Filed Aug. 15, 1990, Ser. No. 567,629

Int. Cl.[5] A61D *11/00*; **A01K** *29/00*

U.S. Cl. 119—159 **3 Claims**

1. A method of cleaning a contaminated animal by adding a diluent of similar nature to the contaminant then either directly, or by stages, inverting the diluent so that it becomes the internal phase rather than the external phase of the emulsion, which can then be diluted with more of the external phase.

5,009,198

ROTARY VEE ENGINE

Robert W. Sullivan, Snyder; Tommie J. Holder, Mountain Park, and Max F. Buchanan, Roosevelt, all of Okla., assignors to Sullivan Engine Works, Inc., Snyder, Okla.

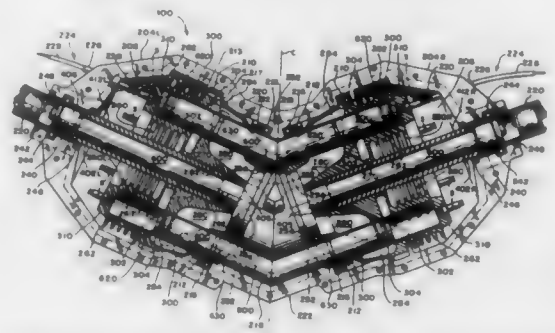
Division of Ser. No. 151,657, Feb. 3, 1988, Pat. No. 4,867,107. This application Jun. 28, 1989, Ser. No. 373,215

Int. Cl.[5] F02B *57/06*

U.S. Cl. 123—43 A **8 Claims**

1. In a rotary vee engine:

a housing having outer ends;



two cylinder blocks each having inner and outer ends and mounted in the housing for rotation of one cylinder block about a first rotational axis and rotation of the other cylinder block about a second rotational axis, said axes being angled to intersect adjacent the inner ends of said blocks at an included angle less than one hundred and eighty degrees;

each cylinder block having a plurality of cylinders formed therein to intersect the inner end of the cylinder block and to extend therefrom into the cylinder block parallel to the rotational axis of the cylinder block;

a plurality of angled pistons each having a portion disposed in a cylinder of one block and a portion disposed in a cylinder in the other block for orbital motion of the pistons coordinately with the rotation of the cylinder blocks;

a central bore formed through each of the cylinder blocks along the rotational axis for the respective cylinder block;

an angled support shaft extending through the central bores of each cylinder block, the support shaft having portions supported by the housing and including means for rotatably and axially supporting each of the cylinder blocks on the support shaft;

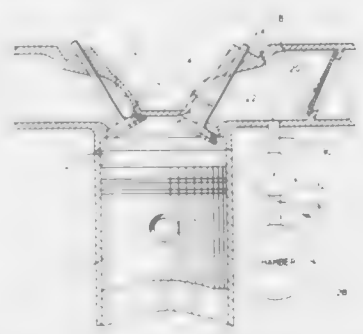
a generally bent axis cylindrical wedge shaped central cavity formed by the housing between the inner ends of the cylinder blocks for receiving air/fuel mixture during the operation of the engine;

an exhaust cavity formed by the housing axially outwardly from the central cavity adjacent each cylinder block for receiving and discharging the exhaust gases created during the operation of the engine;

a cooling air cavity formed by the housing adjacent the outer ends of each cylinder block including a torus shaped chamber expanding in volume radially outwardly from the rotational axis of the adjacent cylinder block and terminating in a cooling air discharge port; and

cooling air intake means defined in the outer ends of the housing in fluid communication with the adjacent cooling air cavity.

5,009,199



INTAKE RESERVOIR FOR AN ENGINE HAVING A CHECK VALVE

Glen R. MacFarlane, Clarkston, Mich., assignor to General Motors Corporation, Detroit, Mich.

Filed Jun. 8, 1990, Ser. No. 535,000

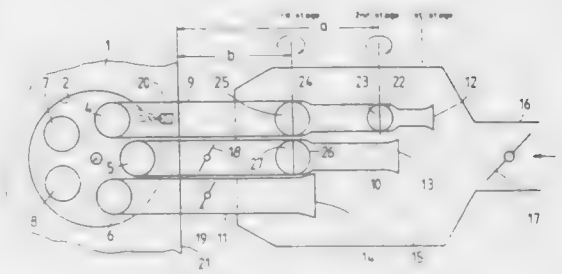
Int. Cl.[5] F02M *35/10*

U.S. Cl. 123—52 MF **3 Claims**

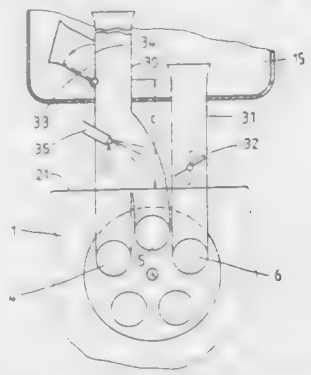
1. An intake reservoir for an engine having an intake passage leading to a cylinder, a check valve in the intake passage to allow fluid flow toward the cylinder and obstruct fluid backflow in the reverse direction, an intake valve seated in the intake passage between the check valve and cylinder, and a bypass port located on the intake passage so that the bypass port communicates with a trapped volume defined by the portion of the intake passage between the check valve and intake valve, the intake reservoir comprising a reservoir cavity having a single cavity port, a port passage connected between said cavity port and the bypass port enabling fluid flow between the trapped volume and said reservoir cavity, and a control valve connected to said port passage enabling active adjustment of the flow area of said port passage throughout a range of engine operating conditions to regulate fluid flow between the trapped volume and said reservoir cavity.

5,009,200

INTAKE MANIFOLD ASSEMBLY FOR A MULTICYLINDER INTERNAL COMBUSTION ENGINE



Richard van Basshuysen, Bad Wimpfen, and Armin Bauder, Neckarsulm, both of Fed. Rep. of Germany, assignors to Audi AG, Ingolstadt, Fed. Rep. of Germany

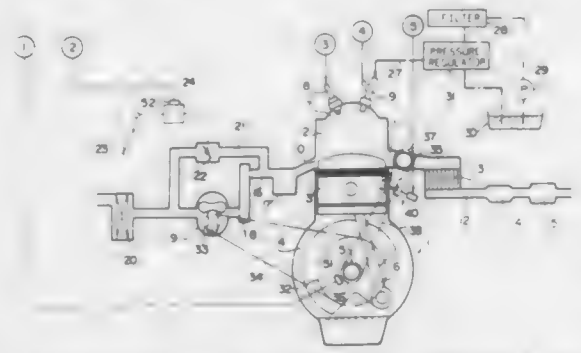


Filed Mar. 16, 1990, Ser. No. 495,287

Claims priority, application Fed. Rep. of Germany, Mar. 25, 1989, 3909837

Int. Cl.[5] F02M *35/10*

U.S. Cl. 123—52 M **10 Claims**



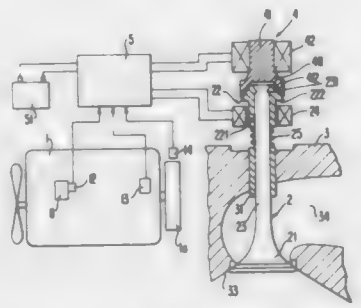
1. An intake manifold assembly for a multicylinder internal combustion engine having at least two inlet valves per cylinder, said assembly comprising longer and shorter length individual intake manifolds for each cylinder, each said manifold serving a respective inlet valve, each said shorter intake manifold having a control valve therein, said assembly characterized in that the effective length of each said longer individual intake manifold can be shortened to the length of the shorter individual intake manifold serving the same cylinder when the control valve is open allowing flow through the shorter intake manifold.

5,009,201

TWO-CYCLE ENGINE HAVING A DIRECT FUEL INJECTION SYSTEM

Koji Morikawa, Tokyo, Japan, assignor to Fuji Jukogyo Kabushiki Kaisha, Tokyo, Japan

Filed Jul. 3, 1990, Ser. No. 547,863
Claims priority, application Japan, Jul. 29, 1989, 1-199135
Int. Cl.[5] F02B *33/00*
U.S. Cl. 123—65 BA **3 Claims**



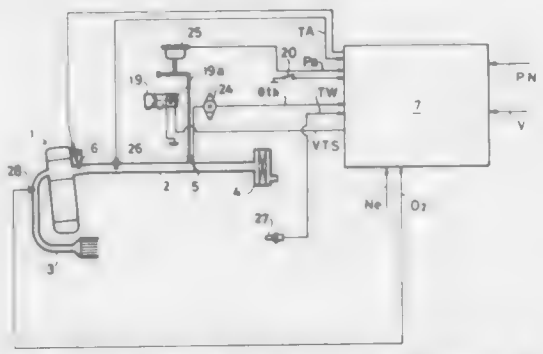
1. A two-cycle engine having at least one cylinder, a scavenge port, an exhaust port, an intake passage communicated with said scavenge port, an exhaust passage communicated with said exhaust port, a scavenge pump provided in said exhaust passage, a rotary exhaust valve provided in said exhaust passage, means for rotating said scavenge pump and said rotary exhaust valve respectively, and a fuel injector provided for injecting fuel directly in the cylinder, the engine comprising:
- valve phase control means for changing a phase of said rotary exhaust valve;
- detector means for detecting engine speed and load on the engine and for producing an operating condition signal;
- valve phase determining means responsive to said operating condition signal for determining the phase of said rotary exhaust valve and for producing a valve phase signal;
- an actuator responsive to said valve phase signal for actuating said valve phase control means whereby changing the phase of said rotary exhaust valve in accordance with engine operating conditions.

5,009,202

ELECTROMAGNETICALLY OPERATED VALVE ASSEMBLY FOR USE IN INTERNAL COMBUSTION ENGINE

Hideo Kawamura, Samukawa, Japan, assignor to Isuzu Motors Limited, Tokyo, Japan

Filed Dec. 18, 1989, Ser. No. 452,041
Claims priority, application Japan, Dec. 22, 1988, 63-324301
Int. Cl.[5] F01L *9/04*
U.S. Cl. 123—90.11 **2 Claims**



1. An electromagnetically operated valve assembly for selectively opening and closing a port communicating with a cylinder in an internal combustion engine, comprising:
- a valve made of a ceramic material, for selectively opening and closing the port, said valve including a stem;
- a movable member mounted on an end of said stem and having a frustoconical flange portion on an end thereof, said movable member being made of a magnetic material;
- a first coil disposed around said movable member;
- a fixed member disposed in confronting relation to said movable member and having a recessed portion complementary in shape to said frustoconical flange portion, said fixed member being made of a magnetic material; and
- a second coil disposed around said fixed member.

5,009,203

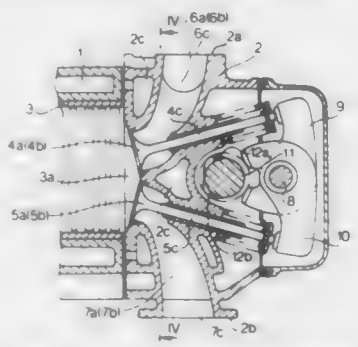
CONTROL METHOD FOR VALVE-TIMING CHANGEOVER IN ENGINE

Yasunari Seki, Tochigi, Japan, assignor to Honda Giken Kogyo Kabushiki Kaisha, Tokyo, Japan

Filed Aug. 1, 1989, Ser. No. 388,170
Claims priority, application Japan, Aug. 1, 1988, 63-192239; Aug. 1, 1988, 63-192241
Int. Cl.[5] F01L *1/34*
U.S. Cl. 123—90.16 **6 Claims**

1. A control method for valve-timing changeover in an engine in which the engine is an electronically controlled fuel injection type, valve timing for at least one of either the intake valves or the exhaust valves can be changed over between a low-speed valve timing suitable for a low-speed revolution range of the engine and a high-speed valve timing suitable for a high-speed revolution range of the engine, said method comprising the steps of:
- establishing two sets of fuel injection quantities for selected operating conditions of the engine, one set of which are first fuel injection quantities suitable for the low-speed valve timing and the other set of which are second fuel injection quantities suitable for the high-speed valve timing;
- detecting the selected operating conditions of the engine;
- obtaining a value of the first fuel injection quantity from the one set and a value of the second fuel injection quantity from the other set for the detected operating conditions of the engine; and
- comparing the obtained values for the first and second fuel injection quantities and outputting a signal for causing a changeover of the valve timing on the basis of the result of the comparison.

5,009,204



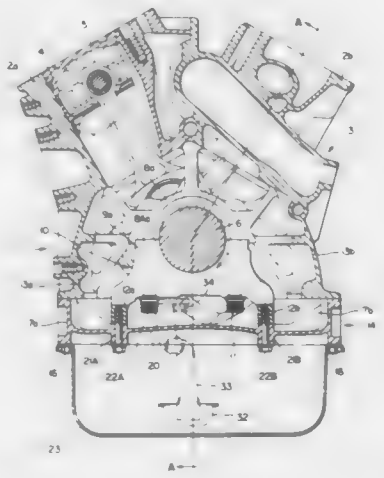
SPARK PLUG ARRANGEMENT IN AN OVERHEAD CAMSHAFT ENGINE

Norio Ishii, Mitaka, Japan, assignor to Fuji Jukogyo Kabushiki Kaisha, Tokyo, Japan

Filed Nov. 24, 1989, Ser. No. 441,077
Claims priority, application Japan, Nov. 30, 1988, 63-303381
Int. Cl.[5] F02F *1/32*
U.S. Cl. 123—193 H **1 Claim**

1. In a spark plug arrangement in a single overhead camshaft engine having a cylinder head, two intake valves partially in

two intake ports and two exhaust valves at each cylinder provided in the cylinder head and only one overhead camshaft rotatably mounted in the cylinder head intersecting an extension of a center axis of said cylinder and disposed in a space between the intake valves and the exhaust valves for actuating said intake and exhaust valves by rocker arms, the improvement in the arrangement comprising:
- a spark plug mounted in a plug hole in said cylinder head provided between said two intake valves and along and between said intake ports said spark plug defining an angle



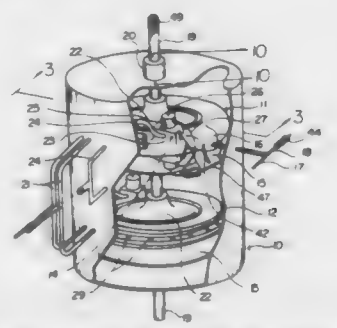
between said exhaust valves with said intake valves located in said angle between said spark plug and said exhaust valves, said intake valves defining substantial acute angles with said exhaust valves and with said spark plug, respectively, with the acute angle between said exhaust valves and said intake valves being larger than the acute angle between said spark plug and said intake valves, the spark plug and the plug hole being arranged so that a center electrode of the spark plug is positioned at said center axis with minimum inclination angle between said valves.

5,009,205

CRANKSHAFT SUPPORTING STRUCTURE FOR AN INTERNAL COMBUSTION ENGINE

Ryoji Abe, Hiroshima; Junichi Okita, Iwakuni; Katsunobu Miyagoshi, Miyagoshi, and Kouichi Hashiyama, Hiroshima, all of Japan, assignors to Mazda Motor Corporation, Hiroshima, Japan

Filed Nov. 8, 1989, Ser. No. 432,998
Claims priority, application Japan, Nov. 9, 1988, 63-282965
Int. Cl.[5] F02F *7/00*
U.S. Cl. 123—195 H **20 Claims**



1. A crankshaft supporting structure for a multi-cylinder engine comprising:
- a plurality of bulkheads provided in a cylinder block of the engine to be arranged along an axis of a crankshaft disposed in a lower part of the cylinder block;
- a bearing cap member having a plurality of bearing cap portions each coupled with a lower end of one of the bulkheads so as to form a bearing portion for supporting the crankshaft in conjunction with the bulkhead, and a pair of beam, portions extending along the axis of the crankshaft to interconnect two adjacent bearing cap portions;
- a reinforcement member having a side wall portion coupled with a portion of the cylinder block;
- a plurality of bolt seats located underneath the beam portions of the bearing cap member;
- a plurality of ribs interconnecting one of the bolt seats and the side wall portions; and
- a plurality of bolts each fastening the beam portions and the bolt seats to the cylinder block.

5,009,206

ROTARY INTERNAL COMBUSTION ENGINE

Chong S. Yi, 40-15 79st #4D, Elmhurst, N.Y. 11373

Filed Nov. 16, 1989, Ser. No. 436,610
Int. Cl.[5] F02B *53/00*
U.S. Cl. 123—248 **17 Claims**

1. A rotary internal combustion engine comprising:
- a housing,
- an axle mounted to rotate in the center of said housing,
- a first toroidal casing having a first circular chamber disposed within said housing, said first toroidal casing containing a first rotor rotatably disposed therein, said first rotor being fixedly mounted to said axle,
- a first piston connected to said first rotor and slidably engaged within said first circular chamber for slidably moving along said first circular chamber and including a plurality of oil conduits,
- a second toroidal casing having a second circular chamber disposed in parallel with said first toroidal casing within said housing, said second toroidal casing containing a second rotor rotatably disposed therein, said second rotor being fixedly mounted to said axle,
- a second piston connected to said second rotor and slidably engaged within said second circular chamber for slidably moving along said second circular chamber and including a plurality of oil conduits,
- a first valve member and a second valve member disposed within said first and second toroidal casings, respectively, said first and second valve members including first and second valve doors with a pair of gas-exhausting apertures which are adapted to open or close so as to permit or prevent the piston from passing, respectively,
- a first valve plate fixedly mounted to said axle and disposed in parallel with said first toroidal casing within the housing, said first valve plate having a peripheral edge portion and an extended edge portion for operatively guiding the rotation of a first valve roller therealong, said first valve roller being connected to said first valve doors through a first connecting member,
- a pair of first magnetic members operatively associated with said first valve member and disposed in opposite side to

each other about the first valve member within the housing, said pair of first magnetic members having a first up and down rod with a first closure for operatively opening and closing said pair of gas-exhausting apertures, respectively,

a second valve plate fixedly mounted to said axle and disposed in parallel with said second toroidal casing within the housing, said second valve plate having a peripheral edge portion and an extended edge portion for operatively guiding the rotation of a second valve roller therealong, said second valve roller being connected to said second valve doors through a second connecting member,

a pair of second magnetic members operatively associated with said second valve member and disposed in opposite side to each other about the second valve member within the housing, said pair of second magnetic members having second up and down rod with a second closure for operatively opening and closing said pair of gas-exhausting apertrures, respectively,

a first auxiliary roller and a second auxiliary roller for operatively rotating along said first and second valve roller and connecting said first and second magnetic members through a electric wire, respectively so as to make the magnetic member activate and open and close the first and second valve doors,

refrigeration means are connected to said first and second toroidal casings through a wall of said housing for cooling the first and second chambers,

connecting means are connected to said first and said second toroidal casings through a wall of said housing for exhausting combustion gases from the first and second circular chambers,

first and second air and gas intakes are connected to said first and said second circular chambers, respectively for supplying a compressed air-fuel mixture to the first and second circular chambers, and

spark forming means associated with an ignition and explosion zone formed between said first and second pistons and said first and second valve members respectively, in said first and said second circular chambers, whereby the rotation of the rotor within the internal combustion engine is achieved by continuously transferring the compressed air-fuel mixture to the ignition and explosion zone in a closed valve door position, igniting and simultaneously exploding the mixture continuously, and continuously exhausting the gases of combustion in the closed valve door position and thereafter, the piston passes through the valve doors in an open valve door position and simultaneously, the gases of combustion do not exhaust, whereby rotation of the rotors together with the axle is achieved.

5,009,207

INTERNAL COMBUSTION ENGINE

Dan Merritt, 139 Baginton Road, Coventry, England

Filed May 5, 1989, Ser. No. 347,821

Claims priority, application United Kingdom, May 7, 1988, 8810871; Apr. 24, 1989, 8909185

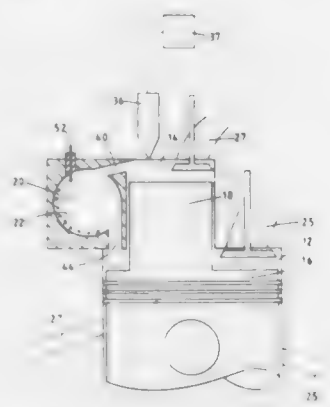
Int. Cl.[5] **F02B** *19/00*

U.S. Cl. 123—261 **39 Claims**

1. An internal combustion engine comprising at least one pair of first and second cylinders, said first cylinder having a larger swept volume than said second cylinder;

a combustion chamber communicating with said cylinders;

first means for delivering a charge of substantially air into said first cylinder;



second means for delivering a charge of liquid fuel into said second cylinder;

respective first and second pistons movable in said cylinders;

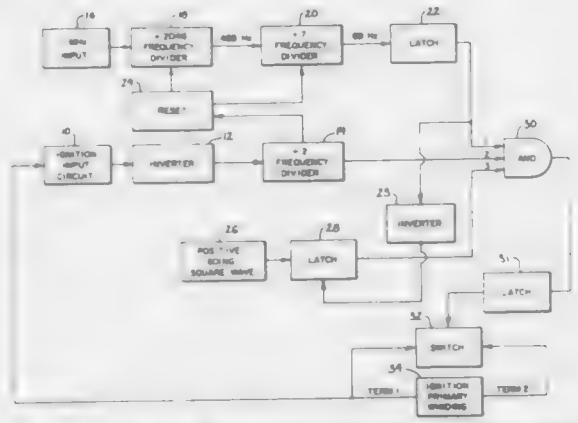
continually operable ignition means in said combustion chamber;

control means for controlling said second means to commence delivery of said charge of fuel into said second cylinder during movement of said second piston between a first position wherein said piston is at the commencement of its induction stroke and a second position wherein said piston is not less than 10° angle of movement from the end of its compression stroke and to terminate delivery of said charge of fuel when said second piston reaches a third position no later than the inner dead centre position of the piston at the end of the compression stroke; and

means for inhibiting movement of fuel/air mixture from said second cylinder into said combustion chamber prior to

said second piston reaching a fourth position wherein said piston has completed at least substantially 80% of its compression stroke length and means for inducing a vortex motion in air delivered to said combustion chamber from said first cylinder for assisting rapid mixing in said combustion chamber of fuel/air mixture from said second cylinder and air from said first cylinder during combustion.

5,009,208



ENGINE SPEED LIMITER

John A. Fiorenza, II, Slinger, Wis., assignor to Briggs & Stratton Corporation, Wauwatosa, Wis.

Continuation of Ser. No. 482,006, Feb. 15, 1990, abandoned. This application Aug. 14, 1990, Ser. No. 568,654

Int. Cl.[5] **F02P** *5/15*

U.S. Cl. 123—335 **14 Claims**

7. A speed limiter for an internal combustion engine which has an ignition primary winding that outputs successive ignition pulses, comprising:

computing means for outputting a speed signal functionally related to the time between successive ignition pulses, including:

determining means for outputting a frequency signal functionally related to the frequency of ignition pulses;

first frequency divider means for frequency dividing said frequency signal and for outputting a divided frequency signal;

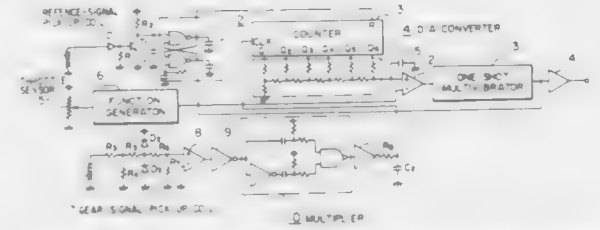
generating means for generating a reference signal functionally related to a maximum limit speed including:

input means for receiving a clock signal;

means for deriving said reference signal from said clock signal and for outputting said reference signal; and

comparison means for comparing said speed signal with said reference signal and for generating a limit signal if the result of said comparison indicates that the engine speed is about equal to or greater than said maximum limit speed.

5,009,209



IGNITION TIMING CONTROL CIRCUIT FOR AN INTERNAL COMBUSTION ENGINE

Hiroshi Okuda, and Masayuki Ozawa, both of Himeji, Japan, assignors to Mitsubishi Denki Kabushiki Kaisha, Tokyo, Japan

Filed Feb. 7, 1990, Ser. No. 476,231

Int. Cl.[5] **F02P** *5/155*

U.S. Cl. 123—415 **13 Claims**

1. An ignition timing control circuit for an internal combustion engine, comprising:

a load sensor (5,6) for sensing the load condition of said engine and generating an output signal representative of the sensed load condition;

reference-signal generating means (1,2) for generating a reference signal;

a clock pulse generator (7-11) for generating clock pulses in accordance with the rotation of the engine;

a counter (3) operable to start the counting of the clock pulses generated by clock pulse generator when said reference-signal generator generates a reference signal, said counter outputting a digitalized output representative of the number of the counter clock pulses;

a digital to analog converter (4) for converting the digitalized output of said counter into an analog voltage having a stepped waveform;

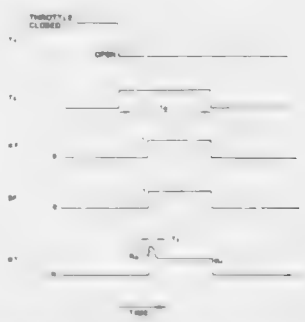
an integrator connector to said digital to analog converter for integrating and smoothing out the stepped output voltage of said digital to analog converter; and

a comparator (12) for comparing the output voltage of said integrator and the output voltage of said load sensor and generating an output signal for controlling the ignition timing of said engine in accordance with the result of comparison,

wherein said integrator comprises a capacitor (15) having a fixed time constant, and wherein said capacitor has one terminal coupled to the output terminal of said digital to analog converter and the other terminal grounded.

5,009,210

AIR/FUEL RATIO FEEDBACK CONTROL SYSTEM FOR LEAN COMBUSTION ENGINE



Toyoaki Nakagawa; Hiroshi Sanbuichi, both of Yokohama; Katsunori Terasaka, Yokosuka, and Makoto Saito, Yokohama, all of Japan, assignors to Nissan Motor Co., Ltd., Japan

Filed Jan. 7, 1987, Ser. No. 1,328

Claims priority, application Japan, Jan. 10, 1986, 61-3199

Int. Cl.[5] **F02D** *41/14, 41/10*

U.S. Cl. 123—489 **9 Claims**

1. A control system for feedback control of the air/fuel ratio of an air-fuel mixture supplied to an internal combustion engine which uses a three-way catalyst for purifying the exhaust gas, the control system comprising:

air/fuel ratio detection means for detecting actual values of air/fuel ratio in the engine;

load detection means for detecting the load under which the engine is operating;

transient condition detection means for detecting any of predetermined transient operating conditions of the engine; and

control means for performing feedback control of the feed of fuel or air to the engine based on the detected actual values of air/fuel ratio, the control means comprising target value setting means for determining the target value of the air/fuel ratio according to information obtained by said load detection means and said transient condition detection means such that the target value becomes a first value which is higher than the stoichiometric air/fuel ratio at least during predetermined steady-state operation of the engine and shifts to a second value which is optimum for the activities of the three-way catalyst when any of said predetermined transient operating conditions is detected and modulation means for regulating the feed of fuel or air to the engine at the start of the shift of the target value such that the air/fuel ratio deviates from said second value in the direction reverse to the target value immediately before the shift only for a predetermined period of time.

5,009,211

FUEL INJECTION CONTROLLING DEVICE FOR TWO-CYCLE ENGINE

Kazumitsu Kushida, Tokyo; Osamu Kudou, Saitama; Sumitaka Ogawa, Saitama, and Hiroshi Uike, Saitama, all of Japan, assignors to Honda Giken Kogyo Kabushiki Kaisha, Tokyo, Japan

Division of Ser. No. 448,529, Dec. 11, 1989. This application Aug. 31, 1990, Ser. No. 575,616

Claims priority, application Japan, Feb. 23, 1989, 1-41825

Int. Cl.[5] **F02D** *41/06*

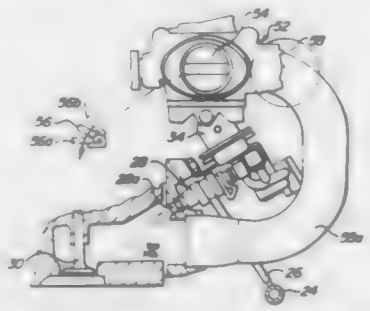
U.S. Cl. 123—491 **4 Claims**

1. A fuel injection control apparatus for a two-cycle engine including an electronic type fuel injection apparatus comprising:

a kick starter for actuating the electronic type fuel injection apparatus;

counter means for counting the number of times the kick starter is actuated; and

means for sequentially reducing fuel injection to the two-cy-



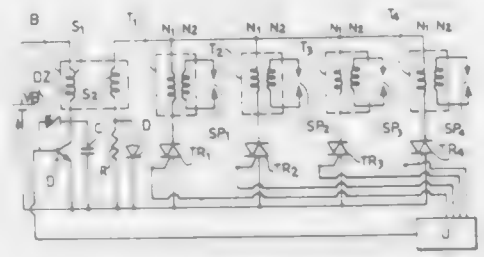
cle engine with every increase in a count value representing an increase in the counting of the number of times the kick starter is actuated for enhancing the possibility of firing of the two-cycle engine.

5,009,212

PORT FUEL INJECTION AND INDUCTION SYSTEM FOR INTERNAL COMBUSTION ENGINE

Macram N. Bishai, Windham, N.H., assignor to McCord Winn Textron Inc., Winchester, Mass.

Filed Jan. 17, 1990, Ser. No. 466,587
Int. Cl.[5] F02M *23/00*
U.S. Cl. 123—533 **10 Claims**



1. An engine having a valve cover with a PCV valve to vent a valve chamber so as to eliminate oil and gas fumes therefrom and an automotive fuel injection system having a port fuel injector connected to a fuel supply and to an air manifold for injecting an air/fuel mixture into the injector for producing a fuel spray pattern at the outlet of an air induction passage from a throttle body assembly and upstream of an inlet valve to the combustion chamber of an internal combustion engine characterized by an integral electric motor driven pump assembly means supplying the injection air to the air manifold; said motor pump assembly means having a pump inlet connected to said PVC valve for providing a lubrication mist to said pump during the operation thereof and said motor pump assembly means having a pump outlet connected to the inlet of said air manifold.

5,009,213

STATIC IGNITION DEVICE FOR INTERNAL COMBUSTION ENGINES

Vittorio Di Nunzio; Eraldo Giaccardi, both of Turin, and Sergio Saluzzo, San Pietro Val, all of Italy, assignors to Fiat Auto S.p.A., Turin, Italy

Filed Feb. 13, 1990, Ser. No. 479,806
Claims priority, application Italy, Feb. 13, 1989, 67084 A/89
Int. Cl.[5] F02P *3/04*
U.S. Cl. 123—620 **9 Claims**

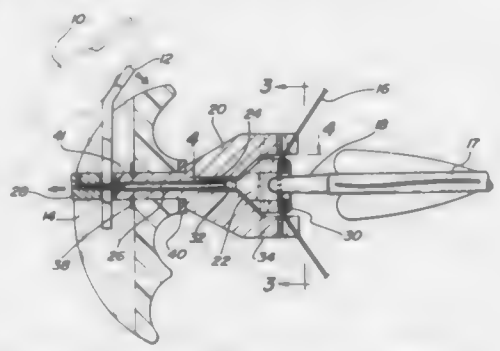
1. In an ignition device for internal combustion engines, including:

mutual impedance means with a primary winding and a secondary winding with a given ratio of turns, the secondary winding being intended to supply at least one ignition branch circuit having at least one ignition spark plug.

excitation means for storing a given ignition energy in the primary winding and for the rhythmic transfer of the energy to the secondary winding, the improvement wherein

said given ratio of turns is selected substantially unitary,

the at least one ignition branch circuit includes a respective voltage step-up transformer which acts between the secondary winding and the at least one respective ignition spark plug with respective activation means which can selectively cause the transfer of the ignition energy to the voltage step-up transformer in order to carry out an ignition cycle, the arrangement being such that, for each ignition cycle, the induction in the voltage step-up transformer varies between an initial prepolarisation value and a final value, the initial value and the final value being approximately identical in value but opposite in sign, and



a resistor for limiting the prepolarisation current in the at least one voltage step-up transformer to its initial value is interposed between the secondary winding and the at least one ignition branch circuit.

5,009,214

HOLDING AND RELEASE MECHANISM

James Wilde, 2022 Stephens Rd., Prudenville, Mich. 48651

Filed Oct. 27, 1989, Ser. No. 427,555
Int. Cl.[5] F41B *5/00*; **A01K** *27/00*
U.S. Cl. 124—35.2 **5 Claims**

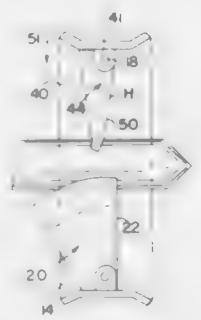
1. A holding and release mechanism comprising

A. dual yoke arms, said arms having slotted open ends to receive a flexible line or rigid rod;

B a swinging lever holding member attached between said yoke arms, said lever having dual rod-like extensions attached perpendicular to the plane of said lever and adapted to hold said line or rod within said slotted open ends of said yoke arms, said swinging lever holding member being attached to said yoke arms so as to allow said swinging lever to pivot between said yoke arms, and said swinging lever extending rearwardly so as to form a detent portion thereof;

C. a retaining rod slidably positioned in a bore formed in the closed ends of said yoke arms, said rod being urged forwardly by a coil spring engaging said rod on the circumference thereof, having a detent on the forward end thereof, and adapted to frictionally engage said detent portion of said holding member; and

D. a trigger acting upon said retaining rod so as to move said rod rearwardly and out of a detent position in which said swinging lever holding member is held in a detent position so as to retain said line or rod within said slotted portion of said yoke arms.



5. The article recited in claim 1 wherein said swinging holding member is adapted to receive a flexible line or rigid rod attached to an animal collar.

5,009,215

ARROW REST AND HOLDER APPARATUS

James E. Ludwig, 4063 Ensign Ave. North, Minneapolis, Minn. 55427

Filed Jul. 2, 1990, Ser. No. 552,796
Int. Cl.[5] F41B *5/00*
U.S. Cl. 124—44.5 **15 Claims**

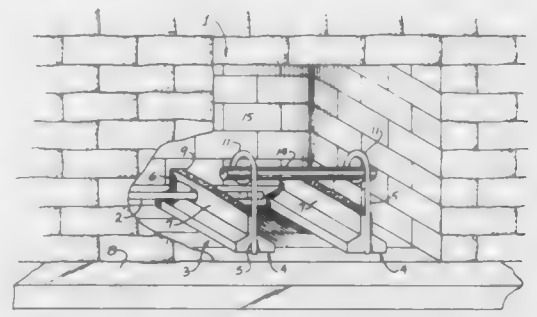
1. Arrow rest apparatus mountable on an archery bow having a bow handle and a bow string extending rearwardly of the bow handle for supporting an arrow having a shaft, vanes on the shaft and an arrow point when the arrow is in a strung non-drawn position and the arrow is moved to a fully drawn shooting position, comprising a mounting bracket having a transversely extending, generally horizontal leg, a transverse pivot mounted on the horizontal leg above the leg and having a transverse pivot axis, and a generally frusto-sector shaped swing arm having a base edge, leading and trailing edges intersecting with the base edge in longitudinal spaced relationship to one another to diverge in a generally radially outward direction away from the pivot, the intersection of the base and leading edges defining a swing arm corner portion mounted by the pivot for limited pivotal movement between a datum position and an arrow shooting position, and a generally arcuately extending edge extending between and intersecting with the leading and trailing edges radially outwardly of the base edge to provide an arrow shaft supporting surface, the supporting surface having a leading surface portion and a trailing surface portion that extends more closely adjacent to the pivot axis than the minimum spacing of the leading surface portion from the pivot axis.

5,009,216

BOW DRAW STOP

Lawrence M. Ross, 8708 Hwy. V, Caldonia, Wis. 53108

Filed Aug. 13, 1990, Ser. No. 566,840
Int. Cl.[5] E41R *5/00*
U.S. Cl. 124—88 **2 Claims**



1. A draw stopping device for use with a bow having upper and lower limbs comprising a first strap which is removably attached to said upper limb of the bow on a first end a convenient distance from a central portion of the bow, a second strap which is removably attached to said lower limb of the bow on a first end a convenient distance from said central portion of the bow, a loop-shaped wrist strap which is removably attachable to an archer's wrist, and a third strap which is attached to the wrist strap on a first end, the first, second and third straps being joined on their second ends, the length of the first, second and third straps being such that a bow string may be drawn to a point which is approximately at the user's chin.

5,009,217

FIREPLACE LOG HOLDER AND ALARM

Hewitt M. Johnson, Rte. 2, Box 68, Lebo, Kans. 66856

Filed Apr. 9, 1990, Ser. No. 506,220
Int. Cl.[5] F23H *13/00*; **G08B** *3/02*; **G10K** *1/06*
U.S. Cl. 126—152 R **6 Claims**

1. A fireplace log holder and alarm comprising:

log support means adapted to extend from the front to the rear of a firebox;

a pair of laterally spaced uprights on a front portion of said log support means, and each having an upper end provided with an eye; and

a tubular member spanning the uprights and loosely received in said eyes of the uprights, whereby a falling log striking the uprights or the tubular member will cause the latter to strike the uprights within the eyes to generate a warning sound.

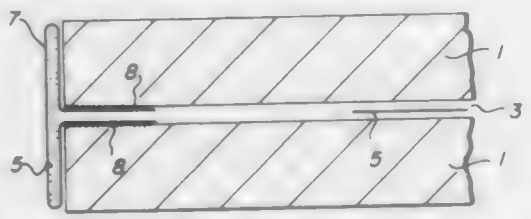
HEAT-INSULATING BUILDING AND/OR LIGHT ELEMENT



Emil Bächli, Marktgasse 7, CH-5304 Endigen, Switzerland

Division of Ser. No. 88,850, Jul. 22, 1987. This application Jun. 28, 1990, Ser. No. 545,038

Claims priority, application Switzerland, Nov. 29, 1985, 5091/85; Apr. 16, 1986, 1558/86; Sep. 18, 1986, 3737/86

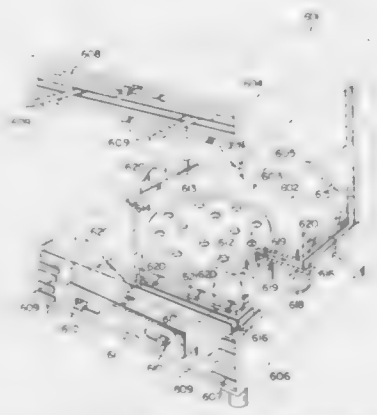
Int. Cl.[5] F24J *2/00*

U.S. Cl. 126—452 9 Claims

1. A process for the production of a heat-insulating building and/or light element comprising the steps of positioning a plurality of flat support elements (2) between at least two substantially parallel wall elements (1) to space the wall elements a predetermined distance apart, applying a metallic foil seal to the edge areas of the spaced wall elements to form a tight bond therebetween so as to define an evacuable interspace (3) therebetween and to absorb any differences in expansion of the wall elements resulting from differences in the temperatures of the wall elements, evacuating the interspace to a vacuum between 1 and 10^{-2} mbar, the distance between the wall elements being smaller than the free path lengths of air molecules as determined for that vacuum such that the heat conductivity of the air molecules between the wall elements is substantially cancelled.

5,009,219

HEATING DEVICE



Fredericus Liet, HD Losser, Netherlands, assignor to Liets Agrarische Technieken B.V., HD Losser, Netherlands

Continuation-in-part of Ser. No. 273,046, Nov. 18, 1988, abandoned. This application Feb. 2, 1989, Ser. No. 473,107

Claims priority, application Netherlands, Nov. 20, 1987, 8702795; Dec. 3, 1987, 8072919; Jan. 15, 1988, 8800090; Jan. 15, 1988, 8800091; European Pat. Off., Jun. 17, 1988, 88.201.266.9

Int. Cl.[5] F24B *1/188*

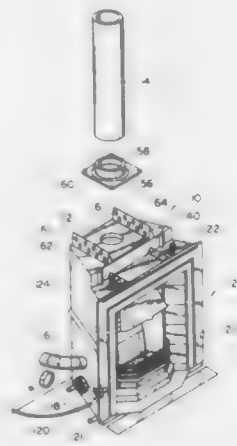
U.S. Cl. 126—523 10 Claims

1. A heating device with a combustion space having at least one free side, said heating device comprising a substantially C-shaped heat exchanger open to the front for heating air, said heat exchanger being provided with a lower heat exchanger part on which solid fuel can be laid, said lower part connecting onto a standing heat exchanger part that in turn connects to an upper heat exchanger part such that said heat exchanger bounds said combustion space, characterized in that

the lower heat exchanger part further comprises a chamber in communication with outside air to be heated and having a wall adjoining the combustion space, through which chamber wall at least one substantially vertical channel extends connecting said combustion space with surrounding air for a supply of air, and

supporting means slidably carrying an ash pan having at least one aperture communicating with outside air, said supporting means comprising a compartment with an upper wall in communication with the at least one vertical channel whereby outside air is supplied via the at least one ash pan aperture to the combustion space, said compartment being positioned in the chamber of the lower heat exchanger part such that at least one passage is formed by the ash pan and a wall of the chamber whereby outside air communicating with the chamber is heated by the combustion space and flows at least partially around said compartment to the outside.

5,009,220



SAFETY ENCLOSURE FOR COAL, GAS OR WOOD-BURNING FIREPLACE

Peter B. Cornelison, Hiram, Ohio, assignor to Condar, Inc., Garrettsville, Ohio

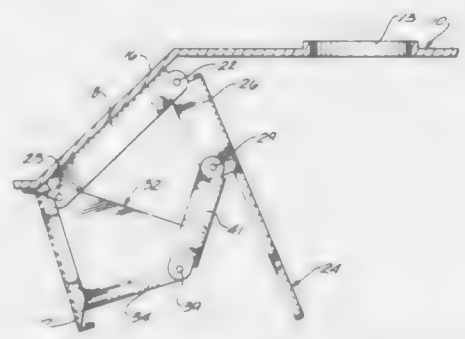
Filed Nov. 22, 1989, Ser. No. 440,105

Int. Cl.[5] F24B *1/188*

U.S. Cl. 126—523 12 Claims

1. A reduced clearance system for a cast iron fireplace including a surround having a rectangular outer periphery, said system including a sheet metal box at least partially open at the front, having a trapezoidally shaped sheet metal base and sheet metal side walls vertically extending from each of the three shorter sides of the base, one of the side walls including near the bottom thereof an air inlet aperture, each of the three side walls having a generally horizontal outwardly projecting sheet metal spacer bar secured thereto for limiting the clearance of the system from adjacent building structure, the opposing side walls being stepped at the top to provide a recess in the top marginal edge, a first trapezoidally shaped top member for the higher step having an aperture therein adapted to accept a flue member, a pair of spaced spacer members secured to said first top member and extending in a direction normal to the front of said box, a second trapezoidally shaped top member for the lower step, a rectangularly shaped front member covering the riser portion of the step, the second trapezoidally shaped top member having at least a pair of spaced sheet metal spacer bars extending generally normal to the front member secured thereto, the front member also having spaced generally vertically extending sheet metal spacer bars secured thereto, and a pedestal supported in spaced relation to the sheet metal base for supporting the cast iron fireplace.

5,009,221



ADJUSTABLE LINTEL EXTENSION FOR A FIREPLACE

David O. Brazell, and J. Timothy French, both of Yorba Linda, Calif., assignors to Superior Fireplace Company, Fullerton, Calif.

Filed Jan. 19, 1990, Ser. No. 467,647

Int. Cl.[5] F24B *1/189*

U.S. Cl. 126—538 7 Claims

1. A pre-built fireplace comprising:

a frame having an outlet for combustion gases and an open front side for viewing the interior of the frame;

a damper movably secured to the frame between a first position allowing combustion gases to escape from the frame through the outlet and a second position substantially inhibiting the escape of gases through the outlet; and

a lintel extension movably secured to the frame and movably coupled to the damper such that movement of the damper to the first position simultaneously moves the lintel extension partially into the viewing area of the frame to inhibit the escape of combustion gases from the open front side and movement of the damper to the second position simultaneously moves the lintel extension to a position substantially out of the viewing area of the frame.

VARIABLE AXIS KNEE BRACE

Michael A. DeFonce, 12149 Mirror Lake, Creve Coeur, Mo. 63146

Filed Oct. 2, 1989, Ser. No. 415,623

Int. Cl.[5] A61F *5/00*

U.S. Cl. 128—80 C 13 Claims

1. A stabilizing mechanical hinge for use in a knee brace for simulating the functions of the articulating members in the human knee, said brace having leg grasping means for clasping the brace to wearer's leg and means defining a mechanical hinge at the lateral and medial sides of the human knee, said hinge comprising:

a femoral joint element including at least one femoral arcuate slot formed through said femor joint element with center of curvature located at the femoral attachment point of a cruciate ligament;

a tibial joint element including at least one tibial arcuate slot formed through said tibial joint element with center of curvature located at the tibial attachment point of a cruciate ligament;

at least one femoral pivot and bearing means carried by said femoral joint element, said femoral pivot and bearing means located at the center of curvature of said femoral arcuate slot and having a surface in bearing engagement with said tibial arcuate slot,

at least one tibial pivot and bearing means carried by said tibial joint element, said tibial pivot and bearing means located at the center of curvature of said tibial arcuate slot and having a surface in bearing engagement with said femoral arcuate slot;

thrust resisting means mounted to said femoral pivot and bearing means and confining said tibial joint element be-

tween said femoral joint element and said thrust resisting means; and

thrust resisting means mounted to said tibial pivot and bearing means and confining said femoral joint element between said tibial joint element and said thrust resisting means.

PERSONAL VENTILATING SYSTEM

William S. Vrabel, Warsaw, Ind., assignor to Boehringer Mannheim Corporation, Indianapolis, Ind.

Filed Nov. 30, 1989, Ser. No. 443,916

Int. Cl.[5] A62B *7/00*

U.S. Cl. 128—201.24 **4 Claims**

1. A personal ventilating system for use with a surgical hood enveloping at least the wearer's face and isolating from the surrounding atmosphere the breathing space proximate the wearer's nose and mouth, said system comprising:

inlet means for receiving air from the breathing space isolated by the surgical hood;

outlet means for exhausting to the surrounding atmosphere air flowing from said inlet means;

filter means intermediate said inlet means and said outlet means for removing impurities from the air drawn from the breathing space within the surgical hood;

adjustable flow inducing means including a fan and a variable speed d.c. motor for driving said fan operable for drawing air from the breathing space within the surgical hood and causing it to exhaust through said outlet means to the surrounding atmosphere; and

a first power source for operating said flow inducing means to achieve a desired flow rate including a d.c. power supply distant from the wearer and having a variable speed control for selectively varying the voltage being directed to said motor;

cord means selectively coupling said power supply and said motor;

a second power source for operating said flow inducing means including a battery; and

switch means for selectively energizing said motor either by said power supply or by said battery.

MECHANICAL RESUSCITATOR

William T. Holt, 4610 Ellendale Rd., Memphis, Tenn. 38135

Filed May 14, 1990, Ser. No. 523,897

Int. Cl.[5] A62B *7/00*

U.S. Cl. 128—205.18 **19 Claims**

1. A resuscitator for conveying gas to a patient's lungs, said resuscitator comprising:

(a) a pump having a cavity and including movable means movable between a first position and a second position for forcing gas from said cavity of said pump when moved from said first position to said second position and for drawing gas into said cavity of said pump when moved from said second position to said first position, said pump having an opening for allowing gas to be drawn into and forced out of said cavity thereof;

(b) a base member having a passageway for allowing gas to pass therethrough, said passageway having a first end and a second end;

(c) coupling means for allowing gas to pass from said passageway of said base member to said patient's lungs, said coupling means including a hollow tube for being connected to said second end of said passageway of said base member to allow gas to pass from said passageway of said base member therethrough; and

(d) seal means for forming a gas-tight seal between said opening of said pump and said first end of said passageway of said base member when said movable means of said pump is moved from said first position to said second position to allow gas to be forced from said cavity of said pump through said passageway of said base member and out said coupling means.

ENDOTRACHEAL TUBE HOLDER

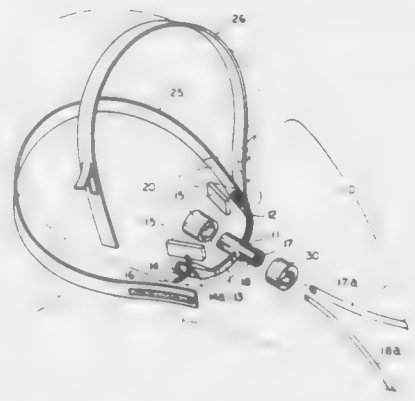
Peter P. Nieuwstad, 12374 NE. 116th La., Kirkland, Wash. 98034

Filed Sep. 21, 1989, Ser. No. 410,429

Int. Cl.[5] A61M *16/00*

U.S. Cl. 128—207.17 **9 Claims**

1. A medical tube holder including:



a tubular member having two separate parallel passageways, one of said passageways adapted to hold a first medical tube and the other of said passageways adapted to hold a second medical tube;

a removable sleeve collet disposed over said tubular member;

said sleeve collet having a partial inner annular ring member;

flanges disposed on opposite sides of said tubular member engageable with said inner annular ring member on said sleeve collet to prevent the removal of said sleeve collet;

said tubular member having a circumferential groove for mating with said inner annular ring member on said sleeve collet to tighten said tubular member against said first

medical tube and hold it in position relative to said passageway adapted to hold said first medical tube; and

two flexible elongated side members disposed on either side of and extending away from said tubular member and adapted to attach said medical tube holder to the face of a wearer.

STEROID ELUTING INTRAMUSCULAR LEAD

Pierre-Andre Grandjean, Bassenge, Belgium, and Philip H. J. Lee, Woodbury, Minn., assignors to Medtronic, Inc., Minneapolis, Minn.

Filed Dec. 6, 1989, Ser. No. 446,594

Int. Cl.[5] A61N *1/05*

U.S. Cl. 128—419 P **6 Claims**

1. An apparatus for stimulating a skeletal muscle of a human patient surgically prepared to assist the heart of said human patient comprising:

a. implantable pulse generator means for generating pulses to stimulate said skeletal muscle in timed relation to said heart of said human patient;

b. a connector for electrically coupling said pulses from said implantable pulse generator;

c. at least one sealing ring coupled to said connector to seal said connector to said implantable pulse generator means;

d. an electrically conducting coil having a proximal end and a distal end wherein said proximal end is electrically coupled to said connector;

e. an insulating sheath disposed over substantially all of said electrically conducting coil except a portion at said distal end of said electrically conducting coil wherein said portion is sufficient to function as an electrode to couple said pulses to said skeletal muscle;

f. a length of suture material having a proximal end and a distal end wherein said proximal end is attached to said distal end of said electrically conducting coil;

g. a suture needle attached to said distal end of said length of suture material;

h. means coupled to said length of suture material for holding said electrode in contact with said skeletal muscle; and,

i. means releasably embedded within said length of suture material for lowering a stimulation threshold of said skeletal muscle.

PERSONAL GLUCOSE MONITOR

Donald P. Hutchinson, Knox County, Tenn., assignor to EOL, Inc., Oak Ridge, Tenn.

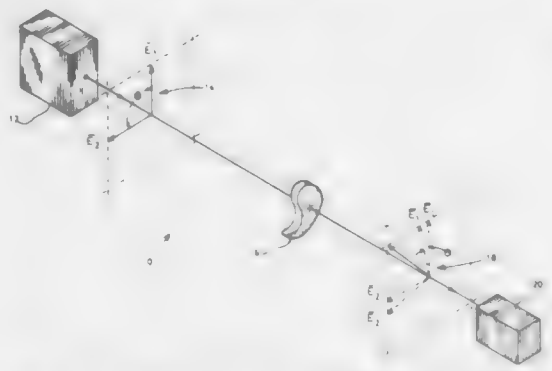
Continuation-in-part of Ser. No. 345,662, May 1, 1989, Pat. No. 4,901,728, which is a continuation-in-part of Ser. No. 200,130, May 31, 1988, abandoned. This application Feb. 12, 1990, Ser. No. 475,844

Int. Cl.[5] A61B *5/00*

U.S. Cl. 128—633 **14 Claims**

1. A device for the non-invasive determination of the concentration of blood glucose in a patient which comprises:

a first source of infrared light of a selected wavelength;



means for repetitively producing two alternating linearly-polarized orthogonal states of said infrared light, said two states being equal in amplitude;

means for directing said two states of said infrared light non-invasively through a selected tissue of said patient;

polarizing means for receiving said two states subsequent to

passage through said selected tissue of said patient, and for passage of portions of said two states in a direction of transmission of said polarizing means;

detector means for detecting the intensities of said portions of said two states passing through said polarizing means, said intensities being related to glucose concentration and absorption in said selected tissue;

means for producing a sum and a difference of said intensities of said states received by said detector means; and

means for providing a ratio of said sum and said difference of said intensities to provide a signal related only to said glucose concentration.

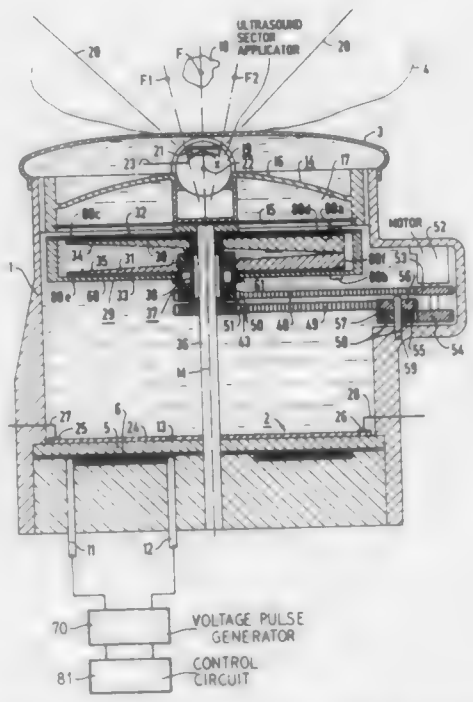
EXTRACORPOREAL LITHOTRIPSY APPARATUS USING HIGH INTENSITY SHOCK WAVES FOR CALCULUS DISINTEGRATION AND LOW INTENSITY SHOCK WAVES FOR IMAGING



Dietrich Hassler, Uttenreuth, and Erhard Schmidt, Erlangen, both of Fed. Rep. of Germany, assignors to Siemens Aktiengesellschaft, Munich, Fed. Rep. of Germany

Filed Aug. 11, 1989, Ser. No. 392,356

Claims priority, application European Pat. Off., Aug. 17, 1988, 88113375.5

Int. Cl.[5] A61B *17/22*

U.S. Cl. 128—660.03 **19 Claims**

1. An extracorporeal lithotripsy apparatus for treatment of a calculus in the body of a patient, comprising:

means for generating shock waves propagating in a propagation direction and converging in a focus zone;

means including a shock wave propagation medium for coupling shock waves generated by said means for generating shock waves into the body of said patient;

means for selectively driving said means for generating shock waves to generate high intensity shock waves converging in a focus zone of high intensity shock waves for disintegrating said calculus or for generating low-intensity shock waves for producing an image of said focus zone of high-intensity shock waves;

pressure sensor means disposed in said propagation medium for measuring echoes in the form of pressure fronts having a cross-section caused by reflection of said shock waves for generating electrical signals corresponding thereto, said pressure sensor means having a surface active for sensing pressure which is co-extensive with the cross-section of said echoes in the region of said surface;

acoustic means through which said flow intensity shock waves pass for deflecting said low-intensity shock waves, when generated, for conducting a sector scan which includes said focus zone of high-intensity shock waves; and

reception means connected to said pressure sensor means for generating said image of said focus zone of high-intensity shock waves from said electrical signals in the form of a B-image.

MINIATURIZED HAND-HELD LASER SCANNING MICROMETER

Harry G. Petrohilos, Yellow Springs, Ohio, assignor to Laser-Mike, Inc., Dayton, Ohio

Filed Jan. 10, 1989, Ser. No. 295,272

Int. Cl.[5] A61B *5/00*

U.S. Cl. 128—666 **8 Claims**

1. A miniaturized laser scanning micrometer for making precision hand-held measurements comprising:

compact housing means for enclosing said miniaturized laser scanning micrometer, said housing means comprising handle means for gripping said miniaturized laser scanning micrometer and scanning gap extension means projecting from said handle means for defining a scanning gap of said miniaturized laser scanning micrometer at a distance spaced from said handle means, said scanning gap extension means being substantially thinner than said handle means and tapering in width towards its distal end to facilitate insertion of said scanning gap extension means into limited spaces to permit taking measurements therewithin;

laser beam generating means housed within said handle means for generating a collimated laser beam;

photocell means housed within said handle means for detecting said collimated laser beam;

laser beam scanning means housed within said handle means for receiving said collimated laser beam from said laser beam generating means and repeatedly scanning said collimated laser beam through a defined optical space; and

optical means housed within said handle means and said scanning gap extension means for receiving said collimated laser beam from said laser beam scanning means and directing said collimated laser beam across said scanning gap through said scanning gap extension means to said photocell means.

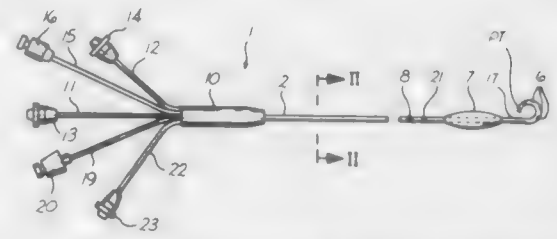
FOR THE THERMODILUTION METHOD OF DETERMINING CARDIAC OUTPUT

Eckhard Alt, Eichendorffstrasse 52, 8012 Ottobrunn, Fed. Rep. of Germany

PCT No. PCT/DE88/00240, § 371 Date Dec. 22, 1988, § 102(e) Date Dec. 22, 1988, PCT Pub. No. WO88/08274, PCT Pub. Date Nov. 3, 1988

PCT Filed Apr. 27, 1988, Ser. No. 301,760



Claims priority, application Fed. Rep. of Germany, Apr. 27, 1987, 3714027

Int. Cl.[5] A61B *5/02*

U.S. Cl. 128—672 **22 Claims**

1. Instrumentation for determining cardiac output by means of a single catheter introduced along an aorta to extend into the left heart by measurement of the change of temperature resulting from the injection, comprising in combination: distal cryogen discharge means positioned on the catheter for entering a cryogen impulse into the bloodstream of the left ventricle,

a temperature sensor disposed within the catheter toward a proximal position from the cryogen discharge position for positioning in the aorta having accompanying temperature processing means for sensing temperature changes at the temperature sensor position over a cooling-warming cycle generated by said cryogen impulse to establish temperature changes effected in the bloodstream of the aorta introduced by both flow of cryogen through the catheter

past the sensor before entering the bloodstream and flow of chilled blood toward the aorta past the single sensor in response to the injection of the cryogen impulse.

URINE SPECIMEN COLLECTING METHOD USING A VEHICLE

Ronald L. Messenheimer, 11909 Trailridge Dr., Potomac, Md. 20854

Filed Aug. 16, 1989, Ser. No. 394,719

Int. Cl.[5] A61B *5/00*

U.S. Cl. 128—760 **3 Claims**

1. A method of collecting, without observation and in a container, urine specimens that are to be analyzed for illegal drugs comprising:

providing a highway vehicle having at least two privacy rooms each having a receptacle for disposal of urine and free of access to substances that can be used for the purpose of altering laboratory test results from the results justified by the unadulterated urine specimen of the donor, a secure area for temporary storage for filled urine containers and a reception station for a collection site person;

transporting said vehicle to a predetermined location;

directing a urine donor to said predetermined location and to the reception area of said vehicle wherein each donor is given an empty urine collection container;

marking the empty container with a unique identification indicator;

carrying the empty container into a privacy room;

filling the container with the urine sample by the donor while the donor is in one of said privacy rooms and unobserved;

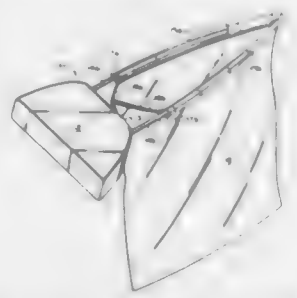
returning the urine filled container to the collection site person where the container is sealed in the presence of the donor and thereafter deposited in said secure area for temporary storage; and

removing the urine containers from said temporary storage to a testing location under the controlled custody.

5,009,236

URINE COLLECTION SYSTEM

William S. Brothers, 1815 N. 1400 East, Provo, Utah 84604



Filed Jan. 29, 1990, Ser. No. 471,609

Int. Cl.[5] A61B *5/00*

U.S. Cl. 128—761 **8 Claims**

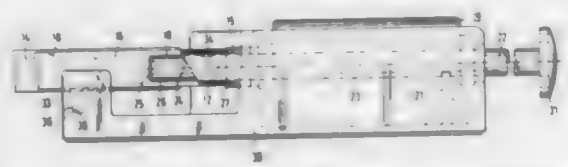
1. A urine collection system comprising, a mount that includes a hand engaging means, from a front face of which mount co-planar rod means extend outwardly that are centrally bowed apart and slope towards one another to their

forward ends; a flexible bag means that includes an open top or mouth end with sleeves formed along opposite edges of said

flexible bag means mouth end; and means for closing said flexible bag means mouth end.

5,009,237

DEVICE FOR MAKING CIGARETTES



Ernst Schmidt, Stuhr; Heinz Stehmeier, Bremen; Heinrich W. Ruppert, Trossingen; Klaus G. Gatschmann, Bad Durrheim, and Gunter Schutze, Trossingen, all of Fed. Rep. of Germany, assignors to Martin Brinkmann AG, Fed. Rep. of Germany

Filed Sep. 19, 1984, Ser. No. 652,298

Claims priority, application Fed. Rep. of Germany, Sep. 20, 1983, 8326921; Nov. 30, 1983, 3343407; Mar. 19, 1984, 3410038

Int. Cl.[5] **A24C** *5/00*

U.S. Cl. 131—70 **14 Claims**

1. A device for the do-it-yourself making of a cigarette by transferring a pre-portioned tobacco rod from a cylindrical wrapping into a cigarette tube comprising:

an axially moveable pusher member having an effective end for engaging the tobacco rod;

and axially moveable insertion nozzle being insertable into said cigarette paper tube in advance of said effective end of the pusher member;

said insertion nozzle being of hollow tubular configuration and having an insertion end of smaller diameter than the cigarette papertube.

SELECTIVE DELIVERY AND RETENTION OF ALDEHYDE AND NICOTINE BY-PRODUCT FROM CIGARETTE SMOKE

Richmond R. Cohen, Hockessin, and Gary A. Luzio, Bear, both of Del., assignors to Hoechst Celanese Corporation, Bridgewater, N.J.

Filed Dec. 20, 1988, Ser. No. 286,687

Int. Cl.[5] **A24D** *3/06, 3/08, 3/14*

U.S. Cl. 131—342 **24 Claims**

1 A process for improving appearance plus selective aldehyde filter retention and selective nicotine pass through properties of a cigarette filter element comprising filter substrate in the form of at least one of synthetic thermoplastic fiber- and/or film-containing substrate material, comprising

(a) directly treating said filter substrate with an effective amount of a modifier composition comprising

(1) polyethyleneimine together with

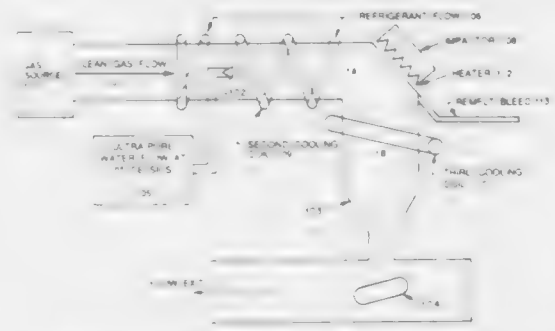
(2) an organic acid selected from at least one of the group consisting of formic, propionic, butyric, lactic, benzoic, and acetic acid;

in an amount sufficient to obtain a buffered composition within a pH range of about pH 8 to about pH 9.5; and

(b) completing fabrication of the desired filter element;

whereby selective filter retention of aldehyde smoke components and selective filter pass through of nicotine smoke components are promoted in combination.

5,009,240



WAFER CLEANING METHOD

Mark W. Levi, Utica, N.Y., assignor to United States of America, Washington, D.C.

Filed Jul. 7, 1989, Ser. No. 377,020

Int. Cl.[5] **B08B** *7/00,* **F25D** *17/02*

U.S. Cl. 134—7 **6 Claims**

1. A semiconductor wafer cleaning system which cleans a semiconductor wafer by sandblasting the semiconductor wafer with ice particles such that when said semiconductor wafer has been cleaned, any residual ice particles may be evaporated from the semiconductor's surface without leaving any contamination on said semiconductor wafer, said semiconductor wafer cleaning system comprising:

a source of pressurized gas which emits a stream of gas with a flow rate that is adjustable;

a conduit which is fixed to said source of pressurized gas so that the conduit receives and conducts said stream of gas to said semiconductor wafer;

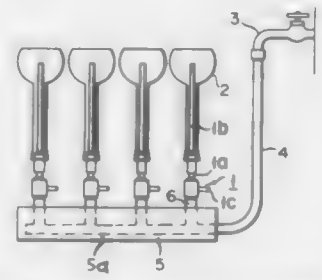
a source of pressurized water which emits to a stream of water,

a spray head which is connected to said source of pressurized water and which protrudes into said conduit so that the spray head receives and converts said stream of water into a spray of water which is conducted by said stream of gas through said conduit; and

a means for cooling said spray of water to temperatures which are below a point at which water freezes, said cooling means thereby converting said spray of water into said ice particles which sandblast and clean said semiconductor wafer as they are conducted to the semiconductor wafer by said stream of gas in said conduit.

5,009,241

APPARATUS FOR WASHING NARROW NECK BOTTLES



Hideyuki Nishizawa, 1-5-1 Nakazato, Kita-ku, Tokyo, Japan

Continuation of Ser. No. 139,348, Dec. 29, 1987, abandoned. This application May 22, 1990, Ser. No. 529,741

Claims priority, application Japan, Dec. 29, 1986, 61-312360

Int. Cl.[5] **B08B** *3/02, 9/08*

U.S. Cl. 134—102 **2 Claims**

1. Apparatus for washing narrow neck bottles comprising:

a base having a header with a plurality of vertical branches;

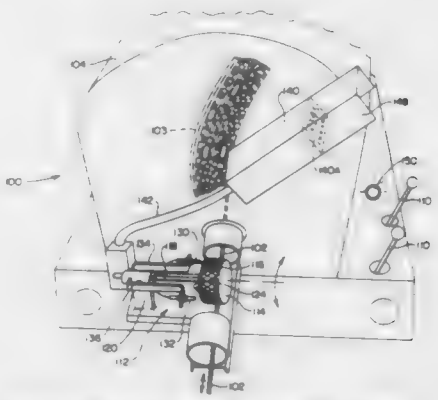
water supply hose means connected to said header to supply water to said vertical branches of said header;

a plurality of aspirator means each having an intake end and an outlet end, there being one of said aspirator means connected to each of said branches, its inlet end being so connnected; each said aspirator mean comprising a vertical discharge pipe with an air suction port entering into said vertical discharge pipe from atmosphere so as to provide air for entrainment into water flowing through said discharge pipe;

a vertical tube connected to the outlet end of each of said aspirator pipes;

whereby bottles can be mounted inverted one each of said vertical tubes and washed by water discharged through said aspirator, which water contains a substantial quantity of air bubbles entrained from said air suction port.

5,009,242



APPARATUS FOR MONITORING SEWER CLEANING TOOL EXTENSION

Charles J. Prange, Cridersville, Ohio, assignor to Sewer Rodding Equipment Company, Lima, Ohio

Filed Sep. 12, 1989, Ser. No. 405,988

Int. Cl.[5] **B08B** *9/04*

U.S. Cl. 134—113 **6 Claims**

1. A mobile sewer cleaning machine comprising:

an elongated sewer cleaning tool wound upon a reel mounted in a reel compartment of the machine;

motor means coupled to said reel for rotating said reel;

motor control means for operating said motor means in one direction to play out said tool into a sewer by unwinding it from said reel, and in the direction opposite to said one direction to retract said tool from said sewer by rewinding said tool onto said reel;

movement signaling means coupled to said tool for generating signals representative of play out of said tool in defined incremental lengths and retraction of said tool in defined incremental lengths, said movement signaling means comprising:

a rotatably mounted tool sensing drum which is frictionally engaged with and rotated by said tool and including a position indicator mounted thereto,

two proximity sensors positioned to sense said position indicator as said drum is rotated, and

switch means coupled to said motor control means for activating one of said proximity sensors upon rotation of said motor means in said one direction and the other of said proximity sensors upon rotation of said motor means in said opposite direction;

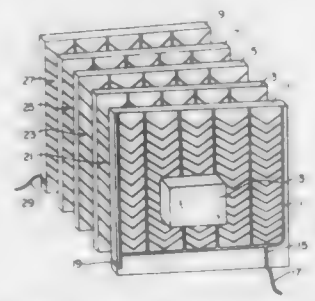
electronic counter means connected to said movement signaling means and responsive to said signals for displaying a count representative of the extent of said elongated sewer cleaning tool which has been unwound from said reel and/or rewound onto said reel, said electronic counter means including input means for selecting a de-

sired count and output means for indicating when a desired count has been reached; and

alarm means connected to the output means of said electronic counter means connected to the output means of said electronic counter means for generating an alarm signal upon reaching said desired count

---

5,009,243



SOLAR HARNESS

Owen P. Barker, 455 W. State St. MD2, Trenton, N.J. 08618

Continuation-in-part of Ser. No. 889,167, Jul. 25, 1986, abandoned. This application May 21, 1990, Ser. No. 525,606

Int. Cl.[5] **H01L** *31/042, 31/048, 31/052*

U.S. Cl. 136—246 **50 Claims**

21. A solar harness system, which comprises:

(a) a parabolic reflector having a specific theoretical focal point and having a series of focal points for the different colored light rays contained in solar lights;

(b) means for supporting said parabolic reflector;

(c) a solar harness apparatus, including:

(i) a plurality of solar cells, each having an active surface, with said active surface of each solar cell being substantially parallel to one another and facing the same direction, and with said solar cells being stacked in line behind one another;

(ii) a plurality of magnets, with at least one magnet being located between each adjacent solar cell in said plurality of cells, each of said magnets being of adequate magnetic power to hold said plurality of solar cells in stacked arrangement therewith, without any other support and so as to create solderless contacts with each solar cell in series;

(iii) means connected to one end of said stacked arrangement of plurality of solar cells and magnets for drawing electric current therefrom;

(d) means for supporting said solar harness apparatus at the focal point of a color of the colored light rays in solar light other than the red color focal point.

5,009,244

FIRE FIGHTING FOAM MIXING SYSTEM

John R. Grindley, and Robert M. Grindley, both of Los Angeles, Calif., assignors to Grindley, Inc. and Robwen, Inc., both of Los Angeles, Calif.

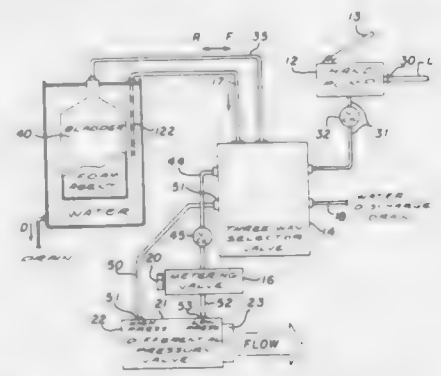
Filed Aug. 17, 1989, Ser. No. 395,321

Int. Cl.[5] **G05D** *11/03*

U.S. Cl. 137—101.11 **8 Claims**

1. In a fire fighting system for proportioning the injection of foam into a fluid stream, having

a primary fluid delivery conduit having an inlet and an outlet;



valve means in said conduit for maintaining the fluid pressure adjacent said inlet above the adjacent said outlet that;

a foaming agent reservoir;

means for conducting foaming agent from said reservoir to said fluid conduit adjacent the outlet thereof and;

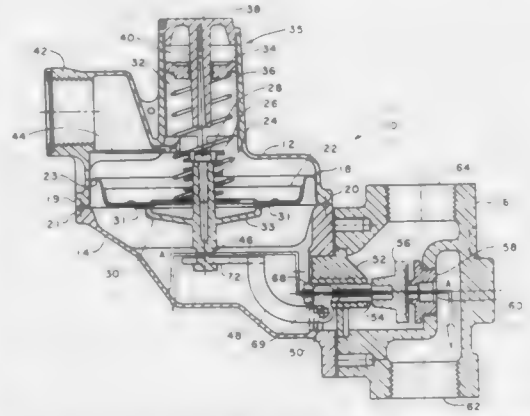
means for pressurizing said reservoir to expel foaming agent therefrom through said foaming agent conducting means including;

a secondary fluid delivery conduit between said primary fluid conduit adjacent the inlet thereof and said reservoir;

the improvement comprising;

means automatically operable in response to movement of said valve means for varying the flow of fluid through said secondary fluid conduit.

5,009,245



PRESSURE REGULATOR

John L. Esola, Falls Creek, and David L. Kessler, DuBois, both of Pa., assignors to M&FC Holding Company, Inc., Wilmington, Del.

Continuation of Ser. No. 354,499, May 19, 1989, abandoned. This application Sep. 20, 1990, Ser. No. 587,621

Int. Cl.[5] **G05D** *16/06*

U.S. Cl. 137—116.5 **11 Claims**

1. A pressure regulator for connection to a body having a gas inlet and a gas outlet, the gas inlet being in fluid communication with the gas outlet through an orifice restriction, said pressure regulator comprising:

a substantially concave lower case defining a throat area of the pressure regulator;

a cover assembly secured to the lower case to define an inner chamber;

a contoured, flexible diaphragm secured between the lower case and the cover assembly to separate the inner chamber into upper and lower sections, said lower section being in fluid communication with the orifice restriction through said throat area, said diaphragm being capable of deflecting into the upper section in proportion to the gas pressure in the lower section, and said diaphragm having an outer circumferential corrugation capable of deforming when said diaphragm deflects so that said diaphragm will not experience material deformation during deflection;

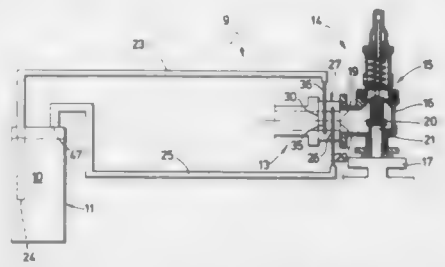
means for controlling the deflection of the diaphragm so that the deflection is predictable in relation to the gas pressure in said lower section;

a one piece, curved lever arm in mechanical communication with said diaphragm, said lever arm comprising an upper portion slidably connected to a coupling member fixed to said diaphragm, said upper portion being movable with said coupling member, a first portion of said lever arm extending from said upper portion of said lever arm and substantially normal thereto, a second portion of said lever arm disposed substantially normal to said first portion, said first and second portions being interconnected by a partial annulus portion of said lever arm, and a stem drive portion of said lever arm extending from an end of said lever arm remote from said coupling member and being substantially normal to said second portion and substantially normal to said upper portion;

a fulcrum pin positioned in the throat area of the pressure regulator at the junction of said lever arm second portion and said stem drive portion, said lever being adapted to rotate about said fulcrum pin so that linear deflection of the diaphragm results in rotational displacement of the lever arm, said lever arm and fulcrum pin arrangement providing a lever ratio greater than 3:1; and

a throat assembly comprising a stem member connected to said stem drive portion of said lever arm, a stem guide disposed in a wall of said lower case in said throat area, said fulcrum pin being mounted in said stem guide, said stem member being slidably disposed in said stem guide, a distal end of said stem drive portion being disposed in said stem member and a valve pad fixed to said stem member and movable therewith, whereby said valve pad is in mechanical communication with said lever arm so that increased pressure in the lower section, causing the diaphragm to deflect away from said lower section, causes rotational displacement of the lever arm which linearly displaces the valve pad toward said orifice restriction to restrict the flow of gas from the gas inlet to the gas outlet.

5,009,246



SYSTEM TO AVOID ICING IN THE DISCHARGE PIPING OF A PRESSURE RELIEF VALVE

Gary J. Giles, Pineville, La., assignor to Dresser Industries, Inc., Dallas, Tex.

Filed Nov. 4, 1988, Ser. No. 267,416

Int. Cl.[4] **B67D** *5/00*

U.S. Cl. 137—205.5 **17 Claims**

1. In combination, a safety relief valve for a pressurized system, said valve including a housing, a nozzle mounted within said housing and communicating with said pressurized system, an outlet from said housing in flow communication with said nozzle, a closure member normally urged into a shut position to prevent the discharge of pressure fluid from said nozzle to said outlet, discharge piping connected to said valve housing in fluid communication with said nozzle through said outlet thereby to define a discharge flow path to receive a high mass flow of gas discharged from said nozzle when fluid in said system becomes over pressurized and urges said closure member into an open position, a reservoir for an anti-solidifying agent, inlet and outlet lines communicating between said discharge flow path and said reservoir, a high pressure probe connected to said inlet line and extending into said discharge flow path, said high pressure probe including an inlet orifice positioned in said flow path and opening in a direction facing at least partially upstream relative to said flow path to communicate a volume of discharge gas at a first pressure greater than the static pressure of said discharge gas flow from said path to said reservoir, and an injection probe connected to said outlet line and extending into said discharge flow path, said injection probe including an outlet orifice positioned in said flow path and opening in a direction facing at least partially downstream relative to said flow path to communicate to said reservoir a second pressure no greater than the static pressure of said discharge gas flow so said anti-solidifying agent may be driven from said reservoir into said discharge gas flow by a driving pressure representative of the difference in said first and second pressures.

5,009,247

PIPE INTERRUPTER

Hans Oberdörfer, Stuttgart, Fed. Rep. of Germany, assignor to Hansa Metallwerke AG, Stuttgart, Fed. Rep. of Germany

Filed Oct. 24, 1989, Ser. No. 425,944

Claims priority, application Fed. Rep. of Germany, Oct. 31, 1988, 3837032

Int. Cl.[5] **F16K** *24/02*

U.S. Cl. 137—218 **3 Claims**

1. Sanitary fitting comprising

(a) a fitting body (**1**) having a base part (**6**);

(b) an outlet mouthpiece (**3**) which can be pulled out and which is connected by way of a flexible hose (**4**) to an outlet pipe (**5**) fastened in said base part (**6**), said flexible hose being arranged in a loop which is guided partly inside said fitting body (**1**);

(c) control elements (**7**) inside said fitting body (**1**) for controlling the water flow through said fitting;

(d) a chamber (**10**) provided in said base part (**6**) and opening into said chamber an inlet pipe (**9**) for water coming from said control elements (**7**), said outlet pipe (**5**) and a ventilating passage (**14**);

(e) a hollow, cylindrical insert (**13**) inserted into said chamber (**1**) from the side and sealed against the wall of said chamber (**10**);

(f) a closing flap (**16**) mounted in said chamber (**1**) which, in the event of a reduced pressure in the inlet pipe (**9**), both closes the inlet pipe (**9**) and opens the ventilation passage (**14**), said closing flap (**16**) being formed from a single piece of resilient elastic material that includes

(1) an attachment section (**18**) that is secured by said insert (**13**) in a fixed position at the wall of said chamber (**10**);

(2) a single planar closing section (**19**) joined to and extending outwardly in a single plane from said attach-

ment section (18), which closing section is movable in the manner of a hinge through an angle extending between

a first position in which it bears against and by itself covers and closes off said ventilation passage (14) solely by virtue of its elastic resilient when there is no reduced pressure in said inlet pipe (9), and

a second position in which said elastic resiliency of the single planar closing section (19) that biases it against said ventilation passage (14) is overcome by reduced pressure in the inlet pipe (9) and the single planar closing section (19) moves through a single arc to a position where it by itself covers and closes off said inlet pipe (9).

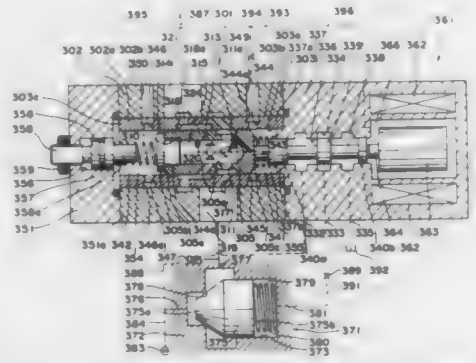
FLOWMETER



Kenji Masuda, Settsu, Japan, assignor to Daikin Industries, Ltd., Osaka, Japan

Division of Ser. No. 251,219, Aug. 8, 1988, Pat. No. 4,969,364. This application Jul. 27, 1990, Ser. No. 558,622

Claims priority, application Japan, Dec. 8, 1986, 61-291960; Dec. 23, 1986, 61-310415; Jan. 21, 1987, 62-12781; Feb. 6, 1987, 62-26539; Feb. 7, 1987, 62-26728

Int. Cl.[5] G05D *7/00*

U.S. Cl. 137—486 6 Claims

1. A flow control valve comprising a flow detective unit, a flow-regulating unit, and means for setting the flow rate,

said flow detective unit comprising a main body structure having an interior, generally cylindrical chamber, a detective core having a longitudinal axis and being slidably fitted in said chamber, a spool which is connected to said detective core and which controls passageways between a plurality of ports in the manner of shifting, inflow passageways formed in said main body structure for leading a flowing fluid into said detective core, and outflow passageways formed in said detective core for leading the fluid drawn in by said inflow passageways into said main body structure, at least either said inflow passageways or said outflow passageways being inclined with respect to the axis of the detective core;

said flow-regulating unit comprising a valve element for opening and shutting the supply passageway leading to said inflow passageway and a chamber opened to one end of said valve element and connected to one of said plurality of ports which is used for pressure control; and

said means for setting the flow rate applies a prescribed force to said detective core and actuates said spool by balancing force produced by changes in momentum of a flowing fluid and acting on said detective core.

AIR DISTRIBUTION CONNECTOR VALVE

Jim A. Faughn, Bel Air, Md., assignor to The United States of America as represented by the Secretary of the Army, Washington, D.C.

Filed May 3, 1990, Ser. No. 519,518

Int. Cl.[5] F16L *29/00*

U.S. Cl. 137—614.04 1 Claim

1. An air distribution connector valve comprising:

first and second mating connectors;

each connector including a self-closing, one way valve arranged and adapted to interfere with the valve of the other connector when the two connectors are mated together, whereby to open the two valves for unrestricted passage of air therethrough;

each connector includes engagement means for separably coupling the two connectors together to produce the interference between said valves;

each valve includes a valve body, and a compression spring associated and aligned therewith;

each connector further includes a valve housing having an axis of symmetry; the valve body of each connector being retained and slidable axially within the valve housing against the force exerted by the associated compression spring, and the valve body being normally urged by the associated compression spring against an end wall of the housing having a circular opening therein, so that the valve body is normally seated against the end wall to block said opening;

said valve body is cylindrical and includes spacing means on its cylindrical surface for separating the valve body from the inner surface of the associated valve housing,

said spacing means have holes therein to allow passage of air therethrough from the opening in said end wall to the other end of the associated valve housing when the valve body is unseated from said end wall;

each said valve body includes an end portion axially projecting through said opening when the valve body is normally seated against the end wall of the associated valve housing, said end portion having an end surface arranged and adapted to confront and abut against the end surface of the valve body of the other connector and to interfere with one another as the two connectors are being coupled together, so that both valve bodies are unseated from the end wall of their associated valve housings when the two connectors are fully coupled together and are reseated when the two connectors are fully uncoupled, whereby an air distribution passageway is formed through the entirety

of the coupled connectors and is automatically closed at each half of the uncoupled connectors;

said engagement means of one of said connectors includes a captive, rotatable ring having a plurality of spaced teeth on the inner surface of said ring;

said engagement means of the other connector includes a plurality of helical grooves equal in number to the number of said teeth, and arranged and adapted to receive and accept the teeth, and, when accepted and the ring is rotated, the teeth ride within the helical grooves to fully couple or uncouple the connectors depending on the direction of rotation of the ring;

said engagement means of the other connector further includes pin means for locking the teeth in position at the end of each of the associated helical grooves, said teeth and said pin means being releasable by exertion of pressure on the ring in the direction opposite that in which the teeth were fully engaged in the helical grooves.

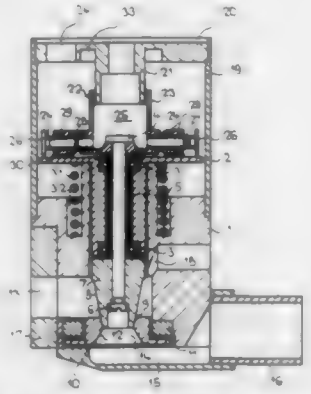
DEVICE FOR REMOVING A THREAD, WITH ROTATABLE RING AND ROTATABLE BOOM FOR CLAMPING AN END OF THE THREAD



Jan Pajgrt, Brno; Vincenc Smetak, Lelekovice; Jaroslav Kalina; Michal Zemek, both of Brno; Milan Pus, Ubersky Brod, and Pavel Bucek, Brno, all of Czechoslovakia, assignors to ZVS Vyzkumnevyvojovy ustav, Czechoslovakia

Filed May 2, 1989, Ser. No. 346,398

Claims priority, application Czechoslovakia, May 3, 1988, 2966-88; May 24, 1988, 3510-88

Int. Cl.[5] **D03D** *47/30*

U.S. Cl. 139—116.2 **11 Claims**

1. A device for removing a thread, said device comprising:

(A) a rotatable ring with an inner conical surface;

(B) a rotatable boom with an outer conical surface, said rotatable boom being axially displaceable toward said rotatable ring to clamp an end of the thread between said inner conical surface of said rotatable ring and said outer conical surface of said rotatable boom; and

(C) driving means for (1) displacing said rotatable boom toward said rotatable ring to clamp the end of the thread between said inner conical surface of said rotatable ring and said outer conical surface of said rotatable boom and (2) rotating said rotatable boom while the end of the thread is clamped between said inner conical surface of said rotatable ring and said outer conical surface of said rotatable boom;

wherein said driving means is directly operatively connected to said rotatable boom;

wherein said ring, said boom and said driving means are coaxial with each other;

wherein said driving means includes (1) displacing means for axially displacing said boom and (2) a pneumatically reactive driving unit operable for rotating said boom, said displacing means and said reactive driving unit having means permitting them to be driven by a common source of pressurized air

APPARATUS TO FILL SEED/FERTILIZER DRILLS

Gerald Brunner, Box 15, Conrad, Mont. 59425

Filed Nov. 20, 1989, Ser. No. 439,635

Int. Cl.[5] **B65G** *67/06*

U.S. Cl. 141—35 **2 Claims**

1. A seed drill including retractable towing wheels, disks and means for attachment to a tractor for pulling of the seed drill by a tractor, for receiving and distributing granular material such as seeds from a mobile source such as a truck, the seed drill being longitudinally elongated and being longitudinally symmetrical about a centerline, and further comprising, in combination:

(a) a plurality of bins for holding said granular material, including at least a first bin, a second bin, a third bin and a fourth bin, the bins being spaced longitudinally, the first and second bins being alongside the centerline and the third and fourth bins being across the centerline from the first and second bins;

each of the plurality of bins having an upper edge defining opening, the first bin having an upper edge defining a first opening, the second bin having an upper edge defining a second opening, the third bin having an upper edge defining a third opening, and the fourth bin having an upper edge defining a fourth opening;

the upper edges and openings of the plurality of bins, including the upper edges and the first, second, third and fourth openings of the first through fourth bins, being in longitudinally spaced relationship with each other and being substantially coplanar;

(b) transfer auger means and distribution auger means for distributing the granular material from the source to the plurality of bins;

the distribution auger means including a substantially enclosed auger channel extending longitudinally across the bins and further including a distribution auger for drivably conveying granular material within the auger channel from the transfer auger means to all the bins;

the auger channel having a discharge aperture positioned above each of the plurality of openings, including a first discharge aperture positioned above said first opening, a second discharge aperture positioned above said second opening, a third discharge aperture positioned above the third opening, and a fourth discharge aperture positioned above the fourth opening;

the discharge apertures being in longitudinally spaced relationship with each other and being substantially coplanar with each other and with the openings, in an operative position of the distribution auger means;

(c) the upper edge of said each bin, its opening, and the respecti discharge aperture being constructed and arranged to define means for gravity feeding substantially all of said conveyed granular material from the distribution auger means into the bin through said discharge aperture and said opening until said granular material reaches the height of said discharge aperture for substantially stopping all the flow of said granular material through said discharge aperture to said bin while said bin stores substantially all of said conveyed granular material gravity fed therein;

the upper edge of each bin, its opening and the respective discharge aperture being further constructed and arranged to define means for gravity feeding substantially all of said conveyed granular material from said distribution auger means into said bin through said discharge aperture and said opening, after the flow of said granular material to others of said bins has been stopped;

(d) the transfer auger means having a transverse extent and including a transfer auger channel extending transversely to the discharge auger channel and further including a transfer auger for drivably conveying granular material within the transfer auger channel from the source to the distribution auger means.

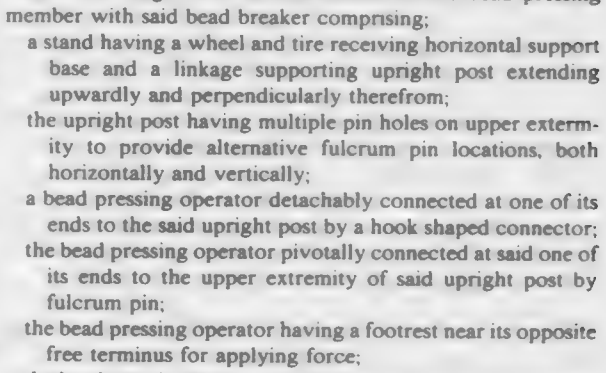
CORD-TYPE TIRE TRACTION DEVICE

Franklin G. Smith, Portland, Oreg., assignor to Manufacturer's Consultants, Inc., Portland, Oreg.

Filed Dec. 21, 1988, Ser. No. 288,619

Int. Cl.[5] **B60C** *27/06;* **B65H** *69/04;* **A44B** *1/04, 11/25*



U.S. Cl. 152—221 **35 Claims**

1. A tire traction device for vehicle tires having treads, comprising:

a pair of longitudinal side cord members for extending circumferentially of a tire along opposite sidewalls thereof, opposite ends of each said side cord member being interconnectable; and

multiple cross cord members spaced along the length of said side cord members and extending between and joining said pair of side cord members for extending across said tire treads, said cross cord members being joined to said side cord members at knotted connections;

each knotted connection including at least one knot on the

connected side cord member and adjacent means on the connected cross cord member cooperable with the knot to at least limit relative lateral displacement of the connected side and cross cord members at the knotted connection.

TIRE BREAKER APPARATUS FOR ALL-TERRAIN VEHICLE TIRES

Richard R. Reeves, HC 66 Box 36A, Kinder, La. 70648

Filed May 15, 1990, Ser. No. 525,401

Int. Cl.[5] **B60C** *25/02*

U.S. Cl. 157—1.26 **1 Claim**

1. A bead breaker for displacing the bead of a deflated ATV tire from the flange of a wheel upon which said tire is mounted by uniquely clamping the tire sidewall in a fixed position relative to the bead pressing member, so as to insure breaking of the bead during downward movement of the bead pressing member with said bead breaker comprising;

a stand having a wheel and tire receiving horizontal support base and a linkage supporting upright post extending upwardly and perpendicularly therefrom;

the upright post having multiple pin holes on upper extermity to provide alternative fulcrum pin locations, both horizontally and vertically;

a bead pressing operator detachably connected at one of its ends to the said upright post by a hook shaped connector;

the bead pressing operator pivotally connected at said one of its ends to the upper extremity of said upright post by fulcrum pin;

the bead pressing operator having a footrest near its opposite free terminus for applying force;

the bead pressing operator having a fastening means interactive between said bead pressing operator's free terminus and a point below on the support base to releasibly immobilize said bead pressing operator in a deployed position;

a bead press support column pivotally connected at its upper terminus to said bead pressing operator and with a bead press shoe fixed to its lower terminus;

a first jaw fixed perpendicular to said press support comumn

and disposed in a position to lie immediately above tire sidewall;

a second jaw pivotally connected to said first jaw so as to allow said second jaw to close against said first jaw,

a tire sidewall clamping device operator rigidly connected to said second jaw at such an angle to render said operator in a nearly horizontal position when said second jaw is closed against said first jaw;

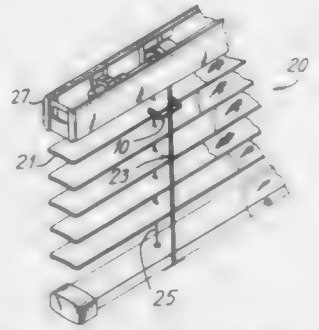
the tire sidewall clamping device operator rigidly connected to said second jaw at such an offset measured along its pivotal axis to allow clearance between the working plane of said tire sidewall clamping device operator and other parts;

the tire sidewall clamping device operator having a footrest near its free terminus for applying force;

the tire sidewall clamping device operator having a fastening means interactive between said tire sidewall clamping device operator's free terminus and a point below on the support base to releasibly immobilize said tire sidewall clamping device operator in a fixed position relative to the bead press shoe;

said tire sidewall clamping device operator fastening means to include a chain with spring to allow for movement of said tire sidewall clamping device operator with respect to support base.

5,009,258



METHOD AND CLIP FOR SECURING A SLAT OF A VENETIAN BLIND

Donald E. Fraser, Ramsey, N.J., assignor to Hunter Douglas Inc., Upper Saddle River, N.J.

Filed Dec. 8, 1988, Ser. No. 281,561

Int. Cl.[5] E06B *9/36*

U.S. Cl. 160—168.1 **4 Claims**

1. A Venetian blind and clip for securing a slat of said blind, comprising in combination:

a ladder cord having vertically extending side legs connected by cross rungs;

at least one slat supported by said cross rungs of said ladder cord;

a raising/lowering cord extending vertically and running through an aperture defined in said slat; and

a press-on clip securable on a single edge of the slat for securing the slat to its supporting rung, said clip comprising

a first generally planar prong, and second and third prongs formed integrally with and opposed to said first prong, said second and third prongs being spaced from said first prong in order to receive a slat therebetween, said second and third prongs being spaced from one another on either side of said first prong,

whereby when said fastener is urged over a slat resting on a cross rung of a ladder of a Venetian blind said second and third prongs cause said first prong to urge the cross rung into frictional engagement with the under side of the slat.

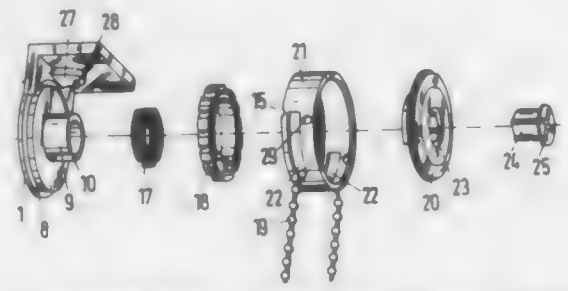
ROLLER BLIND SUPPORT

Ludwig Miloslaus, Trittau, Fed. Rep. of Germany, assignor to Aerolux Produktions- und Handelsgesellschaft mbH, Norderstedt, Fed. Rep. of Germany



PCT No. PCT/EP88/00139, § 371 Date Aug. 24, 1989, § 102(e) Date Aug. 24, 1989, PCT Pub. No. WO88/06672, PCT Pub. Date Sep. 7, 1988

PCT Filed Feb. 25, 1988, Ser. No. 399,494

Claims priority, application Fed. Rep. of Germany, Feb. 28, 1987, 8703112[U]

Int. Cl.[5] E06B *9/17*

U.S. Cl. 160—323.1 **12 Claims**

1 A system for supporting a roller blind having a rotation axis passing through a projecting support pin (**38**) and a projecting drive pin (**39**), on room structure such as a wall, ceiling or the like, comprising:

first and second substantially identical fixture parts (**1**) for attachment to the room structure in opposed, spaced apart relation before the roller blind is installed, each fixture part having a fixed collar (**9**) projecting toward the fixed collar of the other fixture part so as to be coaxially centered about the axis after said attachment, each collar having a passage aperture (**10**) extending radially therethrough;

a first bearing part (**2**) rotatably disposed on the first fixture part and including means for selectively securing the bearing part in a particular rotational position so as to prevent accidental rotation, the bearing part further including a fixed bearing shell (**13**) in coaxial, overlapped relation to the collar for rotatably receiving the support pin (**38**), the bearing part further having an insertion aperture (**14**) which extends radially through the shell, whereby

when the bearing part is in a rotationally open position relative to the collar such that the insertion aperture (**14**) is aligned with the passage aperture (**10**) in the collar, the support pin (**38**) can be displaced radially along the insertion aperture between an initial position outside the bearing part to a final position on the axis in the shell; and

when the bearing part (**2**) is selectively rotated to said particular position, the passage aperture is closed and the pin (**38**) is trapped on the axis within the shell (**13**) and collar; and

a second bearing part disposed on the second fixture part and including

drive pin support means (**24,25**) for non-rotatably engaging the drive pin (**39**), and

drive means (**17–23**) including a drag spring (**17**) for selectively rotating the drive pin support means, said drag spring being positioned coaxially around the collar (**9**) of the second fixture part.

COMBINATION RADIATOR AND CONDENSER APPARATUS FOR MOTOR VEHICLE

Gary A. Halstead, Lockport, and Ronald C. Treloar, Williamsville, both of N.Y., assignors to General Motors Corporation, Detroit, Mich.

Filed Jun. 19, 1990, Ser. No. 540,015

Int. Cl.[5] F28D *7/16*

U.S. Cl. 165—140 **39 Claims**

1. A combination radiator and condenser apparatus for a motor vehicle having a plurality of parallel tube passes for cooling high pressure refrigerant vapor in an air conditioning system for the motor vehicle and for cooling engine coolant having air centers bonded thereto for cooling fluid flow through said parallel tube passes comprising:

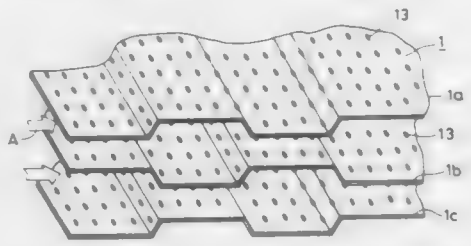
said parallel tube passes each including a flow tube with

aligned segments forming a refrigerant passage and a separate coolant passage;

a pair of unitary tank and header units; each of said unitary tanks and header units including a coolant space communicating with said coolant passages for flow of coolant therethrough;

each of said unitary tank and header units including a high pressure refrigerant space for communicating said refrigerant passages with a mechanical refrigerant system for directing refrigerant vapor through said refrigerant passages for condensation therein;

an internal partition in each of said unitary tank and header units extending the length thereof to separate said coolant space from said high pressure refrigerant space; and



air center means connected to each of said aligned flow tube segments for conductively transferring heat from said coolant and said refrigerant vapor.

5,009,263

HEAT-EXCHANGER UTILIZING PRESSURE DIFFERENTIAL

Yuu Seshimo, and Masao Fujii, both of Hyogo, Japan, assignors to Mitsubishi Denki K. K., Tokyo, Japan

Filed Dec. 11, 1985, Ser. No. 807,911
Claims priority, application Japan, Dec. 14, 1984, 59-264087
Int. Cl.[5] F28D *1/04*
U.S. Cl. 165—151 **28 Claims**

1. A heat exchanger apparatus comprising: a heat transmission member having a plurality of through-holes, said heat transmission member extending in a direction of fluid flow and being corrugated in the direction of fluid flow in the form of alternating trapezoids to produce a pressure difference between opposite surfaces of each of plural portions of said heat transmitting member; and main flow guide means for guiding a main portion of said fluid flow such that it does not pass through said through-holes but flows along said heat transmitting member.

WELL PRODUCTION APPARATUS INCLUDING PUMP MEANS AND THERMAL ABSORPTION MEANS

Kris M. Sliger, Denver, Colo.; Randolph C. Moeller, Casper, Wyo., and Scott E. Williamson, Castle Rock, Colo., assignors to Baker Hughes Incorporated, Houston, Tex.

Filed May 23, 1990, Ser. No. 527,748
Int. Cl.[5] E21B *33/128*
U.S. Cl. 166—106 **6 Claims**

1. A well production apparatus, comprising:

(1) a tubular production conduit extending from the top of the well to a production zone and disposed within casing in said well;

(2) an electric submersible pump on said conduit, said pump having a production fluid flow passageway extending therethrough and communication between the exterior of said conduit immediate said pump and the interior of said casing;

(3) a packer assembly in communication with said production conduit below said pump and positionable into sealing engagement with said casing to isolate said production zone from a portion of the well thereabove; and

(4) thermal absorption means on said production conduit between upper and lower production conduit members secured thereto whereby, subsequent to positioning of said packer assembly into sealing engagement with said casing, thermal expansion or contraction of said conduit above said packer assembly is absorbed by said thermal absorption means without transmission of said thermal expansion or contraction of said conduit to said pump

the thermal absorption means comprising first and second housing members, said first housing member being secured to said upper production conduit member and

said second housing member being secured to said lower production conduit member, one of said housing members defining a slot therethrough for receipt of lug means carried on the other housing member, said lug means and said slot when in a first position relative to one another preventing axial rotation between said upper and lower production conduit members and being movable by manipulation of said tubular production conduit to another position whereby said upper and lower production conduit members are movable longitudinally in telescopic relationship.

Int. Cl.[5] E21D *1/00*
U.S. Cl. 175—53 10 Claims

1. A drill assembly comprising mandrel means for rotatable mounting in a casing shoe at the bottom end of a drill string, bit means for rotatable mounting in said mandrel means beneath the bottom end of the drill string, said bit means and mandrel means normally rotating together in one direction with said bit means eccentric with respect to said mandrel means, whereby the bit means can bore a hole larger in diameter than the casing shoe; head means on said bit means for engaging a formation to stop rotation of said bit means; shoulder means on said bit means and said mandrel means for retaining said bit means in the eccentric drilling position; and cam means on said bit means for engaging said casing shoe when the bit means is moved upwardly against the casing shoe to cause said bit means to rotate in the other direction to a release position in

which said bit means is aligned with the casing shoe for movement therethrough

FLOW PULSING METHOD AND APPARATUS FOR DRILL STRING

Bruno H. Walter, Edmonton, Canada, assignor to Intech International, Inc., Edmonton, Canada

Filed Nov. 15, 1989, Ser. No. 436,603
Claims priority, application Canada, Nov. 25, 1988, 584145; Jun. 22, 1989, 603594
Int. Cl.[5] E21B *7/18, 7/24, 4/14, 31/113*
U.S. Cl. 175—56 24 Claims

1. A flow pulsing apparatus including a housing having means providing a passage for a flow of fluid and means for periodically interrupting the flow through said passage to create a cyclical water-hammer effect to vibrate the housing and provide pulsations in the flow during use, said means for periodically interrupting the flow including a constriction means in the passage to accelerate the flow to a higher velocity and a first passage region through which the accelerated higher velocity fluid flows followed by an enlarged downstream passage region adapted to provide for a reduced fluid velocity and a control means having a pair of generally opposed faces, said control means being associated with said first passage region and being movable between a substantially open full-flow position and a substantially closed flow interrupting position, said control means, in use, having one of said faces at least partially exposed to the higher velocity fluid flow provided by said first passage region such that (a) when the control means is in the open position the higher velocity fluid flow tends to reduce the pressure force acting on at least a portion of said one face and (b) when the control means is in the closed position the flow interruption creates a fluid pressure force increase acting on at least a portion of said one face while the other of said faces of the control means is, in use, at least partially exposed to the fluid pressures existing in said downstream passage region with said control means thus tending to be moved rapidly or to vibrate between the substantially open and substantially closed positions under the influence of the alternating differential pressure forces acting on said opposed faces of the control means during use.

18. A flow pulsing method including flowing a fluid through a passage while periodically interrupting the flow to create pulsations in the flow and a cyclical water-hammer effect, characterized by passing the fluid through a constriction means in the passage to accelerate the flow to a higher velocity and thence into a first passage region through which the accelerated higher velocity fluid flows and thereafter passing the fluid through a downstream passage region arranged to reduce the fluid velocity, there being a control means having generally opposed faces, which control means is associated with said first passage region and is movable between a generally open full-flow position and a closed generally flow interrupting position, and exposing one face of said control means to the higher velocity fluid flow in said first passage region while the opposing face thereof is exposed to the fluid pressure existing in said downstream passage region of lower fluid velocity so that said control means tends to be moved rapidly or to vibrate between the generally open and closed positions by virtue of alternating differential pressure forces arising from Bernoulli and water-hammer effects acting on said generally opposed faces of the control member.

5,009,273

DEFLECTION APPARATUS

Piotr Grabinski, Calgary, Canada, assignor to Foothills Diamond Coring (1980) Ltd., Calgary, Canada

Filed Jan. 9, 1989, Ser. No. 295,144
Int. Cl.[5] E21B *7/04*
U.S. Cl. 175—61 20 Claims

1. A deflection apparatus for use in directional drilling comprising:

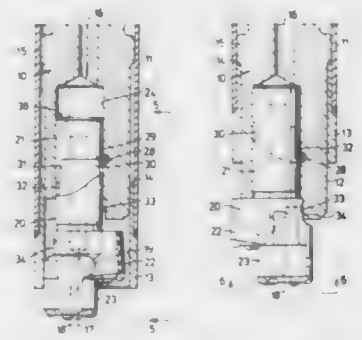
a housing which is adapted to be disposed about a drill string and to be rotatable relative to said drill string and to be moveable longitudinally of said drill string;

a deflection member pivotally connected to said housing and moveable between a first equilibrium position in which said member is in a retracted position adjacent said housing and a second position in which said member is biased toward an extended position outwardly of said housing;

means for maintaining said member in said first equilibrium position;

means responsive to an externally-imposed force for releasing said member from said equilibrium position; and

means, independent of the externally-imposed force, for biasing said deflection member into said extended position;



and wherein said means for biasing is responsive to said release of said deflection member from said first equilibrium position to move said deflection member toward said second position.

5,009,274

LATERALLY ADJUSTABLE DRILLING TOOL

Stig U. Löf, Sunne, Sweden, assignor to Uniroc Aktiebolag, Fagersta, Sweden

Filed Apr. 3, 1990, Ser. No. 503,724
Claims priority, application Sweden, Apr. 5, 1989, 8901198
Int. Cl.[5] E21B *10/66*
U.S. Cl. 175—260 10 Claims

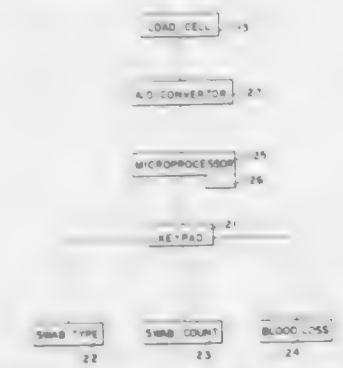
1. A drilling tool for drilling in earth and in rock covered by overburden concurrently with a casing tube (**11**) following the drilling tool downhole, said tool incorporating a guide member (**10**) rotatably centered in said casing tube (**11**) at the mouth thereof, a drill bit (**20**) having a shaft (**21**) integral with an intermediate laterally projecting eccentric bit (**22**) and an axially protruding frontal pilot bit (**23**), said shaft (**21**) being journalled in an eccentrically disposed bore (**24**) in said guide member (**10**) to move relative thereto pivotally and axially between, on the one hand, a drilling position wherein the pilot bit (**23**) is coaxial with the guide member (**10**) and the eccentric bit (**22**) projects laterally beyond the casing tube (**11**) so as to drill a hole larger than said casing tube (**11**), and, on the other hand, a retracted position in which the drill bit (**20**) can be retracted and lowered through the casing tube (**11**), said drilling tool being c h a r a c t e r i s e d b y cooperating cam and follower means (**30,31,32;28**) between said shaft (**21**) and said guide member (**10**) wherein:

(a) the drill bit (**20**) is maintained in the drilling position thereof form-bound adjacent to the guide member (**10**) so as to be movable in axial direction in unison therewith,

(b) the guide member (**10**) by a form-restricted angular displacement relative to the drill bit (**20**) away from said drilling position is freed to perform a form-restricted axial movement backward and forward relative to the drill bit (**20**), and

(c) the guide member (**10**) in said backward position thereof by a form-restricted continued angular displacement relative to the drill bit (**20**) away from said drilling position is again maintained form-bound to the drill bit (**20**) for axial movement in unison therewith with the drill bit (**20**) in retracted position spaced in front of the guide member (**10**).

5,009,275



MEDICAL SWAB WEIGHING APPARATUS

James Sheehan, The Hermitage, Blackrock, County Dublin, Ireland

Filed Nov. 22, 1989, Ser. No. 440,972
Claims priority, application Ireland, Nov. 24, 1988, 3527/88
Int. Cl.[5] G01G *19/42, 19/52*
U.S. Cl. 177—25.13 8 Claims

1. A medical swab weighing apparatus, comprising a container into which used swabs may be deposited during the course of an operation, and a weighing means on which the container is removably support and which provides an electri-

cal output signal whose value is dependent upon the instantaneous total weight of the container and contents, the weighing means having means for storing the weight of a dry swab and program means responsive to the stored weight of a dry swab

and the electrical output signal for calculating and displaying, each time a swab is deposited in the container, the total weight of blood absorbed in used swabs deposited in the container and the total number of swabs deposited in the container

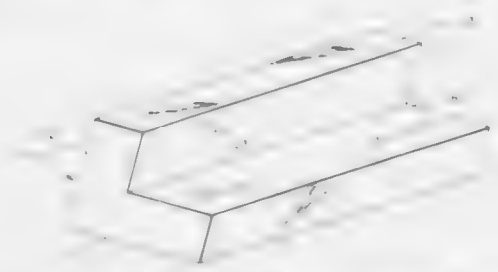
5,009,276

ELECTRONIC POSTAL SCALE WITH MULTILINGUAL OPERATOR PROMPTS AND REPORT HEADINGS

Terry E. Raikes, Santa Rosa; William L. Kramer, Windsor; John B. Howard, Forestville, all of Calif.; Wayne D. Moore, North York, Canada; Louis Jackson, Milford, Conn., and Jeffrey D. Kotecki, Newtown, Conn., assignors to Pitney Bowes Inc., Stamford, Conn.

Filed Jan. 16, 1990, Ser. No. 466,120
Int. Cl.[5] G01G *19/40*; G06F *15/20*
U.S. Cl. 177—25.15 16 Claims



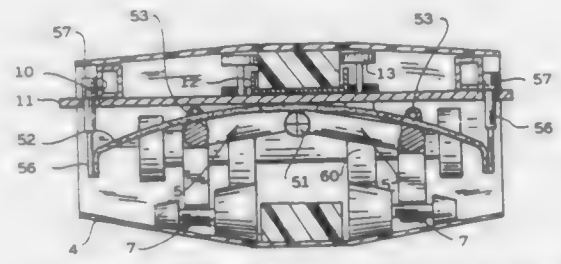
1. A postal scale comprising:
(a) weight sensing means for generating a weight signal;
(b) input means for generating a language select signal;
(c) output means for outputting texts;
(d) a memory for storing texts, said texts comprising a plurality of sets of texts, each of said sets being in a different language; and
(e) a microprocessor programmed to:
(i) receive and process said weight signal;
(ii) receive said language select signal;
(iii) select one of said sets of texts in accordance with said language select signal; and
(iv) cause said output means to output texts from said selected set.

5,009,277

METHOD AND APPARATUS FOR POSITION DETERMINATION

Seymour J. Sindeband, Pound Ridge, N.Y., and Robert Butler, Milford, Conn., assignors to Science Accessories Corp., Stratford, Conn.

Filed Mar. 19, 1990, Ser. No. 495,330
Int. Cl.[5] G08C *21/00*
U.S. Cl. 178—18 16 Claims



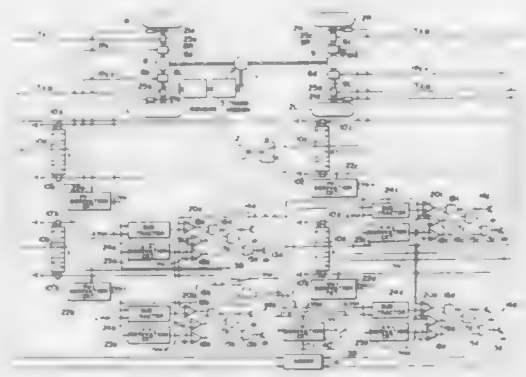
5. Apparatus for obtaining and outputting the position of a moveable element in a data space, comprising
an acoustic digitizer subsystem for determining the position of said movable element by measuring the transit time of acoustic wave energy traveling, in either direction, between said movable element and a plurality of known locations,
means for outputting said position measurement values;
means for computing the distance between determined time sequential positions of the movable element; and
means for disabling the outputting of said position measurement values when said computed distance is outside a predetermined range.

5,009,278

METHOD AND A SUPPORT ARRANGEMENT IN A ROLLER VEHICLE TO BE STEERED BY A ROLLER MAT

Timo Laakso, Tuusula, Finland, assignor to 3TL Trading Co., Hyrylä , Finland

PCT No. PCT/FI88/00114, § 371 Date Mar. 26, 1990, § 102(e) Date Mar. 26, 1990, PCT Pub. No. WO89/01893, PCT Pub. Date Mar. 9, 1989
PCT Filed Jul. 8, 1988, Ser. No. 466,422
Claims priority, application Finland, Sep. 2, 1987, 873816
Int. Cl.[5] B62D *55/07*
U.S. Cl. 180—9.44 16 Claims



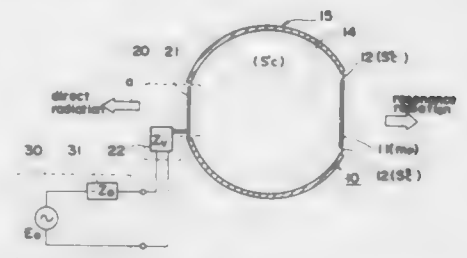
1. A support arrangement in a roller vehicle for steering thereof, including
a turnover roller mat **4**;
a rigid body part **1** for supporting a power engine **2** and transmission means **3** for transmitting a driving force directly to an outer periphery of said roller mat **4** movable around a turnable wheel assembly **6**, **7** under said rigid body part **1**;
a support arrangement **5** extending the whole length of said body part **1** and suspended therefrom, said support arrangement including a separate, twistable auxiliary body **5**, **5'** supported by said body part **1** at two points on a center line of said vehicle;
said roller wheel assembly **6**, **7** being suspended by said auxiliary body **5**, **5'**;
said auxiliary body being provided with means **8**, **9** connected to steering means for said vehicle for twisting said auxiliary body **5**, **5'** for steering said vehicle;
said auxiliary body including two flexible, telescopically lengthening rod means, the length of said rod means being at a minimum extent when said auxiliary body is in a unfolded balance state;
said auxiliary body **5**, **5'** being connected to said body part **1** by several parallel and spaced downwardly directed support rods **52** transverse to a longitudinal axis of said vehicle passing through a center of gravity of said vehicle defining a longitudinal center line thereof, each of said rods being supported to maintain the transverse position thereof at three points to the body part **1**;
said auxiliary body **5**, **5'** being suspended to each support rod **52** by at least two thrust bearings **53**, so that when said auxiliary body **5'** is twisted it can move on said thrust bearings **53** along said transverse support rods **52**, whereby on one side of said roller mat **4**, the distance between said roller wheels **6**, **7** and said body part **1** is shorter and on the other side of said roller mat **4** the distance between the roller wheels **6**, **7** and the body part **1** becomes correspondingly longer, so that the roller mat **4** is displaced from a direct driving position to a curved driving position, at the same time when the center of gravity of the vehicle transfers from a side towards which said vehicle tilts on one side of the longitudinal center line of the vehicle to a side on the other side of the longitudinal center line of said vehicle, whereat said roller mat **4** is closer to said body part **1**.

5,009,279

METHOD AND SYSTEM FOR DETECTING WHEEL SLIPPAGE

Toshiro Matsuda, Sagamihara, Japan, assignor to Nissan Motor Company, Limited, Yokohama, Japan

Filed Oct. 14, 1986, Ser. No. 918,125
Claims priority, application Japan, Oct. 11, 1985, 60-224936
Int. Cl.[5] B60K *28/16*
U.S. Cl. 180—197 14 Claims



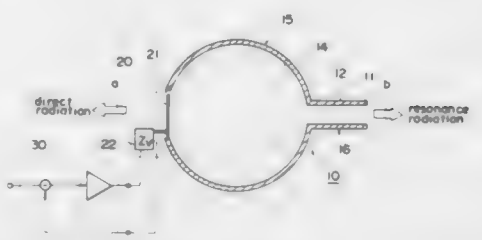
1. A system for detecting wheel slippage comprising:
a first sensor for monitoring wheel rotation and producing a first sensor signal indicative of the wheel speed;
a second sensor for monitoring a parameter reflecting road surface friction and producing a second sensor signal indicative thereof;
a reference signal generator for sampling said first sensor signal having at a given timing and generating a reference signal having a value reflecting a projected vehicle speed based on the sampled first sensor signal value; and
an arithmetic means for modifying said reference signal value based on said second sensor signal value and comparing said first sensor signal value with the modified reference signal value so as to detect occurrences of wheel slippage.

5,009,280

ACOUSTIC APPARATUS

Kenji Yokoyama, Hamamatsu, Japan, assignor to Yamaha Corporation, Hamamatsu, Japan

Filed Mar. 24, 1989, Ser. No. 328,473
Claims priority, application Japan, Apr. 1, 1988, 63-81032; Apr. 1, 1988, 63-81033
Int. Cl.[5] H04R *1/28*, *3/04*
U.S. Cl. 181—160 8 Claims



1. An acoustic apparatus, comprising:
a body portion having an internal cavity therein defining a resonator and a passive diaphragm operatively coupled to said body portion, wherein said passive diaphragm functions as a resonance radiation unit for radiating an acoustic wave caused by resonance;
a vibrator disposed in the body portion and having an active diaphragm including a direct radiation portion for directly radiating can acoustic wave and a resonator driver portion for driving said resonator; and
vibrator drive means for driving said vibrator, said vibrator drive means being coupled to said vibrator and comprising drive control means for controlling a drive condition of said vibrator, wherein an atmospheric counteraction of said resonator is substantially cancelled at a time of driving of said resonator by said vibrator.

5,009,281

ACOUSTIC APPARATUS

Kenji Yokoyama, Hamamatsu, Japan, assignor to Yamaha Corporation, Hamamatsu, Japan

Filed Mar. 1, 1989, Ser. No. 317,952
Claims priority, application Japan, Mar. 10, 1988, 63-56905; Mar. 10, 1988, 63-56906
Int. Cl.[5] H04R *7/00*
U.S. Cl. 181—160 9 Claims

1. An acoustic apparatus comprising:
a body portion having an internal cavity therein defining a resonator and having a port therein forming a resonance radiation unit for radiating an acoustic wave by resonance;
a vibrator disposed in the body portion and having a diaphragm, including a direct radiation portion for directly radiating an acoustic wave outwards from the resonator and a resonator driver portion for driving said resonator, the driving of the resonator tending to produce counter-

acting air movement from the cavity of the body portion upon the diaphragm; and

a vibrator drive means having a motional feedback means responsive to movement of said diaphragm for producing a motional signal corresponding to movement of said diaphragm and negatively feeding back the motional signal to the vibrator drive means, said vibrator drive means responding to the negatively fed back motional signal from the motional feedback means to effect motional feedback driving of said vibrator in a manner which substantially cancels counteracting air movement from the cavity of the body portion upon the diaphragm.

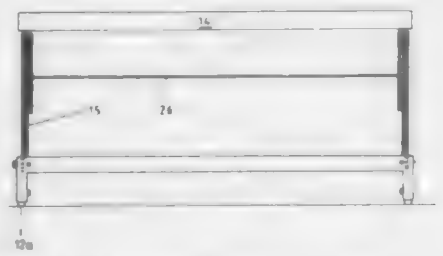
FOLDING STEPS

Philip Willsher, 21, Afan Terrace, Cwmavon, Port Talbot, United Kingdom



PCT No. PCT/GB88/01085, § 371 Date Oct. 10, 1989, § 102(e) Date Oct. 10, 1989, PCT Pub. No. WO89/05390, PCT Pub. Date Jun. 15, 1989

PCT Filed Dec. 12, 1988, Ser. No. 424,218

Claims priority, application United Kingdom, Dec. 10, 1987, 8728893

Int. Cl.[5] **E06C** *1/387*

U.S. Cl. 182—88 **9 Claims**

1. A folding step structure, which comprises:

(a) an elongate base member adapted to be laid on or parallel to a ground surface;

(b) a frame structure connected to said base member;

(c) a step member connected to said frame structure such that said frame structure and said step member are together pivotal, about pivot points towards one end of said base member, between a first limit position in which said step member is disposed substantially parallel to, and closely spaced from, said ground surface at a location towards the other end of said base member, in which limit positions said frame structure is in close juxtaposition to said base member, and a second limit position in which said step member is supported substantially parallel to said ground surface and substantially spaced above said base member; and

(d) securing means for securing said step member and said frame structure in said second limit position.

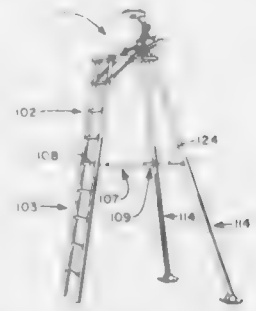
5,009,283

HUNTING STAND SYSTEM

Leonard W. Prejean, P.O. Box 529, Ville Platte, La. 70586

Filed Feb. 23, 1990, Ser. No. 484,220

Int. Cl.[5] **A45F** *3/26*; **A47C** *9/10*



U.S. Cl. 182—116 **39 Claims**

1. A stand for supporting a hunter in a tree, comprising:

a platform having a front end and a back end, said back end having means for traction on said tree;

a climbing bar assembly having a first end and second end connected to said platform, said climbing bar assembly forming a loop extending past said back end of said platform and positioned to engage said tree at a height above said platform;

a seat assembly having a post pivotally connected at one end to said platform, a seat connected to an opposite end of said post, said seat assembly being adjustable from an upright position to a collapsed position relative to said platform, and

means connected to said seat assembly for engaging said hunter's feet when said seat assembly is in a collapsed position

CHAIR LIFT APPARATUS

Sherrill A. Authement, Sr., P.O. Box 77, Cameron, La. 70631

Filed Jul. 9, 1990, Ser. No. 550,057

Int. Cl.[5] **A45F** *3/26*; **A47C** *9/10*; **A01M** *31/02*

U.S. Cl. 182—142 **6 Claims**

1. A chair lift apparatus comprising, in combination,

a seat platform, the seat platform including a bottom surface and a top surface, the bottom surface including a lateral seat support bar extending beyond opposed sides of the seat platform,

and

a longitudinal seat support bar orthogonally oriented relative to the lateral seat support bar mounted to the bottom surface, wherein the lateral and longitudinal so at support bars are integrally mounted to the bottom surface of the seat platform,

and

a right arm post integrally and orthogonally mounted to a right terminal end of the lateral seat support bar, and a left arm post integrally and orthogonally mounted to a left terminal end of the lateral seat support bar, wherein the right and left arm posts are arranged parallel relative to one another,

and

a right arm rest platform mounted to an upper terminal end of the right arm post, and a left arm rest platform mounted to an upper terminal end of the left arm post, wherein the right and left arm rest platforms are pivotally mounted to the respective right and left arm posts,

and

the longitudinal seat support bar including a forward "L" shaped yoke mounted at a forward terminal end of the longitudinal seat support bar,

and

a rear "L" shaped yoke mounted to a rear terminal end of the longitudinal seat support bar,

and

a forward leg post mounted to the forward "L" shaped yoke and orthogonally oriented relative to the longitudinal seat support bar in a first position and arranged to overlie in inter-folded relationship the longitudinal seat support bar in a second position, wherein the forward "L" shaped yoke permits selective pivotment of the forward leg post relative to the longitudinal seat support bar,

and

a forward leg post support bar integrally and orthogonally mounted to the forward leg post,

and

a lower spine link mounted to the rear "L" shaped yoke, wherein the rear "L" shaped yoke permits pivotment of the lower spine link from a first position orthogonally oriented relative to the longitudinal seat support bar to a second position to overlie the upper surface of the seat platform in a second position of the lower spine link,

and

a back support plate mounted integrally and orthogonally to a forward surface of the lower spine link,

and

an upper spine link including an upper spine link lower yoke pivotally mounting the upper spine link relative to the lower spine link from a longitudinally aligned first position of the upper spine link to the lower spine link to an overlying orientation of the upper spine link relative to the lower spine link in an upper spine link second position,

and

an upper spine link "L" shaped yoke orthogonally mounting an overhead link in a first position, wherein the overhead link is arranged parallel to the longitudinal seat support bar in the first position,

and

a winch mounted to a forward terminal end of the overhead link, wherein the winch includes an elongate cable mounted thereto for securement to a structural support member permitting elevational repositioning of the apparatus upon selective extension or retraction of the cable.

COMBINATION BACKPACK AND TREE STAND

E. Don Ramsey, Rte. 1, Box 247, Konawa, Okla. 74849

Filed May 21, 1990, Ser. No. 525,824

Int. Cl.[5] **A01M** *31/02*

U.S. Cl. 182—187 **3 Claims**

1. A backpack and tree stand, comprising:

an endless seat frame having a seat thereon and having a rearward end rail;

a chain connected at its respective end portions with respective end portions of said rearward seat end rail for transversely surrounding an intermediate portion of an upright support for securing said seat frame to the latter;

chain stop means including a planar member having outer and inward surfaces and having a forwardly open normally horizontal slot therein secured to opposite sides of said seat frame for receiving a selected intermediate link of said chain and securing respective end portions of said chain against longitudinal movement relative to the seat frame;

a chain link stop on the inward surface of said planar member adjacent the slot for preventing removal of a chain link from the slot while the chain is under tension;

a transverse horizontal frame member spaced downwardly with respect to said seat frame rearward end rail;

a pair of semicircular cams projecting rearwardly from said seat rearward end rail,

each said cam of said pair of cams secured in laterally spaced-apart parallel relation to the central portion of said seat frame rearward end rail and said transverse frame member and having a rearwardly projecting arcuate portion normally disposed downwardly with respect to the normally horizontal plane of the seat for forming a fulcrum and a binding action of said pair of cams against said upright support and supporting said seat in a substantially horizontal plane when said seat is biased downward by the mass of a hunter thereon; and,

elongated prong means secured to the seat frame and said transverse frame member and projecting rearwardly and downwardly coextensive with the seat frame and rearward extent of the cam means for contacting said support and stabilizing said seat frame against lateral movement relative to said support.

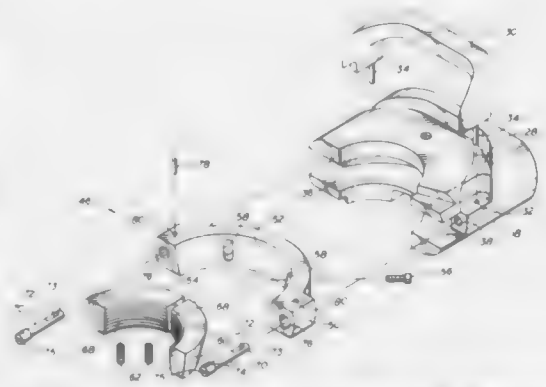
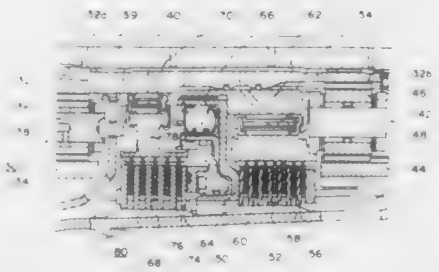
VEHICLE LIFT
George N. Starr, Memphis, Tenn., assignor to Delaware Capital Formation, Inc., Wilmington, Del.
Filed Sep. 19, 1989, Ser. No. 409,438
Int. Cl.[5] B60S *13/00*
U.S. Cl. 187—8.41 11 Claims



1. A vehicle lift comprising:
(a) support means for engaging a vehicle to be lifted, said support means including at least one carriage means and lift arm means, said carriage means including follower means;
(b) power means engaging said support means for lifting, supporting and lowering said support means to lift, support and lower a vehicle engaged by said support means; and
(c) at least one vertically extending column means for supporting and guiding said support means during said lifting, supporting and lowering thereof; said column means including a pair of first channel means opening inwardly towards said carriage and a pair of second channel means respectively joined to said first channel means and respectively opening outwardly in the opposite direction from said pair of first channel means, and said pair of first channel means movably receiving said follower means.

5,009,288
SHEAVE ARRAY ARRANGEMENT FOR ELEVATOR
Kelichiro Nakai, Tokyo, and Yoshinori Nakanishi, Shibayama, both of Japan, assignors to Otis Elevator Company, Farmington, Conn.
Filed Nov. 14, 1989, Ser. No. 436,269
Claims priority, application Japan, Dec. 9, 1988, 63-311541
Int. Cl.[5] B66B *11/04*
U.S. Cl. 187—20 3 Claims



1. A sheave array for use in an elevator system for guiding counterweight and car ropes, said array comprising: a first sheave pair having parallel axes of rotation, one sheave of said first sheave pair guiding ropes attached to a first side portion of the counterweight, and the other sheave of said first sheave pair guiding ropes attached to said car in the vicinity of a vertical line passing through the center of gravity of the car; and a second sheave pair having parallel axes of rotation, the axes of rotation of said second sheave pair being skew to the axes of rotation of said first sheave pair, one sheave of said second sheave pair guiding ropes attached to a side portion of the counterweight opposite said first side portion, and the other sheave of said second sheave pair guiding ropes attached to the car in the vicinity of said vertical line.

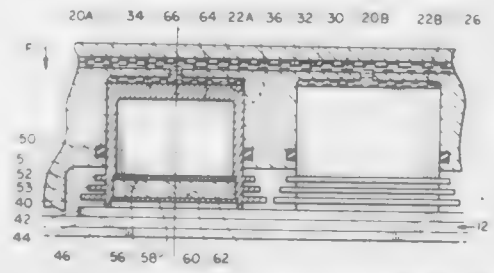
BLOWOUT PREVENTER STRING SUPPORT
James G. Nance, Spring, Tex., assignor to Cooper Industries, Inc., Houston, Tex.
Filed Mar. 23, 1987, Ser. No. 28,743
Int. Cl.[5] E21B *33/06*
U.S. Cl. 188—67 12 Claims



1. An apparatus for supporting a tubular string within a well bore, comprising
a body having means for connecting to a wellhead structure, a central bore therethrough an opposed, aligned guideways extending outward from the central bore,
a ram positioned in each of said guideways,
fluid pressure responsive means for moving each of said rams axially in their respective guideways,
each of said rams including
a ram body with a packer slot substantially of C-shape extending horizontally in a concave pattern across the face of the ram body, said packer slot being defined by both an upper and a lower outwardly extending horizontally positioned flange-like portion of said ram body, and
a pipe gripping assembly including
a bowl body shaped to be received in said packer slot with the interior of said bowl body facing said central bore and having an arcuate surface which tapers downwardly and inwardly,
fastening means for fixedly securing said bowl body within said packer slot,
a plurality of gripping members with each of said gripping members having a [illegible] surface tapered to mate with said arcuate tapered surface of said bowl body, and
means for slidably mounting said gripping members within said bowl body for movement along said tapered bowl surface in a vertical direction,
each of said gripping members having a plurality of gripping teeth on the face thereof.

5,009,290
MULTI-DISK BRAKE FOR AUTOMATIC TRANSMISSION
Kyouji Harada; Eiji Kato; Yoshikazu Sakaguchi; Kazuaki Watanabe, and Akira Hoshino, all of Aichi, Japan, assignors to Aisin-AW Kabushiki Kaisha and Toyota Jidosha Kabushiki Kaisha, both of, Japan
Filed Aug. 4, 1989, Ser. No. 389,590
Claims priority, application Japan, Aug. 6, 1988, 63-195307
Int. Cl.[4] F16H *5/00*
U.S. Cl. 188—71.5 19 Claims

1. A multi-disc brake for an automatic transmission, comprising:
(a) a cylindrical case having a splined inner peripheral surface and a central axis,
(b) a plurality of annular outer lamellae having a first diameter and concentrically arranged along the axis of said cylindrical case and splined to said inner peripheral surface with an annular gap therebetween;
(c) a plurality of annular inner lamellae having a second diameter smaller than said first diameter and concentrically arranged along the axis of said cylindrical case, said outer and inner lamellae being alternatively interleaved;
(d) an engagement/disengagement mechanism capable of pressing said outer and inner lamellae together into frictional engagement and capable of disengaging and releasing said outer and inner lamellae from each other; and
(e) spring means, inserted into the lowermost portion of said annular gap beneath said outer lamellae, for applying a spring loading on said outer lamellae to bias said outer lamellae upward in said case

BRAKE PISTON ASSEMBLY
Thomas P. Castellano, Malibu, Calif., assignor to Industrial Material Technology, Inc., Andover, Mass.
Filed Jun. 14, 1988, Ser. No. 206,600
Int. Cl.[4] F16D *65/84*
U.S. Cl. 188—71.6 7 Claims

1. An actuator apparatus for use in a brake system having a first disc element which is to be pressed against another disc element, comprising
walls forming a cylinder;
a piston slideably mounted in said cylinder to move in a predetermined forward direction toward said disc element and in an opposite rearward direction;
means for applying pressured hydraulic fluid to said cylinder to push said piston in said forward direction;
a seal between said piston and cylinder for preventing the leakage of said hydraulic fluid;
said piston having a rear wall against which said hydraulic fluid presses, a substantially cylindrical side wall which seals against said seal, and a forward end that presses toward said disc element;
said piston also having first and second forward internal walls forming a sealed chamber between them within said cylindrical side wall at a location forward of said seal, and a quantity of a coolant material which is generally a liquid under temperatures reached in braking, lying in said chamber wherein said coolant material has a specific heat at least half that of sodium

5,009,292
MECHANISM AND METHOD OF POSITIVE ARCUATE ORIENTATION OF A FIRST MEMBER AND A SECOND MEMBER, PARTICULARLY FOR BRAKE ADJUSTED ORIENTATION OF A DRIVE MEMBER AND A DRIVEN MEMBER IN A DISC BRAKE ASSEMBLY HAVING PARKING BRAKE MECHANISM
Charles T. Hoffman, Jr., Springboro; Ralph A. Gordon, Centerville, both of Ohio; Thomas P. Houmer, Concord, and Robert M. Lucas, Melrose, both of Mass., assignors to General Motors Corporation, Detroit, Mich.
Filed May 19, 1989, Ser. No. 355,012
Int. Cl.[4] F16D *65/38*
U.S. Cl. 188—71.7 2 Claims

1 In a disc brake assembly having a caliper housing with a parking brake lever stop defining a released position for a parking brake lever, a piston, and a parking brake actuator including a parking brake lever adapted to have parking brake cable means connected therewith for moving the parking brake actuator to move the piston mechanically to actuate the disc brake assembly as a parking brake:
mechanism for establishing a positive disc brake piston position with the parking brake lever positioned at its housing stop during the parking brake release mode and the piston is a desired axially proper adjusted position, said mechanism comprising:
a threaded shaft axially fixed with respect to said caliper housing forming a part of the piston brake actuator, said shaft being mounted for driving rotational movement in the caliper housing and having one end positioned within the caliper housing and threaded and receiving cooperating driven threaded means thereon to act on the piston to mechanically apply the brake assembly in the parking brake mode and to be positioned in the brake release mode to provide an axially adjusted position of said driven threaded means and therefore of the piston, said shaft having on its other end outward of the caliper housing a multi-equal sided non-circular cross section first portion having at least six sides, and said shaft having a second portion, and a threaded end in axial series alignment;
and a parking brake actuating lever assembly forming another part of the parking brake actuator including a first lever portion defined by an intermediate lever assembly portion and a second lever portion defined by the parking brake lever;

said first lever portion having a multi-equal sided non-circular cross section opening receiving said shaft first portion therethrough in any one of a plurality of arcuate positions relative to and in arcuately rotatable driving relation with said shaft and said first lever having at least three equally spaced holes radially aligned relative to said threaded shaft;

said second lever portion being spring biased to a released position and said second lever having an opening receiving said shaft second portion with said second lever portion upon such receipt being in translationally fixed but arcuately relatively movable relation to said shaft, and said second lever having at least three sets of equally spaced holes on concentric arcs for registration with said first lever holes, none of said holes on said second lever being radially aligned relative to said threaded shaft,

connector means joining said first and second lever portions in any one of a series of arcuately relative substantially equi-spaced positions by registration through aligned holes in said first and second levers and thereby establishing a selected fixed arcuate position of said second lever portion in relation to said shaft and a rotatably fixed driving relation between said second lever portion and said shaft through which said shaft may be operatively arcuately rotated by arcuate rotational movement of said second lever portion, the arcuate range of arcuately relative positions available between said shaft and said second lever portion being sufficient to incrementally orient said second lever portion arcuately on said shaft with the brake in the fully adjusted and released position and with said second lever portion engaging the second lever portion stop on said caliper housing and therefore placing said parking brake actuator and actuating lever in the properly adjusted position with said piston in its desired axially proper adjusted position.

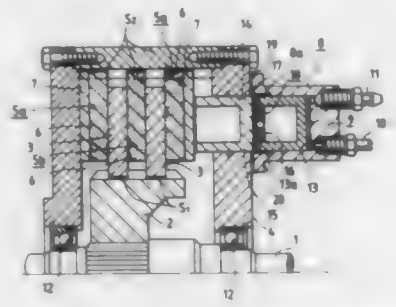
DISC BRAKE APPARATUS



Nobuyuki Takahashi, Saitama, Japan, assignor to Akebono Brake Industry Co., Ltd., Tokyo and Akebono Research and Development Centre Ltd., Hanyu, both of, Japan

Filed Dec. 12, 1989, Ser. No. 448,847

Claims priority, application Japan, Dec. 21, 1988, 63-164472

Int. Cl.[5] F16D *55/18*

U.S. Cl. 188—72.4 **5 Claims**

1. A disc brake apparatus for a vehicle having a vehicle wheel, the apparatus comprising:

at least one rotor rotating with the vehicle wheel;

a housing provided on an unrotatable portion of the vehicle;

at least two pads supported by said housing, said pads being located at both sides of said rotor;

a cylinder comprising a flange having a plurality of apertures, and cylinder secured to said housing by a plurality of threaded fasteners passing through said apertures to engage said flange;

a piston means engaging said cylinder for urging said pads against said rotor, said piston means comprising a main part fitted sealably in said cylinder and a sub-part slidably mounted in a circular aperture in the housing, said sub-part being provided between said main part and said pads, and a first heat-resistant member provided between said main part and said sub-part to prevent the transfer of heat from the sub-part to the main part, said main part, said first part and said sub-part to prevent the transfer of heat from the sub-part to the main part, said main part, said first heat-resistant member and said sub-part being arranged in series, said first heat resistant member completely separating said sub-part from said main part; and

a second heat-resistant member provided between said cylinder and flange and said housing to prevent the transfer of heat from the housing to the cylinder.

VEHICLE TRACTION CONTROL SYSTEM

Youssef A. Ghoneim, Mt. Clemens, Mich., assignor to General Motors Corporation, Detroit, Mich.

Filed Jan. 19, 1990, Ser. No. 467,436

Int. Cl.[5] B60K *41/20*

U.S. Cl. 192—1.22 **4 Claims**

1. A traction control method for a vehicle having an engine for applying a driving torque to a driven wheel and having a brake for braking the driven wheel, the method comprising the steps of:

determining a wheel slip condition of the driven wheel;

controlling the driving torque applied to the driven wheel by the engine, when the determined wheel slip condition represents an excessive acceleration wheel slip condition, in direction to limit wheel slip to a desired slip value λ^*;

determining a condition where using only the step of controlling the driving torque would be incapable of preventing a trajectory of wheel slip from exceeding a predetermined maximum allowable slip value λ_x; and

controlling the brake for braking the driven wheel when it is determined that the step of controlling the driving torque would be incapable of preventing the trajectory of wheel slip from exceeding the predetermined maximum value λ_x.

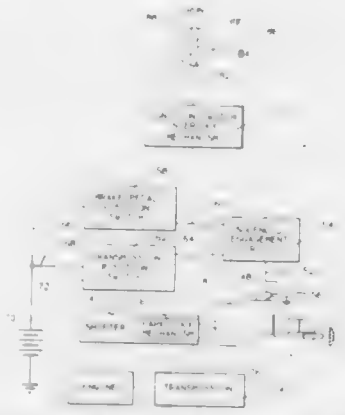
TRANSMISSION SHIFTER TO OPERATOR CONTROLLED MECHANISM INTERLOCK

Charles E. Kinkade, Dryden; Harold L. Sharp, Union Lake, and Robert F. Vrbensky, Utica, all of Mich., assignors to General Motors Corporation, Detroit, Mich.

Filed Dec. 8, 1989, Ser. No. 447,778



Int. Cl.[5] B60K *41/26*

U.S. Cl. 192—4 A **1 Claim**

1. A shift control in an automatic transmission on a vehicle having at least one operator controlled mechanism to be manipulated prior to the transmission being shifted from a Park range comprising:

position selector means movable to control setting of said transmission and having Park/Lock means for mechanically blocking the movement of said position selector means from said Park range until said Park/Lock means is released including

selectively energizable electromagnetic solenoid means for holding stationary said Park/Lock means and said position selector means when said transmission is in said Park range prior to manipulation of said operator controlled mechanism; and

said solenoid means providing travel stop means for said Park/Lock means when said position selector means is placed in said Park range and having an armature and a pole piece which are separated sufficiently to reduce the magnetic attraction therebetween to an ineffective level when the position selector means is moved from the Park range and the operator controlled mechanism is in the unmanipulated condition.

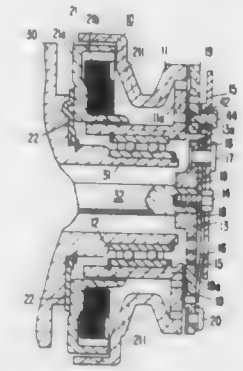
ELECTROMAGNETIC CLUTCH HAVING A STRUCTURE FOR REDUCING IMPACT NOISE



Hideyuki Gonda, Isesaki, Japan, assignor to Sanden Corporation, Isesaki, Japan

Filed Mar. 15, 1989, Ser. No. 323,961

Claims priority, application Japan, Mar. 15, 1988, 63-33099[U]

Int. Cl.[5] F16D *27/112, 27/14*

U.S. Cl. 192—84 C **18 Claims**

10 An electromagnetic clutch comprising:

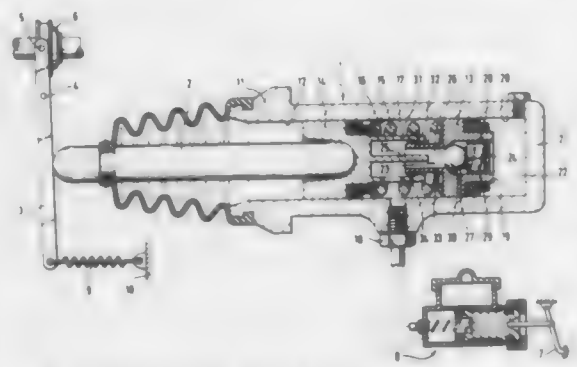
a first rotatable member rotatably supported on a first bearing and having an axial magnetic end plate;

a second rotatable member which is rotatably supported;

an annular magnetic member connected to said second rotatable member through a plurality of leaf springs so as to be capable of axial movement, said annular magnetic member facing said axial magnetic end plate of said first rotatable member with an axial gap therebetween;

a third rotatable member connected to said second rotatable member to limit the axial movement of said annular magnetic member;

electromagnetic means associated with said first rotatable member for attracting said annular magnetic member to said axial magnetic end plate, said leaf springs being arranged to absorb rotational force when said second rotatable member is rotated with said first rotatable member;



coupling means for coupling said annular magnetic member to said third rotatable member; and

elastic means sandwiched between said coupling means and an outer end surface of said third rotatable member for reducing vibration and impact noise when said annular magnetic member is attracted to said axial magnetic end plate, said elastic means receiving substantially compression forces when said annular magnetic member is attracted to said axial magnetic end plate.

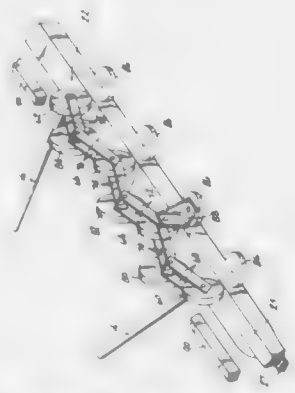
ANTI-ROTATION DEVICE FOR THE RELEASE BEARING OF A MANUALLY OPERATED CLUTCH
Kenneth L. Romig, Rochester, Mich., assignor to General Motors Corporation, Detroit, Mich.
Filed Mar. 21, 1990, Ser. No. 496,721
Int. Cl.[5] F16D *23/14*
U.S. Cl. 192—98 4 Claims

1. A device adapted to establish a cooperative interface between at least one finger of a clutch throw fork and the mounting portion of a release bearing in a clutch assembly, one or more of the devices being mounted at selected locations along the circumference of a flange means extending radially outwardly from the mounting portion of the clutch release bearing, said device comprising: a substantially planar body portion having lateral edges with a transverse edge extending therebetween; first and second side flanges extending substantially perpendicularly outwardly from the lateral edges of said body portion to define a reaction cavity therebetween; at least one finger of a throw fork being cooperatively received within said reaction cavity; fastening clip means secured to at least one of said side flanges to embrace the flange means extending outwardly from the mounting portion of the clutch release bearing; and, a blocking paddle portion extending outwardly from, and in coplanar relation with, said body portion to engage the finger means on the throw fork and thereby serve to preclude rotation of the mounting portion on the release bearing even when the throw fork has been displaced from within said reaction cavity.



5,009,301
CLUTCH DAMPER ASSEMBLY
Wayne L. Spitler, Ludlow Falls, Ohio, assignor to General Motors Corporation, Detroit, Mich.
Filed Jun. 1, 1990, Ser. No. 531,612
Int. Cl.[5] F16D *3/14*
U.S. Cl. 192—106.2 2 Claims

1. A clutch and damper comprising: a clutch input member having spring seating means and an input stop member; an intermediate member having spaced first and second spring seating means and first and second stop surfaces with one of said stop surfaces being radially and axially aligned with said input stop member; a clutch output member having spring seating means and an output stop member radially and axially aligned with the other of said first and second stop surfaces; first spring means disposed between said clutch input member spring seating means and the first spring seating means for permitting relative angular movement between said clutch input member and said intermediate member; and second spring means disposed between said clutch output member spring seating means and the second spring seating means for permitting relative angular movement between said intermediate member and said clutch output member, said input stop member and said one stop surface cooperating to limit the relative angular movement between said clutch input member and said intermediate member and said output stop member and said other stop member cooperating to limit the relative angular movement between said intermediate member and said clutch output member.

5,009,302
CURVED ESCALATOR WITH FIXED CENTER CONSTANT RADIUS PATH OF TRAVEL
Frank M. Sansevero, West Hartford, Conn., assignor to Otis Elevator Company, Farmington, Conn.
Division of Ser. No. 328,926, Mar. 27, 1989, Pat. No. 4,930,622.
This application Mar. 9, 1990, Ser. No. 490,885
Int. Cl.[5] B66B *21/02*
U.S. Cl. 198—328 6 Claims

1. An escalator assembly having an arcuate path of travel defined by a constant radius derived from a fixed center as viewed in plan, the escalator including horizontal entry and exit landing zones, an intermediate constant slope zone, and entry and exit transition zones of continuously varying slope interconnecting the constant slope zone with the entry and exit landing zones respectively, said escalator having turnaround sprockets at each of said landing zones for reversing the direction of travel of the moving escalator components, and said escalator assembly including:

(a) track means extending between said landing zone and through said transition and constant slope zones for supporting movement of steps along the path of travel of the escalator;

(b) a plurality of steps, each having: an upper tread portion which remains substantially horizontal throughout a people transporting portion of the path of travel of the escalator; a step axle at radially inner and outer sides of each step; radially inner and outer step axle rollers rotatably mounted on said step axles, said step axle rollers being operable to travel over radially inner and outer portions of said track means;

(c) a radially outer step chain forming a continuous connection between said stub axles whereby all of said steps are connected together at their radially outer sides throughout the entire path of travel of the escalator;

(d) means for continuously changing the effective length of said outer step chain, without changing the actual length of said outer step chain as the steps move through each of said transition zones by shortening the effective length of said outer step chain by forming kinks therein in said entry transition zone, and means for straightening the kinks in said exit transition zone whereby the effective length of said outer step chain separates the step axles of adjacent steps at a first predetermined greater distance in both of said landing zones, and separates the step axles of adjacent steps a second predetermined shorter distance, in said constant slope zone, so as to move the outer ends of the step axles of adjacent steps toward and away from each other in said transition zones while concurrently pivoting each step about a point corresponding substantially to its radially inner leading corner as the steps move through the transition zones, whereby the steps are continuously guided and properly positioned along said arcuate path of travel; and

(e) said outer step chain having an effective length which equals its actual length when engaging said turn around sprockets.

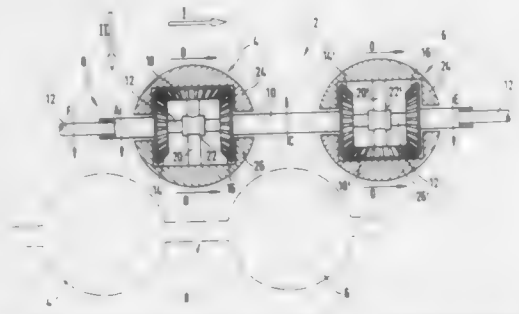
MULTI-DIRECTIONAL DRIVE FOR ROLLER CONVEYORS OR SIMILAR
Ekkehard Schmalzl, Am Schlierbach 5, D-7860 Schoptheim, Fed. Rep. of Germany
Filed Mar. 13, 1990, Ser. No. 492,678
Claims priority, application Fed. Rep. of Germany, Mar. 17, 1989, 3908856
Int. Cl.[4] B65G *37/00*
U.S. Cl. 198—372 3 Claims

1. Multi-directional drive for roller conveyors comprising a plurality of rolling elements **4, 6** which are consecutively mounted on at least one powered shaft, the elements can rotate selectively in each of the longitudinal direction of the shaft or perpendicular thereto, characterized therein that



the shaft is formed as a hollow quill **(10)** and is intended to encompass coaxially an inner rotating shaft **(12)**;

the quill **(10)** is discontinuous in the region of the rolling elements **(4, 6)**, forming two free, opposed faces there;

gearwheels **(14, 16)** which are drivingly coupled together by means of an idle wheel **(18)** perpendicular to them, are mounted on the free faces of the quill such that they cannot rotate freely, where the rotational axis of the idle

wheel (18) intersects the longitudinal axis of the rotating shaft (12);

the rotary motion of each idle wheel (18) is transmitted to a plane of rotation which is axially symmetrical to the rotating shaft (12) relative to the plane of rotation of the idle wheel (18); and

that the rolling elements consist of two sub-elements (24, 26) which are located in both rotational planes, and the quill (10) can selectively rotate relative to the stationary rotating shaft (12).

DISPOSABLE CONTAINER FOR STORING AND DISPENSING PET FOOD

Patrick D. Finney, P.O. Box 658, Horsham, Pa. 19044

Filed Apr. 4, 1990, Ser. No. 503,907

Int. Cl.[5] B65D *69/00, 85/72*

U.S. Cl. 206—229 2 Claims

1. A disposable container for storing and dispensing pet food comprising:

(A) a monolithic circular outer shell having

(1) a base which has an outer dimension,

(2) a hollow tubular sidewall connected to said base and having an inner surface and an outer surface and a top rim spaced from said base, said top rim having an outer dimension that is greater than said base outer dimension so that said sidewall diverges from said base to form a bowl shape,

(3) said sidewall being folded over itself at said top rim and having a sidewall portion of said sidewall outer surface in contact with said sidewall inner surface, said sidewall portion extending from said top rim toward said base and having a terminal end located inside said outer shell, and

(4) said sidewall having an end edge at said terminal end which extends from said outer surface to said inner surface and slopes downwardly from said outer surface toward said base, said terminal end extending completely around said sidewall and defining a ledge, said ledge being triangular in shape with said terminal edge defining a hypotenuse, said ledge having a thickness as measured along the height dimension of said triangular shape;

(B) adhesive material on said base, said adhesive material having a thickness measured from said base and an outer dimension that is slightly smaller than said base outer dimension, said adhesive material releasably affixing said base to a support upon contact with such support;

(C) a protective covering having an inner surface releasably

attached to said adhesive material and covering said adhesive material, said protective covering having an outer surface and a thickness measured between said protective covering inner surface and said protective covering outer surface, and an outer dimension that exceeds the outer dimension of said adhesive material and is smaller than the outer dimension of said base, said protective covering further including a pull tab mounted on said protective covering outer surface;

(D) a sealing cover releasably affixed to said outer shell top rim, said sealing cover including

(1) a top surface,

(2) a bottom surface,

(3) said sealing cover having an outer dimension which exceeds the outer dimension of said outer shell adjacent to said top rim,

(4) adhesive means releasably affixing said sealing cover to said outer shell top rim,

(5) said sealing cover forming a flexible overhang which is outwardly circumjacent to said outer shell adjacent to said top rim,

(6) a pull tab mounted on said sealing covering top surface,

(7) a food stirring element releasably mounted on said sealing cover top surface;

(E) a monolithic shell cover releasably mounted on said outer shell sidewall in covering relation thereto, said shell cover including

(1) an inner surface which is located adjacent to said outer shell inner surface when said shell cover is mounted on said shell,

(2) a base having an inner surface with an inner dimension and an outer surface,

(3) said shell cover base inner surface inner dimension being slightly smaller than the outer dimension of said outer shell adjacent to said outer shell top rim,

(4) a flexible tubular sidewall connected to said shell cover base and including

(a) a first section connected to said shell cover base,

(b) a connecting section connected to said first section and having an inner dimension that is smaller than said outer shell outer dimension adjacent to said outer shell top rim,

(c) a third section connected to said connecting section,

(d) said connecting section being located to engage said outer shell adjacent to said outer shell top rim when said shell cover is mounted on said outer shell and flexing outwardly to accommodate said outer shell, and

(e) said shell cover tubular sidewall second section curving away from said shell sidewall and having an outer rim which is spaced from said outer shell sidewall when said shell cover is mounted on said outer shell, and

(5) an annular ridge on said shell cover base outer surface, said annular ridge including

(a) a planar top surface spaced from said shell cover base outer surface,

(b) a sloping wall extending from said planar top surface to said shell cover base outer surface and circumscribing an area therewithin on said shell cover base outer surface, said area having a dimension that is slightly greater than the outer dimension of said protective covering,

(c) said annular ridge having a height measured between said planar top surface and said cover base outer surface, and

(d) said annular ridge height exceeding the combined thickness of said adhesive and said protective covering; and

(F) a sealing plate which includes

(1) an upper surface having an outer dimension,

(2) a lower surface having an outer dimension, with said lower surface outer dimension exceeding said upper surface outer dimension,

(3) an edge connecting said upper surface to said lower surface, said edge being triangular in shape and being received in said outer shell ledge when said sealing plate is mounted on said outer shell,

(4) a pull ring element mounted on said sealing plate upper surface,

(5) said sealing plate lower surface outer dimension being less than the dimension of said outer shell adjacent to said ledge, and

(6) said sealing plate having a thickness measured between said sealing plate upper surface and said sealing plate lower surface, with said sealing plate thickness being equal to said ledge thickness.

REMOVABLE RIGID SUPPORT STRUCTURE FOR CIRCUIT CARDS

Robert J. Schenk, 28 Valley View Ter., Wayne, N.J. 07470

Filed Jun. 11, 1990, Ser. No. 536,324

Int. Cl.[5] B65D *81/06*

U.S. Cl. 206—332 **5 Claims**

1. A method for adding structural rigidity during usage to a circuit card, comprising the steps of:

providing a walled housing in which said circuit card is to be mounted;

providing a sealable compliant bag;

filling said bag with resin and catalyst which when mixed together form a foam which expands and becomes rigid upon curing;

sealing said bag;

fixedly mounting said circuit card to said housing;

mixing said resin and catalyst in said bag;

placing said bag in said housing between a side of said circuit card and a wall of said housing; and

allowing the mixed resin and catalyst in said bag to cure.

4. An arrangement for rigidly supporting a circuit card within a housing during usage comprising

means for fixedly mounting said circuit card to said housing;

a sealed compliant bag; and

a quantity of resin and catalyst within said bag, said resin and catalyst being of the types that when mixed together form a foam which expands and becomes rigid upon curing;

wherein said bag is supported within said housing between a side of said circuit card and a wall of said housing, the placement of said bag within said housing being effected after the resin and catalyst are mixed but before the resulting foam is cured.

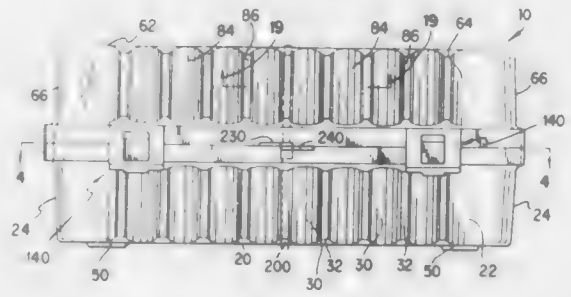
CONTAINER AND IMPROVED METHOD FOR CARRYING AND TRANSPORTING COMPUTER TAPE CARTRIDGES



David G. Leben, 105 S. Broadway, Suite 640, Wichita, Kans. 67202

Continuation-in-part of Ser. No. 392,210, Aug. 10, 1989, which is a division of Ser. No. 287,739, Dec. 21, 1988, Pat. No. 4,874,088. This application Oct. 10, 1989, Ser. No. 419,397

The portion of the term of this patent subsequent to Oct. 17, 2006, has been disclaimed.

Int. Cl.[5] B65D *25/18, 85/67*

U.S. Cl. 206—387 **16 Claims**

1. A container for carrying and transporting computer tape cartridges comprising

a container base having a base bottom, a pair of base hollow upright side walls integrally secured to said base bottom, and a pair of base end walls integrally secured to said base bottom and to said base side walls, each of said base hollow upright side walls having a base outside wall and a base inside wall with said base outside wall having a structure defining a plurality of hollow dome-shaped protrusions spaced by an abridging outside wall member and with said base inside wall having a structure defining a plurality of hollow dome-shaped ribs spaced by an abridging inside wall member, and said base bottom having a base outside wall and a base inside wall having a structure defining a plurality of hollow dome-shaped ridges spaced by an abridging base inside wall member, said dome-shaped ribs integrally connected to said dome-shaped ridges; and

a container lid pivotally secured to said container base.

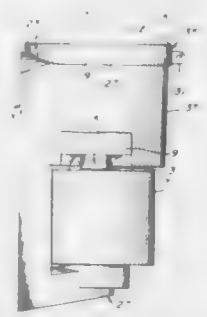
BATHROOM TISSUE DISPENSER (SPINDLE RELEASE)



Michel Morand, Montreal, Canada, assignor to Wyant & Company Limited, Lachine, Canada

Filed Feb. 15, 1990, Ser. No. 480,590

Claims priority, application United Kingdom, Aug. 16, 1989, 8918667

Int. Cl.[5] B65D *85/62*

U.S. Cl. 206—391 **11 Claims**

1. A two-roll toilet paper dispenser having a base with a bottom support arm and an upper enclosure; a spindle extending up from the bottom support arm into the enclosure; movable stop means provided on the spindle and positioned thereon to have space for a first toilet paper roll, consisting of a coil of paper wrapped on a core, rotatably mounted on the spindle and resting on the support arm beneath the stop means in a lower operative position, the stop means also positioned on the spindle to provide space for a second toilet paper roll, consisting of a coil of paper wrapped on a core, rotatably mounted on the spindle and resting on the stop means substantially enclosed by the enclosure in an upper storage position, and actuating means on the dispenser to move the stop means to permit the second roll to drop on the spindle from the storage position to the operating position when the paper coil of the first roll has been used up and its core removed

BOTTLE CARRIER ASSEMBLY

Raymond C. Arthurs, Scarborough, Canada, assignor to Saepter Manufacturing Company Limited, Don Mills, Canada

Filed Jun. 30, 1989, Ser. No. 374,648

Int. Cl.[5] B65D *21/02, 1/24, 85/00*

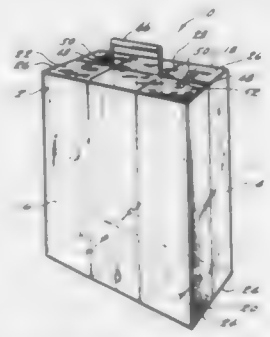
U.S. Cl. 206—427 **7 Claims**

1. An assembly of adjacent bottle carriers, each formed of resilient plastic material and each of generally rectangular plan having a base, side walls, end walls and upstanding internal walls forming a plurality of bottle accommodating cells, and each carrier having a socket through the base extending upwardly between cells, and a tongue extending downwardly within the socket between the bottle carrying cells; and an assembly plate extending under said carriers and having upstanding prongs, a prong fitting into a corresponding socket of each carrier adjacent the tongue whereby, on peripheral pressure on the assembly the prong bears against the tongue to hold the plate against falling.

5,009,315

CONTAINER CARRIER

Douglas F. F. Robare, P.O. Box 172, Middlefield, Mass. 01243



Filed Jun. 29, 1990, Ser. No. 545,820

Int. Cl.[5] B65D *33/02, 30/22, 5/46*

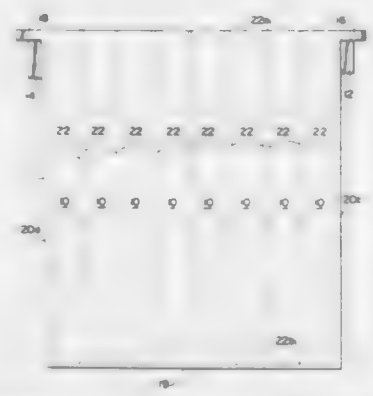
U.S. Cl. 206—427 **5 Claims**

1. A container carrier for storing and transporting beverage cans and the like, said container comprising a box having a front wall, a back wall, two end walls, an openable bottom, an openable top, latch means associated with said top and with said bottom for holding said top and said bottom in a closed position, an insert disposed within said container for dividing the volume thereof into substantially equal portions and a handle for carrying said container disposed on said insert and extending from within said container to a point outside of said container, said openable top and openable bottom comprising a pair of flaps, one of said pair of flaps being hingedly connected

to said front wall and the other of said pair of flaps being hingedly connected to said back wall, said box being made of

a flexible, clear plastic material, said insert being made of a rigid plastic material.

5,009,316



TEST TUBE CASSETTE SYSTEM AND CASSETTES FOR USE THEREIN

David C. Klein, 20 Redding Ridge Dr., Gaithersburg, Md. 20878

Division of Ser. No. 174,855, Mar. 29, 1988. This application May 12, 1989, Ser. No. 350,843

Int. Cl.[5] B65D *85/20*

U.S. Cl. 206—443 **16 Claims**

1. An asymmetrical test tube cassette for use in a cassette system, the cassette comprising:

a pair of spaced parallel exterior side walls having straight top, bottom and side edges;

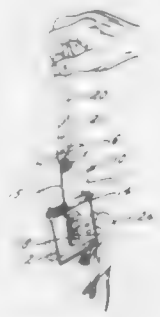
a pair of parallel exterior end walls having straight top, bottom and end edges, the end walls being integrally connected to the side walls along the respective side edges of the end walls and side walls;

a planar exterior bottom wall extending between the bottom edges of the side walls and end walls, the side walls, end walls and bottom walls together defining a fluid-tight cassette chamber with an opening defined by the straight top edges of the side walls and end walls;

a plurality of dividing walls, the dividing walls being integrally formed with the side walls and bottom walls and extending within the chamber between the side walls so as to divide the chamber into a plurality of fluid-tight test tubes, each test tube defined by two planar end walls and two planar side walls, each test tube side wall being a portion of the cassette side wall and each test tube having a substantially rectangular cross-section; and

a planar rear extension extending from one end of the cassette and a planar front extension extending from the other end of the cassette, the front and rear extensions having different shapes such that the cassette is asymmetric so as to aid in proper placement of the cassette in the cassette system.

5,009,317



ANIMAL TRAP WITH SANITARY HANDLING MEANS

William J. Kist, 337 Roberts Rd., Barrington, Ill. 60010

Filed Sep. 19, 1990, Ser. No. 585,250

Int. Cl.[5] B65D *73/00*

U.S. Cl. 206—466 **12 Claims**

1. An animal trap comprising

a base,

a "U"-shaped bail,

means mounting said bail on said base for pivotable movement between a latched position and a sprung position,

means biasing said bail toward said sprung position,

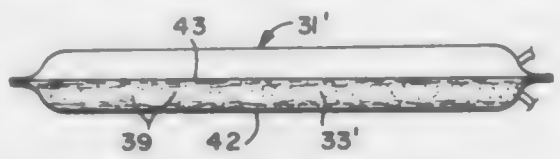
a trigger,

latch mounted on said base for releasable engagement with said trigger for maintaining said bail in said latched position, and

a flexible handle normally extending in upright relation to said base so as not to impede access to said trigger by a mouse nor movement of said bail from said latched to said sprung positions, said handle being bendable so as to permit handling and transport of said trap by grasping an upper end of said handle with said base and a mouse trapped thereon suspended in depending relation from a lower end of said handle.

5,009,318

METHOD, DEVICE AND PADDED PRODUCT FOR MAINTAINING AN OBJECT



Dominique Lepinoy, Dijon, France, assignor to Lepinoy Industrie, Dijon, France

Continuation of Ser. No. 139,254, filed as PCT FR87/00115 on Apr. 8, 1987, published as WO87/06209 on Oct. 22, 1987, abandoned. This application Mar. 9, 1990, Ser. No. 492,251

Claims priority, application France, Apr. 9, 1986, 86 05317; Aug. 26, 1986, 86 12091

Int. Cl.[5] B65D *81/20*

U.S. Cl. 206—524.8 **11 Claims**

1. A device for cushioning an object comprising:

(a) a quantity of granular material;

(b) a retaining element defining a plurality of closed chambers, each closed chamber enclosing a portion of the granular material such that the entire quantity of granular material is enclosed by the retaining element the retaining element made of material that is permeable to gas and impermeable to the granular material;

(c) a sealed housing defining an enclosed inner volume and enclosing the retaining element within the enclosed inner volume, the sealed housing being made of a supple material impermeable to gas; and

(d) means to depressurize the enclosed inner volume of the sealed housing, the retaining element preventing any excessive accumulation of the granular material in a particular part of the enclosed inner volume before depressurization.

PACKAGING CARTON

William I. Kramer, 103 Briarcliff Dr., Ossining, N.Y. 10562

Filed Oct. 31, 1990, Ser. No. 607,242

Int. Cl.[4] B65D *5/54*

U.S. Cl. 206—607 **20 Claims**

1 A carton for containing food suitable for microwaving, comprising:

a pair of spaced end walls coupled with a base;

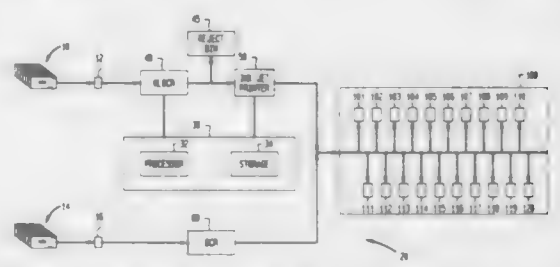
a top closure wall including coupled thereto a side wall for each said end wall of said pair of end walls adapted to fit over said pair of end walls;

perforation means on each of said side walls for dividing said side walls into first and second portions; and

sealing means for sealing said side walls to said end walls and leaving said second portions partially free of sealing engagement with said end walls;

said perforation means enabling said second portions to be separated from said first portions to form handles for supporting said carton.

5,009,321



SORTING SYSTEM FOR ORGANIZING RANDOMLY ORDERED ROUTE GROUPED MAIL IN DELIVERY ORDER SEQUENCE

Laurence J. Keough, Fairfield, Conn., assignor to Pitney Bowes Inc., Stamford, Conn.

Filed Nov. 13, 1989, Ser. No. 434,734

Int. Cl.[5] B07C *5/02*

U.S. Cl. 209—3.1 **10 Claims**

1. A system for sorting mail pieces for delivery by a mail carrier in a sequence corresponding to the mail carrier's route comprising:

a. means for storing a database containing a delivery sequence for each address on the carrier's route;

b. means for feeding the mail pieces to be delivered by the carrier;

c. means coupled to the feeding means for reading an address on each of said fed mail pieces;

d. means, operatively connected to said reading means and said storing means, for determining a sorting sequence representative of said delivery sequence for each of the mail pieces;

e. means for printing on each of the mail pieces a sequence code corresponding to said sorting sequence;

f. sort means operatively connected to said determining means for depositing the mail pieces into sorting bins inn accordance with said sorting sequence wherein number of passes through said sort means and number of sorting bins needed to complete the sorting of the mailpieces always depends on the formula $X = Y^n$, where X equals a maximum number of stops on the letter carrier's route, Y equals the number of said sorting bins in the sorting system and n equals number of passes through the sorting system to complete the sort, the formula holding true for any number of stops.

5,009,322

PROCESS AND APPARATUS FOR CHECKING/SEPARATING OUT CIGARETTES

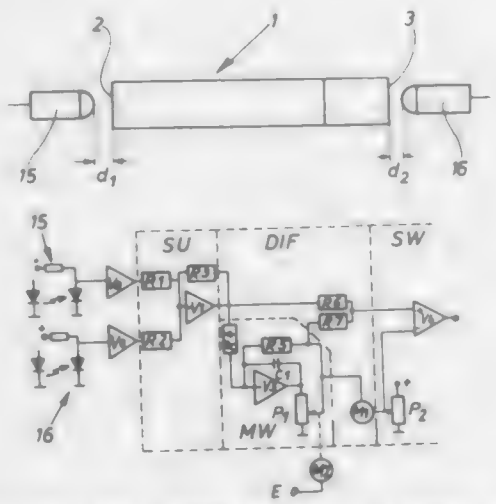
Heinz Focke, Verden, and Jürgen Süssenguth, Lilienthal, both of Fed. Rep. of Germany, assignors to Focke & Co. (GmbH & Co.), Verden, Fed. Rep. of Germany

Filed Apr. 5, 1988, Ser. No. 177,737

Int. Cl.[4] B07C *5/12*

U.S. Cl. 209—536 **6 Claims**

1. Process for checking, in a contactless manner, cigarettes filled with tobacco, comprising the steps of:



measuring two distance values between two axial end faces of an individual cigarette and two respective reference points and producing two corresponding measuring signals;

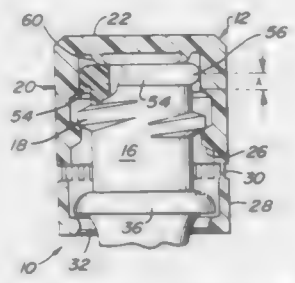
obtaining a current sum value of said two distance values;

averaging a plurality of sum values of previous measurements for obtaining a sum average value'

obtaining a difference value between said sum average value and said current sum value;

determining a threshold value in accordance with the color of said tobacco;

comparing said difference value with the threshold value, and



generating an error signal for use in separating said individual cigarette from said cigarettes when said difference value is above the threshold value.

5,009,323

TAMPER INDICATING CLOSURE HAVING A ROTARY SEAL

Gary V. Montgomery, and Terry E. Beck, both of Evansville, Ind., assignors to Sunbeam Plastics Corporation, Evansville, Ind.

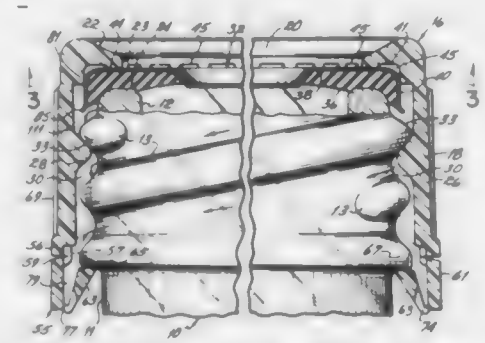
Filed Nov. 13, 1989, Ser. No. 435,261
Int. Cl.[5] B65D *41/34*
U.S. Cl. 215—252 **10 Claims**

1. A threaded tamper indicating closure for use on a container having a threaded neck and stop means below its threads, said closure comprising:

a cap having a top and an annular skirt depending from said top with internal threads complementary to said container threads;

a tamper indicating band spaced from the bottom of said cylindrical skirt and connected thereto by a plurality of circumferentially spaced axially extending frangible webs;

engagement means on said band which permits rotation of said band with said cap as said cap is being threaded onto said container by allowing said engagement means to pass over said container stop means to the point where said closure is fully threaded onto said container neck where said engagement means is spaced from said container stop means, said engagement means contacting said stop means as said cap is being unthreaded, and said webs are stretched to their fracture point by retention of said engagement means by said container stop means; and



a rotary sealing member on said cap in the form of a cylindrical surface on said annular cap skirt which maintains sealing contact with an outwardly extending bead on said container neck until after said cap has been unthreaded to the point where said webs fracture.

5,009,324

CLOSURE HAVING THERMALLY RESPONSIVE WATER WASHING SLOTS

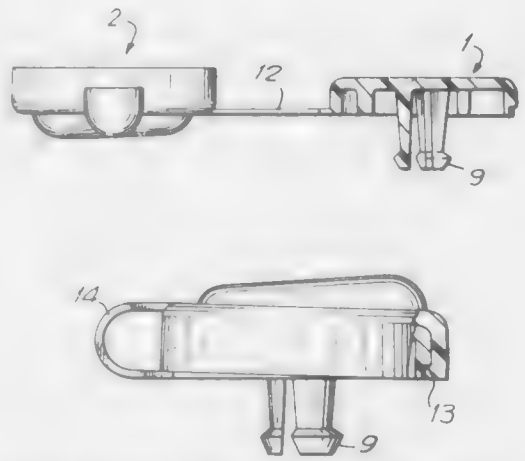
Charles S. Ochs, Lancaster, Ohio, assignor to Anchor Hocking Corporation, Lancaster, Ohio

Continuation-in-part of Ser. No. 402,211, Sep. 1, 1989. This application Jun. 8, 1990, Ser. No. 535,400
Int. Cl.[5] B65D *51/16*
U.S. Cl. 215—276 **10 Claims**

1. A closure having a top, a skirt depending from said top, cooperating securing means on an inside surface of said skirt and on a container to secure the closure on said container, passages in said closure for conducting wash water from said top downwardly to a space between the securing means of the closure and container so that said securing means can be washed while said closure is secured on a container, and

temperature responsive passage blocking means in said passages, said blocking means normally closing said passages to the ingress of foreign particles from the top of said closure toward said securing means,

said blocking means being responsive by thermal expansion to open during hot water washing, so that wash water can flow past said blocking means to wash said securing means.



5,009,325

CAP OF VENT NOZZLE

Walter K. Weber, Grand Rapids, Mich., assignor to KB Lighting, Inc., Kentwood, Mich.

Filed Feb. 9, 1990, Ser. No. 478,262
Int. Cl.[5] B65D *51/16*
U.S. Cl. 220—374 **5 Claims**

1. A cap for vent nozzles, comprising a main cap part turnably mountable on a lower nozzle member to adjust a passage through the vent nozzle, said main cap part having an inlet opening formed to communicate with an ambient atmosphere and allow air to come into the lower nozzle member and then into an interior of a device to be vented; an auxiliary cap part connected with said main cap part and provided with a passage and an outlet opening communicating with said passage, said auxiliary part being formed so that it is fittable on said main cap part so that in a fitted condition said passage communicates with said inlet opening of said main cap part and said outlet opening of said auxiliary cap apart faces toward an interior of the vent nozzle in a direction opposite to said inlet opening of said main cap part; a flexible element connecting said main cap part and said auxiliary part with one another permitting said auxiliary part to be turned and fitted on said main cap part.

5,009,326

INSULATED CONTAINER SYSTEM FOR SHIPPING PERISHABLE PRODUCTS

Thomas A. Reaves, and John S. Sherritt, both of Anchorage, Ak., assignors to Premier Industries, Inc., Tacoma, Wash.

Continuation of Ser. No. 325,677, Mar. 17, 1989, abandoned. This application Jul. 18, 1990, Ser. No. 554,183
Int. Cl.[5] B65D *77/00*
U.S. Cl. 220—441 **17 Claims**

1. An insulated container system for shipping perishable products comprising:

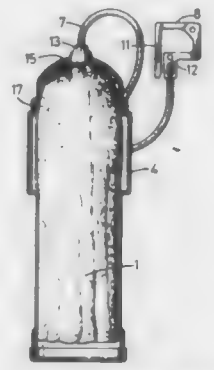
(a) an outer container having a top and a bottom, each of said top and said bottom comprising a rectangular sheet of container material, said rectangular sheets of container material folded such that said top has a substantially rectangular ceiling and said bottom has a substantially rectangular floor, such that said ceiling and said floor are encompassed by side walls and end walls and such that said top and said bottom have regions composed of a single layer of said container material, said top and said bottom having corners formed by inwardly folded sections of said rectangular sheets, said inwardly folded sections being fastened to single layered portions of said top and said bottom thereby forming multilayered regions;

(b) a one-piece insulating liner formed of an unbacked, separate single sheet of foam insulating material for covering said single layered regions of said bottom of said outer container when said one-piece insulating liner is inserted into said bottom but not said multilayered regions, said one-piece insulating liner comprising:

(i) a rectangular floor region;

(ii) two side wall regions; and,

(iii) two end wall regions, said two side wall regions and said two end wall regions being unitarily joined together with said floor region such that said two side wall regions and said two end wall regions form an integral structure with said floor region, said one-piece insulating liner including compression creases where said two side wall regions and said two end wall regions join said floor region; and,



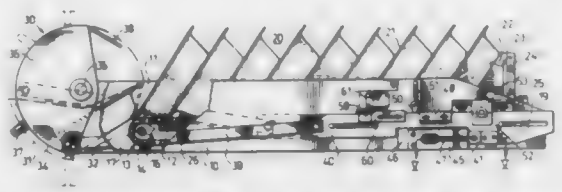
(c) an insulating lid formed of a single sheet of foam insulating material for covering said ceiling of said top of said outer container when said insulating lid is inserted into said top.

5,009,327

TOWEL OR CLOTH CONTAINER

Barrie Levison, 39 Beaumont Ave., St. Albans, Herts AL1 4TW, England

Filed May 3, 1990, Ser. No. 518,187
Claims priority, application United Kingdom, Dec. 5, 1989, 8927452
Int. Cl.[5] A45C *11/00*
U.S. Cl. 220—890 **3 Claims**



1. A container for a towel, cloth and the like, comprising a tubular enclosure having one closed end and the other end defining an access opening, an elongate flexible member which slidably extends through an aperture in the wall of the enclosure at said closed end, means for attaching the flexible member at its inner end to the towel, stop means at the outer end of the flexible member whereby the towel can be readily deployed for use from a stowed condition within the container by a distance limited by the stop means on the flexible member, the towel has a substantially circular periphery and is attached to the flexible member substantially at its center so that when retracted into the enclosure it collapses through said access opening of the enclosure into said stowed condition somewhat like the material covering of an umbrella; a tapered collar provided at the inner end of the flexible member for sealing the enclosure aperture when the towel is in said stowed condition, and a flange and cooperating washer plate provided on said collar between which surrounding material of the towel can be sandwiched for its ready attachment and release.

5,009,328

ARTICLE CASSETTE FOR A VENDING MACHINE

Curt A. Bergstén, Bärnstensgatan 14, Helsingborg, Sweden S-253 68

PCT No. PCT/SE87/00555, § 371 Date Jul. 20, 1989, § 102(e) Date Jul. 20, 1989, PCT Pub. No. WO88/04086, PCT Pub. Date Jun. 2, 1988
PCT Filed Nov. 24, 1987, Ser. No. 359,659
Claims priority, application Sweden, Nov. 24, 1986, 86 05013-5
Int. Cl.[5] B65G *59/00*
U.S. Cl. 221—152 10 Claims

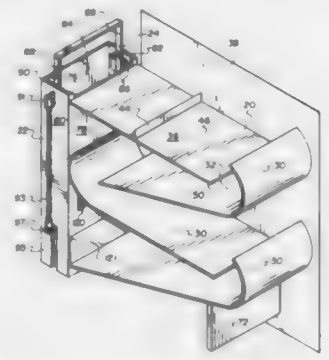
1. An article cassette for a vending machine, said cassette being of the kind comprising an elongate approximately horizontal conveyor (13) which is arranged to support a plurality of articles (21) in a row, one after the other, in a storage space (20) located behind a stationary outfeed station (32), and to feed said articles (21) step by step towards said outfeed station (32) while successively transferring the foremost article (21) in said row from the storage space (20) to the outfeed station (32) through a transfer passage between the conveyor and the outfeed station, an access opening defining a front end of the outfeed station,(31) a cover (30) for the access opening mounted for manual rotation around a transverse horizontal axis (36) and movable between, on the one hand a closed position, in which the cover closes said opening, and, on the other hand an open position, in which the cover uncovers the access opening (31) and provides access to the outfeed station (32) enabling an article located in the outfeed station to be removed through said access opening, screen means (38) being provided for keeping the storage space (20) screened off from the outfeed station (32) and preventing access to said spaced from the access opening (31) via the outfeed station (32) when said opening (31) is uncovered, characterized in that said screen means comprise a screen member (38) rigidly connected to the cover (30) and arranged to be inserted into the transfer passage when the cover (30) is rotated in a direction towards its open position and to be withdrawn from the transfer passage when the cover (30) is rotated in the opposite direction.

5,009,329

DISPENSING APPARATUS

Anselmo N. Farrentine, 1368 Pyramid Dr., Las Vegas, Nev. 89108

Filed Oct. 18, 1989, Ser. No. 423,022
Int. Cl.[5] B65G *59/00*
U.S. Cl. 221—175 16 Claims



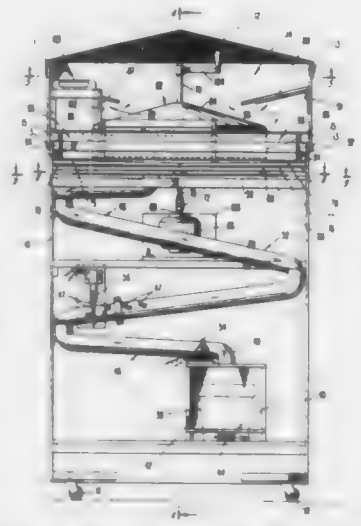
1. An apparatus adapted for dispensing articles, said apparatus comprising:

a storage means for storing articles to be dispensed, said storage means defining an inlet, an outlet and a pathway between said inlet and said outlet;

a channel means mounted on said storage means proximate said outlet and defining a vertically disposed passageway; said channel means being adapted for receiving an article exiting said outlet;

a displacement means mounted within said channel means for elevating said article upward through said passageway;

a retaining means associated with said channel means for engaging said article displaced upwardly through said passageway, said retaining means including a finger member pivotally mounted on said channel means and extending into said passageway, said finger member being adapted to preclude a downward displacement of said article through said passageway after said article has been displaced upwardly past said finger member;



wherein said retaining means is adapted to permit said displacement means to be displaced upwardly and downwardly through said passageway, past said retaining means without obstruction.

5,009,330

GOLF BALL VENDING MACHINE

Donald R. Young, and Ruth L. Young, both of 12859 Honeybrook Dr., Hudson, Fla. 34669

Filed Jan. 8, 1990, Ser. No. 462,171
Int. Cl.[5] G07F *11/00*
U.S. Cl. 221—196 46 Claims

1. A machine for vending golf balls, comprising:

a hopper for holding a large plurality of golf balls;

an escape aperture formed in a floor of said hopper;

delivery means for sequentially delivering golf balls, one at a time, to said escape aperture;

said delivery means including a rotatable mounted turntable having a plurality of ball-receiving apertures formed therein and rotating means for rotating said turntable, said turntable and said apertures formed therein being specifically positioned within said hopper so that said apertures sequentially pass over said escape aperture as said turntable rotates;

a pipe having an upper end in an open communication with said escape aperture so that a golf ball received within a turntable aperture falls under the influence of gravity into said pipe upper end when said turntable aperture passes over said escape aperture;

a bucket chamber disposed below said hopper;

said pipe having a lower end in open communication with said bucket chamber;

a first gate operative to close said pipe to travel of golf balls therethrough when said gate is closed and operative to open said pipe to travel of said golf balls therethrough when said gate is open;

said first gate positioned near a lower end of said pipe;

a second gate positioned about mid-way between the upper end of the pipe and the lower end of the pipe;

said pipe following a generally spiral downward path of travel; and

control means for selectively opening and closing said first and second gates in a predetermined sequence.

5,009,331

APPARATUS FOR SEPARATING ELONGATED CONTAMINANTS FROM A STREAM OF MATERIAL

Sanford N. Smith, Spartanburg, S.C., assignor to Phillips Petroleum Company, Bartlesville, Okla.

Division of Ser. No. 173,509, Mar. 25, 1988, Pat. No. 4,900,498.
This application Oct. 10, 1989, Ser. No. 419,299
Int. Cl.[5] B07B *13/00*
U.S. Cl. 209—615 17 Claims

1. An apparatus for separating elongated contaminants from a stream of material containing pellets and said contaminants, said apparatus comprising:

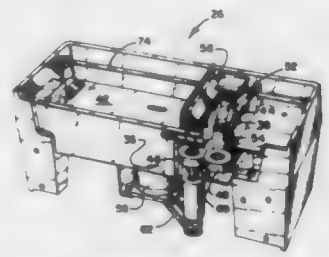
a separation means having wall means defining an entrance, an exit, and an enclosure, said enclosure located between said entrance and exit, each of said entrance and exit having centers defining an axis;

support means comprising rod means within said enclosure;

at least one outwardly extending projection affixed to said rod means to snag said contaminants as said pellets continuously flow in substantially parallel relation to said axis through said enclosure.

5,009,332

OUTPUT HOPPER APPARATUS



Benjamin H. Sannel, St. Louis Park; Steven A. Miller, Mahtomedi, and Robert A. Sells, Minneapolis, all of Minn., assignors to Datacard Corporation, Minnetonka, Minn.

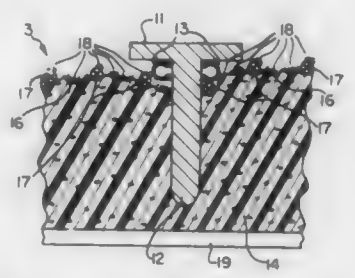
Filed Nov. 23, 1988, Ser. No. 276,236
Int. Cl.[5] B07C *9/00*; B65H *29/44*
U.S. Cl. 209—652 18 Claims

1. An output hopper apparatus for receiving cards passed through card processing stations, the card processing stations having card sensing means determining a status of each card as acceptable or rejected comprising:

(a) card deflecting means in communication with the card sensing means for deflecting the cards toward one of two or more card stacks and driving the cards onto the card stack, wherein the card deflecting means comprises a rotatable deflector arm including a roller at its tip;

(b) card feed means for advancing the cards to the card deflecting means;

(c) card retention means for preventing cards in the card stacks from obstructing a path swept by the card deflecting means, so that the cards are maintained in the card stacks in sequence; and



(d) card stack tensioning means pressing each card against adjacent cards in the card stacks.

JEWELRY HOLDER KIT

Karen Souders, 449 Colgate Ave., Elyria, Ohio 44035

Continuation-in-part of Ser. No. 255,489, Oct. 8, 1988, Pat. No. 4,907,704. This application Sep. 25, 1989, Ser. No. 411,664
Int. Cl.[5] A47F *7/00*
U.S. Cl. 211—13 20 Claims

1. A kit for making a holder for an object such as jewelry or the like which has a pin-like penetrating part and a shorter protrusion on one side, the kit comprising:

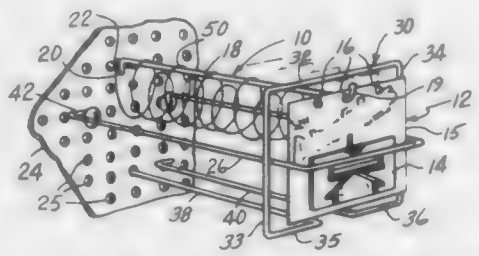
a stock pad consisting essentially of resilient foamed polymer, the pad having a self-healing working surface that exposes a multitude of open cells and has an at least partial facing of discontinuous paint on said working surface, said open cells and discontinuous paint being for the purpose of assisting to obliterate puncture marks from service, the pad having sufficient depth for gripping and retaining the penetrating part of the object to be held, the working surface being readily penetrable by the penetrating part and depressible by the shorter protrusion for the purpose of accepting said penetrating part that is to be gripped and retained by the foamed polymer; and

at least one pattern of configuration adapted to the confines of the pad for decorating and/or shaping it.

5,009,334

ANTI-PILFERAGE FIXTURE

Stanley H. Bodkins, Sharon, Mass., assignor to The Gillette Company, Boston, Mass.



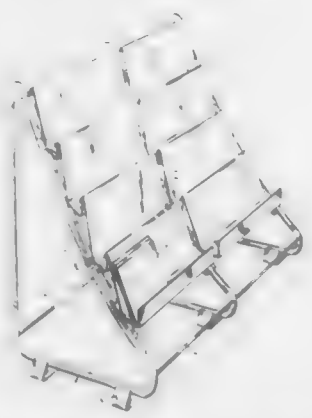
Filed Sep. 19, 1989, Ser. No. 409,252
Int. Cl.[5] A47F *7/00*
U.S. Cl. 211—54.1 11 Claims

1. An anti-pilferage fixture to be employed with at least one rod extending outwardly from a wall surface and terminating in a free end spaced from the wall surface for supporting a

plurality of items disposed in a row on the rod for movement therealong, said fixture comprising:

means disposed along the length of the rod for inhibiting lateral movement of an item supported on the rod including a pair of elongated side members, one disposed on either side of the plurality of items, each said side member extending from the wall surface and being attached thereto; and

means spaced from the rod free end for inhibiting movement of no more than a predetermined number of items out-



wardly from the rod free end including a front member disposed substantially parallel to the wall surface and connecting the outer ends of said side members, and a substantially rectangular frame attached to said side members, said front member being located a predetermined distance outwardly from the rod free end and said frame being located between the wall surface and the rod free end whereby items are removed from the rod free end within the predetermined distance between the rod free end and said front member.

5,009,335

DISPLAY DEVICE FOR FLAT ARTICLES

Robert G. C. Jonker, Toernooiveld 24, 4902 PH Oosterhout, Netherlands

Filed Nov. 1, 1989, Ser. No. 430,019
Int. Cl.[5] B42F *7/00*
U.S. Cl. 211—55 **12 Claims**

1. A device for displaying flat articles comprising:

a frame;

at least one substantially horizontal suspension member supported by the frame;

a plurality of carrier elements for holding said flat articles, each carrier element including a body portion comprising a first substantially planar surface having a front edge and a rear edge; lower engagement means comprising a second substantially planar surface extending upwardly from said front edge of said first substantially planar surface; a back portion comprising a third substantially planar surface extending upwardly from said rear edge of said first substantially planar surface, wherein said third substantially planar surface of the back portion extends further upwardly from the body portion than said second planar surface of the lower engagement means, and upper engagement means for overhanging said suspension member or the lower engagement means of another carrier element, said upper engagement means comprising a hook-like suspension strip along an upper edge of the third substantially planar surface of said back portion, wherein said hook-like suspension strip extends backwardly and downwardly from the upper edge of the third substantially planar surface, wherein the upper engagement means of a first carrier element overhangs the substantially horizontal suspension member, and the upper engagement means of a second carrier element overhangs the lower engagement means of said first carrier element, and

at least one support means for supporting said first and second carrier elements in the vicinity of the rear edge of the body portions thereof, wherein said support means has the form of a strip which is releasably connected to the frame and extends downwardly from adjacent the suspension member.

5,009,336

STRUCTURE OF A MULTIPURPOSE, HAND-HELD SWIVEL TYPE STATIONERY CASE

Peter Liaw, 25 Lane 60, Alley 164 Fu Lin Street, Taipei, Taiwan

Filed May 3, 1990, Ser. No. 518,372
Int. Cl.[5] A47F *7/00*
U.S. Cl. 211—69.1 **1 Claim**

1. A multipurpose, hand held rotary type stationery case comprising:

a disk shaped base having a ball bearing mounted in the center of the upper surface thereof;

a casing having a depression in the bottom surface, rotatably mounted on said base with the ball bearing received in the depression, a plurality of vertically disposed upwardly opening hollow cones mutually spaced around the periphery of said casing and a plurality of pockets, one disposed between each pair of cones mounted on said casing in the lower portion thereof, and said casing defining a plurality of horizontally extending grooves between each pair of cones in the upper portion thereof;

a trapezoidal pen rack comprising a recessed top flat board having a plurality of holes therein for holding pens, and a center hold with a plurality of projection strips on the bottom internal surface of said center hold, a plurality of step sideboards extending downwardly and outwardly from said recessed top flat board at all each side except one, said stepped sideboards having a purality of holes on each step, a suspension rod extending outwardly from the open side of said recessed top flat board, and a plurality of projecting portions on the inner surface of said vertical wall of said step sideboards, each projection portion extending into a groove in said casing for mounting said rack thereon; and

a handle having an expanded bottom end releasably fastened in the center hole of said rack, said expanded bottom end having a plurality of projecting strips thereon for engaging the

AUTOMOTIVE PARTS SUPPORT RACK

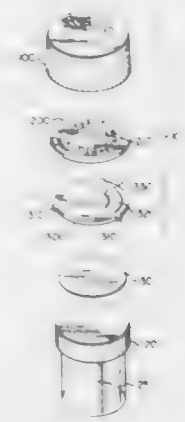
Domenico Bimbi, 2494 Highmoore Rd., Highland Park, Ill. 60035

Filed May 1, 1989, Ser. No. 345,771
Int. Cl.[5] A47F *5/00*
U.S. Cl. 211—86 **8 Claims**

1. An automotive parts support rack for holding objects such as automotive parts, the rack being temporarily located on a substantially horizontal surface of a vehicle, comprising:

a frame having a substantially rectangular configuration with four corners and having first and second longitudinally adjustable side sections connected respectively by first and second longitudinally adjustable end sections, each of said first and second side sections and said first and second end sections having a means for holding the respective side and end sections at a desired length, each of the first and second side sections and each of said first and second end sections being a substantially straight rod having a telescoping portion, said means for holding releasably engaging said telescoping portion to permit said rod to be adjustable;

at least four means for temporarily supporting the frame on the surface of the vehicle attached to an underside of said frame at least substantially in the vicinity of said four corners, that is each of said corners having attached in a vicinity thereof at least one of said means for temporarily supporting the frame on the substantially horizontal surface of the vehicle; and



means for supporting the objects having a predetermined rigid configuration, said means for supporting retained on an upper side of said frame, said means for supporting the objects being retained on the upper side of said frame by at least one upward projecting leg on the upper side of said frame which engages a corresponding opening in a bottom area of said means for supporting the objects, at least one of said first and second side sections and said first and second end sections of said rack having said upward projecting leg for engaging said corresponding opening in said bottom of said means for supporting objects, said opening being a slot oriented parallel to the end or side section having the corresponding upward projecting leg, thereby allowing the rectangular size of the frame to be changed without removing the means for supporting the objects.

INDICATOR CAP FOR A MEDICINE BOTTLE

Allan Barker, Boulder, Colo., assignor to Senetics Corporation, Boulder, Colo.

Filed Feb. 3, 1989, Ser. No. 306,485
Int. Cl.[5] B65D *51/24*
U.S. Cl. 215—230 **10 Claims**

1. An indicator cap for attachment to a sealing cap of a container, said sealing cap being a pre-existing container cap that forms a seal on said container, and for indicating the number of times said container has been opened comprising:

(a) an outer cover comprising a top piece, an indicator window located in said top piece, and a skirt attached to an outer circumference of said top piece and extending away from said top piece;

(b) a snap cover lacking means for directing securing said indicator cap to said container and having means for attaching said snap cover to an inner surface of said skirt that allows said skirt to rotate a predetermined number of degrees in each direction without causing rotation of said snap cover while rotation of said skirt beyond said predetermined number of degrees will cause said snap cover to rotate;

(c) an indicator wheel disposed between said snap cover and said top piece having indicating means on a surface facing said indicator window;

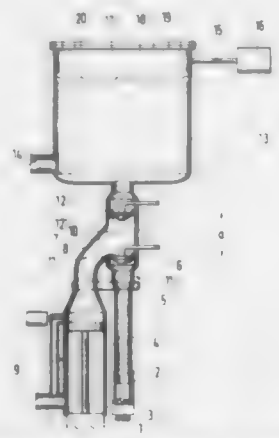
(d) rotation means connecting said indicator wheel and said outer cover for causing movement of said indicator wheel only when said outer cover is rotated in a first direction; and

(e) antirotation means connecting said snap cover and said indicator wheel for preventing movement of said indicator wheel when said snap cover is rotated in a second direction opposite said first direction;

(f) means for attaching said snap cover to said sealing cap of said container.

5,009,339

METHOD OF AND AN APPARATUS FOR VENTING A FILLING PLANT



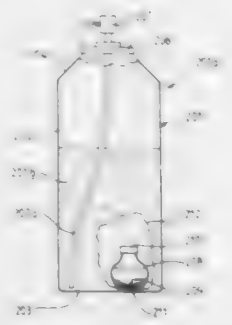
Goran Hanerus, Malmo, and Tommy Ljungstrom, Hoor, both of Sweden, assignors to Tetra Pak Holdings & Finance S.A., Switzerland

Filed Oct. 17, 1989, Ser. No. 422,683
Int. Cl.[5] B67C *3/22*; **B65B** *31/00*
U.S. Cl. 222—1 **8 Claims**

2. A method of venting a plant for filling containers by means of a dispensing pump with an apportioned quantity of liquid without the inclusion of air, the liquid being supplied via a buffer container through serially connected bottom and upper control valves to a filler pipe connected to the dispensing pump, the bottom control valve disposed at the intake of the filler pipe, the filler pipe being provided at its outlet end

with a filler nozzle, comprising the steps of (1) maintaining the bottom and upper control valves open, (2) creating a vacuum within the buffer container, (3) allow air to bubble out upwardly, (4) close the upper control valve, (5) after a delay, close the bottom control valve, (6) open the upper control valve, (7) after a delay, close the upper control valve

5. An apparatus for venting a plant for filling containers with an apportioned quantity of liquid without any air inclusion,



comprising in combination a dispensing pump, a buffer container connected to a feed line and a vacuum pump, a filler pipe adapted to have its outlet closed by a filler nozzle, a control valve housing with an upper externally and separately positively controlled control valve which connects to the buffer container and a bottom externally and separately positively controlled control valve which occludes the intake end of the filler pipe.

5,009,340

PACKAGING CONTAINER USING A SYSTEM OF FERMENTATION TO PRODUCE A PROPULSIVE GAS

Bruno Morane, Neuilly, France, assignor to L'Oreal, Paris, France

Filed Oct. 27, 1988, Ser. No. 263,358
Claims priority, application France, Oct. 30, 1987, 87 15050
Int. Cl.[5] B65D *35/22*
U.S. Cl. 222—94 **3 Claims**

1. A container for packing under pressure a liquid or pasty fluid, provided with a distribution valve, with said fluid to be distributed being placed under pressure by means of propulsive gas composed of carbon gas obtained by anaerobic fermentation of a fermentation system containing sugars, using yeasts, with a components of said fermentations system being selected qualitatively and quantitatively so that the carbon gas produced creates a pressure inside the packing container which is capable of ensuring the distribution of the fluid by said valve, wherein the fermentation system is contained in a chamber provided inside said container, said chamber comprising a small rigid reservoir which is normally closed by a valve, said valve being calibrated to open only when the pressure in said reservoir exceeds by a given value the pressure prevailing in the interior space of the container, said reservoir being ballasted so that the liquid phase of the fermentation system is located vertically beneath said valve, whatever the position of said container

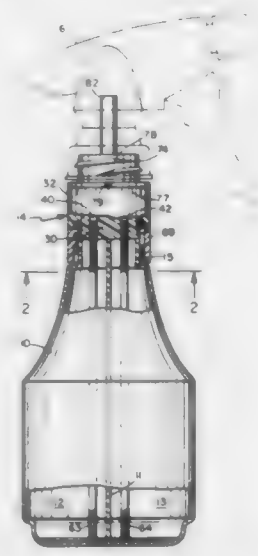
DECORATIVE CONDIMENT SHAKERS

Peter A. Broxton, Uppingham, England, assignor to Loncraine Broxton & Partners Limited, England

Filed Aug. 28, 1989, Ser. No. 398,900
Int. Cl.[5] A47G *19/24*
U.S. Cl. 222—130 **7 Claims**



1. A decorative condiment shaker, comprising
a body member including a base and a condiment container,
a removable top for sealing said condiment container;
a hollow and transparent decorative ring mounted about said condiment container and held in position by engagement with said body member and said removable top; and
means received within said decorative ring for ornamenting said decorative ring.

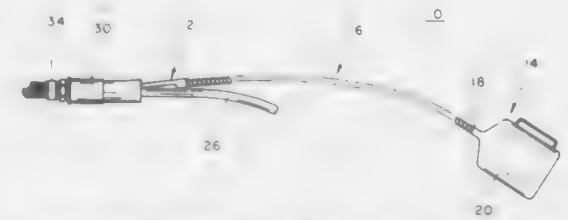
5,009,342

DUAL LIQUID SPRAYING ASSEMBLY

Ronald L. Lawrence, San Diego, Calif., and Mark R. Miller, 680 Brotherton, Escondido, Calif. 92025, assignors to Mark R. Miller and Steven J. Berling, both of Escondido, Calif.

Filed Aug. 14, 1989, Ser. No. 393,292
Int. Cl.[5] B61D *5/00*
U.S. Cl. 222—136 **19 Claims**

1. A liquid spraying assembly for selectively dispensing at least two different liquids, comprising:
an outer container containing at least two separate compartments for containing two different liquids, the container having an outlet;



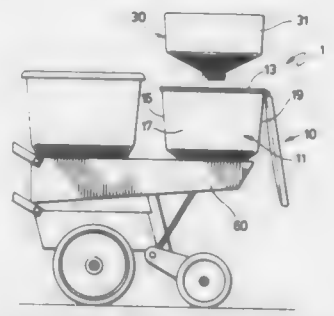
a spray pump assembly mounted on the container for dispensing liquids from the compartments; and
a valve assembly connected between the compartments and the spray pump assembly for controlling the dispensing of the two different liquids, the valve assembly comprising an inner valve member having a outlet passageway for connection to the spray pump assembly, a first inlet passageway for connection to one of the liquid compartments, and a second inlet passageway for connection to the other liquid compartment, and an outer control sleeve rotatably mounted on the inner valve member, the outer control sleeve including connecting means for controlling connection of the inlet passageways to the outlet passageway, the outer control sleeve being rotatable between at least two different connects at least one of the respective inlet passageways to the outlet passageway.

5,009,343

AUTOMOTIVE TOOL

Benjamin E. Pugatch, 68 Pond St., North Easton, Mass. 02356

Filed Feb. 12, 1990, Ser. No. 478,936
Int. Cl.[4] B67D *1/07*
U.S. Cl. 222—192 **1 Claim**



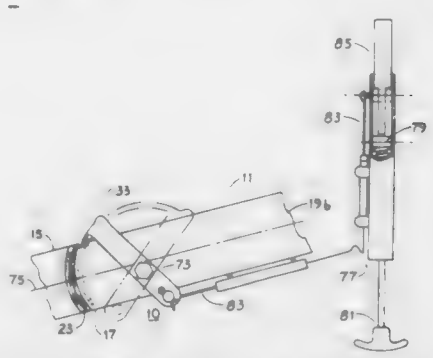
1. The combination of a tool, a spark plug wire and a spark plug, the tool comprising a head portion, a container and a flexible hose connection, the container having a nozzle and a pump to pump fluid contents therefrom, the flexible hose connection connecting the nozzle to the head portion, the head portion having a longitudinally extended, arced blade portion, the spark plug wire having a plug wire terminal positioned within a nipple, the nipple having a rear aperture, the spark plug wire passed through the rear aperture, the spark plug including a top cap, the top cap positioned within the nipple and electrically engaging the plug wire terminal whereby after positioning the blade portion at the rear aperture and within the nipple, action of the pump forces said fluid in the container through flexible hose connection onto the blade portion and onto the connection between the plug wire terminal and the top cap.

5,009,344

BULK MATERIAL HANDLING APPARATUS

Edwin L. Cooley, 201 Houser St., Monon, Ind. 47959

Filed Oct. 16, 1989, Ser. No. 422,330
Int. Cl.[5] B65D *88/54*
U.S. Cl. 222—325 **5 Claims**



1. A rigid bulk container having a shoulder and a threaded neck at the top thereof, said neck being adapted to receive a cap screwed thereon, and having a mouth at the top of the said neck and a tape seal adapted to close the said mouth and a tether attached at one end to the said seal and attached at the other end to a handle which handle is adapted to be pulled for removal of the said seal from the mouth of the said container, said container having provided in the bottom thereof a handle adapted for grasping by a person and said container having sides that are tapered towards the top and a threaded cap adapted to be screwed onto the neck of the said container and adapted to seal the said container, wherein the said cap is provided with a storage compartment adapted for storage of the said tether and tether handle and an external handle adapted for carrying the container.

5,009,345

CHUTE CLOSURE APPARATUS

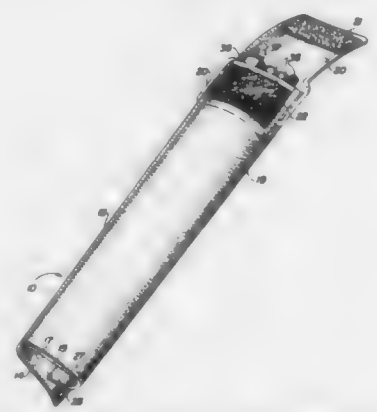
Michael A. McSweeney, Lemont, and John F. Stufflebeam, Romeoville, both of Ill., assignors to J. I. Case Company, Racine, Wis.

Filed Oct. 10, 1989, Ser. No. 419,461
Int. Cl.[5] B65D *47/00*
U.S. Cl. 222—556 **10 Claims**

1. An apparatus for controllably closing a seed-dispensing chute connected to a seed hopper, such chute having a pair of side walls, each such side wall having a longitudinal center line, the apparatus including:
a chute;
a gate assembly movable between an open position and a closed position, such gate assembly thereby controllably opening and closing the chute, such gate assembly including a first arm and a second arm depending from a bridge member, each such arm having two ends including a proximal end and a distal end, such distal ends being connected by a linkage pin, each such arm being mounted on the chute for pivoting movement with respect thereto, such mounting being by a pivot mount attached to each arm at a point between such ends and closer to such distal ends, such pivot mounts defining a pivot axis located near to but non-coincident with the longitudinal center lines of the side walls of the chute, such mounting providing a reduced distance of travel of such linkage pin as the gate assembly is moved between open and closed positions.

5,009,346

SLING MOUNTABLE POUCH FOR FIREARMS



Ronnie T. Butler, Lakeland, Fla., assignor to Peace River Arms & Accessories, Inc., Lakeland, Fla.

Filed Nov. 21, 1988, Ser. No. 273,863
Int. Cl.[5] A45C *13/30*
U.S. Cl. 224—205 **9 Claims**

1. In combination with a firearm carrying sling having a strap portion, a gun cleaning kit mounted on the strap portion, the kit comprising:
at least one firearm cleaning rod section having a length;
a tubular container having a length generally equal to the

length of the cleaning rod section; the container containing a cleaning tool handle and a plurality of other gun care and maintenance accessory elements therein, and further having a replaceable top thereon for providing access to the contents of the container;

a pouch comprising a generally rectangular pocket member having a top with an opening, a closed bottom, and left and right sides having lengths generally equal to the length of the cleaning rod section; opposing left and right elongated retaining flaps respectively joined substantially along the full lengths of the left and right sides of the pocket member and having lengths generally equal to the

lengths of the pocket member sides; closure means releasably closing the pocket member; and means joining the respective retaining flaps to each other substantially along their lengths to form a tubular opening axially aligned in parallel with the pocket member and receiving the strap portion snugly therethrough to readily removably retain the pouch on the sling in coaxial alignment with the strap portion;

the cleaning rod section and the tubular container being received in side-by-side arrangement substantially within the pocket for removal therefrom through the pocket opening.

5,009,347

WRIST HOLSTER

Bill E. Phelps, Box 2595, Jackson, Wyo. 83001

Continuation of Ser. No. 266,396, Nov. 12, 1988, abandoned.
This application Jan. 29, 1990, Ser. No. 474,629
Int. Cl.[5] A45C *11/00*
U.S. Cl. 224—219 **4 Claims**

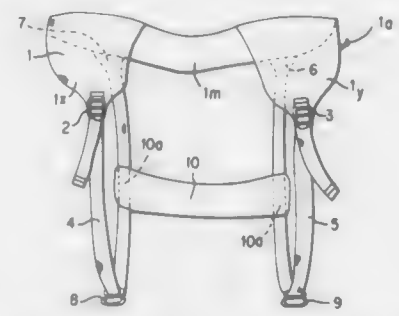
1. In combination, a canister shaped in a cylinder of preselected length containing gas of the type used to repel intruders and assailants, and a holster therefor, said holster comprising a wristband formed of a single piece of fabric having an inner and an outer surface, said wristband comprising a central portion, a first band of substantially lesser width than said central portion extending in a first direction from said central portion and having a first outer terminus, a second band of substantially lesser width than said central portion extending therefrom in a direction opposite said first band and having a second outer terminus, said central portion having top and bottom parallel edges tapering inward to merge with the lesser width of said first and second bands, a buckle on said outer surface, first means fixing said buckle in place vicinal said first outer terminus, second means vicinal said second outer terminus engageable with said buckle to tighten said holster around the wrist of the wearer in a variety of positions, a pouch fixed to said outer surface on said central portion shaped complementary to said cylinder and of a length less than said preselected length to retain a substantial portion but not all of said canister with said canister extending transversely relative to said first and second bands, one end of said pouch being open and an end of said canister extending out of said pouch for easy gripping by the wearer, and third means on said central portion detachably retaining said canister in said pouch, said third means being quickly releasable, said third means comprising a closure strap fixed to a margin of said central portion adjacent said open end of said pouch and extending outwardly therefrom, said closure strap being substantially narrower than said central portion, said closure strap being foldable to extend over the outside of said pouch, said closure strap being capable of being inserted inside said pouch whereby said closure strap may be folded back to close off said open end to retain said canister in said pouch, said pouch having an outer pouch surface, said third means being located on said outer surface of said wristband and one surface of said closure strap, said pouch comprising a piece of fabric of pre-selected width having opposite side edges and one end fixed to said central portion, the width of said piece of fabric between said side edges being sufficient so that said canister can fit between said piece of fabric and said central portion.

5,009,348

KNIFE SHEATH OF TOUGH FLEXIBLE MATERIAL

Keith Derkatz, P.O. Box 1118, Stn. "A", Kelowna, B.C., Canada V1Y 7P8

Filed Jan. 10, 1990, Ser. No. 462,802
Int. Cl.[5] B26B *29/02*
U.S. Cl. 224—232 **6 Claims**



1. A knife sheath of tough flexible material, comprising a back wall, a front wall attached at its periphery to said back wall to form a knife-receiving pouch, and a pair of laterally spaced slits in said front wall of said knife-receiving pouch for receiving a wearer's belt that passes through said pouch between the front and back walls thereof, said slits being offset in the longitudinal direction, whereby when the wearer's belt is passed through said offset slits, said pouch sits at a forward angle on the wearer's belt, snugly located on the wearer's hip and tucked in the belt.

5,009,349

LIFTING AND CARRYING DEVICE

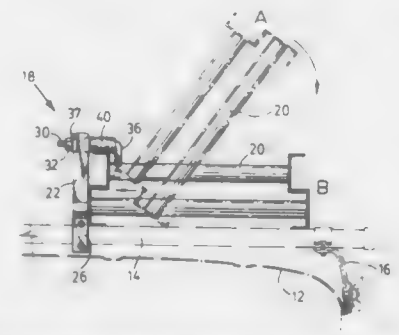
Geir O. Eide, Olav Bismos gate 9, N-2670 Otta, and Dag I. Eide, Maelan 12, N-7460 Roros, both of Norway

Filed Jul. 6, 1989, Ser. No. 376,853
Claims priority, application Norway, Jul. 8, 1988, 883058
Int. Cl.[5] A45F *3/04*
U.S. Cl. 224—260 **10 Claims**

1. Lifting and carrying device (**1***a*) adapted for support on a user's body, said device constituting an auxiliary means for the user to lift and carry articles of various size, shape and weight, said device (**1***a*) comprising in combination:

an elongated and relatively soft shoulder and neck yoke (**1**) having end portions,

a tie loop (**4, 5**) depending from the area of each end portion (**1***x*, **1***y*)) of said yoke (**1**) and,



a supporting element (**10**) adjustably attached to said tie means (**4, 5**), and extending between said tie loops (**4, 5**) , and selectively movable from a back portion of the user's body to the hip area of the user's body.

5,009,350

RETAINER ASSEMBLIES FOR ELONGATED OBJECTS

John M. Schill, 208 Samuel Street, Kitchener, Ontario, Canada N2H 1R6 , and William C. Schill, 18 Windy Ridge, Kitchener, Ontario, Canada N2P 1N3

Filed Sep. 8, 1989, Ser. No. 404,379
Int. Cl.[5] B60R *9/048*
U.S. Cl. 224—324 **13 Claims**

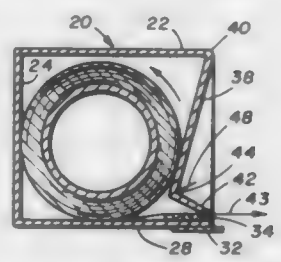
1. A retainer assembly for use in combination with a support member to retain on the support member an elongated object having two transversely spaced longitudinal sides and having a predetermined height when in a horizontal position thereon, the assembly comprising;

a body member having an one end attachment means for its attachment to the support member and adapted when so attached to extend generally vertically therefrom;

a transverse member extending from the body member to be generally parallel to the support member and to be spaced from the support member to provide between them a respective vertically-extending gap of height just greater than said predetermined height of the elongated member, into which gap one side of the elongated object is inserted generally horizontally, said one side being so inserted with the other side elevated above the support member and the other side then being rotated downward onto the support member until the elongated member is in said horizontal position for its retention by the assembly;

means connected between said transverse member and said body member for preventing said transverse member from movement in any direction on said body member and relative to the support member;

the transverse member having a retainer portion extending generally parallel to the body member to provide a respective horizontally-extending gap of smaller height than said vertically-extending gap and adapted to receive said one side of the elongated object when inserted therethrough, the retainer portion being adapted to engage the elongated object in its horizontal position and retaining it against transverse movement out of the vertically-extending gap; and



a compressible resilient member on the transverse member between the body member and the retainer portion, the uncompressed resilient member reducing the height of the vertically-extending gap to less than said predetermined height of the elongated object and being adapted to be compressed generally vertically by said one side of the elongated object upon said insertion thereof into the vertically-extending gap and the subsequent downward rotation of the other side into engagement with the support member, so that the compressed resilient member will apply vertical pressure to the elongated object and hold it in retaining engagement with the support member against movement in any direction thereon.

5,009,351

SHEET-MATERIAL DISPENSING BOX

Vivian M. Handler, 1727 David St., Pensacola, Fla. 32514

Filed Aug. 24, 1988, Ser. No. 235,623
Int. Cl.[5] B26F *3/02*
U.S. Cl. 225—52 **8 Claims**

1. A container for holding and dispensing a roll of flexible sheet material, said container comprising:

a. a box for containing said roll, said box comprising bottom, top, rear and end walls, said top wall having a top forward edge and said bottom wall terminating in a lower forward edge;

b. a cutting edge mounted on said lower forward edge, whereby a portion of said sheet material may be severed from the remainder of said sheet material,

c. an abrasive material mounted rearwardly of said cutting edge in the interior of said box and on said bottom wall, whereby said sheet material passes over and in contact with said abrasive material on the way to said cutting edge; and

d. biasing means for resiliently biasing said sheet material into light frictional contact with said abrasive material, whereby a portion of said sheet material may be pulled past said abrasive material in preparation for dispensing a portion of said sheet material, said frictional contact being sufficiently great that the new free end of said sheet material created when a portion of said sheet material is severed by said cutting edge is restrained from re-entering said box, said biasing means comprising a front wall, said front wall comprising:

(1) a first portion sloping downwardly and inwardly from said top forward edge to a horizontal fold line; and

(2) a second portion sloping downwardly and outwardly from said fold line, said second portion terminating in an edge pressing said sheet material into said frictional contact; and

(e) detaining means for retaining said second portion in position, said retaining means comprising a tab extending inwardly from one of said end walls and engaging said front wall.

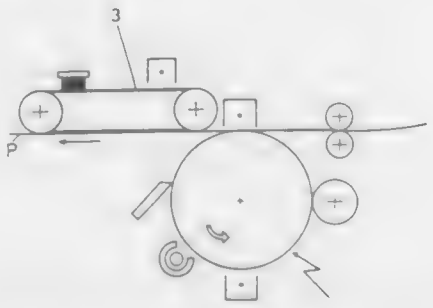
APPARATUS FOR CONVEYING DIELECTRIC SHEETS



Masashi Yasuda, Kobe; Yoshihiro Uchimoto, Habikino, and Yasunori Mikata, Hyogo, all of Japan, assignors to Bando Chemical Industries, Ltd., Hyogo and Unico Co., Ltd., Osaka, both of, Japan

Filed Jun. 30, 1989, Ser. No. 374,541

Claims priority, application Japan, Jul. 1, 1988, 63-165740

Int. Cl.[5] B65H *20/00;* **G03G** *15/02*

U.S. Cl. 226—94 **7 Claims**

1. An apparatus for conveying dielectric sheets in which said sheets to be conveyed consist of a dielectric material which are held by electrostatic adhesion on an adhesion surface of a conveying means of said apparatus when said adhesion surface is charged by a charging means and conveyed by causing said conveying means to move, said apparatus being characterized in that said adhesion surface consists of a dielectric material and electrode parts which consist of a conductive material provided adjacent to each other on said adhesion surface of said conveying means and said dielectric material and said electrode parts are both electrostatically charged by said charging means to different polarities whereby a strong and stable electrostatic field is created between said dielectric material and said electrode parts of said conveying means for electrostatically adhering said dielectric sheets to said conveying means.

5,009,353

CABLE TENSIONING DEVICE

John W. Alquist, Quinnesec, Mich., assignor to Lake Shore, Inc., Kingsford, Mich.

Filed Feb. 1, 1990, Ser. No. 473,617

Int. Cl.[5] B65H *77/00;* **B66D** *1/00*

U.S. Cl. 226—172 **8 Claims**

1. A cable tensioner comprising,

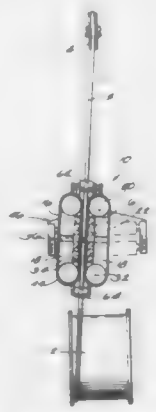
a base,

a pair of generally horizontal elongated platforms mounted side-by-side on said base,

a drive pulley at one end of each platform,

a driven pulley at the other end of each platform,

a multiplicity of idler pulleys mounted in a line along the edge of each platform adjacent the other platform,



an endless belt having a grooved exterior and gear teeth on its interior and encircling the drive, driven and idler pulleys of each platform whereby the belts on said platforms have a generally horizontal long straight run between them to receive a cable therebetween in the grooved exterior,

a motor connected to each said drive pulley,

a brake connected to each said driven pulley,

a means for adjusting the spacing between said platforms to adjust the force with which said belts grip a cable in said straight run,

means enabling said platforms to tilt as a unit about a generally horizontal axis transverse said elongated platforms,

means enabling said platforms to pivot in a generally horizontal plane as a unit about a generally vertical axis,

means enabling said platforms to rise or fall as a unit relative to said base, and

slide means between said base and said platforms permitting said platforms to move laterally of said platforms in a generally horizontal plane,

said motors and said brakes being energized as required to provide desired tension on the cable leading either direction from the tensioner.

AUTOMATIC RIVETING MACHINE

Anthony D'Aquila, Trumbull; Charles F. Smart, and Raymond H. Varian, both of Danbury, all of Conn., assignors to Emhart Inc., Towson, Md.

Filed Dec. 1, 1989, Ser. No. 445,079

Int. Cl.[5] B21J *15/10*

U.S. Cl. 227—2 **6 Claims**

1. A rivet setting machine comprising

a rivet tool for setting rivets,

a loading device for loading individual rivets into said rivet tool, said loading device including rivet receiving means

means for delivering a rivet to said rivet receiving means including

means for presenting a rivet at a transfer position,

means for verifying that a rivet is at said transfer position,

feed tube means,

pressurized air means for transferring a rivet presented at the transfer position through said feed tube means to said rivet receiving means,

means for actuating said pressurized air means,

means for determining that a rivet has transferred from said transfer position to said rivet receiving means,

means for generating a fault signal in the event said determining means fails to determine that a rivet has transferred from said presenting means to said rivet receiving means to indicate that the rivet is between said receiving means and said transfer position,

means for again operating said pressurized air means in the event said fault signal is generated, and

means for again operating said presenting means in the event a rivet is not received by said rivet receiving means and operating said pressurized air means for the third time when the next rivet is located at said transfer position.

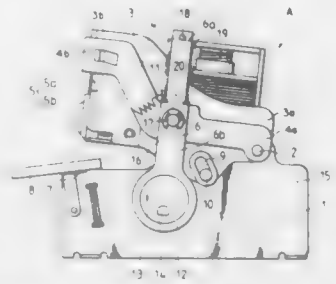
ELECTRIC STAPLER



Nobuyuki Akizawa; Yasunori Kudo; Toshiyuki Kanai; Yasuo Kamei; Nobuaki Oyama, and Akihito Negishi, all of Tokyo, Japan, assignors to Max Co., Ltd., Tokyo, Japan

Continuation-in-part of Ser. No. 291,221, Dec. 28, 1988, abandoned. This application Apr. 2, 1990, Ser. No. 504,032

Claims priority, application Japan, Dec. 28, 1987, 62-198839[U]; Jan. 26, 1988, 63-8544[U]; Apr. 21, 1988, 63-54047[U]; Apr. 21, 1988, 63-54049[U]

Int. Cl.[5] B27F *7/17*

U.S. Cl. 227—114 **7 Claims**

1. An electric stapler comprising:

a base;

a magazine pivotally mounted on said base for movement in a vertical plane, said magazine including:

a cartridge mounting portion for mounting a staple cartridge having an accommodating portion for containing a stack of staple sheets;

means defining a staple feed path extending from said accommodating portion to a staple supply portion including an endless belt disposed below said cartridge and having an outer friction surface disposed to engage a staple sheet within said accommodating portion so as to feed it from said accommodating portion to said staple supply portion so that a leading staple in said sheet is in a staple supply position;

means defining a staple driver guide path generally perpendicular to said staple feed path means and passing through said staple supply position;

a staple driver for reciprocal movement along said driver guide path means from an initial position to a stapling position so as to drive a staple fed to said staple supply position, through an article to be stapled;

an actuating link having a first end operatively engaged with said magazine and said staple driver for moving said magazine and said staple driver in a vertical plane, and a second end pivotally mounted on said base;

a drive shaft mounted on said base and operable by a motor for rotation about its axis;

a disc-shaped cam member fixedly mounted on said drive shaft in eccentric relation thereto for rotation therewith;

a connecting rod having at one end an annular portion in which said cam member is rotatably fitted so that rotation of said cam moves said connecting rod in a vertical plane, said connecting rod having a central portion which is connected to a vertically central portion of said actuating link whereby said actuating link is pivotally moved when said rod moves vertically; and

clinching means for folding legs of the staple extending through the article against the article.

REMOVABLE MAGAZINE FOR STAPLE GUNS

Ted Chang, No. 204-2, Chiung Lin Rd., Hsin Chuang City, Taipei Hsien, Taiwan

Filed Jan. 8, 1990, Ser. No. 461,679

Int. Cl.[5] B27C *5/02;* **B25C** *5/02*

U.S. Cl. 227—120 **3 Claims**

1. A staple gun comprising a housing which is constituted by two side plates, a striker, a striking mechanism including a handle, and a magazine together with a spring-biased staple pusher and characterized in that said magazine is an elongated substantially "U" sectioned member having two limbs each with a plurality of protrusions formed on an outside surface thereof to co-operate with a groove formed on an inside surface of each said side plate, said grooves being so disposed that said magazine is slidable therealong with said protrusions inserted thereinto, each of said side plates further having a retainer disposed at the rear end of said magazine so as to retain said magazine within said housing, said magazine further having a stop formed on the outside surface of each of the limbs thereof to prevent said magazine from being further pushed forwards by abutting the rear ends of said grooves.

JOINING OF CERAMIC COMPONENTS TO METAL COMPONENTS

Derrick J. Baker, Chieveley; Walter G. Bugden, and Peter R. Smith, both of Nottingham, all of England, assignors to Lilliwyte Societe Anonyme, Luxembourg

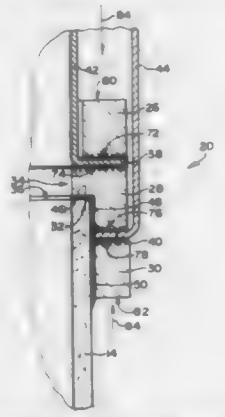
Filed Jul. 25, 1989, Ser. No. 385,323

Claims priority, application United Kingdom, Jul. 28, 1988, 8818050

Int. Cl.[5] B23K *101/36, 103/16*

U.S. Cl. 228—122 **17 Claims**

1. A method of joining together a ceramic component and a metal component for use in the construction of a high temperature electrochemical cell, which method comprises the steps of:



metallizing a surface of the ceramic component with a metallizing metal to form a metallized layer thereon; and

thermocompression bonding the metal component to the metallized layer,

the ceramic component comprising alpha-alumina, the metal of the metallized layer comprising at least one metal selected from the group consisting of tantalum, titanium,

vanadium, tungsten and molybdenum, and the metal component comprising at least one metal selected from the group consisting of iron, nickel, cobalt, chromium, manganese and copper, and

the metallizing of the surface of the ceramic component

comprising forming a metal matrix on said surface, the matrix having a continuous glass phase dispersed therein, the metallizing step including applying the metallizing metal to said surface and then heating the ceramic component to a temperature of above 800° C. under a reducing atmosphere in the presence of glass-forming constituents.

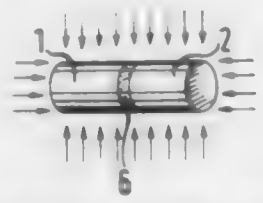
PROCESS FOR JOINING WORKPIECES OF METAL OR CERAMIC BY BOUNDARY SURFACE DIFFUSION



Detlev Stover, Niederzier; Hans-Peter Buchkremer, Heinsberg, and Rudolf Hecker, Jülich, all of Fed. Rep. of Germany, assignors to Forschungszentrum Julich GmbH, Jülich, Fed. Rep. of Germany

Filed May 9, 1990, Ser. No. 521,091

Claims priority, application Fed. Rep. of Germany, May 13, 1989, 3915702

Int. Cl.[5] B23K *20/00, 20/24*

U.S. Cl. 228—175 **1 Claim**

1. A process for joining workpieces, both of metal or of ceramic or one of metal and one of ceramic, to each other by hot isostatic pressing and boundary surface diffusion between the materials of the respective workpieces at this location of joining, in which process junction surfaces of the respective workpieces are put together and fixed in juxtaposition, and are then subjected to hot isostatic pressing, said process comprising the steps of:

completing the fixation of the juction surfaces of the workpieces in juxtaposition to each other by plasma jet coating of the outer edge of the location of joining with a layer compatible with the materials of the workpieces;

after plasma jet coating and before hot isostatic pressing, sintering at low pressure said layer produced by plasma jet coating;

applying mechanically stable pressing force until hot isostatic pressing is performed; and

sealing gas-tight the location of joining and hot pressing isostatically the fixated workpieces while the location of joining is sealed gas-tight.

PROTECTIVE COVER FOR A FILE FOLDER

Zhenia J. Chariton, 630 Arlington, Novato, Calif. 94947, and Barbara J. Teixeira, 2618 Las Gallinas Ave., San Rafael, Calif. 94903

Filed Dec. 18, 1989, Ser. No. 451,989

Int. Cl.[5] B65D *27/00*

U.S. Cl. 229—1.5 R **10 Claims**

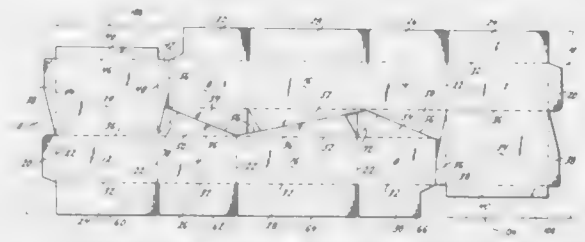
1. A protective cover for a file folder having left and right panels separated by at least one fold line, each said panel having top and bottom edges and a side edge and one of said panels having a label tab depending from the bottom edge thereof; said protective cover comprising:

a pair of cover panels, each of a size and shape to cover completely one of said file folder right and left panels, said cover panels being separated by at least one score line;

top and bottom flaps on said cover panels to receive said top and bottom edges of said left and right panels;

means forming a slot in the bottom flap of one of said cover panels to receive and interlock with said label tab.

5,009,362



QUICK-ASSEMBLED FOLDING CARTON WITH REINFORCED BOTTOM THAT LOCKS IN POSITION

Edward J. Brangle, Jr., 11885 Lackland Rd., Ste. 26, St. Louis, Mo. 63146

Continuation-in-part of Ser. No. 328,066, Mar. 23, 1989, abandoned. This application Sep. 17, 1990, Ser. No. 583,577

Int. Cl.[5] B65D *5/36*

U.S. Cl. 229—117 **27 Claims**

1. A folding carton formed from a blank sheet of carton material, the carton comprising:

first, second, third and fourth carton wall sections connected together end-to-end along fold lines scored between adjacent wall sections, the wall sections being arranged to be formed into a rectangular configuration;

a carton bottom section bound by four fold lines arranged in a rectangular configuration, the bottom section being connected to the first wall section along the first fold line and the bottom section being enclosed by first, second and third strengthening flanges connected respectively along the second, third and fourth fold lines of the bottom section in their entirety; and

carton bottom locking means formed unitarily with the second, third and fourth carton wall sections and arranged to engage the first, second and third strengthening flanges respectively, to maintain the carton bottom section in a desired position relative to the four carton wall sections when the carton wall sections are formed into a rectangular configuration.

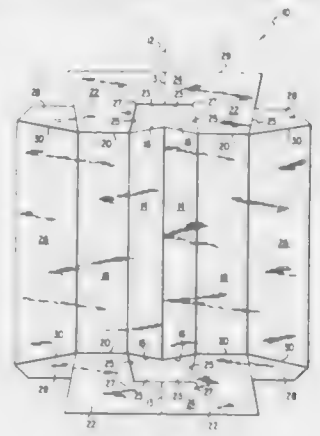
BRIDGE SEPARATED TRAY AND BLANK FOR FORMING IT



James F. Zavatone, 109 N. Mid America Mall, Apt. 1511, Memphis, Tenn. 38103

Filed Mar. 15, 1990, Ser. No. 493,652

Int. Cl.[5] B65D *5/48*

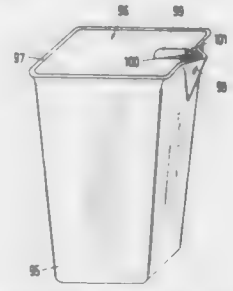
U.S. Cl. 229—120.17 **11 Claims**

1. A unitary paperboard blank for making a tray having at least a pair of parallel troughs, the blank including a series of elongated, parallel panels each having parallel, elongated edges and joined by fold lines in series to each other along their elongated respective edges, each panel of at least one adjacent pair of said panels being trapezoidal and having shorter edges, termed free edges, not foldably connected to any of said panels, said pair of trapezoidal panels adapted to form an arch partition between an adjacent pair of parallel troughs, said parallel panels including a pair of generally rectangular, trough bottom forming panels each joined to one of said elongated respective edges of a respective said trapezoidal panel, said trough bottom forming panels having an angled tray end forming flap attached along a fold axis to each shorter edge of the former, one leg of each end wall forming flap being oppositely spaced from one of said free edges of a respective said trapezoidal panel, the free edge of each trapezoidal panel slanting away from the fold axis which joins a trough bottom forming panel to the latter's angled flap, the length of the fold line joining said trapezoidal panels being longer than the length of the fold lines

joining any of said trapezoidal panels to its next adjacent said trough bottom forming panel.

5,009,364

EASY-OPEN PACKAGE FOR FLUENT MATERIAL



Georg Bolte, Vechelde, Fed. Rep. of Germany, assignor to Schmalbach-Lubeca AG, Braunschweig, Fed. Rep. of Germany

Filed Jan. 11, 1990, Ser. No. 463,371

Claims priority, application Fed. Rep. of Germany, Jan. 19, 1989, 3901517

Int. Cl.[5] B65D *5/70*

U.S. Cl. 229—123.2 **5 Claims**

1. An easy-open package for a fluent material, the package comprising:

an upwardly open base vessel having an annular rim;

a foil having an outer periphery engaging the rim and formed inward of the periphery with an annular tear line defining a tearout portion;

an open tab engaging the portion within the tear line and having one leg lying on the foil and another leg joined at a fold to the one leg and projecting from the foil;

an annular bond securing the foil at the periphery of the foil to the rim;

a bond securing the one leg of the tab to the foil adjacent the tearout portion; and

a bond securing the one leg of the tab to the portion within the tear line.

5,009,365

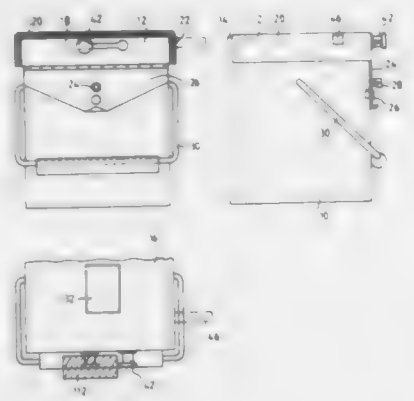
REMOVABLE COIN STORAGE RECEPTACLE FOR SLOT MACHINES

Dominique Holtzer, 7,rue Moncey, 25000 Besancon, France

Filed Nov. 29, 1988, Ser. No. 277,173

Claims priority, application France, Dec. 8, 1987, 87 17040

Int. Cl.[5] G07B *15/00*



U.S. Cl. 232—16 **6 Claims**

1. A removable coin storage receptacle for slot machines, the receptacle comprising:

a housing provided with a slot in one of its faces for receiving coins;

means mounted inside said receptacle and capable of moving in translation, said means including a bolt having a locking end and a flap fixed to said bolt and suitable for closing said slot;

operating means projecting from said receptacle and constrained to move in translation with said bolt in order to move said moving means into a first position in which said slot is left open and said locking end of the bolt projects out from said housing in order to enable said receptacle to be locked to said slot machine, or into a second position in

which said flap closes said slot and in which said locking end is retracted so as not to project out from said housing; and

a latching mechanism distinct from said operating means and co-operating with said moving means for enabling said moving means to be moved initially from said second position to said first position; and subsequently enabling said moving means to be moved back from said first position to said second position; said moving assembly then being prevented by said latching mechanism from returning to said first position until after said latching mechanism has been acted upon by using controlled access means.

5,009,366

MAILBOX INSERT

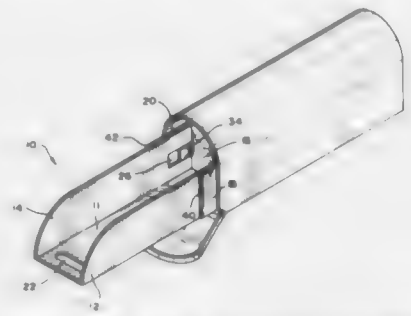
Albert van Druff, Jr., Lawrenceville, and David A. Fussell, Lilburn, both of Ga., assignors to Cornerstone Products Inc., Norcross, Ga.

Filed Feb. 16, 1990, Ser. No. 480,951
Int. Cl.[5] V65D *91/00*
U.S. Cl. 232—17 **3 Claims**

1. A tray-type insert for use with a mailbox in delivering and removing mail from the box, said insert being movable between a retracted position within the box and a protracted position partially removed from the box comprising:

a rectangular shaped bottom panel;

side panels generally rectangular in shape and foldably attached to longitudinal edges of said bottom panel; said side panels including locking tab openings at one end thereof;



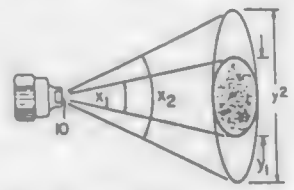
an end panel foldably attached to an end of said bottom panel;

said bottom panel, side panels and end panel forming a mail receiving chamber;

locking panels having hinge means for attachment to said end panel, said locking panels being positioned on said side panels outwardly of said mail receiving chamber;

locking tab detents formed at a juncture of said end panel and each of said side panels;

locking tabs integrally formed on said locking panels an positioned; opposite said side panel openings, said locking tabs being folded through said side panel openings and lockingly positioned in said locking tab detents tab detents securing said side panels to said end panel; and



said locking panels further including an abutment surface formed by an edge of said locking panels to abut a cooperating edge of the mailbox door opening preventing total removal of said insert from the interior of said mailbox when the insert is in the protracted position.

5,009,367

METHODS AND APPARATUS FOR OBTAINING WIDER SPRAYS WHEN SPRAYING LIQUIDS BY AIRLESS TECHNIQUES

Kenneth A. Nielsen, Charleston, W. Va., assignor to Union Carbide Chemicals and Plastics Technology Corporation, Danbury, Conn.

Filed Mar. 22, 1989, Ser. No. 327,275
Int. Cl.[5] B05D *1/02, 1/04*
U.S. Cl. 239—3 **44 Claims**

1. In a method for the airless spraying of a coating composition which comprises passing the composition under pressure through an orifice to produce a spray pattern having a maximum first width, the said composition comprising (i) a solids fraction containing at least one component capable of forming a coating on a substrate; and (ii) a solvent fraction which is at least partially miscible with the solids fraction, the improvement which comprises forming a liquid mixture in a closed system, which liquid mixture contains the said (i) and (ii), and also contains (iii) at least one supercritical fluid in at least an amount which when added to (i) and (ii) and sprayed is sufficient to produce a spray pattern having a second width which is greater than the first width.

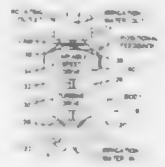
5,009,368

CONSTANT-PRESSURE, VARIABLE-VOLUME IRRIGATION SPRINKLERS

Donald A. Streck, Ojai, and Jerry R. Iggulden, Santa Clarita, both of Calif., assignors to Light Ideas Incorporated, Woodland Hills, Calif.

Filed Jun. 21, 1989, Ser. No. 369,659
Int. Cl.[5] B05B *3/04, 1/08*
U.S. Cl. 239—70 **16 Claims**

1. A control device for controlling the flow of irrigation water between an inlet and an outlet thereof comprising:



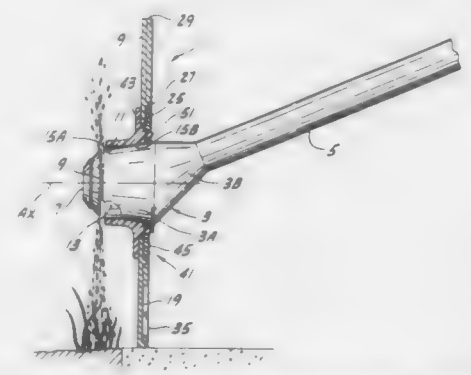
(a) a hollow body having an inlet thereto and an outlet therefrom, said outlet being contained in an outlet member mounted to said body for rotation;

(b) a rotating drive positioned within said body, said rotating drive being a turbine drive including a turbine wheel

positioned within said body to be rotated by a flow of water between said inlet and said outlet; and,

(c) flow control means disposed within said body between said inlet and said outlet and driven by said rotating drive for varying the volume of water discharged through said outlet to areas watered by a sprinkler head connected to said outlet without changing the pressure of said water, said flow control means comprising means for rotating said outlet member at different rates as a function of the radial position of said outlet member.

14. In an irrigation controller which opens a supply valve to input a supply of irrigation water under pressure to at least one sprinkler head for a pre-established irrigation period at pre-set times and days, the improvement to permit high-precipitation irrigation sprinkler heads to achieve average low-precipitation operation over the irrigation period comprising:



a secondary timer connected in series with the controller to control the opening and closing of the supply valve to, when the irrigation period begins, initially connect the supply of irrigation water to the sprinkler head, allow irrigation water to flow to and through the sprinkler head for a period of time less than that required to produce run-off of the water from an area being watered by the sprinkler head, break the connection between the supply of irrigation water and the sprinkler head, delay for a period of time sufficient to allow previously broadcast water time to soak into the area being watered by the sprinkler head, and repeating a cycle of connecting and breaking the connection between the supply of irrigation water and the sprinkler head until the irrigation period is completed.

5,009,369

SPRAY SHIELD UNIT

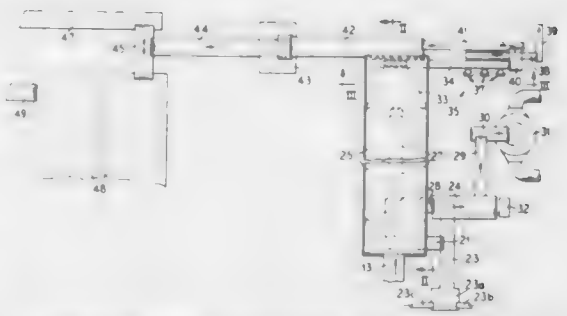
Carlos Iwaszkowiec, St. Peters, Mo., assignor to Monsanto Company, St. Louis, Mo.

Filed Feb. 16, 1990, Ser. No. 481,099
Int. Cl.[5] B05B *15/04, 1/28*
U.S. Cl. 239—223 **14 Claims**

1. A spray shield unit adapted to be mounted on the head of a sprayer, said head having a spinner thereon rotatable about an axis for spraying liquid generally radially outwardly with respect to said axis, said spray shield unit comprising:

a hub having an opening therein for receiving the head of the sprayer, said hub opening having a central axis; and

a generally planer circular shield member mounted on the hub generally coaxial with the hub and projecting radially outwardly from the hub for shielding spray emitted by the spinner from the wind;



said shield member being rotatable on the hub generally on the central axis of the hub opening whereby when the spray shield unit is mounted on the head of the sprayer and when the sprayer is held with the spinner axis generally horizontal, the shield member may be rolled on the ground to maintain the head of the sprayer in the hub opening a fixed vertical distance from the ground to provide a uniform distribution of spray onto the ground.

5,009,370

MUNICIPAL SOLID WASTE MATERIAL SORTING TROMMEL SYSTEM

Harold B. Mackenzie, Wheaton, Ill., assignor to New Life Foundation, Wheaton, Ill.

Filed May 11, 1989, Ser. No. 350,339
Int. Cl.[5] B02C *23/14;* **B07B** *9/00*
U.S. Cl. 241—24 **18 Claims**

1. A municipal solid waste material sorting system comprising:

a multi-stage trommel having an intake at one end and being downwardly tilted toward an opposite discharge end;

said trommel having a first stage relatively short length upper end section with relatively small size holes, followed by a second stage substantially longer intermediate section provided with substantially larger size holes and then a third stage lowest end relatively short section with largest size holes;

means for delivering heterogenous solid municipal waste into said intake end;

means for receiving for transporting to a selected site waste materials which drop through said small size holes of said first stage

means for further classifying at said selected site said materials which drop through said small size holes of said first stage section;

a further size screening device;

means for directing to said further size screening device materials which drop through said larger size holes of said second stage section;

means for classifying of materials screened by said further size screening device;

sorting conveyor means for receiving materials which drop through said largest size holes of said third stage section;

a manual sorting station through which said sorting conveyor means travels;

take-away means for receiving objects manually sorted from said sorting conveyor means;

means for transporting to a shredder unsorted material received from said sorting conveyor means; and

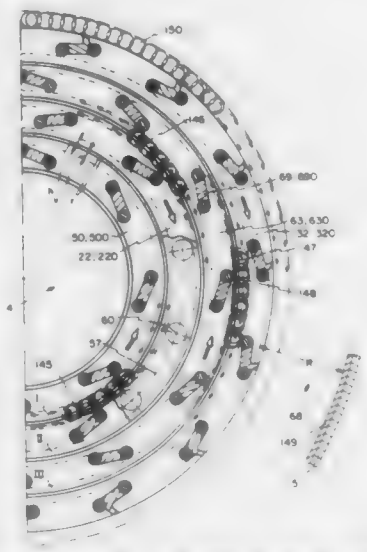
said transporting means for transporting to said shredder also being arranged for receiving and transporting to said shredder largest size materials not passing through said

largest size holes and discharged from said trommel discharge end.

5,009,371

ROTARY DISINTEGRATING DEVICE

Klaus-Dietrich Nickel, Frankfurt am Main, Fed. Rep. of Germany, assignor to Citadel Investments Limited, St. Helier Jersey, Channel Islands



PCT No. PCT/DE89/00040, § 371 Date Sep. 27, 1989, § 102(e) Date Sep. 27, 1989, PCT Pub. No. WO89/07012, PCT Pub. Date Aug. 10, 1989

PCT Filed Jan. 25, 1989, Ser. No. 423,439

Claims priority, application Fed. Rep. of Germany, Jan. 27, 1988, 3802260

Int. Cl.[5] B02C *13/20*

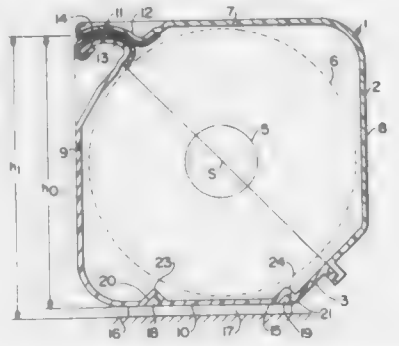
U.S. Cl. 241—187 41 Claims

1. A rotary disintegration apparatus comprising a housing with a central material input and a material outlet open underneath, an inner rotor fixed to a fist shaft and an outer rotor fixed to a second shaft on the same axis that rotates in the opposite direction, and blade rings that follow each other in alternation, said blade rings having blades which are inclined relative to the direction of rotation, the blades having front and rear edges of hard wear-resistant material, and which sit on one side on retaining rings and on the other side on assembly rings forming replaceable components of annular assembly ring carriers that are connected to the shafts, si blades being so arranged at a distance from the edges of the assembly and retaining rings of their blade rings that the front edges of the blades of a blade ring and the rear edges of the blades of the following blade ring which rotates in the opposite direction define annular chambers within a disintegration chamber, within which, within a nominal speed range of the rotors, vortex zones of the gas-solids mixture are formed.

5,009,372

ROLL CASSETTE WITH SPACERS FOR HEIGHT ADJUSTMENT

Erhard Loewe, Waldesch, Fed. Rep. of Germany, assignor to E. I. du Pont de Nemours and Company, Wilmington, Del.



Filed May 1, 1989, Ser. No. 347,388

Claims priority, application Fed. Rep. of Germany, May 11, 1988, 8806260[U]

Int. Cl.[5] B65H *75/00*

U.S. Cl. 242—71.1 15 Claims

1. A light-tight cassette for a roll of web material and adapted for use in at least two exposure devices having cassette support surfaces at different heights from points for receiving the material from the cassette comprising a housing defining an outlet slit oriented parallel to a rotational axis of the roll and positioned above a bottom surface of the cassette housing, characterized in that the bottom surface has means for detachably mounting to at least one spacer such that when no spacer

is mounted to the bottom surface the cassette is adapted for use in one of the exposure devices and when one of the spacers is mounted to the bottom surface the cassette is adapted for use in a different one of the exposure devices.

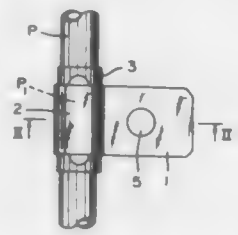
SEIZURE-FIXING DEVICE OF PIPE BY CLAMP MEMBER



Masayoshi Usui, Numazu, Japan, assignor to Usui Kokusai Sangyo Kaisha Ltd., Japan

Filed Apr. 24, 1990, Ser. No. 513,871

Claims priority, application Japan, Apr. 26, 1989, 1-48981[U]; Apr. 26, 1989, 1-48982[U]; Apr. 26, 1989, 1-48984[U]

Int. Cl.[5] F16L *3/08*

U.S. Cl. 248—74.1 14 Claims

1. A seizure-fixing device of a pipe by a clamp member, comprising:

a pipe;

an elongated clamp member including a seizure wall wrapping around the pipe and a mounting wall leastwise at one longitudinal end of the clamp member;

a resinous bush having a thermal contractility, the bush being interposed between the pipe and the clamp member and bonded via a bonding layer to an outer peripheral surface of the pipe; and

a fixing means for resiliently fixing the seizure wall of the clamp member to the bush, the fixing means comprising a fitting wall so formed on the pipe as to assume a non-circular shape in section, the non-circular shape including at least one flat outer peripheral surface on the pipe, and a seizure wall formed in a shape similar to the sectional shape of the fitting wall.

DEBRIS COLLECTION FOR A LAWNMOWER

Joseph N. Mangeruga, 168 South Odessa Ave., Egg Harbor, N.J. 08215

Filed Feb. 6, 1990, Ser. No. 475,879

Int. Cl.[5] B65B *67/04*

U.S. Cl. 248—99 1 Claim

1. A debris collection device attachable to an inclined circular cross-sectioned handle element of a lawnmower: said collection device comprising an endless annular frame consisting of a rod bent into a rectangular configuration to form four rod sections connected at right angles to each other; a flexible bag having four flap portions (36) looped over and around the four rod sections whereby the bag is suspended from the annular frame; one of said rod sections having an intermediate portion thereof offset from the corners at the ends of said one rod section; a resilient clip means attached to said annular frame for partial encirclement around an inclined handle element of a lawnmower; said resilient clip means comprising a single circularly curved metal sheet extending along said one rod section in the plane of the annular frame; said curved metal sheet being welded to the corners at the ends of said one rod section whereby a slot (32) is formed between said curved metal sheet and the intermediate portion of said one rod section; one of said flap portions extending over the intermediate portion of said one rod section and through said slot; and an elastomeric lining on the interior surface of the resilient curved metal sheet, whereby said elastomeric lining is enabled to frictionally grip the circular cross-sectioned surface of an inclined handle element of a lawnmower.

RAKE MATE AND METHODS OF CONSTRUCTING AND UTILIZING SAME

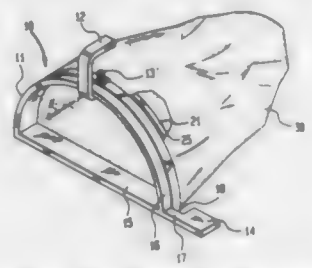
John C. Linsmeyer, and Greg Linsmeyer, both of P.O. Box 195, Quinnesec, Mich. 49876

Filed Jan. 4, 1990, Ser. No. 460,731

Int. Cl.[5] B65B *67/04*

U.S. Cl. 248—99 12 Claims

1. An apparatus for removably securing a bag mouth in an open position, comprising:



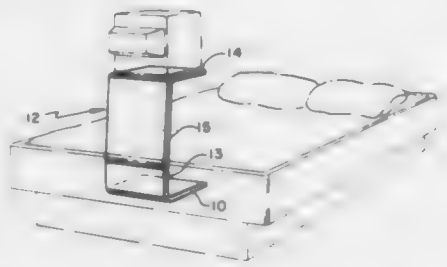
a frame member including a base adapted to support said apparatus, said frame having a rolled rim which secures a strap to said frame and cooperates with said strap to secure a bag to said apparatus;

a semi-circular portion of said frame contiguous with said base;

a handle attached to said semi-circular portion;

bag attachment means comprising a strap extending along a rear portion of the bottom of said base upwardly such that the ends of said strap meet adjacent said handle; and

a foot pad extension extending from said base outward from said semi-circular portion, said boot pad accommodating a user's foot securely hold said apparatus while inserting



material through said apparatus into said bag, said foot pad extension includes a cut-out portion to accommodate the passage of said strap about said frame.

5,009,379

BED MOUNTED TELEVISION STAND

Thomas E. Sadler, 1250 First St., NW., Cedar Rapids, Iowa 52405

Filed Jun. 21, 1990, Ser. No. 541,371
Int. Cl.[5] A47B *23/00*
U.S. Cl. 248—174 6 Claims

1. A stand for supporting a television receiver or the like on a bed having a mattress separable from and supported on a suitable support means forming part of the bed, said stand comprising a lower horizontally extending base having an inner end and an outer end, the outer end of the base being insertable between the mattress and its support means so as to position the base therebetween, an upright member extending upwardly from the inner end of the base, and an upper ledge for supporting a television receiver and having an inner end jointed to the upper end of the upright member, the upper ledge being of a sufficient width to accommodate a television receiver and extending substantially horizontally outwardly toward an outer edge spaced from the inner edge a sufficient distance for the ledge to support a television receiver, the upright member being at an acute angle from the vertical toward the outer edge of the ledge so as to create a force that biases the lower base downwardly toward the support means of the bed when a television receiver is supported on the upper ledge.

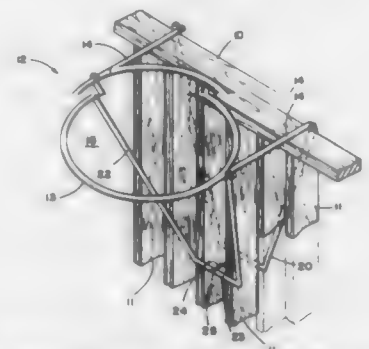
RAIL MOUNTED RACK FOR BOWL-SHAPED OR KETTLE-SHAPED CONTAINERS SUCH AS OUTDOOR GRILLS AND THE LIKE

Thomas G. Fee, 984 Stratford Rd., Mendota Heights, Minn. 55118

Continuation of Ser. No. 305,108, Feb. 2, 1989, abandoned. This application Jun. 5, 1990, Ser. No. 534,298
Int. Cl.[5] A47B *96/00*
U.S. Cl. 248—214 20 Claims



1. A combination comprising:

(a) a railing arrangement having an upper surface and first and second opposite sides; and, said railing arrangement including a horizontal railing supported by a plurality of spaced support members having first and second, opposite, sides corresponding to said first and second sides of sail railing arrangement; and,

(b) a rack for a bowl-shaped grill; said rack being mounted on said railing arrangement; said rack including: a generally planar frame portion; a depending bracing member; and, means for securing said bracing member to said support members of said railing arrangement;

(i) said planar frame portion including a support arm arrangement extending across said upper surface of said railing arrangement and between said first and second sides of said railing arrangement; said support arm arrangement including a pair of substantially horizontal arm members;

(ii) said planar frame portion including an arcuate frame member constructed and arranged for supportive receipt therein of a circular bowl-shaped grill; said arcuate frame member being supported by said support arm

arrangement in extension outwardly from said first side of said railing arrangement;

(iii) said depending bracing member comprising a substantially U-shaped member depending downwardly from said pair of substantially horizontal arm members along said second side of said railing arrangement;

(iv) said means for securing said bracing member to said railing arrangement including: a cross-brace member and an anchoring extension; said cross-brace member being positioned on said first side of said railing arrangement; and, said anchoring extension extending between at least two of said support members, of said railing arrangement, and in securing relation between said cross-brace member and a portion of said depending bracing member; at least one of said support members of said railing arrangement being securely clamped between said depending bracing member and said cross-brace member.

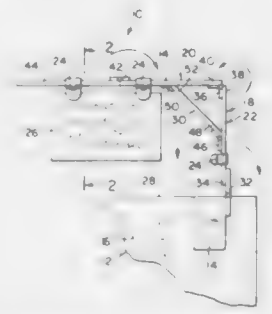
TOOL HOLDER FOR TOOLS ON A PERFORATED BOARD

Fredrik Hermansson, Flugeby, Sweden, assignor to Bengt Henningson, Sweden

PCT No. PCT/SE88/00471, § 371 Date Mar. 13, 1990, § 102(e) Date Mar. 13, 1990, PCT Pub. No. WO89/02347, PCT Pub. Date Mar. 23, 1989
PCT Filed Sep. 13, 1988, Ser. No. 469,526
Claims priority, application Fed. Rep. of Germany, Sep. 14, 1987, 8712428; Mar. 14, 1988, 8803408
Int. Cl.[5] A47B *96/06*
U.S. Cl. 248—221.1 12 Claims

1. A holder, for supporting a tool on a perforated board, with a bifurcated generally plate-like base (1) for receiving a tool carrier (4), the bifurcation commencing approximately at the center of said base and extending toward a bottom edge thereof, said base having a front surface and a rear surface with the rear surface of said base being provided with claw means (15) for cooperation with a hole of the perforated board, characterized in that the bifurcation is achieved by a slot (9) which extends through a cut-out portion (10), into which is inserted a twistable locking member (11) having said claw means (15),



and the locking member (11) is guided in at least one of the cut-out portion (10) and the slot (9) by means of a guiding part (14), shaped to be movable therein, with said claw means projecting from the rear surface of the said base.

INSTRUCTION CLIP FOR SEWING MACHINE

Almyria Huffaker, 2548 McHenry Rd., Goshen, Ohio 45122, and George Spector, 233 Broadway, #3815, New York, N.Y. 10007

Filed Dec. 8, 1989, Ser. No. 447,837
Int. Cl.[5] A47B *97/00*
U.S. Cl. 248—284 1 Claim

1. An instruction holder for a sewing machine cabinet which comprises:

(a) a mounting block affixed to rear surface of the sewing machine cabinet;

(b) an inverted L-shaped stanchion having a horizontal arm and a vertical arm having center lines defining a vertical plane said vertical arm is affixed to said mounting block;

(c) at least one clip for suspending an instruction sheet from a pattern envelope on said horizontal arm which extends over top surface of the sewing machine cabinet, so that hands of a person are free while sewing;

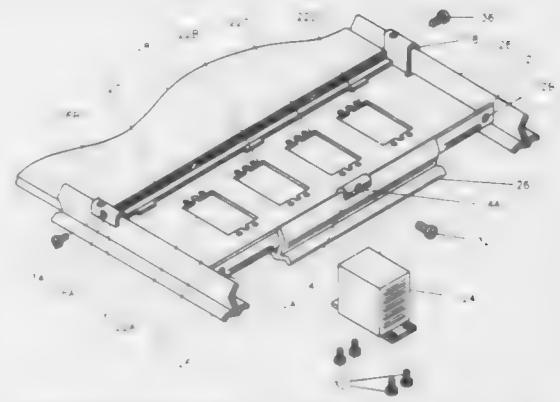
(d) an angular brace support extending between said horizontal arm and said vertical arm to keep said horizontal arm in a secured position over the top surface of the sewing machine cabinet;

(e) a first hinge disposed between bottom end of said vertical arm and said mounting block, having means for pivoting said vertical arm rearward aligned with said vertical plane;

(f) a second hinge disposes between top end of said vertical arm and an end of said horizontal arm; adapted to pivot inwardly along said vertical plane

(g) a third hinge disposed on an upper surface between two segmented portions of said horizontal arm;

(h) a fourth hinge disposed between lower end of said angular brace support and said vertical arm; between the first and second said hinges;



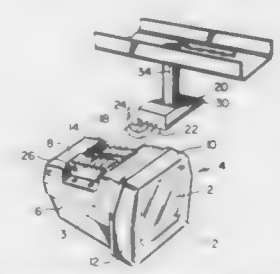
(i) a stop member disposed on the underside of said angular brace support between the second and third said hinges so that said inverted L-shaped stanchion can be collapsed and folded upon itself in a stored position behind the rear surface of the sewing machine cabinet.

5,009,383

SUSPENDED CEILING ELECTRICAL BRACKET

James A. Chapman, Wakefield, Mass., assignor to Daniel J. Chapman, Salem, N.H.

Filed Apr. 30, 1990, Ser. No. 516,966
Int. Cl.[5] F16M *13/00*
U.S. Cl. 248—343 6 Claims



1. A bracket structure for mounting electrical junction boxes in a grid type suspended ceiling, comprising: ceiling tiles supported by spaced and adjoining, inverted, t-shaped grid elements; a sheet of rigid material which replaces a portion of said ceiling tile, so as to overlap the inside edges of said grid elements; said sheet of rigid material of sufficient size to allow one or more cutouts, with said cutouts of sufficient size to allow the insertion of said junction boxes, and with means adapted for securing said junction boxes to said sheet of rigid material; a plurality of support members formed out of or attached to said sheet of rigid material with means adapted for rigidly securing said support members to said grid elements; whereby said bracket structure can rigidly support said junction boxes in said suspended ceiling.

5,009,384

OVERHEAD SUPPORT SYSTEM FOR TV MONITORS

David B. Gerke, and Michael MacDonald, both of Calgary, Canada, assignors to Inter-Link Communciations Inc., Calgary, Canada

Filed Jun. 29, 1990, Ser. No. 545,602
Int. Cl.[5] B42F *13/00*
U.S. Cl. 248—343 11 Claims

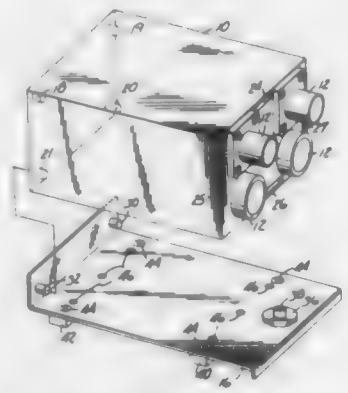
1. An overhead support system for TV monitors for use on buses and the like comprising:

(a) a shoe carrying cable means for the TV monitor, the cable means electrically associated with an electrical contact means exposed on an outer surface of the shoe, the shoe having sides provided with guide and support means positioned to mateably slide in cooperating guide and

support means in the upper part of a TV monitor housing, into seated position with the shoe electrical contact means electrically engaging corresponding electrical contact means on the TV monitor housing;

(b) support means in the form of a pipe secured at one end to and upwardly extending from the shoe, the shoe cable means extending through the pipe, the pipe to extend through an aperture in an overhead support frame;

(c) shock absorbing means to be supported on the overhead support frame and having an aperture through which the pipe is to extend; and



(d) anchor means to sit on the shock absorbing means and releasably engage the other end of the pipe to hold the shoe firmly in position on the overhead support frame.

5,009,385

MOUNTING ARRANGEMENT FOR AVIONICS EQUIPMENT

Larry L. Burgener, and Larry L. Durbin, both of Phoenix, Ariz., assignors to Honeywell Inc., Minneapolis, Minn.

Filed Dec. 5, 1989, Ser. No. 446,107
Int. Cl.[5] G01D *11/30*
U.S. Cl. 248—346 **14 Claims**

13. Equipment mounting apparatus comprising:

a housing for holding the equipment;

first and second apertures on the housing spaced a first distance apart;

a first elongated slot on the housing remote from the first and second apertures;

a third aperture on the housing spaced a second distance from the second aperture;

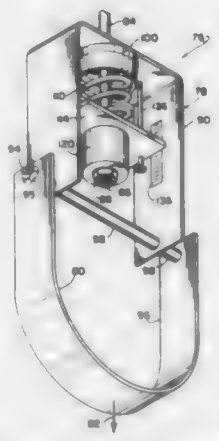
a second elongated slot on the housing remote from the second and third apertures;

first and second mounting members each having a first flat portion with first and second ends, the first end being at substantially right angles to the flat portion;

first and second guide pins on the first end of the first mounting member spaced apart by the first distance and extending from the second end over the flat portion;

a first rotatable eccentric cam on the second end of the first mounting member, the first and second guide pins fitting within the first and second apertures of the housing and the first cam rotating into the first elongated slot to wedge the housing in a first orientation with respect to the mounting member;

third and fourth guide pins on the first end of the second mounting member spaced apart by the second distance and extending over the flat portion; and



a second rotatable eccentric cam on the second end of the second mounting member, the third and fourth guide pins fitting within the second and third apertures of the housing and the second cam rotating into the second elongated slot to wedge the housing in a second orientation with respect to the mounting member.

5,009,386

PIPE HANGER AND SUPPORT

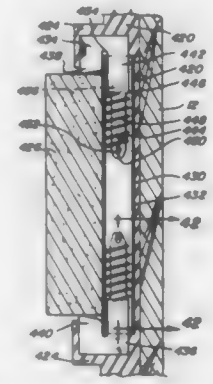
Richard C. Berger, Off Split Rock Rd., Syosset, N.Y. 11791, and Paul L. Berger, 28 Moss La., Jericho, N.Y. 11753

Filed Jun. 1, 1989, Ser. No. 360,072
Int. Cl.[5] F16M *13/00*
U.S. Cl. 248—613 **3 Claims**

1. A hanger for horizontally supporting a pipe at spaced locations therealong comprising at said locations an inverted U-shaped frame connected to support the pipe at the lower end thereof, a vertically oriented support rod disposed centrally of said frame, a helical spring disposed about said support rod within said frame, the first end of said spring resting in an elastomeric dampening member mounted to said frame and passing said mounting rod therethrough, a horizontally oriented spring-compressing member disposed in said frame in supporting relation beneath said spring and with a depending end of said support rod in projected relation therebelow, the depending end of said support rod passing through a second elastomeric dampening member, a first nut engaging said plate through said second elastomeric dampening member, a first removable spring-compressing means in the form of cooperating nuts and bolts on opposite sides of said spring operatively arranged upon threaded adjustment of said nuts to cause ascending movement in said spring-compressing member to correspondingly cause a prestressing of said spring, and a second spring compressing means formed by said first nut being in threaded engagement on said support rod depending end so as to cause additional ascending movement in said spring-compressing member without movement of said frame to additionally prestress said spring, whereby the partaking of said spring-compressing member of said ascending movements is not accompanied by any vertical movements of said supported pipe.

5,009,387

OBJECT RETAINER FOR UPRIGHT CONCRETE CONSTRUCTION FORMS



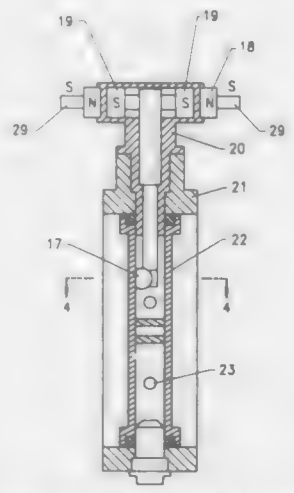
Samuel C. Scott, 2519 Walnut St., Denver, Colo. 80209, and William C. Scott, III, 4575 Joliet St., Denver, Colo. 80239

Filed Feb. 6, 1989, Ser. No. 306,168
Int. Cl.[5] E04G *9/10*
U.S. Cl. 249—96 **15 Claims**

1. A retainer device for holding an object in a substantially upright concrete form while concrete is poured into and sets within the form, a surface of the retained object is intended to be exposed in an outer surface of the finished concrete structure, said retainer device comprising in combination:

a flexible liner having a recess sized to closely fit an object to be exposed in the outer surface of the finished concrete structure, said recess having a ridge formed around its perimeter to surround the edges of the object; and

a retainer means attached to said flexible liner through said liner recess ridge to hold said object within the liner recess so that it will be properly positioned and not dislodged when the concrete is poured into the form, said retainer means being arranged to release from said object when the form is removed from the finished concrete structure.

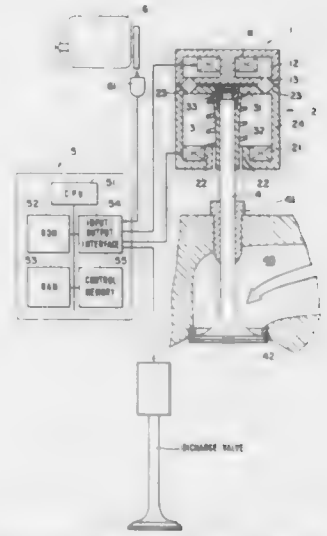


5,009,388

MAGNETIC-CONTROLLED VALVE FOR FLUID PIPELINES

Mao Pei-gi, Porder Metallurgy Factory Nan-Ning; Gan Jing, Block 28, Room 207, Nan-Ning, Jiang Nan Road, both of Guangxi Zhuang Autonomous Region, China, and Que Binghuang, 2/f, Flat A, Kum On BLdg., No. 3, Station Lane, Hung Hom, Kowloon, Hong Kong

Filed Nov. 7, 1989, Ser. No. 432,482
Claims priority, application China, Jan. 6, 1989, 89 103861
Int. Cl.[5] F16K *31/08, 5/00*
U.S. Cl. 251—65 **3 Claims**



1. A magnet-controlled valve for fluid pipelines comprising: a sealed disk-like guide bushing accommodating an external magnet ring rotatable along the outer wall surface thereof and an internal magnet ring rotatable therein, said internal magnet ring being connected with a connecting rod provided with a stopper element rotatable therewith, and a valve body accommodating a hollow valve plate provided with pressure relief aperture, back pressure aperture and a through hole, said valve plate provided with a peripheral groove for accommodating an expandable packing ring, said connecting rod being inserted into the interior cavity of said valve plate and arranged with its stopper element to be in registry with and engaged with said pressure relief aperture and said back pressure aperture on the two side walls of said valve plate, said through hole provided on the peripheral wall of the valve plate establishing fluid communication between a back pressure area in the interior cavity of said valve plate and the peripheral groove, an expandable packing ring being provided therein.

5,009,389

ELECTROMAGNETIC FORCE VALVE DRIVING APPARATUS

Hideo Kawamura, Samukawa, Japan, assignor to Isuzu Ceramics Research Institute, Co., Ltd., Fujisawa, Japan

Filed Feb. 15, 1990, Ser. No. 480,578
Claims priority, application Japan, Feb. 20, 1989, 1-038429
Int. Cl.[5] F16K *31/06*
U.S. Cl. 251—129.1 **5 Claims**

1. An electromagnetic force valve driving apparatus for opening and closing a suction/exhaust valve of an engine, comprising:

a freely reciprocatable movable magnetic pole member connected to the suction/exhaust valve;

a upper fixed magnetic pole opposing he one end of said movable magnetic pole member;

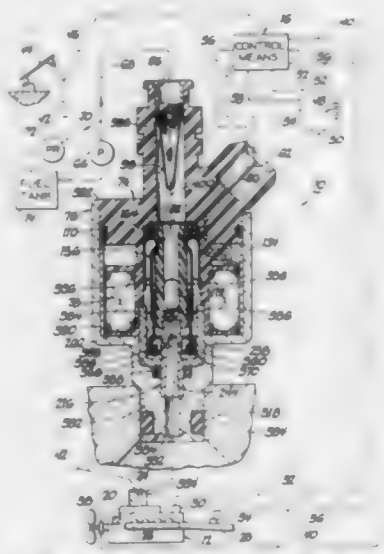
a first electromagnet comprising a yoke member magnetically communicating with said upper fixed magnetic pole and having a lower magnetic pole opposing the other end of said movable magnetic pole member;

a second electromagnet having a first magnetic pole opposing said upper fixed magnetic pole and a second magnetic pole opposing the one end of said movable magnetic pole member;

a spring for subjecting said movable magnetic pole member to a force which moves said movable magnetic pole member in the direction of the one end thereof; and

energizing control means for energizing said first and second electromagnets when the suction/exhaust valve is released and immediately before it is seated, thereby causing a repulsive force to act between the one end of said movable magnetic pole member and said second magnetic pole.

5,009,390



ELECTROMAGNET AND REED-TYPE VALVE ASSEMBLY

Lawrence McAuliffe, Jr., Ann Arbor, and Sidney D. Hardy, Sterling Heights, both of Mich., assignors to Coltec Industries Inc., New York, N.Y.

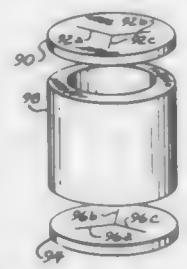
Filed Mar. 1, 1990, Ser. No. 486,991
Int. Cl.[5] F16K *31/06*
U.S. Cl. 251—129.2 **28 Claims**

1. A valving assembly for variably restricting fluid flow, comprising housing means, electrical field coil means for creat-

ing a magnetic field flux, wherein said field coil means comprises a cross-sectional longitudinal axis, pole piece means, a valve seat, fluid flow passage means formed through said valve seat, a movable valve, armature means, and resilient means normally operatively resiliently urging said valve toward operative seating engagement with said valve seat as to thereby terminate flow of said fluid through said fluid flow passage means, wherein said electrical field coil means upon being

energized is effective to create said magnetic field flux and cause said armature means to move said valve in a direction away from said valve seat to thereby permit flow of said fluid through said fluid flow passage means, wherein as said valve moves in said direction away from said valve seat said valve is moving in a direction generally transverse to said cross-sectional longitudinal axis, and wherein said movable valve also serves as an armature member in addition to said armature means.

5,009,391



VALVE ASSEMBLY

Carl J. Steigerwald, Fox Lake, Ill., assignor to The Kendall Company, Mansfield, Mass.

Continuation of Ser. No. 453,522, Dec. 20, 1989, abandoned, which is a division of Ser. No. 189,097, May 2, 1988, Pat. No. 4,895,346. This application Oct. 31, 1990, Ser. No. 611,804

Int. Cl.[5] F16L *37/28*

U.S. Cl. 251—149.1 **24 Claims**

1. A valve assembly for receiving an elongated element such as a catheter, comprising:

a hollow body member having a cavity;

a compression member received on one end of the body member and having an annular flange aligned with the cavity;

an elastic duckbill valve having a slit adjacent the distal end of the cavity;

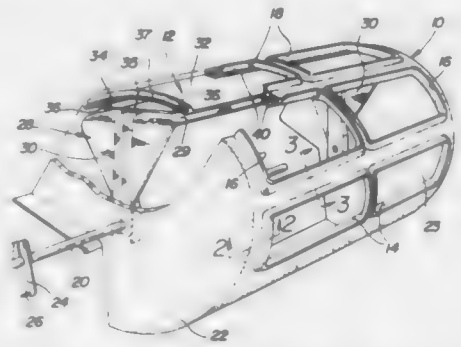
an elastic disc received in the cavity and having a central opening intermediate the valve and the annular flange;

a cylindrical elastic sleeve received in the cavity and having a bore circumferentially surrounded by inner and outer surfaces of the sleeve, the sleeve thickness dimension between the inner and outer surfaces of the sleeve being less than the length dimension of the sleeve;

said slit, opening and sleeve bore being adapted to receive said elongated element and to seal against the outer surface of said element; and

means for adjusting the compression member relative to the body member into a plurality of axially spaced apart positions for exerting different axial forces on the sleeve for inwardly bulging the sleeve, so that the sleeve permits passage of the elongated element axially through the bore of the sleeve in a sleeve open position, immobilizes and holds the element in the bore of the sleeve in a sleeve gripping position, and after removal of the element from the bore of the sleeve, inhibits flow of fluid, such as air or blood, through the bore of the sleeve in a sleeve bulged inwardly position.

5,009,392



ROTARY AIR VALVE

James C. Ostrand, Armada, Mich., assignor to General Motors Corporation, Detroit, Mich.

Filed May 11, 1990, Ser. No. 521,874

Int. Cl.[5] F16K *5/04*

U.S. Cl. 251—180 **4 Claims**

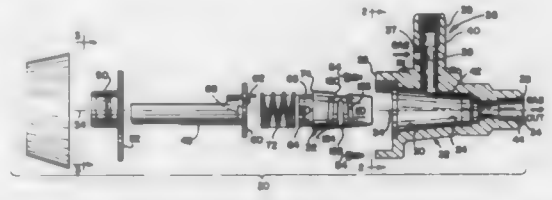
1. A rotary air valve for a motor vehicle heating, air conditioning and ventilation system comprising a generally cylindrical case having an opening through which air may flow, rotary air valve means mounted in the case for rotatable movement about an axis so as to cover and uncover said opening, said rotary air valve means comprising a valve frame rotatable about said axis, floating valve means mounted on said valve frame, spring means for urging said floating valve means radially outward against said case, cooperating annularly extending rib and groove means on said floating valve means and said case for sealing said valve means with respect to said case at one of two pairs of opposite sides of said openings, and axially extending compliant seal means on said case for sealingly contacting said valve means at the other pair of said sides of said opening whereby said rib and groove means and said seal means cooperatively seal said valve means about the perimeter of said opening when said valve means is rotated to cover same.

5,009,393

LINEAR FLOW TURN DOWN VALVE

Dale A. Massey, Orland Park, Ill., assignor to Harper-Wyman Company, Lisle, Ill.

Filed Jun. 13, 1990, Ser. No. 537,367



Int. Cl.[5] F16K *5/10*

U.S. Cl. 251—207 **22 Claims**

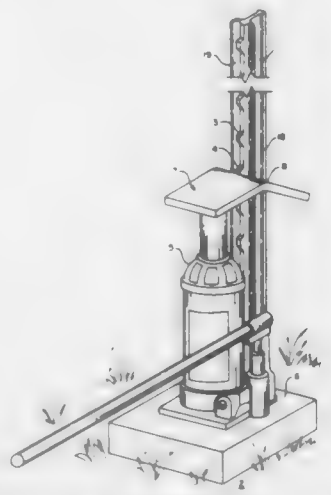
1. A linear flow control valve for gaseous fuel, comprising:

a valve body having a chamber for receiving a valve plug and including an inlet on one side and an outlet at one end; and

a tubular valve plug rotatably mounted in said chamber about a central axis aligned with said outlet, said plug having an outlet at one end adjacent said chamber outlet and an annular side wall defining a central bore extending longitudinally between opposite ends along said axis of rotation, said side wall closing said chamber inlet when said plug is in an off position in said body and having an inlet port movable into alignment with said chamber inlet providing direct communication between said chamber inlet and said bore when said plug is rotated to a maximum flow, on, position in said body;

said side wall further including a pair of spaced apart divergent/convergent flow slots, extending generally transversely of said axis and penetrating from an outside surface of said plug to said central bore spaced from said inlet port, said divergent/convergent flow slots providing an effective flow cross-section formed by areas of overlap between said chamber inlet and both of said flow slots as said plug is rotated through an intermediate range of angularly spaced, variable flow positions for continuously changing the gas flow rate through said plug.

5,009,394



METAL FENCE POST EXTRACTOR

Rick A. Marshall, 14902 - 168th NE., Woodinville, Wash. 98072

Filed Apr. 16, 1990, Ser. No. 509,881

Int. Cl.[5] B66F *3/00*

U.S. Cl. 254—30 **20 Claims**

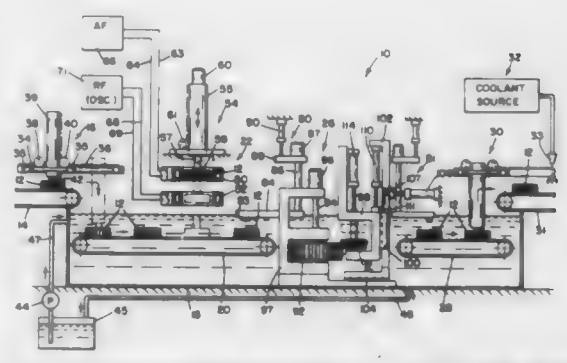
1. An extractor device for dislodging from the ground metal fence posts of the type having a substantially T-shaped cross section and longitudinally spaced lugs, comprising:

a unitary metal plate having a length greater than width so as to define a longitudinal axis and being bent at an obtuse angle about a lateral bend line generally mid-length so as to divide the plate into a post gripping portion and a jacking portion;

a T-shaped aperture is formed in said post gripping portion substantially normal to the plane of the plate with the stem of the T aperture generally aligned with the longitudinal axis of the plate and terminating adjacent one longitudinal end of said plate, and the cross of the T aperture disposed crosswise of the plate adjacent said jacking portion and proximate said bend line so as to present an edge of said cross engageable with a post lug, said plate portions including said T-shaped aperture being sized so that in one orientation of the plate relative to the post, said T-shaped aperture slips along the length of the post, clearing post lugs, and in another orientation the edges of the T-shaped aperture and adjacent margins o the plate engage the post and one lug to grip the post and to exert a jacking force applied between ground and the jacking portion of the plate on the lug side of the post to extract the post.

5,009,395

METHOD AND APPARATUS FOR SELECTIVELY HEATING A WORKPIECE SUBJECTED TO LOW TEMPERATURE THERMOMECHANICAL PROCESSING



George D. Pfaffmann, Farmington, Mich., assignor to Tocco, Inc., Boaz, Ala.

Division of Ser. No. 6,142, Jan. 23, 1987, Pat. No. 4,744,836, which is a continuation-in-part of Ser. No. 899,323, Aug. 28, 1986, Pat. No. 4,715,707, which is a division of Ser. No. 752,550, Jul. 8, 1985, Pat. No. 4,637,844. This application Mar. 9, 1988, Ser. No. 166,103

The portion of the term of this patent subsequent to Jan. 20, 2004, has been disclaimed.

Int. Cl.[5] C21D *9/68, 11/00*

U.S. Cl. 266—92 **10 Claims**

1. An improved system for isoforming an iron carbide workpiece comprising:

(a) preheating means for heating a first band portion of said workpiece adjacent to the contour of said workpieces to a temperature approximately equal to the M_s temperature of said workpiece while the remaining core portion of said workpiece remains below said M_s temperatures;

(b) final heating means for heating a second band portion of said workpiece encompassing the contour of said workpiece to a temperature at least equal to the austenitic temperature of said workpiece, said second portion smaller than and contained within said first portion of said workpiece;

(c) die forming means for forming the second heated portion of said workpiece to a finished shape while said second portion of said workpiece is in a plastic state at a temperature not less than said M_s temperature and supported by said first portion while the remaining core portion of said workpiece remains below said M_s temperature;

(d) means for controlling movement of said workpiece into said die forming means to insure that said second portion achieves a critical cooling rate and the temperature thereof becomes less than said austenitic temperature; and

(e) means for cooling said workpiece below said M_s temperature after it has been shaped.

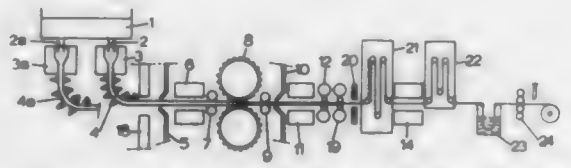
METHOD AND APPARATUS FOR THE MANUFACTURE OF FORMABLE STEEL STRIP



Hulbert den Hartog, Noordwijkerhout, and Erik B. van Perlstein, Beverwijk, both of Netherlands, assignors to Hoogovens Groep B.V., Ijmuiden, Netherlands

Division of Ser. No. 235,152, Aug. 23, 1988. This application Sep. 28, 1989, Ser. No. 414,024

Claims priority, application Netherlands, Sep. 1, 1987, 8702050

Int. Cl.[5] C21D *1/64*

U.S. Cl. 266—115 3 Claims

1. Apparatus for the manufacture of formable steel strip having a thickness between 0.5 and 1.5 mm , having the following items arranged in sequence:

(i) at least one continuous casting machine for forming liquid steel into slabs having a thickness of 30 to 100 mm,

(ii) a homogenizing furnace for the slab from (i),

(iii) a planetary mill followed by a planishing mill stand for hot rolling of the slab from (ii) into strip,

(iv) means for cooling the strip from (iii) to a temperature in the range 300° to 850° C. and homogenizing the strip at that temperature,

(v) at least one four-high mill stand for rolling the strip from (iv),

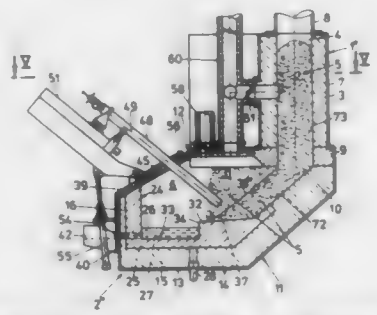
(vi) a furnace for recrystallization-annealing of the strip from (v) at a temperature of at least 620° C.,

(vii) cooling means for cooling the strip from (vi), and

(viii) at least one strip coiler.

5,009,397

PLANT TO BE USED FOR METALLURGICAL TREATMENTS OF METAL COMPOUNDS AND/OR METAL ALLOYS OR FOR PRODUCING CALCIUM CARBIDE



Gerhard Glöckler, Ohlsdorf; Heinz Müller, Neuhofen; Leopold W. Kepplinger; Panajiotis Matzawrakos, both of Linz; Erwin Koch, Leonding, and Heinrich Anberger, Linz, all of Austria, assignors to Voest-Alpine Industrieanlagenbau GmbH, Linz, Austria

Filed Mar. 30, 1990, Ser. No. 502,336

Claims priority, application Australia, Apr. 13, 1989, A877/89

Int. Cl.[5] C21B *7/08*

U.S. Cl. 266—197 7 Claims

1. In a plant comprising a furnace for producing a product melt from a metallurgical burden in which the furnace has a laterally disposed melt collecting chamber at one end and an upwardly disposed burden-receiving shaft comprising an upper portion and a lower portion at the other end of said furnace, and at least one burner means entering said furnace above said melt chamber directed towards burden flowing downwardly of said shaft through the lower portion thereof into said furnace, the improvement which comprises:

a combustion chamber disposed above said melt chamber which communicates said melt chamber with the lower portion of said shaft, and

a shelf disposed below the lower portion of said shaft serving as the bottom of said combustion chamber, said shelf extending to and above said melt chamber and terminating into an overflow edge over which melt produced from said burden enters said melt chamber,

said shelf also providing support for said burden flowing down said shaft for metallurgical treatment by said burner means and adapted via its overflow edge to separate the melt from the burden,

said burden means comprising a plasma burner.

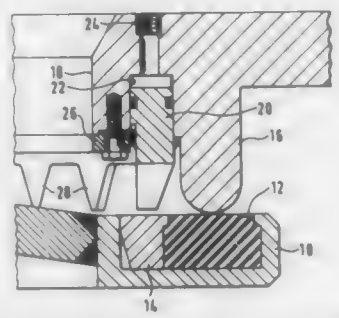
DEVICE FOR REDUCING THE STRESSES ON A SEALING SHUTTER



Emile Lonardi, Bascharage, Luxembourg, assignor to Paul Wurth S.A., Luxembourg, Luxembourg

Filed Dec. 8, 1989, Ser. No. 448,002

Claims priority, application Luxembourg, Dec. 30, 1988, 87420

Int. Cl.[5] C21B *7/00*

U.S. Cl. 266—199 9 Claims

1. An apparatus for sealing an orifice of a blast furnace, said orifice being defined by a wall, said wall having a first side and an opposed second side, said orifice extending through the wall in a first direction from the first side of the wall to the second side of the wall, comprising:

an annular seat disposed on the first side of the wall and surrounding the orifice;

a shutter for sealing the orifice, comprising:

a shutter body having opposed first and second sides,

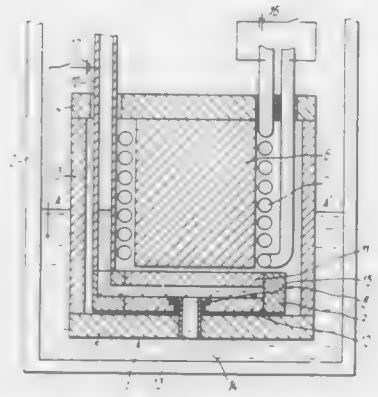
a gasket secured to the second side of the shutter body,

said shutter being movable between a closed position, wherein the gasket is disposed in contact with the annular seat to seal the orifice, and an open position, where in the gasket is set apart from the annular seat; and

pressure compensating means for reducing stresses on the gasket while the shutter is maintained in the closed position by urging the shutter in a second direction when the shutter is in the closed position, said second direction being opposite the first direction.

5,009,399

DEVICE FOR TRANSFER OF MOLTEN METAL



David G. Bykhovsky, ulitsa Esenina, 32, korpus 2, kv. 95, and Alexandr N. Panov, naberezhnaya reki Fontanki, 26, kv. 3, both of Leningrad, U.S.S.R.

PCT No. PCT/SU88/00215, § 371 Date Jun. 1, 1990, § 102(e) Date Jun. 1, 1990, PCT Pub. No. WO90/04878, PCT Pub. Date May 3, 1990

PCT Filed Oct. 28, 1988, Ser. No. 499,331

Int. Cl.[5] H02K *44/02*

U.S. Cl. 266—237 5 Claims

1. A device for transfer of molten metal wherein a centrifugal conduction MHD pump (1) comprises a metal housing (3) provided with a cover (4) and incorporating a working chamber (8) which has a pipe (12) for discharge of molten metal and communicates with a molten metal bath (2), and a magnetic circuit producing a magnetic field within the molten metal contained in the working chamber (8), and wherein the inside surface of the cover (4) of the metal housing (3) is connected to one end of a metal rod (6) which is enclosed on its side surface by a solenoid (7), while the working chamber (8) aligned axially with respect to the metal rod (6) is arranged between the other end of the metal rod (6) and a bottom (5) of the metal housing (3) in such a way as to be dielectrically insulated from them, so that the metal housing (3) with its cover (4) and the bottom (5), the metal rod (6), the solenoid (7) and the working chamber (8) form a magnetic circuit, whereas the bottom (5) of the metal housing (3) and the bottom portion of the working chamber (8) are provided with openings forming a duct (13) hermetically connecting the working chamber (8) with the molten metal bath (2).

5,009,400

ACTIVE SPRING-AND-DAMPER SYSTEM

Gerhard Ott, Herrenberg, Fed. Rep. of Germany, assignor to Dr. Ing. h.c.F. Porsche AG, Fed. Rep. of Germany

Filed Nov. 30, 1989, Ser. No. 443,316

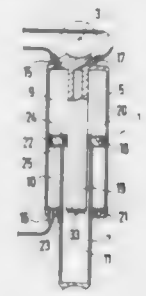
Claims priority, application Fed. Rep. of Germany, Dec. 16, 1988, 3842338

Int. Cl.[5] B60G *17/00*

U.S. Cl. 267—64.11 9 Claims

1. An active spring-and-damper system for placement between a vehicle body and a wheel suspension member, the system comprising:

a piston cylinder unit which has a pressure chamber for static load support and two additional pressure chambers for dynamic load control;



all the three pressure chambers are arranged in a cylindrical housing and are equipped with connections for hydraulic lines;

a first and a second pressure chamber of the three pressure chambers are located in a cylindrical housing on opposite sides of a piston;

the piston is connected with a hollow piston rod defining the third pressure chamber of the three pressure chambers;

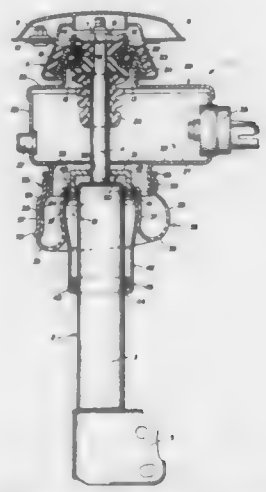
all the pressure chambers are sealed off with respect to one another by means of at least three sealing devices;

a guide rod is coaxially arranged within and connected with the cylindrical housing;

the guide rod extends into the third pressure chamber which is located inside the hollow piston rod; and

the hollow piston rod is sealed by one of the three sealing devices to a housing floor of the cylindrical housing.

5,009,401



AIR SPRING SUSPENSION SYSTEM WITH DUAL PATH ISOLATION

David A. Weitzenhof, Akron, Ohio, assignor to Bridgestone/-Firestone, Inc., Akron, Ohio

Continuation-in-part of Ser. No. 885,124, Jul. 14, 1986, Pat. No. 4,712,776. This application Dec. 4, 1987, Ser. No. 128,958

Int. Cl.[5] F16F *3/08*

U.S. Cl. 267—64.21 20 Claims

1. An improved suspension system for vehicles including:

(a) a fluid shock absorber strut having a cylinder and a reciprocal piston rod;

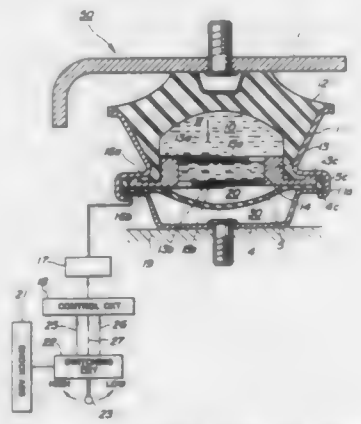
(b) a first elastomeric member telescopically mounted on an upper end of the piston rod in a sealing relationship therewith to provide damping when the strut becomes active;

(c) a fluid pressure chamber comprising a rigid annular member sealingly engaged with an outer surface of the first elastomeric member, and a flexible sleeve sealingly connected to and extending between said rigid member and the cylinder for containing a supply of pressurized fluid with said piston rod extending through the pressure chamber;

(d) bracket means for securing an upper end of the fluid pressure chamber to a vehicle support structure;

(e) bearing means located generally radially outwardly from the rigid annular member of the fluid pressure chamber

and located between the bracket means and said rigid annular member for providing movement between the bracket means and fluid pressure chamber; and



(f) a second elastomeric member located between and secured to the bracket means and to the bearing means to provide the primary load support for the vehicle when in a static state, said second elastomeric member being less elastic deformable than the first elastomeric member.

5,009,402

VEHICLE ENGINE AND SUSPENSION VIBRATION CONTROL ARRANGEMENT

Shigeki Sato, Yokosuka, Japan, assignor to Nissan Motor Co., Ltd., Japan

Filed Jun. 19, 1989, Ser. No. 367,682
Claims priority, application Japan, Jun. 21, 1988, 63-152655
Int. Cl.[5] F16F *5/00*
U.S. Cl. 267—140.1 **5 Claims**

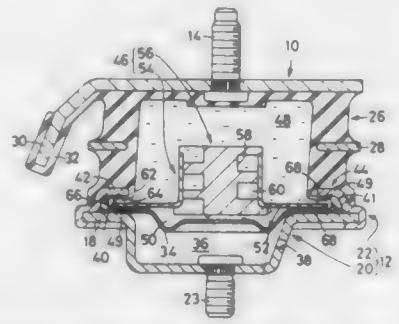
1. A suspension arrangement for use in a vehicle having a chassis and an engine, comprising:

a vehicle suspension comprising a shock absorber including damping control means for selectively varying the damping characteristics of the shock absorber between a plurality of different damping levels to produce a plurality of different suspension hardnesses;

an engine mount which supports the engine on said chassis, said engine mount including a variable-volume main chamber, an orifice passage, an auxiliary chamber which is fluidly connected with the main chamber by said orifice passage, an electrorheopetic fluid filling said main chamber and said auxiliary chamber, and electrodes disposed in said orifice passage such that changes in a voltage impressed upon said electrodes changes the viscosity of the electrorheopetic fluid and the damping characteristics of the mount;

a source of voltage electrically connected with said electrodes for selectively applying one of a plurality of different voltages to said electrodes;

a manually operable switch having a plurality of settings and operatively connected with said damping control means of said shock absorber for switching the damping characteristics of said shock absorber; and



a controller responsive to said switch for controlling the voltage applied to said electrodes by said source of voltage so that when said switch is set to a setting which induces said shock absorber to produce a given damping level, a voltage is applied to said electrodes by said source of voltage such that the damping characteristics of the engine mount are induced to match those produced by the shock absorber for the instant switch setting.

FLUID-FILLED ELASTIC MOUNT

Rentaro Kato, Kasugai, and Tatsuya Suzuki, Inuyama, both of Japan, assignors to Tokai Rubber Industries, Ltd., Aichi, Japan

Filed Jun. 26, 1989, Ser. No. 371,089
Claims priority, application Japan, Jul. 2, 1988, 63-88082
The portion of the term of this patent subsequent to Apr. 23, 2008, has been disclaimed.
Int. Cl.[5] F16M *5/00*
U.S. Cl. 267—140.1 **16 Claims**

1. A fluid-filled elastic mount comprising:

a first and second support member which are spaced apart from each other in a load-receiving direction in which a vibrational load is applied to the elastic mount;

an elastic body for elastically connecting said first and support members;

means for defining a pressure-receiving chamber between said first and second support members, said pressurereceiving chamber being filled with a non-compressible fluid and receiving said vibrational load applied to the elastic mount;

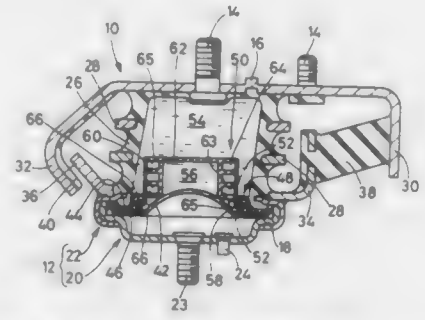
means for defining an equilibrium chamber between said first and second support members, said equilibrium chamber being filled with said non-compressible fluid, at least partially defined by a flexible diaphragm, and having a variable volume;

means for defining a restricted passage for fluid communication between said pressure-receiving chamber and said equilibrium chamber;

a movable member disposed between said pressurereceiving chamber and said equilibrium chamber such that said movable member is movable by a predetermined distance in said loadreceiving direction so as to absorb a fluid-pressure difference between the pressure-receiving chamber and the equilibrium chamber, said movable member being formed of a rigid material and supporting said means for defining said restricted passage;

holding means fixedly supported by said second support member, for holding an outer peripheral portion of said movable member such that the movements of said movable member in said load-receiving direction are limited by butting contacts of said outer peripheral portion of the movable member with a pair of contact surfaces of said holding means; and

a pair of cushioning members secured to said pair of contact surfaces of said holding means, respectively, said outer peripheral portion of said movable member being subjected to shockabsorbing butting contacts with said pair of contact surfaces of said holding means via said pair of cushioning members,



wherein said movable member comprises a first generally cylindrical member having said outer peripheral portion, while said means for defining said restricted passage comprises a second generally cylindrical member having a helical groove formed in an outer circumferential surface thereof, said second cylindrical member being fitted in said first cylindrical member so that said restricted passage is provided by said helical groove closed by an inner circumferential surface of said first cylindrical member.

STRAP WRENCH END ATTACHMENT ASSEMBLY FOR A TWISTED ROPE TORSION BAR

Jack E. Smith, Dayton, Ohio, assignor to General Motors Corporation, Detroit, Mich.

Filed Oct. 19, 1989, Ser. No. 423,930
Int. Cl.[5] B60G *11/18*
U.S. Cl. 267—273 **2 Claims**

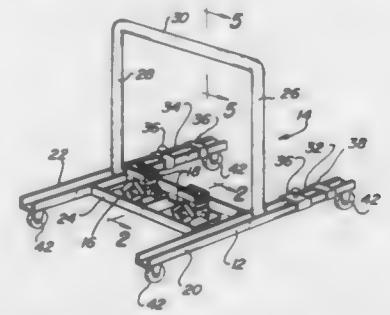
1. A strap wrench end attachment assembly in combination with a twisted rope torsion bar, comprising:

an anchor nut connecting to a mounting means for a sprung mass;

means for attaching said anchor nut to said twisted rope torsion bar, including a plurality of tie rods;

a plurality of strap wrenches operated by said tie rods;

said strap wrenches gripping said twisted rope torsion bar, and being adapted to compress said twisted rope torsion bar when torque is applied;



whereby secure and firm compressive engagement is continuously maintained between said end attachment and said twisted rope torsion bar to transmit torque for shock absorption and reduce the stress concentration at the attachment interface.

VEHICLE DOOR REMOVAL APPARATUS

Gregory J. McDermott, 4725 Clippert, Dearborn Heights, Mich. 48125

Filed Jan. 5, 1990, Ser. No. 461,319
Int. Cl.[5] B23Q *3/00*
U.S. Cl. 269—17 **15 Claims**

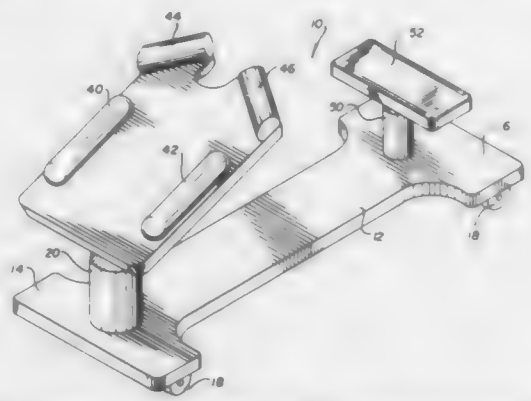
1. A vehicle door removal and replacement apparatus for allowing removal of a door by a single individual operator comprising:

a base portion, said base portion comprising a pair of channel members connected by a central cross member;

an adjustable support connected to said base portion, said adjustable support for engaging a lower edge of an opened vehicle door for vertically supporting the door;

a vertically extending frame member extending from said base portion, said frame member comprising means to adjust said frame member along said base portion for accommodating different widths of vehicle doors; and

a means to secure the vehicle door to said frame member, such that the means to secure and the adjustable support hold the door in a fixed position whereby the door may be



removed from the vehicle, serviced and replaced in substantially the same orientation as when it was removed.

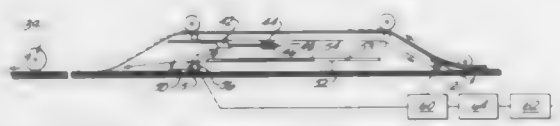
SURGICAL TABLE FOR MICROSCOPIC LUMBAR LAMINECTOMY SURGERY

Robert S. Watanabe, 11645 Wilshire Blvd., Ste. 701, Los Angeles, Calif. 90025

Filed May 15, 1989, Ser. No. 352,058
Int. Cl.[5] A61G *13/00*
U.S. Cl. 269—322 **4 Claims**



1. A surgical table for microscopic lumbar laminectomy, and spine surgical procedures, comprising: an elongated base having a first end and a second end; a first post mounted at the first end of said base and extending vertically upwardly from a horizontal plane of said base; a table top having a first end and a second end mounted on the upper end of said first post as a cantilever and supported at its first end by said post in an upwardly displaced position with respect to said base, said table top being angularly adjustable about a vertical ax of said first post and angularly displaceable relative to a second post mounted at the other end of said base and extending upwardly from the plane of said base; and a horizontal elongated leg support for the patient mounted on the upper end of said second post, longitudinally displaced from the second end of said table top and extending transversely with respect to the base said leg support being angularly adjustable about a vertical axis of said second post.

5,009,408

CONTINUOUS FEED BOARD INSERTER

Nicholas R. Pulskamp, 1616 Bushnell Ave., South Pasadena, Calif. 91030

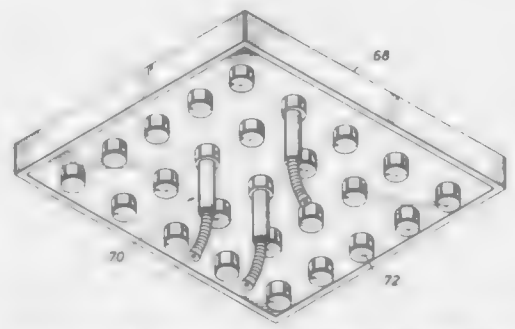
Filed Mar. 16, 1989, Ser. No. 324,584
Int. Cl.[5] B65H *5/30*
U.S. Cl. 270—57 **20 Claims**

1. An apparatus for injecting paper boards and like material into a continuous stream of interleaved paper sheets moving in a forward direction along a primary conveyance means, comprising:

means for lifting the paper stream from the primary conveyance means, the means for lifting providing continued forward movement and subsequently allowing the papers in the stream to fall back onto the primary conveyance means;

retaining means extendible into the path of the falling paper sheets to momentarily detain the trailing edges of the sheets from downward movement;

path clearing means for moving the trailing edges of the falling sheets not detained by the restraining means toward the primary conveyance means;



ejection means for feeding a paper board or like material into the space cleared in the falling sheets by the retaining means and the path clearing means and thus into the moving stream of papers.

METHOD AND APPARATUS FOR MANIPULATION OF FABRIC

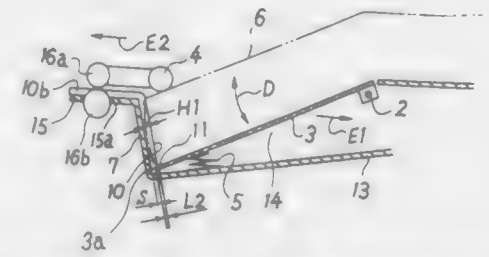
Nazim S. Nathoo, Houston, Tex., and Fanis Giannopoulos, Scotch Plains, N.J., assignors to Shell Oil Company, Houston, Tex.

Continuation of Ser. No. 231,923, Aug. 15, 1988, abandoned. This application Nov. 17, 1989, Ser. No. 437,316
Int. Cl.[5] B65H *3/08*
U.S. Cl. 271—90 **1 Claim**

1. An apparatus for separating at least one curvilinear non-planar layer of porous fabric having a known periphery from a curvilinear non-planar stack of porous fabrics, said apparatus comprising:

a plurality of flow orientation adjustment means, each adjustment means having a first end and a second end, said first end having mount means operatively engaged to a flow locator, said second end having an end effector with a fluid opening defined therethrough, said mount means and said end effector flexibly connected to each other in a fluid tight manner by a moveable manually rebendable flexible tube having constant wall thickness, said tube manually rebendable to fixedly aim said end effector fluid opening into anticipated orthogonal contact with said curvilinear non-planar stack of porous fabrics, said fluid opening in fluid communication with a flow opening defined in a bottom surface of said flow locator, said end effector manually aimable to a desired orientation independent of any other end effector,

fluid movement means cable of moving fluid upward through said fluid opening and said flow opening, and



means for moving in unison said plurality of flow orientation adjustment means so as to fluid-couple each of said adjustment means to said at least one non-planar curvilinear layer, and to thereafter move said flow orientation adjustment means and said at least one non-planar curvilinear layer from said stack.

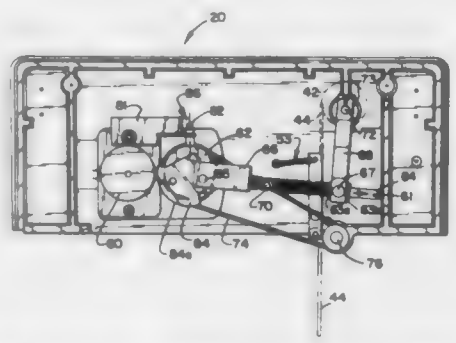
PAPER FEEDING SYSTEM FOR A SHREDDER

Yoshihalu Fujii, Sakurai, and Yukitoshi Fujita, Yamatokoriyama, both of Japan, assignors to Sharp Kabushiki Kaisha, Osaka, Japan

Continuation of Ser. No. 371,655, Jun. 20, 1989, abandoned, which is a continuation of Ser. No. 103,214, Oct. 1, 1987, abandoned. This application Aug. 7, 1990, Ser. No. 563,948
Claims priority, application Japan, Oct. 3, 1986, 61-152797[U]; Jan. 13, 1987, 62-3755[U]
Int. Cl.[5] B65H *3/06*
U.S. Cl. 271—127 **8 Claims**



1. A paper feeding system for a paper shredder comprising: a paper rest rotatably provided around a support shaft of a main body for supporting paper to be shredded; a paper feed roller located above said paper rest; a baffle plate provided on said main body at a position juxtapositioned to a leading end face of said paper rest for preventing paper from shifting forward, there being provided a clearance between said end face and said baffle plate to allow said paper rest to rotate freely around said support shaft; paper stop ribs projecting from the surface of said baffle plate, running in the direction of rotation of said paper rest; and notches formed in said leading end of said paper rest with respect to the paper feeding direction of said paper rest corresponding to each of said paper stop ribs on said baffle plate, permitting said ribs to interlock with said notches when said paper rest is rotated.

5,009,411

INPUT HOPPER APPARATUS

Donald J. Manderfeld, Richfield, and Robert A. Sells, Sells, both of Minn., assignors to DataCard Corporation, Minneapolis, Minn.

Filed Aug. 26, 1988, Ser. No. 237,214
Int. Cl.[5] B65H *1/08*
U.S. Cl. 271—129 **2 Claims**

1. An input hopper apparatus used with card members, the apparatus comprising:

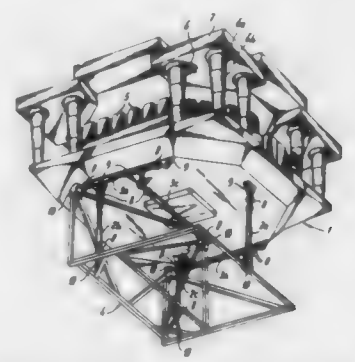
(a) stacking means having a front end and a rear end for storing the card members in stacked configuration, the card members each having opposing facing major surfaces and a top, bottom, first, and second side edge, the card members resting on their bottom edges in the stacking means;

(b) biasing means for biasing the card members toward the front end of the stacking means;

(c) card picker means for separation of a lead card member proximate the front end of the stacking means, wherein a roller assembly proximate the first side edge of the lead card provides frictional force to the lead card member, thus propelling the card member from the input hopper, and wherein the roller assembly comprises a drive roller, a pinch roller and an index roller, the drive roller providing frictional shear force to the lead card member;

(d) a motor;

(e) drive linkage means intermounting the motor to the card picker means, wherein the drive linkage includes a drive pulley connecting to an elongated shaft, the elongated shaft being slidably intermounted to an extension arm of the drive linkage; and,



(f) shear force override means comprising a compressed spring positioned about the elongated shaft between the drive pulley and the extension arm, wherein the spring is continually compressed to drive the extension arm during a drive stroke.

EATHQUAKE SIMULATOR FOR A THEME PARK

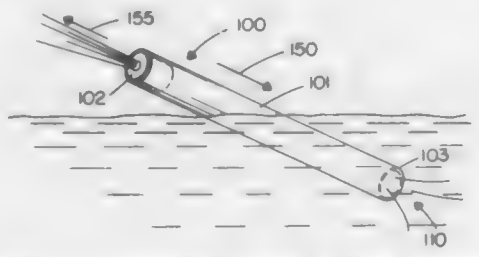
Joop Roodenburg, Delft, and Hendrik F. Roodenburg, Krimpen A/D Ijssel, both of Netherlands, assignors to Itrec B.V., Rotterdam, Netherlands

Filed Nov. 16, 1989, Ser. No. 438,267
Claims priority, application Netherlands, Nov. 16, 1988, 8802827
Int. Cl.[5] A63G *31/00*
U.S. Cl. 272—2 **9 Claims**

1. An earthquake simulator for a theme park which comprises:

a platform having a plurality of chairs securely attached thereto, said chairs provided with safety straps, and ears affixed to the platform;

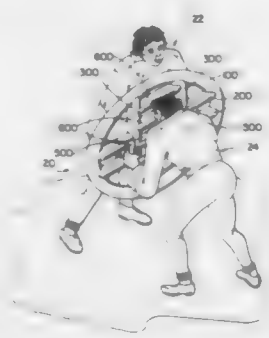
an underframe spaced from the platform having ears affixed thereto;



at least three substantially vertical hydraulic cylinders having opposed ends, arranged in a triangle with one end of each cylinder affixed to the ears of the platform and with the opposed end affixed to the ears of the underframe;

means for movably attaching each hydraulic cylinder between an ear on said platform and an ear on said underframe; and

means for providing pressurized oil to said hydraulic cylinders,



wherein the platform is movable with at least three independently driven degrees of freedom.

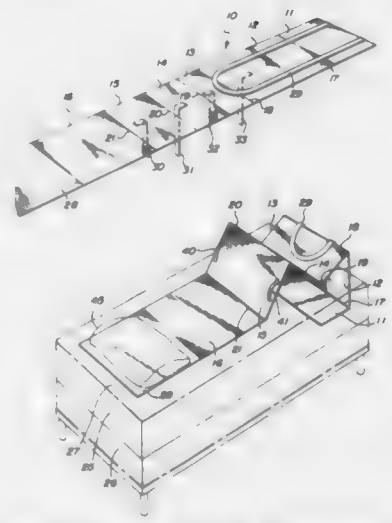
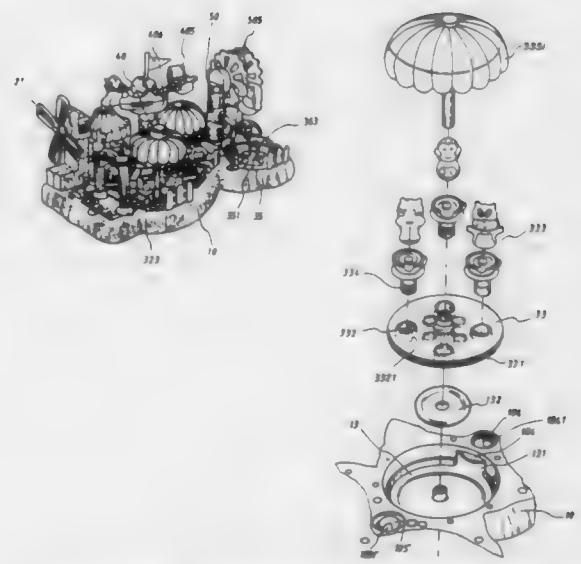
RECREATIONAL GYMNASTIC APPARATUS
Juan M. Perez Blanco, Sevill, Spain, assignor to Internacional de Technicas y diseno, S.A., Sevill, Spain
Filed Sep. 13, 1989, Ser. No. 406,731
Claims priority, application Spain, Sep. 16, 1988, 8802751; Sep. 30, 1988, 8802896; Jan. 5, 1989, 8900023
Int. Cl.[5] A63B *25/08*
U.S. Cl. 272—114 **4 Claims**

1. A recreational gymnastic apparatus of the type in which a user makes successive jumps generated by his body's impulses against and so as to cause the deformation of elastic means which, in their subsequent recovery, cause the combined effect of jumping and advancing of the apparatus, said apparatus, comprising:
a support body having an upright top section and a generally horizontal bottom section joined together to form an acute angle;
a support platform for the user mounted on the bottom section rearwardly of the top section;
the platform having one of an inlay and a housing with a generally hemispherical shape, a mouth facing downward and a window at the rear;



an elastic element including a rubber ball received in said mouth, which fits right in said housing through its mouth;
the window being formed in such a way that the ball rests only on the front half of the hemispherical shape; and
fastening means for the user's feet comprising hook means open on one side for receiving the front of a user's foot and a recess in the platform corresponding to the hook means for receiving the heel of the foot;
handle means for being grouped by the user formed at the top of said top section.

5,009,416
GRIP FACILITATING HANDLE
Scott Caruthers, Glen Burnie, Md., assignor to DAR Products Corporation, Baltimore, Md.
Continuation-in-part of Ser. No. 241,297, Sep. 9, 1988, Pat. No. 4,896,880, which is a continuation-in-part of Ser. No. 94,794, Sep. 14, 1987, Pat. No. 4,813,669. This application Mar. 20, 1989, Ser. No. 325,915
Int. Cl.[5] A63B *21/00*
U.S. Cl. 272—143 **18 Claims**



1. In combination with an apparatus having an existing handle, an auxiliary handle for the apparatus and means to detachably attach the auxiliary handle to the existing handle of the apparatus; such that when attached, the auxiliary handle is rigidly secured to the existing handle and is disposed radially outwardly of the existing handle, wherein a forceful grip is not required for the manipulation or control of the apparatus, the auxiliary handle being substantially unitary and rigid and having respective inner and outer walls defining a chamber therebetween, the auxiliary handle having an opening formed therein and communicating with the chamber for providing access for the user's hand, the chamber being closed internally of the auxiliary handle and limiting the degree of insertion of the user's hand through the opening and into the chamber, such that the user's hand is disposed in the chamber between the inner and outer walls of the auxiliary handle, the inner wall having a substantially convex inner surface, and the outer wall having a substantially concave inner surface, such that the palm of the user's hand substantially rests on the convex inner surface of the inner wall, and such that the back of the user's hand substantially confronts the concave inner surface of the wall, so that the user's hand is substantially in a curved natural at rest position rather than being tightly closed, thereby substantially reducing the human effort and energy required to manipulate or control the apparatus, and thereby substantially reducing the fatigue normally associated therewith and the existing handle of the apparatus being disposed radially inwardly of the inner wall of the auxiliary handle and being nested therein, such that the weight concentration of the existing handle is aligned radially with respect to the auxiliary handle and the user's hand therein.

5,009,417
ABDOMINAL EXERCISE DEVICE
Jeff Sarkozi, 1117 N. Avila Pl., Orange, Calif. 92669
Filed Jul. 31, 1990, Ser. No. 561,337
Int. Cl.[5] A63B *23/02*
U.S. Cl. 272—145 **10 Claims**

1. A portable exercise device for strengthening abdominal muscles and the like of a user, for use on a mattress and box-spring comprising: a plurality of sheet elements serially attached along fold liens having a first end and a second end; said second end comprising at least a plurality of sections one of which is sufficiently long enough to support the thigh portion of the leg and a second attached sheet which is sufficiently long enough to support the lower legs; said second end further comprising a foot securement means located and attached within the plurality of sheets designated as the second end, said first end comprising a body sheet serially attached along a fold line to the second end of the device; whereby, the exercise device is adapted for unfolding along the fold lines and assembly with the mattress and box-spring; for use in a sit-up exercise mode; for removal of the device from the mattress and box-spring; for folding up; and, for carrying or storage.

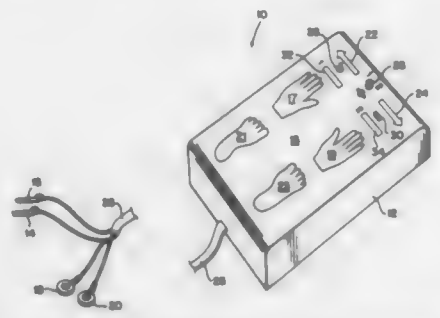
TOY INCLUDING FISHING GAME AND PASSIVE GAME ELEMENTS
Chuang Chuan-Tien, No. 40, Lane 174, Ta Hsin Street, Taipan, Taiwan
Filed May 25, 1989, Ser. No. 356,534
Int. Cl.[5] A63F *9/00*
U.S. Cl. 273—448 **13 Claims**

1. A toy having a participant-interactive game portion for active participation by game participants, and a noninteractive portion for visually entertaining said game participants, said toy including:
a supportive housing having a plurality of cavities;
of least one participant-interactive game pan having a plurality of vertically extending sockets and supported for rotation in a cavity of the plurality of cavities, said at least one participant-interactive game pan including a plurality of game targets positioned in individual sockets of the plurality of vertically extending sockets for access thereto by said game participants;
at least one noninteractive pan having a plurality of vertically extending sockets and supported for rotation in a cavity of the plurality of cavities for visually entertaining said game participants, each of said at least one noninteractive pan including a plurality of passive game pieces positioned for support in individual sockets thereof, a first one of said at least one noninteractive pan being operably connected to a sun gear positioned therebeneath whereby rotation of said first one of said at least one noninteractive pan causes rotation of said sun gear, and each of said plurality of passive game pieces positioned for support in said first one of said at least one noninteractive pan has a cylindrical gear formed on a bottom portion thereof for meshingly engaging with the sun gear such that rotation

of the sun gear causes rotation of each of the plurality of passive game pieces; and



drive means including a motor and gear means for simultaneously rotating said at least one participant-interactive game pan and said at least one noninteractive pan.

MICROCOMPUTER CONTROLLED ROTATION GAME

Willie L. Streeter, 3318 Mount Pleasant St., NW., Washington, D.C. 20010

Filed Sep. 6, 1989, Ser. No. 404,951
Int. Cl.[5] A63F *9/24*
U.S. Cl. 273—454 2 Claims

1. A game device for development of coordination of the hands and feet of a game participant, comprising:

a housing;

indicia representing a pair of hands and a pair of feet located on the surface of said housing;

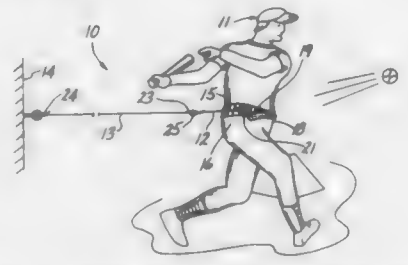
means for generating a sensorially perceptible time sequence of events in the form of light or sound or a combination of light and sound, said sequence generating means including means for generating a plurality of distinct sensorially perceptible events in a predetermined time sequence and at a predetermined time rate;

means for communicating said sensorially perceptible time sequence of events to a game participant, wherein each event of the sequence is associated with one of the indicia representing hands and feet;

means actuable by a participant for responding to said time sequence of events, said participant actuable means including a plurality of manually operable controls, each associated with a single one of said distinct sensorially perceptible events and actuable by the participant in response to one of said distinct events, said participant actuable means including at least four separate controls wherein each of said controls requires actuation by a different one of said participant's hands and feet in response to a stimulus by the sensorially perceptible event and the indicia representing the hands and feet, whereby coordination is developed in the use of the hands and feet of the participant;

means coupled to said time sequence generating means and to said participant actuable means for determining the correctness of the participant's response, said correctness determining means including means for storing a representation of the generated sequence of events and means for comparing the stored sequences with the participant's response, said comparing means including means for providing an indication of the correctness or incorrectness of the response; and

means responsive to said indication of incorrectness for generating an error signal;



wherein said indicia are mounted so that said pair of hands and pair of feet define a generally circular pattern and wherein said sequence of sensorially perceptible events is selectively actuable so as to generate either a random pattern of said hands and feet indicia or a pattern of said hands and feet indicia which is clockwise or counter clockwise.

BATTING PRACTICE METHOD

Joseph M. Martelli, 4242 W. Oak, Fullerton, Calif. 92633

Filed Dec. 23, 1988, Ser. No. 290,147
Int. Cl.[5] A63B *69/40*
U.S. Cl. 273—26 R 5 Claims

1. A batting practice method wherein a batter is to execute a batting stroke as though a ball were moving along a path from one location in a first direction and with the batter located along said path intermediate said one location and a fixed location, said method comprising:

positively restraining the hips of the batter with a device which is coupled to the batter and to said fixed location against significant movement toward said one location while allowing the hips to pivot as the batter executes the batting stroke.

5,009,421

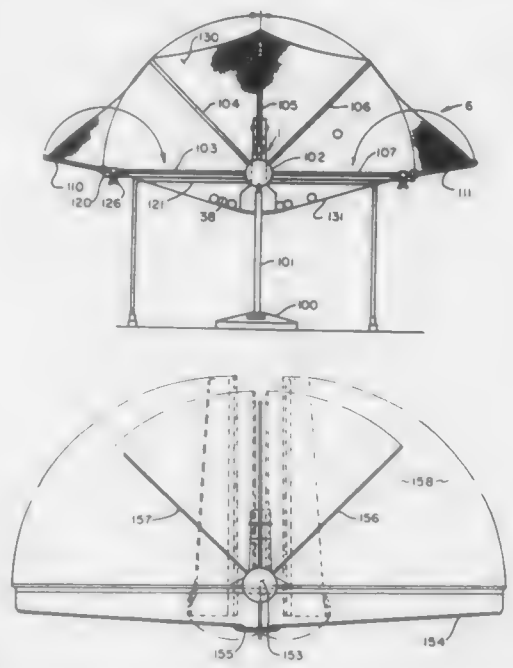

TABLE TENNIS BALL SERVING DEVICE

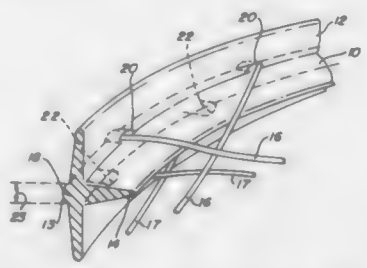
Gary Gatchel, Rockford, Ill.; Joseph E. Newgarden, 10931 Griffing Blvd., Biscayne Park, Fla. 33161, and Gordon E. Lyun, Carol City, Fla., assignors to Joseph E. Newgarden, Gallatin, Tenn.

Continuation of Ser. No. 143,565, Jan. 13, 1988, Pat. No. 4,917,380, which is a continuation of Ser. No. 719,872, Apr. 3, 1985, Pat. No. 4,844,458. This application Nov. 13, 1989, Ser. No. 425,053
Int. Cl.[5] A63B *39/00*
U.S. Cl. 273—30 5 Claims

1. In a robot serving assembly, the improvement comprising net means, said net means including a central portion having a plurality of pivoting arms attached at one end to said central portion in close proximity to one another and extending radially outwardly from said central portion in different angular positions so as to be foldable into a collapsed positions immediately adjacent one another, said arms also being pivotally movable from collapsed to predetermined extended angular positions relative to said central portion, netting attached to and extending between said arms enabling said netting to be maintained in an open and extended position when said arms are moved to their predetermined extended angular positions, said netting also being attached to a trough device for receiving balls, said trough device being pivotally attached to said central portion and also being folded immediately adjacent said arms when collapsed to facilitate joint storage and carrying of

said folded trough device and collapsed arms, and a robot server operatively mounted relative to the trough device in



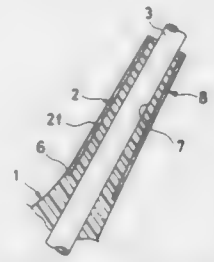
order to feed balls to said robot server when said trough device is in a opened, unfolded and extended position.

5,009,422

SPORTS RACKET

Tsai C. Soong, 1839 Jackson Rd., Penfield, N.Y. 14625

Filed Nov. 20, 1989, Ser. No. 438,862
Int. Cl.[5] A63B *49/02*
U.S. Cl. 273—73 D 9 Claims



1. In a sports racket having a hand grip joined to a frame supporting a string network extending throughout a ball-hitting region spaced from the grip, the frame having a shank region projecting from the grip and flaring outward in a throat region and surrounding a generally oval ball-hitting region spanned by the string network composed of interconnecting strings, the improvement wherein the frame has a cross section including a first member in the plane of the said string network and a second member arranged approximately perpendicular to the said horizontal member, and whereas the majority of the strings of the string network enter and leave the frame at different levels of elevation away from the said plane of the string network, said strings wrapping said first member for support.

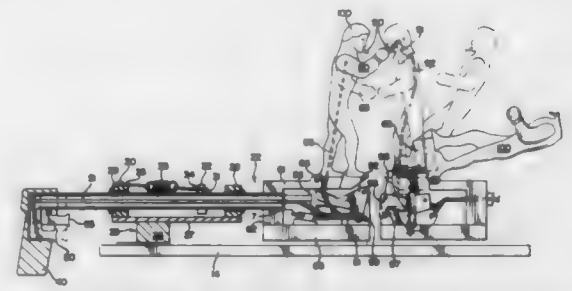
WOOD GOLF CLUB AND ITS PRODUCTION METHOD

Takaharu Okumoto, Chigasaki; Tadashi Hayashida, Hiratsuka; Kazuo Kawada, Hiratsuka, and Tetsuo Hayashi, Hiratsuka, all of Japan, assignors to The Yokohama Rubber Co., Ltd., Tokyo, Japan

Filed Apr. 9, 1990, Ser. No. 506,214
Claims priority, application Japan, Apr. 10, 1989, 1-40963; Dec. 12, 1989, 1-320447
Int. Cl.[5] A63B *52/10*
U.S. Cl. 273—80.2 11 Claims



1. A wood golf club consisting essentially of a club head having a ball hitting face and a club shaft connected to said club head through a neck portion, wherein the main body of said club head and said neck portion are molded integrally from a fiber-reinforced resin as a principal material; said neck portion has an outer peripheral surface recessed from the outer surface of said club head main body through a step; a long-fiber-reinforced resin layer consisting of resin-impregnated long fibers wound so as to cross the axial direction of said neck portion is fitted over said outer peripheral surface; and the outer surface of said long-fiber-reinforced resin layer and the outer surface of said club head main body are substantially at the same level.

5,009,424

GAMEBOARD AMUSEMENT DEVICE

Arthur Harth, 4150 W. Barry, Chicago, Ill. 60641; Adrian T. Dowbrowski, R.R. 1 Box 251A, Remington, Ind. 47977, and Bernard O. Williams, 239 E. Northead Ave., Elmhurst, Ill. 60126

Filed Sep. 20, 1989, Ser. No. 409,804
Int. Cl.[5] A63F *9/14, 13/06*
U.S. Cl. 273—85 D 20 Claims

1. A mechanically operated gameboard amusement device, comprising; in combination:

gameboard having a top playing surface with an accessible underside with a center play area defined by at least one opening in said surface;

a plurality of independent hollow cylinders, each having a pedestal end and a trigger end and extending continuously therebetween with each of said cylinders movably mounted under said gameboard;

pivot means for movably pivoting and slide mounting each of said cylinders under said gameboard;

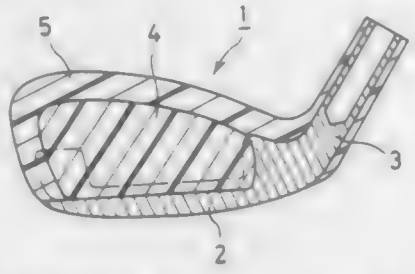
operator means for grasping said trigger end of each of said cylinders;

actuator means for delivering mechanical force from said operator means to said pedestal end;

at least two contact figures pivotably mounted upright upon each of said pedestal ends through said opening, each of said contact figures having a contact figure pivot pedestal removably recessed within a fixed pedestal when said contact figure is positioned upright, and each having a plurality of movable arms cooperatively associated with said actuator means to deliver contact force to an opposing contact figure, said contact figures further defined by having release means for releasing said contact figures from said upright position to a position other than said upright position upon contact from an opposing contact figure, whereby each operator participating in play of said amusement device grasps said operator means and manipulates same in combination with said pivot means and said actuator means to attempt contact between said movable arms and said release means of an opposing contact figure.

5,009,425

GOLF CLUB HEAD



Takaharu Okumoto, Chigasaki; Toshio Ninomiya, Isehara, and Tetsuya Hayashi, Hiratsuka, all of Japan, assignors to The Yokohama Rubber Co., Ltd., Tokyo, Japan

Filed Oct. 27, 1989, Ser. No. 427,539

Claims priority, application Japan, Oct. 27, 1988, 63-269494; Aug. 28, 1989, 1-218519

Int. Cl.[5] A63B *53/04*

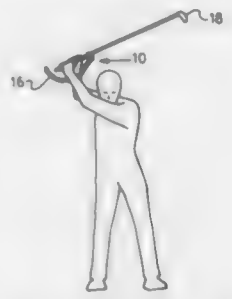
U.S. Cl. 273—167 R **4 Claims**

1. A wood-type golf club head comprising an outer shell consisting of a fiber reinforced thermosetting resin having the shape of a wooden golf club, a metal sole provided on a lower surface of said outer shell, and a core placed on an upper surface of said sole so as to be buried in the interior of said outer shell, said core being molded from a mixture of a thermoplastic resin selected from the group consisting of polyamide, polybutylene terephthalate, polypropylene, ABS and hard vinyl chloride and a metal powder having a high specific gravity selected from the group consisting of zinc, lead and tungsten.

5,009,426

GOLF CLUB GUIDE MEANS

Robert W. Cox, 33 Chapel Hill Road, Chapel Hill, Queensland 4069, Australia



Continuation-in-part of Ser. No. 347,886, Apr. 25, 1989, abandoned. This application Feb. 7, 1990, Ser. No. 480,531

Claims priority, application Australia, Oct. 27, 1986, PH8710 Oct. 27, 1987 [AU] Australia PCT/AU87/00363

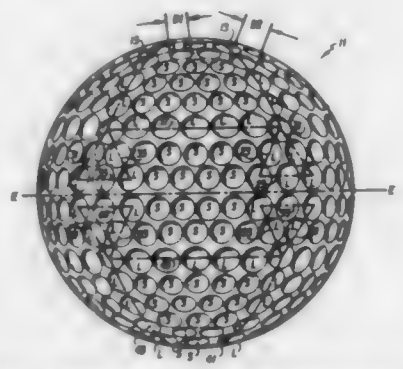
Int. Cl.[5] A63B *69/36*

U.S. Cl. 273—186 A **13 Claims**

1. A golf club and guide bar assembly including a golf club and attached thereto a guide bar having mounting means at one end thereof rigidly and releasably attached to the shaft of said golf club, said guide bar having a forearm contact guide portion which slides over and is maintained in contact with the user's trailing forearm throughout a golf stroke and including contact at the backswing position and contact at the ball-striking position to provide an indication of the alignment of the golf club head relative to the user's trailing forearm, said forearm contact guide portion extending from a first position spaced from the golf club handle whereby the user's trailing forearm will contact the forearm contact guide portion at said first position when the golf club is held in the backswing position, to a second position adjacent the upper end of the golf

club handle, and said forearm contact guide portion having a terminal end extending in a direction back toward said golf club handle, whereby the user's trailing forearm will contact the forearm contact guide portion at said second position when the golf club is held in the ball-striking position.

5,009,427



GOLF BALL

Joseph F. Stiefel, Shrewsbury, Mass.; Terence Melvin, Somers, Conn., and R. Dennis Nesbitt, Westfield, Mass., assignors to Spalding & Evenflo Companies, Inc., Tampa, Fla.

Filed Jun. 6, 1990, Ser. No. 534,087

Int. Cl.[5] A63B *37/14*

U.S. Cl. 273—232 **6 Claims**

1. A golf ball having two poles and an equator and having a preselected number of dimples covering the surface of the ball and arranged in a geometrical lattice configuration based upon a modified icosahedral lattice, said lattice and dimples comprising

a first set of five adjacent triangles on either side of the equator of the ball, with one of the vertices of each of said triangles being located at each pole of said ball and the sides opposite said polar vertices being spaced a predetermined distance from the equator of said ball;

a second set of five triangles smaller than said first set of triangles equally spaced about said ball between said first set of triangles and said equator of said ball, each of said second set of triangles having a vertex common with the lower vertices of two adjacent ones of said first plurality of triangles, with the leg opposite said common vertex being parallel to but spaced from said equator;

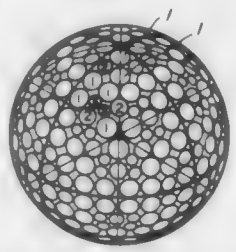
a first plurality of dimples having a diameter D1 lying along the lattice forming said first and second set of triangles;

a second plurality of dimples having a diameter D2 lying within the lattice of said first set of triangles and between the lattice of said second set of triangles;

diameter D1 being greater than the diameter D2; and a dimple-free line about said equator.

5,009,428

GOLF BALL



Hisashi Yamagishi; Shinichi Kakiuchi, both of Yokohama, and Seisuke Tomita, Tokorozawa, all of Japan, assignors to Bridgestone Corporation, Tokyo, Japan

Continuation-in-part of Ser. No. 435,207, Nov. 4, 1989. This application May 2, 1990, Ser. No. 517,730

Claims priority, application Japan, Dec. 2, 1988, 63-305561

Int. Cl.[5] A63B *37/12*

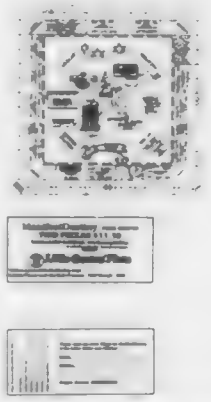
U.S. Cl. 273—232 **4 Claims**

1. A golf ball having at least three types of dimples on the surface thereof, wherein

provided that the ball has a phantom spherical surface, three phantom orthogonal great circles are drawn on the spherical surface to define eight spherical regular triangles, and phantom perpendiculars are extended from the three apexes of each said spherical regular triangle to the opposite sides to divide the spherical regular triangle into six equal spherical right triangles, thereby dividing the entire spherical ball surface into 48 equal spherical right triangles,

dimples are arranged on every two adjoining spherical right triangles such that the dimples are in axial symmetry with respect to the common side of the two adjoining spherical right triangles and the dimples do not intersect the great circles.

5,009,429



INVESTMENT GAME AND METHOD OF ADVERTISEMENT

David Auxier, 3148 Hewitt Ave., Apt. #155, Silver Spring, Md. 20906

Filed Jul. 5, 1990, Ser. No. 548,364

Int. Cl.[5] A63F *3/00*; **G09F** *23/14*

U.S. Cl. 273—240 **25 Claims**

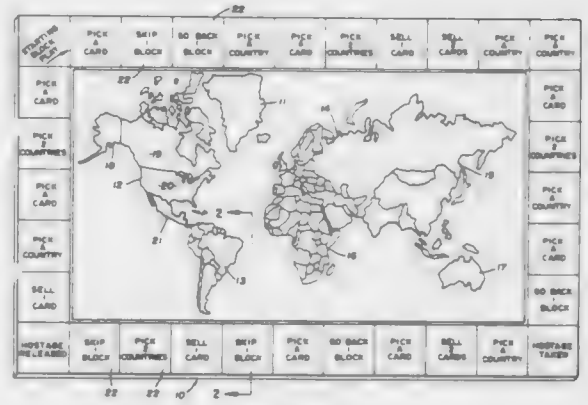
10. A board game including a playing surface comprised of spaces to which player's tokens are moved according to chance selection during play, comprising:

reward means for players including at least one prize coupon with a redemption value comprised of an item selected from the group of real products and actual services;

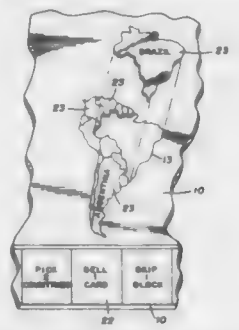
said prize coupon including indicia which identifies businesses which have purchased the right to be included as part of the game as a means for advertisement, said purchases being the means for preselecting said prize coupons as integral to the game through normal, nonfantasy business practices involving the transfer of real value;

means for altering chance selected spaces during play of the game to dynamically alter said play; and a plurality of preselected cards including indicia on selected ones of said cards and said prize coupons representing business entities acquired by the players during the course of the game, acquisition of said spaces, said prize coupons, and said cards being achieved through a fantasy barter system by the players.

5,009,430



METHOD OF PLAYING A GEOGRAPHICAL MAP GAME

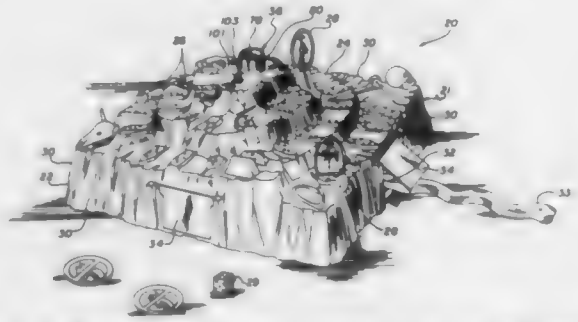


Donald E. Yuhasz, 802 S. Lucius Ave., Youngstown, Ohio 44502

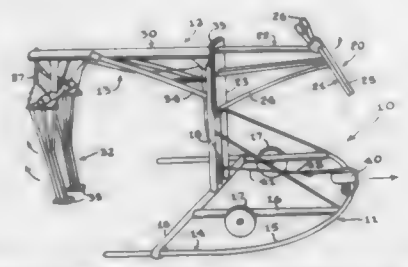
Filed Sep. 10, 1990, Ser. No. 579,948

Int. Cl.[5] A63F *3/04, 9/10*; **G09B** *25/06*

U.S. Cl. 273—255 **4 Claims**

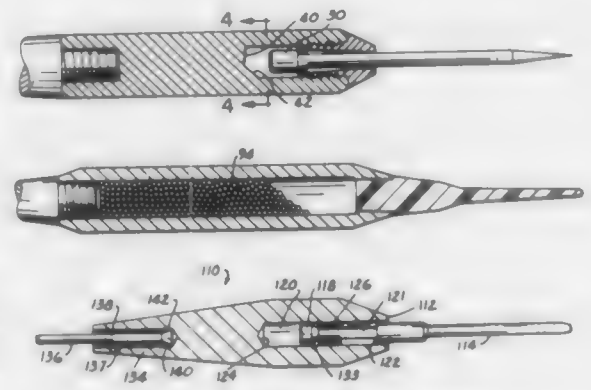


4. The method of playing a board game with at least one die having a number on each of its faces by a plurality of players comprising the following steps: providing a plurality of game board pieces representing countries, providing a plurality of game markers for said players' use, providing a plurality of playing cards bearing titles of military meanings and different point values, providing a game board having a plurality of playing regions representing continents, each of said playing regions further comprising a plurality of countries matching said game board pieces, providing a plurality of blocks on said game board bearing instructions, rolling said die and observing the number rolled, placing a game marker on one of said blocks on said game board as determined by said observed number, starting a timing device which times out when a predetermined length of time has elapsed, randomly selecting and placing a game board piece on said game board on the matching country in said playing region if the instructions on said block so state, picking a playing card from said plurality of playing cards if the instructions on said block so state, determining a total based



on the number of game board pieces placed correctly on matching countries on said game board before said predetermined length of time has elapsed and the total number of point values of the playing cards picked up and crediting said total to a player.

5,009,431
SURPRISE ACTION GAME
Adolph E. Goldfarb, 1432 S. Eastwind Cir., Westlake Village, Calif. 91361, and Martin I. Goldfarb, Santa Monica, Calif., assignors to Adolph E. Goldfarb, Westlake Village, Calif.
Filed Feb. 9, 1990, Ser. No. 477,637
Int. Cl.[5] A63F 3/00
U.S. Cl. 273—258 16 Claims

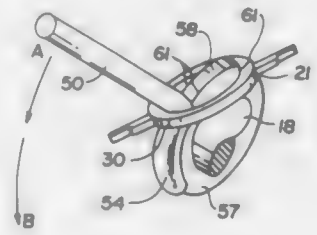


1. A multiple-station surprise action game apparatus comprising:
a base;
a plurality of player stations spaced from each other around the base;
an object-projecting mechanism on the base and capable of projecting an object at any one of said player stations;
means, operatively associated with the object-projecting mechanism, for setting said mechanism on a random or apparently random basis so that the mechanism will project, when the mechanism is activated, an object at only one of said player stations, the identity of said only one player station being concealed from the players;
means, operatively associated with said mechanism, for activating said mechanism to project said object at said only one player station;
indicating means; and
means for activating the indicating means after a random or apparently random period of time.

5,009,432
ROPING PRACTICE APPARATUS
David L. Richard, Rte. 5, Box 3675, Choupique Rd., Sulphur, La. 70663
Filed Oct. 1, 1990, Ser. No. 590,724
Int. Cl.[5] A63B 69/00
U.S. Cl. 273—339 5 Claims

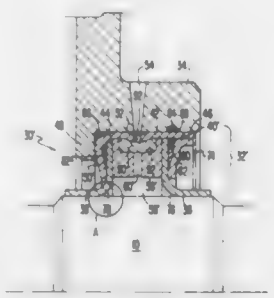
1. A roping practice apparatus for teaching team roping to heelers and headers wherein, the apparatus comprises:
a wheeled support unit having at least one vertically disposed support column;
a rear torso member fixedly secured to said at least one support column; wherein said rear torso member is further provided with at least one pivoted leg element;
a quick release unit comprising a conventional quick release member disposed on said wheeled support unit and further provided with a main cable actuator member which extends from said quick release member to said at least one pivoted leg element.

5,009,433
DART FOR AIMING AT A GAME BOARD
Alexander D. Reid, 2378 Eaton Gate, Lake Orion, Mich. 48035
Filed Dec. 1, 1989, Ser. No. 444,674
Int. Cl.[5] A63B 65/02
U.S. Cl. 273—419 12 Claims



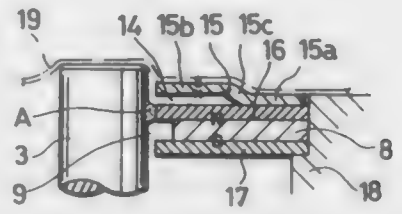
1. A dart for aiming at a game board comprising:
a body portion having a tail portion and spaced therefrom a point portion;
the point portion being movable on a line with the horizontal longitudinal axis of the body portion and on a line with the vertical axis of the body so that the point can stick to the board and avoid obstructions on the board;
wherein the body has a cavity in which the point portion moves as the point engages the target;
a ramp situated at the rear of the cavity causes the point portion to move on a line with the vertical axis of the body when the dart strikes the target; and
the point portion having a needle portion and a head portion wherein the head portion is retained in place by an elastomeric compressible engaging means which is in direct contact with the point portion.

5,009,434
STRETCHABLE OIL SEAL AND METHOD OF INSTALLATION
Stephen E. Nash, Lakeland, and Gerald P. Pichler, Dearborn, both of Mich., assignors to Federal-Mogul Corporation, Southfield, Mich.
Division of Ser. No. 372,208, Jun. 26, 1989, which is a continuation of Ser. No. 149,466, Jan. 28, 1988, abandoned. This application Feb. 20, 1990, Ser. No. 481,280
Int. Cl.[5] F16J 15/00
U.S. Cl. 277—1 3 Claims



1. A method for applying an annular elastomeric seal over a shaft flange and onto a shaft sealing surface using an installation tool, said flange extending radially outwardly and around a shaft, said tool having an outer peripheral arcuate surface and an inner peripheral grooved portion, said method comprising:
engaging said grooved portion of said tool with said flange for guiding the movement of said tool about said flange;

engaging said seal with said arcuate surface of said tool and with a peripheral portion of said flange; and

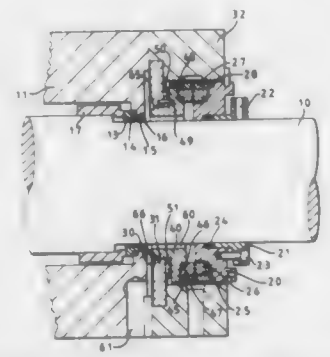


stretching said seal over said flange by pivoting said tool such that said seal is elongated at least about 100% of its unstretched length.

5,009,435
UNITARY SEALING SYSTEM WITH INTERNAL VENTING
Tibor J. Villanyi, Hanahan, S.C., and Kevin W. Westerson, Nashville, Ind., assignors to Cummins Engine Company, Inc., Columbus, Ind.
Filed Aug. 15, 1989, Ser. No. 393,881
Int. Cl.[5] F16J 15/32
U.S. Cl. 277—23 17 Claims

1. A unitary seal device having a dual seal system for sealing around a rotatable shaft between the rotatable shaft and its cover to separate a region of higher pressure along the shaft on one side of the cover from a region of lower pressure along the shaft on the other side of the cover, said sealing system comprising:
an annular outer housing which forms an outer periphery of said unitary seal device, said annular outer housing having a radial through bore formed therein which divides said annular outer housing into an axially inner portion and an axially outer portion, said through bore operating to permit venting through said unitary seal device in the event of a sealing failure;
first and second seal elements each including a radially extending portion and an axially extending portion, each of said radially extending portions being spaced apart from the other to form a central channel and each of said axially extending portions including a shaft engaging surface adapted to sealingly engage the rotatable shaft around to entire circumference of the rotatable shaft;
filter means disposed in said central channel adjacent said through bore for preventing external contamination of said first and second seal elements; and
securing means for securing said first and second seal elements in position within said annular outer housing.

5,009,436
MAGNETIC FLUID SEAL ASSEMBLY
Mineyo Endo; Kiyoyoshi Takegami, both of Oumihachiman; Noriaki Hishida, Kyoto, and Itsuo Miyaji, Youkaichi, all of Japan, assignors to Nippon Densan Corporation, Kyoto, Japan
Filed Dec. 15, 1988, Ser. No. 284,736
Claims priority, application Japan, Jul. 11, 1988, 63-91670
Int. Cl.[5] F16J 15/40; F16C 33/82
U.S. Cl. 277—80 9 Claims



1. A magnetic fluid seal assembly which is arranged between a stationary central shaft and a rotor rotatable about said central shaft, said seal assembly comprising:
an annular sealing clearance formed around said central shaft;
annular magnetizing means mounted on said rotor and surrounding said sealing clearance for forming a magnetic field in said sealing clearance;
ferromagnetic fluid retained in said clearance by said magnetic field; and
an annular cover provided separately from and arranged axially outwardly of said magnetizing means, said cover forming a second annular clearance surrounding said central shaft at a position axially outwardly of said sealing clearance, said cover further forming an annular pocket located between said sealing and second clearances to open toward said central shaft;
wherein said cover and magnetizing means have adjacent, opposed faces, and wherein said cover is permanently magnetized in a manner such that said adjacent, opposed faces of said cover and said magnetizing means are identical in magnetic polarity;
wherein said second clearance is arranged substantially in axial alignment with said sealing clearance, and
wherein said second clearance is normally substantially free of ferromagnetic fluid.

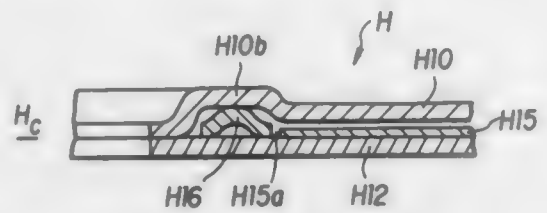
5,009,437
MECHANICAL FACE SEAL INCLUDING TWO DIAPHRAGMS SURROUNDING A GLAND PLATE
Anthony C. Back, Slough, United Kingdom, assignor to John Crane U.K. Limited, United Kingdom
Filed Apr. 25, 1990, Ser. No. 514,182
Claims priority, application United Kingdom, May 3, 1989, 8910106
Int. Cl.[5] F16J 15/36, 15/54
U.S. Cl. 277—88 9 Claims

1. A seal for providing a fluid tight seal between a shaft and housing comprising a first seal face member mounted for rotation with the shaft, a second seal face member mounted on a carrier ring in axially opposed relationship to the first seal face member, a first annular radially extending diaphragm being secured at its outer periphery to a housing and at its inner periphery to the carrier ring, said first diaphragm providing a fluid tight seal between the housing and the carrier ring and being disposed on the high pressure side of the seal face members, a second resilient annular radially extending diaphragm being secured at its outer periphery to the housing, its inner periphery acting against the carrier ring to urge the second seal face member into sealing engagement with the first seal face member, said second diaphragm being disposed on the low pressure side of the first diaphragm, the first and second dia-

phragms being clamped to the housing with a gland plate therebetween, the gland plate extending radially inwardly in

juxtaposed relationship to the first and second diaphragms, the surface of the gland plate adjacent the first diaphragm limiting deflection of the first diaphragm.

5,009,438



STEEL LAMINATE GASKET WITH ASSOCIATED BEADS

Tsunekazu Udagawa, Ichikawa, Japan, assignor to Ishikawa Gasket Co., Ltd., Tokyo, Japan

Division of Ser. No. 194,376, May 16, 1988. This application Oct. 10, 1989, Ser. No. 419,328

Int. Cl.[5] F16J *15/08*

U.S. Cl. 277—235 B **5 Claims**

1. A steel laminate gasket for an internal combustion engine having at least one hole therein, comprising:

a first plate having at least one first hole corresponding to the hole of the engine, at least one first bead situated around the first hole and having a flat top portion, and a main portion situated outside the first bead and extending substantially throughout the entire area of the engine, said first bead further having height between an outer surface of the main portion and an outer surface of the flat top portion and width between an outwardly extending portion adjacent the first hole and an outwardly extending portion adjacent the main portion, said width being greater than said height thereof,

a second plate situated under the first plate and having at least one second hole surrounding the hole of the engine,

support means in the form of an annular shape and including at least one second bead, said second bead being situated above the second plate and beneath the first bead so that when the gasket is tightened, the second bead of the support means abuts against a part of the flat top portion of the first bead and partly supports the first bead to thereby provide wide, strong and even sealing pressure by means of the first and second beads, and

a third plate having at least one third hole with a diameter which is substantially the same as an outer configuration of the first bead surrounding the first hole, said third plate being situated between the first and second plates, said second bead of the support means being situated between the first bead and the second plate within the third hole of the third plate.

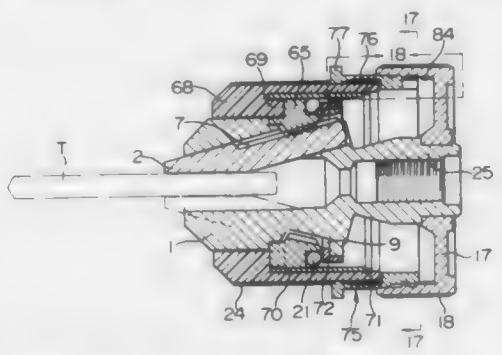
CHUCK FOR TOOLS



Iwao Sakamaki, Ojiya, Japan, assignor to Sakamaki Mfg. Co., Ltd., Ojiya, Japan

Filed Jul. 8, 1988, Ser. No. 216,754

Claims priority, application Japan, Jul. 21, 1987, 62-181563; Feb. 29, 1988, 63-47315

Int. Cl.[5] B23B *31/12*

U.S. Cl. 279—62 **2 Claims**

1. A chuck for tools comprising,

a main body with an axially extending hole through said main body defining a longitudinal axis of the chuck,

a plurality of oblique slots in the main body converging on said longitudinal axis to act as guides for jaw members,

a plurality of jaws slidably received in said oblique slots, each of said jaws provided with an outer surface and a male thread portion,

a rotary member having a female thread portion in meshing engagement with each of said male thread portions of said jaws and rotatably mounted on said main body,

a first grip integrally connected to said main body,

ball bearing mass interposed between said rotary member and said main body for minimizing friction between the two,

a second grip rotatably coupled to the rotary member for applying a rotative torque to the rotary member,

a buffer stop cylinder longitudinally movable relative to said first and second grips between first and second position,

releasable locking means on the stop cylinder and said first and second grips for locking the first and second grips together when said buffer stop cylinder is positioned in said first position and releasing the first and second grips from each other when said buffer stop cylinder is positioned in said second position.

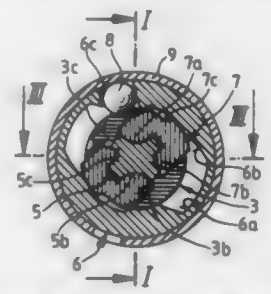
TOOL CHUCK FOR TOOL BITS

Erwin Manschitz, Germering, Fed. Rep. of Germany, assignor to Hilti Aktiengesellschaft

Filed May 24, 1988, Ser. No. 198,046



Claims priority, application Fed. Rep. of Germany, May 25, 1987, 3717614

Int. Cl.[5] B23B *31/10*

U.S. Cl. 279—71 **7 Claims**

1. A tool chuck for holding a tool with an axially extending shank end having at least one axially extending groove thereon, said at least one axially extending groove having closed opposite ends, said tool chuck comprising an axially extending guide tube having an inside surface and an outside surface, an adapter sleeve enclosing at least an axially extending part of said guide tube and being rotatable relative to said guide tube about the axis thereof, and locking elements and entrainment strips mounted for rotation with the guide tube and for selective displacement radially inwardly by said adapter sleeve into at least one groove of the tool, wherein the improvement comprises a holding segment with one said locking element and one said entrainment strip thereon spaced apart in the circumferential direction of said adapter sleeve and

the mounting of said holding segment with said one locking element and said one entrainment strip comprising a through opening extending between the inside surface and the outside surface of said guide tube, said holding segment being radially

displaceable through said through opening by said adapter sleeve and said adapter sleeve arranged and adapted for selective radially inward displacement of said locking element or both of said locking element and entrainment strip of said holding segment.

SKI BOARD BINDING

Lonnie P. Toft, 345 Arcade Dr., Ventura, Calif. 93003

Filed May 21, 1990, Ser. No. 525,615

Int. Cl.[5] A63C *9/083, 5/03;* **B63B** *35/79, 35/81*

U.S. Cl. 280—14.2 **8 Claims**

1. A releasable binding for mounting a foot of a human being onto a structure designed for movement on the surface of the earth, said binding comprising:

a binding assembly composed of a heel strap assembly and an instep strap assembly, said heel strap assembly adapted to be located across the heel of a human foot, said instep strap assembly having a first end and a second end and adapted to be located across the instep of the human foot, said heel strap assembly including an elastic cord, said elastic cord having a first terminal fixedly connected to said first end and a free end adapted to be manually grasped and longitudinally movable from an at-rest position to a stretched position, said elastic cord being mounted in a tube of fixed cross-section and fixedly secured to said second end of said instep strap assembly, with said free end in said at-rest position said elastic cord being of a thickness tightly frictionally engaging with said tube effectively securing together said tube and said elastic cord, with said free end in said stretched position the thickness of said elastic cord is decreased which permits longitudinal sliding movement between said elastic cord and said tube so that said heel strap assembly is to be snugly secured against the heel of the human foot, upon manual release of said free end said heel strap assembly maintains said binding against the heel.

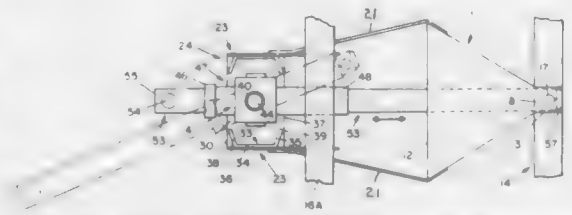
SLIDEABLE JACK STAND
Thomas M. Williams, Jr., 2310 Old Oxford Hwy., Durham, N.C. 27704
Filed Sep. 21, 1989, Ser. No. 410,370
Int. Cl.[5] B60D *1/00*
U.S. Cl. 280—477 **8 Claims**



1. A trailer hitch alignment device comprising:
(a) a ground support structure providing an elevated flat horizontal wall;
(b) a socket member opening upwardly of said wall and having a base portion dimensioned to receive a lower end of a conventional trailer jack shaft;
(c) means for supporting said socket member on said wall and providing a substantially low friction sliding support; and
(d) means for guiding and limiting travel of said socket member on said wall to permit limited lateral and longitudinal sliding movement of said jack shaft when mounted in said socket member comprising:
(i) an elongated guide slot formed in said wall and providing a vertical passage therethrough bounded by a continuous flat, vertical edge, said edge being shaped so as to make a middle of the passage relatively narrow and ends of the passage relatively wide; and
(ii) a guide member secured to said socket member base portion and passing through said low friction sliding support and said passage, said guide member being operative by contacting said edge to permit both limited lateral and longitudinal sliding of said socket member and said jack shaft mounted therein on said wall as required to facilitate trailer hitch alignment.

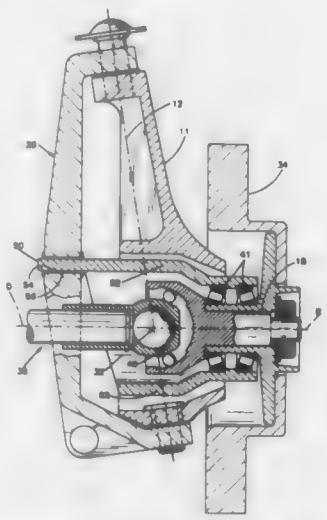
TRAILER HITCH CABLE PULLER
Thomas M. Williams, Jr., 2310 Old Oxford Hwy., Durham, N.C. 27704
Filed Oct. 3, 1989, Ser. No. 416,720
Int. Cl.[5] B60D *1/38*
U.S. Cl. 280—477 **3 Claims**



1. A clamp-on trailer alignment device mountable on a tongue of a trailer having a ball socket, the tongue being formed of a hollow channel of rectangular cross section, comprising:
(a) a winding cable having an outer end fitted with means for engaging a ball mount on a towing vehicle;
(b) a winching mechanism comprising:
(i) a base plate secured to a top surface of the trailer tongue by fasteners positioned on opposite sides of the tongue and secured to a clamp plate on a bottom surface of the tongue and including a side portion extending outwardly from one side of said tongue and having an aperture;
(ii) a drum assembly including a cable drum fixedly mounted on one driven end of a shaft and supported on and positioned above said base plate side portion, said shaft being rotatably supported on and above said base plate and having an opposite drive end extending outwardly from an opposite side of said tongue with a handle mounted on said opposite shaft drive end;
(c) a pulley assembly including a vertical tubular housing secured at an upper end to a bottom surface of said base plate side portion below said aperture and extending downwardly from said base plate to a lower end and a cable pulley mounted in said lower end of said tubular housing; and
(d) said cable extending from said drum through said aperture downwardly through a cavity formed by said tubular housing, over said pulley and from the pulley to the ball mount enabling a run of cable between said pulley and the ball mount to extend at an upward angle to thereby give a lifting effect to the front of said tongue.

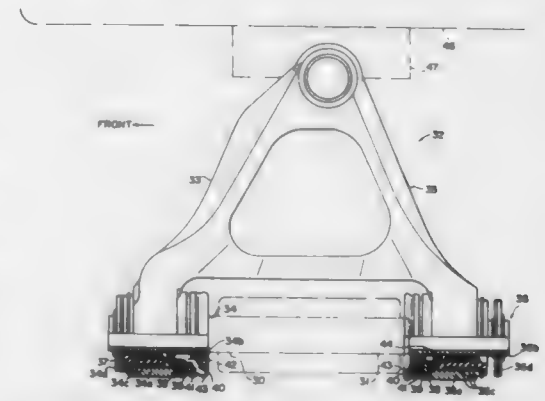
SELF ALIGNING COUPLING APPARATUS
Darrel B. Davis, 170 Macleay Rd., Sequim, Wash. 98382
Continuation of Ser. No. 318,764, Mar. 3, 1989, Pat. No. 4,893,829. This application Jan. 12, 1990, Ser. No. 464,176
Int. Cl.[5] B60D *1/00*
U.S. Cl. 280—479.2 **3 Claims**



1. A self-aligning coupling apparatus for mounting on a vehicle comprising:
a first housing arranged to be secured to the underside of the vehicle,
a dual gimbal housing supported in said first housing for rotatable adjustment in horizontal and vertical directions,
an elongated coupler member having front and rearward ends,
said coupler member being slidably supported in said dual gimbal housing for rotatable and longitudinal adjustable movement with said gimbal housing for connection to a randomly located mating coupler member,
a funnel-shaped guide arranged to be secured to the underside of the vehicle,
said funnel-shaped guide having a large open front end facing said first housing and a smaller rearward end,
said funnel-shaped guide being arranged to slidably receive the rearward end of said coupler member in its rotatably adjusted position and slidably guide the rearward end into the smaller end of the funnel-shaped guide for aligning the elongated coupler member longitudinally with the vehicle,
said first housing including guide means therein that direct said coupler member slidably into said open front end of said funnel-shaped guide,
and latch means associated with the smaller end of said funnel-shaped guide for securing the elongated coupler member in a coupled and aligned position.

ZERO CAMBER STEERING SUSPENSION
Dewitt Gabel, 11018 Blodgett Creek Trail, Strongsville, Ohio 44136
Filed Jul. 5, 1989, Ser. No. 375,711
Int. Cl.[5] B62D *17/00*
U.S. Cl. 280—661 **6 Claims**

1. In a dirigible wheel axle assembly for supporting a wheel of a vehicle, said wheel, when supported on said axle assembly, having a rotation axis, a caster angle, and a camber angle, said axle assembly comprising:
(a) a suspension spindle rotatably mounted to rotate about an inclined but substantially vertical steering axis;
(b) an axle housing attached to said spindle;
(c) a stub axle for supporting said wheel for rotation about said rotation axis of said wheel;
(d) means for rotatably securing said stub axle to said axle housing;
and wherein said axle assembly may also include drive means including a universal joint, said drive means comprising a connection to a drive shaft that is connected to a source of motive power to rotate said shaft about an axis thereof and thereby to rotate said wheel;
wherein the improvement comprises of attaching said axle housing to said spindle by means that allow rotation of said axle housing on a substantially horizontal camber pivot axis that intersects at substantially the same point the said steering axis and the said rotation axis of said wheel and, when a drive means is present, also said axis of said drive shaft;
and wherein the improvement further comprises providing control means to restrict and control the rotation of said axle housing on said camber pivot axis, thereby providing control of said camber angle independent of any steering axis inclination and caster angle.

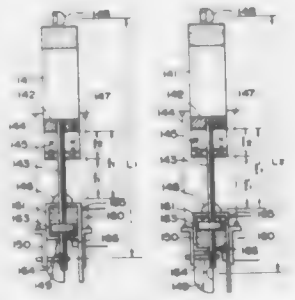
SHOCK ABSORBER FOR USE IN A VEHICLE



Yasuyuki Hayashi, Fukuroi, and Shigenobu Abe, Hamamatsu, both of Japan, assignors to Kabushiki Kaisha Showa Seisakusho, Tokyo, Japan

Filed Jul. 7, 1989, Ser. No. 376,879

Claims priority, application Japan, Jul. 19, 1988, 63-178131; Aug. 19, 1988, 63-108291[U]; Sep. 14, 1988, 63-119876[U]

Int. Cl.[5] B60G *11/14*

U.S. Cl. 280—724 3 Claims

1. A hydraulic shock absorber for a vehicle comprising:
a damper cylinder;
a piston slidably fitted in said damper cylinder, said piston having a compression stroke and a rebound stroke;
a piston rod extending from said piston through an end portion of said cylinder;
a first mounting member for mounting a cylinder end of said shock absorber to one of a body portion and an axle of said vehicle;
a second mounting member for mounting an end of said shock absorber opposite said cylinder end to the other of said body portion and axle of said vehicle;
a first spring bearing secured to said damper cylinder;
a second spring bearing secured to said piston rod;
a suspension spring interposed between said first and second spring bearings; and,
height adjusting means for changing the spacing between said first and second mounting means by changing the compression stroke of said piston with neither the rebound stroke of said piston nor the spacing between said first and second spring bearings changing.

SEAL

Bruce W. Irvine, 856 Andover Crescent, West Vancouver, British Columbia, Canada V7S 1Y5 , and Bruce G. R. Irvine, 2908 Dickerson Place, Victoria, British Columbia, Canada V9B 2G7

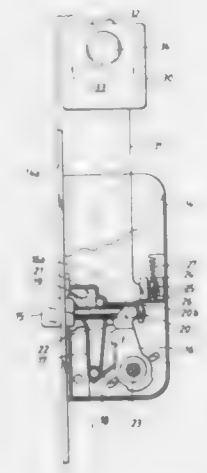
Filed Dec. 5, 1989, Ser. No. 446,507

Int. Cl.[5] F16L *17/00*

U.S. Cl. 285—106 9 Claims

1. A sealed joint between two relatively movable surfaces comprising:
a recess in a first surface;
a sealing member received in the recess with a clearance, the sealing member having a modulus of elasticity such that it does not substantially deform under a predetermined external pressure;
the sealing member extending to contact the second surface;

a sealing ring received in the recess to provide an additional seal for the joint;



whereby pressure applied to one side of the joint can act on that side of the sealing member remote from the second surface to force the sealing member against the second surface, the end of the sealing member being of reduced area where it contacts the second surface to reduce the area of contact with the second surface.

5,009,456

DOOR LOCK APPARATUS

Berth Eck, Bollebygd, Sweden, assignor to Lasinvast Svenska AB, Sweden

Filed Jan. 30, 1990, Ser. No. 472,202
Claims priority, application Sweden, Feb. 10, 1989, 8900450
Int. Cl.[5] E05C *1/16*
U.S. Cl. 292—173 **13 Claims**

1. A door lock apparatus comprising,

a latch bolt,

first spring means for biasing said latch bolt into a latching position,

a door handle driver for retracting said latch bolt from said latching position to a retracted position,

catch means displaceable between a catch position for retaining said latch bolt in said retracted position and an inoperable position,

second spring means for biasing said catch means into said catch position,

an actuator for displacing said catch means from said catch position to said inoperable position,

an alarm detector remotely placed from said lock apparatus for detecting a state of alarm,

a signal transmitter connected to said alarm detector and adapted to transmit a signal when said alarm detector detects said state of alarm, and

a signal receiver connected to said actuator and adapted to receive said signal, whereby upon receipt of said signal by said signal receiver said actuator displaces said catch means from said catch position to said inoperable position.

POUCH FOR MOUNTING TO A VEHICLE DOOR

Thomas A. Shute, 5055 Meeker Drive, Kalama, Wash. 98625

Filed Apr. 24, 1989, Ser. No. 342,739
Int. Cl.[5] B60R *7/04*
U.S. Cl. 296—37.13 **6 Claims**

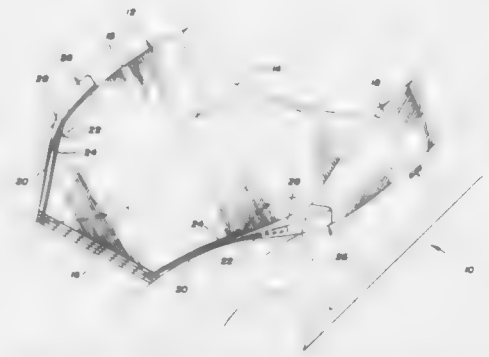
1. A method of mounting a pouch on a vehicle door comprising a frame, an inside panel, and screws securing the inside panel to the frame by engagement with respective screw holes in the frame, said method comprising:

(a) selecting two screws at opposite respective edges of the panel,

(b) providing an elongate mounting bracket having two opposite ends and having a hole adjacent each end, the distance between the holes in the bracket being substantially equal to the distance between the selected screws, and the bracket being coupled to the pouch,

(c) removing the selected screws from their respective screw holes in the frame,

(d) placing the bracket against the door panel with the holes in the bracket aligned with the screw holes in the door frame, and



(e) inserting the screws into the door frame through the respective holes in the mounting bracket.

5,009,459

WIPER SYSTEM FOR RAKED WINDSHIELD

Harlan W. Charles, Southfield, Mich., assignor to General Motors Corporation, Detroit, Mich.

Filed Mar. 22, 1990, Ser. No. 497,172
Int. Cl.[5] B60S *1/28*
U.S. Cl. 296—84.1 **1 Claim**

1. A wiper system in a vehicle of the type having a windshield with a lower edge, an upper edge, and a pair of side edges, each of which side edges is defined partially by a body door pillar line and partially by a hood line, said windshield also having a length measured from said lower to upper edge that is relatively large compared to its width measured between said side edges, a wiper system, comprising,

a pair of wiper arms, each oscillatable about a respective pivot point located at the juncture of a respective door pillar line and hood line and over a wipe pattern having an upper limit parallel to a respective door pillar line and a lower limit parallel to a respective hood line,

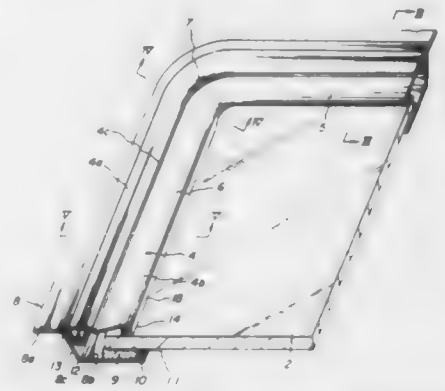
a wiper blade mounted to each of said arms of a length sufficient to reach close to both said upper and lower edges as said wiper arms move in said wipe pattern, and,

a pair of slotted side mirror housings, each located over a wiper arm pivot point and extending partially along a respective hood line,

whereby, as said wiper arms oscillate, they move through said slotted wiper housings as substantially the entire surface of said windshield is wiped by said blades, and when said wiper arms are stopped at said lower limit, they are partially covered by said side mirror housings.

5,009,460

WINDOW MOLDING MEMBER FOR AUTOMOBILES



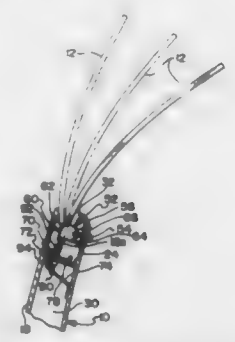
Takao Iwata, and Tetsuo Hotta, both of Yokohama, Japan, assignors to Hashimoto Forming Industry Co., Ltd., Japan

Filed Oct. 26, 1989, Ser. No. 426,779
Claims priority, application Japan, Oct. 31, 1988, 63-142492[U]
Int. Cl.[5] B60J *10/02, 1/20*
U.S. Cl. 296—93 **5 Claims**

1. A window molding member for automobiles including a body panel having an outer surface, a flange which is recessed from said outer surface, and a shoulder portion connecting said flange with said outer surface, and a window plate mounted on said flange of the body panel, said window plate having a peripheral edge opposing said shoulder portion of the body panel leaving a gap therebetween, said molding member comprising at least one upper segment to extend at least partly along an upper edge of the window plate, at least one side segment to extend along at least one side edge of the window plate, at least one corner segment integrally and continuously connecting said upper and side segments with each other in a longitudinal direction of said molding member,

a main body comprising a sheet material and adapted to cover said gap, said main body including first and second sections which are integrally connected with each other and to be engaged with the outer surfaces of said body panel and said window plate, respectively, said second section having a width which varies in the longitudinal direction of said molding member, and

an elongate cushion element comprising a resilient material integrally connected to said second section of the main body to extend along an entire length of the molding

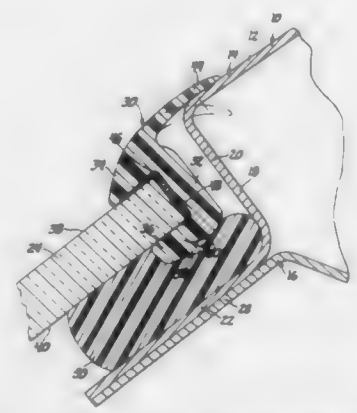


member such that the cushion element contacts said outer surface of the window plate, said cushion element cooperating with said second section of the main body to form a weir along said side segment for preventing water on the window plate from flowing across said side segment and guiding the water to flow along said side segment.

5,009,461

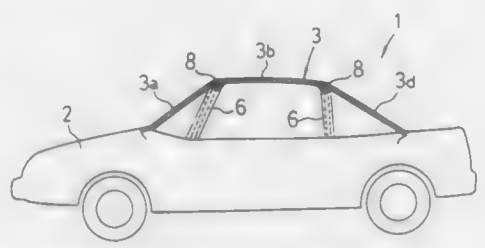
VEHICLE DOOR PIVOTED SIDE GLASS

Garry R. Smith-Horn, Utica, and Robert J. Wendt, Keego Harbor, both of Mich., assignors to General Motors Corporation, Detroit, Mich.



Filed May 31, 1988, Ser. No. 200,225
Int. Cl.[5] B60J *1/14, 5/04*
U.S. Cl. 296—146 **5 Claims**

1. In an automotive vehicle having body structure defining a door opening, a door assembly which is hingedly connected with said body structure via a hinge means for movement between a closed position in which the door assembly closes said opening and is aligned with said vehicle and an open position in which the door assembly extends transversely of said vehicle to permit entry into and exit from said vehicle, the improvement being that said door assembly includes a window which is pivotally supported by a pivot means for movement about a generally horizontal axis between inner and outer positions, said axis being fixed in position relative to a lower part of said door assembly during said movement, and an operating mechanism including a movable member operatively connected with said window and with said body structure for automatically effecting pivotal movement of said window from its inner position towards its outer position in response to movement of the door assembly from its closed position towards its open position so that said window is disposed out of the way to permit ease of entry into the vehicle when the door



assembly is open and for automatically effecting pivotal movement of said window from its outer position towards its inner position in response to movement of the door assembly from its open position towards its closed position so that the window closes off said opening when the door assembly is closed.

WINDOW REVEAL MOLDING
Ricky V. Katcherian, Farmington Hills, Mich., assignor to General Motors Corporation, Detroit, Mich.
Filed Sep. 1, 1989, Ser. No. 401,721
Int. Cl.[5] B60J *1/00*
U.S. Cl. 296—201 1 Claim

1. A motor vehicle window molding installation having a molding concealing a space between an inwardly extending wall of a flanged vehicle body panel and an edge of a window panel, with the edge of the window panel overlying a parallel extended wall intersecting the inwardly extending wall of the flanged vehicle body panel and mounted on the parallel extended wall of the flanged vehicle body panel by a curable adhesive, the molding comprising:
a C-shaped channel member of plastic material fitted onto the edge of the window panel and having spaced apart outer and inner legs which forcibly grip the opposed outer and inner faces of the window panel, said channel member being adapted to receive a bead of adhesive by which the channel member is adhesively mounted onto the window panel, a continuous flexible lip extruded integral with the channel member and adapted upon mounting of the window panel upon the body panel flange by the curable adhesive to bridge across the space between the window panel and the body panel thereby flexing and overlying the body panel and bearing upon the body panel exerting a spring-like influence tending to rotate the molding, and the inner leg having a continuous foot extruded integral therewith, and defined by a crevasse formed in the inner leg underlying the inner face of the window panel and extending angularly away from the intersection of the inwardly extending wall and the parallel extended wall of the body panel flange and towards the inner face of the window panel and terminating within a perimeter of the window panel, wherein the continuous foot is adapted to seat within the curable adhesive so that the adhesive surrounds the foot and enters the crevasse and thereby mechanically retains the lower leg of the molding onto the window panel and the body panel independently of the bead of adhesive within the channel member to thereby further anchor the molding against being dislodged from the vehicle body by the rotary force exerted thereon by the continuous flexible lip.

REINFORCED PLASTIC AUTOMOBILE BODY STRUCTURE
Masahiro Saitoh; Suguru Yoshida; Keiichi Obata, and Yoshinobu Ono, all of Saitama, Japan, assignors to Honda Giken Kogyo Kabushiki Kaisha, Tokyo, Japan
Continuation of Ser. No. 200,030, May 27, 1988, abandoned. This application May 1, 1990, Ser. No. 517,381
Claims priority, application Japan, May 27, 1987, 62-80218[U]
Int. Cl.[5] B62D *25/06;* B60J *1/02, 1/18*
U.S. Cl. 296—210 5 Claims

1. An automobile body structure comprising:
a body shell;
a canopy of molded plastic material carried by said body shell including a front windshield section, a top section, and a rear window section integrally formed of undivided, one-piece construction, said canopy having a primary thickness between interior and exterior surfaces thereof that is substantially uniform;
said interior surface of said canopy extending inwardly to form at least one continuous projection of a thickness greater than said primary thickness which extends laterally across said canopy; and
an arch-shaped rigid support member separate from, but embedded in, said projection and being substantially coextensive therewith.

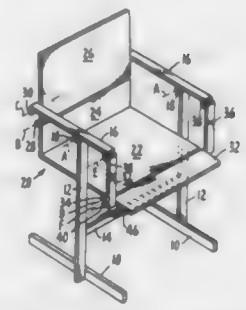
STRUCTURE FOR DRAINING LIQUID FOR A VEHICLE AND METHOD FOR FORMING THE STRUCTURE
Minekazu Hasegawa; Keiichi Ikeda, and Junichi Fujihira, all of Chiba, Japan, assignors to Kinugawa Rubber Industrial Co., Ltd., Chiba, Japan
Continuation of Ser. No. 77,370, Jul. 24, 1987, abandoned. This application Jan. 11, 1990, Ser. No. 463,887
Claims priority, application Japan, Jul. 25, 1986, 61-175092; Aug. 11, 1986, 61-188171; Aug. 12, 1986, 61-189180; Jan. 14, 1987, 62-7149
Int. Cl.[5] B60J *7/11*
U.S. Cl. 296—213 5 Claims

1. A structure for draining fluid from a vehicle, comprising:
a vehicle roof having a roof opening, said roof opening defined by front, rear and first peripheral side portions of said roof and a top edge of a door glass;
a first weatherstrip disposed along said front, rear and first peripheral side portions of said roof, said first weatherstrip including an intermediate portion having a V-shaped cross-section defining a groove recessed in a sidewall of said first weatherstrip, said sidewall being substantially parallel to a longitudinal axis of said first weatherstrip;
an easily removable roof panel disposed in said roof opening and having front, rear, first and second peripheral sides corresponding to said front, rear and first peripheral side portions and to said top edge of said door glass, respectively;
a second weatherstrip disposed along said second peripheral side of said roof panel, said second weatherstrip including an end portion adjacent said first weatherstrip and having a wedge-shaped cross-section portion inserted into said groove of said first weatherstrip in a tongue and groove



type connection when said roof panel is inserted into said roof opening.

5,009,465
ROLL-UP ROOF COVERING FOR AUTOMOBILES WITH REMOVABLE ROOF PANELS
Michael L. Induni, 5873 Dogwood La., Johnston, Iowa 50131
Filed Aug. 14, 1987, Ser. No. 85,372
Int. Cl.[5] B60J *7/10*
U.S. Cl. 296—219 4 Claims

1. A vehicle having a roll-up roof covering with the vehicle body having U-shaped roof openings on opposite sides of a longitudinal center line roof member extending between the windshield and rear of the roof, said body having opposite side windows and said roof on opposite sides adjacent said side windows including front and rear body openings for at times securing roof panels in place, and at other times for securing a roll up roof covering, said roll-up roof covering comprising:
a cover sheet of flexible material having opposite ends extending over said vehicle covering said U-shaped roof openings,
a locking assembly on opposite ends of said cover sheet engaging said front and rear body openings to secure said cover sheet in a covering position over said U-shaped roof openings, and
each of said locking assemblies including a pair of opposed rod means having outer ends respectively received in said front and rear openings in the vehicle body, and one of said rod means being longitudinally moveable relative to the other rod means for engagement and disengagement with the associated body opening.

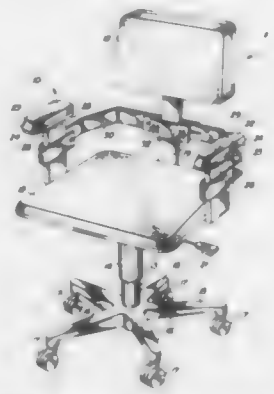
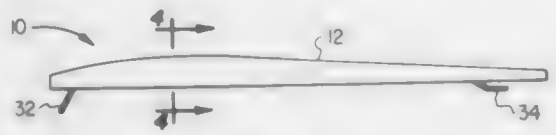
RECLINING CHAIR
Charles O. Perry, 20 Shorehaven Rd., East Norwalk, Conn. 06855
PCT No. PCT/US89/01704, § 371 Date May 2, 1989, § 102(e) Date May 2, 1989
Continuation-in-part of Ser. No. 185,707, Apr. 25, 1988, abandoned. This PCT application Apr. 24, 1989, Ser. No. 381,151
Int. Cl.[5] A47C *1/02*
U.S. Cl. 297—323 3 Claims



1. A reclining chair comprising
a seat having a front and a back, a support plane adapted to support a user and a seat back portion extending approximately six inches above the support plane generally perpendicular thereto,
a frame for supporting the chair on a floor,
an arm pivotally supported on the frame above the seat and pivotally coupled to the front and back of the seat to suspend the seat from the frame for reclining,
a back panel adapted to engage the user's back and forming a first control lever which comprises the coupling between the arm and the back of the seat with the first lever pivoted near its lower end to the seat back portion approximately six inches above the support plane and pivoted to the arm intermediate of its ends for moving the seat horizontally with respect to the arm and supporting the user's low-back responsive to pressure on the first lever by the user's back, and
a thigh support adapted to engage the user's upper legs and forming a second control lever which comprises the coupling between the arm and the front of the seat with the second lever pivoted near one end to the seat and pivotally coupled intermediate to its ends to the seat and pivotally coupled intermediate to its ends to the arm for moving the seat vertically with respect to the arm responsive to pressure on the second lever by the user's legs,
the coupling between the arm and the seat including at least four pivot axes.

5,009,467
ADJUSTABLE ARMREST FOR CHAIR
David C. McCoy, 1903 Brooks La., Oviedo, Fla. 32765
Filed May 30, 1989, Ser. No. 358,814
Int. Cl.[5] A47C *7/54*
U.S. Cl. 297—411 6 Claims



1. An adjustable armrest attachment for providing elbow support to a secretarial chair, or the like, said chair having a generally horizontal seat supported in elevated position on a base and a generally vertical backrest supported above said seat, said attachment comprising:
left and right, oppositely laterally extending bracket members having inner and outer ends;
means attaching said inner ends of said bracket member in adjacent positions at a point of attachment to said chair;
left and right elbow rests;
means respectively attaching said elbow rests to said outer ends in opposing, left and right, laterally spaced positions elevated above said seat;
means located at said inner end point of attachment for

moving said inner ends laterally, opposite to each other and relative to said point of attachment, for selectively varying the lateral spacing of said elbow rests;
means releasably locking said inner ends against said opposite lateral movement; and
means located at said outer ends for selectively varying the elevation of said elbow rests relative to said seat;

wherein said means for varying the lateral spacing further comprises said inner ends being placed in superposed relationship at said point of attachment and each having a laterally extending elongated slot, and said means attaching said inner ends to said chair comprises fastening means extending through said slots.

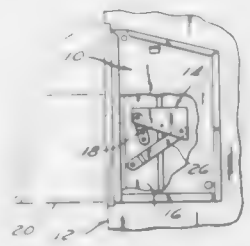
RESILIENT ARM REST
K. A. Fomby, P.O. Box 636, Gainesville, Tex. 76240
Filed Aug. 29, 1986, Ser. No. 902,474
Int. Cl.[5] A47C *7/54*
U.S. Cl. 297—412 **9 Claims**

1. An arm rest cap comprising:
a lower rigid base member for securing said cap to a passenger seat;
an upper resilient member positionable over said base;
a pair of angled strips having a vertical portion and horizontal portion wherein said vertical portion and the upper surface of said horizontal portion are embedded within said upper resilient member and the lower surface of said horizontal portion engages said lower rigid base member.

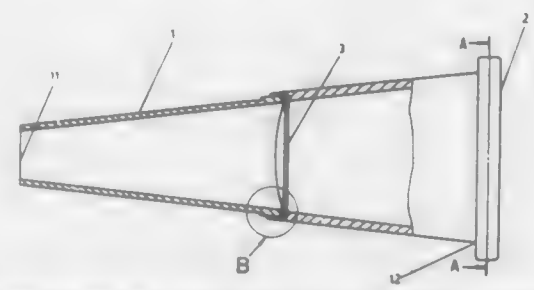


5,009,469
VEHICLE SEAT WITH SEATBELT BUCKLER RECEIVER
Takayuki Mouri, Kanagawa, Japan, assignor to Ikeda Bussan Co., Ltd., Ayase, Japan
Continuation of Ser. No. 345,183, May 1, 1989, abandoned. This application Mar. 22, 1990, Ser. No. 499,208
Claims priority, application Japan, Sep. 21, 1988, 63-123886[U]
Int. Cl.[5] B60R *21/00*
U.S. Cl. 297—468 **11 Claims**

1. A vehicle seat comprising:
at least two seatbelt assemblies each including a belt, a tongue member and a buckle member;
a seat portion;
a seatback portion including a front surface having a recess therein;
one receptacle member for each seatbelt assembly tightly received in said recess and having an opening which faces forward, said receptacle member having a depth which is substantially twice the thickness of each buckle member

and being adapted to receive therein said buckle members in a vertically overlapped condition and parallel to said front surface of said seatback portion.

5,009,470
LATERAL FILE DRAWER POSITIONLOCK
Timothy J. Roller, Ashville, N.Y., and Robert E. Thiele, Wexford, Pa., assignors to Adanlock, Jamestown, N.Y.
Filed May 22, 1989, Ser. No. 354,742
Int. Cl.[5] A47B *88/00*
U.S. Cl. 312—325 **2 Claims**



1. A mounting for a front opening drawer rotatable from a closed position to an open position comprising:
a cabinet side;
a drawer mounting saddle rotatably connected to a first linkage arm and a second linkage arm; said first linkage arm and said second linkage arm rotatably mounted to said cabinet side such that the first linkage arm and the second linkage arm are in continuous non-parallel orientation during rotation from the open position to the closed position, and said first linkage arm and said second linkage arms intersect in the closed position;
an engagement member on the first linkage arm; and
a reception aperture on the second linkage arm to receive the engagement member when the drawer is in the closed position.

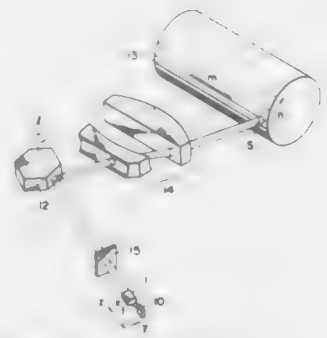
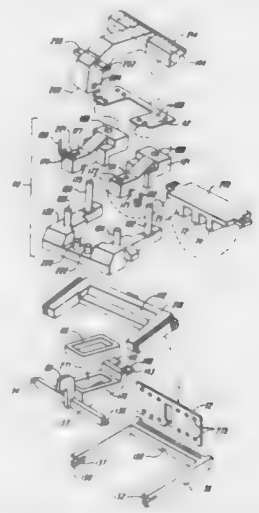
IMPROVED KALEIDOSCOPE STRUCTURE
Vincent K. W. Lee, No. 44, Lane 458, Sheh Chung St., Taipei, Taiwan
Filed Dec. 21, 1989, Ser. No. 454,689
Int. Cl.[5] G02B *23/00*
U.S. Cl. 350—4.1 **9 Claims**



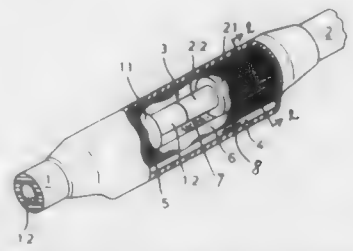
1. A structure for a kaleidoscope, comprising:
a hollow tubular housing having a viewing end and an end opposite said viewing end;
a disk-shaped pattern creating device for producing changing patterns at least in the center portion thereof, said pattern creating device located at said opposite end of said housing; and

a multi-angled prism positioned between said viewing end and said pattern creating device;

thereby creating, at said viewing end, a multi-imaged view of the patterns created by said pattern creating device.



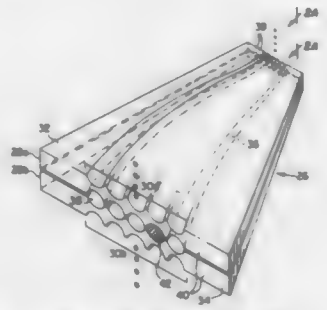
5,009,472
LIGHT SCANNING DEVICE WITH POLARIZING DEVICE TO MAKE LIGHT TRANSMISSION MORE UNIFORM
Akira Morimoto, Tokyo, Japan, assignor to Asahi Kogaku Kogyo Kabushiki Kaisha, Tokyo, Japan
Filed Dec. 31, 1987, Ser. No. 140,166
Claims priority, application Japan, Jan. 8, 1987, 62-1100; Jan. 16, 1987, 62-4583
Int. Cl.[5] G02B *26/10, 26/02*
U.S. Cl. 350—6.5 **25 Claims**



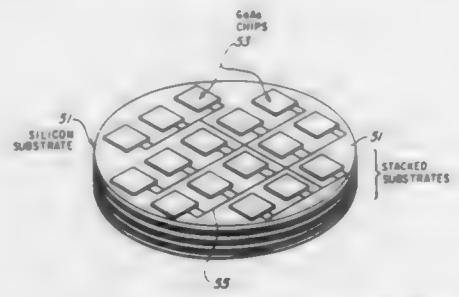
1. A light scanning device comprising:
a light source equipped with a semiconductor laser;
deflecting means for deflecting a light beam emitted by said light source, said light beam being deflected in a scanning direction within a plane which is perpendicular to the plane of the P-N junction of said semi-conductor laser;
a scanning lens for imaging a light beam deflected by said deflecting means on a subject to be scanned; and
a polarizing device for changing the polarized state of said light beam to include polarized light which contains at least a p-polarized component with respect to an incident plane including an optical axis of the scanning lens and an incident direction of the light beam, said light beam passing through said polarization device only once.

5,009,473
LOW VIBRATION RESONANT SCANNING UNIT FOR MINIATURE OPTICAL DISPLAY APPARATUS
Gregory H. Hunter, Westwood; Benjamin A. Wells, Newton, and Michael A. Feldstein, Sudbury, all of Mass., assignors to Reflection Technology, Inc., Waltham, Mass.
Continuation-in-part of Ser. No. 200,645, May 31, 1988, Pat. No. 4,902,083. This application Nov. 13, 1989, Ser. No. 434,351
Int. Cl.[5] G02B *26/10*
U.S. Cl. 350—6.6 **24 Claims**

1. In a resonant electromechanical scanning unit having a base, a mirror, a mirror frame attached to said mirror, a first spring connecting said mirror frame to said base to allow said mirror and said mirror frame to oscillate relative to said base, a counterbalance mass, a second spring connecting said counterbalance mass to said base to allow said counterbalance mass to oscillate relative to said base and a drive motor for causing said mirror and said counterbalance mass to oscillate, the improvement wherein at least a portion of said mirror frame and said base are comprised of a moldable material and are fabricated by a molding process and said first spring is inserted into said base and into said portion of said mirror frame during said molding process to form an integral mirror mount unit.

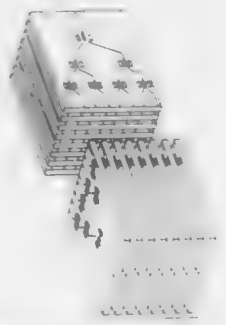


5,009,474
PROTECTION DEVICE FOR A FIBER LIGHT CONDUCTOR JUNCTION
Ulrich Wurmser, Rottach-Egern, and Josef Meyer, Grossbelfendorf, both of Fed. Rep. of Germany, assignors to Messerschmitt-Boelkow-Blohm GmbH, Munich, Fed. Rep. of Germany
Filed Nov. 8, 1989, Ser. No. 434,407
Claims priority, application Fed. Rep. of Germany, Nov. 10, 1988, 3838075
Int. Cl.[5] G02B *6/38*
U.S. Cl. 350—96.2 **5 Claims**



1. A protection device for a junction between two ends of fiber light conductors facing each other, comprising a protection jacket on each of said fiber light conductors, a sleeve envelope (4) of shrinkable material bridging said junction, a shrink fit between each end of said sleeve envelope and the respective protection jacket for securing said sleeve envelope to said protection jackets through said shrink fits, a fiber material filling in said sleeve envelope, said fiber material filling comprising uninterrupted tension resistant filler fibers bridging said junction inside said sleeve envelope, said filler fibers having such a length that each fiber end reaches into a respective shrink fit where said fiber ends are compressed directly between said sleeve envelope and said protection jacket by said shrink fit of said sleeve envelope on said protection jacket for transmitting tension loads substantially only through said tension resistant filler fibers.

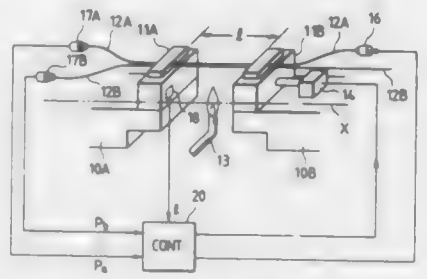
5,009,475
IMAGE TRANSFER DEVICE AND METHOD OF MANUFACTURE
Steven B. Kmetzon, Golden, Colo., assignor to Advance Display Technologies, Inc., Golden, Colo.
Filed Dec. 27, 1989, Ser. No. 457,269
Int. Cl.[5] G02B 6/00
U.S. Cl. 350—96.10 8 Claims



1. An image transfer device, comprising:
at least first and second pre-molded spacers each having first and second opposed longitudinal surfaces and first and second opposed end surfaces, with at least one of the opposed longitudinal surfaces of each spacer provided with a plurality of elongated grooves etched therein with the grooves being in substantially abutting relation along the first end surface and laterally displaced from one another and terminating along the second end surface, and wherein the second end surface of each spacer has a predetermined thickness greater than the thickness of the first end surface;
means for interconnecting the first and second spacers in back-to-back confronting relationship such that the etched grooves of the first and second spacers cooperate to form a set of closed channels through the interconnected first and second pre-molded spacers; and
means located within each of the closed channels for conducting elemental image portions of an image through the closed channels between the first and second end surfaces, wherein the means for conducting includes a conducting material along an inner peripheral surface of each of the closed channels.

5,009,476
SEMICONDUCTOR LAYER WITH OPTICAL COMMUNICATION BETWEEN CHIPS DISPOSED THEREIN
Lee R. Reid, Plano, and Han-Tzong Yuan, Dallas, both of Tex., assignors to Texas Instruments Incorporated, Dallas, Tex.
Filed Jan. 16, 1984, Ser. No. 571,044
Int. Cl.[5] G02B 6/12; H01L 31/12
U.S. Cl. 350—96.11 33 Claims

1. An optical communication system which comprises:
(a) support means of semiconductor material having a surface;
(b) optical frequency signal transmission means disposed within and forming a part of said support means and extending to said surface;
(c) a first semiconductor element having an optical frequency signal transmitter disposed at the surface of said support and optically coupled to said transmission means; and
(d) a second semiconductor element having an optical frequency signal receiver disposed at the surface of said support and optically coupled to said transmission means.



5,009,477
OPTICAL INTERCONNECT ARRANGEMENT
Rodney C. Alferness, Holmdel, N.J.; Zigmantas L. Budrikis, Dalkeith, Australia; David W. Hagelbarger, Nederland, Colo.; Herwig W. Kogelnik, Rumson, and Arun N. Netravali, Westfield, both of N.J., assignors to AT&T Bell Laboratories, Murray Hill, N.J.
Filed May 12, 1989, Ser. No. 350,962
Int. Cl.[5] G02B 6/28, 6/26
U.S. Cl. 350—96.15 19 Claims

1. An arrangement comprising:
An M plurality of output plates each having N output ports delivering optical energy substantially along a line, said output plates being substantially parallel to each other, thereby forming an array of output energy ports;
an N plurality of input plates, each having M input ports for receiving optical energy substantially along a line, said input plates being substantially parallel to each other;
and means for coupling the optical energy of output j of plate i in said M plurality of output plates to input i of input plate j in said N plurality of input plates, where i is an integer in the range 1 to M and j is an integer in the range 1 to N.

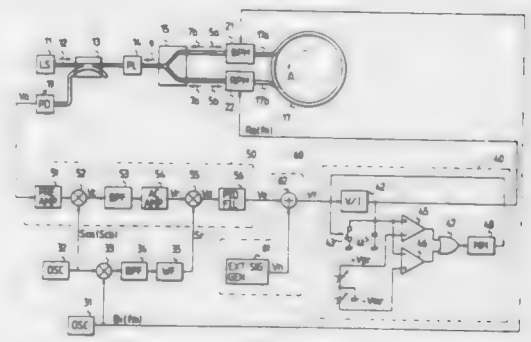
METHOD FOR THE MANUFACTURE OF AN OPTICAL FIBER COUPLER
Hiroyuki Sasaki, Hachiouji; Masato Shimamura, Sagamihara; Juichi Noda, Mito; Hiroaki Hanafusa, Mito, and Yoshiaki Takeuchi, Mito, all of Japan, assignors to Japan Aviation Electronics Industry Limited and Nippon Telegraph and Telephone Corporation, both of Tokyo, Japan
Filed Nov. 7, 1989, Ser. No. 432,935
Claims priority, application Japan, Nov. 18, 1988, 63-292139
Int. Cl.[5] G02B 6/26; C03B 23/20
U.S. Cl. 350—96.15 5 Claims

1. A method for the manufacture of an optical fiber coupler by fusion welding at least two optical fibers, comprising the steps of:
fusion welding at least two optical fibers to form coupled optical fibers;
heat elongating said coupled optical fibers;
measuring a performance of said coupled optical fibers at a desired elongation length;
repeating said heat elongating step and said measuring step at least twice for different elongation lengths;
determining a functional equation representing a relationship between said elongation length and said performance of said coupled optical fibers, through approximate calculation based on measured values of the performance;
calculating from said functional equation an elongation

length which provides an intended performance of said coupled optical fibers; and
heat elongating said coupled optical fibers to said calculated elongation length to obtain said optical fiber coupler.



5,009,479
OPTICAL FIBER COUPLING DEVICE AND METHOD FOR ITS USE
Shawn J. Morrison, Saskatoon, Canada, assignor to Northern Telecom Limited, Montreal, Canada
Filed Oct. 5, 1989, Ser. No. 417,624
Claims priority, application Canada, Sep. 27, 1989, 613,580
Int. Cl.[5] G02B 6/26; H01J 5/16
U.S. Cl. 350—96.15 13 Claims

1. An optical coupler, comprising:
a rigid coupling element having a concave surface defining a desired bend profile for an optical fiber, the coupling element comprising a rigid body having the concave surface and an optoelectronic device carried by the rigid body at a position and orientation for optical coupling between the optoelectronic device and an optical fiber held against the concave surface so as to conform to the desired bend profile;
a resiliently deformable bending element having a convex surface which is complementary to the concave surface of the coupling element; and
means for urging the bending element toward the coupling element so as to conform an optical fiber placed between the concave surface of the coupling element and the convex surface of the bending element to the desired bend profile

13. A method for coupling an optical signal between an optical fiber and an optoelectronic device, the method comprising:
providing a rigid coupling element having a concave surface defining a desired bend profile for an optical fiber, the coupling element comprising a rigid body which includes the concave surface and an optoelectronic device which is carried by the rigid body at a position and orientation for optical coupling between the optoelectronic device and the fiber conforming to the desired bend profile against the concave surface;
providing a resiliently deformable bending element having a convex surface which is complementary to the concave surface of the coupling element;
placing an optical fiber between the convex surface of the bending element and the concave surface of the coupling element; and
urging the bending element toward the coupling element so as to conform the optical fiber to the desired bend profile.

5,009,480
FIBER OPTIC GYRO
Kenichi Okada; Masashi Nishino, and Shu Tanigawa, all of Tokyo, Japan, assignors to Japan Aviation Electronics Industry Limited, Tokyo, Japan
Filed Aug. 3, 1990, Ser. No. 562,605
Claims priority, application Japan, Aug. 11, 1989, 1-208860; Oct. 13, 1989, 1-267582
Int. Cl.[5] G02B 6/26; G01B 9/02
U.S. Cl. 350—96.15 7 Claims

1. A fiber optic gyro comprising:
a light source;
an optical fiber coil;
an optical coupler whereby light from said light source is split into two for input into said optical fiber coil at one end and at the other end thereof, respectively, and two rays of light having propagated through said optical fiber coil in opposite directions and output therefrom are caused to interfere with each other;
a photodetector for detecting said interference light available from said optical coupler;
a biasing phase modulator disposed between said optical coupler and one end of said optical fiber coil;
a biasing voltage generator for generating a phase modulating biasing voltage of a predetermined frequency which is applied to said biasing phase modulator;
a ramp phase modulator disposed between said optical coupler and the other end of said optical fiber coil;
a ramp voltage generator for generating a phase modulating ramp voltage which is applied to said ramp phase modulator;
a phase difference detect/control section whereby a phase difference between said two rays of light interfering with each other in said optical coupler is detected from the output of said photodetector and said ramp voltage generator is controlled by said detected output so that said phase difference may be of a predetermined value;
external signal generating means for generating a varying external signal; and
external signal adding means whereby external signal is added to the output of said phase difference detect/control section and said added output is applied to said ramp voltage generator to thereby fluctuate the frequency of said ramp voltage.

METHOD AND APPARATUS FOR FABRICATING A PIGTAILED LENS ASSEMBLY

Thomas C. Lincoln, South Pasadena, Calif., assignor to Microdot Inc., Chicago, Ill.

Filed Sep. 25, 1989, Ser. No. 411,919

Int. Cl.[5] G02B *6/32*

U.S. Cl. 350—96.18 **12 Claims**

1. An apparatus for joining an optical fiber to a spherical lens comprising

means for retaining said spherical lens so as to allow a light beam to pass through said lens along a first axis thereof;

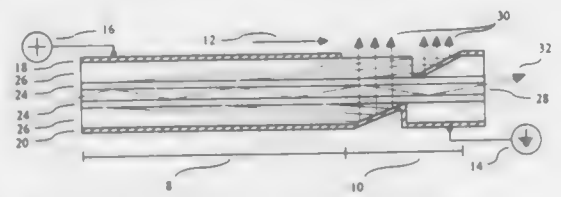
means for directing a low intensity light beam through said lens along said first axis thereof;

means for micropositioning an end of said optical fiber in contiguity with said lens and colinear with said first axis thereof, whereby said low intensity beam is directed into said optical fiber by said lens;

means optically coupled with said fiber for detecting the amount of said low intensity beam directed into said fiber by said lens; and

means for directing a high intensity light beam through said lens along said first axis thereof, the intensity of said high intensity beam as focused by said lens being sufficient to fuse said fiber to said lens.

5,009,483



OPTICAL WAVEGUIDE DISPLAY SYSTEM

Marshall A. Rockwell, III, 303 Grenola St., Pacific Palisades, Calif. 90272

Continuation-in-part of Ser. No. 337,141, Apr. 12, 1989. This application Jul. 25, 1989, Ser. No. 385,910

Int. Cl.[5] G02B *6/04*

U.S. Cl. 350—96.24 **23 Claims**

1. A visual optical switching element comprising:

a first elongated transparent optical material,

a second elongated optical material,

said first and said second optical materials arranged alongside each other,

a light source positioned in a light coupling relationship to said first elongated optical material,

a means for causing some of the light traveling through said first optical material from said light source to exit selectively into said second optical material so light can be observed by a viewer,

a means of altering the path taken by light traveling through said second optical material,

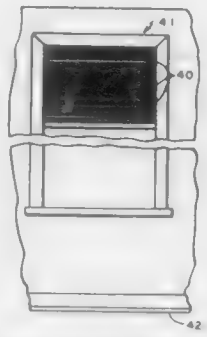
said path altering means consisting of a plurality of abrupt discontinuities formed in said second optical material.

5,009,484

DIFFRACTION GRATINGS HAVING HIGH EFFICIENCIES

Hendrik J. Gerritsen, Providence, R.I., assignor to Advanced Environmental Research Group, Woolwich, Me.

Filed May 3, 1989, Ser. No. 346,726



Int. Cl.[5] G02B *5/18*

U.S. Cl. 350—162.11 **16 Claims**

1. A diffraction grating structure comprising

a substrate having a grating portion at an input surface thereof and an adjacent solid portion at an output surface thereof;

a plurality of diffracting elements formed in said grating portion, each of said diffracting elements including grooves having a selected depth which depends on a selected design wavelength λ of incoming radiation impinging thereon, the diffracting elements being formed at a selected slant angle ϕ with reference to a direction

orthogonal to the plane of the input surface of said grating portion

MULTIPLE-NOTCH RUGATE FILTERS AND A CONTROLLED METHOD OF MANUFACTURE THEREOF

James T. Hall, Torrance, Calif., assignor to Hughes Aircraft Company, Los Angeles, Calif.

Filed Aug. 17, 1989, Ser. No. 394,909

Int. Cl.[4] G02B *27/00;* **B05D** *5/12;* **C23C** *14/54*

U.S. Cl. 350—163 **9 Claims**

1. A method for forming a multiple-notch rugate filter comprising a substrate having formed thereon a layer of an optical material having a refractive index that varies according to a continuous predetermined pattern as a function of the thickness of said layer, comprising the steps of:

(a) providing said substrate;

(b) providing rectants which interact physically or chemically to form said optical material as a layer on said substrate;

(c) providing an ideal target profile of refractive index versus thickness of said layer, said profile having a multiple-notch composite pattern formed from superpositioned single-notch patterns, and determining from said target profile ideal values of optical thickness at successive points in time corresponding to points along said profile;

(d) providing target process conditions as a function of time for said reactants operative to form said layer having said ideal target profile;

(e) initiating said process conditions to form a layer having a depositing profile;

(f) performing continuous optical monitoring of said layer as deposited to provide an optical signal;

(g) determining from said optical signal the measured increments of optical thickness of said layer as deposited and continuously monitoring said increments of optical thickness;

(h) determining whether said optical thickness value is measured at the predetermined time relative to said target process conditions that produce said ideal target profile;

(i) based on the results of (h), determining the multiple sinusoidal phase-angle adjustments required to be made to the depositing profile of refractive index versus thickness of said layer in order to follow accurately said ideal target profile, wherein said determining comprises applying the following equation:

$$n(z, \phi_i) = \bar{n}^{*} - \frac{1}{2}\sum_{i=1}^{m} \Delta n_i^{*} \sin\left(\frac{4\pi \bar{n}^{*} z^{*}}{\lambda_i} + \phi_i\right)$$

where

n = refractive index of optical material

$\bar{n}$ = average index of refraction over one period in film thickness space (z)

m = total number of rugate transmittance notches

z = design position of layer

i = component integer

Δn_i = i^{th} peak-to-trough index modulation

λ_i = i^{th} notch wavelength

ϕ_i = i^{th} sinusoidal phase angle adjustment, continually updated by algorithm to insure Bragg reflection at λ_i

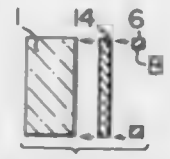
* = parameters that can have local errors, which are compensated for by ϕ_i

(j) altering said process conditions over time to provide said adjustments to said actual profile;

(k) repeating steps "f" through "j" the number of times required to form said multiple-notch rugate filter.

5,009,486

FORM DEPICTING, OPTICAL INTERFERENCE AUTHENTICATING DEVICE



Jerzy A. Dobrowolski, Ottawa; Fang C. Ho, Gloucester, and Allan J. Waldorf, Kemptville, all of Canada, assignors to Canadian Patents and Development Limited/Societe Canadienne des Brevets et D'Exploitation Limitee, Ottawa, Canada

Continuation-in-part of Ser. No. 741,562, Jun. 5, 1985. This application Mar. 23, 1989, Ser. No. 327,542

Claims priority, application Canada, Jun. 8, 1984, 456146

Int. Cl.[5] G02B *1/10, 27/00;* **B42D** *15/00*

U.S. Cl. 350—164 **13 Claims**

1. An authenticating device for a document for confirming the authentication of the document, comprising:

(a) a substrate attachable to or forming part of the document;

(b) at least one form depicting coating carried on a first side of the substrate, said depicting coating having at least one, at least partially translucent, optical interference layer with the material and thickness thereof such as to provide first particular and known spectral reflectance and spectral transmission characteristics to the form depicting coating, said depicting coating being in a predetermined planar configuration such as to provide a design form to said depicting coating;

(c) at least one contrast coating carried on said first side of the substrate and in interfacial contact with the depicting coating, said contrast coating where coextensive with the depicting coating having at least one, at least partially translucent, optical interference layer with the material and thickness thereof such as to provide second particular and known spectral reflectance and spectral transmission characteristics to the contrast coating, said contrast coat-

ing having a planar area greater than the planar area of the depicting coating so that only a portion of the contrast coating is in interfacial contact with the depicting coating; and

wherein the difference in the said first and second characteristics is sufficient that when the coatings are viewed from a particular angle, the design form of the depicting coating is visible by light reflected or transmitted at lest in part by optical interference at said interfacial contact of the coatings as a different color from hat of the contrast coating which is not in interfacial contact with the depicting coating.

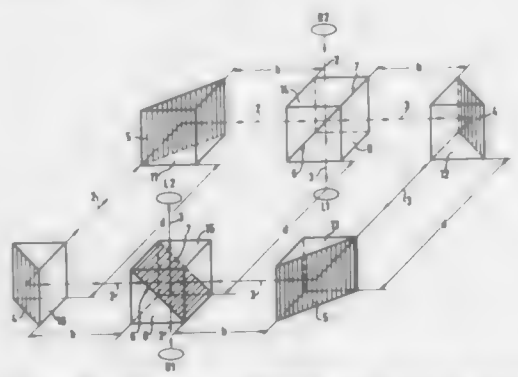
PRISM SYSTEM FOR A STEREOSCOPIC MICROSCOPE



Josef Reiner, Cologne, Fed. Rep. of Germany, assignor to Oculus Optikgeraete GmbH, Wetzlar, Fed. Rep. of Germany

Filed Jul. 28, 1989, Ser. No. 386,735

Claims priority, application Fed. Rep. of Germany, Jul. 30, 1988, 3826069

Int. Cl.[5] G02B *5/04, 21/22*

U.S. Cl. 350—286 **13 Claims**

1. In a prism system for a stereoscopic microscope having a plurality of reflecting surfaces each deflecting one of a right and left beam path by 90°, the improvement comprising wherein four of said reflecting surfaces are provided in each beam path, wherein two of said surfaces in each beam path are reflection surfaces arranged in planes parallel with respect to an optic longitudinal axis of the microscope, and wherein the two other surfaces in each beam path are respectively inlet and outlet surfaces and are inclined at 45° with respect to the optic longitudinal axis and at 90° with respect to one another.

5,009,488

FILTER ACCESSORY FOR AN IMAGING MICROSPECTROFLUORIMETER

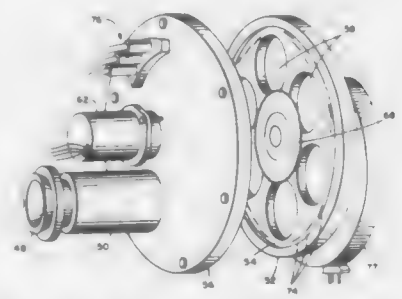
Fredric S. Fay; Kevin E. Fogarty, both of Worcester, and Cyril Rodgers, Paxton, all of Mass., assignors to University of Massachusetts Medical Center, Worcester, Mass.

Continuation of Ser. No. 365,320, Jun. 13, 1989, Pat. No. 4,943,142, which is a continuation of Ser. No. 204,931, May 31, 1988, Pat. No. 4,859,063, which is a continuation of Ser. No. 34,777, Apr. 3, 1987, abandoned, which is a continuation-in-part of Ser. No. 900,407, Aug. 26, 1986, Pat. No. 4,744,677, which is a continuation-in-part of Ser. No. 828,766, Feb. 11, 1986, abandoned. This application Jun. 14, 1990, Ser. No. 538,116

The portion of the term of this patent subsequent to May 17, 2005, has been disclaimed.

Int. Cl.[5] G02B *5/20*

U.S. Cl. 350—315 **7 Claims**



1. A filter accessory comprising:

an optical conduit between a light inlet and a light outlet;

an inlet connector at the inlet end of the optical conduit for coupling the conduit into a microscope system;

an outlet connector complementary to the inlet connector at the outlet end of the optical conduit for coupling the conduit into a microscope system;

a filter assembly eccentrically mounted relative to the optical conduit, the assembly including a filter housing and a

filter disc within the filter housing, the filter disc having a plurality of removable filter elements circumferentially spaced about a filter axis offset from the optical conduit; and

a filter drive for rotating the filter discs about the filter axis.

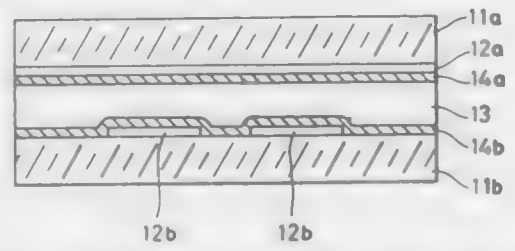
LIQUID CRYSTAL DEVICE



Ken Eguchi; Haruki Kawada; Kunihiro Sakai; Yoshinori Tomida; Hiroshi Matsuda; Akira Tsuboyama; Kiyoshi Takimoto, and Osamu Takamatsu, all c/o Canon Kabushiki Kaisha: 30-2, 3-chome, Shimomaruko, Ohta-ku, Tokyo, Japan

Continuation of Ser. No. 33,191, Apr. 2, 1987, abandoned. This application Jul. 7, 1989, Ser. No. 376,940

Claims priority, application Japan, Apr. 4, 1986, 61-76704; Apr. 8, 1986, 61-80808; Jun. 11, 1986, 61-133776; Jun. 11, 1986, 61-133777; Jun. 11, 1986, 61-133778; Jun. 11, 1986, 61-133779

Int. Cl.[5] G02F *1/13*

U.S. Cl. 350—341 **11 Claims**

1. A ferroelectric liquid crystal device comprising a pair of substrates, a ferroelectric liquid crystal arranged therebetween and an alignment-controlling film arranged on tehliquid crystal side surface of at least one of hte substates, said alignment-controlling film being a polyimide monomolecular film or a monomolecular-built-up film thereof obtained by dehydrating ring closure of a monomolecular or monomolecular-built-up film of a polyamic acid.

5,009,490

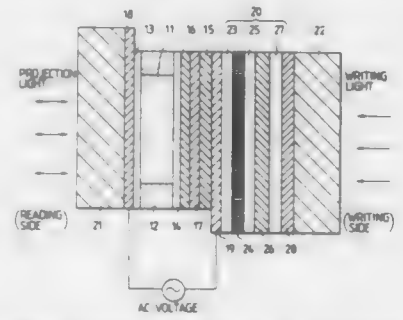
PHOTO-CONDUCTIVE LIQUID CRYSTAL LIGHT VALVE

Tomomitsu Kouno; Hideki Hatano; Takashi Yamaji; Sakashi Ootaki, and Masami Nishida, all of Saitama, Japan, assignors to Pioneer Electronic Corp., Tokyo, Japan

Filed Jun. 9, 1989, Ser. No. 363,825

Claims priority, application Japan, Nov. 11, 1988, 63-284970

Int. Cl.[5] G02F *1/13; G04B 19/30*



U.S. Cl. 350—342 **2 Claims**

1. A photo-conductive liquid crystal light valve comprising:

a lamination of a photo-conductive layer and a liquid crystal layer;

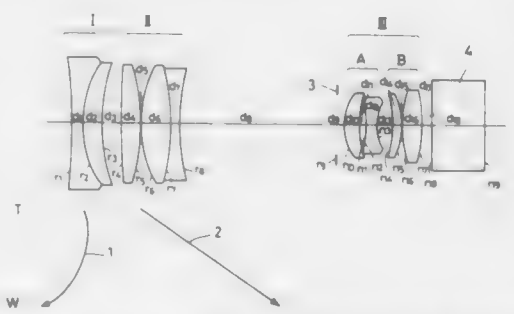
a pair of transparent electrodes, one electrode of said pair of electrodes being disposed on the outside of said photo-conductive layer and another electrode of said pair of electrodes being disposed on the outside of said liquid crystal layer respectively; and

an electroluminescence element disposed on the outside of

one of said electrodes of said pair of electrodes, said one electrode being on a writing side, said electroluminescence element includes a first transparent insulation layer, a transparent electrode, a second transparent insulation layer, a zinc sulfide layer, a third transparent insulation layer, and a metal electrode which are laminated in the stated order.

5,009,491

COMPACT ZOOM LENS SYSTEM



Kazuyoshi Hata, Osaka, Japan, assignor to Minolta Camera Kabushiki Kaisha, Osaka, Japan

Filed Aug. 8, 1988, Ser. No. 230,173

Claims priority, application Japan, Aug. 7, 1987, 62-198369; Aug. 17, 1987, 62-204933; Aug. 17, 1987, 62-204934; Aug. 22, 1987, 62-208508

Int. Cl.[5] G02B *15/14*

U.S. Cl. 350—427 **29 Claims**

1. A compact zoom lens system comprising from the object side to the image side:

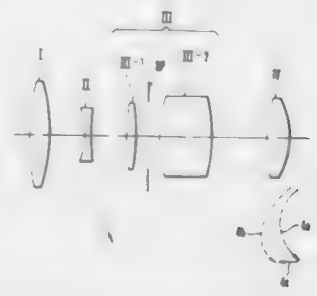
a first lens unit of a negative refractive power having a cemented lens component consisting of a negative lens element and a positive lens element cemented with each other, said first lens unit being shiftable along an optical axis of the lens system in a zooming operation;

a second lens unit of a positive refractive power having two positive lens components, at least one of which consists of a positive lens element and a negative lens element cemented with each other, said second lens unit being shiftable along the optical axis of the lens system in the zooming operation; and

a third lens unit of a positive refractive power having, from the object side, a front lens component of a negative refractive power and a rear lens component of a positive refractive power, said third lens unit being stationary along the optical axis of the lens system in the zooming operation.

5,009,492

ZOOM LENS



Hiroyuki Hamano, Kanagawa, Japan, assignor to Canon Kabushiki Kaisha, Tokyo, Japan

Filed Aug. 1, 1989, Ser. No. 387,826

Claims priority, application Japan, Aug. 10, 1988, 63-199581; Aug. 10, 1988, 63-199582

Int. Cl.[5] G02B *15/14*

U.S. Cl. 350—427 **9 Claims**

1. A zoom lens, when counted from the object side, comprising:

a first lens group having a positive refractive power;

a second lens group having a negative refractive power;

a third lens group having a positive refractive power; and

a fourth lens group having a positive refractive power, wherein

said third lens group includes a front lens unit having a positive refractive power, an aperture stop and a rear lens unit, whereby variation of magnification is performed by moving said second lens group and said fourth lens group, and focusing is performed by moving said fourth lens group, said zoom lens satisfying the following conditional expressions, wherein focal lengths of said second, third, fourth lens groups and said front lens unit respectively are f2, f3, f4, and f3-1, the focal length of the entire lens system at the wide-angle end is fv, the zoom ratio is z, and the imaging magnification at a telephoto end of said second lens group is $\beta 2T$:

$$0.9 < |f2/f\omega| < 1.3$$

$$0.9 < |\beta 2T/\sqrt{z}| < 1.4$$

$$1.8 < f4/f\omega < 2.4$$

$$2.8 < f3/f\omega < 3.7$$

$$1.6 < f3 - 1/f3 < 2.6$$

5,009,493

MIRROR ARRANGEMENT FOR A BEAM PATH IN A MULTIPLE-REFLECTION MEASURING CELL

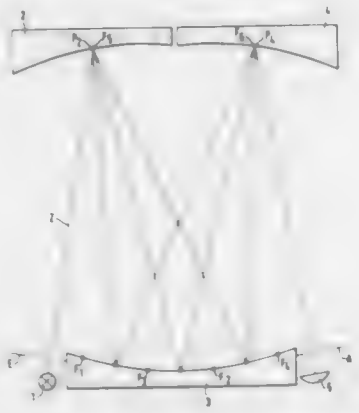
Edmund Koch, and Dieter Pruss, both of Lübeck, Fed. Rep. of Germany, assignors to Drägerwerk Aktiengesellschaft, Lübeck, Fed. Rep. of Germany

Filed Aug. 30, 1989, Ser. No. 400,698

Claims priority, application Fed. Rep. of Germany, Sep. 10, 1988, 3830906

Int. Cl.[5] G02B *5/08; G01N 21/00*

U.S. Cl. 350—619 **3 Claims**



1. A mirror arrangement for defining a beam path in a multiple-reflection cell for measuring the absorption of light in a measuring gas, the cell having an entrance aperture and an exit aperture separated from each other by a predetermined distance, the mirror arrangement comprising:

an entrance aperture mirror and an exit aperture mirror

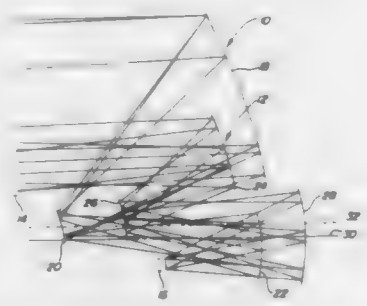
having respective reflective surfaces approximating respective ellipsoids;

said entrance aperture mirror defining first and second focal points (F_1, F_2) and said exit aperture mirror defining third and fourth focal points (F_3, F_4);

a field mirror disposed opposite of and at a confocal distance from each of said aperture mirrors so as to define a beam path for a beam which permits said entrance aperture to be imaged into said exit aperture via said aperture mirrors and said field mirror;

said entrance aperture and said exit aperture being disposed at opposite ends of said field mirror;

said first and second focal points (F_1, F_2) being separated by a first focal point spacing (F_1- F_2) and said third and fourth focal points (F_3, F_4) being separated by a second focal point spacing (F_3- F_4); and,



said first and second focal point spacings (F_1- F_2 and F_3- F_4) having a sum which is approximately equal to said predetermined distance.

5,009,494

WIDE FIELD ALL-REFLECTIVE MULTIPLE FIELD OF VIEW TELESCOPE

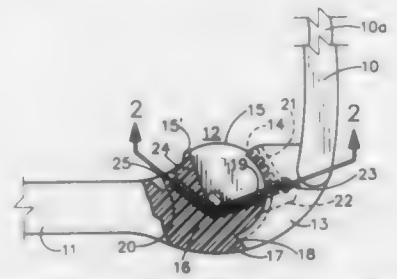
Daryl R. Iossi, Torrance; Lacy G. Cook, El Segundo, and Alfred Koppensteiner, Torrance, all of Calif., assignors to Hughes Aircraft Company, Los Angeles, Calif.

Filed May 21, 1990, Ser. No. 525,801
Int. Cl.[5] G02B *17/06, 7/18, 26/10, 15/00*
U.S. Cl. 350—620 20 Claims

1. An all reflective multiple field of view optical system comprising:

an entrance pupil region;

first reflecting means for reflecting light from a viewed object passing through said entrance pupil region to a plane for viewing; and



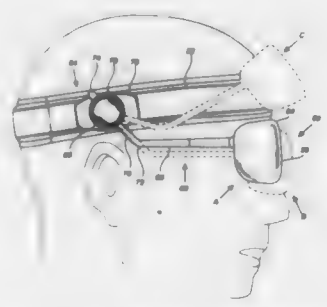
second reflecting means for reflecting light from a viewed object passing through said entrance pupil region to said plane for viewing, said first or second reflecting means being an afocal three mirror anastigmat, said first and second reflecting means being movably positioned with respect to one another such that in a first position said first reflecting means or said second reflecting means is reflecting light passing through said entrance pupil region to said plane for viewing and in a second position the other of said first or second reflecting means is reflecting light to said plane for viewing wherein fields of view and afocal magnification of said first and second reflecting means are different.

5,009,495

HINGE FOR EYEGLASSES

Robert D. Williams, 5374 S. Datura St., Littleton, Colo. 80120

Filed May 26, 1989, Ser. No. 358,699
Int. Cl.[5] G02C *5/14, 5/22*
U.S. Cl. 351—153 9 Claims



1. An improved eyeglass mounting assembly including supporting means for the lenses and a pair of temples together with means for pivotally mounting each of said temples on said supporting means adjacent respective ones of the lenses for movement about its respective pivotal axis between a folded position and an open use position, each of said means for pivotally mounting said temples comprising a bearing member having complementary bearing surfaces one on a respective one of said supporting means and the other on the respective temple, and means for maintaining said complementary bearing surfaces in face engagement with one another, aid maintaining means including a respective elongated elastic member secured under tension between the respective one of said supporting means and the respective temple for urging said complementary surfaces into face engagement and retaining said temples in position on said supporting means, each said elastic member being attached to a respective temple at one end and to a respective lens supporting means at the other.

5,009,496

EYEGLASSES AND HEADGEAR COMBINATION

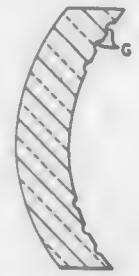
Ramer B. Holtan, Jr., 5003 E. Mercer Way, Mercer Island, Wash. 98040; Kevin L. Falk, Mercer Island, Wash.; James F. Bergman, Snohomish, Wash.; James R. Smith, Kirkland, Wash., and Kenneth E. Nelson, Redmond, Wash., assignors to Ramer B. Holtan, Jr., Mercer Island, Wash.

Filed Mar. 15, 1989, Ser. No. 324,202
Int. Cl.[5] B02C *3/00*
U.S. Cl. 351—156 34 Claims

1. An eyeglasses and headgear combination comprising:

headgear attachable to the head of a user;

eyeglasses attachable to said headgear, said eyeglasses including a front member, a lens, and temple members coupled to said front member, each of said temple members having a tip portion and a body portion, said tip portion being alternatively positionable extending downward or upward, the tip portion extending upward when said eyeglasses are attached to said headgear and said tip portion extending downward when said eyeglasses are attached behind said user's ear; and



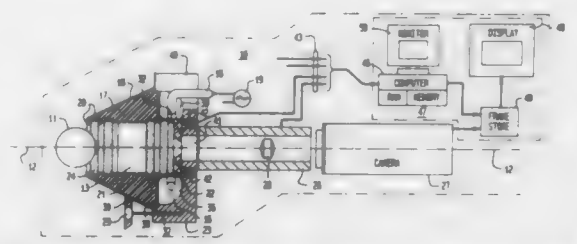
a coupling member means for attaching said tip portion of said eyeglasses to said headgear, said coupling member providing a coupling to said headgear which permits said front member to be pivoted upward, with said lenses out of the line of sight of said user.

5,009,497

CONTACT LENSES UTILIZING KEEL ORIENTATION

Allen L. Cohen, 10010 Walsham Ct., Richmond, Va. 23233

Continuation-in-part of Ser. No. 120,263, Nov. 12, 1987, abandoned. This application Apr. 22, 1988, Ser. No. 185,217
Int. Cl.[5] G02C *7/04*
U.S. Cl. 351—161 5 Claims



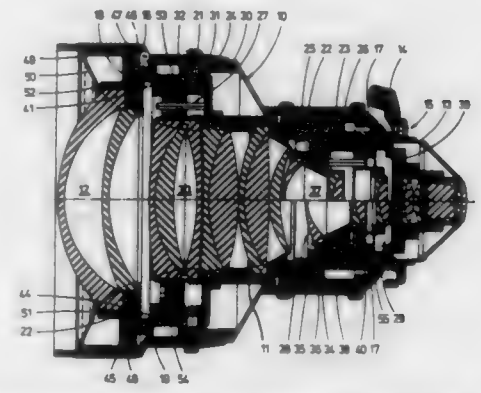
1. An ophthalmic contact lens of (i) soft toric contact lens design such as those which are prism ballasted and (ii) aspheric rigid or soft contact lens possessing enhanced stability to translational slippage thereby facilitating rotational orientation comprising an arrangement of one or more circular or near-circular profiled grooves cut into the anterior, posterior or both lens surfaces.

5,009,498

INTERCHANGEABLE KERATOSCOPE DEVICE

Martin Gersten, Brooklyn; Lars Tibbling, New York, and Roy Maus, Brooklyn, all of N.Y., assignors to Computed Anatomy Inc., New York, N.Y.

Filed Mar. 20, 1990, Ser. No. 496,016
Int. Cl.[5] A61B *3/10*
U.S. Cl. 351—212 7 Claims



1. A keratoscope image processing system comprising a light box and a conical body of translucent material having a cylindrical bore defining a series of light transmitting rings, the improvement wherein said conical body includes a plurality of light-pervious machine readable spots disposed to receive a portion of said light from said light box, said machine readable spots being arranged in a binary pattern indicative of the optical characteristics of said conical body, means for storing image processing initializing data including signal values representing predetermined types of illuminated ring light ring devices, and means responsive to said binary pattern and said signal values for modifying said processing of said keratoscope image.

5,009,499

SOUND INSULATED INTERCHANGEABLE LENS

Otto Blaschek, Anwanderweg 16, D-8011 Aschheim, Fed. Rep. of Germany

Filed Dec. 22, 1989, Ser. No. 455,166
Claims priority, application Fed. Rep. of Germany, Dec. 24, 1988, 3843838
Int. Cl.[5] G03B *31/00*
U.S. Cl. 352—35 16 Claims

1. An interchangeable lens that can be removably mounted to a motion picture camera housing, comprising

mount structure for removable attachement to said camera housing, external casing structure, said external casing structure comprising adjusting elements of said interchangeable lens, lens casing structure connecting said mount structure and said external casing structure;

first sound-absorbing buffer ring structure located on the object side of said interchangeable lens and connecting said external casing structure to said lens casing structure,

second sound-absorbing buffer ring structure located on the camera side of said interchangeable lens, said first and second buffer ring structures serving to radially support and center said external casing structure at end zones thereof on said lens casing structure,

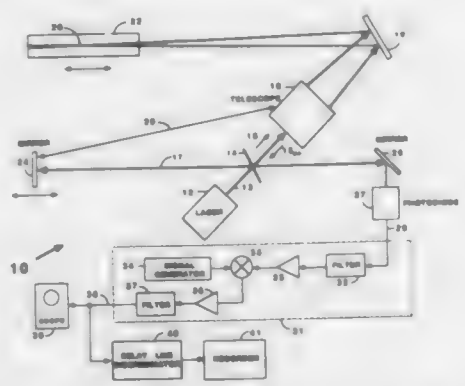
third sound-absorbing buffer ring structure, and

a forward lens system in the forward zone of said lens casing structure and connected to said lens casing structure, said forward lens system being both centrally borne in relation to said lens casing structure and being connected to said external casing structure by means of said third sound-absorbing buffer ring structure.

5,009,500

REMOTE METHOD OF MEASURING SUBSURFACE WATER TEMPERATURES

Donald A. Leonard, Cupertino, and Harold E. Sweeney, Menlo Park, both of Calif., assignors to GTE Government Systems Corporation, Stamford, Conn.



Filed Jul. 28, 1989, Ser. No. 386,382
Int. Cl.[5] G01B *9/02*
U.S. Cl. 356—43 4 Claims

1. An optical method for remotely measuring an unknown temperature T_s of a transparent medium, consisting of the steps of:

directing into said medium a pulsed laser beam comprising a plurality of pulses each having an intensity sufficient to cause stimulated Brillouin scattering in said medium and thereby causing a phase-conjugate beam to emanate from said medium;

adjustably focussing said pulsed laser beam to a plurality of focal points at different depths within said medium;

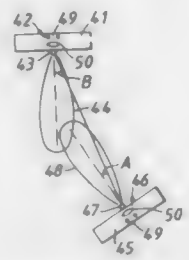
adjusting the range of a portion of said pulsed laser beam and said phase-conjugate beam to enable mixing of the pulses of each beam at the same time;

mixing said phase-conjugate beam with said portion of said pulsed laser beam and thereby producing a difference frequency proportional to temperature T_x and

converting said difference frequency to a value of temperature corresponding to T_x.

5,009,501

A REMOTELY CONTROLLABLE POSITION INDICATOR SYSTEM



David F. Feaner, 2 Bishops Green, Barnston Great Dunmow Essex, and John S. Menown, Stoke House, Roxwell Road, Writtle Essex, both of United Kingdom

PCT No. PCT/GB87/00844, § 371 Date Jul. 27, 1989, § 102(e) Date Jul. 27, 1989, PCT Pub. No. WO88/04060, PCT Pub. Date Jun. 2, 1988

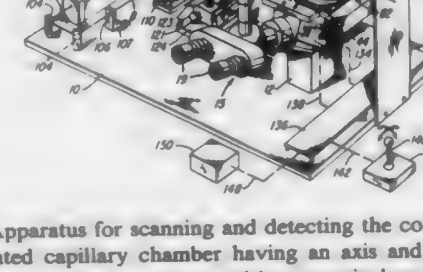
PCT Filed Nov. 26, 1987, Ser. No. 365,164

Int. Cl.[5] G01C *3/10, 1/00*

U.S. Cl. 356—152 17 Claims

1. A remotely controllable position indicator system, comprising a movable remote control device controllable to transmit command radiation signals, and a fixed reference station adapted to execute commands represented by said command radiation signals, said remote control device further comprising two transmitters forming one directional transmitter and said fixed reference station further comprising a receiver, means for monitoring intensity of radiation received by said receiver, means for distinguishing between radiation from one of said two transmitters and radiation from the other of said two transmitters and computer means programmed to determine the direction of said reference station from said remote control device using a comparison of monitored intensity of radiation received by said receiver from each of said two transmitters of said directional transmitter to give the direction of said receiver from said directional transmitter, in which one or more of said two transmitters is controllable to transmit radiation command signals and said receiver is arranged to receive said command signals, including switching means for said one or more of said two transmitters to initiate radiation command signals to enable an operator to selectively point at a target and then issue a command radiation signal for execution by said reference station.

5,009,502



SYSTEM OF HOLOGRAPHIC OPTICAL ELEMENTS FOR TESTING LASER RANGE FINDERS

I-Fu Shih, Los Alamitos; David B. Chang, Tustin; James A. Arns, Los Angeles; Gaylord E. Moss, Marina Del Rey, and Ronald T. Smith, Redondo Beach, all of Calif., assignors to Hughes Aircraft Company, Los Angeles, Calif.

Filed Apr. 20, 1989, Ser. No. 341,010

Int. Cl.[5] G02B *5/32*; G01C *3/08*

U.S. Cl. 356—152 10 Claims

2. Apparatus for testing alignment of a first optical path with a second optical path, said apparatus comprising:

a detector responsive to incident energy of a first wavelength or wavelength range;

a test object for reflecting visible wavelength energy; and

holographic optical means for:

(a) receiving said visible wavelength energy from said test object, collimating said energy and directing said energy along a first optical path; and

(b) receiving energy of said first wavelength or wavelength range from along a second optical path;

said test object and said detector being cooperatively placed such that if said second optical path is properly aligned with said first optical path said holographic optical means will focus and direct said energy of said first wavelength or wavelength range onto said detector.

5,009,503

AUTOMATED CAPILLARY SCANNING SYSTEM

Martin J. Murphy, Jr., Dayton; Jack B. Stubbs, Waynesville, and Thomas A. Leonard, Dayton, all of Ohio, assignors to Hipple Cancer Research Corporation, Dayton, Ohio

Continuation of Ser. No. 205,725, Jun. 13, 1988, Pat. No. 4,902,132. This application Feb. 14, 1990, Ser. No. 479,959

The portion of the term of this patent subsequent to Feb. 20, 2007, has been disclaimed.

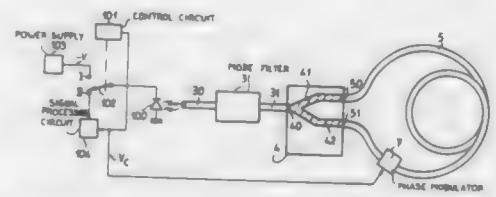
Int. Cl.[5] G01N *21/51*; C12M *1/34*

U.S. Cl. 356—339 23 Claims

1. Apparatus for scanning and detecting the contents of an elongated capillary chamber having an axis and defined by light transmitting means, comprising an optical sensor having a predetermined optical axis, means for supporting said light transmitting means to position said capillary chamber with its axis substantially intersecting said optical axis, means for producing relative movement between said optical sensor and said supporting means to move said capillary chamber axially across said optical axis, means for generating a precision light beam, means for directing the light beam towards said capillary chamber at a substantial angle relative to a plane perpendicular to the axis of said chamber for illuminating the contents of said capillary chamber without producing significant reflection and refraction of light by said light transmitting means to said optical sensor, and said optical sensor including means for detecting differences in the light reflected by the illuminated contents of said capillary chamber along the length of said chamber.

5,009,504

MONOMODE OPTICAL FIBER RING INTERFEROMETRIC DEVICE WITH SEMICONDUCTOR DIODE AS LIGHT ENERGY EMISSION-RECEPTION/AMPLIFICATION MEANS



Hervé Arditty, Marly Le Roi, and Hevré Lefevre, Paris, both of France, assignors to Thomson-CSF, Paris, France

Continuation of Ser. No. 300,902, Jan. 24, 1989, abandoned, which is a continuation of Ser. No. 867,097, May 27, 1986, Pat. No. 4,842,409. This application Jun. 4, 1990, Ser. No. 532,367

Claims priority, application France, May 30, 1985, 85 08163

Int. Cl.[5] G01B *9/02*

U.S. Cl. 356—350 2 Claims

1. A ring interferometer device comprising:

a monomode optical fiber forming a ring;

coherent light energy emission-reception means;

means for separating and mixing the radiation for directing, simultaneously and in equal parts, the emitted coherent light energy to the two ends of the monomode optical fiber and for recombining the radiation emerging from both ends of the monomode optical fiber;

a mode filter disposed between the separation and mixing means and the light energy emission-reception means;

wherein said light energy emission-reception means are formed by a semiconductor diode which, polarized in the forward direction, emits light of a given wave length and which, polarized in the reverse direction, detects light of the same wave length; and further comprising

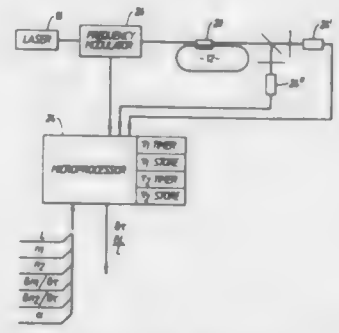
means for biasing said diode in the forward direction for controlling the light emission thereof;

electric signal processing means for obtaining a measurement of non-reciprocal effects from any phase shift indicated by an interference signal; and

switching means and means for controlling said switching means, so as to establish alternately an electric connection between said semiconductor diode and respectively, the forward direction biasing means and the electric processing means, the switching means being switched from the emission mode to the detection mode at a period equal to double the transit time of the light in the ring interferometer.

5,009,505

OPTICAL SENSOR FOR DETERMINING CHANGES IN A DIMENSION AND/OR A TEMPERATURE OF AN OBJECT



Alan R. Malvern, Bracknell, United Kingdom, assignor to British Aerospace Public Limited Company, London, England

Filed Jun. 28, 1989, Ser. No. 372,626

Claims priority, application United Kingdom, Jun. 30, 1988, 8815558

Int. Cl.[5] G01B *9/02*

U.S. Cl. 356—352 13 Claims

1. A sensor for determining changes in at least one of a physical dimension and the temperature of an object, said sensor comprising:

means defining a first optical path having a first refractive index;

means defining a second optical path having a second refractive index different from said first refractive index, said second path being adjacent or substantially coincident with said first path;

means for introducing light into each of said paths;

frequency modulation means for applying a repeating ramp frequency modulation to the light introduced into each of said paths;

detector means for detecting resonances of the light in said first path and said second path; and

processing means responsive to a timing of the appearance of said resonances to output data representative of at least one of said physical dimension and temperature based thereon.

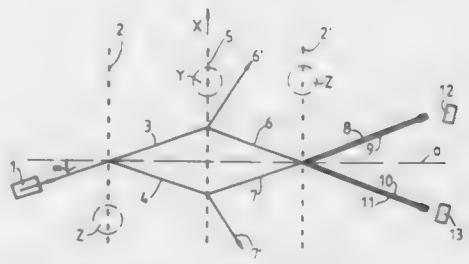
PHOTOELECTRIC POSITION-MEASURING ARRANGEMENT HAVING A PLURALITY OF SHIFTABLE GRIDS



Alfons Spies, Seebruck, Fed. Rep. of Germany, assignor to Dr. Johannes Heidenhain GmbH, Traureut, Fed. Rep. of Germany

Filed Mar. 22, 1989, Ser. No. 327,300

Claims priority, application Fed. Rep. of Germany, Mar. 25, 1988, 3810165

Int. Cl.[5] G01B *9/02*

U.S. Cl. 356—356 9 Claims

1. A photoelectric position-measuring arrangement for mea-

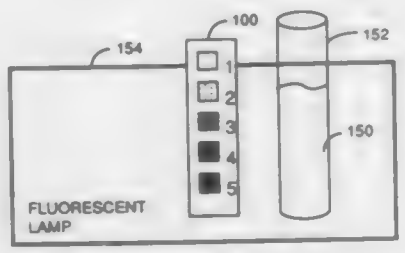
suring length or angles which includes first, second and third grids which are shiftable with respect to one another, which grids diffract the light eminating from a light source into partial-beams and bring the diffracted partial-beams into interference wherein the intensity modulations arising from the interference from the partial-beams are transduced by photodetectors into electrical signals which are phase shifted with respect to one another, wherein the improvement comprises:

a first grid, a second grid, and a third grid, the first grid disposed such that light from the light source impinges the first grid at an angle α relative to the grid normal (0) and is diffracted by the first grid, the second grid disposed to receive the partial-beams diffracted by the first grid, the third grid disposed to receive partial-beams diffracted by the second grid;

the first grid being configured such that only the partial-beam of the zero diffraction order and the partial-beam of the first diffraction order lying closest to the grid normal (0) are diffracted at the second grid, whereby only these two beams contribute to the signal formation, and the first grid being further configured such that the partial-beams obtain a constant phase displacement of an amount θ;

the second grid being configured such the partial-beams incident thereon are resolved only into partial-beams of their first diffraction orders, the second grid being further configured such that the partial-beams lying closest to the grid normal (0) are brought into interference by diffraction on the third grid;

the third grid being identically configured to the first grid; and



the photodetectors being disposed such that the interfering partial-beams from the third grid impinge thereon.

METHOD OF EVALUATING MECONIUM CONTENT OF AMNIOTIC FLUID

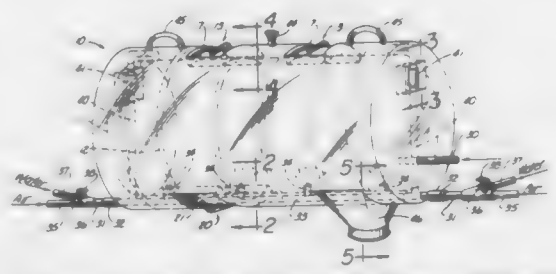
Michael Katz, 3848 California Ave., San Francisco, Calif. 94118

Filed Mar. 21, 1990, Ser. No. 496,684
Int. Cl.[5] G01J *3/52*
U.S. Cl. 356—421 **6 Claims**

1. A method of evaluating meconium content of an amniotic fluid sample, the steps of the method comprising:

placing a sample of amniotic fluid in a transparent medium;

providing a color chart depicting fluid colors which correspond to various levels of meconium content in amniotic fluid, said color chart including at least one meconium concentration indicia corresponding to a predefined color in said color chart; and



comparing said amniotic fluid sample with said color chart and determining the meconium concentration level of said amniotic fluid sample relative to said meconium concentration indicia.

5,009,508

APPARATUS FOR MIXING CONCRETE

Henry K. Wojdylo, 3816 Diamond Head Rd., Honolulu, Hi. 96816-4434

Filed Mar. 26, 1990, Ser. No. 498,716
Int. Cl.[5] B28C *5/06;* **B01F** *13/02, 15/02*
U.S. Cl. 366—10 **3 Claims**

1. An apparatus for mixing concrete at the point of use at a building site having sources of compressed air and water even at elevated locations wherein the apparatus comprises:

a tank, said tank having a top, a bottom, a first and second side and a first and a second end, said tank having a chamber disposed therein which is generally elliptical in cross sectional shape; and, wherein said tank has at least a substantially translucent vertical height portion which permits both the level and the viscosity of the cement contained therein to be monitored;

reinforcing rods associated with said tank to impart rigidly thereto and means associated with the top of said tank and operatively connected to said reinforcing rods for permitting said tank to be lifted to said elevated locations at the building site;

inlet means disposed in the top of said tank for permitting concrete ingredients to be introduced therethrough;

means for selectively sealing said inlet means to that said chamber can be pressurized;

outlet means disposed in the bottom of said tank for permitting mixed concrete to be withdrawn from said chamber;

means attached to said tank for introducing air under pressure to a lower portion of the chamber in said tank;

conduit means connected to said tank for introducing water into said tank;

nozzle means disposed in a lower portion of said chamber for selectively introducing air and water into said chamber,

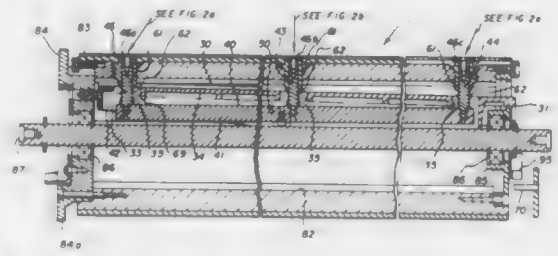
means for connecting a supply of water under pressure to said nozzle means; and,

means for connecting a supply of air under pressure to said nozzle means; including conduit means connecting a top portion of said chamber with said air supply means for permitting air to pass from the top of said chamber to said air supply means; and, further including a one-way valve means for permitting air to flow through said conduit means from the top of the chamber to the air supply means but preventing air from flowing from said air supply means directly to the top of the chamber through said conduit means; wherein, air flowing from the top of said chamber is mixed directly with air entering said chamber from said air supply means; and, wherein mixing takes place within said chamber.

5,009,509

CLAMPING APPARATUS FOR THERMAL TRANSFER PRINTER

Robert J. Matoushek; Terrence L. Fisher, both of Rochester, and James A. Whritenor, Spencerport, all of N.Y., assignors to Eastman Kodak Company, Rochester, N.Y.



Filed Dec. 26, 1989, Ser. No. 457,039
Int. Cl.[5] G01D *15/28;* **B65H** *5/02*
U.S. Cl. 346—138 **2 Claims**

1. In a thermal transfer printer of the kind having a rotatably mounted print drum for supporting receiver sheets for movement past a thermal print station, improved apparatus for clamping such receiver sheets comprising:

(a) actuator means mounted on one end of said drum for movement between clamping and unclamping positions;

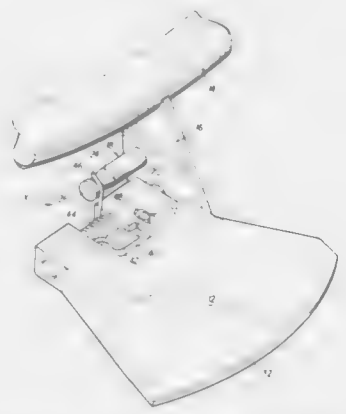
(b) lever means pivotally mounted at the other end of said drum and having a longitudinal body extending axially within said drum interior to a follower end in actuatable relation to said actuator means;

(c) clamping means having:

(i) an elongated portion extending axially within said drum in generally opposing relation to said longitudinal body of said lever means;

(ii) a plurality of axially spaced arms extending radially from said body to said drum periphery; and

(iii) a clamp member coupled to said arms and extending axially over a longitudinal section of said drum periphery; and



(d) means for pivotally coupling said elongated portion of said clamping means to a region of said lever means that is between said drum ends.

SCRAPER MOUNTING ARRANGEMENT FOR FOOD PROCESS AGITATORS

Valentino Gabriele, Baltimore, Md., assignor to J. C. Pardo and Sons, Baltimore, Md.

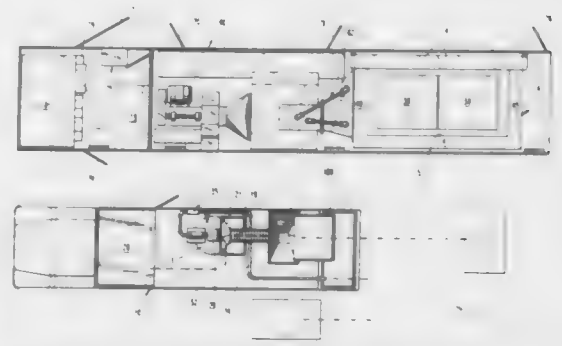
Filed Sep. 27, 1990, Ser. No. 588,855
Int. Cl.[5] B01F *11/00*
U.S. Cl. 366—311 **18 Claims**

1. In combination with an agitator mounted for rotation within a container within which materials are being mixed, apparatus mounted on the agitator for scraping walls of the container, comprising:

scraper means positioned in scraping relation with at least portions of the walls of the container for preventing adhesion of the materials to said walls, the scraper means having aligned bores formed in one end and a cutout portion disposed between the aligned bores, the scraper means having an aperture formed therein;

mounting means carried by the agitator and being received within the aligned bores of the scraper means for mounting the scraper means for pivotal motion relative to the agitator;

adjusting means carried by the agitator for constantly adjusting the position of the scraper means to accommodate surface contours of the walls and to accommodate surface wear of at least portions of the scraper means in order to maintain the scraper means in scraping relation with said walls on rotation of the agitator, the adjusting means comprising spring loading pin means spaced from the mounting means and carried by the agitator for providing a surface against which a force can be directed, the adjusting means further comprising a coiled spring having a substantially cylindrical body portion, a first end and a second end, the body portion of the coiled spring being disposed within the cutout portion of the scraper means, the mounting means being received through the coil body portion, the first end of the coiled spring biasing against the scraper means and the second end of the coiled spring biasing against the spring loading pin means, the coiled spring thereby exerting a bias against the scraper means to force the scraper means into scraping relation with the walls of the container and to hold the scraper means under tension; and,



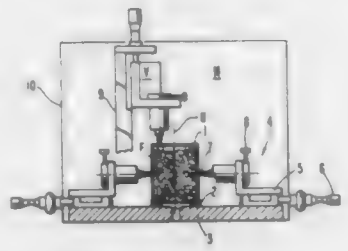
stop means carried by the agitator for limiting the pivotal motion of the scraper means on the mounting means to a predetermined arcuate angle, the stop means comprising an L-shaped pin having a proximal leg mounted to the agitator and a distal leg receivable within the aperture formed in the scraper means on pivoting of the scraper means toward the stop means, portions of the scraper means contacting the proximal leg to prevent further pivoting motion of the scraper means, the scraper means being formed with a recess communicating with the aperture in the scraper means, the proximal leg of the stop means being received into the recess on pivoting of the scraper means toward the stop means, the bottom wall of the recess contacting the proximal leg of the stop means to prevent further pivoting motion of the scraper means.

5,009,511

INORGANIC RECYCLING PROCESS

Leonard S. Sarko, Dublin, and Richard S. Lyon, Galion, both of Ohio, assignors to Inorganic Recycling Incorporated, Columbus, Ohio

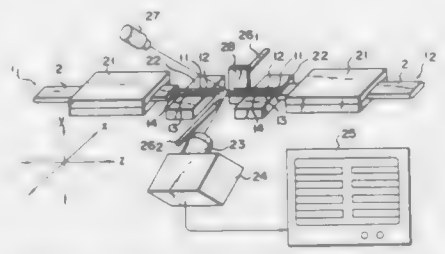
Continuation of Ser. No. 110,447, Oct. 20, 1987, abandoned. This application Jan. 26, 1990, Ser. No. 471,042
Int. Cl.[5] B01F *7/08*
U.S. Cl. 366—348 **9 Claims**



4. A method of recycling inorganic hazardous waste material into useful products by chemically fixing inorganic constituent materials of said inorganic hazardous waste into a silicate matrix comprising the steps of:

(a) loading an inorganic hazardous waste material into a mixing chamber;

(b) mixing said material in said chamber with chemicals selected from the group consisting of inorganic alkaline



materials, acid materials, water and a combination of two or more thereof;
(c) causing an oxidation-reduction reaction to occur;
(d) mixing said oxidation-reduction reaction product with further chemicals comprising adding bonding clay to said oxidation-reduction reaction product and blending for 3–30 minutes, and thereafter adding silica sand thereto and blending for 3 to 30 minutes;
(e) conveying said mixed material to a heating chamber;
(f) heating said mixed material at 1800°–2250° F. for 60–120 minutes to cause vitrification to occur and to chemically fix said inorganic constituents of said inorganic hazardous waste into a silicate matrix to produce a vitrified, silicate-based, inert material;
(g) removing from said material particulate laden gas formed during said heating step, said particulate laden gas including solid and liquid particulates and gaseous contaminants; and
(h) scrubbing said gas with a scrub liquid to remove particulates therefrom and adjusting the pH of said scrub liquid to transfer contaminants from the gas phase to the liquid phase.

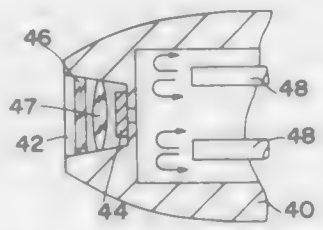
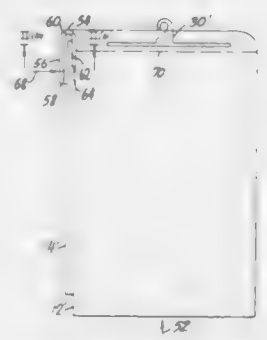
DEVICE AND METHOD FOR MEASURING THE DEFORMATIONS OF A SAMPLE
Jacques Lesai, Maule; Philippe Perreau; Daniel Bary, both of Rueil Malmaison, and Guy Grard, Argenteuil, all of France, assignors to Institute Francais du Petrole, Cedex, France
Continuation of Ser. No. 213,138, Jun. 29, 1988, abandoned. This application May 9, 1990, Ser. No. 521,012
Claims priority, application France, Jun. 30, 1987, 87 09263
Int. Cl.[5] G01N *25/00;* **G01B** *7/02, 21/02*
U.S. Cl. 374—6 **24 Claims**



1. A device for measuring deformations of a sample, said deformations particularly resulting from relaxation of stresses to which the sample was previously subjected, the device comprising a cell inside which the sample is placed, said cell contains a fluid thermal mass whose heat capacity and thermal conductibility are appreciably greater than those of air under normal temperature and pressure conditions, and sensor means cooperable with said sample for sensing displacements of the sample so as to enable a measurement of deformations thereof, wherein the sample is a solid impregnated by at least one fluid, the fluid thermal mass is chosen so that said impregnation fluid concentration in the sample is not substantially modified during measurement of the deformations and wherein said fluid thermal mass is chosen so as not to be introduced into the sample.

5,009,513
METHOD OF MEASURING QUANTITY OF HEAT APPLIED TO OPTICAL FIBER
Tsutomu Onodera, and Takeshi Yamada, both of Sakura, Japan, assignors to Fujikura Ltd., Tokyo, Japan
Continuation of Ser. No. 283,228, Dec. 12, 1988, abandoned. This application Aug. 23, 1990, Ser. No. 572,343
Claims priority, application Japan, Dec. 16, 1987, 62-318435
Int. Cl.[5] B65H *69/08;* **G01K** *17/00;* **G02B** *6/255*
U.S. Cl. 374—31 **9 Claims**



1. A method of measuring a quantity of heat applied to an end of each of exposed fiber portions of a ribbon optical fiber, comprising the steps of:
measuring a distance between an end of each of the exposed fiber portions of a ribbon optical fiber before heating and the end of each of the exposed fiber portions after heating, which comprises the steps of,
picking up a first position of said end, before heating, of each exposed fiber portion of said optical fiber;
picking up a second position of said end, after heating, of each exposed fiber portion of said optical fiber; and
determining said distance by subtracting said second position from said first position; and
determining a quantity of heat applied to the end of each of said exposed fiber portions based on said measured distance, by using a heat characteristic of the ribbon optical fiber, said heat characteristic indicating a relationship between a quantity of heat applied to the end of each of the exposed fiber portions and an amount of retraction of the end of each of the exposed fiber portions.

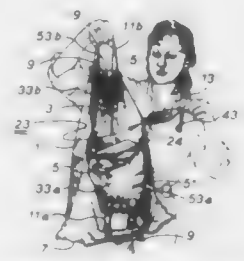
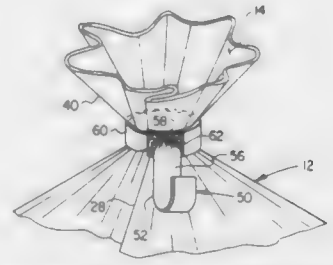
METHOD AND APPARATUS FOR PROTECTION AGAINST HEAT
Ardon Gador, POB 570, 55105, Kiryat Ono, Israel
Filed Nov. 14, 1988, Ser. No. 270,793
Claims priority, application Israel, Nov. 26, 1987, 84611
Int. Cl.[5] G01J *05/04,* **G01K** *01/14, 13/02*
U.S. Cl. 374—138 **10 Claims**



1. A method for slowing the convective heat transfer rate from a high total enthalpy fluid flow to an area of an object with a heat sensitive element mounted thereat, facing the fluid flow and located at the stagnation zone of the object, comprising the step of,
recessing said heat sensitive element into said object at said stagnation zone to provide a substantially unvented recess facing said fluid flow, the depth of said heat sensitive element in said object having a ratio to the diameter of said recess at the surface of said object for a recess of circular cross section, or to the recess dimension at the surface of said object substantially perpendicular both to the direction of said flow and to the stagnation line of the stagnation zone for a recess of other than a circular cross section, to reduce the radial velocity of flow parallel to the area of said heat sensitive element within said recess, thereby slowing the heat transfer to said heat sensitive element.

5,009,515
PLASTIC FILM BAG WITH A MULTI-LAYERED BIGHT THROUGH WHICH A HANGER EXTENDS AND RELATED METHODS
Ronald Bennett, Bay Shore, N.Y., assignor to Ultra Creative Corp., Brooklyn, N.Y.
Filed Jun. 27, 1989, Ser. No. 373,154
Int. Cl.[5] B65D *33/14*
U.S. Cl. 383—23 **8 Claims**

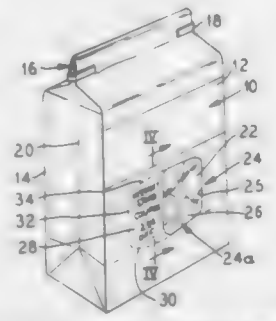


1. A bag comprising facing first and second sheets of plastic film having upper and lower extremities, at least one of said sheets at the upper extremity thereof constituting a multi-layered U-shaped bight, including a multi-layered curved section and multi-layer legs extending from said curved section, a heat seal extending completely through said bight so that the bight and bag are welded closed, the other sheet extending fully into said bight and at least closely adjacent said curved section, and a hanger generally within said bight but including a portion extending through and outwardly of said bight.

5,009,516
SHOPPING CONTAINER DEVICE
Carol A. Geeck, 827 Plumosa, Vista, Calif. 92083
Filed Aug. 27, 1990, Ser. No. 572,680
Int. Cl.[5] B65D *30/10*
U.S. Cl. 383—37 **9 Claims**

1. A shopping container device, comprising:
(a) a first, storage bag-size, collapsible bag, having an open top and a closed bottom;
(b) a flexible, non-stretchable handle attached about said open top for carrying said bag when full;
(c) a second, smaller collapsible bag having a closed bottom and an openable top, said top biased normally closed;
(d) flexible means joining said open top of said first-bag to the inside of said second-bag a short distance below its biased-closed top;
(e) said bottom of said second-bag folded flat to form a short flap;
(f) said flap folded about one portion of a small ring and attached to itself to form a ring-holding closed loop; and,
(g) a normally closed, openable snap anchored to said ring for attachment to a user's vehicle ignition keys;
(h) said smaller second-bag of an overall size sufficient to completely contain said first-bag collapsed therein, and of a length sufficient to contain the ignition keys when said first-bag is removed therefrom.

5,009,517
PLASTIC FILM BAG WITH INTEGRAL PLASTIC FILM TIE ELEMENT, AND ASSOCIATED FABRICATION METHODS
Gary L. Rutledge, Dallas, Tex., assignor to John C. Marrelli, Tustin, Calif.
Continuation of Ser. No. 321,719, Mar. 10, 1989, Pat. No. 4,948,268, which is a division of Ser. No. 117,209, Nov. 4, 1987, Pat. No. 4,854,735. This application Feb. 2, 1990, Ser. No. 474,170
Int. Cl.[5] B65D *33/28*
U.S. Cl. 383—72 **4 Claims**



1. A plastic film bag having integral closure tie apparatus, comprising:
a plastic film bag having:
an open upper end,
a closed lower end,
a pair of opposite side edge portions, and
a pair of opposite side walls interconnecting said side edge portions and said lower end; and
tie means fixedly secured to said plastic film bag and usable to close said open upper end thereof, said tie means including:
an elongated closure tie element formed from a relatively limp material and having an inner end portion, an outer end portion, and a longitudinally intermediate portion extending between said inner and outer end portion,
means for firmly securing said inner end portion of said tie element to an attachment area of one of said side edge portions of said bag adjacent said upper end of said bag, and
an aperture formed through said attachment area and said inner end portion of said tie element secured thereto,
said tie element being configured and positioned to permit its use in closing the bag by wrapping said longitudinally intermediate portion of said tie element around said upper end of said bag to form a loop therearound, passing said outer end portion of said tie element through said aperture, and pulling on said outer end portion to cause said loop to constrict around, frictionally engage, and close said upper end of said bag.

5,009,518

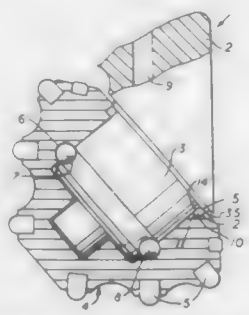
WINDOW-STYLE BAG WITH INTEGRAL COUPON

Mark Faltynek, Chicago, Ill., assignor to Bagcraft Corporation of America, Chicago, Ill.

Filed Aug. 8, 1989, Ser. No. 390,826
Int. Cl.[5] B65D *33/04*
U.S. Cl. 383—106 6 Claims

1. An open-topped bag for carrying goods on the inside thereof, which comprises bottom, side, back and front walls, said front wall having a window defined by an aperture area and a transparent film secured to said front wall on the inside thereof and overlying said aperture area:

wherein the improvement comprises said front wall including a coupon defining section having a perimeter and separably connected to but integral with said front wall in said aperture area, said section being connected to the front wall along less than the section's entire perimeter and constructed to overlie at least a portion of said transparent film;



whereby said coupon section can be removed from the bag without adversely affecting the integrity of the bag and exposing previously unexposed transparent film so as to provide for greater viewing of the contents after separation than before separation of the coupon section from the bag.

SEALING ASSEMBLY FOR RELATIVELY MOVABLE MEMBERS

David M. Tatum, 9251 Burdine, No. 386, Houston, Tex. 77096

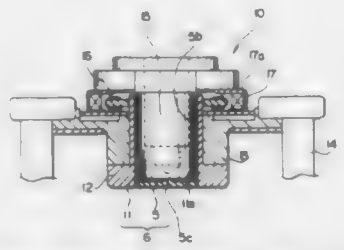
Continuation-in-part of Ser. No. 55,126, May 28, 1987, Pat. No. 4,762,189. This application Aug. 3, 1988, Ser. No. 227,624
The portion of the term of this patent subsequent to Aug. 9, 2005, has been disclaimed.
Int. Cl.[5] F16C *33/76*; F16J *15/26, 15/28, 15/38*
U.S. Cl. 384—94 35 Claims

1. A sealing assembly for a plurality of surfaces defining an annular space having a longitudinal axis, for sealing relatively movable members at temperatures up to about 1000° F., comprising

first and second annular shaped members of a hard, but elastically deformable material,

each annular shaped member being generally of an L-shape configuration and substantially of identical shape and being assembled to be in opposed mirror relation so that substantially identical surfaces of the annular shaped members face in opposite directions, one annular shaped member having a first outer radially facing annular surface for being in substantially surface-to-surface contact with one of the relatively movable members and the other annular shaped member having a first inner radially facing annular surface for being in substantially surface-to-surface contact with the other relatively movable member, said one annular member having a second inner radially facing annular surface for being in substantially surface-to-surface contact with said other relatively movable member, said other annular shaped member having a second outer radially facing annular surface for being in substantially surface-to-surface contact with said one relatively movable member, said first outer radially facing annular surface and said first inner radially facing surface being substantially identical, said second inner facing radially annular surface and said second outer facing annular surface being substantially identical, said radially facing annular surfaces of each respective annular shaped member being joined by an axially facing annular surface for engaging in substantially surface-to-surface contacting relationship an adjacent surface to which each respective annular shaped member is axially positioned, said axially facing annular surfaces facing in opposite directions away from each other,

said annular members having surfaces facing inwardly toward each other in being assembled and shaped to form an annular cavity and a small spacing between adjacent opposed edges of said annular members defining radially and axially offset gaps therebetween, and



annular elastic spring means positioned in said annular cavity between and substantially surrounded on all sides thereof by said annular members except at said offset gaps and spaced from all surfaces of said annular space and said relatively movable members biasing said annular members apart in directions both radially and axially of said longitudinally axis when installed with said annular members under compression toward each other.

DYNAMIC PRESSURE TYPE BEARING AND SPINDLE UNIT

Toshimi Takajo, Fujisawa; Hiromitsu Asai, Samukawa, and Kiyoshi Haginuma, Fujisawa, all of Japan, assignors to Nippon Seiko Kabushiki Kaisha, Tokyo, Japan

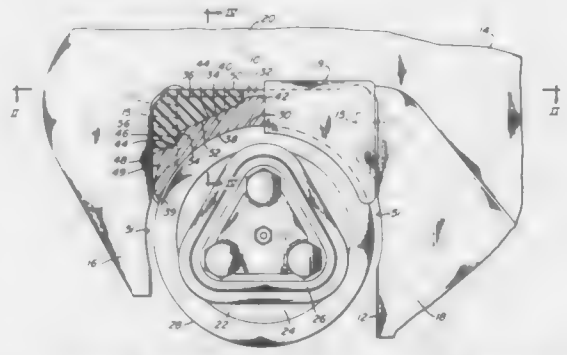
Filed Apr. 18, 1990, Ser. No. 510,619
Claims priority, application Japan, Apr. 26, 1989, 1-106866
Int. Cl.[5] F16C *32/06, 33/22*
U.S. Cl. 384—100 7 Claims

1. A dynamic pressure type bearing comprising:

a hollow outer cylinder made of a metal; and

a hollow inner cylinder made of a synthetic resin and having an outer cylindrical surface fastened to an inner cylindrical surface of said outer cylinder and having an inner cylindrical surface fitting a rotatable shaft;

at least one of the outer cylindrical surface of the rotatable shaft and the inner cylindrical surface of said inner cylinder defining a dynamic pressure producing groove therein; and



said inner cylinder being made of a thermosetting resin containing a 5 wt % to 75 wt % heat treated phenol resin powder and a 5 wt % to 75 wt % silicon dioxide, the total content of the heat treated phenol resin powder and the silicon dioxide being 50 wt % to 80 wt %.

RAILWAY TRUCK AND BEARING ADAPTER THEREFOR, AND METHOD FOR CONTROLLING RELATIVE MOTION BETWEEN TRUCK COMPONENTS

Donald Wiebe, Sewickley, Pa., assignor to A. Stucki Company Division of Hansen, Inc., Pittsburgh, Pa.

Continuation of Ser. No. 379,934, Jul. 14, 1989, abandoned. This application May 11, 1990, Ser. No. 522,472
Int. Cl.[5] F16C *23/04*
U.S. Cl. 384—191.1 27 Claims

1. A bearing adapter assembly adapted for engagement within a pedestal opening of a railway truck side frame for supporting such a railway truck side frame with respect to a railway truck wheelset bearing comprising:

a rigid adapter means adapted to be supported with respect to such a wheelset bearing in a manner to accommodate axial rotation of such a wheelset with respect to said rigid adapter means;

said rigid adapter means being further adapted to be received within such a pedestal opening with outer surface portions thereof disposed in spaced relationship with respect to given inner surface portions of such a pedestal opening;

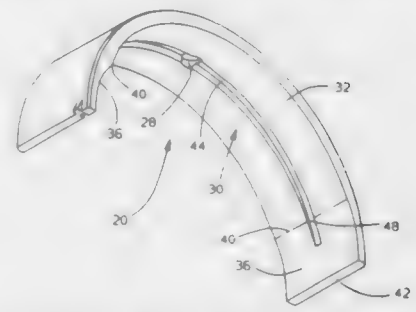
resiliently deformable elastomeric means engageable with said outer surface portions and adapted to engage such given inner surface portions for support of such a side frame with respect to said rigid adapter means; and

said elastomeric means being resiliently deformable under loads borne thereby while supporting such a side frame in a manner to exert between said rigid adapter means such a side frame both laterally and longitudinally directed confining forces of sufficient magnitude to restrain lateral and longitudinal movement of said rigid adapter means with respect to such a pedestal opening in operation; and

said elastomeric means being further resiliently deformable in a manner to permit said rigid adapter means to rotate with respect to such a pedestal opening about an axis of rotation extending generally axially of such a wheelset.

5,009,522

REDUCED FLOW BEARING



Charles J. Hahn, assignor to General Motors Corporation, Detroit, Michigan, Mt. Clemens, Mich.

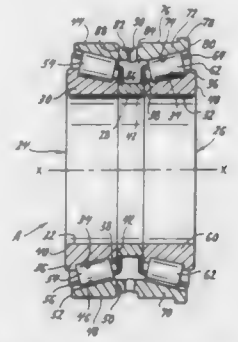
Filed Apr. 2, 1990, Ser. No. 502,723
Int. Cl.[5] F16C *33/10*
U.S. Cl. 384—288 6 Claims

1. A journal bearing for internal combustion engines wherein a rotatable journal is received within a cylindrical opening defined jointly by a pair of detachably secured members, said bearing comprising:

a semi-cylindrical bearing shell adapted to be opposedly received within said opening to define a generally semi-cylindrical, inwardly facing bearing surface adapted to surround a portion of said journal in close fitting bearing relationship with clearance for formation therebetween of a load carrying lubricating oil film;

said inwardly facing bearing surface divided circumferentially into a concentric central portion and a pair of eccentric end portions, said portions each extending axially the full width of said surface, said concentric central portion being equidistant at all points from said central axis and extending circumferentially a predetermined angular dimension, said eccentric end portions extending outwardly from the opposite ends of said central portion and of progressively increasing distance from said central axis toward the ends of said bearing shell of said shell;

said inwardly facing bearing surface further having an eccentric lubricant supply groove extending circumferentially a predetermined angular dimension larger than said concentric central portion, said groove tapering from a point of maximum depth within said concentric central portion to terminate within each of said eccentric end portions thereby forming lubricant metering orifices at the interface of said concentric central portion, said eccentric end portions and said eccentric lubricant supply groove to meter the flow of lubricant from said groove to said eccentric end portions; and



a lubricant supply opening extending through said bearing shell to intersect said supply groove for supplying lubricant from an external source to said bearing.

5,009,523

DOUBLE ROW BEARING ASSEMBLY

Russell F. Folger, and Gerald P. Fox, both of Stark County, Ohio, assignors to The Timken Company, Canton, Ohio

Filed Jul. 20, 1989, Ser. No. 382,994
Int. Cl.[5] F16C *19/38, 33/66*
U.S. Cl. 384—475 22 Claims

1. In combination with a housing having a bore and a shaft which extends through the housing and has a pair of radially directed abutments and a bearing seat between the abutments, an improved bearing assembly for supporting the shaft between the abutments so that the shaft will rotate about an axis of rotation, said bearing assembly comprising: first and second bearings, each including an outer race having an inwardly

presented raceway, an inner race having an outwardly presented raceway which faces the raceway of the outer race, and rolling elements arranged in a single row between the raceways of the outer and inner races, the raceways and rolling elements of each bearing being configured and oriented such that the bearing will transmit an axial load in one direction as well as a radial load, the outer races of the two bearings being in the bore of the housing, the inner races of the two bearings being on the bearing seat of the shaft, the bearings being oriented in opposition so that one transmits axial loads in one direction and the other transmits axial loads in the other direction, the outer race of the second bearing being captured in the housing so that it cannot shift axially with respect to the housing, the outer race of the second bearing further having an extension formed integral therewith and projected axially toward the outer race of the first bearing, the extension being against the outer race of the first bearing so as to position the outer race of the first bearing in a predetermined axial position with respect to the outer race of the second bearing, the extension on the outer race for the second bearing having an outer diameter that is less than the outer diameter of the remainder of the outer race for the second bearing and also less than the outer diameter for the outer race of the first bearing so as to provide an annular cavity between the two outer races, the extension having ports extended radially through it for enabling a fluent lubricant to pass from the annular cavity into the region between the inwardly and outwardly presented raceways of the two bearings.

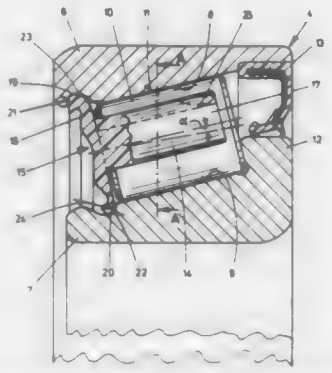
ROLLER SEATING



Uwe Brockmüller, Oberwerrn, and Hans-Gerd Weber, Poppenhausen, both of Fed. Rep. of Germany, assignors to SKF GmbH, Schweinfurt, Fed. Rep. of Germany

Filed Nov. 22, 1989, Ser. No. 440,091

Claims priority, application Fed. Rep. of Germany, Dec. 10, 1988, 3841629

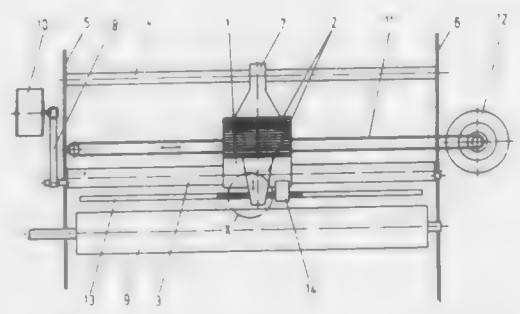
Int. Cl.[5] F16C *33/49*

U.S. Cl. 384—576 **11 Claims**

1. A bearing seating arrangement comprising an outer ring, an inner ring, a bendable elastic cage and rolling elements between said inner and outer rings and positioned to roll in a circumferential direction, each rolling element being installed between essentially axially extending spacers of said cage, the spacers having holding surfaces partially surrounding the rolling surfaces of the rolling elements, at least one of the two ends of the spacers being solidly attached to at least one radially inward and/or radially outward extending projection of the cage, said projection(s) facing a respective revolving shoulder surface(s) of the inner or outer ring, said projection(s) being mounted to be pushed with a directed pre-tensioning force against the circumference of the respective shoulder surface of one of said inner ring or the outer ring, said pre-tensioning force being in a direction to elastically radially dislocate said holding surfaces against said rolling elements.

5,009,526

METHOD OF ADJUSTING A PRINTING GAP IN A PRINTER



Rolf Kirchhof, Freusburg, Fed. Rep. of Germany, assignor to U.S. Philips Corporation, New York, N.Y.

Filed Apr. 10, 1990, Ser. No. 508,034

Claims priority, application Fed. Rep. of Germany, Apr. 21, 1989, 3913073

Int. Cl.[5] H1J *25/28*

U.S. Cl. 400—56 **15 Claims**

1. A method of adjusting a printing gap in a printer between a printing head and a printing support comprising:

(a) moving the printing head to and fro in first reciprocating directions between direction switching pints and then simultaneously moving the head forwards in a second direction toward the printing support to contact the support,

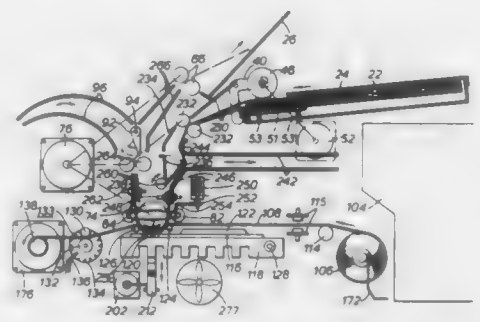
(b) determining the variation of a parameter characteristic value of the reciprocating to and fro movement caused by contact of the printing head with the printing support,

(c) said variation results, when a given characteristic value is reached, in stopping the forward movement, and

(d) moving the printing head, starting from this stopped forward movement position, in which the printing gap is at "zero", backwards a desired value of the printing gap.

5,009,527

THERMAL TRANSFER COLOR PRINTER WITH SHEET RETAINING AND GUIDING STRUCTURE ADJACENT PLATEN



Masasumi Yana; Hitoshi Nagato, both of Yokohama; Kiyoshi Yamada, Tokyo; Shyoji Ueno, and Kunihiro Shibuya, both of Yokohama, all of Japan, assignors to Tokyo Shibaura Denki Kabushiki Kaisha, Kanagawa, Japan

Continuation of Ser. No. 742,850, Jun. 10, 1985, abandoned, which is a continuation of Ser. No. 554,319, Nov. 22, 1983, abandoned. This application Mar. 3, 1986, Ser. No. 834,650

Claims priority, application Japan, Nov. 24, 1982, 57-204526

Int. Cl.[5] B41J *2/325, 35/16, 13/036*

U.S. Cl. 400—120 **3 Claims**

1. A thermal transfer color printer for printing a color image on individual separate sheets of a recording media having front and rear end portions comprising:

feed means for feeding separate sheets of a recording media one by one into said thermal transfer color printer;

a reversible platen roller to transport a single sheet of recording media received from said feed means;

retention means adjacent said reversible platen roller for retaining and guiding the sheet of recording media along the surface of said platen roller as the sheet of recording media moves in both a first and reverse direction during printing of a color image;

a multicolored ink ribbon supported to move across said platen roller with one face of said ink ribbon in heat transfer relationship with the sheet of recording media, said ink ribbon having a plurality of color segments successively arranged along its length;

a thermal printhead having thermal elements which are selectively energized by color component electrical signals representing the color image to be printed on the sheet of recording media, said printhead being positioned with said thermal elements facing the surface of said platen roller in heat transfer relatioship with said multicolored ink ribbons;

printhead moving means for selectively moving said thermal printhead up and down so that in the up state said printhead presses said ink ribbon and said sheet of recording media onto the surface of said reversible platen roller for thermally transferring colored ink from said ink ribbon onto said sheet of recording media when said thermal elements are energized and in the down state said printhead is disengaged from said reversible platen roller;

ink ribbon drive means for transporting said multicolored ink ribbon in said first direction;

platen roller drive means for driving said reversible platen roller to transport the sheet of recording media in said first direction without disengaging said retention means from the rear end portion of the sheet of recording media, said platen roller drive means transporting the sheet of recording media at substantially the same rate as said ink ribbon, said platen roller drive means also including reverse drive means for driving said reversible platen roller in said reverse direction to transport the sheet of recording media in a second direction opposite said first direction without disengaging said retention means from the front end portion of the sheet of recording media, wherein said platen roller drive means includes means to prevent said sheet of recording media from exiting said printer during printing of said color image on said recording media; and

electrical circuit means connected to said thermal printhead for supplying the color component electrical signals to said thermal elements while the sheet of recording media is transported in the first direction.

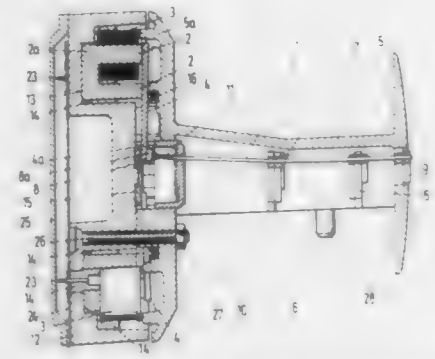
MATRIX PRINT HEAD OF HINGED-CLAPPER-ARMATURE CONSTRUCTION



Bernd Gugel, Ulm-Einsingen; Clemens Kaufmann, Ulm; Herbert Kitzberger, Oberstotzingen, and Kurt Röhrer, Niederstotzingen, all of Fed. Rep. of Germany, assignors to Mannesmann Aktiengesellschaft, Düsseldorf, Fed. Rep. of Germany

Filed Nov. 30, 1989, Ser. No. 443,754

Claims priority, application European Pat. Off., Dec. 1, 1988, 88730266.9

Int. Cl.[5] **B41J** *2/235*

U.S. Cl. 400—124 **21 Claims**

1. A matrix pin print head of the hinged clapper armature construction with several pin systems comprising

a magnetic yoke limb pair for each pin system including an individual outer magnetic yoke limb;

an electromagnetic coil;

a hinged clapper armature having opposed notches;

a print pin having at an end a pin connection point,

a circumferentially closed ring;

an electromagnetic coil support forming with the magnetic yoke limb pairs a single circular piece component and wherein the outer individual magnet yoke limb and wherein, in each case, the magnet yoke limb pairs are disposed on a radial line passing through the pin connection point, and wherein each radially inner magnet yoke limb is formed to be part of the circumferentially closed ring;

a shell;

guide means attached to and projecting from the shell and

receiving means disposed in the closed ring, said opposed notches being aligned with said receiving means, said guide means being received in said opposed notches and said receiving means to confine the pivoting motion of the hinged clapper armatures.

APPARATUS FOR REVERSE RECORDING IMAGE AND COVERING BY PROTECTIVE MEDIUM

Susumu Kuzuya, Gifu; Seiji Shimizu; Mikio Kato, both of Nagoya; Yujiro Ishikawa, Toyota; Takashi Sakai, Nagoya, and Eiji Yuki, Owariasahi, all of Japan, assignors to Brother Kogyo Kabushiki Kaisha, Aichi, Japan

Filed Oct. 24, 1988, Ser. No. 261,318

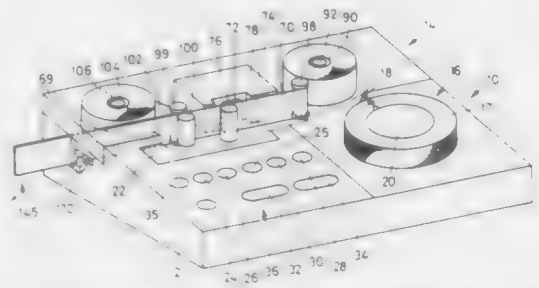
Claims priority, application Japan, Oct. 31, 1987, 62-167673[U]; Dec. 21, 1987, 62-323429

Int. Cl.[5] **B41J** *2/325*

U.S. Cl. 400—188 **11 Claims**

1. A recording apparatus, comprising:

an apparatus body having a front section on the side of an operator of the apparatus and a rear section remote from the operator's side;



medium feeding means supported by said apparatus body, for feeding a substantially transparent recording tape along a predetermined feed path defining a boundary between said front and rear sections, such that one of opposite surfaces of the tape faces the operators side;

ribbon feeding means disposed in said rear section of said apparatus body, for feeding an ink ribbon along a portion of said predetermined feed path;

recording means including a stationary thermal head disposed in said rear section of said apparatus body, for recording an image on the other of said opposite surfaces of said tape, via said ink ribbon fed between said tape and said thermal head;

a platen disposed in said front section of said apparatus body, in facing relation with said thermal head, for supporting said tape in contact with one surface of the tape;

control means for controlling said recording means, said medium feeding means and said ribbon feeding means, such that said image is laterally reversed as viewed in a first direction from said recording means toward said

other surface of the medium, with respect to a nominal desired image as viewed in a second direction from said front section toward said one surface of the tape, whereby the laterally reversed image is seen as said nominal desired image when view in said second direction;

a backing tape comprising a substrate, two adhesive layers formed on opposite surfaces of said substrate, and a release layer provided on one of said two adhesive layers; and

means disposed at a position along said predetermined feed path downstream of said recording means, for superposing said backing tape on a recorded portion of said recording tape such that said backing tape is bonded at the other of said two adhesive layers thereof to said other surface of said recording tape.

COLOR INK RIBBON AND PRINTER USING THIS RIBBON

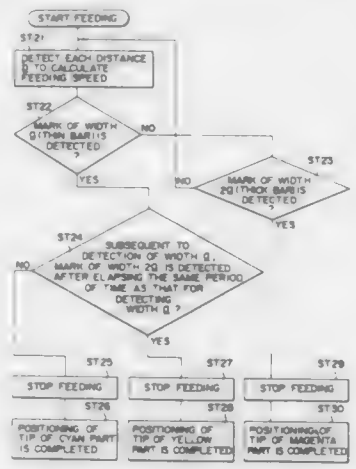
Seiji Koike, Shizuoka, Japan, assignor to Tokyo Electric Co., Ltd., Tokyo, Japan

Filed Jan. 16, 1990, Ser. No. 464,949

Claims priority, application Japan, Jan. 20, 1989, 1-11634

Int. Cl.[5] **B41J** *31/09*

U.S. Cl. 400—240.3 **16 Claims**



1. A printer system comprising:

an ink ribbon body on which a plurality of kinds of ink portions are arranged, said ink portions being arranged along a feed direction of said ink ribbon body;

means for discriminating the kinds of said ink portions and for providing ink kind information, said discriminating means being arranged on said ink ribbon body in correspondence with each of said ink portions;

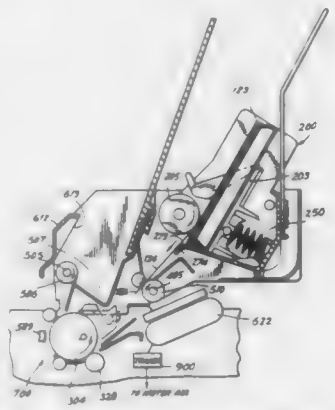
means for detecting a feeding speed of said ink ribbon body and for providing ribbon speed information, said detecting means being arranged on said ink ribbon body; and

means for determining the kind of ink portion which is subsequent to a current ink portion to be used by the

printer system, according to said ink kind information and said ribbon speed information.

5,009,532

PAPER FEEDING APPARATUS FOR ACCOMMODATING DIFFERENT LENGTHS OF RECORDING MEDIA FOR USE WITH A PRINTER



Hiroyuki Akazawa, Suwa, and Toshihiro Imae, Hino, both of Japan, assignors to Seiko Epson Corporation, Tokyo, Japan

Filed May 16, 1988, Ser. No. 194,667

Claims priority, application Japan, May 18, 1987, 62-120717

Int. Cl.[5] **B41J** *13/03*

U.S. Cl. 400—636.2 **30 Claims**

1. A paper feeding apparatus associated with a printer having a platen, comprising:

driving means for rotating the platen in first and second directions;

storage means for holding a plurality of individual recording media and including separating means for controlling the release of individual recording media from the storage means;

roller means for removing individual recording media from the storage means;

auxiliary roller means disposed along a path travelled by the individual recording media and between the roller means and platen for advancing the individual recording media towards the platen; and

transmission means for rotating said roller means to remove individual recording media from the storage means in response to rotation of said platen in the first direction and for rotating said auxiliary roller means to advance the recording media in response to rotation of said platen in the first and second directions;

wherein said auxiliary roller means rotates in only one direction in response to rotation of said platen in first and second directions.

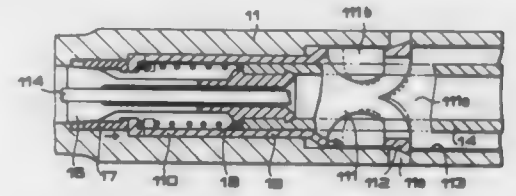
PROPELLING PENCIL WITH CUSHION SLEEVE



Hidehei Kageyama, Kawagoe, Japan, assignor to Kotobuki & Co., Ltd., Kyoto, Japan

Continuation of Ser. No. 346,344, Apr. 28, 1989, abandoned, which is a continuation of Ser. No. 695,755, Jan. 29, 1985, abandoned, which is a continuation of Ser. No. 410,963, Aug. 24, 1982, abandoned. This application Aug. 9, 1990, Ser. No. 565,214

Claims priority, application Japan, May 10, 1982, 57-67850

Int. Cl.[5] **B43K** *21/00, 21/22*

U.S. Cl. 401—65 **5 Claims**

1. A pencil comprising:

(a) an outer cylinder;

(b) a lead pipe accommodated in said outer cylinder and having a lead chuck at a distal end thereof;

(c) a chuck tightening pipe mounted in said outer cylinder and, in assembly, tightening said lead chick;

(d) an axially slidable cushion sleeve mounted in said outer cylinder and including:

(i) a first elongated portion, having a first outer diameter, adapted to engage said chuck tightening pipe,

(ii) a second elongated cushioning portion, having a second outer diameter, connected to said first elongated portion, said second elongated cushioning portion having a rear end remote from said first elongated portion,

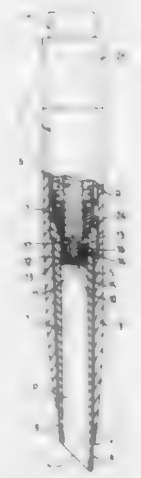
(iii) an engaging projection extending radially outward of said second portion at said rear end,

(iv) a diametric slit formed in said rear end of said second portion and extending substantially transverse to said radially extending engaging projection, said diametric slit permitting radial resilient deflection of said rear end of said second portion in a direction substantially transverse to said diametric slit, and

(v) a circumferential hole formed in said second portion in front of said engaging projection, said circumferential hole permitting axial resilient deflection of said second portion, said slit, said hole and said second portion cooperating to form a resilient elastically deformable spring;

(e) said outer cylinder including engagement means for engaging said projection for limiting the axial movement of said cushion sleeve;

(f) said outer cylinder including guide means for guiding said at least one projection into engagement with said engagement means during assembly; and



(g) spring biasing means interposed between said lead pipe and said first portion.

5,009,534

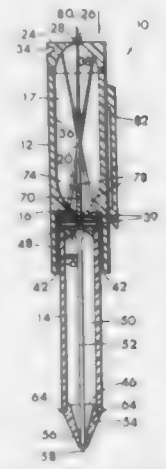
PISTON DISPENSER FOR PASTE OR SOLID PRODUCTS

Jean-Louis Gueret, Paris, France, assignor to L'Oreal, Paris, France

Filed Feb. 2, 1990, Ser. No. 474,525
Claims priority, application France, Feb. 7, 1989, 89 01545
Int. Cl.[5] B05C *17/00*; B45D *40/06*
U.S. Cl. 401—75 14 Claims

1. A dispenser for a product to be spread and including a reservoir for the product, a drive means for dispensing the product from said reservoir, said reservoir comprising a tube having a cylindrical interior and a dispensing opening at one end thereof, a piston movably disposed in said interior of said tube, said drive means including a rod having one end engageable with said piston, said piston having opposite faces and a passage extending therethrough from the one of said faces facing said reservoir to the other of said faces facing said rod, said passage being located in said piston so as to be in axial alignment with said rod and said rod having a head for engaging said other of said faces of said piston on which said passage opens, said rod being movable toward said piston to bring said head into engagement therewith to effect the dispensing and away from said piston thereby allowing separation of said rod from said piston.

5,009,535



COMBINATION WRITING IMPLEMENT AND TOOTHPICK DISPENSER

Clayton D. Oilar, P.O. Box 64, Cedarville, Calif. 96104

Filed Aug. 10, 1990, Ser. No. 565,456
Int. Cl.[5] B43K *29/00*; B65D *83/02*
U.S. Cl. 401—195 1 Claim

1. A toothpick dispenser and writing implement combination, comprising:

an elongated tubular housing sized for hand held usage by a human, said tubular housing having a first end and an oppositely disposed second end, said first end having a plurality of toothpicks within a storage chamber of said tubular housing, said first end having means for dispensing a toothpick of said plurality of toothpicks, said means for dispensing a toothpick having means actuatable by pressing on a top of said first end whereby a single toothpick is dispensed from within said storage chamber through an aperture in said top of said first end, said tubular housing having spring biased means affixed thereto for temporarily retaining said tubular housing in a shirt pocket, said second end of said tubular housing having a writing tip, and means for temporarily covering said writing tip.

5,009,536

WATER BASE PIGMENT INK COMPOSITIONS FOR USE IN MARKING PENS

Hiroshi Inoue; Wataru Yokono, and Yasuji Okuda, all of Osaka, Japan, assignors to Sakura Color Products Corp., Osaka, Japan

Division of Ser. No. 434,945, Nov. 9, 1989, Pat. No. 4,942,185.
This application Jun. 8, 1990, Ser. No. 535,328
Claims priority, application Japan, Nov. 15, 1988, 63-288237
Int. Cl.[5] B43K *5/02*
U.S. Cl. 401—198 8 Claims

1. A marking pen which contains an absorbent ink reservoir impregnated with an ink composition and a pen tip connected thereto, the ink composition comprising:

(a) water in amounts of not less than 50% by weight;

(b) an aqueous emulsion of hollow resin particles in amounts of 0.5–40% by weight as solids;

(c) a white pigment in amounts of 1–40% by weight; and

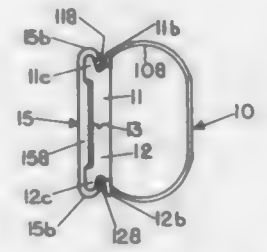
(d) a water-solubilized alpha-methylstyrene/styrene/acrylic acid copolymer which has a weight average molecular weight of 1000–10,000 and a distribution of molecular weight of 0.5-3.3, but which contains substantially no components having a weight average molecular weight of not more than 500, in amounts of 0.1–30% by weight, based on the ink compositions, respectively.

5,009,537

BOOKLET BINDING SYSTEM

Philip B. Stengel, Cambridge, Minn., assignor to Creative Binding Systems, Inc., Cambridge, Minn.

Filed Dec. 27, 1988, Ser. No. 290,563
Int. Cl.[5] B42F *13/04*
U.S. Cl. 402—21 3 Claims



1. A booklet binding system for use with a wire loop binder of the type having a pair of opposed spaced apart rows of loop segments, wherein one of the segments forms narrow tine elements adapted to be received through the holes of prepunched sheets and the other segment being connecting loops to provide a continuous wire loop binder,

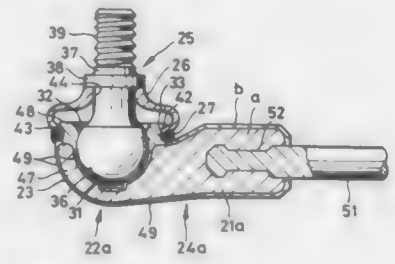
a closure removably mounted in the space between the two opposed loop segments to capture the sheets mounted on the tine elements of the wire loop binder,

said closure including a pair of spaced apart loop receiving grooves for respectively receiving the spaced apart ends of the two rows of loop segments,

means for retaining the closure in binding position between the ends of the loop segments, and wherein

the loop receiving grooves are orientated to alone slope inwardly to maintain the closure in interlocked binding

position between the two rows of loop segments, and wherein



the closure comprises a pair of elongated sections hingedly connected longitudinally thereof to facilitate insertion of the loop segments into the grooves defined therein.

5,009,538

BALL JOINT

Tadayoshi Shirai, and Masahito Hioki, both of Hamamatsu, Japan, assignors to Ishikawa Tekko Kabushiki Kaisha, Tokyo, Japan

Filed Jul. 12, 1990, Ser. No. 551,912
Claims priority, application Japan, Aug. 3, 1989, 1-201849
Int. Cl.[5] F16C *11/00*
U.S. Cl. 403—134 5 Claims

1. A ball joint comprising:

a housing portion;

said housing portion including an inner layer and an outer layer;

said inner layer including a fiber-reinforced plastic resin;

said outer layer substantially covering said inner layer;

said outer layer being a self-lubricating plastic resin substantially without fiber reinforcement;

a spherical inner chamber in said outer layer;

a hemi-spherical inner chamber in said inner layer;

an opening in said spherical inner chamber;

a ball stud;

a ball portion of said ball stud slidably mounted in said spherical inner chamber; and

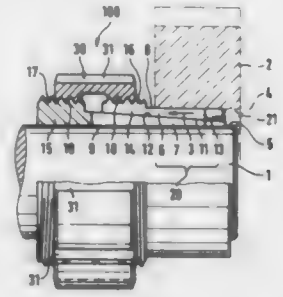
a stud portion of said ball stud protruding from said opening.

5,009,539

CLAMPING SET WITH SCREW SLEEVE

Ralph Muellenberg, Im Wiesengrund 6, D-4048 Grevenbroich 12, Fed. Rep. of Germany

Filed Aug. 4, 1989, Ser. No. 389,890
Claims priority, application Fed. Rep. of Germany, Aug. 6, 1988, 3826849
Int. Cl.[5] B25G *3/20*
U.S. Cl. 403—370 31 Claims



1. A clamping set for the transmission of torques between at least one inner shaft component having a cylindrical outer peripheral face and at least one outer hub component having a recess in which the inner component engages concentrically, and also having a cylindrical inner peripheral face, said clamping set comprising:

an outer taper bushing having a cylindrical outer peripheral face disposed to rest against the inner peripheral face of the outer component and an inner taper face coaxial with the outer peripheral face and having a taper angle lying in the self-locking region;

an inner taper bushing having a cylindrical inner peripheral face disposed to rest against the outer peripheral face of the inner component and an outer taper face coaxial with the inner peripheral face and having a taper angle equal to that of the inner taper face;

a screw sleeve which surrounds the inner taper bushing and is screwed with a first internal thread on an externally threaded extension of the inner taper bushing thereby connecting axially to a clamping region of the outer taper face; and

a longitudinal stop on the outer component engaging with the end of the inner taper bushing;

said screw sleeve being arranged axially outside a side portion of the outer component thereby drawing the taper bushings towards each other and pressing away from each other axially while gliding over the taper faces;

said outer taper bushing having an externally threaded extension connecting axially to the clamping region of the inner taper face, said outer taper bushing being arranged axially outside the side portion of the outer component;

said screw sleeve having a second internal thread of different pitch axially adjacent to the first internal thread;

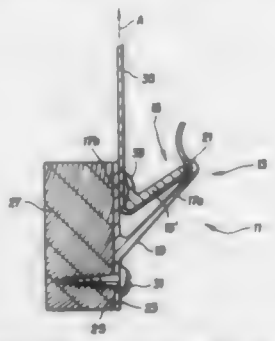
the second internal thread of the screw sleeve engaging with the external thread of the outer taper bushing;

the externally threaded extension of the outer taper busing being disposed on a thin-walled end of the outer taper bushing and the threaded extension of the inner taper bushing being disposed on a thick-walled end of the inner taper bushing.

5,009,540

FASTENING MEANS

Vernon E. L. Nolan, 16 Goose Road, Padbury, Western Australia, Australia



PCT No. PCT/AU87/00358, § 371 Date Apr. 25, 1989, § 102(e) Date Apr. 25, 1989, PCT Pub. No. WO88/03231, PCT Pub. Date May 5, 1988
PCT Filed Oct. 23, 1987, Ser. No. 348,669
Claims priority, application Australia, Oct. 27, 1986, PH8699
Int. Cl.[5] B25G *3/00*; A47H *13/00*
U.S. Cl. 403—405.1 11 Claims

1. A fastening means for fastening sheet material to a fixture wherein the sheet material is subject to a varying tensile force, comprising:

a fork member for mounting to the fixture, said fork member including a pair of outwardly diverging arms joined at a common junction, one of said arms including a hook means thereon spaced from said junction; and

means for fastening the sheet material within said fork member such that the fastening force applied to the sheet material is proportional to the tensile force in the sheet material, said means for fastening within said fork member

including a keeper member having a substantially planar body, said substantially planar body having two ends, one end for holding the sheet material against said hook means and an other end for holding the sheet material against the inner side of the other of said arms such that a fastening force is applied to the sheet material by said other end of said body in proportion to the tensile force in the sheet

material, a distance between said ends of said body being greater than a maximal spacing between said arms, and being less than a distance between said hook means and said common junction, so that said keeper may adopt a locking position wherein said keeper is pulled in the same direction as the tensile force in the sheet material, thereby causing said ends of said body to apply the fastening force.

PLASTIC BARRICADE WITH LIMITING BOLT

Kurt W. Thurston, 475 Hill St., Reno, Nev. 89501

Continuation-in-part of Ser. No. 326,615, Mar. 21, 1989, abandoned, and a continuation of Ser. No. 383,298, Jul. 20, 1989. This application Jan. 25, 1990, Ser. No. 470,394

Int. Cl.[5] E01F *13/00, 15/00*

U.S. Cl. 404—6 **3 Claims**

1. A plastic barricade constructed from two substantially similar frame units each having a planar outside face and which are one piece, hollow, and integrally molded, such unit being hinged together to pivot around a common axis of rotation, each of said frame units having left and right edges when an outside face of said hinged barricade is directly viewed by an observer in front of the face of a freestanding barricade, the improvement comprising:

hinge means at the top of each of said frame units including near said left edge a cylindrical male boss and near said right edge a C-shaped female socket for snapping onto said male boss and freely pivoting thereon said hinge means normally allowing said two frame units to pivot open or unfold to an angle substantially greater than a predetermined angle used when placing said barricade in a freestanding position;

means for maintaining said barricade at said predetermined angle of said unfolded freestanding position, including for each frame unit a pair of recesses in said planar outside face near each one of said edges and below said hinge means each said recess having an aperture for accepting an elongated fastener having limiting means on both ends for abutting against said recesses when said barricade is unfolded to its predetermined angle said fastener having a length less than the distance between the planar outside faces of a folded barricade;

each of said frame units including at least one pair of interlocking means located on said outside face of each of said frame units proximate to said left and right edges of said frame unit, one of said pair of interlocking means being an indentation in and the other a protrusion from said outside face, said indentation and protrusion being dimensioned and shaped to closely mate together, said protrusion for each of said two frame units of said barricade always being located on a predetermined one of said left and right edges, whereby assuming the same lengthwise orientation of a barricade, one folded barricade may be stacked on another with the said interlocking means automatically mating with said planar faces of said frame units abutting each other, and without obstruction or interference by said fasteners.

TRAFFIC BARRIER GATE

Paul W. Hardin, Jr., 3086 Parklane, Snellville, Ga. 30278, and Wayne Taylor, 5202 Vivid Dr., Stone Mountain, Ga. 30083

Filed Mar. 6, 1990, Ser. No. 489,346

Int. Cl.[5] E01F *13/00, 15/00*

U.S. Cl. 404—6 **11 Claims**

1. A traffic barrier for controlling the flow of vehicles comprising:

end walls flanking a vertically disposed and horizontally elongated movable gate, said gate being selectively movable vertically from an upright, closed position to an open substantially ground level position,

said gate having a first side and a second side, said sides being connected by a top member,

the first and second sides being pivotally connected to said top member,

a reinforcing longitudinal support beam extending from one end wall to the other end wall, said beam supporting the top member,

retractable support means extending from the support beam to ground level,

lifting means to effect vertical movement of said gate upon command,

said first and second sides of said gate being adapted to move about said pivotal connection at the top member as the gate is moved to its lowered open position wherein said first and second sides collapse to substantially ground level to provide a ramp surface.

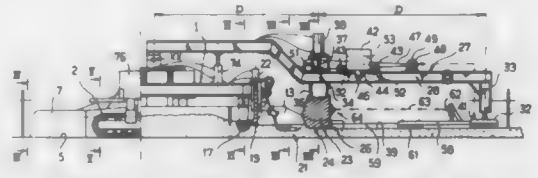
METHOD AND MACHINE FOR WORKING AN AREA OF GROUND, IN PARTICULAR FOR SURFACING A ROAD



Alain Chaize, 3 rue Greneta, 75003 Paris, France

Filed Aug. 14, 1989, Ser. No. 394,414

Claims priority, application France, Aug. 18, 1988, 88 10998

Int. Cl.[5] E01C *19/22*

U.S. Cl. 404—72 **24 Claims**

1. A method for working an area of ground, in which a machine carrying a tool (23) which is in contact with said area is displaced along the area to be worked while means (3, 38) at least indirectly supporting the tool (23) are adjusted in respect of height so that said tool follows a path which is substantially independent of the unevenness of a nonworked region (5) of the ground over which there progress means (2) for supporting said machine on rough ground located forwardly of a rear transverse end (26) of the tool (23), the tool being supported, during working, under a bridge frame, one front end of which is supported by the means (2) for supporting said machine on rough ground via an articulation (31) with an axis (X—X) transverse to the median longitudinal plane (P) of the machine, wherein a rear end of the bridge frame (27) is caused to rest on the worked area (39) under a pressure which is sufficiently low to avoid any significant deterioration of the worked surface (37), and wherein said pressure is adjusted by displacing a ballast (42) along the bridge frame (27).

7. A method for working an area of ground, in which a machine carrying a tool (23) which is in contact with said area is displaced along the area to be worked while means (3, 38) at least indirectly supporting the tool (23) are adjusted in respect of height so that said tool follows a path which is substantially independent of the unevenness of a nonworked region (5) of the ground over which there progress means (2) for supporting the machine on rough ground which are located forwardly of a rear transverse end (26) of the tool (23), the tool being supported, during working, under a bridge frame one front end of which is supported by the means (2) for supporting the machine on rough ground via an articulation (31) with an axis (X—X) transverse to the median longitudinal plane (P) of the machine, wherein a rear end of the bridge frame (27) is caused to rest on the worked area (39) under a pressure which is sufficiently low to avoid any significant deterioration of the worked surface (39), and wherein said pressure is continuously detected and adjusted to maintain said pressure substantially constant.

WIRE MESH STRAIGHTENING METHOD AND APPARATUS

Darold D. Coleman, Rice Lake, and Raymond P. Nesseth, Barron, both of Wis., assignors to NTH, Inc., Barron, Wis.

Continuation of Ser. No. 316,155, Feb. 27, 1989, abandoned. This application Jul. 20, 1990, Ser. No. 555,652

Int. Cl.[5] E01C *11/16, 24/04*

U.S. Cl. 404—100 **29 Claims**

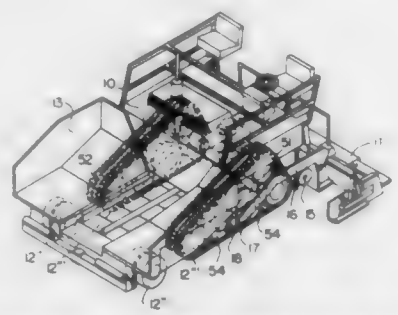
1. Wire mesh straightening apparatus for automatically straightening rolled wire mesh at a construction site, comprising:

(a) a chassis sized and configured for ease of mobility to and at a construction site;

(b) a pair of generally parallel rollers mounted to said chassis and cooperatively aligned generally parallel to each other and forming a nip between those respective surface portions of said rollers that lie closest to one another at any point in time, said rollers having a length at least equal to the width of the wire mesh to be straightened;

(c) means for advancing the wire mesh to be straightened through said nip formed by said rollers including hydraulic drive means operatively connected to drive at least one of said rollers about its axis;

(d) reaction means connected to said chassis arranged and configured to intercept the wire mesh passing through said nip for continuously bending said mesh in a direction opposed to the preexisting curvature of said wire mesh as it leaves said nip; whereby said wire mesh is uniformly straightened as it leaves said reaction means; and



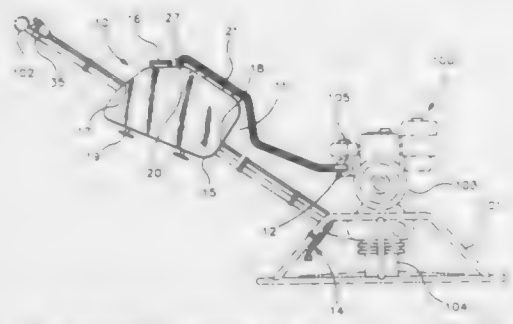
(e) self-releasing starting means connected to said chassis for retainably engaging the wire mesh to be straightened and for guiding the mesh toward said nip.

5,009,546

ROAD PAVER-FINISHER WITH A COMBINATION OF AXLES WITH STEERING WHEELS AND CRAWLER UNITS

Domenico Domenighetti, Via Calli, 8, CH-6900, Switzerland, and Jack Layton, 4725 Turner Rd., SE., Salem, Oreg. 97301

PCT No. PCT/EP87/00197, § 371 Date Feb. 8, 1989, § 102(e) Date Feb. 8, 1989, PCT Pub. No. WO88/08054, PCT Pub. Date Oct. 20, 1988
PCT Filed Apr. 10, 1987, Ser. No. 299,826
Int. Cl.[5] E01C *19/18*
U.S. Cl. 404—110 **7 Claims**



1. A road paver-finisher comprising a tractor unit, a screed unit mounted for vertical movement on and relative to the tractor unit, the tractor unit having a hopper for road material, and conveyor means for unloading the road material from the hopper in front of the screed to be leveled by the screed, crawler belts mounted on the tractor unit forwardly of the screed for advancing the tractor unit, ground engaging steering wheels mounted on the tractor unit forwardly of the crawler belts, and power means for moving said steering wheels and crawler belts vertically relative to each other thereby to control tilting of the tractor unit and hence of the screed.

5,009,547

WATER SPRAY FOR CEMENT FINISHER

Jeff A. Clark, 225 W. El Norte #206, Escondido, Calif. 92026

Filed Jan. 11, 1990, Ser. No. 463,521
Int. Cl.[5] E01C *19/22*
U.S. Cl. 404—112 **5 Claims**

1. An improved apparatus for treating cement and other flooring surfaces having a frame, a handle on the frame, an internal combustion engine on the frame and a rotary finishing means to smooth the flooring surface on the frame powered by the engine, wherein the improvement comprises:

a. a fluid tank;

b. a filler cap on the fluid tank;

c. a control means connected to the fluid tank to control the flow of fluid from the fluid tank;

wherein the control means further comprises:

at least two control valves;

a linkage means attached to each control valve to open and close the control valve; and

an actuation means attached to each linkage means to move the linkage means;

d. at least two first inlet ports in the fluid tank through which the control means enters the fluid tank;

e. at least two outlet ports in the fluid tank through which the control means exits the fluid tank;

f. an first attachment means on the fluid tank to attach the fluid tank to the handle on the frame;

g. at least two nozzles to direct the flow of the fluid;

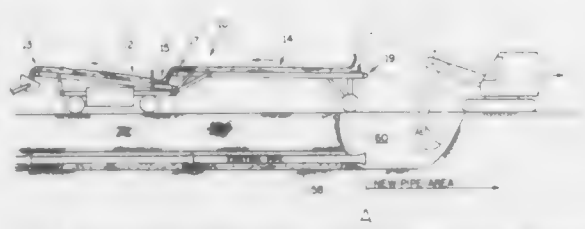
h. at least two fluid conduits to transmit the fluid from the fluid tank to the nozzles;

i. an second inlet port in the fluid tank;

j. a pressure conduit to transmit pressure to the fluid tank;

k. a first pressure connection means to connect the pressure conduit to an exhaust apparatus of the engine;

l. a second pressure connection means to connect the pressure conduit to the fluid tank through the second inlet port; and



m. a pressurization regulation valve connected to the pressure conduit.

5,009,548

APPARATUS FOR AND A METHOD OF FACILITATING THE EXCAVATING AND REFILLING OF A TRENCH

G. P. "Sonny" Falbo, Rte. 3, Box 525 C, San Antonio, Tex. 78218, and Jesse W. Harris, 3006 Mayfair, San Antonio, Tex. 78217

Filed Jan. 26, 1990, Ser. No. 470,949
Int. Cl.[5] B65G *21/10*
U.S. Cl. 405—179 **3 Claims**

1. A method for aiding the excavation and filling of trenches in laterally confined spaces using an apparatus comprising;

a first longitudinal conveyer section and a second longitudinal conveyer section, each of said sections having a first end and a second end;

a first and a second endless conveyer belt located on said first and second conveyer section;

belt drive means for energizing said conveyor belts, said belt drive means capable of reversing direction;

link means for attaching the second end of said first section with the first end of said section second section, said link means further comprising pivot means for selectively allowing a straight or angled relationship between the longitudinal axis of said sections;

means for selectively positioning the linked ends of said sections, one above the other; and

truck means for steerably supporting said first and said second conveyer sections, said truck means having wheels and spaced sufficiently wide to straddle the trench:

the method comprising:

(a) removing virgin overburden for dumping at an off-site location by depositing overburden on the first end of the first conveyor unit for transportation to the second end of the second conveyor unit;

(b) removing overburden for depositing on the first end of the first conveyor unit which overburden will be dropped off the second end of the first conveyor unit into previously excavated trench which contains bedding and pipe, wherein steps (a) and (b) remove sufficient overburden to lay a section of pipe;

(c) adding bedding material by depositing it on the second end of the second unit for dropping into the trench ultimately off the first end of the second unit and the first end of the first unit until sufficient bedding has been laid;

(d) laying a section of pipe;

(e) adding overburden from step (b) above in an amount sufficient to refill the trench;

wherein steps (a) through (e) are completed sequentially as the apparatus moves longitudinally in the direction of excavation until such a time as the excavation is complete.

5,009,549

EXPANSION ASSEMBLY FOR MINE ROOF BOLTS

John C. Stankus, Canonsburg, Pa., assignor to Jennmar Corporation, Pittsburgh, Pa.

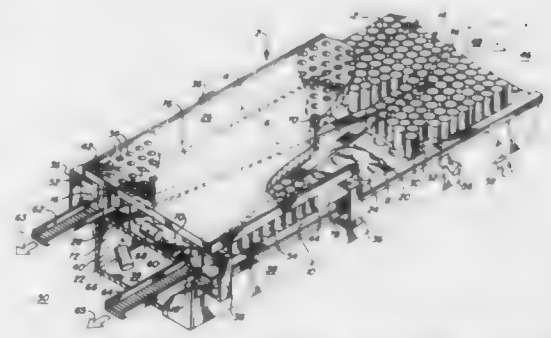
Continuation of Ser. No. 275,205, Nov. 22, 1988, Pat. No. 4,861,198. This application May 22, 1989, Ser. No. 363,274
The portion of the term of this patent subsequent to Aug. 29, 2006, has been disclaimed.
Int. Cl.[5] E21D *20/02*
U.S. Cl. 405—261 **10 Claims**

1. An expansion assembly for a mine roof bolt having a threaded portion at one end and a bolt head at the other end comprising;

a tapered plug having a body portion with a threaded internal bore adapted to be threaded onto said bolt threaded end portion, said tapered plug having two legs depending from said body portion that straddle said bolt and extend toward said bolt head when said plug is threaded onto said bolt threaded portion, said body portion and said depending legs forming continuous tapered surfaces that each form an angle of at least 8° to the axis of said bolt when said plug is threaded onto said bolt;

said tapered plug body portion having the surface positioned closer to said bolt threaded end formed with a relieved edge having a frusto-conical configuration to facilitate penetration of resin by said expansion assembly,

a pair of expansion leaves each having a serrated outer surface, a smooth inner surface and tapering edge surfaces joining said inner and outer surfaces, said expansion leaves each surrounding said bolt at a radially spaced distance from said bolt when said expansion assembly is positioned on said roof bolt, each of said leaf tapering edge surfaces being in abutting contact with said tapered plug tapered surfaces whereby said leaves are forced apart when said tapered plug is threaded axially onto said roof bolt and said leaves are restrained from axial movement relative to said roof bolt,



a metal bail connected to each of said expansion leaves and extending over the end of said roof bolt to prevent axial movement of said leaves relative to said bolt when said tapered plug is threaded onto said bolt threaded portion to force said leaves apart.

5,009,550

ARTICLE HANDLING DEVICE WITH LOW PROFILE SIDE GUIDES

Brian K. Hilbish, Beford; David W. Leonard, Sr., Lynchburg; Arnold C. Burgess, Madison Heights, and David R. Burns, Forest, all of Va., assignors to Simplimatic Engineering Company, Lynchburg, Va.

Filed Aug. 30, 1989, Ser. No. 400,523
Int. Cl.[5] B65G *47/256, 51/03*
U.S. Cl. 406—87 **26 Claims**

20. An improved can combiner for separating a stream of randomly oriented articles moving along an air conveyor path from an upstream to a downstream position into either right or left lanes, said articles having a generally uniform article height measured along a longitudinal axis of said articles and upstanding on said path with said longitudinal axis generally perpendicular to said path, said combiner comprising:

(a) an air conveyor deckplate having opposite lateral edges open to opposing sides of said deckplate with said conveyor path therebetween, said deckplate having a plurality of air jet orifices extending through said deckplate, said jets being oriented to propel said articles on said deckplate in a generally downstream direction, the number of said jets being at a predetermined value per unit area of deckplate;

(b) a plenum in pneumatic communication with said deckplate for being connected to a source of air under pressure to supply said air to said jets;

(c) a perforated cover mounted parallel to said deckplate above said deckplate at a vertical distance slightly greater than said article height, said cover restraining said articles against tipping over about said longitudinal axis;

(d) a first pair of elongated raised border members for establishing outer right and left boundaries for said path, said stops being mounted to said deckplate and extending longitudinally along the opposite lateral edges thereof in alignment with the direction of article flow;

(e) a second pair of right and left elongated raised divider members mounted to said deckplate between said border members, said divider members meeting at a point and extending in a downstream direction from said point at an acute angle to each other along at least a portion of said divider member lengths in the region of said point, the right divider member being spaced from said right border member to form said right lane therebetween and said left divider member being spaced from said left border member to form said left lane therebetween, whereby said articles encountering said point tend to separate into either the left or the right lane,

said border and divider members having a top wall portion spaced a preselected vertical distance from said deckplate that is high enough to deflect a majority of said articles to either side of said point and retain said articles within said lanes, but is low enough to permit some of aid articles to fall across said members to be thereby expelled out of said air conveyor.

MATERIAL HANDLING SYSTEM AND CONTROL VALVE THEREFOR
Roy Swartz, Muncy, Pa., assignor to Delaware Investments Corp., Wilmington, Del.
Division of Ser. No. 192,916, May 12, 1988, abandoned. This application Jun. 26, 1989, Ser. No. 371,979
Int. Cl.[5] B65G *53/46*
U.S. Cl. 406—128 14 Claims

1. A system for handling particulate material comprising
means for holding a supply of said particulate material,
means for receiving said particulate material,
means for pneumatically conveying said particulate material from said holding means to said receiving means,
means operatively connected to said pneumatic conveying means for inducing fluid flow therein;
a rotary valve operatively interconnected between said material holding means and said pneumatic conveying means for gravity feeding said material from said material holding means to said pneumatic conveying means, said rotary valve comprising a housing having a rotor chamber, a rotor journaled in said housing having a plurality of circumferentially spaced pockets for receiving said material, means for rotating said rotor, said rotor chamber having an inlet communicating with said material holding means and an outlet communicating with said pneumatic conveying means whereby material in said holding means will gravity flow through said inlet into said rotary pockets, to be carried through said rotor chamber and discharged through said outlet into said pneumatic conveying means, a slide valve disposed in said inlet for controlling the flow of material therethrough, and means for electrically operating said slide valve;
means for sensing operating conditions of said system; and
remote control means connected and responsive to said sensing means and electrically connected to said slide valve operating means for automatic operation of said slide valve in response to sensed conditions.

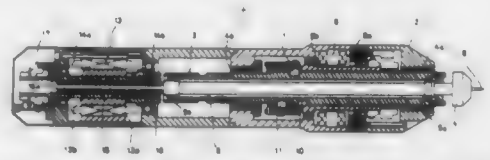
WEAR RESISTANT GRAIN FLOW CONTROL ELBOW
James G. Talcott, P. O. Box 2493, Great Falls, Mont. 59403
Filed Mar. 12, 1990, Ser. No. 493,492
Int. Cl.[5] B65G *53/52*
U.S. Cl. 406—193 2 Claims

1. A flow control elbow for changing direction of particulate matter flowing in a stream, the flow control elbow comprising:
an entrance spout through which the stream of particulate matter may flow;
a discharge spout through which the stream of particulate matter may flow;
a chamber having a first opening in fluid communication with the entrance spout and a second opening in fluid communication with the discharge spout; the chamber further providing a path for the particulate matter to travel from the entrance spout to the discharge spout;
the entrance spout being positioned above the discharge spout and being further positioned with the direction of stream flow through the entrance spout at an angle 90° or greater with the direction of stream flow through the discharge spout;
a baffle-support plate provided within the chamber in the path of the particulate matter through the chamber, the baffle-support plate being positioned to provide an inclined surface extending from one side of the second opening upwardly and generally perpendicular to the stream flow through the entrance spout;



a baffle secured to the baffle-support plate, the baffle extending upwardly from the baffle plate and sized to provide clearance between the top of the baffle and an opposing wall of the chamber;
the baffle including two members formed in a "V"-shaped pattern with the apex of the "V"-shaped pattern positioned closer the second opening than the free ends of the "V"-shaped pattern;
the baffle further having the apex broken away to permit grain flow from above the baffle to the discharge spout

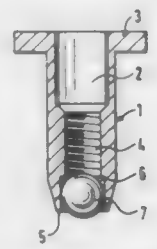
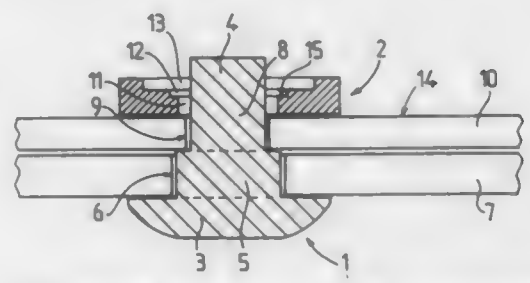
MACHINE TOOL
Fumio Kameyama, Nagoya, and Chikamasa Hattori, Ichinomiya, both of Japan, assignors to Brother Kogyo Kabushiki Kaisha, Nagoya, Japan
Filed Sep. 4, 1990, Ser. No. 577,125
Claims priority, application Japan, Sep. 9, 1989, 1-234032
Int. Cl.[5] B23C *1/06*; B23B *47/06*
U.S. Cl. 409—231 19 Claims



1. A machine tool for machining a work piece, comprising:
a housing;
a spindle having a first end supported within the housing such that the spindle rotates about an axis of the spindle and reciprocates along the spindle axis;
a tool attached to a second end of the spindle;
a feed motor installed in the housing for reciprocating the spindle along the spindle axis;
a variable reluctance motor installed in the housing for rotating the spindle about the spindle axis; and
synchronous control means for controlling the feed motor and variable reluctance motor.

5,009,555
TOOL HOLDER FOR MACHINE TOOL
Koichiro Kitamura, Toyama, Japan, assignor to Kitamura Machinery Co., Ltd., Toyama, Japan
Filed Mar. 13, 1989, Ser. No. 322,125
Claims priority, application Japan, Mar. 25, 1988, 63-69256
Int. Cl.[5] B23B *31/04*
U.S. Cl. 409—232 10 Claims



1. A machine tool comprising a machine tool body, a spindle rotatably supported by the machine tool body, the spindle having a supporting portion, a tool holder having an inserting portion to be attached to the supporting portion, a protecting layer fixed to the supporting portion for covering the supporting portion, said tool holder having a coating layer formed on the inserting portion thereof, the coating layer being made of a titanium compound selected from the group consisting of TiN, TiC and TiCN, the protecting layer being made of a ceramic material.

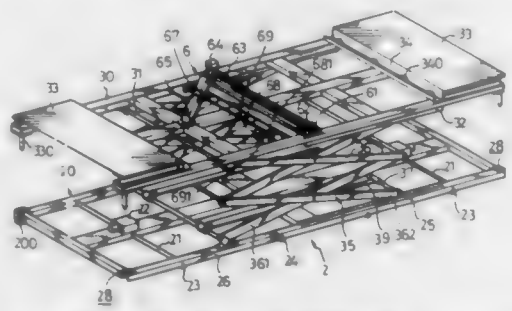
ASSEMBLY DEVICE AND PROCESSES OF USING SAID DEVICE
Charles Desirier, Bouclans, France, assignor to Bost S.A., Laissey, France
Filed Mar. 20, 1990, Ser. No. 496,022
Claims priority, application France, Mar. 20, 1989, 89 03957
Int. Cl.[5] F16B *19/06*
U.S. Cl. 411—504 5 Claims

1. An assembly device for permanently joining at least two parts, comprising:
a rivet element having a head and a rod formed of a material which is deformable by compression; and
a washer having an opening through which said rod extends when said rivet element is assembled to the parts to be joined with said head abutting a first one of the parts and said rod extending through the parts to be joined,
wherein a volume of said opening is at least equal to a volume of said rod projecting from the parts to be joined when said rivet element is assembled to the parts to be joined with said head abutting the first of the parts,
wherein the walls of said washer defining said opening have a lateral shoulder, and
wherein said opening comprises three coaxial cylindrical bores having progressively increasing diameters in a direction away from the rivet head when the rivet element is assembled to the parts to be joined, and wherein the volume of the two bores closest to the rivet head is substantially equal to the volume of said rod projecting from



the parts to be joined when said rivet element is assembled to the parts to be joined.

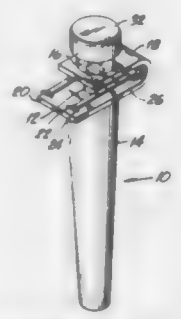
ELEVATOR TYPE PARKING LOT
Chyi J. Tsay, No. 5-1, Tung Ping Lane, Chen Ping Li, Pei Tun Chu, Taichung City, Taiwan
Filed Oct. 30, 1989, Ser. No. 428,872
Int. Cl.[5] E04H *6/00*
U.S. Cl. 414—259 12 Claims



1. An elevator type parking lot comprising:
a plurality of layers of main frames, each layer including a passage longitudinally provided on a center of a bottom surface thereof, at least one layer of holding units being provided along each side of said passage, each holding unit including a pair of upper tracks and a pair of lower tracks;
an elevator slidable vertically to align with each layer of said main frames;
a sliding conveyer being raised and carried by said elevator, said sliding conveyer being slidable on a bottom surface of said elevator and slidable along said passage of each layer of said main frames so as to align with each holding unit, said sliding conveyer including a lower frame and an upper frame connected together by a lifting mechanism, said lifting mechanism being extendible vertically so as to raise said upper frame, and a cross slide feed mechanism being provided upon said upper frame; and
a sliding carrier being comprised of substantially a plate and being carried on said upper frame of said sliding conveyer, said sliding carrier being raised by said lifting mechanism to align with either said pair of upper tracks or said pair of lower tracks of each said holding unit, said sliding carrier being actuated to move laterally by said cross slide feed mechanism to either said pair of upper tracks or said pair of lower tracks, said sliding carrier being held on said pair of upper tracks of each said holding unit when carrying a motor vehicle and being held on said pair of lower tracks when carrying no vehicle.

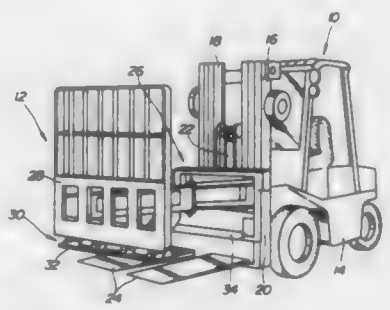
MIXED FREIGHT HANDLING SYSTEM
Carl J. Ruder; Ronald J. Haney, both of Overland Park, Kans.; Richard J. Chutorash, Portland; Wayne W. Bostad, Forest Grove, both of Oreg.; Arnold A. Zweig, Olympia, Wash., and Lyle B. Payne, Stilwell, Kans., assignors to Yellow Freight System, Inc., Overland Park, Kans.
Filed Dec. 6, 1988, Ser. No. 280,720
Int. Cl.[5] B65G *1/06*, *67/02*
U.S. Cl. 414—392 27 Claims



1. An article handling system for transferring articles between spaced apart first and second locations, said second location being within the article receiving, elongated, open end interior of an article transporting vehicle and said first location being external of said interior, said system comprising:
(a) an elongated article conveyor including means forming a support surface capable of simultaneously supporting a moving succession of articles, said conveyor being positioned at said first location and extendible from a retracted condition substantially at said first location to an extended condition wherein a portion of said conveyor invades said second location through said open end and a portion of said conveyor remains at said first location; and
(b) an article manipulator having a manipulating portion, a chassis portion spaced apart horizontally from said manipulating portion and a boom member structurally connecting said manipulating and chassis portions, said manipulator being extendible independently of said conveyor from a retracted condition substantially at said first location and an extended condition wherein said manipulating portion invades said second location through said open end and said chassis portion remains at said first location but connected to said manipulating portion by said boom member, said manipulator being at least in part spaced from said conveyor such that an article moving on said conveyor is tranferable on said conveyor between said locations past said manipulator, said manipulator and said conveyor being both adapted to simultaneously extend generally horizontally from said first location a substantially equal extent through said open end into said second location when in said respective extended conditions.

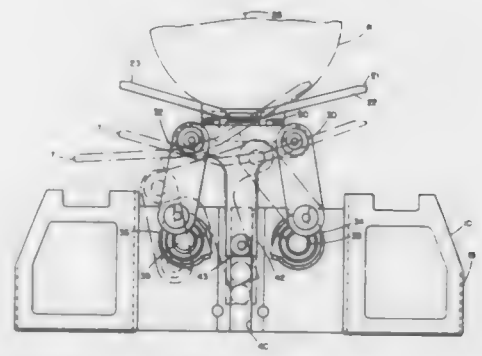
REAGENT TABLET DISPENSER
Paul A. Lombardino, Warren; Ronald L. Saxon, Stephensburg, and Dennis W. Supchak, Bloomfield, all of N.J., assignors to Pharmacia Diagnostics Inc., Fairfield, N.J.
Filed Aug. 18, 1989, Ser. No. 395,608
Int. Cl.[5] B65D *83/04*
U.S. Cl. 414—412 27 Claims



1. A tablet dispenser which dispenses a tablet from a package which has two layers of packaging material which comprises
(a) a top shaft;
(b) a thumb piece in which an anular hollow inclined blade having a retracted portion is engaged, said thumb piece being slidably mounted on said shaft, and said blade being adapted to penetrate a generally flat package placed below the blade and to release a tablet from said package while said retracted portion leaves an incompletely cut out hole in both sides of said package;
(c) a plate having a hole adapted to allow the blade to pass therethrough, said plate being connected to the top shaft by a support member;
(d) a bottom shaft extending underneath the hole and in line with the cutting blade and top shaft, said bottom shaft being connected to the plate; and
(e) means for holding a package containing a tablet on top of the plate so that the package can be positioned in order to align the tablet over the hole and in the path of the blade.

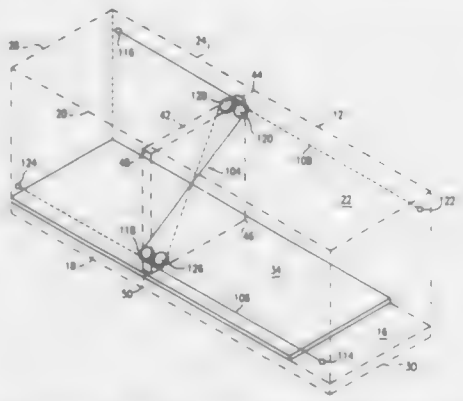
MOBILE VEHICLE AND METHOD FOR HANDLING PAPER ROLLS
Marvin L. Case, Aberdeen; Robert E. Sturm, Hoquiam, and David P. Herigstad, Aberdeen, all of Wash., assignors to Haines & Emerson, Inc., Hoquiam, Wash.
Filed Jun. 14, 1989, Ser. No. 366,880
Int. Cl.[5] B60P *3/00*
U.S. Cl. 414—470 6 Claims



1. A mobile vehicle for handling large cylindrical paper rolls, comprising:
a roll support cradle on a main frame, said cradle having a central recess formed by upwardly and outwardly diverging opposite elongated leaves for supporting and guiding a cylindrical roll to roll along the leaves and center itself in the central recess of the cradle when lying on the cradle with the roll's central longitudinal axis horizontal;
said main frame having a central cradle support track for pivotally supporting said cradle and limiting the cradle's movement with respect to the track to vertical and pivotal movement;
means for manipulating the cradle so that the leaves can be raised or lowered; and
wherein each of said leaves can be raised or lowered in different directions relative to each other and on opposite sides of said central support track for tilting the cradle and thereby rolling a paper roll onto or cut of the cradle central recess from either lateral direction relative to said central support track, and the leaves of the cradle can be moved laterally with respect to the central support track by the pivoting of the cradle about a horizontal axis.

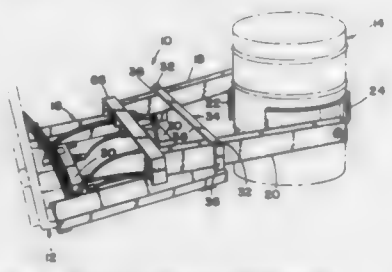
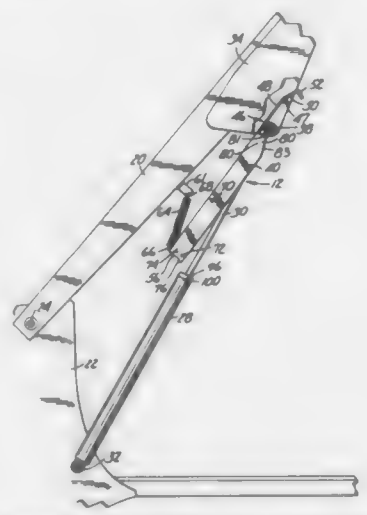
CARGO CARRYING VEHICLE HAVING A MOVABLE BULKHEAD LOCATED THEREIN
David E. Lutz, and David W. Lutz, both of P.O. Box 810, Carlisle, Pa. 17013
Filed Oct. 2, 1989, Ser. No. 415,719
Int. Cl.[5] B60P *1/00*
U.S. Cl. 414—510 31 Claims



20. A cargo carrying vehicle comprising:
(a) a body having an interior, an internal floor, a left internal sidewall, a right internal sidewall, a longitudinal axis, a front end, and a rear end;
(b) at least one movable support surface mounted on said

internal floor for movement relative thereto, said movable support surface having a front end and a rear end;
(c) first means for moving said movable support surface back and forth between a first position and a second position spaced longitudinally from said first position towards said rear end of said body;
(d) a movable bulkhead mounted in said interior above said movable support surface for movement relative to said internal floor;
(e) second means for moving said movable bulkhead back and forth between a first position and a second position spaced longitudinally from said first position towards said rear end of said body; and



(f) third means for stabilizing said movable bulkhead against pivotal movement relative to said internal sidewalls, said third means comprising at last two inextensible cables each of which:
(i) has a first end mounted on said body adjacent said rear end of said body;
(ii) has a second end mounted on said body adjacent said front end of said body;
(iii) passes through said movable bulkhead but is not attached to said movable bulkhead; and
(iv) prevents pivotal movement of said movable bulkhead about one axis.

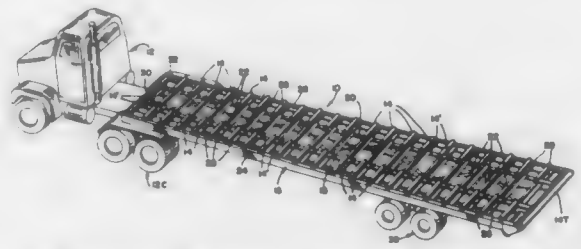
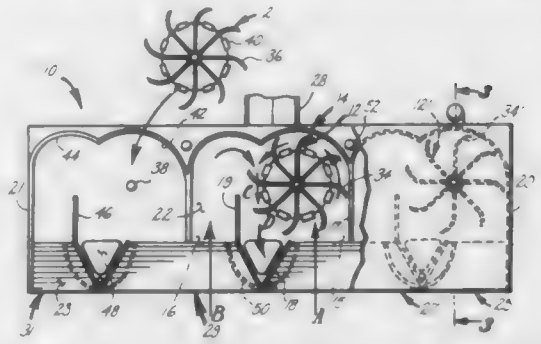
FORK LIFT ATTACHMENT
LaVerne Esau, Hillsboro, Kans., assignor to Liberty Diversified Industries, Inc., Minneapolis, Minn.
Filed Nov. 20, 1989, Ser. No. 439,551
Int. Cl.[5] B65G *65/34*
U.S. Cl. 414—607 **4 Claims**



1. An attachment for a fork lift comprising:
a frame having attachment means for attaching said frame to the forks of a fork lift;
first and second pivot arms, each of said pivot arms extending from a proximal end to a distal end;
means for pivotally connecting said pivot arms to said frame for said distal ends to move toward and away from one another in first predetermined plane;
first and second clamp means carried on said distal ends of said first and second pivot arms, respectively;
means for rotatably connecting said clamp means to said distal ends for said clamp means to rotate in a second predetermined plane generally perpendicular to said first predetermined plane;
arm motion control means for selectively urging said distal ends toward and away from one another, and for said arms to pivot between first and second positions with said arms in said first position spaced apart for said clamps to receive a drum of predetermined dimensions, and with said arms in said second positions disposed for said clamps to be urged against said drum;
clamp motion control means for selectively rotating said clamps in any one of at least two rotational directions, said clamp motion control means including first and second fluid pressure actuators associated with said first and second clamp means, respectively; each of said fluid pressure actuators having a cylinder and a piston head disposed within said cylinder for reciprocating motion, master control means for selectively admitting a fluid under pressure to said cylinders on opposite sides of said piston heads to selectively urge said piston heads to reciprocate within said cylinder, first and second sets of first and second piston rods connected to said piston heads of said first and second actuators, respectively, for movement therewith, said first piston rods extending in response to movement of said piston heads in a first direction and said second piston rods extending in response to movement of said piston heads in a second direction, said master control means including a master fluid pressure actuator for simultaneously urging piston heads of said first and second actuators; and
linkage means for linking said first and second sets of first and second piston rods to said first and second clamp means, respectively for said clamp means to rotate in a first direction when said first piston rods extend, and to rotate in a second direction when said second piston rods extend.

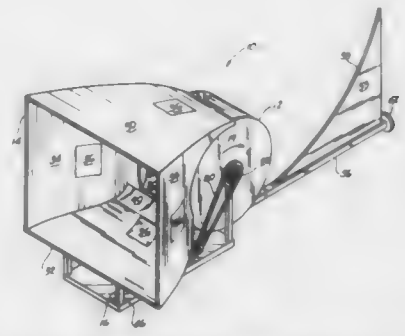
5,009,566
RETRACTABLE BOOM STOP
James E. Asche, Milnor, N. Dak., assignor to Clark Equipment Company, Milnor, N. Dak.
Filed Oct. 20, 1989, Ser. No. 425,648
Int. Cl.[5] B66C *23/00;* **E02F** *3/80*
U.S. Cl. 414—722 **20 Claims**

1. A retractable stop assembly for use with a boom arm of the type configured to be raised and lowered by a lift cylinder having a body and an extensible rod, comprising:
a stop member;
a mounting assembly for attaching the stop member to the boom arm for movement between an inoperative position adjacent the boom arm and an operative position in which the stop member is engaged between a segment of the boom arm and a forward end of the lift cylinder body for preventing retraction of the lift cylinder; and,
a biasing mechanism releasably securable between the boom arm and stop member for moving the stop member from the operative position to the inoperative position in response to an extension of the lift cylinder.



5,009,567
TRAILER AND TRAILER UNLOADING SYSTEM
E. Dale Fenton, 1325 Smiley La., Columbia, Mo. 65202
Division of Ser. No. 908,821, Sep. 18, 1986, Pat. No. 4,806,061.
This application Feb. 2, 1989, Ser. No. 305,062
Int. Cl.[5] B60P *1/04*
U.S. Cl. 414—786 **6 Claims**

1. A method for unloading a large load from a long bed trailer onto a flat area of ground using a prime mover as its sole source of power, wherein the trailer's bed is connected to the prime mover at one end by a connection which allows it to pivot downward at the connection from a position with its tail end is well off of the ground and maintains the bed at the connection to the prime mover, a substantially fixed height above the ground as the prime mover moves over the ground to a position wherein the tail end is just off of the ground, and said trailer bed has a wheeled carriage having brakes separately controlled from the prime mover which is mounted at its bottom so as to move longitudinally from a position wherein it supports the trailer with its tail end well off of the ground to a position wherein the tail end is just off of the ground, comprising the steps of
(a) lowering the tail end of the bed by applying the brakes to the wheeled carriage and moving the prime mover and the trailer bed relative thereto and without the use of any other powered devices and without articulating the trailer bed between the connection to the prime mover and the carriage;
(b) removing any securing devices from between the load and the trailer;
(c) advancing the trailer and the bed, with the tail end down out from under the load, so that it falls to the ground off of the tail of the bed; and
(d) raising the tail end of the bed by reapplying the brakes to the wheeled carriage while moving the prime mover and the bed relative thereto and without the use of any other powered devices and without articulating the trailer bed between the connection to the prime mover and the carriage.



5,009,568
WAVE ACTUATED POWER GENERATING APPARATUS
George S. Bell, 1365 Kingswood Ct., Ft. Myers, Fla. 33919
Filed Jul. 11, 1990, Ser. No. 551,144
Int. Cl.[5] F03B *13/12*
U.S. Cl. 415—3.1 **8 Claims**

1. A wave-actuated power generating apparatus comprising:
an impulse-type water turbine having a plurality of blades each with a facing and a following surface and operably mounted for rotation within a housing onto an upright output shaft about a hub for use;
said housing having a back panel, opposing sides and opposing lower and upper panels, said lower and upper panels in close proximity to the upper and lower edges of said water turbine;
said sides and lower and upper panels extending to form an inlet nozzle which faces oncoming waves;
a wave splitter positioned centrally within said inlet nozzle forming a first and second inlet nozzle portion structured to separate each oncoming wave so that a first and second portion of each wave passes through said first and second inlet nozzle portions, respectively and into said housing;
said first wave portion passing through said first water nozzle portion striking said facing surfaces of said water turbine blades before contacting said housing back panel

while being reversed in direction through about 180 degrees toward the center of said housing;
said second wave portion passing through said second water nozzle portion striking said housing back panel and being reversed in direction through about 180 degrees toward the center of said housing before striking said facing surfaces of said water turbine blades;
a water outlet positioned centrally in said housing lower panel behind said wave splitter for downwardly discharging water entering said inlet nozzle after rotationally acting upon said water turbine;
said housing lower surface positioned generally at mean water level.

5,009,569
WIND ENERGY COLLECTION SYSTEM
Francis N. Hector, Sr., and Francis N. Hector, Jr., both of P.O. Box 81024, Las Vegas, Nev. 89180
Filed Jul. 21, 1989, Ser. No. 382,908
Int. Cl.[5] F03B *15/06*
U.S. Cl. 415—4.1 **7 Claims**

1. A wind-driven apparatus for generating rotational mechanical energy from a wind flow stream comprising:
(a) a closed rotatable cylinder journeled to a supporting member and having a first axis of rotation;
(b) a plurality of closed elongated vanes positioned about the entire circumference of and secured to said cylinder and oriented parallel to said first axis of rotation, each of said vanes curving outwardly away from said cylinder and

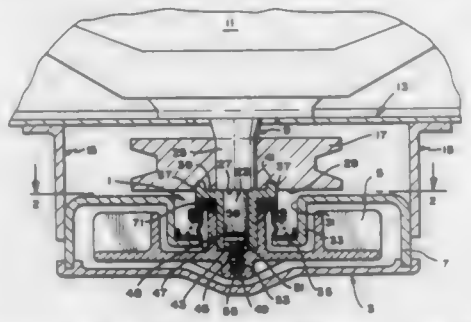
meeting at adjacent ends thereof, thereby forming concave adjacent wind impingement areas circumferentially about said cylinder, thereby preventing the flow of said wind stream past said cylinder;

(c) an intake funnel secured to said supporting means and configured to converge on said closed rotatable cylinder to collect and direct said wind flow stream towards said vanes, said funnel having top, bottom and side walls and being open at the front, said walls of said funnel converging irregularly to direct said wind flow stream to said wind impingement areas, said top wall of said intake funnel terminating downstream of said horizontal axis of rotation and said bottom wall terminating upstream of said horizontal axis of rotation;

(d) a plurality of blow-through panels forming a part of said funnel and biased to begin opening at a pre-selected wind flow stream pressure;

(e) said supporting member being secured to a base member and being pivotal about a second axis of rotation, said second axis being generally perpendicular to said first axis of rotation;

(f) an open exhaust area immediately downstream of said first axis of rotation, said exhaust area being free of any immediate obstruction and other means for channeling of said funnelled wind flow stream; and,



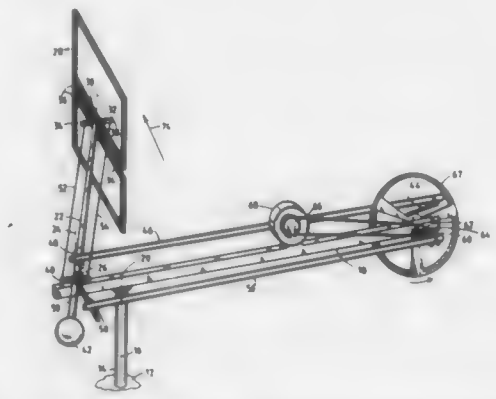
(g) means for aligning said open front of said funnel generally parallel to the direction of said wind flow stream, said alignment means including an elongated member connected to said supporting member at its first proximate end and elongated in the direction of said wind flow stream to a second distal end having means for allowing the pivoting of said supporting member about said second axis of rotation, said means for allowing pivoting comprising a wheel member mounted at said distal end of said elongated member and confined to motion along a pre-determined arcuate track; and, a second vane member mounted to and depending vertically upwardly from said elongated member, said second vane member increasing in vertical extent from said proximate end to said distal end of said elongated member.

5,009,570

MOUNTING ASSEMBLY FOR THE IMPELLER OF A FLUID PUMP

Curtis G. Richardson, Energy, Ill., assignor to Maytag Corporation, Newton, Iowa

Filed May 2, 1989, Ser. No. 346,584
Int. Cl.[5] F04D *29/10*
U.S. Cl. 415—174.2 **16 Claims**



1. An assembly for mounting the impeller of a fluid pump to the drive shaft of an electric motor, the pump being of the type including an impeller disposed for rotation within a stationary housing for pressurizing fluid through an inlet and an outlet of the housing and a resilient seal assembly for preventing fluid leakage from the housing, the improvement comprising the resilient seal assembly being disposed to urge the impeller in a direction towards the drive shaft of the motor for providing end thrust force to axially locate and maintain the impeller on the drive shaft, a sleeve slidably secured on the end of the drive shaft, the impeller being attached to the sleeve and the seal assembly being disposed between the sleeve and the housing.

5,009,571

WIND MOTOR

Raoul D. Smith, Lompoc, Calif., assignor to Aeolian Partnership, Camarillo, Calif.

PCT No. PCT/US89/00326, § 371 Date Dec. 28, 1989, § 102(e) Date Dec. 28, 1989
PCT Filed Jan. 26, 1989, Ser. No. 460,832
Int. Cl.[5] F03D *5/06*
U.S. Cl. 416—79 **13 Claims**

1. Apparatus for use in a wind motor, comprising in combination:

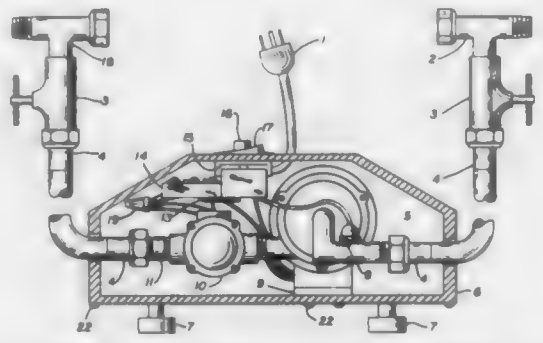
a base;

an arm oriented at an angle θ with respect to said base;

means for mounting said arm to said base for pivotal motion with respect to said base about a first axis that is perpendicular to said arm;

a sail having a center of pressure and oriented at an angle α with respect to said base;

means for mounting said sail to said arm for pivotal motion with respect to said arm about a second axis parallel to but displaced from the first axis, said second axis passing through the center of pressure of said sail; and



coupling means interconnected between said base and said sail for producing a reciprocating motion of said arm with respect to said base by continuously altering the angle α of said sail with respect to said base.

5,009,572

WATER CONSERVATION DEVICE

Ray Imhoff, 1824 Arlington Ave., El Cerrito, Calif. 94530, and Sadraddin Seif, 933 Lorna St., Corona, Calif. 91720

Filed Oct. 16, 1989, Ser. No. 422,247
Int. Cl.[5] F04B *49/00*
U.S. Cl. 417—32 **5 Claims**

1. An improved water conservation device which may be installed in conjunction with existing and non-existing plumbing systems and fixtures having a source of pressurized water, a hot water supply line, a cold water supply line, a hot water heater, and outlet fixtures coupled to the hot and cold water supply lines, said device comprising:

a first tee fitting adapted for coupling to said hot water supply line;

a second tee fitting adapted for coupling to said cold water supply line;

a hot water supply line shut-off valve adapted for coupling to said first tee fitting;

a cold water supply line shut-off valve adapted for coupling to said second tee fitting;

an electrically controlled pump having an outlet port and an inlet port;

a first water line adapted for coupling to said hot water supply line shut-off valve and to said inlet port of said pump;

a solenoid valve having an input port connected to said outlet port of said pump for allowing mixture of hot and cold water while said pump is operating, and for preventing the mixture of hot and cold water when said pump is not operating;

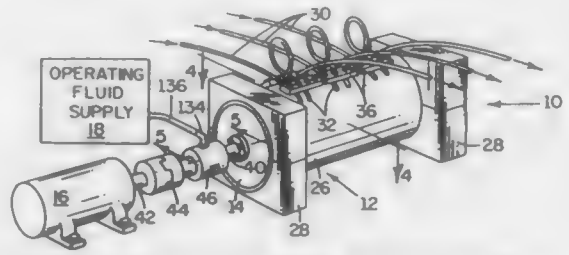
a nipple fitting having one end adapted for coupling to the output end of said solenoid valve;

a second water line adapted for coupling to remaining open end of said nipple and to said cold water supply line shut-off valve;

an adjustable thermostat temperature selector for detecting the hot water temperature of said inlet of said pump;

a thermostat switch for energizing said solenoid valve and said pump;

a removable housing structure; and



an indicator light for informing the user that the selected water temperature has been achieved.

5,009,573

VARIABLE OCCLUSION PERISTALTIC APPARATUS AND METHOD

Gregg Ring, Sr., Houston, and Daniel C. Soper, Buda, both of Tex., assignors to Randolph Austin Company, Inc., Manchaca, Tex.

Filed Aug. 18, 1989, Ser. No. 395,940
Int. Cl.[5] F04B *43/12*
U.S. Cl. 417—53 **18 Claims**

1. A variable occlusion peristaltic apparatus comprising:

A. a housing;

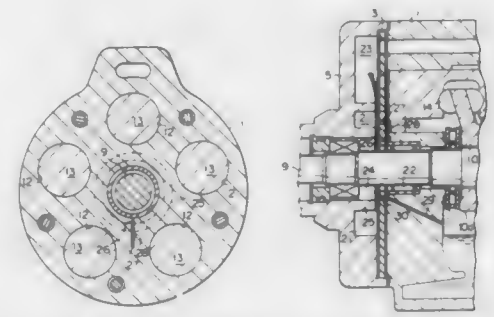
B. an occlusion track being defined in the housing and including a generally arcuate reactive surface, the occlusion track being adapted to receive a loop of tubing extending into the housing through a tubing inlet and exiting the housing through a tubing outlet;

C. a rotor rotatably mounted within the housing and adapted for rotation about a device rotational axis;

D. a rotating machine having a drive shaft connected to the rotor for rotation therewith;

E. a plurality of carriage passageways positioned in the rotor and extending outwardly from the device rotational axis at different angular orientations therefrom toward the arcuate reactive surface of the occlusion track;

F. an occluding member carriage positioned in each carriage passageway having an occluding member mounted thereon, the carriage being adapted for movement through the carriage passageway between a fully retraced position in which the occluding member is positioned generally out of the occlusion track and away from the reactive surface and the tubing in the occlusion track, and an extended position in which the occluding member is positioned so as to bear against and completely collapse the flexible tubing in the occlusion track against the reactive surface; and



G. operating fluid distribution means for providing an operating fluid at a desired operating pressure from a remote operating fluid supply to each carriage passageway to control the occlusion force provided by each occluding member against the tubing received in the occlusion track and to control the position of each carriage between the fully retracted and fully extended positions.

5,009,574

THRUST BEARING AND SHOE LUBRICATOR FOR A SWASH PLATE TYPE COMPRESSOR

Hayato Ikeda; Masahiro Sawada, and Norihiko Nakamura, all of Kariya, Japan, assignors to Kabushiki Kaisha Toyoda Jidoshokki Seisakusho, Aichi, Japan

Filed Dec. 4, 1989, Ser. No. 445,289
Claims priority, application Japan, Dec. 2, 1988, 63-306369
Int. Cl.[5] F04B *1/16*
U.S. Cl. 417—222 **5 Claims**

1. A swash plate type refrigerant gas compressor incorporated in an air-conditioning circuit for a vehicle and having a pair of axially combined front and rear cylinder blocks having a plurality of cylinder bores formed therein, an axially extended bore for rotatably receiving a drive shaft via radial bearings seated in said axial bore, a swash plate chamber, and an oil chamber for storing a lubricating oil, said swash plate chamber and said oil chamber being interconnected with one another to permit the lubricating oil to enter said swash plate chamber;

a swash plate received in said swash plate chamber and keyed on said drive shaft and capable of rotating with said drive shaft and stirring the lubricating oil in said swash plate chamber;

a front housing arranged at one axial end of the combined cylinder blocks via a front valve plate, and having therein a central shaft sealing chan ber through which said drive shaft extends, a front suction chamber for a refrigerant gas before compression, and a front discharge chamber for the refrigerant gas after compression, said shaft sealing chamber being fluidly interconnected with said swash plate chamber via gaps in said radial bearings in said axial bore of said combined cylinder block;

a rear housing arranged at the other axial end of the combined cylinder blocks via a rear valve plate, and having therein a rear suction chamber for the refrigerant gas before compression, and a discharge chamber for the refrigerant gas after compression, said rear suction chamber being fluidly interconnected to said front suction

chamber, and said rear discharge chamber being fluidly interconnected to said front discharge chamber,

a plurality of reciprocatory double-headed pistons slidably fitted in said cylinder bores and operatively engaged with said swash plate via shoes for carrying out a suction and compression of the refrigerant gas in said cylinder bores, and a discharge of the compressed refrigerant gas from said cylinder bores to said discharge chambers of said front and rear housings, said pistons sliding across said swash plate chamber to thereby cause a leakage of a part of the compressed refrigerant gas from said cylinder bores into said swash plate chamber while said drive shaft and swash plate are rotating, said leakage of a part of the compressed refrigerant gas generating a high pressure condition in said swash plate chamber;

a pair of thrust bearings mounted on said drive shaft for axially supporting said swash plate against a thrust force acting on said swash plate;

a suction refrigerant circuit for permitting the refrigerant gas before compression to flow toward said cylinder bores when said refrigerant gas before compression is returned from the air-conditioning circuit, said suction refrigerant gas circuit including at least said front and rear suction chambers, said cylinder bores, and a passageway interconnecting said front and rear suction chambers;

lubricating means for limiting an evacuation of the lubricating oil from said swash plate ad oil chambers to said suction refrigerant circuit during said high pressure condition in said swash plate chamber, to thereby promote a lubrication of movable elements including at least said thrust bearings, said shoes, and said swash plate by the lubricating oil stored in said swash plate and oil chambers when said swash plate rotates and disperses said lubricating oil toward said movable elements, said lubricating means including:

a partition wall formed in said front housing for structurally separating said shaft sealing chamber from said suction chamber of said front housing; and

a fluid passageway means arranged between said shaft sealing chamber and said suction chamber of said front housing for flow of said gas from said swash plate chamber to said suction chamber of said front housing through said shaft sealing chamber while said drive shaft and said swash plate were rotating, to thereby define a pressure in said shaft sealing chamber, intermediate between the pressure in the swash plate chamber and the pressure in the suction chamber, during the operation of the swash plate type compressor, said intermediate pressure in said shaft sealing chamber permitting separation of the lubricating oil from the gas when said lubricating oil is carried by said flow of the gas from the swash plate chamber to the suction chamber to thereby limit the loss of the lubricating oil from said swash plate chamber.

5,009,575

VAPOR LOCK PREVENTING MECHANISM IN MOTOR-DRIVEN FUEL PUMP

Kazumichi Hanai; Koichi Mine, and Hikaru Kikuta, all of Obu, Japan, assignors to Aisan Kogyo Kabushiki Kaisha, Obu, Japan

Filed Oct. 31, 1989, Ser. No. 428,886

Claims priority, application Japan, Nov. 7, 1988, 63-145311[U]

Int. Cl.[5] F04D *9/00*

U.S. Cl. 417—244 8 Claims

6. A two-stage fuel pump comprising:

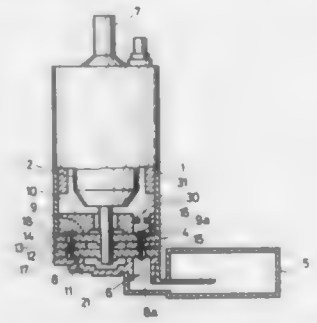
(a) a first impeller;

(b) a first wall for surrounding said first impeller;

(b-1) a first pump chamber being defined between an inner surface of said first wall and an outer circumference of said first impeller;

(b-2) said first wall being formed with a fuel inlet communicating with said first pump chamber to suck fuel into said first pump chamber;

(b-3) said first wall being formed with a vapor jet communicating with said first pump chamber to discharge a vapor of said fuel from said first pump chamber;



(c) a second impeller having a size and a shape identical with those of said first impeller; and

(d) a second wall for surrounding said second impeller;

(d-1) a second pump chamber being defined between an inner surface of said second wall and an outer circumference of said second impeller;

(d-2) said second pump chamber having a sectional shape substantially the same as that of said first pump chamber;

(d-3) said second wall being formed with a fuel outlet communicating with said second pump chamber to discharge said fuel;

(d-4) a part of said second wall partitioning said first pump chamber from said second pump chamber, said part being formed with a communication hole for communicating said first pump chamber with said second pump chamber;

(e) wherein a ratio of (a sectional area of said fuel outlet)/(a sectional area of said second pump chamber) is equal to or less than 1.4, and said vapor jet is formed at a position where a fuel pressure is boosted to a value greater than a half of a set pressure of a pressure regulator for regulating a pressure of said fuel to be discharged from said fuel outlet;

(f) whereby a boosting rate in said first pump chamber can be made larger than that in said second pump chamber to efficiently discharge said vapor.

5,009,576

COMPRESSOR UNLOADER CONTROLLER

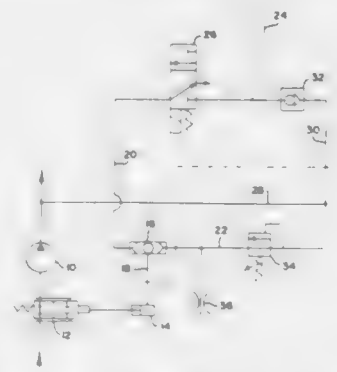
Thomas R. Gagnet, Moseta, Va., assignor to Ingersoll-Rand Company, Woodcliff Lake, N.J.

Filed Jan. 8, 1990, Ser. No. 462,164

Int. Cl.[5] F04B *49/00*

U.S. Cl. 417—295 7 Claims

1. An apparatus comprising:



a compressor having an inlet and an outlet;

compressor inlet valve means, movable between a normally open and a closed position, for regulating fluid flow to the compressor inlet;

a pressure reservoir containing pressure sufficient to bias the compressor inlet valve means into the closed position;

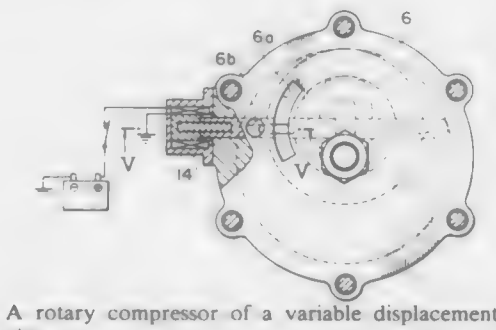
means for separating the pressure in the reservoir from the pressure in the outlet of the compressor; and

starter valve means for applying pressure from the pressure reservoir to the inlet valve means, which is normally

closed when the compressor is not operating and is opened during the starting of the compressor.

5,009,577

ROTARY COMPRESSOR OF VARIABLE DISPLACEMENT TYPE



Isao Hayase, Katsuta, and Kunisuke Tejima, Mito, both of Japan, assignors to Hitachi, Ltd., Tokyo, Japan

Filed Oct. 20, 1989, Ser. No. 425,128

Claims priority, application Japan, Oct. 28, 1988, 63-272659

Int. Cl.[5] F04B *49/02, 21/02;* F01C *21/00*

U.S. Cl. 417—295 6 Claims

1. A rotary compressor of a variable displacement type comprising:

a cylinder having an inner peripheral surface and both axial ends;

a rotor means including a rotor accommodated in said cylinder in an eccentric relationship therewith and at least one vane incorporated in said rotor through an outer periphery of the latter, said vane being movable relative to said rotor reciprocatably in a longitudinal direction of said vane;

two side plates for closing said cylinder at both ends of the latter;

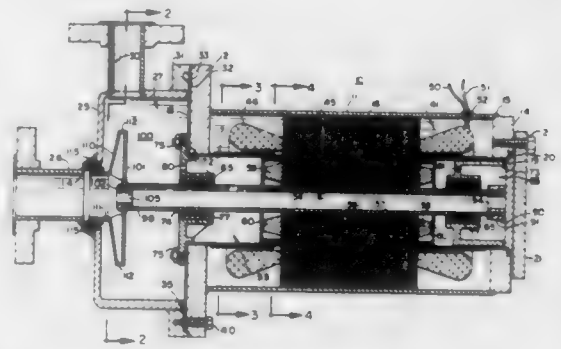
said vane dividing a working space defined by said rotor, said cylinder and said side plates into a plurality of spaces;

suction port means formed in at least one of said side plates and being opened at a surface of the side plate making sliding contact with said rotor;

opening means formed in a rear side portion of the vane as viewed in a direction of said rotor and being opened at a surface of the vane making sliding contact with the rotor, said opening means being adapted to be repeatedly communicated with and interrupted from said working space according to the reciprocative movement of the vane relative to the rotor; and

suction passage means formed in said rotor means for establishing a communication between said suction port means and said opening means in a predetermined range of rotation of said rotor means, wherein said suction passage means including a passage formed in said vane and having a depth smaller than a thickness of said vane, said passage having one end opened at a surface of said vane making sliding contact with the side plate and the other end communicated with said opening means.

5,009,578



MOTOR DRIVEN PUMPS

George J. Hyland, Norristown, Pa., assignor to Crane Co., New York, N.Y.

Filed Oct. 27, 1987, Ser. No. 114,403

Int. Cl.[5] F04B *35/04*

U.S. Cl. 417—365 6 Claims

1. A motor driven pump which includes

an impeller housing having inlet and delivery connections and having an impeller chamber with an impeller therein, an outer cylindrical casing connected to said impeller housing and closed off by first and second end plates, a cylindrical sleeve extending between said end plates and providing therewith and with said outer casing an isolated motor stator chamber, a motor stator in said stator chamber, the interior of said sleeve providing a motor rotor chamber, the improvement which comprises

first and second adaptors fixedly mounted within said sleeve at opposite ends thereof,

said first adaptor being mounted adjacent said impeller and said second adaptor being mounted at the end opposite thereto,

said first adaptor having at least one fixed orifice of selected size therealong connecting the interior of said sleeve with said impeller chamber permitting controlled fluid flow therebetween,

an end liner plate between said second adaptor and said second end plate,

said second adaptor having at least one fixed orifice therealong of larger diameter than said first orifice and connecting the interior of said sleeve with a chamber formed between said second adaptor and the end plate at the end of said sleeve opposite said impeller for controlled fluid flow therebetween,

a hollow shaft having sleeve bearings secured thereto, carried in said first and second adaptors, and extending into said impeller chamber, said impeller being mounted to said shaft in said impeller chamber,

a motor rotor on said shaft between said bearings in said motor rotor chamber,

said first and second adaptors have sleeves therein engaged with said bearings carried by said shaft,

automatic thrust balancing means for balancing the axial forces on said shaft which includes

an impeller flow limitor to limit fluid flow from said impeller chamber into said hollow shaft adjacent said end of said impeller, such that axial movement permits fluid flow therein to balance the shaft axial forces,

snubber means carried on said shaft in said chamber at the shaft end opposite to said impeller,

said snubber means having an end surface,

said end liner plate adjacent said snubber means having a surface facing said snubber means end surface, such that axial movement of said shaft permits fluid flow between said end liner plate and said snubber and through said orifice in said second adaptor into said second adaptor chamber in controlled modulated amounts and therefrom into said shaft upon axial movement of said shaft for thrust balancing.

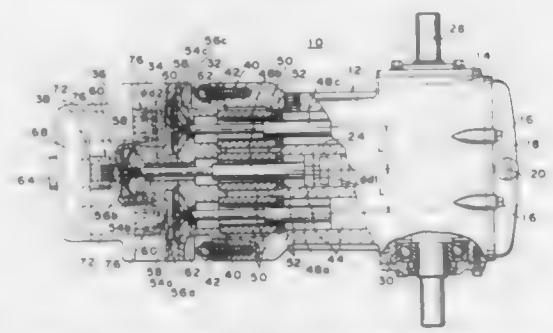
MULTIPLE RECIPROCATING PUMP

Shingo Maru, Chiba, Japan, assignor to Maruyama Mfg. Co., Ltd., Tokyo, Japan

Filed Aug. 24, 1990, Ser. No. 572,224

Claims priority, application Japan, Dec. 28, 1989, 1-338358

Int. Cl.[5] F04B *23/06*



U.S. Cl. 417—533 **8 Claims**

1. A multiple reciprocating pump, comprising:

a drive shaft;

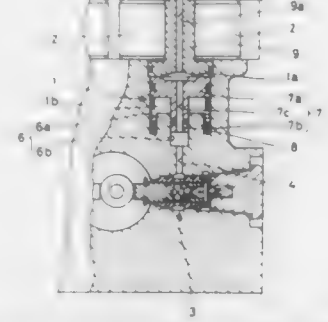
a plurality of reciprocating members having parallel axes and a length in the direction of the axes, being disposed to one side of the drive shaft, and being operably connected to the drive shaft to reciprocate along said axes, wherein the length of each reciprocating member is different from the length of a nearest adjacent member; and

a pump chamber corresponding to each reciprocating member, each chamber having a volume and wall member operably connected to reciprocate with the corresponding reciprocating member, wherein the volume of the pump chamber increases and decreases as the wall member reciprocates to take in and discharge fluid from the pump

chamber, and wherein each chamber is displaced from a nearest adjacent chamber in the direction of the axes of the reciprocating members.

5,009,581

FLUID ACCUMULATOR FOR ANTI-SKID BRAKES



Takashi Kushiyama, and Yoshiyasu Kurihara, both of Higashimatsuyama, Japan, assignors to Jidosha Kiki Co., Ltd., Tokyo, Japan

Filed Dec. 20, 1989, Ser. No. 453,513

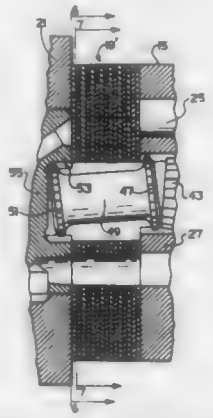
Claims priority, application Japan, Dec. 27, 1988, 63-330225

Int. Cl.[5] F04B *11/00*

U.S. Cl. 417—540 **4 Claims**

1. A fluid control unit including a body means having an operating fluid passage formed therein of a predetermined diameter, said fluid passage including a first passage portion of greater diameter than said predetermined diameter and a second passage portion of greater diameter than said first passage portion, piston means including a first piston portion having a diameter and being slidably and liquid-tightly disposed within said first passage portion, said piston means including a second piston portion having a diameter greater than the diameter of said first piston portion and being slidable and liquid-tightly disposed in said second passage portion, said second piston portion defining with said body means an air chamber in communication with atmospheric air, biasing means urging said piston means in a first direction away from said first said passage portion, said second piston portion having an outer face remote from said first piston portion, said outer face defining a movable side of a fluid accommodating chamber for receiving fluid when said piston means moves in a second direction opposite to said first direction, said piston means having an axial passage passing completely therethrough and being in communication with said operating fluid passage.

5,009,582



ROTARY FLUID PRESSURE DEVICE AND IMPROVED STATIONARY VALVE PLATE THEREFOR

Marvin L. Bernstrom, Eden Prairie, Minn., assignor to Eaton Corporation, Cleveland, Ohio

Filed Aug. 9, 1989, Ser. No. 391,803

Int. Cl.[5] F01C *1/10, 19/08*

U.S. Cl. 418—61.3 **10 Claims**

1. A rotary fluid pressure device of the type including housing means defining a fluid inlet port and a fluid outlet port; a rotary fluid displacement mechanism including a ring member having a plurality N+1 of internal teeth, and a star member having a plurality N of external teeth, said star member being eccentrically disposed within said ring member, the teeth of said ring member and said star member interengaging to define expanding and contracting fluid volume chambers during relative movement therebetween, one of said ring member and said star member having rotational movement about its own axis, and one of said members having orbital movement about the axis of the other of said members; a stationary valve member operatively associated with said housing means and defining a stationary valve surface oriented generally transversely relative to said axes of rotation, said stationary valve member further defining a plurality N+1 of first fluid passages, each of said first fluid passages being in fluid communication with one of said fluid volume chambers, and having passage openings in said stationary valve surface, arranged circumferentially relative to said axis of one of said ring member and said star member; a rotary valve member, movable in synchronism with said rotational movement of said one of said ring member and said star member, said rotary valve member including a valve surface disposed in sliding, sealing engagement with said stationary valve surface, and defining a plurality 2N of valve ports having openings in said valve surface arranged circumferentially relative to the axis of said rotary valve member, said plurality 2N of valve ports including a first group of valve ports having constant fluid communication with said fluid inlet port, and a second group of valve ports having constant fluid communication with said fluid outlet port; at least a portion of said plurality 2N of valve port openings being in fluid communication with at least a portion of said first fluid passage openings during said relative orbital and rotational movement to direct fluid from said inlet port to said expanding volume chambers, characterized by:

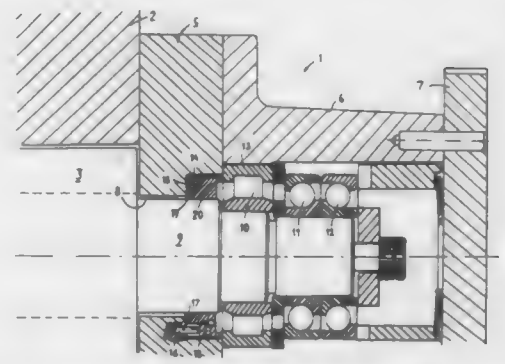
(a) said stationary valve member further defining a plurality N+1 of second fluid passages, each of said second fluid passages having passage openings in said stationary valve surface, said second fluid passage openings being arranged circumferentially relative to said axis of said one of said ring members and said star member, each of said second fluid passages being approximately diametrically disposed from one of said first fluid passages;

(b) said stationary valve member further defining a plurality N+1 of third fluid passages, each of said third fluid passages providing fluid communication between only one of said first fluid passages and only said one of said second fluid passages diametrically disposed therefrom; and

(c) said fluid pressure device including means for blocking direct fluid communication from said second fluid passages to said fluid volume chambers.

5,009,583

SHAFT SEAL AND BEARING MEMBERS FOR A ROTARY SCREW COMPRESSOR



Anders Carlsson, Ingarö ; Lars Johansson, Stavsnäs, and Frits Söderlund, Saltsjöbaden, all of Sweden, assignors to Svenska Rotor Maskiner AB, Stockholm, Sweden

Continuation of Ser. No. 399,513, Aug. 28, 1989, abandoned. This application Oct. 9, 1990, Ser. No. 595,675

Claims priority, application Sweden, Mar. 19, 1987, 8701123

Int. Cl.[5] F04C *18/16, 27/00*

U.S. Cl. 418—104 **3 Claims**

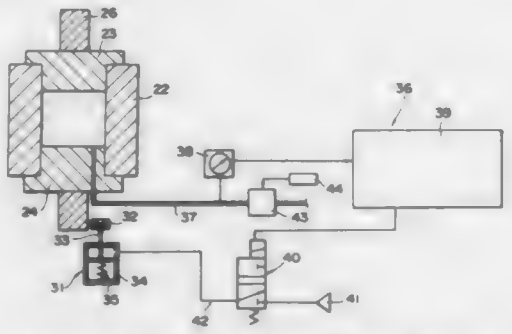
1. In a screw rotor machine for a working fluid, comprising:

a pair of intermeshing rotors (3) having helical lands and intervening grooves; and

a casing with a working space generally comprised of two intersecting bores, each enclosing one of the rotors (3), said casing having a low pressure end section (4), a high pressure end section (1) carrying bearings (10, 11, 12) for the rotors (3) and an intermediate barrel section (2), said intermediate barrel section (2) being connected to at least one of said end sections (1, 4) by means of a detachable joint, and said high pressure end section (1) being provided with a bearing chamber separated from the working space by an end wall (5) provided with a plurality of holes (8), each hole freely surrounding a cylindrical projection (9) of a rotor (3),

the improvement comprising:

a separate annular element (15) axially fixed with respect to said end section and surrounding each one of the respective rotor projections (9), the annular elements (15) each having a radial inner surface (20) which forms a sealing surface with a running clearance, said sealing surface cooperating with the respective rotor projection (9) by a very slight radial contact sealing force;



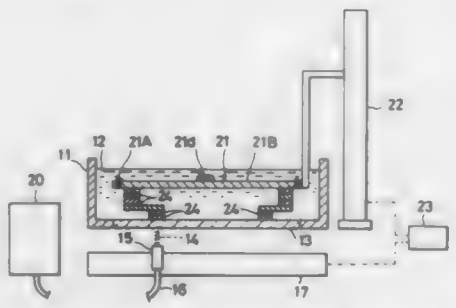
the end section having a recess within which said annular element is free to move to a certain distance in the radial direction; and

the annular elements (15) each being radially movable substantially without friction in the casing, always to maintain position alignment with the axis of the rotor projection, and being in axial sealing contact with the casing, the annular elements (15) each being non-rotatably fixed to the casing.

5,009,584
INTERLOCK SYSTEM FOR ISOSTATIC FORMING PRESS

Katsuhiro Uehara; Masanori Kurita, and Masakazu Murakami, all of Kobe, Japan, assignors to Kabushiki Kaisha Kobe Seiko Sho, Kobe, Japan

Filed Mar. 2, 1990, Ser. No. 487,444
Claims priority, application Japan, Mar. 2, 1989, 1-51695
Int. Cl.[5] B29C *43/10*; B22F *3/04*
U.S. Cl. 425—135 4 Claims

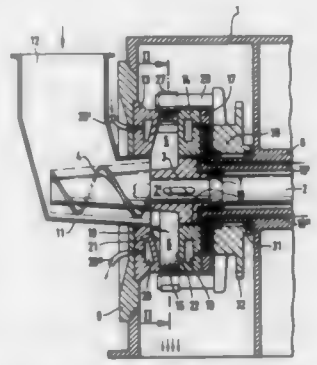


1. An interlock system for an isostatic press machine of the type including a high pressure container having upper and lower closure plugs releasably received in upper and lower openings to be used for loading and unloading work therethrough, and a holder frame for supporting the axial force of the container in an isostatic pressing phase of the press operation, the holder frame being pivotally supported at one side thereof for swinging movements about a vertical axis into and out of a holding position in engagement with the high pressure container, wherein said interlock system comprises:
- a lock mechanism constantly urged to lock said holder frame in said holding position; and
- a control means adapted to control said lock mechanism to maintain said holder frame in said holding postion when the internal pressure of said high pressure container is higher than a predetermined level and to release the lock mechanism when the internal pressure of said high pressure container is lower than said predetermined level.

5,009,585
OPTICAL MOLDING APPARATUS AND MOVABLE BASE DEVICE THEREFOR

Yoshinao Hirano; Katsuno Sato; Shigeru Nagamori; Katsuhide Murata, all of Chiba; Kazuhito Horikiri, and Junji Shirai, both of Okayama, all of Japan, assignors to Mitsui Engineering & Shipbuilding Co., Ltd., Tokyo, Japan

Filed Dec. 18, 1989, Ser. No. 451,760
Int. Cl.[5] B29C *35/08*; B05D *3/06*
U.S. Cl. 425—174.4 3 Claims

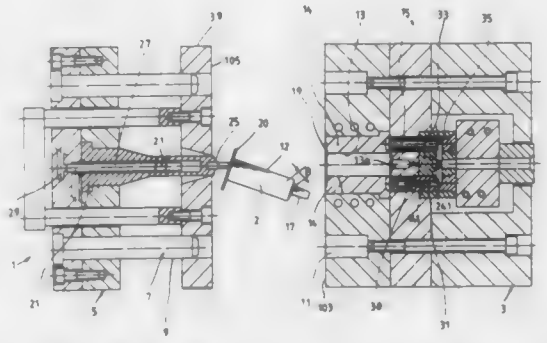


1. An optical molding apparatus used for an optical molding method including the steps of radiating light onto a photocurable resin so as to cure the resin at an irradiated portion and laminating the cured portions to form an object, said apparatus comprising:
- a container having an aperture in one of a bottom portion and a side portion thereof, and a light transmitting plate with an inner surface situated in said aperture;
- a base which is movable away from the inner surface of said light transmitting plate, said base being composed of a square frame;
- a light radiation apparatus for radiating light into said container through said light transmitting plate; and
- a cured object holding plate which is mounted to and dismounted from above said base, said cured object holding plate being inserted into said frame.

5,009,586
AGGLOMERATING APPARATUS FOR THE CONTINUOUS REGRANULATION OF THERMOPLASTIC WASTES

Wilhelm Pallmann, Zweibruecken, Fed. Rep. of Germany, assignor to Pallmann Maschinenfabrik GmbH & Co. KG, Zweibruecken, Fed. Rep. of Germany

Filed Dec. 12, 1989, Ser. No. 448,842
Claims priority, application Fed. Rep. of Germany, Dec. 14, 1988, 3842072
Int. Cl.[5] B29C *47/52*
U.S. Cl. 425—311 4 Claims



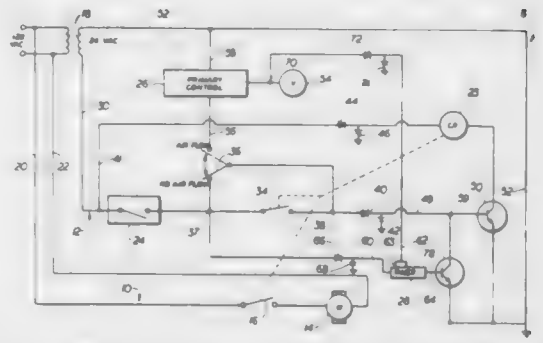
1. Agglomerating apparatus for the continuous, regranulation of thermoplastic wastes comprising films, fibers, filaments, cords, fabrics, carpet backings, foam materials, and mixtures of these materials, the apparatus comprising:
- (a) stationary, axially spaced annular walls having radially inner and outer ends, and opposite inside surfaces
- (b) an annular die interposed between and connected to said annular walls at the radially outer ends thereof, said die containing perforations over at least part of its annular surface, said annular walls and said die defining therewithin a plasticizing chamber,
- (c) a feed inlet communicating with said plasticizing chamber,
- (d) shaft means including a rotor hub mounted in said apparatus generally centrally with respect to said plasticizing chamber, and means for rotating said shaft and hub,
- (e) at least one pressing blade nonrotatably mounted on said hub for rotation in said plasticizing chamber, said at least one blade having a leading flank and being constructed such that when combined with the inside surface of said die, said plasticizing chamber steadily narrows in a direction opposite to the direction of rotation of said at least one blade,
- (f) knife means mounted for rotation outwardly of said annular die for contacting the radial outer surface of said die and cutting agglomerated material passing through said die perforations, and

wherein the spacing of said annular walls and the pressing blade at their radially outer portions is less than the spacing at their radially inner portions thereby to define a radially outward narrowing of said plasticizing chamber, such narrowing permitting throughput capacity to be increased without thermal damage to the material.

5,009,587
INJECTION MOLDING MACHINE FOR MAKING TUBULAR WORKPIECES FROM PLASTIC MATERIAL

Romeo Corvaglia, Ramsen, and Martin Schöttli, Schaffhausen, both of Switzerland, assignors to Schottli AG, Diessenhofen, Switzerland

Continuation of Ser. No. 259,327, Oct. 18, 1988, abandoned.
This application Dec. 28, 1989, Ser. No. 455,767
Claims priority, application Switzerland, Oct. 31, 1987, 4257/87
Int. Cl.[5] B29C *45/22*
U.S. Cl. 425—549 18 Claims



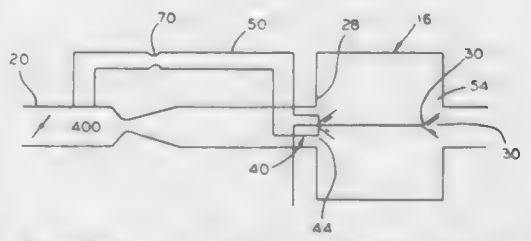
1. An injection molding machine comprising a first mold section and a second mold section, said first and second mold sections respectively having confronting first and second surfaces and at least one of said sections being movable between operative and retracted positions in which said surfaces respectively abut and are spaced apart from each other, said first section having at least one substantially cylindrical recess with an open end at the first surface and a second end remote from the first surface, and an end wall at said second end; at least one core having a circumference and provided on and extending from the surface of said second section and being received in said recess with play in the operative position of said one section so that said at least one core and said first surface then define an elongated mold cavity; and means for supplying plasticized material into said cavity, said means for supplying said plasticized material including at least two nozzles carried by said first section adjacent said end wall in line with said recess, each nozzle being substantially coaxial with said recess and having a plurality of orifices for admission of said plasticized material into said cavity at said end wall, said orifices being spaced apart from each other along the circumference of the at least one core in said recess each orifice having a discharge end adjacent the second end of said recess so that the supplied plasticized material flows from said end wall toward said first surface to expel air from the mold cavity at the first surface of said first mold section and to center the at least one core in said recess.

5,009,588
TIME-DELAY CIRCUIT FOR AUTOMATIC SHUTDOWN OF FURNACE SYSTEMS

Roger W. Williams, Jr., Springfield, Mass., assignor to R. E. Phelon Company, Inc., East Longmeadow, Mass.

Filed Jun. 26, 1990, Ser. No. 544,192
Int. Cl.[5] F23N *5/00*
U.S. Cl. 431—31 5 Claims

1. In a time-delay circuit for automatic shutdown of furnace systems having a power source connected to an induced draft blower motor, a primary burner control adapted to energize a fuel valve of the furnace, a relay controller adapted to control the operation of the induced draft blower motor and the primary burner control, a thermostat connected to supply energy selectively to the primary burner control and to a first electronic switching means connected, when conductive, to energize said relay controller, a second electronic switching means is connected, when conductive to turn "off" the first electronic switching means, the improvement comprising a timer including connections for at least a first and a second input and one output, the first input of said timer being connected to receive energy from the thermostat, the second input being connected in circuit with the primary burner control and the fuel valve so



that when the primary control energizes said fuel valve, the timer is also energized, the output of said timer being connected to said second electronic switching means so that when said timer generates an output signal, the second electronic switching means will be turned "on", said second electronic switching means being adapted to divert energy from and turn "off" said first electronic switching means to de-energize the relay controller and thus cut "off" both the primary burner control and the induced draft blower.

5,009,589
STORED ENERGY COMBUSTOR FUEL INJECTION SYSTEM

Jack R. Shekleton, San Diego, and Robert W. Smith, Lakeside, both of Calif., assignors to Sundstrand Corporation, Rockford, Ill.

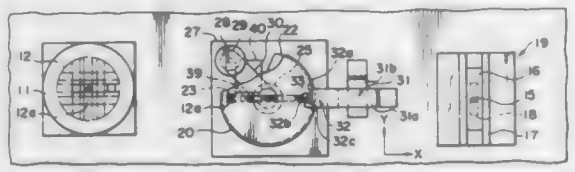
Filed Dec. 8, 1989, Ser. No. 447,599
Int. Cl.[5] F23M *9/00*
U.S. Cl. 431—183 13 Claims

1. A fuel injection system for a combustor having an upstream portion and a downstream portion comprising:
- a fuel injector associated with said upstream portion of said combustor, said fuel injector having a fuel flow passage in communication with a source of fuel, said fuel flow passage terminating in said upstream portion of said combustor and including means for swirling fuel injected into said upstream portion of said combustor;
- primary oxidant delivery means associated with said upstream portion of said combustor, said primary oxidant delivery means including a primary oxidant flow passage in communication with a source of oxidant for delivering a major portion of said oxidant in said combustor, said primary oxidant flow passage terminating in said upstream portion of said combustor;
- secondary oxidant delivery means associated with said upstream portion of said combustor, said secondary oxidant delivery means including a secondary oxidant flow pas-

sage for delivering a minor portion of said oxidant to said combustor, said secondary oxidant flow passage terminating in said upstream portion of said combustor;

oxidant diverter means for diverting said minor portion of said oxidant from said primary oxidant flow passage to said secondary oxidant flow passage;

oxidant accelerating means for accelerating oxidant in said secondary oxidant flow passage to a higher velocity substantially independent of the velocity of oxidant in said primary oxidant flow passage and substantially independent of pressure in said combustor; and



oxidant swirling means in said second oxidant flow passage downstream of said oxidant acceleration means for swirling oxidant delivered to said upstream portion of said combustor.

5,009,590

METHOD AND APPARATUS FOR PREHEATING SEMICONDUCTOR CHIPS

Tadashi Mitarai, and Makoto Kanda, both of Fukuoka, Japan, assignors to Mitsubishi Denki Kabushiki Kaisha, Japan

Filed Jan. 18, 1990, Ser. No. 466,866
Claims priority, application Japan, Jul. 24, 1989, 1-191977
Int. Cl.[5] F27D *3/00, 13/00*
U.S. Cl. 432—121 **8 Claims**

1. A method for preheating semiconductor chips comprising:

sequentially mounting a plurality of semiconductor chips on a rotatable table;

heating the semiconductor chips on the rotatable table, while the rotatable table is stationary, for a predetermined time; and

sequentially ejecting the heated semiconductor chips from the rotatable table.

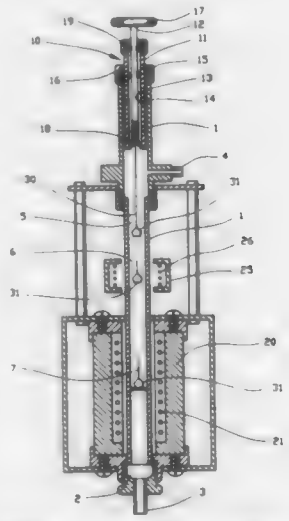
5,009,591

PYROLYZER FOR GAS CHROMATOGRAPHY

Chuichi Watanabe, Gotemba, Japan, assignor to The Dow Chemical Company, Midland, Mich.

Filed Jan. 30, 1990, Ser. No. 472,532
Claims priority, application Japan, Jan. 30, 1989, 1-17443
Int. Cl.[5] F27B *9/02*
U.S. Cl. 432—128 **3 Claims**

1. A gas chromatography pyrolyzer apparatus comprising:



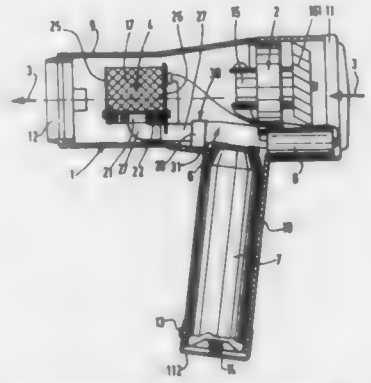
(a) a body defining a cavity therein, the cavity having at least a first portion, a second portion and a third portion, the body also defining a carrier gas inlet port therethrough in fluid communication with the cavity, the body further defining a carrier gas outlet port therethrough in fluid communication with the cavity so that a carrier gas can be flowed into the cavity through the carrier gas inlet port and then out of the cavity through the carrier gas outlet port to sweep any pyrolysis products generated in the cavity out of the carrier gas outlet port so that any pyrolysis products generated in the cavity can be analyzed by gas chromatography;

(b) a movable sample vessel positioned within the cavity for containing a sample to be pyrolyzed;

(c) a subsidiary heater for heating the second portion of the cavity;

(d) a subsidiary heater for heating the third portion of the cavity;

(e) means for selectively positioning the sample vessel at the first, second or third portions of the cavity so that a sample contained in the sample vessel is essentially not heated when the sample vessel is positioned at the first portion of the cavity, can be heated to a temperature below its pyrolysis temperature when the sample vessel is position at the second portion of the cavity and can be heated to its pyrolysis temperature when the sample vessel is position at the third portion of the cavity.



5,009,592

HOT AIR GENERATING DEVICE WITH A CATALYTIC BURNER

Antoine Roldan, Mions, and Daniel Demilliere-Vergnais, Francheville, both of France, assignors to Application Des Gaz, Paris, France

Filed Oct. 27, 1989, Ser. No. 427,496
Claims priority, application France, Oct. 28, 1988, 88 15370
Int. Cl.[5] F24H *1/00*
U.S. Cl. 432—222 **10 Claims**

1. A hot air-generating device, comprising:

a body which forms a conduit for the circulation of an air flow, extending from an inlet for fresh air to an outlet for hot air

a ventilation means arranged inside the body for generating the flow of air from the inlet towards the outlet of said conduit

a catalytic gas burner, which is disposed inside the conduit, which is connected with a source of pressurized fuel gas, and combustion fumes of which are mixed with the air flow to produce the hot air discharged through the conduit outlet, said burner being of the induced air type and comprising a means for mixing primary air in the fuel gas, an inlet outside said conduit to draw said primary air independently and separately relative to the air flow circulating in said conduit, a chamber for distributing the fuel gas mixed with the air downstream of the mixing means, and a catalytic structure, the inlet face of which faces the distribution chamber, and the outlet face of which is in faces the conduit for the air flow.

5,009,593

METHOD AND APPARATUS FOR SECURING A DENTAL RESTORATION

Henry J. Vogelstein, New York, N.Y., assignor to Coltene/-Whaledent, Inc., New York, N.Y.

Filed Feb. 5, 1990, Ser. No. 475,649
Int. Cl.[5] A61C *5/08*
U.S. Cl. 433—221 **30 Claims**

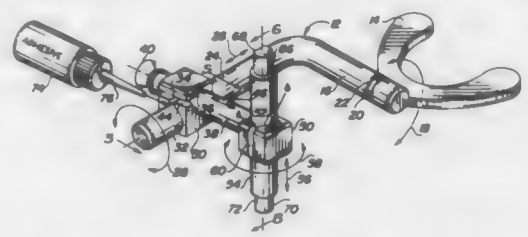
1. A method for restoring a tooth, comprising the steps of:

(a) preparing the tooth to accept a dental prosthesis;

(b) applying a polyacrylic acid solution to the prepared area;

(c) rinsing the prepared area until the area is clear from the polyacrylic acid solution;

(d) applying a drying agent to the prepared area; and



(e) securing a dental prosthesis to the prepared area through the use of a dental cement.

5,009,594

DISPOSABLE TRANSFER JIG ASSEMBLY

Weldon D. West, Mission Viejo, Calif., assignor to Denar Corporation, Anaheim, Calif.

Filed Jul. 18, 1989, Ser. No. 381,466
Int. Cl.[5] A61C *19/04*
U.S. Cl. 433—73 **8 Claims**

1. An adhesive fixatable disposable transfer jig apparatus for using in preparing a dental prosthetic, said apparatus comprising in combination:

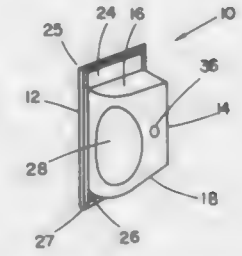
(a) a bitefork having an arm extending therefrom;

(b) a first support rod;

(c) a first clamp block for interconnecting said arm with said first support rod and for fixating said arm with said first support rod, said first clamp block including a first cylindrical passageway for receiving said arm, a first slot extending from said first cylindrical passageway for accommodating a flow of adhesive intermediate said arm and said first cylindrical passageway, a second cylindrical passageway for receiving said first support rod, a second slot extending from said second cylindrical passageway for accommodating a flow of adhesive intermediate said first support rod and said second cylindrical passageway;

(d) a second support rod;

(e) a second clamp block for interconnecting said first support rod with said second support rod, said second clamp block being formed as an integral part of said second support rod and inseparable therefrom; said second clamp block including a third cylindrical passageway for receiving said second support rod, a third slot extending from said third cylindrical passageway for accommodating a flow of adhesive intermediate said third support rod and said third cylindrical passageway; and



(f) said first and second slots being interconnected with one another to accommodate flow of adhesive into each of said first and second passageways upon a single application of adhesive into one of said first and second slots.

5,009,595

DENTAL MOUTH PROP

Carl F. Osborn, 106 Stuyvesant Rd., Asheville, N.C. 28803

Filed Jul. 28, 1989, Ser. No. 386,157
Int. Cl.[5] A61C *5/00*
U.S. Cl. 433—140 **10 Claims**

1. A mouth prop for dental patients comprising:

a block; said block being of a substantially unitary construction; said block being somewhat tapered in shape wherein said block has a long end and a short end; said block having a substantially straight and continuous top sloping surface and a substantially straight continuous bottom sloping surface for providing resting areas for certain teeth; a portion of said block near said long end being thinner than other portions of said block, thereby enhancing access to the patient's mouth.

5,009,596

DEVICE FOR FIXING A DENTAL PROTHESIS

Per O. Soderberg, Stockholm, Sweden, assignor to Astra Meditec Aktiebolag, Molndal, Sweden

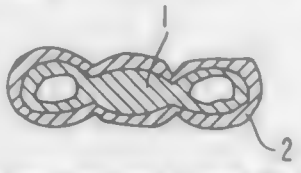
Continuation of Ser. No. 183,849, Apr. 20, 1988, abandoned.
This application Jan. 22, 1990, Ser. No. 469,798
Claims priority, application Sweden, Apr. 22, 1987, 8701655
Int. Cl.[5] A61C *8/00*
U.S. Cl. 433—173 **2 Claims**

1. A device for fixing a dental prosthesis, which device as parts thereof comprises a spacing element adapted for anchoring into the jaw-bone of a patient and a socket adapted for fixing into a dental prosthetic part, wherein the socket rests on the spacing element via an outer conical supporting surface

provided on one of said parts, which supporting surface bears against an inner conical supporting surface provided in the other of said parts, characterized in that a shoulder is provided on the part having the outer conical supporting surface, which shoulder has a planer surface oriented radially around the periphery of the supporting surface, and that an end surface is provided on the part having the inner conical supporting surface, the end surface being oriented radially around the periphery of said supporting surface, and wherein the planar surface and the end surface have such an axial position on the respective part that an externally visible fine gap of uniform and predetermined thickness is formed between them on bearing of the supporting surfaces properly against each other, whereby an improperly formed gap provides a visible indication that the parts do not properly bear against one another.

5,009,597

COMPOSITE DENTAL PROSTHESIS ELEMENT FORMED OF FILLED ACRYLATE/METHACRYLATE POLYMERS



Roland Schaefer, Friedrichsdorf, Fed. Rep. of Germany, assignor to Kulzer & Co. GmbH, Wehrheim, Fed. Rep. of Germany

Continuation of Ser. No. 162,098, Feb. 29, 1988, abandoned. This application May 25, 1989, Ser. No. 358,456

Claims priority, application Fed. Rep. of Germany, Mar. 17, 1987, 3708618

Int. Cl.[5] A61C *5/09, 8/00, 13/00*

U.S. Cl. 433—212.1 **25 Claims**

1. A plastic dental prosthesis element for crowns, bridges and inlays comprising a core formed of a plastic material comprising an 70-10% by weight of an acrylate or methacrylate or mixture thereof based polymer containing 30–90% by weight of an inorganic filler, said inorganic filler being comprised of 60–100% of an inorganic dental filler material selected from the group consisting of silicon dioxide, lithium aluminum silicate glass, strontium aluminum silicate glass and a mixture thereof, and having a particle size of from 0.7–5 micrometers, and 0–40% by weight of microdispersed silicon dioxide having a particle size from 0.01 to 0.04 micrometers, and

a jacket disposed over said core and being formed of a plastic material comprising 90-10% by weight of an acrylate, methacrylate or mixture thereof based polymer containing 10-90% by weight of microdispersed silicon dioxide having a particle size of 0.01 to 0.4 micrometers as the sole filler,

said core having a mechanical strength greater than the mechanical strength of the jacket, whereby thin-walled shapes and slender embodiment of the prosthesis element are enabled, said core having a flexural strength of 160 to 183 MPa and having a bending modulus of 17,800 to 19,000 MPa and said jacket having a flexural strength of 65 to 90 MPa having a bending modulus of 3500 to 3900 MPa.

5,009,598

FLIGHT SIMULATOR APPARATUS USING AN INOPERATIVE AIRCRAFT

Thomas E. Bennington, Box 2392, Palm Beach, Fla. 33480

Filed Nov. 23, 1988, Ser. No. 274,838

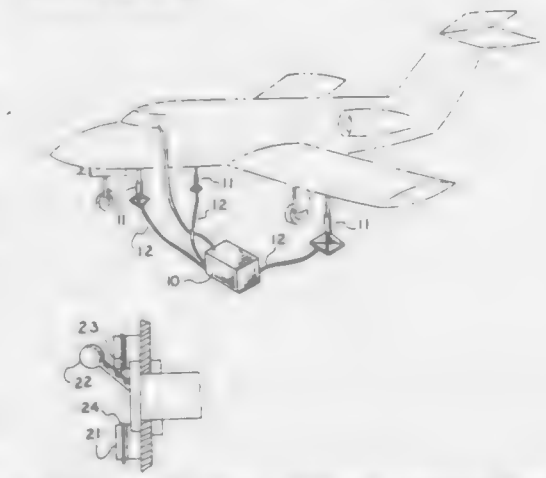
Int. Cl.[5] G09B *9/08*

U.S. Cl. 434—30 **13 Claims**

1. A flight simulator apparatus removably installable in and using an actual aircraft not in flight and having movable control members comprising;

an actual aircraft and aircraft instrument panel, said aircraft being currently non-operative and grounded,

an aircraft instrument panel overlay containing a plurality of simulated instruments, said simulated instruments capable of mimicking and duplicating the movements and responses of actual aircraft instruments,



a central computer,

said simulated instruments of said aircraft instrument panel overlay mountable over the existing actual individual instruments of said actual aircraft instrument panel and receiving output from said central computer,

said central computer adapted to provided simulated displays of the operating instruments of an actual operating aircraft by means of said instrument panel overlay,

a plurality of position sensing means mounted to and adjacent said control members of said actual aircraft and electrically connected to said computer, said position sensing means moving with said control members,

said position sensing means for providing output to said central computer relating to the position of said actual control members,

an indicator light overlay comprising individual indicator lights positioned over actual indicator lights of said aircraft and electrically connected to said computer,

said indicator light overlay receiving signals from said central computer to simulate the appropriate activation of indicator lights in an actual operating aircraft, and

an aircraft switch overlay mounted adjacent existing switches in said actual aircraft and including secondary switches, which open or close upon movement of said existing switches in said actual aircraft, providing positions information of the existing switches to said central computer.

5,009,599

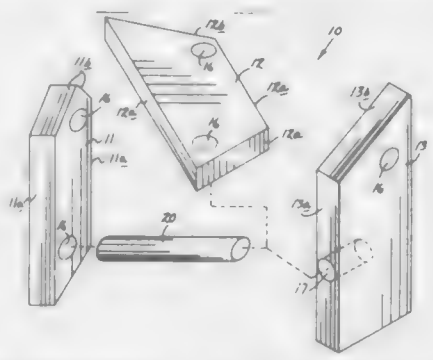
SCULPTURE APPARATUS

Timothy T. Mueller, 96 Eagle Point, Irvine, Calif. 92714

Filed Dec. 18, 1989, Ser. No. 451,601

Int. Cl.[5] G09B *11/00*

U.S. Cl. 434—81 **7 Claims**



1. An educational sculpture apparatus comprising, in combination,

a plurality of plate members, each plate member including a planar top surface overlying and coextensive with a planar bottom surface, and further including at least two parallel sides and two non-parallel sides,

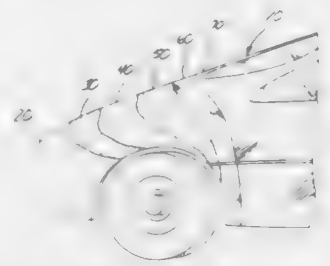
a plurality of rods including end portions, and each plate member including a plurality of bores for receiving the rod end portions for forming an erected educational sculpture, and

wherein each of the plate members is of a varying geometric configuration relative to other plate members, and each plate member is of an equal predetermined thickness, and

the plate members include a predetermined plurality of plate members, including bores in a parallel and non-parallel relationship relative to each other, wherein the plurality of bores includes bores oriented orthogonally relative to the top and bottom surfaces, and the plurality of bores include blind bores positioned in a non-through-extending

relationship relative to the plate member, and the plurality of bores include angular bores oriented at a non-orthogonal inclination relative to the top and bottom planar surfaces of an associated plate member.

5,009,600



METHOD OF PAINTING CLAY BODIES

Robert L. DeLaRosa, Livonia, Mich., assignor to General Motors Corporation, Detroit, Mich.

Filed Feb. 28, 1990, Ser. No. 486,624

Int. Cl.[5] G09B *11/00;* **B05D** *1/36*

U.S. Cl. 434—82 **4 Claims**

1. A method of painting a clay body and maintaining a durable decorative surface finish by providing a barrier film layer between the paint coat layer and the clay body such that the oily substance contained in the clay body being blocked from permeating through said barrier film to adversely affect said paint coat layer comprising the steps of:

providing a body of clay ready to be decorated,

coating said body of clay with a strippable coating layer,

coating said body of clay with a diluted shellac layer over said strippable coating layer,

coating said body of clay with a primer coat layer over said shellac layer, and

coating said body of clay with a color coat layer of a desirable color over said primer coat layer.

5,009,601

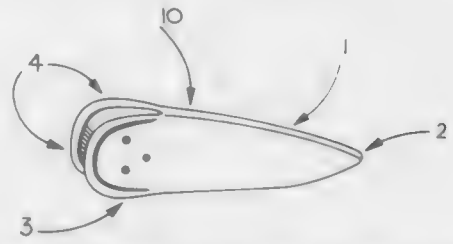
METHOD FOR TEACHING GARMENT BUTTONING

Richard W. Mechling, 830 Vedado Way NE., Atlanta, Ga. 30308

Filed Aug. 19, 1988, Ser. No. 234,198

Int. Cl.[5] G09B *19/00*

U.S. Cl. 434—260 **2 Claims**



1. A method of teaching the skill of garment buttoning to a subject, comprising the steps of:

(a) providing a button with an elongated and pointed side to allow increased sensation to the thumb and index finger of the subject;

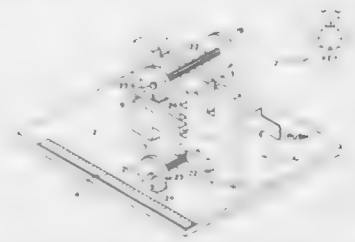
(b) providing said button with raised and flaired edges on a side opposite said elongated and pointed side to allow increased sensation to the thumb and index finger of the subject;

(c) selecting an initial predetermined length of said elongated and pointed side of said button according to the subject's level of buttoning skill;

(d) allowing the subject to attempt to perform the buttoning task using said button which has said initial predetermined length to said elongated and pointed side;

(e) decreasing the length of said initial predetermined length to said elongated and pointed side for a subject demonstrating improved or progressive buttoning skills.

5,009,602



ROTATIONAL MOVEMENT TRAINING APPARATUS

Clifton B. Chandler, 227 Brookwood Way, Mansfield, Ohio 44906

Filed Mar. 28, 1990, Ser. No. 500,582

Int. Cl.[5] G09B *23/02, 23/04*

U.S. Cl. 434—300 **11 Claims**

1. An improved rotational movement training device comprises:

(a) mounting board means comprising at least one mounting board, said mounting board comprising:

(i) a top portion having a plurality of slots therein;

(ii) middle portion having a plurality of slots therein; and

(iii) a bottom portion having a plurality of slots therein; and

(b) a plurality of rotational means engageable in at least two of said slots for demonstrating a rotational movement;

(c) whereby movement of said mounting board means results in movement of said rotational means thereby facilitating derivation of a scientific and mathematical concept.

ELECTRONIC EDUCATIONAL VIDEO SYSTEM APPARATUS

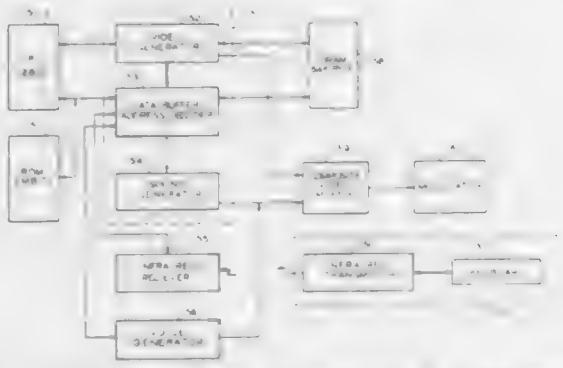
Chi-Ming Fong, New Territories; Wai-Kwok Chew, Tai Po, N.T., and Garry C. Law, Kowloon, all of Hong Kong, assignors to Video Technology Industries, Inc., Wheeling, Ill.

Filed Aug. 19, 1988, Ser. No. 234,257

Claims priority, application United Kingdom, Oct. 28, 1987, 8725204

Int. Cl.[5] G09B *7/04, 15/00*

U.S. Cl. 434—323 **14 Claims**



1. An electronic educational video system apparatus for connection to a standard television receiver for teaching basic skills to a child through the use of animated pictorial displays which serve to motivate said child to utilize said apparatus and enhance said child's learning, said electronic educational video system apparatus comprising:

memory means for storing digital data corresponding to a

plurality of pictorial representations, digital data corresponding to requests associated with said pictorial representations directing said child to provide a proposed correct response, said requests being both aural and textual, and digital data corresponding to the correct response to said requests associated with said pictorial representations,

display generation means electrically connected to said memory means for combining said data into said plurality of combinations and digitally generating video signals representative of said plurality of pictorial representations towards the generation of a single display incorporating said pictorial representations and said textural representations;

interface means electrically connected to said display generation means for providing said video signal to said television receiver towards displaying said pictorial representations and said associated requests thereon,

processor means electrically connected to said memory means and said display generation means,

said processor means for selecting one of said pictorial representations stored in said memory means and causing said selected pictorial representation to be displayed upon said television receiver and for causing said associated request to be presented to said child;

a plurality of interchangeable input means for permitting said child to provide a proposed correct response to said request;

means for comparing said child's proposed correct response with said correct response stored in said memory means;

means for animating said displayed pictorial representation associated with said request for proposed correct responses presented to said child so as to provide said child with an indication of the correctness of said child's proposed correct response.

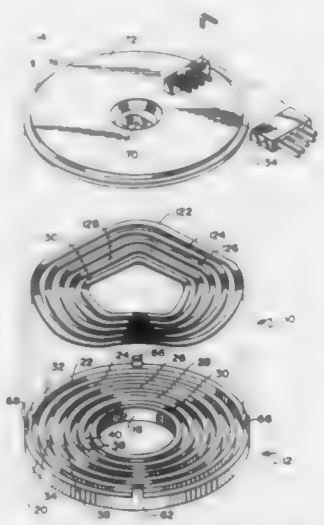
ELECTRICAL CONNECTOR ASSEMBLY FOR VEHICULAR STEERING WHEEL

Edward J. Plocek, Lisle; Stephen Z. Weiss, Highland Park, and Maciej Pike-Biegunski, Warrenville, all of Ill., assignors to Molex Incorporated, Lisle, Ill.

Continuation-in-part of Ser. No. 252,308, Oct. 3, 1988, Pat. No. 4,904,190. This application Dec. 4, 1989, Ser. No. 445,514



Int. Cl.[5] H01R *39/02, 39/06*

U.S. Cl. 439—15 **15 Claims**

1. An electrical connector assembly for achieving electrical connection between first and second members at least one of which is rotatable relative to the other, said assembly comprising:

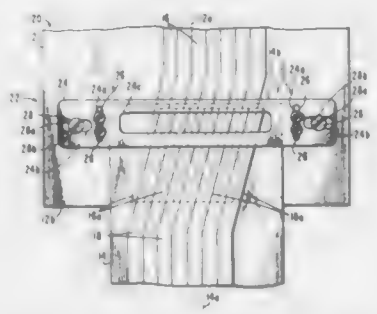
a first housing mountable to said first member and comprising a nonconductive portion having a mating face and at least one annular conductive portion fixedly disposed on said mating face;

a second housing mountable to said second member and comprising a nonconductive portion having a mating face disposed in generally opposed relationship to the mating face of said first housing, said second housing having at least one resilient annular conductive portion nonrotatably disposed on the mating face thereof generally in register with the annular conductive portion on the mating face of said first housing, the resilient annular conductive portions of said second housing including resilient undulations therein, said undulations being in direct electrical and direct mechanical contact with the annular conductive portions of the first housing in register therewith, each said resilient annular conductive portion including a

contact tab for electrical connection to an electrical connector nonrotatably mounted to the second housing; and

wherein the mating face of at least one of said first and second housings comprises at least one annular recess, with at least part of the resilient annular conductive portion of said second housing being disposed in said annular recess, whereby said annular recess retains the resilient annular conductive portion at a radial position for electrically contacting the annular conductive portions in the first housing.

5,009,605



FLAT ELECTRICAL CONNECTOR ASSEMBLY WITH PRECISELY ALIGNED SOLDERING TRACES

William R. Crumly, Anaheim; Blake F. Woith, La Verne, and James R. Walen, Mission Viejo, all of Calif., assignors to Hughes Aircraft Company, Los Angeles, Calif.

Filed Mar. 13, 1990, Ser. No. 493,050

Int. Cl.[5] H01R *9/09*

U.S. Cl. 439—67 **10 Claims**

1. An electrical connector assembly, comprising:

a first member having a first longitudinal axis;

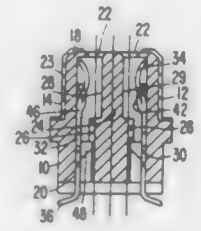
a plurality of electrically conductive first traces carried by the first member, including first generally parallel connector portions which are oriented at a predetermined acute angle to the first longitudinal axis;

a second member having a second longitudinal axis;

a plurality of electrically conductive second traces carried by the second member, including second generally parallel connector portions which are oriented at a like predetermined angle to the second longitudinal axis:

the first and second members being mateable such that the first and second longitudinal axes are substantially aligned, and relatively movable parallel to the first and second longitudinal axes to a position in which the first and second connector portions are respectively aligned.

5,009,606



SEPARABLE ELECTRICAL CONNECTOR

Marc G. Villeneuve, and William P. Buckley, both of Toronto, Canada, assignors to Burndy Corporation, Norwalk, Conn.

Filed Dec. 18, 1989, Ser. No. 451,796

Int. Cl.[5] H01R *13/00*

U.S. Cl. 439—59 **19 Claims**

1. An electrical connector for electrical mating with a plug member having a plurality of male contact members and for electrical mounting on a printed circuit board, said electrical connector comprising a receptacle body, said body being defined by front and rear walls, a pair of end walls, a bottom wall and a top wall, a plurality of spaced passageways formed in said body and extending through said body from said top wall to said bottom wall, a single contact member received within each of said passageways, each of said contact members having a contact surface provided within its respective passageway, a depending gas tight contact portion provided on each of said contact members, said gas tight contact portions extending through said bottom wall of each passageway of said receptacle body and depending therefrom, said receptacle being adapted for electrical mating with said plug member by insertion of each of said male contact members into a respective one of said passageways, such that said contact surface electrically contacts said male contact member, said receptacle being adapted to be separably mounted on a printed circuit board by said contact portions contacting a conductive strip on said printed circuit board.

5,009,607

FLEXIBLE CIRCUIT CONNECTOR

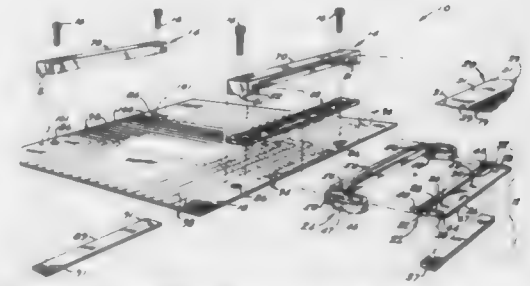
Herman B. Gordon, Phoenix, Ariz.; Mark J. Owens, Vernon, Conn.; Leon Rubinstein, Natick, Mass., and Scott Simpson, Woodstock, Conn., assignors to Rogers Corporation, Rogers, Conn.

Filed Jul. 24, 1989, Ser. No. 384,269

Int. Cl.[5] H05K *1/00*

U.S. Cl. 439—67 **37 Claims**

1. An electrical connector for connecting a flexible circuit to another circuit device comprising:



(1) male plug means, said male plug means including;

(a) block means having opposed upper and lower surfaces, said block means also having alignment means for aligning a flexible circuit which has been wrapped about said upper and lower surfaces of said block means;

(b) cover means attachable to said block means wherein a flexible circuit which has been wrapped about said block means will be sandwiched between said upper surface of said block means and said cover means, said cover means covering at least a portion of said upper surface of said block means with said lower surface of said block means being free of any coverage by said cover means; and

(c) pressure applicator means associated with said lower surface of said block means wherein said pressure applicator means will be sandwiched between said block means and a flexible circuit which has been wrapped about said block means;

(2) female adapter means attachable to another electronic device, said female adapter means including a hood having a hood opening therethrough, said hood opening having a predetermined size to receive at least a portion of said male plug means therein; and

(3) detachable engagement means for effecting detachable engagement between said male plug means and said hood opening in said female adapter means;

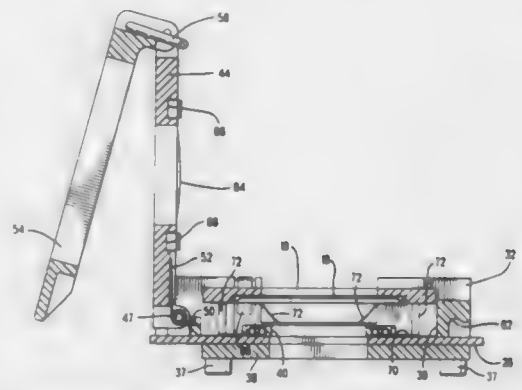
and further including;

at least a pair of spaced tabs extending outwardly from a front edge of said block means;

at least a pair of spaced apertures through said cover means and in registration with said tabs, said apertures receiving said tabs when said cover means is attached to said block means; and

snap-lock engagement means for snap-locking said cover means to said block means when said tabs are received in said apertures.

5,009,608



SEPARABLE CONNECTOR ASSEMBLY FOR AN IC CHIP CARRIER

Joanne E. Shipe, Harrisburg, Pa., assignor to AMP Incorporated, Harrisburg, Pa.

Filed Jul. 12, 1990, Ser. No. 553,217

Int. Cl.[5] H01R *13/62, 9/09;* **H05K** *1/00*

U.S. Cl. 439—331 **13 Claims**

1. A connector assembly for providing separable electrical connections between contact pads (28) on a surface of a first substrate (26) and respective contact pads (14) on a surface of a second substrate (12), comprising:

a frame (32) mounted on said surface of said first substrate (26), said frame (32) including a central opening (38) exposing said first substrate contact pads (28);

a connector housing assembly (40) supported on said first substrate (26) surface in said frame central opening (38), said connector housing assembly (40) including a plurality of contact members (42), each of said plurality of contact members having a first contact portion in contact with a respective one of said first substrate contact pads (28) and a second contact portion exposed through a planar surface of said connector housing assembly (40), said connector housing assembly (40) planar surface being parallel to said first substrate (26) surface and being spaced therefrom;

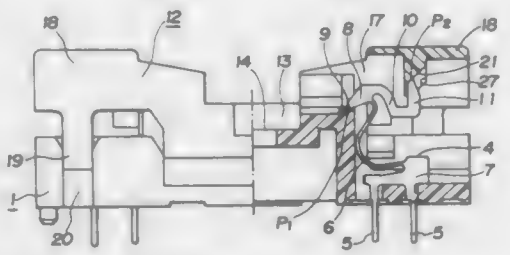
means (16, 18) for supporting said second substrate in said frame central opening above said connector housing assembly with said second substrate pads (14) in contact with respective ones of said exposed second contact portions of said plurality of contact members;

a lid member (44) hingedly mounted (46) to said frame (32) for movement between a closed position parallel to said first substrate (26) surface and an open position transverse to said first substrate surface;

means (64) mounted on said lid member (44) for applying a force to said second substrate (12) within said frame central opening (38) when said lid member (44) is in said closed position, said force being sufficient to establish electrical contact between said first substrate contact pads (28) and said second substrate contact pads (14) through said contact members (42);

means (58, 62) for locking said lid member (44) in said closed position; and

a handle member (54) hingedly mounted to said lid member (44), the hinged mounting (56) of the handle member (54) to the lid member (44) being parallel to and on the opposite end of the lid member (44) from the hinged mounting (46) of the lid member (44) to the frame (32);



said locking means including a hook member (62) on said frame at the end opposite where the lid member (44) is hingedly mounted and a latch member (58) hingedly mounted on said handle member (54) in the general vicinity of the hinged mounting (56) to the lid member (44), the latch member (58) cooperating with the hook member (62) to retain the lid member (44) in said closed position when the handle member (54) is moved to a position parallel relative the lid member (44).

5,009,609

CONTACT SHUTTER DEVICE IN IC SOCKET

Noriyuki Matsuoka, and Junji Ishida, both of Tokyo, Japan, assignors to Yamaichi Electric Mfg. Co., Ltd., Tokyo, Japan

Filed Sep. 27, 1989, Ser. No. 413,389
Claims priority, application Japan, Sep. 30, 1988, 63-248614
Int. Cl.[5] H01R *13/62*
U.S. Cl. 439—73 **5 Claims**

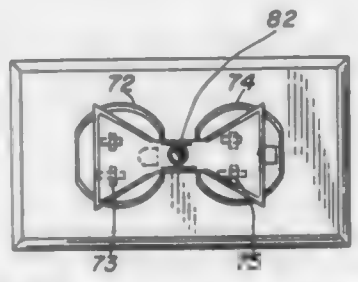
1. An IC socket, comprising:

a socket body having an IC package accommodating portion;

a plurality of contacts disposed in said socket body for contacting terminal members of an IC package; and

a contact shutter member vertically movably mounted on said socket body for pushing said contacts such that said contacts move upward and backward from the terminal members of an IC package upon movement of said contact shutter member toward said socket body;

wherein each said contact comprises a fixing portion for fixing the contact in said socket body, a contact portion for contacting a terminal member, and means for causing said contact portion of said contact to move upward and backward from a first terminal member contact position to a second terminal member non-contact position in response to vertical movement of said contact shutter member toward said socket body, said means comprising a curved spring extending forward toward said IC package accommodating portion from said fixing portion to said contact portion, said curved spring having a double curve with a first concave portion adjacent said fixing portion facing away from said contact portion and a second concave portion adjacent and facing toward said contact portion, and a cantilever arm extending backward from said contact portion, said cantilever arm having a free end, said free end comprising a pressing force receiving portion for being pressed by said contact shutter member; and



wherein each said contact portion of said contacts has a forward end projecting forward in the direction of said IC package accommodating portion and said curved spring has a forwardmost portion at said first concave portion extending forward in the direction of said IC package accommodating portion, said forward end of said contact portion extending further forward than said forwardmost portion of said curved spring in said first terminal member contact position.

5,009,610

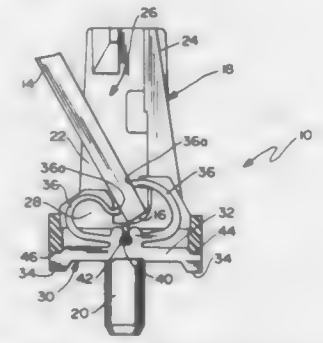
LIGHT SWITCH AND OUTLET GUARD

Robert Woskow, 16801 Severo Pl., Encino, Calif. 91436

Continuation-in-part of Ser. No. 204,217, Jun. 8, 1988, Pat. No. 4,876,425. This application Oct. 16, 1989, Ser. No. 422,147
Int. Cl.[5] H01R *13/44*
U.S. Cl. 439—142 **12 Claims**

1. In a wall plug outlet comprising a mounting plate having at least one mounting hole, at least one female plug outlet, and a mounting screw for said mounting hole, the improvement comprising:

a protective guard for said at least one female plug outlet, said guard comprising a main elongated portion comprising a first female plug-outlet cover portion for selectively closing off access to said at least one female plug outlet, and a second mounting portion connected to said first portion, said second portion having a through-opening formed therein for receiving therethrough said mounting screw, said guard being pivotally mounted to said wall plate via said mounting screw for a selected degree of difficulty of rotation thereof accomplished via the degree of tightening of said mounting screw in said mounting hole of said wall plate, whereby said guard may alternatively close off access to said female plug outlet and allow access thereto;



said second portion comprising a rearwardly projecting bead defining a hollow interior in direct alignment with said through-opening, said bead projecting from the rear surface face of said second portion, whereby said bead may project into said mounting hole of said wall plate, said mounting screw passing through said through-opening and said bead, said bead adding structural integrity to said main elongated portion and providing a seat during the rotation thereof; said bead comprising an outer frusto-conical circumferential surface, said outer surface capable of mating with the interior circumferential surface of said mounting hole of said mounting plate.

5,009,611

HIGH DENSITY ELECTRICAL CONNECTOR FOR PRINTED CIRCUIT BOARDS

Kent Regnier, Lombard, Ill., assignor to Molex Incorporated, Lisle, Ill.

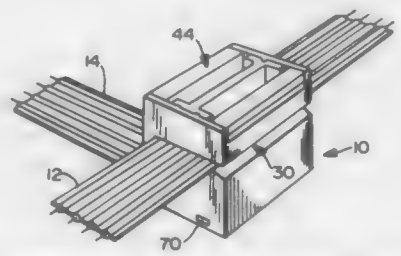
Filed May 23, 1990, Ser. No. 527,464
Int. Cl.[5] H01R *13/00*
U.S. Cl. 439—326 **13 Claims**

1. A connector assembly for electrically connecting closely-spaced circuit elements disposed on two printed circuit boards one of which has a mating edge and a surface with a linear array of contact pads adjacent said edge, comprising:

an elongate dielectric housing having a cavity along its length for receiving the mating edge of said one printed circuit board;

means for mounting the housing to the other of the printed circuit boards;

a plurality of thin contact members mounted on the housing to form a closely-spaced linear terminal array, each contact member being adapted to engage a contact pad when the one printed circuit board is inserted into the cavity, and each contact member having a mounting socket; and



said housing having a mounting post positionable in the mounting socket of each contact member to seat the contact members on the housing.

5,009,612

MULTI-CONDUCTOR ELECTRICAL CABLE CONNECTOR

Paul L. Rishworth, Richmond; Denis L. Rishworth, Knysna Heights, both of South Africa, and Daniel A. Dixon, Naperville, Ill., assignors to Molex Incorporated, Lisle, Ill.

Filed Feb. 7, 1990, Ser. No. 479,302
Int. Cl.[5] H01R *4/24*
U.S. Cl. 439—403 **8 Claims**

1. An electrical conductor cable connector comprising:

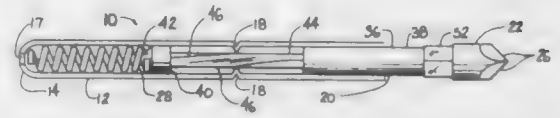
a housing of an electrical insulating material, the housing having side walls and a lower portion defining an first open ended compartment,

a plurality of conductor engaging elements mounted in the lower portion and extending into the first compartment, each element having a portion located in the lower portion of the housing for electrically connecting an electrical conductor located in the lower portion of the housing to the conductor engaging element, the connector housing having a slot which extends from one side of the housing through the walls of the first compartment above the conductor engaging elements, the slot adapted to receive a first ribbon tape cable having a plurality of insulation covered electrical conductors,

a first press member of an electrical insulating material slidably mounted in the first compartment for pressing the first cable against the conductor engaging elements located in the first compartment,

means for locking the first press member in a first position in the first compartment such that the first member is located above the slot, the first cable adapted to be introduced into the slot and terminated to the conductor engaging elements without removal of the first press member,

means for clamping the first cable to the housing, and



means for locking the first press member in a second position in the first compartment to maintain the first cable clamped to the housing.

5,009,613

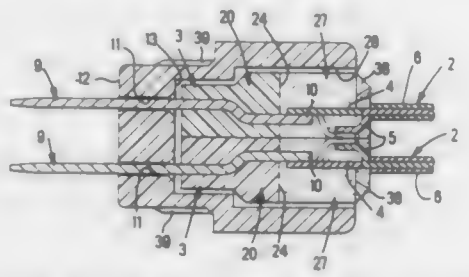
SPRING CONTACT TWISTER PROBE FOR TESTING ELECTRICAL PRINTED CIRCUIT BOARDS

Ulf R. Langgard, Overland Park, Kans., and William E. Thurston, Gladstone, Mo., assignors to Interconnect Devices, Inc., Kansas City, Kans.

Filed May 1, 1990, Ser. No. 517,239
Int. Cl.[5] H01R *11/18*
U.S. Cl. 439—482 **12 Claims**

1. A twisting electrical contact spring probe comprising:

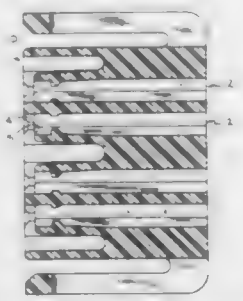
(a) a substantially cylindrical barrel having a spring seating end and an open end, and four spaced crimps equally spaced about the circumference of said barrel at a location between said spring seating end and said open end said crimps forming portions of the sides of a square when said barrel is viewed in cross section;



(b) a compression spring seated in said spring seating end of said barrel;

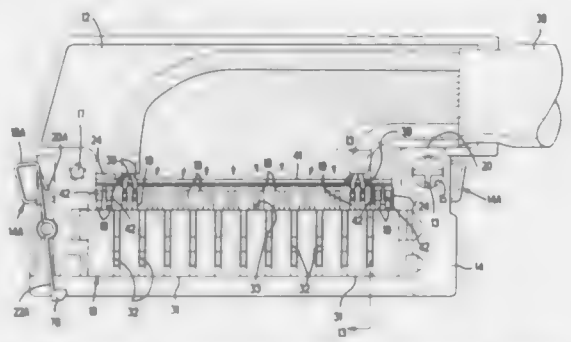
(c) a probe seated within said barrel and retained within said barrel by said crimps, said plunger further comprising a tail section, a shank section, and a twister section between said tail section and said shank section, and four parallel equal spaced helical crests along said twister section, each said crimp engaging one said helical crest and urging rotation of said plunger as said plunger reciprocates relative to said barrel;

(d) means for alternatively admitting and expelling air from said cylinder as said plunger reciprocates in said barrel; and



(e) tip means on said plunger for rotating with said plunger and providing a scraping action.

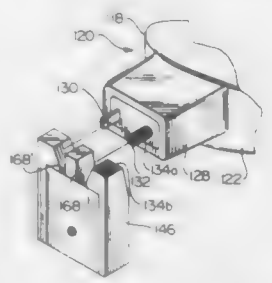
5,009,614
SHIELDED CABLE ASSEMBLY WITH FLOATING GROUND
Michael W. Fogg, Harrisburg; Keith S. Koegel, Linglestown; John R. Shuey, Mechanicsburg; William E. Zelko, Dauphin, and Robert E. Beamenderfer, Palmyra, all of Pa., assignors to AMP Incorporated, Harrisburg, Pa.
Filed May 31, 1990, Ser. No. 531,203
Int. Cl.[5] H01R 9/07
U.S. Cl. 439—497 8 Claims



1. A cable assembly for at least one electrical cable comprising: an insulative housing block, conductive electrical contacts in the housing block connected to corresponding signal wires of the cable, a conductive ground bus connected to corresponding ground wires of the cable, plastics material at a rear of the housing block imbedding the electrical contacts and the ground bus and a portion of the cable, an insulative housing having a rear facing cavity receiving the housing block and the contacts and the plastics material, the housing having contact receiving cavities receiving corresponding contacts, a conductive shell enclosing the housing and connected to chassis ground potential, the ground bus being enclosed by the conductive shell and being isolated electrically from the shell by the plastics material in the housing, and the ground wires extending into the shell and being isolated electrically from the shell by the plastics material in the housing.

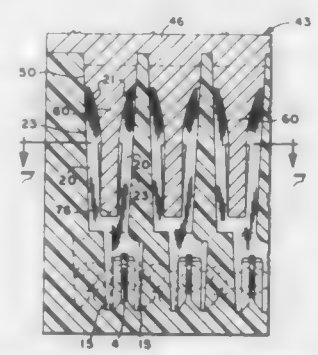
5,009,615
TERMINAL ASSEMBLY WITH FIXED AND FLEXIBLE TAB RECEPTACLE RETAINERS
Dewey F. Mobley, Lake Orion; Robert G. Peterson, Sr., Canton, and James E. LaCava, Novi, all of Mich., assignors to Interlock Corporation, Westland, Mich.
Continuation of Ser. No. 248,591, Sep. 26, 1988, abandoned. This application Jun. 27, 1990, Ser. No. 544,414
Int. Cl.[5] H01R 13/40, 13/422
U.S. Cl. 439—595 1 Claim

1. An electrical terminal assembly comprising:
a stationary first wall member having a first shoulder extending therefrom;
a stop shoulder having first and second ends thereon and being connected to said first wall member at said first end;
a second wall member having a plurality of slots formed therein defining a flexible finger having a second shoulder protruding therefrom, said second wall member being connected to said stop shoulder at said second end thereof, said second wall member cooperating with said first wall member and said stop shoulder to define a terminal receiving cavity, said finger being biased in a direction inwardly of said cavity and cooperating with said cavity to allow a terminal to be received thereinto, said first shoulder of said stationary first wall and said second shoulder of said biased finger being positioned inward of said cavity and coacting with the terminal to secure the terminal therein, said stop shoulder preventing further insertion of the terminal, said finger being deflectable in a direction outwardly of said cavity permitting removable of the terminal from said assembly.



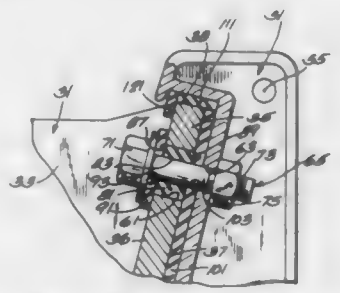
5,009,616
CONNECTOR ASSEMBLY WITH BACK SHELL HAVING VANES
Michael W. Fogg, Harrisburg, and Leroy J. Morningstar, Middletown, both of Pa., assignors to AMP Incorporated, Harrisburg, Pa.
Filed Dec. 14, 1989, Ser. No. 450,784
Int. Cl.[5] H01R 13/648
U.S. Cl. 439—608 6 Claims

1. A shielded connector assembly comprises, a terminal block containing electrical contacts, a conductive back shell, at least one multiconductor cable extending through a cable receiving opening of the back shell with corresponding conductors of the cable connected to corresponding contacts, and a strain relief for the cable contained in the back shell, the improvement comprising:
the back shell separates and shields selected contacts from other contacts in the terminal block, the back shell is bipartite, and conductive vanes on both parts of the back shell extend part way through the terminal block and engage opposing vanes to provide shielding continuously through the terminal block.



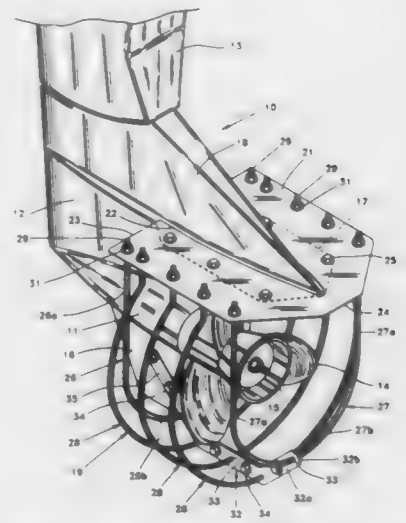
5,009,617
ASSEMBLY FOR A D.C. HID LAMP
Brian J. Thomas, Phoenix, N.Y., assignor to Welch Allyn, Inc., Skaneateles Falls, N.Y.
Filed Feb. 6, 1990, Ser. No. 475,933
Int. Cl.[5] H01R 13/64
U.S. Cl. 439—679 4 Claims

1. A combination socket and lamp assembly that includes a lamp having a first rectangular shaped blade conductor and a second circular shaped cylindrical conductor, the width of the blade conductor being different from the diameter of the cylindrical conductor, a socket means having a top wall and a front wall, a pair of parallel slotted receptacles formed in said front wall that open upwardly through the top wall, a first receptacle being configured and dimensioned to mate with said first blade conductor and a second receptacle being configured and dimensioned to mate with said second cylindrical conductor so that the lamp connectors can be slidably inserted downwardly into the slots, and electrical contact means contained within



the receptacles for transmitting electrical current through the connectors to the lamp.

5,009,618
METHOD AND APPAPATUS FOR MAKING ELECTRICAL CONNECTING DEVICE
Robert H. Black, Jacksonville, Fla., and John T. Venaleck, Madison, Ohio, assignors to Ohio Associated Enterprises, Inc., Painesville, Ohio
Division of Ser. No. 920,273, Oct. 17, 1986, Pat. No. 4,863,402. This application May 10, 1989, Ser. No. 349,754
Int. Cl.[5] H01R 13/405
U.S. Cl. 439—736 16 Claims



1. An electrical connecting device, comprising an electrical contact and housing means for containing at least part of said contact, said housing means having opening means for receiving therein one member for contacting said contact, said contact including a base and extending from said base at least two separate resilient contacting means for contacting at inner surfaces thereof said one member inserted between said contacting means, both said contacting means being capable of outward deformation to undergo substantially independent movement during inserting of said one member therebetween, said housing means including a body molded while said contacting means are outwardly deformed to form an integral structure about and to at least part of said contact and around at least part of said two contacting means to form said opening means in said housing means between said two contacting means and open spaces formed by said contacting means when outwardly deformed and defined by spaces created when said contacting means resiliently return inwardly to an undeformed position, said open spaces being adjacent respective ones of said two contacting means to permit such outward deformation of both said contacting means for insertion of the one member between said two contacting means.

5,009,619
CORROSION PROTECTION SYSTEM
Peter W. Meier, Stuart, Fla., assignor to Outboard Marine Corporation, Waukegan, Ill.
Filed Sep. 5, 1989, Ser. No. 402,521
Int. Cl.[5] B63H 5/12
U.S. Cl. 440—53 13 Claims

1. A marine installation including a transom fabricated on a first metal and including a forward surface, a rearward surface, and a mounting opening extending between said surfaces, and a marine propulsion device including a transom bracket fabricated of a second metal less noble than said first metal, and means for detachably mounting said transom bracket on said transom and for simultaneously electrically insulating said transom bracket from said transom, said means including a sleeve fabricated of electrically insulating material and engaged in said mounting opening and having therein a bore, a sheet fabricated of electrically insulating material and engaged with said rearward surface and with said sleeve and having therein an opening in registry with said bore, a washer fabricated of electrically insulating material and engaged with said forward surface and with said sleeve and having therein an aperture in registry with said bore, and a bolt having a heat engaging said washer, extending through said aperture, through said bore, through said opening in said sheet, and connected to said transom bracket to locate said transom bracket in engagement with said sheet and in rigid assembly with and in electrical isolation from said transom.

5,009,620
PROPELLER GUARD
Louis Feranda, Sr., 4251 W. Oquendo, Las Vegas, Nev. 89118
Filed May 24, 1990, Ser. No. 529,188
Int. Cl.[5] B63B 5/16
U.S. Cl. 440—72 11 Claims

1. A propeller guard for a propeller mounted on a propeller shaft extending rearwardly from a propeller shaft housing of a

marine propulsion unit having a cavitation plate above the propeller, comprising:

(a) an elongate support plate adapted to be secured to the cavitation plate,

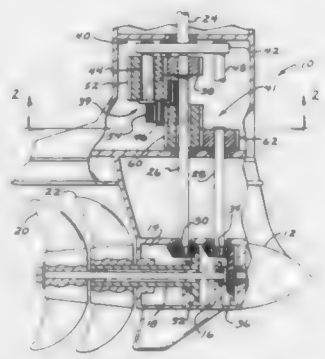
(b) a plurality of ribs independently suspended from the support plate,

the ribs being formed of rod members having integrally formed end portions projecting through apertures in the support plate and having curved sections extending transversely beneath the support plate,

the projecting rod end portions receiving removable fasteners securing the ribs to the support plate,

the removable fasteners permitting individual damaged ribs to be removed and replaced,

(c) the ribs forming a substantially cylindrical cage open at both ends adapted to encompass, the propeller, and



(d) elongate bar means coacting with a bight on each of the curved sections of the ribs for maintaining the latter in a parallel relationship to each other.

5,009,621

TORQUE SPLITTING DRIVE TRAIN MECHANISM FOR A DUAL COUNTERROTATING PROPELLER MARINE DRIVE SYSTEM

Herbert A. Bankstahl, Fond du Lac; Lyle M. Forsgren, Oshkosh; Neil A. Newman, Omro; Wayne T. Beck, and John M. Griffiths, both of Fond du Lac, all of Wis., assignors to Brunswick Corporation, Skokie, Ill.

Filed Mar. 20, 1989, Ser. No. 326,024
Int. Cl.[5] B63H *23/28*
U.S. Cl. 440—75 22 Claims

1. In a marine drive for a boat, said marine drive including an engine having a rotatable output shaft, a drive unit for driving said boat in response to rotation of said output shaft, comprising:

a drive unit housing;

a first propeller shaft rotatably mounted in the lower portion of said drive unit housing;

a second propeller shaft rotatably mounted in the lower portion of said drive unit housing;

a first propeller driving by interconnected with said first propeller shaft;

a second propeller drivingly interconnected with said seond propeller shaft; and

drive means disposed between said output shaft and said first and second propeller shafts for driving said first and second propeller shafts, and thereby said first and second propellers, said drive means comprising a pair of drive shafts mounted in said drive unit housing, and counterrotation drive means for driving said pair of drive shafts in opposite rotational directions in response to rotation of said output shaft, each said drive shaft being drivingly engaged with one of said propeller shafts for rotating said propeller shafts, and thereby said propellers, in opposite rotational directions, said drive means further including means for increasing or decreasing the rotational speed of one of said propellers in response to varying operating conditions, with a resulting decrease or increase in the rotational speed of the other of said propellers, so that the torque fraction supplied to each propeller is substantially constant under a range of operating conditions.

SURFING SAUCER

Jeffrey D. Lueschen, 2335 #23 Caringa Way, Carlsbad, Calif. 92009

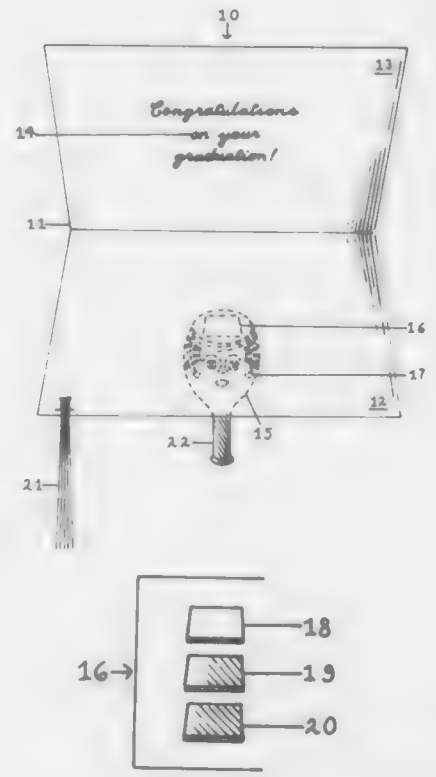
Filed Feb. 20, 1990, Ser. No. 481,590
Int. Cl.[5] A63B *31/10*
U.S. Cl. 441—56 1 Claim

1. A marine propulsion device comprising:

(a) a saucer having a substantially flat circular area circumscribed by a rim with a surface of convex curvature connecting said central circular area to said rim to form concave and convex saucer sides;

(b) a hand strap bisecting said central circular area of said saucer which is firmly connected at both ends to the concave side of the saucer;

(c) the saucer having hydraulic flow spoiling means located on the convex surface of curvature; and,



(d) said hydraulic spoiling means being further defined as comprising a plurality of evenly spaced circular ridges concentric to the center of the saucer.

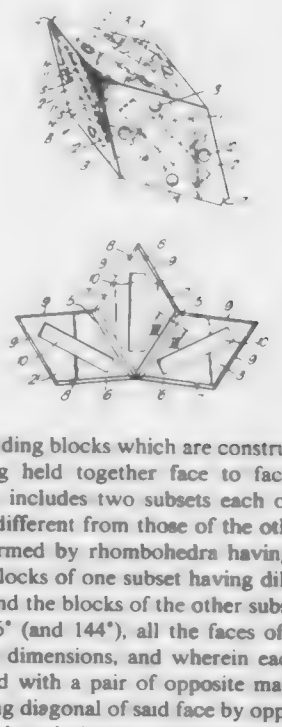
MAILABLE THREE-DIMENSIONAL GREETING DEVICE

Mailiis Estam-Goggin, 26000-L Brigadier Pl., Damascus, Md. 20872, assignor to Maillis Estam-Goggin, Damascus, Md.

Filed Mar. 1, 1990, Ser. No. 486,890
Int. Cl.[5] A63H *33/00*; G09F *1/00*
U.S. Cl. 446—71 20 Claims



1. The combination of a flat piece of card stock, a flat, inflatable balloon and a triple-layered strip of sticky tapes, said strip of triple-layered sticky tapes permanently uniting said flat piece of card stock and said inflatable balloon both while said balloon is uninflated and also upon inflation of said balloon, into one physically intergrated greeting device unit.

BUILDING BLOCKS

Michael S. Longuet-Higgins, 1 Branch Road, Comberton, Cambridge CB3 7DH, England

PCT No. PCT/GB88/00017, § 371 Date Aug. 1, 1989, § 102(e) Date Aug. 1, 1989, PCT Pub. No. WO88/05329, PCT Pub. Date Jul. 28, 1988
PCT Filed Jan. 12, 1988, Ser. No. 382,799
Claims priority, application United Kingdom, Jan. 13, 1987, 8700706
Int. Cl.[5] A63H *33/04*
U.S. Cl. 446—92 13 Claims

1. A set of building blocks which are constructed so as to be capable of being held together face to face magnetically; wherein said set includes two subsets each of blocks of the same shape but different from those of the other subset, both subsets being formed by rhombohedra having a plurality of faces, with the blocks of one subset having dihedral angles of 72° (and 108°), and the blocks of the other subset having dihedral angles of 36° (and 144°), all the faces of all said blocks having the same dimensions, and wherein each face of each block is provided with a pair of opposite magnetic poles on each side of a long diagonal of said face by opposite edges of a pair of transversely polarized magnetic strips extending along said diagonal of each said face, said strip covering an area less than the surface area of said face, whereby when two faces of different ones of said blocks are juxtaposed face to face said blocks will tend to rotate relatively to one another to one of two stable positions in which said faces are aligned.

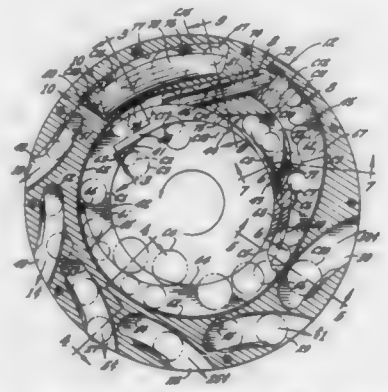
HUMAN LIFELIKE DOLLS, MANNEQUINS AND HUMANOIDS AND PET ANIMAL DOLLS AND METHODS OF INDIVIDUALIZING AND PERSONALIZING SAME

Marcella M. Katz, 10573 Le Conte Ave., Los Angeles, Calif. 90024

Continuation of Ser. No. 848,389, Apr. 4, 1986, abandoned. This application Jul. 25, 1988, Ser. No. 223,808
Int. Cl.[5] A63H *3/36*
U.S. Cl. 446—391 5 Claims

1. A three-dimensional lifelike representation of the head portion of a real life subject comprising: flexible sheet fabric material bearing on one side thereof an imprint of the head portion of a real life subject in the form of a computer-generated printed representation of the head of said subject consisting of an azimuthal-type group of connected sector photographic projections, said sheet material being of a type capable of conforming to a substrate structure; and a computer-selected substrate structure having a three-dimensional configuration and contour of head features matched to those of said subject and of a size matched to the computer-generated

printed representation of the head of said subject on said sheet material, said imprinted sheet material covering and con-



formed to said substrate structure and affixed thereto to form said lifelike representation of the head portion of said subject.

5,009,627

COIN SORTING MECHANISM

James M. Rasmussen, Chicago, Ill., assignor to Cummins-Allison Corp., Mt. Prospect, Ill.

Filed Mar. 14, 1989, Ser. No. 323,271
Int. Cl.[5] G07D *3/06*
U.S. Cl. 453—10 **14 Claims**

1. A coin sorter for sorting coins in terms of their denomination comprising:

a rotatably mounted coin-carrying disc having a resilient surface onto which coins may be fed;

means for rotating said disc;

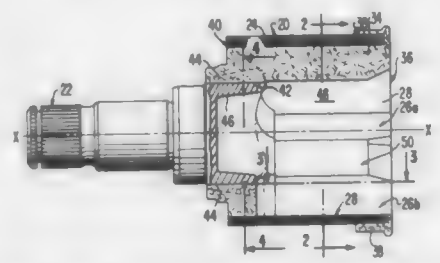
a guide plate having a central opening and a configured surface positioned closely adjacent to said disc and covering said resilient surface, and wherein said configured surface includes an inner recess within which coins move radially, and said inner recess extends outwardly from said central opening, said guide plate forming a referencing means for receiving coins of all denominations and providing a single-file stream of the coins of all denominations positioned at a common radial location,

sorting means disposed around the outer periphery of said guide plate for receiving said single-file stream of coins and sorting the coins in said stream according to their respective denominations, and

means formed in said guide plate for breaking up stacked coins moving from said central opening toward said referencing means,

wherein said means for breaking up stacked coins includes first means for recirculating coins including coins from the stacked coins broken up by said means or breaking up stacked coins, and

wherein said referencing means includes a second means for recirculating coins including excess coins forming a stream of coins not adjacent to said referencing means, but moving to said referencing means in greater numbers than can be accommodated in said single-file stream of coins adjacent to referencing means, and



wherein said first means for recirculating coins directs coins away from the coins travelling in the said second means for recirculating coins.

5,009,628

BODY HAVING A COMPOSITE STRUCTURE FOR A TRANSMISSION JOINT AND ITS METHOD OF PRODUCTION

Michel Rouillot, Lorraine, France, assignor to Glaenzer-Spicer, Poissy, France

Filed Mar. 28, 1989, Ser. No. 329,634
Claims priority, application France, Mar. 28, 1988, 88 04045
Int. Cl.[5] F16C *3/00*; F16D *3/26*
U.S. Cl. 464—111 **17 Claims**

1. A body of an articulated transmission joint comprising:

a case having an inner peripheral surface extending about an axis of rotation of the body, said case being formed of a composite material including continuous reinforcing fibers;

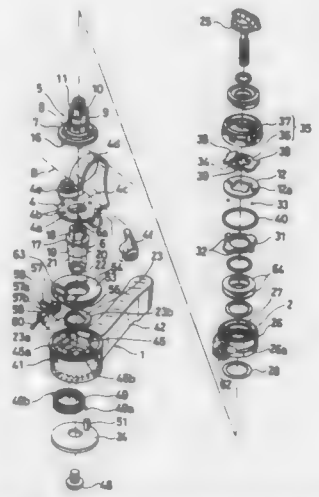
connecting element means forming an integral part of the body for connecting the body to a part of a power transmission system;

at least one metal insert disposed within said case and defining a plurality of passageways, each constituted by a pair of confronting raceways, for receiving an element of the transmission joint which is to be articulated to the body,

said passageways being spaced from one another at angular intervals about said axis of rotation;

said at least one metal insert including wall portions having, on one side thereof, said confronting raceways and, on the other side thereof, confronting surfaces defining an inner space with the inner peripheral surface of said case; and

a matrix material occupying said inner space and integrating said at least one metal insert with said case,



said matrix material comprising one of a thermoplastic and thermosetting resin, and reinforcing means consisting of one of short fibers and particles for reinforcing the resin.

5,009,629

SHIFT LEVER ASSEMBLY FOR BICYCLE

Koichi Tagawa, Kawachinagano, Japan, assignor to Maeda Industries, Ltd., Osaka, Japan

Filed Apr. 3, 1990, Ser. No. 503,854
Claims priority, application Japan, Apr. 5, 1989, 1-86148
Int. Cl.[5] B62M *25/00*
U.S. Cl. 474—80 **10 Claims**

1. A bicycle shift lever assembly for operating a derailleur by winding up or paying out a wire which connects the lever assembly to the derailleur, the lever assembly comprising:

pivot means fixedly mountable to a bicycle handlebar, the pivot means including a first pivot and a second pivot removably connected coaxially to the first pivot,

a shift lever having a boss portion rotatably fitted around the first pivot, the shift lever further having an arm portion extending from the boss portion, the shift lever being spring-biased to return to a neutral position from which the shift lever is rotatable in two opposite directions,

wire winding means provided separately from the shift lever and rotatably fitted around the second pivot,

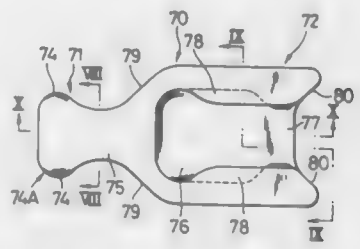
a lever-coupled member provided between the lever boss portion and the wire winding means for rotation with the wire winding means, and

a clutch mechanism for causing the shift lever to rotate with the lever-coupled member away from the neutral position while allowing the shift lever to return to the neutral position without simultaneous rotation of the lever-coupled member.

5,009,630

CHAIN FORMED BY LINK ELEMENTS OF IDENTICAL SHAPE

Makoto Kanehira; Takerou Nakagawa; Yasumasa Tsubakimoto; Kouji Tanaka; Toshio Takahashi, and Masaaki Ikeda, all of Osaka, Japan, assignors to Tsubakimoto Chain Co., Osaka, Japan



Filed Sep. 22, 1989, Ser. No. 411,555
Claims priority, application Japan, Oct. 21, 1988, 63-264199
Int. Cl.[5] F16G *13/02*
U.S. Cl. 474—211 **9 Claims**

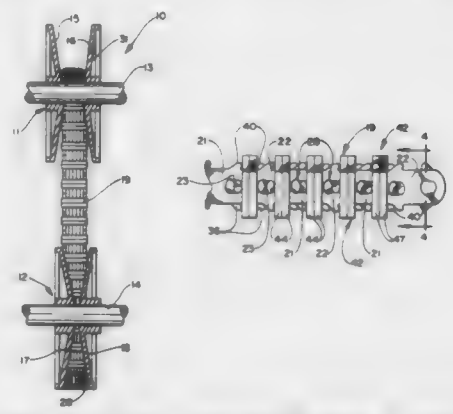
1. A chain comprising a plurality of ceramic link elements, each of which includes a main body part and a connecting part integrally formed with each other, said connecting part projecting from said body part and having a curved surface head portion and a reduced neck portion;

the main body part having, at its point of connection to the neck portion, inclined end surfaces which converge inwardly toward one another for connection to the neck portion;

said main body part including (1) a recess for receiving said curved surface head portion of an adjacent said link element and (2) a narrowed slot portion for receiving said neck portion of the adjacent link element, said narrowed slot portion being contiguous with said recess at an end of said recess opposite said connecting part;

said main body part also including confining sections covering a portion of said recess, said confining sections projecting from both sides of said recess adjacent said narrowed slot portion in the form of overhanging eaves, whereby the connecting part of the adjacent link element is inserted in a first direction into said recess of a first said link element so that the head portion is brought beneath the confining sections, and then said neck portion of the

adjacent link element is received by said narrowed slot portion of the first link element as the adjacent link element is pivoted about its connecting part to extend in a second direction wherein the joined link elements are substantially aligned; and



said main body part adjacent the outer end of said narrowed slot portion having inwardly converging end surfaces which are inclined substantially the same as and complimentary to the first-mentioned end surfaces, the first-mentioned inclined end surfaces of said adjacent link element abutting against the second-mentioned inclined end surfaces of said first link element when the chain is subjected to a pushing force.

5,009,631

CVT CHAIN-BELT

John S. Ivey, Ithaca; Paul M. Bateman, Freeville; Julius A. Clauss; Edward H. Cole, Jr., both of Ithaca, and Philip J. Mott, Dryden, all of N.Y., assignors to Borg-Warner Automotive, Inc., Troy, Mich.

Division of Ser. No. 356,617, May 23, 1989, which is a continuation of Ser. No. 114,335, Oct. 28, 1987, abandoned. This application Oct. 3, 1989, Ser. No. 416,704
Int. Cl.[5] F16G *13/02*
U.S. Cl. 474—213 **3 Claims**

1. A link for a power transmission chain comprising an elongated body having a pair of longitudinally spaced apertures adjacent the opposite ends thereof, each aperture having a generally hour-glass shape with enlarged rounded ends joined by an intermediate neck portion,

an angularly inclined upper surface extending from a first

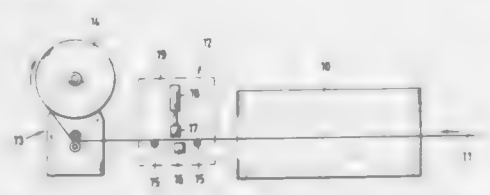
end and terminating in a first outwardly extending tab adjacent said first end of the link and generally laterally aligned with the aperture at said first end,

an inwardly curved lower surface extending from said first end and terminating in a second outwardly extending tab adjacent said first end of the link and generally laterally aligned with the aperture at said first end, said first and second tabs being oppositely disposed,

each tab having a rounded end surface, a flattened rear surface and an undercut corner substantially aligned with an edge of said first aperture.

5,009,632

METHOD AND DEVICE FOR JOINING FOIL HOSES



Bernhard Kruessel, Halle, Fed. Rep. of Germany, assignor to Karl H. Sengewald KG, Halle, Fed. Rep. of Germany

Filed Mar. 16, 1989, Ser. No. 324,316

Claims priority, application Fed. Rep. of Germany, Mar. 18, 1988, 3809125

Int. Cl.[5] B31B *23/74*

U.S. Cl. 493—189 7 Claims

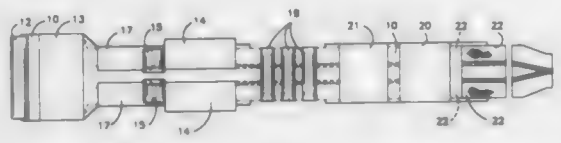
1. A method for joining a first tubular web and a second tubular web, each tubular web defining a plurality of bag portions having a predetermined pitch substantially defining a bag length and each tubular web having an end portion including at least one transverse weld, the method comprising the steps of:

superimposing the transverse weld at the end portion of the first tubular web and the transverse weld at the end portion of the second tubular web, and

joining the superimposed transverse welds by a joining weld, the joining weld being substantially coincident with the superimposed transverse welds,

whereby the first tubular web and the second tubular web are joined to produce a joined tubular web having bag portions of substantially uninterrupted pitch.

5,009,633



METHOD OF MANUFACTURING AN OUTER VACUUM CLEANER BAG FOR AN UPRIGHT CLEANER

Oral M. Smaling, Bloomington, Ill., assignor to White Consolidated Industires, Inc., Cleveland, Ohio

Filed Sep. 5, 1989, Ser. No. 402,647

Int. Cl.[5] B31B *23/68, 23/90*

U.S. Cl. 493—214 7 Claims

1. A method of manufacturing an outer vacuum cleaner bag for a vacuum cleaner, comprising the steps of:

drawing out vacuum cleaner bag material cut to a specified width from a roll, the bag material having left and right sides, each having a side edge;

folding the side edges of the bag material;

providing zipper halves on the right and left sides of the bag material;

feeding the bag material into a double-headed sewing machine with each of the heads on the sewing machine engaging one of the sides of the bag material;

feeding each of the zipper halves into the respective head of the sewing machine and sewing the zipper halves on the right and left hand side edges of the bag material to form a bag assembly; and

feeding the bag assembly into a cutting press using an automatic incremental feed apparatus whereby the bag material is cut into panels.

5,009,634

METABOLIC CATHETER

Marc D. Feldman; Thomas C. Skalak, both of Charlottesville, Va., and Luiz Belardinelli, Gainesville, Fla., assignors to The University of Virginia Alumni Patents Foundation, Charlottesville, Va.

Filed Jan. 11, 1989, Ser. No. 295,517

Int. Cl.[5] A61M *1/00*

U.S. Cl. 604—27 17 Claims

1. A metabolic catheter comprising:

(a) a withdrawal catheter having proximal and distal ends;

(b) an infusion catheter having proximal and distal ends, wherein the infusion catheter is inserted within the withdrawal catheter and positioned so that the distal end of the infusion catheter is near the distal end of the withdrawal catheter and provides a space between distal ends of the withdrawal and infusion catheters;

(c) first and second syringes, wherein the first syringe is attached to the proximal end of the withdrawal catheter and the second syringe is attached to the proximal end of the infusion catheter, wherein plungers of the first and second syringes are fastened together end-to-end and are mounted; and

(d) a first stop solution which is placed into the second syringe attached to the infusion catheter, wherein the metabolic catheter further comprises a second stop solution which is placed into the first syringe attached to the withdrawal catheter.

5,009,635

PUMP APPARATUS

Eugene N. Scarberry, Trafford, Pa., assignor to Respironics Inc., Murrysville, Pa.

Filed Nov. 6, 1989, Ser. No. 432,159

Int. Cl.[5] A61M *1/00*

U.S. Cl. 604—27 13 Claims

1. A stomach pump or the like comprising:

a resiliently flexible bulb means enclosing an interior space and having an outlet and an inlet communicating between said interior space and the exterior of said bulb means;

first one-way flow check valve means disposed in fluid flow communication with said inlet and operable to preclude material movement from said interior space via said inlet;

first connector means disposed adjacent said outlet;

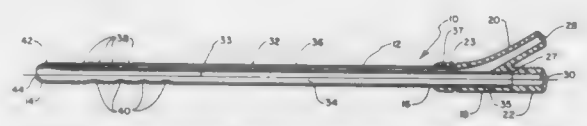
a remote reservoir means for receiving material therewithin and including a second connector means disposed in fluid flow communication therewith to permit movement of material into said reservoir means;

selectively releasable means connecting said first and second connector means to permit material to move from said

interior space of said bulb means into said remote reservoir means; and

said reservoir means including second one-way flow check valve means disposed in fluid flow communication with said second connector means and operable to preclude movement of material from within said reservoir means via said second connector means.

5,009,636



DUAL-LUMEN CATHETER APPARATUS AND METHOD

Ronald W. Wortley, and David C. Beattie, both of Salt Lake City, Utah, assignors to The Kendall Company, Boston, Mass.

Filed Dec. 6, 1989, Ser. No. 446,971

Int. Cl.[5] A61M *5/00*

U.S. Cl. 604—43 11 Claims

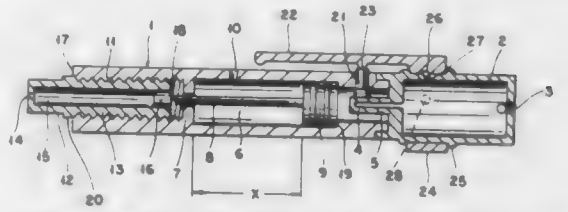
1. An extracorporeal oxygenation catheter apparatus designed for simultaneous withdrawal of blood to be oxygenated by means of gravity drainage and pressurized return of blood that has been oxygenated, comprising:

an elongated catheter body having a distal end and a proximal end, and comprising a septum means for forming a first and a second lumen through the interior of said catheter body, said first lumen comprising a cross-sectional area sized so that a sufficient volumetric flow rate for purposes of oxygenation of said blood will occur in said first lumen as a result of gravity drainage of blood through the first lumen, and said second lumen comprising a cross-sectional area which is smaller in relation to said cross-sectional area of the first lumen but which is also sized so that a substantially equal volumetric flow rate of said oxygenated blood is returned under pressure through said second lumen, each said lumen comprising an opening means for passage of blood therethrough at said stated volumetric flow rate; and

connector means joined to said proximal end for attaching said catheter body to tubing, said connector means comprising means forming a first passageway for connection to tubing through which said blood to be oxygenated is withdrawn from said first lumen, and means forming a second passageway for connection to other tubing through which said oxygenated blood is returned to said second lumen.

5,009,637

APPARATUS FOR HYPODERMIC INJECTION OF LIQUIDS



Jack Newman, Queenscliff, and James A. Monroe, Turramurra, both of Australia, assignors to Sy-Quest International Limited, Woolahra, Australia

Filed Nov. 16, 1988, Ser. No. 272,121

Claims priority, application Australia, Nov. 16, 1987, PI5441

Int. Cl.[5] A61M *5/30*

U.S. Cl. 604—68 9 Claims

1. A device for introducing a liquid into a patient, including:

a capsule for containing the liquid, the capsule including a hollow body with a nozzle end through which the liquid exits from within the capsule, and a capsule piston movably mounted within the body and operable to push the liquid out through said nozzle end;

a body providing a reservoir for receiving a quantity of gas under pressure from a gas source;

an interacting actuator piston and cylinder assembly, within the body, providing a variable volume space behind the actuator piston;

a neck, having a closed end, extending from said reservoir to said space behind the actuator piston;

means operable by a user to open said closed end to permit said quantity of gas to pass from said reservoir to said space behind the actuator piston to cause movement of said actuator piston within said cylinder;

a piston rod extending from said actuator piston towards an anterior end of the body and engageable with the said capsule piston to cause movement thereof upon said quantity of gas under pressure being delivered to said space behind the actuator piston;

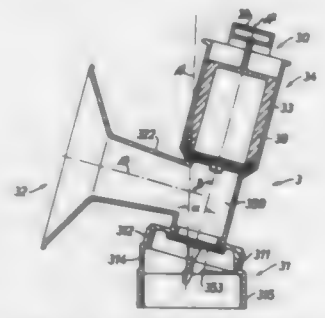
a casule mounting means, at the anterior end of the body, to connect the capsule to the body while allowing the capsule to be axially moveable along the anterior end so that the distance between the capsule piston and a front end of the piston rod can be varied so that the amount of penetration of the piston rod into the capsule, upon movement of the actuator piston, may be adjusted to vary the amount of liquid expelled from the capsule.

5,009,638

BREAST PUMP

Robert Riedweg, Eich, and Klaus Schlensog, Hünenberg, both of Switzerland, assignors to Ameda AG, Switzerland

Filed Feb. 28, 1990, Ser. No. 486,418



Claims priority, application Switzerland, Mar. 1, 1989, 751/89

Int. Cl.[5] A61M *1/06*

U.S. Cl. 604—74 10 Claims

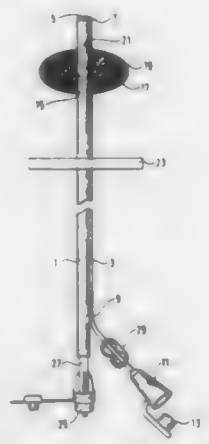
1. A breast pump comprising a milk reservoir and a closure member for connection with said reservoir; said closure member comprising a suction bell and a suction pump suitable for single-handed manual operation and including: (a) a cylinder integrally connected with said closure member; (b) a piston means for reciprocating motion within said cylinder between a first or lower position and a second or upper position, and (c) a spring-loaded actuator for interaction with said piston means; wherein said actuator is formed by a yoke means comprising an elongated spring member having a first or normal position and being reversibly deformable into a second or elastically bent position, said spring member having two ends and being connected with said piston means substantially intermediate between said two ends, and said yoke further comprising a pair of

elongated lateral legs each having a lower end and an upper end, each of said lower ends being connected with an anchoring member on said closure member, each of said upper ends of said elongated lateral legs being connected with said spring member near one of said two ends thereof, said yoke means being dimensioned for single-handed manual compression of

said lateral legs and for elastically deforming said spring member by said compression so as to upwardly displace said piston means within said cylinder upon said manual compression and permitting said spring member to revert into its first or normal position when said lateral legs are released from said manual compression for returning said piston means into said first or lower position.

5,009,639

GASTRIC/DUODENAL/JEJUNAL CATHETER FOR PERCUTANEOUS ENTERNAL FEEDING



Michael Keymling, Bad Hersfeld, Fed. Rep. of Germany, assignor to Fresenius, AG, Bad Homburg, Fed. Rep. of Germany

Filed Apr. 22, 1988, Ser. No. 184,628

Claims priority, application Fed. Rep. of Germany, Apr. 23, 1987, 8705894[U]

Int. Cl.[5] A61M *25/00*

U.S. Cl. 604—96 **4 Claims**

1. In a gastral/duodenal/jejunal catheter for percutaneous enteral feeding comprising:

a first catheter hose having a first channel for the delivery of a feeding solution,

a second hose having a channel for the provision of a filling medium, both said hoses having proximal inflow and distal outflow ends,

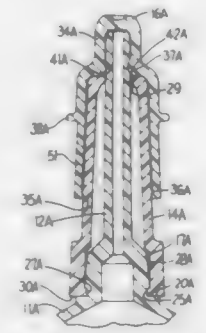
a balloon through which said first and second hose pass, wherein the junction between said balloon and said hoses is sealed to be impervious to gas and liquid, said balloon being located close to the distal end of said first hose and the distal end of said second hose being sealed but having an opening into the inside of said balloon,

the improvement comprising

(a) providing said balloon, when inflated, to be substantially ellipsoid in shape a short axis of said ellipsoid substantially coaxial with the longitudinal axis of said first catheter hose, said balloon being filled with an elastic, compressible, substantially ellipsoidal foam filling, said foam filling being substantially collapsible upon the extraction of air from the balloon,

(b) further comprising a slidable disc, surrounding and slidable on said first and said second hoses locatable between said balloon and said proximal ends.

5,009,640



SLIP CAP FOR CANNULA USE

Thomas W. Pyret, Portage, and James L. Gallagher, Oshtemo, both of Mich., assignors to The Upjohn Company, Kalamazoo, Mich.

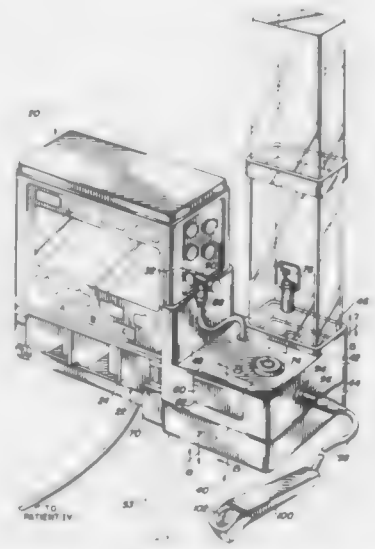
Filed Jan. 19, 1989, Ser. No. 300,278

Int. Cl.[5] A61M *5/00*

U.S. Cl. 604—117 **18 Claims**

16. An applicator for administering a mastitis treatment medication to a cow, comprising: a syringe having an axially elongated, blunt-tipped cannula extending therefrom, said cannula having an axially inner portion and an axially outer portion; a two-part, tubular, cap system releasably connected to and covering said cannula, said cap system comprising an axially inner base cap and an axially outer tip cap, said base cap having an axially elongated sidewall covering the axially inner portion of said cannula, a snap-lock fitting at an axially inner end of said base cap for releasably securing said base cap with respect to said cannula, said base cap having an outer end with an opening therethrough, the axially outer portion of said cannula extending through said opening and projecting outwardly beyond said outer end of said base cap, said tip cap comprising an axially inner, relatively wide, first sleeve portion having an axially inner end and an axially outer end, a cylindrical skirt extending axially inwardly from the axially inner end of said first sleeve portion and surrounding said base cap for a portion of the length thereof, said skirt constituting an axial extension of said first sleeve portion, an axially outer, relatively narrow, second sleeve portion covering the axially outer portion of said cannula and a laterally extending shoulder extending between adjacent ends of said first and second sleeve portions and abutting against the outer end of said base cap, said second sleeve portion having an internal sealing ring projecting laterally inwardly from an internal wall of said second sleeve portion, said sealing ring being pressed into an exterior sidewall of said outer portion of said cannula and resiliently deforming the exterior sidewall of said outer portion of said cannula to form a complementary groove therein so that said sealing ring is in releasable sealing engagement with said groove in said exterior sidewall of said outer portion of said cannula in order to prevent leakage of fluid therebetween; a laterally outwardly projecting, manually engageable, annular flange at the juncture of said skirt and said first sleeve portion, said skirt and said first sleeve portion having internal walls laterally outwardly spaced from an external wall of said base cap to provide an annular clearance space therebetween extending from adjacent to an axially inner end of said skirt to said shoulder, said flange being engageable by a finger or thumb of a user of the applicator so that said tip cap can be displaced from said base cap to expose said outer portion of said cannula, said cylindrical skirt covering said portion of the length of said base cap so that the user's finger or thumb does not contact said base cap or said outer portion of said cannula while said tip cap is being removed whereby to reduce the possibility of contamination of said outer portion of said cannula; and a releasable snap lock connection between the axially inner end of said skirt and an opposing portion of said base cap.

5,009,641



PATIENT-CONTROLLED ANALGESIA SECURITY ATTACHMENT FOR A MEDICATION INFUSION SYSTEM

Lanny A. Gorton, Sunland, Calif., assignor to Pacesetter Infusion, Ltd., Sylmar, Calif.

Filed Dec. 2, 1988, Ser. No. 279,466

Int. Cl.[5] A61M *5/00*

U.S. Cl. 604—131 **24 Claims**

1. An instrument for securely storing fluid medication for use in an infusion pump having a housing and using a replaceable cassette having a fluid inlet and a fluid outlet, comprising:

a first housing member;

means for attaching said first housing member to said infusion pump housing;

a second housing member, said first and second housing members defining a space therebetween, said second housing member being moveable between a first position allowing access to said space defined by said first and second housing members and a second position preventing access to said space defined by said first and second housing members;

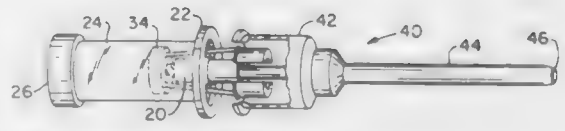
means for receiving a container in which said fluid medication is stored, said receiving means being mounted on said first housing member;

first locking means for preventing said first housing member from being removed from said infusion pump;

second locking means for preventing said receiving means from being removed from said first housing member; and

third locking means mounted on said second housing member for preventing a cassette from being removed from said infusion pump when said second housing member is in said second position.

5,009,642



SELF-BLUNTING NEEDLE ASSEMBLY FOR USE WITH A CATHETER, AND CATHETER ASSEMBLY USING THE SAME

Carl R. Sahi, Coventry, Conn., assignor to Bio-Plexus, Inc., Tolland, Conn.

Continuation-in-part of Ser. No. 101,610, Sep. 28, 1987, Pat. No. 4,828,547. This application May 8, 1989, Ser. No. 348,711

Int. Cl.[5] A61M *5/32*

U.S. Cl. 604—158 **12 Claims**

1. A catheter assembly comprising:

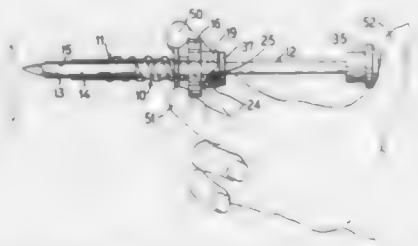
(a) a catheter having a hub within which is formed a hub chamber, and a catheter tube extending from the hub and terminating in a tube tip, the tube having a tube bore extending therethrough;

(b) a needle assembly carried by the catheter and comprising a needle member in which is mounted a blunting member,

(i) the needle member comprising a needle shaft having a needle bore extending therethrough, the needle shaft terminating at one end in a puncture tip and having an opposite, proximal end on which is carried a connector means,

(ii) the blunting member comprising an elongate probe having a retainer means carried thereon, the probe being slidably mounted within the needle bore with the retainer means carried exteriorly of the needle bore and the connector means and in engagement with the connector means,

(iii) the needle member being axially movable relative to the blunting member, from a retracted condition of the blunting member, in which the probe is short of the puncture tip of the needle member, to an extended condition of the blunting member, in which the probe protrudes outwardly of, and thereby blunts, the puncture tip;



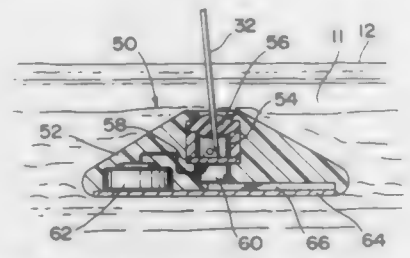
the retainer means being force-fit within the hub chamber to hold the needle assembly in place within the catheter and so positioned that (1) the needle shaft is disposed within the tube bore with the puncture tip thereof extending outwardly of the tube tip, and (2) the needle member is accessible from exteriorly of the catheter at the hub; the retainer means and the connector means being dimensioned and configured to provide a lost motion connection between the needle member and the blunting member, whereby an initial stage of withdrawal of the needle member from the catheter moves the needle member relative to the blunting member to change the blunting member from its retracted condition to its extended condition, thereby blunting the puncture tip, and continued withdrawal of the needle member beyond the initial stage overcomes the force-fit between the retainer means and the hub chamber and extracts the needle assembly from the catheter, wherein the connector means comprises a ferrule slide and the retaining means comprises a clamping member which imposes a pressure grip on the ferrule slide, whereby the lost motion is attained by overcoming the pressure grip to slide the ferrule slide through the clamping member.

5,009,643

SELF-RETAINING ELECTRICALLY INSULATIVE TROCAR SLEEVE AND TROCAR

Harry Reich, Kingston, Pa., and Peter Koch, Schiller Park, Ill., assignors to Richard Wolf Medical Instruments Corp., Rosemont, Ill.

Filed Aug. 9, 1989, Ser. No. 391,413
Int. Cl.[5] A61M 5/178
U.S. Cl. 604—165 9 Claims



1. A device comprising a combination of a trocar sleeve and a trocar received in the sleeve, said trocar sleeve having a distal end and a proximal end, said trocar sleeve including an insulative sleeve with an inner diameter extending through the trocar sleeve to insulate a metal portion of the trocar sleeve from an instrument being inserted through the trocar sleeve, said trocar sleeve, adjacent the proximal end, having an enlarged annular flange of a first diameter and a small annular stop with a second diameter less than the first diameter being spaced toward the distal end from said annular flange, said trocar sleeve having means to prevent the removal of the sleeve from a patient being disposed on an exterior surface of the sleeve to extend from said stop toward the distal end, said means comprising a helical thread extending from the stop toward the distal end and terminating prior to reaching said distal end so that a portion of the trocar sleeve at the distal end is free of said helical thread; said trocar having a distal end with a cutting edge and a proximal end with a knob, said trocar having a stop disposed between said ends and, at a distance from said distal end, which distance is slightly greater than the length of the sleeve so that with the trocar inserted in the sleeve with the stop of the trocar engaging the proximal end of the sleeve, the cutting edge of the trocar extends out of the distal end of the trocar sleeve.

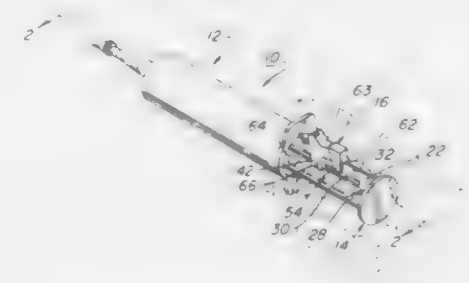
NEEDLE PLACEMENT VERIFIER

Ray S. McDonald, St. Paul, Minn., assignor to Medtronic, Inc., Minneapolis, Minn.

Filed Jul. 25, 1989, Ser. No. 385,132
Int. Cl.[5] A61M 5/32
U.S. Cl. 604—175 5 Claims



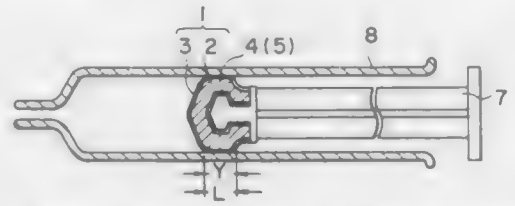
1. An implantable medical device comprising:
contact means for sensing contact with a percutaneous medical instrument including conductive contact means for contacting the medical instrument;
means for providing power which is electrically connected to the contact means;
means for generating an audible signal which is electrically connected to the contact means; and
a conductive plate mounted on the device in contact with the patient's body and electrically connected to the contact means so that an electrical circuit includes a path from the plate through the body, through the medical instrument and back to the contact means.

5,009,645

SYRINGE FOR DISPENSING MEASURED QUANTITIES OF A MATERIAL

Jules Silver, 7 Ridgewood Rd., Niantic, Conn. 06357, and Richard A. Tarozzi, 8 Oakwood Dr., Gales Ferry, Conn. 06335

Filed Jun. 12, 1989, Ser. No. 365,285
Int. Cl.[5] A61M 5/00
U.S. Cl. 604—207 19 Claims



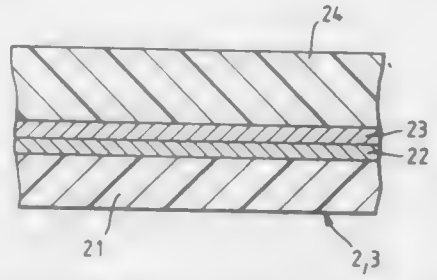
1. A syringe for dispensing a predetermined dosage of material, said syringe comprising a hollow syringe barrel having a discharge end for the material to be dispensed and an open, opposite end, a plunger rod slidably received in said syringe barrel through said open, opposite end, said plunger rod having a first end portion located within said syringe barrel and a rail section having at least a portion thereof located outside of said syringe body, said plunger rod being movable in a downstream direction into said syringe barrel for dispensing a material through the discharge end of said syringe barrel, a stop member attached to the rail section in a region outside of said syringe barrel and being axially movable along the length of the rail section to set the length of travel of the plunger rod in said downstream direction for controlling the volume of material to be dispensed, characterized in that the stop member includes a knife edge for embedding into the rail section to lock the stop member in any one of an infinite number of desired positions on said rail section.

5,009,646

SLIDING STOPPER FOR A SYRINGE

Masamichi Sudo, and Tamotsu Okuda, both of Tokyo, Japan, assignors to Daikyo Gomu Seiko Ltd., Tokyo, Japan

Filed Mar. 14, 1989, Ser. No. 324,037
Claims priority, application Japan, Mar. 16, 1988, 63-33730
Int. Cl.[5] A61M 5/315
U.S. Cl. 604—230 4 Claims



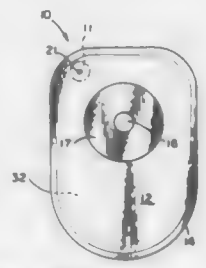
1. A sliding stopper for a syringe, consisting of a rubber elastic body having a part to be contacted with a liquid medicament and a part slidable on the inner wall of a barrel fully laminated with a resin film having a small friction coefficient, the ratio of the length (Y) of the surface of the outer circumferential part of the sliding stopper contacting the inner wall of the barrel to the length (L) of the slidable part of the sliding stopper, Y/L being in the range of 0.8 to 1, and the ratio of the length (L) of the slidable part of the outer diameter (D) of the sliding stopper L/D being in the range of 0.25 to 1.

5,009,647

WATER CLOSET DISPOSABLE OSTOMY BAGS AND MATERIALS

David E. Cross, Rustington; Kenneth J. Brooks, Lancing, and Neil A. Whiteside, Worthing, all of England, assignors to Smiths Industries Public Limited Company, London, United Kingdom

Continuation of Ser. No. 147,425, Jan. 25, 1988, abandoned. This application Feb. 6, 1990, Ser. No. 474,664
Claims priority, application United Kingdom, Feb. 19, 1987, 8703874
Int. Cl.[5] A61F 5/44
U.S. Cl. 604—332 4 Claims



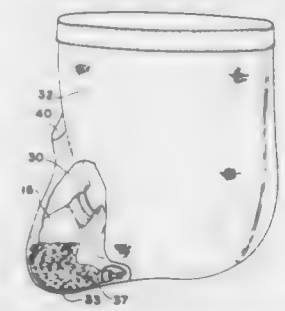
1. An ostomy bag that is disposable in a w.c. by addition of an alkali to the bag or w.c., the bag comprising a flexible wall having an opening therein through which body waste material, in use, enters the bag and is contained thereby; said flexible wall comprising an inner layer disposed on an inner side of the bag, said inner layer being undamaged by the contents of the bag, and an outer layer disposed on an outer side of the bag, both of said inner and outer layers being of material that is broken up on contact with alkali, said material including carboxylated acrylic acid; at least two separately vapor diposited layers of aluminum intermediate said inner and outer layers, the thickness of each aluminum layer by itself being insufficient to prevent odor transmission but said layers in combination being effective substantially to prevent odor transmission through said wall to an extent greater than would be produced by a single aluminum layer equal in thickness to the total thickness of the two aluminum layers, and the two layers of aluminum being exposed to attack by said alkali through said wall after break up of said inner or outer layer and being soluble in said alkali.

5,009,648

STARCH CONTAINING FILM OSTOMY POUCHES

Marvin S. Aronoff, New York; Denis E. Keyes, Staten Island, both of N.Y., and Robert C. Hahn, Sr., East Brunswick, N.J., assignors to E. R. Squibb & Sons, Inc., Princeton, N.J.

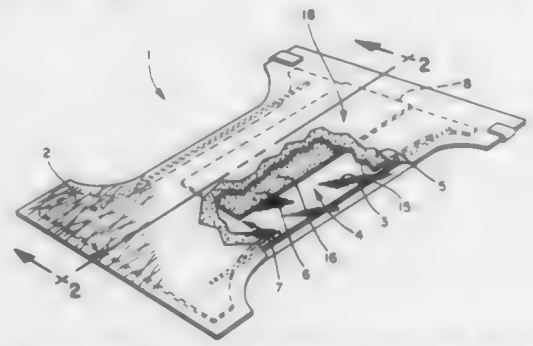
Filed Mar. 22, 1989, Ser. No. 327,469
Int. Cl.[5] A61F 5/44
U.S. Cl. 604—332 15 Claims



1. An ostomy pouch comprising a first front panel and a second rear panel sealed together along at least a portion of their periphery to form said pouch, said first front panel having an aperture providing access to the pouch interior for the stoma of the user, both said first front panel and said second rear panel formed of a composite film comprising a starch containing blended polymeric film coated on one surface with a barrier of polyvinylidene chloride and a ply of water absorbent or waterproof tissue paper laminated to the other surface of said starch containing blended polymeric films, said tissue paper plies constituting the exterior surface of said pouch, an adhesive label affixed to the tissue paper ply of said first front panel around said stomal aperture, and wherein said starch blended polymeric films comprise from about 15% to about 25% by weight of hydrophobic starch, ethylene vinyl acetate wherein each starch blended polymeric film contains from about 15% to about 20% by weight of vinyl acetate, up to 35% by weight of low density polyethylene, and from about 2% to about 6% by weight of an unsaturated vegetable oil.

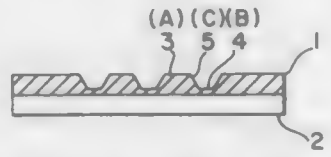
5,009,649

EXPANDABLE BANDED MALE URINARY INCONTINENCE CONDOM AND SUPPORTING UNDERGARMENT



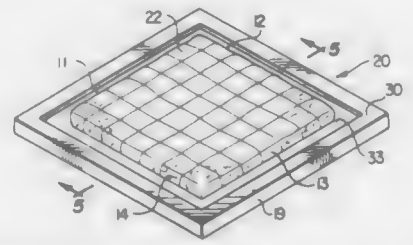
Victor Goulter, and Barbara Goulter, both of 485 Molimo Dr., San Francisco, Calif. 94127

Filed Jul. 13, 1989, Ser. No. 379,105
Int. Cl.[5] A61F 5/44
U.S. Cl. 604—351 8 Claims



1. A method for enabling a urine-incontinent male to carry voided urine conveniently until he can dispose of same, comprising:
fitting a condom having a closed distal end and an open proximal end over at least the distal end of the penis of a wearer, at least the distal end portion of said condom being sufficiently flexible, stretchable, and expandable that when said condom is fitted over said penis and affixed to said penis above said distal end portion of said penis and urine is introduced between said closed distal end portion of said condom and the distal end of said penis, said urine will force said closed distal end portion of said condom to stretch and expand to a larger diameter and away from said distal end of said penis so as to be able to retain at least 100 grams of urine in said closed distal end portion of said condom,
securing said condom to said penis above said distal end of said penis so that said condom will remain on said penis even when said urine fills and forces said distal end portion to stretch and expand, and said condom has no support other than said securing means, and
providing an undergarment containing a pouch in a symmetrical location with respect to said wearer's legs for supporting said condom when it is filled with urine.

5,009,650
ABSORBENT STRUCTURE DESIGNED FOR ABSORBING BODY FLUIDS
Leo J. Bernardin, Appleton, Wis., assignor to Kimberly-Clark Corporation, Neenah, Wis.
Continuation of Ser. No. 886,780, Jul. 17, 1986, Pat. No. 4,699,619, which is a continuation-in-part of Ser. No. 656,384, Aug. 31, 1984, abandoned, which is a continuation-in-part of Ser. No. 599,882, Apr. 13, 1984, abandoned. This application Aug. 6, 1987, Ser. No. 83,475
Int. Cl.[5] A61F *13/16*
U.S. Cl. 604—378 **28 Claims**

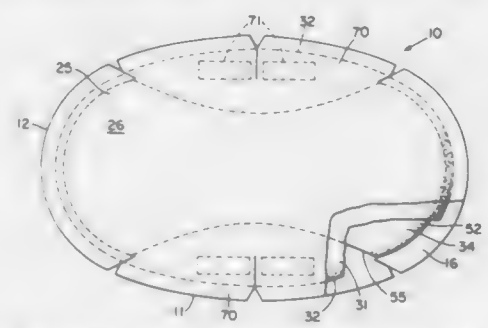


1. A disposable, absorbent structure suitable for use in an absorbent article, said absorbent structure having end edges at the opposite ends of the length of the absorbent structure, said absorbent structure comprising:
(A) an upper layer having a density in the range of about 0.03 to about 0.4 gram per cubic centimeter and consisting essentially of fiber material, which in batt form has a capacity for absorbing fluids; and
(B) a lower layer in direct fluid communication with the upper layer and having a density in the range of about 0.14 to about 0.3 gram per cubic centimeter and comprising preponderantly a mixture of fiber material, which in batt form has a capacity for absorbing fluids, and superabsorbent material;
said lower layer further being positioned relative to said upper layer in a manner such that superabsorbent material in said lower layer is located more towards one of said end edges than the other.

5,009,651
SURFACE MATERIAL FOR SANITARY ARTICLES AND ITS PREPARING METHOD
Nobuyuki Kamishioiri; Manabu Kaneda; Toshiyasu Tanaami, and Miho Maeda, all of Tochigi, Japan, assignors to Kao Corporation, Tokyo, Japan
Filed Aug. 18, 1989, Ser. No. 395,579
Claims priority, application Japan, Sep. 6, 1988, 63-223282
Int. Cl.[5] A61F *13/15*
U.S. Cl. 604—378 **11 Claims**

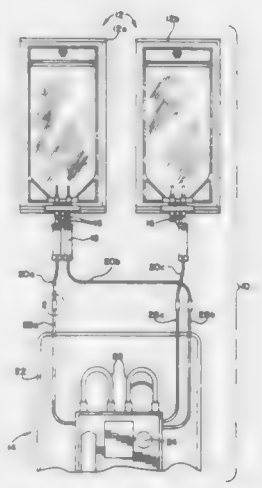
1. A surface material for sanitary articles which has the characteristic of being composed of Layer 1, which is located on the surface adapted to be in contact with the skin, and Layer 2, which is formed into a single unit with Layer 1 on the surface opposite of that which is adapted to be in contact with the skin with its entire surface being essentially covered by Layer 1, and with Layer 1 comprising 50 to 100% of hydrophobic fibers and Layers 2 comprising 50 to 100% of hydrophilic fibers, and moreover, in which at least the portion of Layer 1 covering Layer 2 has an embossed structure and possesses a first section having a given fiber density, a second section of which the fiber density is higher than said given fiber density, and a third section which is located at a boundary between said first and second sections, where the area of the third section occupies 2-50% of the area of the entire surface material.

5,009,652
MEDICAL SPONGES AND WIPES WITH A BARRIER IMPERMEABLE TO INFECTIOUS AGENTS
Cheryle I. Morgan, 6562 Patrick Dr., Dallas, Tex. 75214, and Millard M. Judy, 5740 Palo Pinto Dr., Dallas, Tex. 75206
Filed Oct. 16, 1987, Ser. No. 109,571
Int. Cl.[5] A61F *13/15*
U.S. Cl. 604—385.1 **5 Claims**



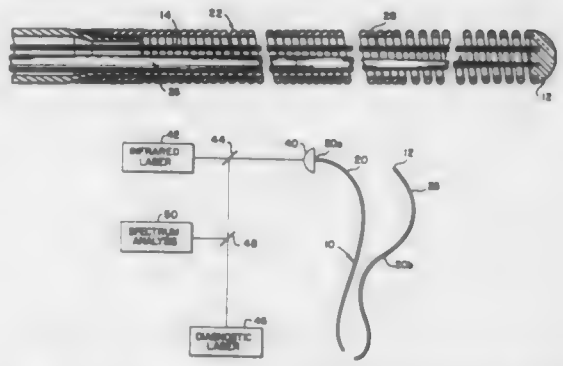
1. A laminated medical sponge, comprising:
a thin and flexible sheet, having a top side and a bottom side, impermeable to infectious agents;
an integral peripheral ridge means on at least one side of said sheet and surrounding the entire peripheral edges of said sheet;
a first layer of absorbent material, having a top surface and a bottom surface and being of a smaller area than said sheet, one said surface of is secured on one side, the wiping side, of said sheet, and having the entire peripheral edges of said first layer spaced inwardly away from the entire said peripheral ridge of said sheet providing a surrounding moat of said sheet alone so that any liquid on said first layer of absorbent material cannot travel through said surrounding moat or wick around said peripheral ridge to reach the opposite side of said sheet adapted to be grasped by being gripped between one's fingers around the central region of said sheet; and
a second layer of absorbent material, having a top surface and a bottom surface and being of a smaller area than said sheet, one said surface of is secured on the opposite side, the grasping side, of said sheet, and having the entire peripheral edges of said second layer spaced inwardly away from the entire said peripheral edges of said sheet providing a surrounding area of said sheet alone.

5,009,653
THIN, FLEXIBLE SANITARY NAPKIN
Thomas W. Osborn, III, Cincinnati, Ohio, assignor to The Procter & Gamble Company, Cincinnati, Ohio
Continuation of Ser. No. 293,606, Jan. 4, 1989, Pat. No. 4,950,264, which is a continuation-in-part of Ser. No. 175,559, Mar. 31, 1988, abandoned. This application Aug. 20, 1990, Ser. No. 570,231
Int. Cl.[5] A61F *13/16*
U.S. Cl. 604—385.1 **12 Claims**



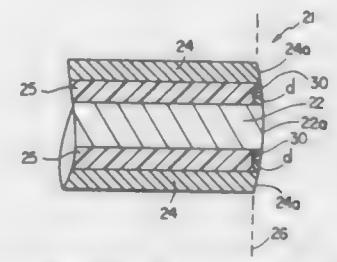
1. A sanitary napkin comprising:
a liquid permeable topsheet;
a liquid impermeable barrier sheet;
an absorbent core intermediate said topsheet and said barrier sheet;

said sanitary napkin having a test capacity of at least about 8.0 grams, a total capacity of at least about 14.0 grams, and



an absorbent portion with a flexure resistance less than about 300 grams.

5,009,654
STERILE PRODUCT AND METHOD FOR STERILIZING AND ASSEMBLING SUCH PRODUCT
Billy W. Minshall, Mission Viejo, Calif.; Kailash Purohit, Winnetka; John E. Nygard, Skokie, both of Ill.; Kwame Sintim-Damoa, Vernon Hills, Ill.; Richard Giesler, Deerfield, Ill., and Archie Woodworth, Barrington, Ill., assignors to Baxter International Inc., Deerfield, Ill.
Filed Mar. 10, 1989, Ser. No. 321,698
Int. Cl.[5] A61B *19/00*
U.S. Cl. 604—410 **20 Claims**



1. A method for assembling a sterile product having at least two parts, comprising;
sterilizing the first part of said product;
isolating a selected portion from the remainder of said first part;
attaching a second part of said product to said selected portion;
exposing said selected portion to an electron beam sufficient to effect sterilization of said portion; and
shielding the remainder of said first part from the radiation of said electron beam.

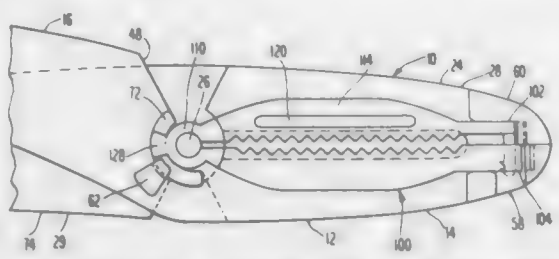
5,009,655
HOT TIP DEVICE WITH OPTICAL DIAGNOSTIC CAPABILITY
Kenneth J. Daignault, Jr., Jefferson; Edward I. McNamara, Chelmsford, and Edward L. Sinofsky, Peabody, all of Mass., assignors to C. R. Bard, Inc., Murray Hill, N.J.
Filed May 24, 1989, Ser. No. 356,437
Int. Cl.[5] A61B *5/06*
U.S. Cl. 606—007 **27 Claims**

1. A medical device for applying heat to a selected site in a lumen, comprising:
an elongated, flexible member having a proximal end and a distal end;
a heating element attached to the distal end of said flexible member, said heating element comprising optical filter means for absorbing a first range of wavelengths and for passing a second range of wavelengths; and
optical fiber means for transmitting both said first and said second ranges of wavelengths extending through said flexible member, said optical fiber means having a distal end optically coupled to said heating element and having a proximal end adapted for receiving laser energy in said first range of wavelengths for heating said optical filter means and adapted for receiving laser energy in said second range of wavelengths for irradiating said lumen through said optical filter means.

5,009,656
BIPOLAR ELECTROSURGICAL INSTRUMENT
Harry G. Reimels, Braintree, Mass., assignor to Mentor O&O Inc., Norwell, Mass.
Filed Aug. 17, 1989, Ser. No. 395,264
Int. Cl.[5] A61B *17/39*
U.S. Cl. 606—48 **30 Claims**

1. A surgical instrument of the kind which is adapted to operate using bipolar energizing potential comprising
a probe having a smooth operation tip, said probe including a pair of adjacently disposed, elongated electrodes adapted to receive said bipolar energizing potential, an electrically insulating means for spacing apart and generally separating said electrodes, each said electrode also

terminating at a distal end at said tip of said probe, said distal ends being generally in the same plane so that they form part of a smooth surface of said tip and so that neither distal end projects above or from said tip,



said electrically insulating means terminating proximally of said tip of said probe and of said distal ends of said electrodes to provide a cavity between said distal ends of said electrodes across which, when said instrument is in use, sparking between said distal ends of said electrodes occurs.

5,009,657

UMBILICAL CORD CUTTING AND CLAMPING DEVICE

John Cotey, Haddonfield, N.J., and Mohammed S. Jahanger, 500 Egg Harbor Rd., Turnersville, N.J. 08012, assignors to Mohammed S. Jahanger, Turnersville, N.J.

Filed Dec. 14, 1989, Ser. No. 450,743
Int. Cl.[5] A61B *17/32*
U.S. Cl. 606—120 4 Claims

1. In combination, an umbilical cord cutting and clamping device for severing an umbilical cord to form a maternal cord end and fetal cord end, and for clamping the fetal cord end, and a fetal cord end clip which is detachable from the device:

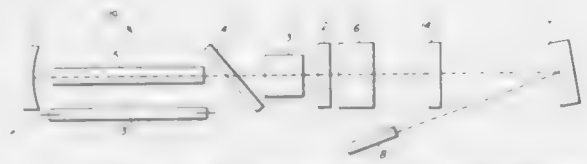
the clip comprising: a pair of elongated arms extending radially from a central section having an opening formed therein, each arm having teeth formed thereon and lock means formed proximate the end thereof for locking together the arms when the clip is closed, at least one arm having an elongated aperture formed therein for cushioning the force exerted on an umbilical cord when the clip is closed on the cord end, the central section including a clip positioning means for retaining the clip in the device until the cord end has been clamped;

the device comprising:

an integral first jaw-and-handle means, the first jaw-and-handle means including a first clamping means for clamping the maternal cord end, first severing means for severing the umbilical cord, and first support means for supporting and positioning a first end of the clip until the cord end has been clamped by the clip, and a rear retention means for supporting and positioning the central section of the clip until the cord end has been clamped by the clip, and

an integral second jaw-and-handle means, the second jaw-and-handle means including a second clamping means for clamping the maternal jaw end, second severing means for severing the umbilical cord, second support means for supporting and positioning a second end of the clip until the cord end has been clamped by the clip;

the first jaw-and-handle means being rotatably affixed by pivot means to the second jaw-and-handle means, the pivot means extending outwardly from and generally perpendicular to the second jaw-and-handle means, the pivot means being adapted for being received by the opening of the central section of the clip, the first jaw-and-handle means being rotatable around the pivot means from an open position to a closed position;



the rear retention means of the device retaining the clip positioning means of the clip to retain the central section of the clip in the device when the clip is installed in the device and the device is in the open position, the clip positioning means rotating with respect to the rear retention means to release the clip from the device after the fetal cord end has been clamped and the clip arms have been locked.

5,009,658

DUAL FREQUENCY LASER LITHOTRIPTER

Karsten Damgaard-Iversen, Marietta, Ga.; Robert C. Morris, Morris County, N.J.; Timothy C. Chin, Hunterdon County, N.J., and Jerry W. Kuper, Somerset County, N.J., assignors to Karl Storz Endoscopy-America, Inc., Culver City, Calif. and Allied-Signal, Inc., Morris Township, Morris County, N.J.

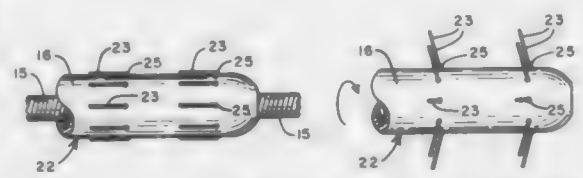
Filed Apr. 14, 1989, Ser. No. 337,919
Int. Cl.[5] A61B *17/22*
U.S. Cl. 606—128 38 Claims

1. A laser lithotripter system comprising, in combination:

a source of pulsed coherent radiation having a wavelength in the range of from about 300 to about 450 nm, at an energy level of from about 2 to about 30 mJ;

a source of pulsed coherent radiation having a wavelength from about 600 to about 900 nm, at an energy level of from about 15 to about 100 mJ,

said pulses of coherent radiation achieving temporal overlap; an endoscopic delivery system; and



mirror means for focusing said temporally overlapping pulses of coherent radiation in spatially overlapped relationship into said endoscopic delivery system for delivery to calcified matter located within a mammalian body.

5,009,659

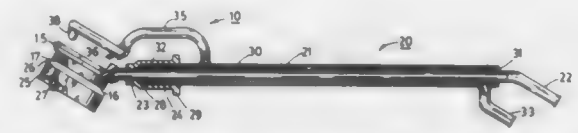
FIBER TIP ATHERECTOMY CATHETER

Robert N. Hamlin, Stillwater; Rick L. Shockey, Eagan, and Robert A. V. Tassel, Excelsior, all of Minn., assignors to Schneider (USA) Inc., Minneapolis, Minn.

Filed Oct. 30, 1989, Ser. No. 428,885
Int. Cl.[5] A61B *17/32*
U.S. Cl. 606—159 5 Claims

1. An atherectomy catheter for removing atheromas from a blood vessel wall comprising:

(a) an elongated flexible tubular shaft having a proximal end and a distal end, said shaft including a plurality of fibers of a predetermined length with only one end of each constrained by attachment to the outer surface of said shaft and normally extending parallel thereto proximate a portion of said distal end; and



(b) means for rotating said shaft at a sufficiently high speed to cause said fibers to project radially outward of said shaft due to centrifugal force for flailing said atheroma and disintegrating same.

5,009,660

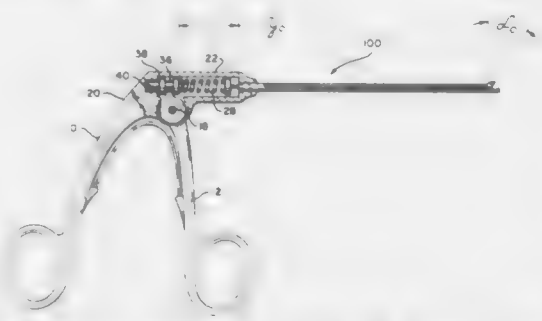
GAS PURGING, EYE FIXATION HAND PIECE

Terrance N. Clapham, Saratoga, Calif., assignor to VISX, Incorporated, Sunnyvale, Calif.

Filed Sep. 15, 1989, Ser. No. 407,566
Int. Cl.[5] A61F *9/00*
U.S. Cl. 606—166 25 Claims

1. In an eye fixation hand piece having a handle extending from a vacuum ring evacuated by a suction line and sized to encircle a cornea of an eye engaged by a proximal side of said vacuum ring so that by steadying the handle, a surgeon can hold the eye in a reference position for surgery, the improvement comprising:

a. a gas purging nozzle mounted on said hand piece and aimed for directing a purging gas jet into the space within said vacuum ring and toward said proximal side of said vacuum ring; and



b. a line separate from said suction line arranged on said hand piece for delivering purging gas under pressure to said nozzle to form said purging gas jet.

5,009,661

PROTECTIVE MECHANISM FOR SURGICAL RONGEURS

Gary K. Michelson, 438 Sherman Canal, Venice, Calif. 90291

Filed Apr. 24, 1990, Ser. No. 341,849
Int. Cl.[5] A61B *17/16*
U.S. Cl. 606—170 12 Claims

1. A rongeur comprising a drive shaft having a cutting means proximate one end of said drive shaft, said cutting means responsive to movement of said drive shaft, said drive shaft movable responsive to a drive means for driving said drive shaft, a resilient member, said resilient member interposed between said drive means and said cutting means whereby force applied to said resilient member is transmitted to said drive shaft.

5,009,662

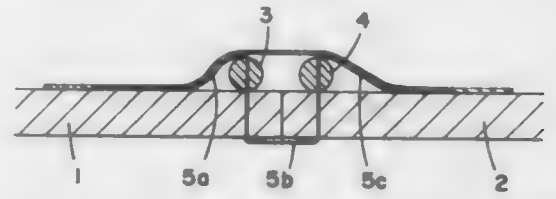
MEDICAL PRESSURE SENSING AND DISPLAY SYSTEM

William D. Wallace, 5038 Memory La., Salt Lake City, Utah 84117; Christopher A. Cutler, 130 N. 600 East, Centerville, Utah 84014, and Scott D. Gentry, 9067 S. Wagner Cir., Sandy, Utah 84093

Continuation-in-part of Ser. No. 230,783, Aug. 10, 1988. This application Mar. 23, 1989, Ser. No. 328,119
Int. Cl.[5] A61M *29/02*
U.S. Cl. 606—192 2 Claims

1. A system for measuring fluid pressure in a balloon of a catheter, said balloon being adapted for inflation inside a human body, said catheter having an inflation lumen providing a fluid path between the interior of the balloon and an external source of fluid for inflating the balloon, the improvement comprising:

a pressure transducer means in fluid communication with the interior of the balloon for providing an electrical signal output which is a function of the pressure in the interior of the balloon, a blood pressure readout transducer the output of said pressure transducer means being communicated with said blood pressure readout transducer generally used for monitoring a person's blood pressure; and



electronic digital display means calibrated to indicate blood pressure in mm Hg operatively associated with said blood pressure readout transducer and responsive to said electrical signal output from said pressure transducer for displaying a numerical value of said balloon pressure measured by said pressure transducer, which numerical value will correspond to the balloon pressure in psi units.

5,009,663

METHOD FOR PERFORMING A SURGICAL CLOSURE OF A SKIN INCISION OR WOUND AND MEANS FOR CARRYING OUT THE METHOD

Albert Broomé, Helsingborg, Sweden, assignor to Brava Patient Och Invent AB, Trollhattan, Sweden

Filed Mar. 22, 1990, Ser. No. 497,418
Int. Cl.[5] A61B *17/00*
U.S. Cl. 606—232 10 Claims

1. A method for performing a surgical closure of a open skin incision or wound presenting two opposite skin edge portions to be held together, comprising the steps of

sewing at least one suture thread through each one of said two skin edge portions and through each one of two separate elastic members associated with a respective one of said skin edge portions and arranged at the outside thereof, said elastic members being made of such a material that, when said suture thread is sewn therethrough frictional forces are established between said members and said suture thread, bringing together said two skin edge

portions using said suture thread, so that frictional forces alone prevent movement of the thread within the members without the need to knot the thread, said elastic members being positioned in such a relation to said suture thread that after completion of said closure, each of said elastic members is being held in contact against the respective skin edge portion by a tensioned portion of said suture thread and said skin edge portions are being held together by said tensioned portion of said suture thread.

5,009,664

MARROW NAIL FOR THE TREATMENT OF BONE FRACTURES

Uve Sievers, Ludwigshafen, Fed. Rep. of Germany, assignor to Mecron Medizinische Produkte GmbH, Berlin, Fed. Rep. of Germany

Filed Oct. 6, 1988, Ser. No. 254,086

Claims priority, application Fed. Rep. of Germany, Oct. 6, 1987, 3734108

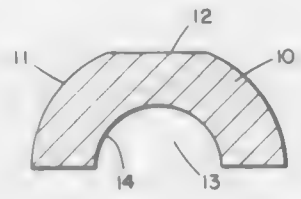
Int. Cl.[5] A61F 2/28, 5/04

U.S. Cl. 623—16 12 Claims

1. A marrow nail for use in a marrow cavity nailing procedure for the treatment of bone fractures, comprising:

a tubular, carbon fiber reinforced plastic nail body having a tip, said tip having a distal end, said tip having a hollow circular cross-section and a conically taperred outer surface which tapers in a direction toward said distal end forming a sharp annular cutting edge.

5,009,665



ACETABULAR CUP

Jon C. Serbousek, and John A. Engelhardt, both of Warsaw, Ind., assignors to Boehringer Mannheim Corp., Indianapolis, Ind.

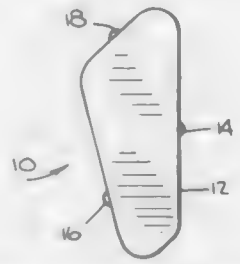
Filed Feb. 8, 1989, Ser. No. 308,112

Int. Cl.[5] A61F 2/34

U.S. Cl. 623—22 16 Claims

1. An improved acetabular cup prosthesis for use in cement fixation to bone, said cup comprising a hemispherical member having an internal recess which forms a bearing surface suitable for receiving a natural or prosthetic femoral head and a generally hemispherical outer surface on which there is at least one substantially flat area displaced from the apex of the cup and within the cross-sectional profile of the hemispherical surface.

5,009,666



PLUG AND METHOD OF USE

Peter B. Van Syckle, and Glen A. Kashuba, both of Pfizer Inc., 235 E. 42nd St., New York, N.Y. 10017-5755

Continuation of Ser. No. 252,231, Sep. 30, 1988, abandoned. This application Dec. 21, 1989, Ser. No. 462,302

Int. Cl.[5] A61F 2/32, 2/28, 5/04

U.S. Cl. 623—23 6 Claims

1. A biocompatible insert for use in filling a fenestration that extends through an implant member wherein the fenestration is of a predetermined shape and depth, said insert comprising at least two discs made of a relatively flexible material, each of said discs having a predetermined thickness and an outer perimeter defining a shape substantially identical to the predetermined shape of said fenestration, each of said discs having a plurality of ribs integrally formed about said outer perimeter thereof and interlocking means for interlocking said discs together to form said insert so that when said insert is press-fitted within said fenestration, the combined thickness of the discs is substantially equal to said predetermined depth of the fenestration in said implant, thereby completely filling the fenestration.

5,009,667

COMPOSITION AND METHOD FOR PROVIDING STAIN RESISTANCE TO POLYAMIDE FIBERS USING CARBONATED SOLUTIONS

Boyd R. Beck, Spring City, Utah, and Robert D. Harris, Cameron Park, Calif., assignors to Harris Research Inc., Cameron Park, Calif.

Filed Jan. 31, 1989, Ser. No. 304,727

Int. Cl.[5] D06M 11/00

U.S. Cl. 8—115.56 32 Claims

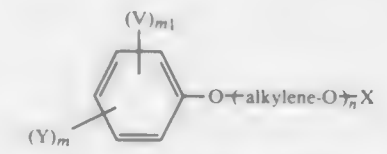
1. An aqueous carbonated composition for treating polyamide fibers to impart stain resistance to said fibers consisting essentially of (a) between about 0.0015 to 1.5% w. of a dye-resist agent consisting of a condensation product of formaldehyde and a member selected from the group consisting of a sulfonated phenol or a sulfonated naphthol; (b) 0 to 6.0% w. of a fluorochemical; and (c) 0 to 5% w. of a detergent suitable for cleaning polyamide fibers with the remainder being made up of an inert aqueous carrier; said aqueous composition being maintained at a pH of between about 2.5 and 7.0 be means of said carbonation.

5,009,668

MIXTURE OF ASSISTANTS AND ITS USE IN THE DYEING OF SYNTHETIC FIBRE MATERIALS: ACID ESTER OF OXYALKYLATED PHENDL, NONIONIC SURFACTANT AND DYE CARRIER

Hans-Ulrich Berendt, Allschwil, and Rosemarie Töpfl, Dornach, both of Switzerland, assignors to Ciba-Geigy Corporation, Ardsley, N.Y.

Filed Feb. 8, 1990, Ser. No. 476,997



Claims priority, application Switzerland, Feb. 8, 1989, 430/89

Int. Cl.[5] D06P 1/61, 3/54

U.S. Cl. 8—557 19 Claims

1. A mixture of dyeing assistants which comprises

(A) an acid ester, or salts thereof, of an alkylene oxide adduct of the formula

(1)

in which V is hydrogen or methyl, X is the acid radical of an inorganic acid containing oxygen, or the radical of an organic acid and Y is C_1–C_{12}alkyl, aryl or aralkyl, "alkylene" is the ethylene or propylene radical and m is 1 to 3, m_1 is 1 or 2 and n is 4 to 50,

(B) a nonionic surfactant containing polyglycol ether groups, and

(C) an aliphatic or aromatic carboxylic acid ester, an alkylbenzene, tetralin or a mixture of these substances;

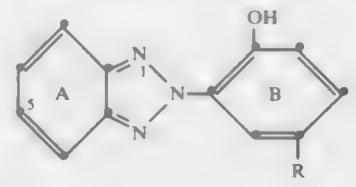
with the proviso that the mixture is substantially free of non-aromatic, water-immiscible solvents.

5,009,669

AQUEOUS DISPENSIONS OF 2-(2'-HYDROXYPHENYL)BENZOTRIAZOLES

Martin Jöllenbeck, Freiburg, Fed. Rep. of Germany; Hans-Ulrich Berendt, Allschwil, and Werner Fringeli, Laufen, both of Switzerland, assignors to Ciba-Geigy Corporation, Ardsley, N.Y.

Filed May 30, 1989, Ser. No. 358,910

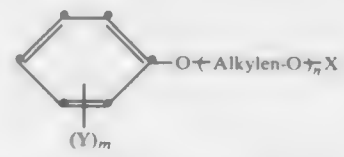


Claims priority, application Switzerland, May 31, 1988, 2056/88; Aug. 5, 1988, 2981/88

Int. Cl.[5] C09B 67/00, 67/46

U.S. Cl. 8—573 25 Claims

1. An aqueous dispersion of a 2-(2'-hydroxyphenyl)benzotriazole compound, comprising



(a) 15 to 50 per cent by weight of a benzotriazole compound of the formula

(1)

where R is halogen, C_1–C_{12}alkyl, lower alkoxy, lower alkoxycarbonyl, cycloalkyl, aryl, C_1–C_{12}alkylaryl or aralkyl, and the rings A and B are independently of one another unsubstituted or substituted by halogen, hydroxyl, lower alkyl, lower alkoxy or lower alkoxycarbonyl, and

(b) 2 to 20 per cent by weight of an acid ester, or a salt thereof, of an alkylene oxide adduct of the formula

(2)

where X is the acid radical of an inorganic oxygen-containing acid, or the radical of an organic acid and Y is C_1–C_{12}alkyl, aryl or aralkyl, "Alkylen" is the ethylene radical or propylene radical, m is from 1 to 4 and n from 4 to 50.

5,009,670

FUELS FOR GASOLINE ENGINES

Franz-Dieter Martischius, Neustadt; Hans-Henning Vogel, Frankenthal; Norbert Greif, Bobenheim; Knut Oppenlaender, Ludwigshafen; Walter Denzinger, Speyer, and Heinrich Hartmann, Limburgerhof, all of Fed. Rep. of Germany, assignors to BASF Aktiengesellschaft, Fed. Rep. of Germany

Filed May 16, 1989, Ser. No. 352,418

Claims priority, application Fed. Rep. of Germany, May 19, 1988, 3817000

Int. Cl.[5] C10L 1/14

U.S. Cl. 44—[illegible]5 3 Claims

1. A fuel for gasoline engines, containing small amounts of copolymers of alkyl (meth)acrylates where the alkyl radical is of 8 to 40 carbon atoms and/or vinyl esters of carboxylic acids of 8 to 40 carbon atoms and monoethylenically unsaturated mono- and/or dicarboxylic acids of 3 to 12 carbon atoms, having a total molecular weight of from 500 to 20,000 g per mole, some or all of the carboxyl groups of the copolymers having been reacted with an alkali with formation of the alkali metal salts and the remainder of the carboxyl groups having been reacted with ammonia and/or amines of not more than 50 carbon atoms to give the corresponding amide groups and/or ammonium salts, with the proviso that the fuel contains from 10 to 2,000 ppm by weight of the alkali metal salts of the copolymers.

5,009,671

PROCESS FOR PRODUCING A SOLID, FINELY DIVIDED FUEL BASED ON COAL

Friedrich H. Franke, Rieperting 3, 8201 Schonstett, and Michael J. Paersch, Rönkrei 6, 2000 Hamburg 65, both of Fed. Rep. of Germany

Filed Jun. 9, 1989, Ser. No. 364,358

Claims priority, application Fed. Rep. of Germany, Jun. 29, 1988, 3821950

Int. Cl.[5] C10L 5/14, 5/28

U.S. Cl. 44—598 6 Claims

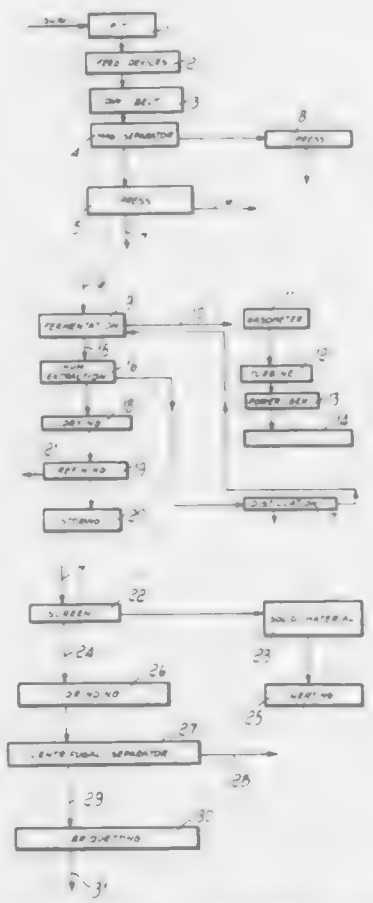
1. A process for producing a substantially water resistant coal briquettes comprising:

(a) heating a green molded coal briquette comprising a mixture of finely divided coal, a first binder containing starch in an amount of 0.5 to 3 wt% and a second binder comprising molasses and water in an amount of 1 to 4 wt% to a first temperature between 80° C. to 150° C. for a time sufficient to convert said starchy binder to a paste, and

(b) heating said green molded coal briquette to a second temperature between 200° C. to 300° C. for a time sufficient to convert said green molded coal briquette into a substantially water resistant coal briquette.

5,009,672

PROCESS FOR RECYCLING AND REUTILIZING WASTE, IN PARTICULAR SOLID URBAN WASTE



Giorgio Ruffo, Milan, and Luciano Vezzani, Ovada, both of Italy, assignors to Vezzani S.p.A., Ovada, Italy

Filed Sep. 13, 1989, Ser. No. 406,645

Claims priority, application Italy, Sep. 15, 1988, 21956 A/88

Int. Cl.[5] C10L *5/06*

U.S. Cl. 44—593 **8 Claims**

8. Process for the recycling and complete recovery of solid urban waste and similar waste, comprising the steps of:

subjecting the solid urban waste (SUW) to high-pressure compression so as to separate putrescible organic material in a finely divided form from dry material of the solid urban waste,

subjecting said organic material to a process of anaerobic fermentation in a sealed reactor in order to extract biogas and obtain soft humus thus produced by the fermentation,

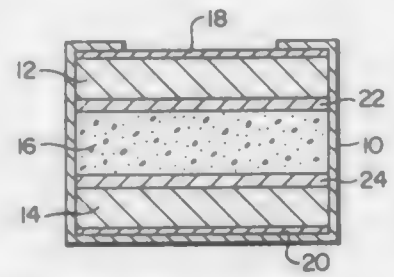
subjecting the humus obtained from the fermentation process to a refining and a screening process to recover light materials therefrom, said light materials subsequently being combined with said dry material obtained in said high-pressure compression step,

subjecting said dry material with said light materials to a screening process to separate combustible material, such as paper, fabrics, wood, plastics, leather, and rubber, from inert material, such as glass, powders, and non-ferrous metals, and

subjecting the combustible material to a grinding process and subsequently to a selection process by means of a separator for separating heavy parts, such as chlorinated heavy plastics, rubber, leather, and aluminum, from light parts, such as plastics in film, paper, and textiles,

subjecting said light parts obtained from said screening process to a briquetting operation to obtain a solid fuel.

5,009,673



METHOD FOR MAKING POLYCRYSTALLINE SANDWICH COMPACTS

Hyun S. Cho, Sandy, Utah, assignor to The General Electric Company, Worthington, Ohio

Filed Nov. 30, 1988, Ser. No. 277,875

Int. Cl.[5] B24D *18/00*

U.S. Cl. 51—293 **13 Claims**

1. A method for manufacturing a polycrystalline sandwich compact comprising a polycrystalline diamond or CBN core interposed between outer support layers, which comprises:

(a) providing an assembly comprising a mass of diamond or CBN particles, a pair of compression disks; two metal layers, one each of which is interposed between said mass and each of said compression disks; and when said mass comprises diamond particles, a source of sintering aid/-catalyst for diamond sintering;

(b) subjecting said assembly to HP/HT sintering for forming a sintered polycrystalline diamond or CBN core having two metal-derived support layers adherently bound thereto.

ABRASIVES

Reiner Kunz, Konigsbergerstrasse 33, D-7890 Waldshut-Tiengen; Albert Babl, Lindenstrasse 4, D-7891 Dogern; Ales Zahradnicek, Sonnhalde 33, D-7892 Albbruck, all of Fed. Rep. of Germany, and Rainer Dietrich, Thiersteinerrain 65, CH-4059 Basel, Switzerland

Continuation of Ser. No. 215,542, Jul. 6, 1988, abandoned. This application Nov. 2, 1989, Ser. No. 430,298

Claims priority, application Switzerland, Jul. 24, 1987, 2830/87; Aug. 31, 1987, 3334/87

Int. Cl.[5] B24B *1/00*

U.S. Cl. 51—295 **5 Claims**

1. Abrasive grain having an aluminum oxide base, comprising the aluminum oxide base with a hygroscopic salt coated on its surface, the amount of said hygroscopic salt being 0.001 to 5.0 percent by weight relative to the amount of the abrasive grain, the specific resistance of the treated abrasive grain, measured in grain beds, being smaller than 3.5×10^{10} ohms×cm, and the hygroscopic salt is a carbonate, hydrogen carbonate, sulfate, nitrate, phosphate, fluoride or chloride of a metal of the first, second or third main group or of the first or second series of the transition metals of the periodic table.

5,009,675

COATED SILICON CARBIDE ABRASIVE GRAIN

Reiner Kunz, Waldshut-Tiengen, Fed. Rep. of Germany, and Rainer Dietrich, Basel, Switzerland, assignors to Lonza LTD, Switzerland

Filed Jun. 8, 1989, Ser. No. 363,059

Claims priority, application Switzerland, Jun. 17, 1988, 2356/88

Int. Cl.[5] B24B *1/00*

U.S. Cl. 51—295 **16 Claims**

1. Abrasive grain comprising at least one silicon carbide particle and a binder-free unmelted coating of 0.01 to 5 percent, relative to the weight of the abrasive grain, of highly dispersed hydrophilic metal oxide particles having a particle size of primary particles of about 1-500 nm in the d_{50} value and a specific surface of 5-500 m^2/g according to BET from the group of silicon dioxide, aluminum oxide, titanium dioxide and mixtures thereof, on the at least one silicon carbide particle.

5,009,676

SINTERED SOL GEL ALUMINA ABRASIVE FILAMENTS

Charles V. Rue, Petersham, Mass.; Ronald H. van de Merwe, Niagara Falls, Canada; Ralph Bauer, Niagara Falls, Canada; Scott W. Pellow, Niagara Falls, Canada; Thomas E. Cottringer, Niagara Falls, Canada, and Richard J. Klok, Niagara Falls, Canada, assignors to Norton Company, Worchester, Mass.

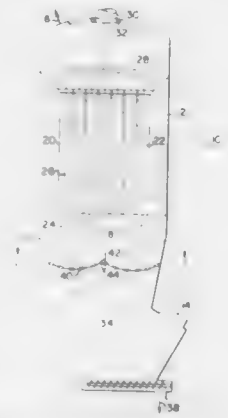
Filed Apr. 28, 1989, Ser. No. 345,139

Int. Cl.[5] C09C *1/68*

U.S. Cl. 51—309 **14 Claims**

1. A sintered sol gel filament shaped alumina based abrasive comprised of sintered alpha alumina crystals, said filament shaped alumina based abrasive having an average aspect ratio of at least ob 1 and a hardness of at least 16 GPa, said alpha alumina crystals having a size no greater than 1 micron.

5,009,677



PROCESS FOR SEPARATING PARTICULATES IN AN ELECTROSTATIC PRECIPITATOR

Steven D. Wolf, Pocatello, Id.; James L. Manganaro, Princeton, N.J., and Ronald H. Miller, Pocatello, Id., assignors to FMC Corporation, Philadelphia, Pa.

Division of Ser. No. 401,904, Sep. 1, 1989, Pat. No. 4,968,330. This application Jul. 2, 1990, Ser. No. 545,958

Int. Cl.[5] B03C *3/00*

U.S. Cl. 55—12 **2 Claims**

1. A process for cleaning particle-laden gas flowing through an electrostatic precipitator zone comprising:

(a) passing a particle-laden gas into the inlet of an electrostatic precipitator zone having a gas inlet and gas outlet,

(b) passing said gas upwardly through a low pressure drop gas distributor in the form of a nonfouling chain screen wherein individual movable chain segments whose ends are affixed to support members make up said chain screen, and more evenly distributing said gas flow throughout said electrostatic precipitator zone,

(c) passing said gas into a plurality of collector electrode zones made up of substantially vertical hollow members suspended within said electrostatic precipitator zone,

(d) passing said gas through said collector electrode zones in proximity to a plurality of discharge electrode wires suspended within said collector electrode zones,

(e) ionizing said dust particles in said gas by means of said discharge electrode wires,

(f) collecting ionized dust particles on the inside surfaces of said collector electrode zones,

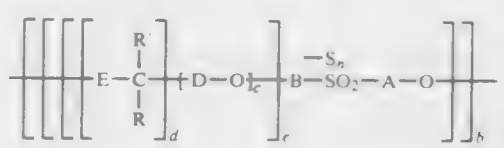
(g) removing collected dust particles from the inside surfaces of said collector electrode zones and dropping them onto and passing them through the movable segments of said chain screen gas distributor concurrent to said upward flowing gas, and into a hopper zone, and

(h) removing gas, substantially reduced in dust, from said perpendicular zone through said gas outlet

---

5,009,678

PROCESS FOR RECOVERY OF AMMONIA FROM AN AMMONIA-CONTAINING GAS MIXTURE



Benjamin Bikson, Brookline; Joyce K. Nelson, Lexington, and Jerry E. Perrin, Dorchester, all of Mass., assignors to Union Carbide Industrial Gases Technology Corporation, Danbury, Conn.

Filed Oct. 31, 1989, Ser. No. 429,817

Int. Cl.[5] B01D *53/22, 71/68*

U.S. Cl. 55—16 **24 Claims**

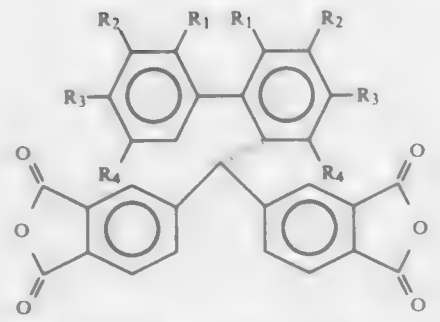
1. A process for separating ammonia from a gaseous mixture thereof with other gaseous components which comprises contacting said gaseous mixture with one side of a gas separation composite membrane comprising a porous support coated with a thin layer of a cation exchange type polymer containing the sulfonic acid ion exchange group in the polymer molecule represented by the general formula:

(I)

wherein A, B, D and E are unsubstituted or substituted arylene groups with at least one A, B, D, E groups in the polymer chain repeat unit substituted by a free sulfonic acid group or its salified form: R and R′ can be the same or different and represent an alkyl group or a halogenated alkyl group having from 1 to 4 carbon atoms; b represents the polymer average molecular weight, generally above about 10,000; c, d and e are integers having a value of from zero to about 6; and the degree of sulfonation $-S_n$ is from about 0.2 to about 2; and recovering the permeate and retentate components, said polymer providing enhanced selectivity and permeability characteristics for the selective permeation and separation of ammonia as the permeate component from the other components of the gaseous mixture comprising retentate components.

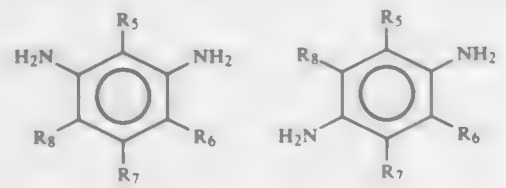
5,009,679

MEMBRANES FORMED FROM RIGID AROMATIC POLYIMIDE POLYMERS

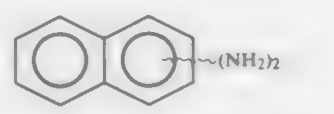


Richard O. Angus, and Kahlil Yacoub, both of Allentown, Pa., assignors to Air Products and Chemicals, Inc., Allentown, Pa.

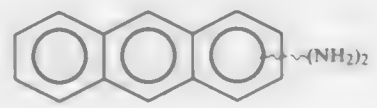
Filed May 25, 1990, Ser. No. 529,078



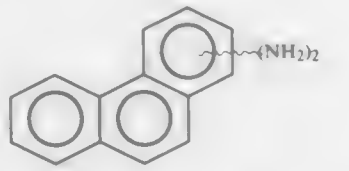
Int. Cl.[5] B01D *53/22, 71/64*

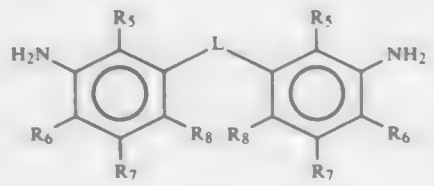


U.S. Cl. 55—16 **24 Claims**

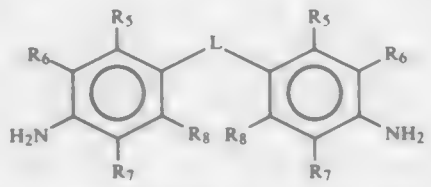


1. A semi-permeable membrane formed from a polyimide obtained by the reaction of a 9,9-bis-(3,4-dicarboxyphenyl)-fluorene represented by the formula:





wherein R_1 through R_4, inclusive, are independently selected from a hydrogen atom, a linear or branched alkyl, alkenyl or alkoxy group having form 1 to about 8 carbon atoms, cyano or R_1 and $R_{1'}$, R_1 and R_2, R_2 and R_3, and R_3 and R_4 may together form part of cyclohydrocarbyl ring; and an aromatic diamine represented by the formulae:



wherein R_5 through R_8, inclusive, are independently selected from a hydrogen atom or a linear or branched alkyl, alkenyl or alkoxy group having from 1 to about 8 carbon atoms, each of which can optionally be partially or fully fluorinated; and

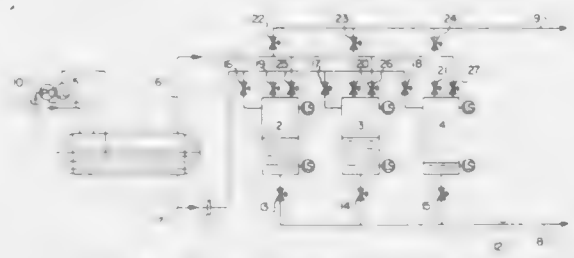
L is a linear or branched alkylene, alkenylene, phenylene or alkylphenylene group having from 1 to about 8 carbon atoms, each of which can optionally be partially or fully fluorinated.

16. A process for separating a component of a gas mixture containing at least one other component, said process comprising: bringing said gas mixture into contact with the membrane of claim 1 whereby one component selectively permeates through said membrane.

5,009,680

METHOD AND A SYSTEM FOR SEPARATING AND TRANSPORTING GAS AND LIQUID

Kristian Brekke, Oslo, Norway, assignor to Aker Engineering a.s., Oslo, Norway



PCT No. PCT/NO89/00123, § 371 Date Jun. 11, 1990, § 102(e) Date Jun. 11, 1990, PCT Pub. No. WO90/06472, PCT Pub. Date Jun. 14, 1990

PCT Filed Nov. 28, 1989, Ser. No. 488,061

Claims priority, application Norway, Nov. 28, 1988, 885302; Mar. 17, 1989, 891194

Int. Cl.[5] B01D *19/00*

U.S. Cl. 55—40 **6 Claims**

1. A process for the transportation of gas and liquid or solid media and the separation of gas from liquid or solid media in a manner so that the pressure in the gas separated off in one separator stage is used for the transportation of separated fluids from a subsequent separator stage, comprises the steps of:

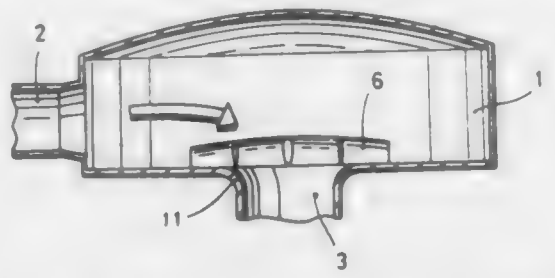
(a) separating gas off at high pressure in one separator stage or adding it from another gas source and

(b) directing said separated or added gas into a separator containing fluid from which gas has been separated at a lower pressure;

(c) said high pressure gas forcing out already separated fluid present in the separator receiving said high pressure gas.

5,009,681

AIR INLET CHAMBER FOR A MIXTURE FORMER OF A MOTOR VEHICLE



Gunter Jochum, Eschborn, Fed. Rep. of Germany, assignor to General Motors Corporation, Detroit, Mich.

Filed Dec. 18, 1989, Ser. No. 450,870

Claims priority, application Fed. Rep. of Germany, Dec. 21, 1988, 3843019

Int. Cl.[5] F02M *35/10*

U.S. Cl. 55—416 **8 Claims**

1. An air inlet chamber for a mixture former of a fuel injection system of a motor vehicle, which comprises a lateral air inlet for connection to a hose coming from an air filter of the vehicle and an axial air outlet for introducing the air into the mixture former, in which in the air inlet chamber on the air outlet is disposed a star-shaped insert which divides the airflow into individual sectors, as a flow rectifier.

5,009,682

APPARATUS FOR DEGASSING FLUIDS

Ulrich Hagelauer, Bottighofen, Fed. Rep. of Germany, assignor to Storz Medical AG, Kreuzlingen, Switzerland

Filed Dec. 22, 1989, Ser. No. 454,857

Claims priority, application Fed. Rep. of Germany, Dec. 31, 1988, 3844460

Int. Cl.[5] B01D *19/00*

U.S. Cl. 55—159 **12 Claims**

1 An apparatus for degassing fluids comprising,

a pressure-resistant container for storing a fluid to be degassed;

a low pressure producing means for producing a low pressure in the pressure-resistant container for carrying out a degassing of fluids;

a supply vessel for supplying the fluid to be degassed to the pressure-resistant container, the supply vessel surrounding the pressure-resistant container;

a valve for connecting the pressure-resistant container to the supply vessel at a valve opening, the valve having open and closed positions; and

a piston/cylinder unit having a working piston for moving the valve between the opened and closed positions due to a pressure differential across the working piston resulting from the low pressure in the pressure-resistant container so that fluid to be degassed flows into the pressure-resistant container from the surrounding supply vessel and separated gas escapes through the valve opening.

5,009,683

PURIFYING AIR CONDITIONER

Shin-Ching Sun, 3F., No. 32, Lane 132, Hu-Lin St., Taipei, Taiwan

Filed Jul. 24, 1989, Ser. No. 383,481

Int. Cl.[5] B03C *3/00*

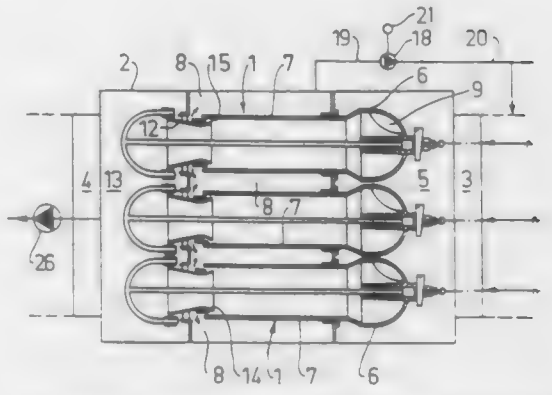
U.S. Cl. 55—131 **1 Claim**

1. An improved air conditioner for purifying air by removing dust particles therefrom, comprising: a negative ion-filtering device disposed behind an air blow direction regulating grill of a front upper face of said air conditioner, said negative ion-filtering device comprising high voltage leads connecting a PC board to high voltage electric sheets in order to cause production of negative ions and a positive charge providing dust collecting mesh disposed between said high voltage electric sheets to cause floating dust particles in air passing after temperature adjustment to carry negative charges so that negative charged floating dust particles are sucked in attachment to said positive charged dust mesh, charged and any dust particles passing said positive charged dust mesh are negatively charged and allowed to fall in attachment to positive ground charges as the air exits the air blow regulating grill.

5,009,684

MULTIPLE CYCLONE SEPARATOR

Ernst Johansson, 6, Björnåkersgatan, S-937 00 Burträsk, Sweden



PCT No. PCT/SE87/00627, § 371 Date Jun. 26, 1989, § 102(e) Date Jun. 26, 1989, PCT Pub. No. WO88/04953, PCT Pub. Date Jul. 14, 1988

PCT Filed Dec. 22, 1987, Ser. No. 378,184

Claims priority, application Sweden, Dec. 22, 1986, 8605590

Int. Cl.[5] B01D *45/12*

U.S. Cl. 55—340 **7 Claims**

1. A purification unit for separating solid particles from a gas stream, comprising:

wall means defining a common chamber having an inlet for a gas stream to be purified, and an outlet for a purified gas stream;

wall means defining a common chamber having an inlet for a gas stream to be purified, and an outlet for a purified gas stream;

at least one flow cylinder unit disposed in said common chamber;

each flow cylinder unit comprising a plurality of flow cylinders having mutually parallel longitudinal axes;

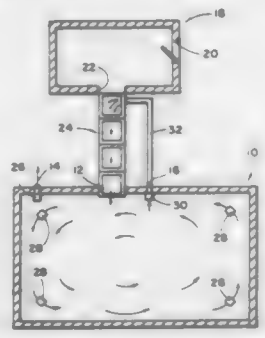
each flow cylinder having an inlet end provided with a stationary head provided with opening means configured to accept a portion of the gas stream entering the common chamber through said inlet to said common chamber and set such portion into rotary motion relative to the longitudinal axis of the respective flow cylinder;

each flow cylinder further having an outlet end having a tubular outlet diffuser having an inlet end telescopically coaxially received therein with spacing therebetween defining an annular gap out through which solid particles separated from the gas stream portion in the respective said flow cylinder may flow into common chamber;

each said outlet diffuser further having an outlet end, out through which the respective gas stream portion, cleansed of said solid particles, flows out of the respective flow cylinder and out of said outlet of said common chamber;

said wall means defining said common chamber further including wall means isolating said inlet end of each flow cylinder and said outlet end of each flow cylinder, from said annular gap of each flow cylinder and thereby defining within said common chamber a closed dust collection chamber;

a steplessly adjustable blower having a suction side and a pressure side; and



suction conduit means operatively connecting the suction side of said blower with said dust collection chamber for maintaining a negative pressure within said dust collection chamber for enhancing separation of said solid particles from said gas stream

5,009,685

SYSTEM FOR IMPROVING THE WORK ENVIRONMENT IN A CONTAMINATED ROOM

Cary L. Wilson, 5408 E. 11th St., Ste. B, Tulsa, Okla. 74112, and John A. Graham, 4606 E. 67th St., Ste. 403-7, Tulsa, Okla. 74136

Filed Feb. 15, 1990, Ser. No. 480,275
Int. Cl.[5] B01D *46/42*
U.S. Cl. 55—385.2 5 Claims

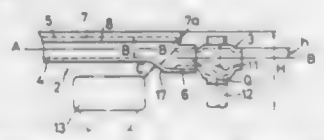
1. A system for improving the work environment in a contaminated room while contaminated material is being removed therefrom, the contaminated room having a door therein through which workmen enter or exit and having a first and a second air discharge opening therein, comprising:

a dressing room adjacent said contaminated room providing an area in which workmen can prepare for work in the contaminated room or prepare for leaving work after working in the contaminated room, the dressing room having a door therein;

a decontamination unit connecting said dressing room door with said contaminated room door through which workmen pass when entering or exiting the contaminated room;

at least one filtered air pump means passing filtered air from within said contaminated room through said first air discharge opening to the exterior of said contaminated room to maintain negative air pressure within said contaminated room;

a conduit connecting said contaminated room second air discharge opening with said decontamination unit; and



a filter air pump means for passing filtered air through said conduit into said decontamination unit to maintain positive air pressure within said decontamination unit whereby air flow is maintained from said decontamination unit into said contaminated room.

5,009,686

AIR CLEANER OF ENGINE FOR VEHICLE

Toshifumi Yuunaga, Wakabayashi, Japan, assignor to Suzuki Jidosha Kogyo Kabushiki Kaisha, Shizuoka, Japan

Filed May 22, 1989, Ser. No. 354,763
Claims priority, application Japan, May 24, 1988, 63-126797
Int. Cl.[5] B01D *46/00*
U.S. Cl. 55—419 1 Claim

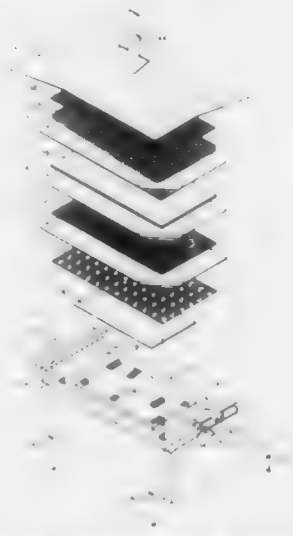
1. An air cleaner of an engine of a vehicle, comprising:

an upper case;

a lower substantially cylindrical case fitted to said upper case;

an air valve; and

an air intake on said lower case having a cylindrical part extending horizontally and joining said air valve;



said air intake including an inclined portion, said inclined portion extending from the lower edge of said lower case and the upper edge of said lower case, so that a central point of an opening formed in said cylindrical part is positioned lower than a horizontal plane passing through the center of said lower case, the cross sectional area of said inclined portion being substantially the same as the cross sectional area of said cylindrical part adjacent said inclined portion to facilitate air flow through said air intake.

5,009,687

METHOD OF MOLDING A COMPOSITE ARTICLE USING SOFTENED GLASS AS A PRESSURE TRANSMITTING MEDIUM

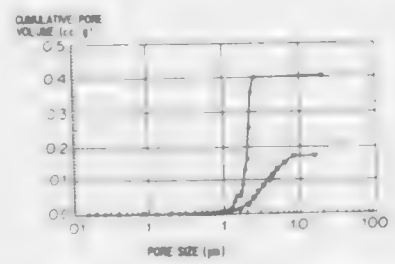
Robert V. Kromrey, Campbell, Calif., assignor to United Technologies Corporation, Hartford, Conn.

Filed Oct. 2, 1989, Ser. No. 416,212
Int. Cl.[5] B29C *43/10*
U.S. Cl. 65—18.1 9 Claims

1. A method for molding a high temperature composite comprising:

(a) providing a compliant layer of softened material selected from the group consisting of glass, ceramic and mixtures thereof;

(b) applying heat to a composite precursor; and



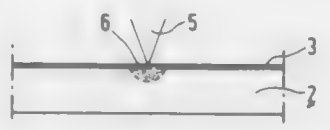
(c) causing said layer of softened material to apply pressure substantially uniformly to said composite precursor.

5,009,688

PROCESS FOR PRODUCING POROUS GLASS

Kazuki Nakanishi, Hirakata, Japan, assignor to Asahi Glass Company, Ltd., Tokyo and Naohiro Soga, Kobe, both of, Japan

Filed Sep. 18, 1989, Ser. No. 408,299
Claims priority, application Japan, Sep. 28, 1988, 63-245532; Mar. 8, 1989, 1-56886
Int. Cl.[5] C03B *19/09, 20/00*
U.S. Cl. 65—18.3 9 Claims



1. A process for producing porous glass, which comprises preparing a reaction solution containing a metal alkoxide or partially polymerized metal alkoxide and an organic polymer, hydrolyzing and polymerizing the metal alkoxide or partially polymerized metal alkoxide in said solution to obtain a gel, and calcining the gel to obtain porous glass, wherein said organic polymer is uniformly soluble with the solution of the metal alkoxide or partially polymerized metal alkoxide, undergoes continuous interlocking phase separation during the hydrolysis-polymerizing step and is substantially free from formation of precipitates, wherein the organic polymer is selected from the group consisting of sodium polystyrene sulfonate, polyacrylic acid, polyallylamine, polyethylene-imine, polyethylene oxide and polyvinyl pyrrolidone.

5,009,689

METHOD OF MANUFACTURING A SEMICONDUCTOR DEVICE

Jan Haisma; Cornelis L. Alting, and Theodorus M. Michielsen, all of Eindhoven, Netherlands, assignors to U.S. Philips Corporation, New York, N.Y.

Filed Jan. 27, 1987, Ser. No. 7,153
Claims priority, application Netherlands, Jan. 30, 1986, 8600216
Int. Cl.[5] H01L *21/00*; C03B *29/00*
U.S. Cl. 65—33 8 Claims

1. A method of manufacturing a semiconductor device comprising the steps of

providing each of a support body and a monocrystalline semiconductor body with an optically smooth surface by a step of bulk-reducing polishing, said monocrystalline semiconductor body consisting of a material having sufficient oxygen diffusion,

providing an oxide layer at the optically smooth surface of at least said semiconductor body,

subjecting at least said oxide layer to a bonding-activating operation,

then mechanically contacting said support body and said oxide layer on said semiconductor body at said optically smooth surface of each to provide a contact surface, said contacting step being carried out in a dust-free atmosphere, and said contacting step being carried out after cleaning said surface of each,

focussing laser radiation on at least a part of said contact surface through said support body, said support body being transparent to said laser radiation,

locally melting at least point portions, each portion being over a region of about 5 μm of said semiconductor body, at said contact surface by said laser radiation, and

forming locally fused connections between said support body and said semiconductor body by diffusing oxygen from said oxide layer into said semiconductor body and by then solidifying said melted portions.

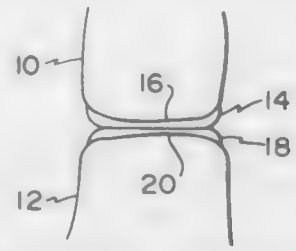
5,009,690

METHOD OF BONDING SINGLE CRYSTAL QUARTZ BY FIELD-ASSISTED BONDING

Richard M. Curlee, Tijeras; Clinton D. Tuthill, Edgewood, and Randall D. Watkins, Albuquerque, all of N. Mex., assignors to The United States of America as represented by the United States Department of Energy, Washington, D.C.

Filed Mar. 9, 1990, Ser. No. 490,895
Int. Cl.[5] C03C *27/00*
U.S. Cl. 65—40 16 Claims

1. A method of producing a hermetically stable structural bond between quartz crystals, comprising the steps of:



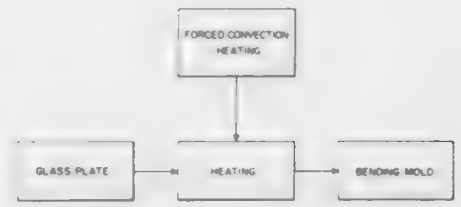
(a) providing first and second quartz crystals;

(b) depositing a thin film of borosilicate glass on a portion of said first crystal, the borosilicate glass film having a thickness in the range of about 3,000 to about 13,000 angstroms;

(c) depositing a thin film of silicon on a portion of said second crystal, the silicon film having a thickness in the range of about 3,000 to about 13,000 angstroms;

(d) juxtaposing said portions of said first and second crystals in a surface contact relationship to thereby provide surface contact between said thin films;

(e) heating said first and second crystals to a temperature for a period sufficient to cause said glass and silicon films on respective crystals to become electrically conductive; and



(f) applying an electrical potential across said first and second crystals for creating an electrostatic field between the adjoining surfaces of the first and second crystals and causing the juxtaposed portions to be attracted into an intimate contact and form a bond for joining the adjoining surfaces.

5,009,691

METHOD OF BENDING GLASS PLATE

Shin-ichi Aratani, Taki, Japan, assignor to Central Glass Company, Limited, Ube, Japan

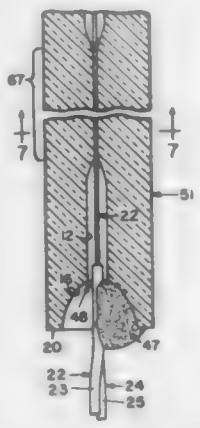
Filed Mar. 23, 1990, Ser. No. 497,853
Claims priority, application Japan, Mar. 24, 1989, 1-73339; Mar. 31, 1989, 1-80537
Int. Cl.[5] C03B *23/023*
U.S. Cl. 65—106 13 Claims

2. A method of bending a glass plate thinner than 6 mm into a predetermined shape having a radius of curvature not larger than 2000 mm, the method having the steps of heating the glass plate in its entirety of a temperature sufficient for bending and bringing the heated glass plate into engagement with at least one bending mold,

characterized in that during the heating step at least one end region of the glass plate is additionally heated by forced convection such that the heat transfer coefficient on at least one major surface of the glass plate in said at least one end region becomes greater than in the remaining region by an amount in the range from 5 to 50 kcal/m^2·h·°C.

5,009,692

METHOD OF MAKING FIBER OPTIC COUPLER



William J. Miller, and Carlton M. Truesdale, both of Corning, N.Y., assignors to Corning Incorporated, Corning, N.Y.

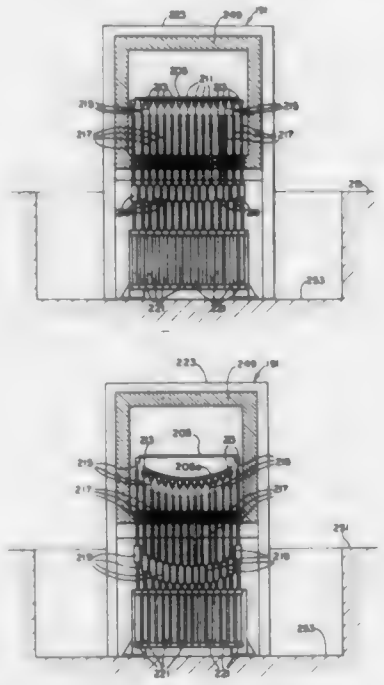
Division of Ser. No. 223,423, Jul. 25, 1988, Pat. No. 4,902,324.
This application Feb. 9, 1990, Ser. No. 477,494
Int. Cl.[5] C03C *25/02*
U.S. Cl. 65—3.11 8 Claims

1. A method of making a fiber coupler comprising the steps of

providing a glass tube having first and second opposite end

portions and a midregion, a longitudinal aperture extending from a first end of said tube to a second end thereof,
disposing at least two glass optical fibers, each having a core and cladding, within said longitudinal aperture, said at least two fibers extending beyond said first and second ends of said tube,
heating said midregion of said tube to collapse said midregion around said fibers,
drawing at least a portion of said midregion, the end portions

of said aperture remaining open, wherein said heating to collapse said midregion and said drawing position said fibers to provide optical coupling from one of said fibers to another of said fibers, thereafter,
heating said tube at the uncollapsed portions of said aperture, and
applying glue to the ends of said tube aperture so that said glue is drawn into said aperture and onto said fibers as said tube cools,
cooling said tube



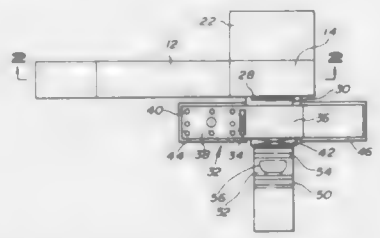
5,009,693

METHOD AND APPARATUS FOR BENDING GLASS

Kenneth Freidel, Cherry Hill; L. Arthur Littleton, Merchantville, and William G. Freund, Burlington, all of N.J., assignors to Muirfield Holdings L.P., Pennsauken, N.J.

Filed Oct. 4, 1989, Ser. No. 417,090
Int. Cl.[5] C03B *23/033*
U.S. Cl. 65—107 **16 Claims**

1. Apparatus for bending glass sheets, comprising
an oven for receiving a glass sheet and for heating the glass sheet to a hot, softened condition,
conveyor means in the oven for moving the glass sheet through the oven,
said conveyor means including longitudinal rows of oven mini-rollers for supporting glass sheets in the oven,
power means connected to the oven mini-rollers for rotating them,
support means in the oven for supporting each longitudinal row of mini-rollers,
means connected to each longitudinal row of oven mini-rollers for changing the vertical position of each longitudinal row of mini-rollers to a glass bending position where the vertical position of each longitudinal row of oven mini-rollers across the width of the oven forms the contour of a desired bend for bending the hot, softened glass sheet as



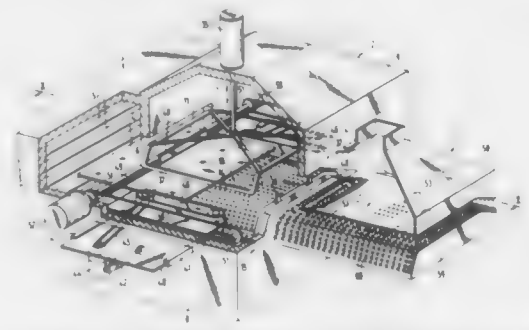
the hot, softened glass sheet conforms to the bend formed by the oven mini-rollers to form a bent glass sheet, and
means for quenching the bent glass sheet.

5,009,694

METHOD FOR HEAT TREATMENT OF GLASS PLATE TO STRENGTHEN ITS PERIPHERAL REGION

Masami Nishitani, Mie Pref., and Joji Suetomi, Matsusaka, both of Japan, assignors to Central Glass Company, Ltd., Ube, Japan

Filed May 24, 1990, Ser. No. 527,875
Claims priority, application Japan, May 31, 1989, 1-138074
Int. Cl.[5] C03B *25/00, 27/00*
U.S. Cl. 65—115 **15 Claims**



1. A heat treatment method for strengthening a glass plate in a peripheral region thereof, comprising the steps of:
(a) heating the glass plate to a first temperature in the range from 550° to 650° C.;
(b) placing the heated glass plate on a ring-like holder, which is maintained at a second temperature lower than said first temperature by 100° to 600° C., such that a peripheral region of the glass plate contiguous to the peripheral edge of the glass plate makes contact with an upper surface of the ring-like holder;
(c) keeping the ring-like holder together with the glass plate placed thereon in an annealing furnace maintained at a third temperature which is in the range from 50° to 500° C. and is not higher than said second temperature until the temperature of the glass plate lowers nearly to said third temperature; and
(d) after step (c) allowing the glass plate to cool down to room temperature.

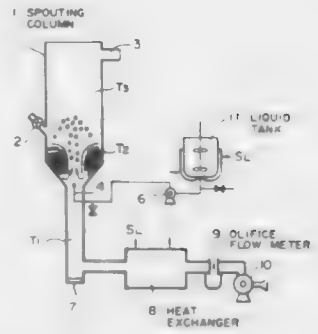
5,009,695

APPARATUS FOR PRODUCING TWO DIMENSIONALLY BENT GLASS

Hans-Werner Kuster, Aachen, Fed. Rep. of Germany, and Luc Vanaschen, Eupen, Belgium, assignors to Saint-Gobain Vitrage, Courbevoie, France

Filed Jun. 6, 1989, Ser. No. 362,346
Claims priority, application Fed. Rep. of Germany, Jun. 8, 1988, 3819503
Int. Cl.[5] C03B *23/03*
U.S. Cl. 65—182.2 **14 Claims**

1. An apparatus for producing two-dimensionally bent glass plates, comprising:
a roller oven having horizontally extending conveying rollers, for heating a horizontally positioned glass sheet to a bending temperature;
a pressing and bending unit positioned downstream of said roller oven in a glass sheet conveying direction, comprising:
(a) a lower full surface male bending mold having a perforate top surface lying in a plane defined by said conveying rollers,
(b) means for supplying pressurized hot gasses to the perforations of said lower bending mold, whereby a hot gas cushion may be formed between said lower bending mold and a glass sheet in said pressing and bending unit,
(c) a female mold positioned over said lower bending mold, and
(d) means for vertically moving said female mold towards said lower bending mold for pressing and bending a glass sheet resting thereon; a cooling device positioned downstream from said
pressing and bending unit for cooling a bent glass sheet; and
means for conveying a glass sheet from said roller oven to said pressing and bending unit and means for transferring a bent glass sheet from said pressing and bending unit to said cooling device.



5,009,696

FERTILIZER WITH A DEGRADATIVE COATING

Toshio Fujita; Yoshisato Yamashita; Shigemitsu Yoshida, and Katsutoshi Yamahira, all of Minamatashi, Japan, assignors to Chisso Corporation, Osaka, Japan

Continuation of Ser. No. 64,577, Jun. 22, 1987, abandoned. This application Dec. 16, 1988, Ser. No. 285,617
Claims priority, application Japan, Jul. 7, 1986, 61-159149; Aug. 7, 1986, 61-160126
Int. Cl.[5] C05G *3/00, 3/10*
U.S. Cl. 71—64.07 **20 Claims**

1. A granular chemical fertilizer with a degradative coating comprising as its combination of active ingredients
(a) a polyolefin resin and
(b) an ethylene-vinyl acetate-carbon monoxide copolymer,
said polyolefin resin being selected from the group consisting of:
(1) polyethylene,
(2) polypropylene,

(3) polybutene-1, and
(4) copolymers of at least two members selected from the group consisting of ethylene, propylene and butene-1,
the ratio by weight of said ethylene-vinyl acetate-carbon monoxide copolymer to said polyolefin resin being in the range of 0.1 to 1.8.

5,009,697

LIQUID ORGANIC PEAT FERTILIZER AND PROCESS OF PREPARING SAME

Antonio M. Martin, and Peter J. Scott, both of Newfoundland, Canada, assignors to Memorial University of Newfoundland, Canada

Filed Dec. 1, 1987, Ser. No. 127,161
Int. Cl.[5] C05F *11/02, 11/04*
U.S. Cl. 71—24 **21 Claims**

1. A process for the preparation of both a liquid peat extract substantially-free from biologically-undesirable concentrations of metal elements and compounds, and a solid peat residue substantially-free from biologically-undesirable concentration of metal elements and compounds, which process comprises:
subjecting particles of high-moor, low-decomposed sphagnum-type peat which has a lower proportion of humic acids, a higher concentration of hydrolyzable nitrogen compounds, and a higher proportion of weakly-bound biologically-active substances than low-moor peat, more than about 50% of said particles having a diameter of about 250 μm or less, to a relatively mild acid hydrolyzation reaction under sterile controlled conditions at superatmospheric pressure at a temperature above the boiling point of water to a maximum elevated temperature of about 130° C. for a time of from about 1 to about 2 hours in an inert container, to provide a reacted medium comprising an aqueous liquid peat extract phase and a solid hydrolyzed peat phase dispersed therethrough;
adjusting the pH of the reaction medium to about neutral;
removing said neutralized reaction medium from said inert container;
pressing and filtering said removed, neutralized reacted medium in inert equipment; and
recovering both said liquid peat extract, and said solid hydrolyzed peat residue.

5,009,698

METHOD FOR STIMULATING PLANT GROWTH USING SYNTHETICALLY PRODUCED 9-BETA-1(+) ADENOSINE

Stanley K. Ries; Violet F. Wert, and Muraleedharan G. Nair, all of East Lansing, Mich., assignors to Board of Trustees operating Michigan State University, East Lansing, Mich.

Filed Apr. 28, 1989, Ser. No. 345,217
Int. Cl.[5] A01N *43/08, 43/713, 43/90*
U.S. Cl. 71—92 **7 Claims**

1. A method for stimulating the growth of a plant which comprises: applying an effective amount of synthetically prepared 9-beta-L,(+) adenosine to the plant in order to stimulate growth of the plant.

5,009,699

1-{[O-(CYCLOPROPYLCARBONYL)PHENYL]SULFAMOYL}-3-(4,6-DIMETHOXY-2-PYRIMIDINYL)UREA HERBICIDAL COMPOSITION AND USE

Thomas E. Brady, Whitehouse Station; Michael E. Condon, Lawrenceville, and Pierre A. Marc, Willingboro, all of N.J., assignors to American Cyanamid Company, Stamford, Conn.

Filed Jun. 22, 1990, Ser. No. 542,564
Int. Cl.[5] A01N *43/54;* **C07D** *239/69*
U.S. Cl. 71—92 **8 Claims**

1. 1-{[O-(cyclopropylcarbonyl)phenyl]sulfamoyl}-3-(4,6-dimethoxy-2-pyrimidinyl)urea.

5,009,700

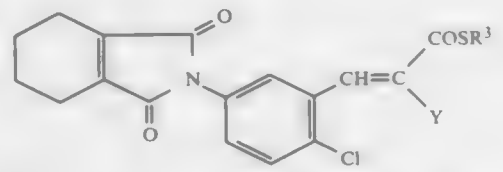
USE OF PYRITHIONE FOR THE CONTROL OF MOSS

Eugene F. Rothgery, North Branford, Conn., assignor to Olin Corporation, Cheshire, Conn.

Filed Jul. 26, 1990, Ser. No. 558,279
Int. Cl.[5] A01N *43/40, 55/02, 31/08*
U.S. Cl. 71—94 **5 Claims**

1. A process for ridding moss from an unwanted location which comprises contacting the moss with a mossicidal effective amount of sodium pyrithione, zinc pyrithione, or a combination thereof.

5,009,701



5-(N-3,4,5,6-TETRAHYDROPHTHALIMIDO)CINNAMIC ACID DERIVATIVES

Peter Plath, Frankenthal; Karl Eicken, Wachenheim; Lothar Rueb, Speyer; Barbara Schwalge, Ludwigshafen; Karl-Otto Westphalen, Speyer, and Bruno Wuerzer, Otterstadt, all of Fed. Rep. of Germany, assignors to BASF Aktiengesellschaft, Ludwigshafen, Fed. Rep. of Germany

Filed Sep. 6, 1989, Ser. No. 403,382
Claims priority, application Fed. Rep. of Germany, Sep. 9, 1988, 3830733
Int. Cl.[5] A01N *43/38;* **C07D** *209/48*
U.S. Cl. 71—96 **12 Claims**

1. A 5-(N-3,4,5,6-tetrahydrophthalimido)cinnamic acid compound of the formula Ib

Ib

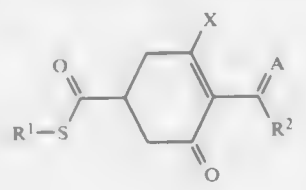
where the substituents have the following meanings:

Y is chlorine, bromine or C_1–C_4-alkyl, and

R^3 is C_1–C_6-alkyl, or C_2–C_6-alkyl mono- to tri-substituted by C_1–C_4-alkoxy, C_1–C_4-alkylthio and/or hydroxyl.

2. A herbicidal composition which comprises: an effective amount of a 5-(N-3,4,5,6-tetrahydrophthalimido)-cinnamic acid compound of the formula Ib as set forth in claim 1, and herbicidally acceptable carrier.

5,009,702



CYCLOHEXENONE COMPOUNDS AND USE AS HERBICIDES OR AS PLANT GROWTH REGULATORS

Michael Keil, Freinsheim; Ulrich Schirmer, Heidelberg; Juergen Kast, Boehl-Iggelheim; Dieter Kolassa, Ludwigshafen; Bruno Wuerzer, Otterstadt; Norbert Meyer, Ladenburg; Wilhelm Rademacher; Johann Jung, both of Limburgerhof, all of Fed. Rep. of Germany, and Dale R. Carlson, Durham, N.C., assignors to BASF Aktiengesellschaft, Ludwigshafen, Fed. Rep. of Germany

Continuation-in-part of Ser. No. 240,465, Sep. 2, 1988, abandoned, which is a continuation-in-part of Ser. No. 201,891, Jun. 3, 1988, abandoned. This application Mar. 22, 1989, Ser. No. 327,352
Int. Cl.[5] A01N *37/00;* **C07C** *327/00*
U.S. Cl. 71—100 **5 Claims**

1. A cyclohexenone compound of the formula I

(I)

where

R^1 is hydrogen; C_1–C_6-alkyl which is unsubstitued or substituted by C_1–C_4-alkoxy, C_1–C_4-alkylthio, C_1–C_4-dialkylamino, hydroxyl or halogen; C_1–C_6-alkenyl; C_3–C_6-cycloalkyl; or phenyl or benzyl which is unsubstituted or substituted by halogen, C_1–C_4-alkyl, C_1–C_4-alkoxy or nitro,

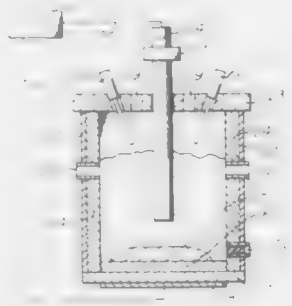
R^2 is C_1–C_4-alkyl or cyclopropyl,

A is oxygen; a radical NOR^3, where R^3 is C_1–C_4-alkyl, C_3- or C_4-alkenyl, C_3- or C_4-alkynyl, C_2–C_4-haloalkyl, C_3- or C_4-haloalkenyl or C_2–C_4-alkoxyalkyl; or a radical NR^4, where R^4 is hydrogen, C_1–C_6-alkyl, C_1–C_4-hydroxyalkyl, C_1–C_4-alkoxyalkyl, benzyl or phenyl, and X is hydroxyl; chlorine; C_1–C_6-alkylthio which is unsubstituted or substituted by C_1–C_4-alkoxy, C_1–C_4-alkylthio, C_1–C_4-dialkylamino, hydroxyl or halogen; C_1–C_6-alkenylthio; C_3–C_6-cycloalkylthio; or phenylthio or benzylthio which is unsubstituted or substituted by halogen, C_1–C_4-alkoxy or nitro.

5. A method of controlling undesirable plants, wherein the plants and/or the area to be kept free of the plants are treated with a herbicidally effective amount of a cyclohexenone compound of the formula I as claimed in claim 1, where A is a radical NOR^3.

5,009,703

SILICON SMELTING PROCESS IN DIRECT CURRENT FURNACE



Arvid N. Arvidson; Vishu D. Dosaj, and James B. May, all of Midland, Mich., assignors to Dow Corning Corporation, Midland, N.J.

Filed Aug. 13, 1990, Ser. No. 566,911
Int. Cl.[5] C22B *4/00*
U.S. Cl. 75—10.36 **15 Claims**

1. A process for preparation of elemental silicon, the process comprising:

(A) adding a feed mixture comprising a source of silicon dioxide and a source of carbon to a substantially closed furnace:

(B) heating the substantially closed furnace with a direct current, submerged-arc; and

(C) tapping elemental silicon from the substantially closed furnace

5,009,704

PROCESSING NICKEL-BASE SUPERALLOY POWDERS FOR IMPROVED THERMOMECHANICAL WORKING

Anthony Banik, Mesa, Ariz., assignor to Allied-Signal Inc., Morristownship, N.J.

Filed Jun. 28, 1989, Ser. No. 373,354
Int. Cl.[5] C22C *29/04*
U.S. Cl. 75—238 **8 Claims**

1. A process for preparing a consolidated nickel-based superalloy compact which may be forged at high strain rates comprising the steps of:

introducing said superalloy powder of known composition into a container;

evacuating and sealing the container containing the powder under a vacuum;

hot isostatically pressing the container to form a consolidated compact at a first temperature, time and pressure, said first temperature being above the incipient melting temperature of the powder to solutionize complex boride and carbide compounds but below the temperature necessary to solutionize the stable metal carbide phase during said time and pressure;

heating the compact to a second temperature below the incipient melting temperature;

holding the compact at said second temperature for a second period of time to homogenize the compact; and

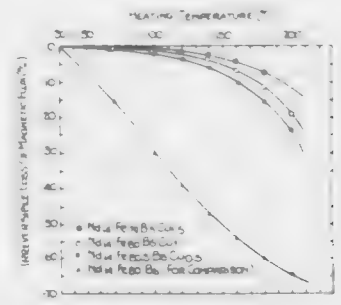
cooling the compact to room temperature.

5,009,705

MICRODRILL BIT

Hironori Yoshimura, and Inada Shyogo, both of Tokyo, Japan, assignors to Mitsubishi Metal Corporation, Tokyo, Japan

Filed Dec. 28, 1989, Ser. No. 458,099
Int. Cl.[5] C22C *29/08*
U.S. Cl. 75—240 **3 Claims**



1. A miorodrill bit made of a tungsten carbide based cemented carbide which contains a binder phase of 6% by weight to 14% by weight of a cobalt alloy and a hard dispersed phase of balance tungsten carbide, said cobalt alloy being comprised of cobalt, chromium, vanadium and tungsten, and having weight ratios so as to satisfy the relationships of $0.04 \leqq (c+d)/(a+b+c+d) \leqq 0.10$ and $0.50 \leqq c/(c+d)$ 0.95, where a, b, c and d denote weight ratios of tungsten, cobalt, chromium and vanadium, respectively; said cemented carbide having a Rockwell A scale hardness of 92.0 to 94.0.

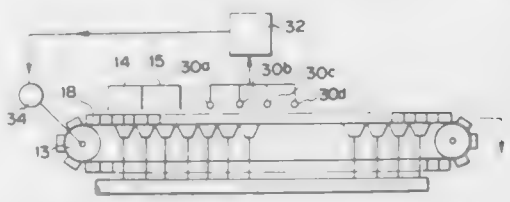
5,009,706

RARE-EARTH ANTISOTROPIC POWDERS AND MAGNETS AND THEIR MANUFACTURING PROCESSES

Hiroaki Sakamoto; Masahiro Fujikura, and Toshio Mukai, all of Kawasaki, Japan, assignors to Nippon Steel Corporation, Tokyo, Japan

Continuation of Ser. No. 475,460, Feb. 6, 1990, abandoned. This application Jul. 18, 1990, Ser. No. 554,109
Claims priority, application Japan, Aug. 4, 1989, 1-202675
Int. Cl.[5] C22C *29/14*
U.S. Cl. 75—244 **18 Claims**

1. A rare-earth alloy anisotropic powder consisting essentially of, in atomic percent, over 12 percent and not more than 20 percent of R (R is at least one of neodymium and praseodymium or at least one of them and one or more rare-earth elements), not less than 4 percent and not more than 10 percent of boron, not less than 0.05 percent and not more than 5 percent of copper and the rest that consists essentially of iron and unavoidable impurities,



the alloy powder being made up of flat crystal grains having mean thickness h (the shortest measure), d not smaller than 0.01 μm and not larger than 0.5 μm and ratio d/h not smaller than 2, d being the mean measure of the grains taken at right angles to the widthwise direction thereof, and the alloy powder being magnetically anisotropic.

5,009,707

METHOD FOR MANUFACTURING AGGLOMERATES OF SINTERED PELLETS

Hidetoshi Noda; Makoto Gocho; Masayasu Shimizu; Osamu Komatsu, and Hideaki Inoue, all of Tokyo, Japan, assignors to NKK Corporation, Tokyo, Japan

Filed Dec. 29, 1989, Ser. No. 456,800
Claims priority, application Japan, Feb. 13, 1989, 1-33428; Feb. 13, 1989, 1-33429; Feb. 20, 1989, 1-39709
Int. Cl.[4] C22B *1/20*
U.S. Cl. 75—375 **14 Claims**

1. A method for manufacturing agglomerates of sintered pellets comprising the steps of:

mixing and pelletizing fine iron ore, flux, binder and return fines;

coating pelletized materials obtained in said step of the mixing and pelletizing with powdery solid fuel, thereby producing green pellets coated with powdery solid fuel;
charging said green pellets into a sintering machine;
drying said green pellets in a dry furnace on said sintering machine and igniting said green pellets in an ignition furnace;
sintering said green pellets on said sintering machine;
measuring a noise level by the use of a noise sensor placed at the ignition furnace, said noise level being indicated by means of a bursting sound produced by said green pellets when said green pellets are burst at the time of the ignition of said green pellets, and permeability of a sintering bed of the sintering machine being worsened when said noise level becomes high; and
taking operation control action in response to said noise level, said operation control action improving the permeability of the sintering bed.

5,009,708

PRINTING PASTE AND METHOD OF APPLYING SAID PASTE

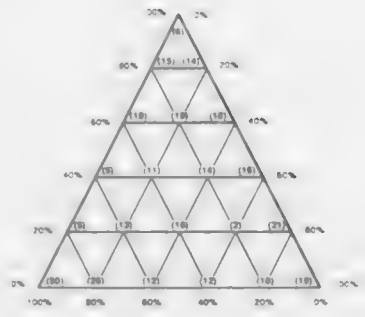
Werner Grünwald, Gerlingen; Gerhard Holfelder, Weissach; Claudio De La Prieta, Stuttgart, and Kurt Schmid, Ditzingen, all of Fed. Rep. of Germany, assignors to Robert Bosch GmbH, Stuttgart, Fed. Rep. of Germany

Continuation of Ser. No. 270,395, Nov. 10, 1988, abandoned, which is a continuation of Ser. No. 133,157, Dec. 11, 1987, abandoned, which is a continuation of Ser. No. 919,626, Oct. 15, 1986, abandoned, which is a continuation of Ser. No. 802,077, Nov. 26, 1985, abandoned, which is a continuation of Ser. No. 613,567, May 24, 1984, abandoned, which is a continuation-in-part of Ser. No. 427,601, Sep. 29, 1982, abandoned. This application Aug. 31, 1989, Ser. No. 403,040
Claims priority, application Fed. Rep. of Germany, Nov. 17, 1981, 3145583
Int. Cl.[5] C09D *5/10;* **C23C** *20/04*
U.S. Cl. 106—105 **19 Claims**

1. A printing paste suitable for application on a non-planar substrate, said paste being a thixotropic paste having a viscosity between about 6 and 8.5 pascal-seconds and consisting essentially of
a solid component in powder form, and
an organic carrier consisting essentially of between 4 and 9% by weight ethyl cellulose, between 74 and 82% alpha-terpineol, and between 8 and 17% benzyl alcohol, and
the relative proportions, by weight, between said solid component and said organic carrier being between 6:4 and 8:2.

5,009,709

STRONG DENTAL PORCELAIN AND METHOD FOR ITS MANUFACTURE



Robert L. Ibsen; Thomas C. Chadwick, and Sally A. Pritchard, all of Santa Maria, Calif., assignors to Den-Mat Corporation, Santa Maria, Calif.

Continuation of Ser. No. 244,853, Sep. 15, 1988, abandoned. This application Jul. 3, 1990, Ser. No. 548,294
Int. Cl.[5] A61C *13/00, 13/083;* **C01K** *3/00*
U.S. Cl. 106—35 **13 Claims**

1. A base frit for dental porcelain, including in combination a portion of feldspar comprising:

Ingredient	Weight by Percent
SiO_2	67.1%
Al_2O_3	18.5%
Na_2O	3.0%
K_2O	10.5%, and
CaO	0.9%

mixed with a Glass 1, comprising:

Ingredient	Weight by Percent
SiO_2	55.4%
Al_2O_3	7.19%
Na_2O	6.68%
K_2O	20.2%
MgO	1.92%
CaO	8.32%
SrO	0.05%
BaO	0.22%
TiO_2	0.02%

and then mixed with a Glass 2, comprising:

Ingredient	Weight by Percent
SiO_2	46.0%
Al_2O_3	0.74%
Na_2O	20.0%
K_2O	0.06%
CaO	3.8%
SrO	3.5%
BaO	12.5%
TiO_2	5.6%
B_2O_3	7.8%.

and then mixed with lithium carbonate.

5,009,710

ALGINATE COMPOSITION FOR APPLICATION TO A SOIL OR PLANT LOCUS

John A. Bewsey, Transvaal, South Africa, assignor to Harvest Chemicals (Proprietary) Limited, South Africa

Continuation of Ser. No. 196,627, May 19, 1988, abandoned. This application Oct. 30, 1989, Ser. No. 428,432
Int. Cl.[5] C05B *37/04, 17/00, 3/00*
U.S. Cl. 106—208 **6 Claims**

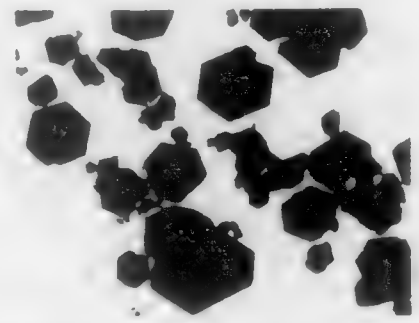
1. A thixotropic composition for application to a plant locus, comprising
a gel comprising water, an alkaline earth metal alginate gel matrix uniformly dispersed throughout the water, bentonite, and at least about 0.05 percent by weight of insolubles having a particle size less than about 70 microns, wherein the weight ratio of the alginate gel to the bentonite is about 1:1 to 1:10, the water is present in an amount of at least about 90 wt % of the gel and the alginate gel matrix is present in an amount of up to about 5 wt % by weight of the gel.

5,009,711

GOLDEN COLOR LUSTER PIGMENTS

Ralf Emmert, Bayonne, N.J., and Manfred Weigand, Darmstadt, Fed. Rep. of Germany, assignors to Merck Patent Gesellschaft mit Beschrankter Haftung, Darmstadt, Fed. Rep. of Germany

Filed Sep. 12, 1988, Ser. No. 243,540
Claims priority, application Fed. Rep. of Germany, Sep. 11, 1987, 3730505
Int. Cl.[5] C04B *14/20*
U.S. Cl. 106—415 **20 Claims**



1. A lustrous, colored pigment, comprising a lamellar substrate coated with a topmost metal oxide layer containing both titanium and iron wherein said metal oxide layer consists essentially of pseudobrookite.

5,009,712

NON-MAGNETIC PIGMENTS

Kousaku Tamari, and Tsutomu Katamoto, both of Hiroshima, Japan, assignors to Toda Kogyo Corp., Hiroshima, Japan

Filed Dec. 14, 1989, Ser. No. 448,196
Claims priority, application Japan, Dec. 23, 1988, 63-326420; Nov. 7, 1989, 1-290783; Nov. 7, 1989, 1-290784
Int. Cl.[5] C09C *1/22*
U.S. Cl. 106—456 **18 Claims**

1. A non-magnetic pigment comprising plate-like potassium ferrite particles having and average diameter of 0.03–30.0 μm.

5,009,713

CEMENT COMPOSITION AND A PROCESS FOR PREPARATION THEREOF

Masaharu Sakuta, Tokyo; Toshiharu Urano, Nagoya; Kyoichi Tanaka; Masashi Sugiyama, both of Ibaraki; Shyuzo Endoh, Tokyo, and Keisuke Fujioka, Kawasaki, all of Japan, assignors to Fujisawa Pharmaceutical Company, Ltd.; Takenaka Komuten Company, Ltd., both of Osaka and Nippon Nyukazai Company, Ltd., Tokyo, all of, Japan

Filed Feb. 13, 1987, Ser. No. 14,593
Claims priority, application Japan, Feb. 25, 1986, 61-038277
Int. Cl.[5] C04B *7/00*
U.S. Cl. 106—727 **9 Claims**

1. A hydraulic cement composition comprising, as a carbonation inhibitor of the cement composition, at least one compound of the formula (I):

$$A\text{-}(Y_n\text{-}H)_l \qquad (I)$$

wherein A is a polyamine residue containing 2–10 carbon atoms,

Y is $-C_3H_6O-$,

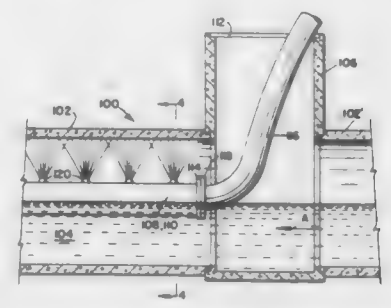
l is a number equal to 1–8,
n is a number equal to 1–4,
the product $n \times l$ is equal to 13–20,
the active hydrogen(s) involved in the amino groups in the polyamine residue being partly or wholly substituted with the residue(s) of propylene oxide.

5,009,714

PROCESS FOR REMOVING COPPER AND COPPER OXIDE DEPOSITS FROM SURFACES

Stephen T. Arrington, and Gary W. Bradley, both of Duncan, Okla., assignors to Halliburton Company, Duncan, Okla.

Filed Aug. 25, 1989, Ser. No. 398,687
Int. Cl.[5] C03C *23/00*
U.S. Cl. 134—2 **18 Claims**



1. A process for removing copper from a surface comprising:
contacting the copper with sufficient quantities of gaseous oxygen such that copper oxide is formed; and contacting the copper oxide with a solution
comprising said gaseous oxygen and sufficient amounts of ammonia and an inorganic ammonium salt to dissolve at least a substantial portion of the copper oxide.

5,009,715

METHOD FOR PREVENTING DETERIORATION OF CONCRETE PIPE

R. E. Wilson, 678 Alderwood Dr., Newport Beach, Calif. 92660

Division of Ser. No. 44,405, Apr. 30, 1987, Pat. No. 4,899,770. This application Nov. 20, 1989, Ser. No. 438,310
Int. Cl.[5] B08B *3/02*
U.S. Cl. 134—22.11 **23 Claims**

1. A method of cleansing away concrete deteriorating acid from interior wall surfaces of concrete sewer conduit, in a sewerage system, normally unwashed by a flow of sewerage therethrough, comprising: introducing a plurality of spray-forming nozzle means into and spaced-apart along said concrete sewer conduit; orienting said nozzle means within said sewer conduit such that spray formed by cleansing fluid passing from said nozzle means will contact and wash said normally unwashed interior wall surfaces of said concrete conduit; connecting said nozzle means via tubular means to a pressurized source of cleansing fluid; and thereby causing said cleansing fluid to flow to said nozzle means; leaving said nozzle means within said concrete sewer conduit a sufficient period of time to enable a spraying operation of cleansing fluid from said nozzles, which can be a continuous operation, during the course of utilization of said concrete sewer conduit in the sewerage system; whereby a spray of said cleansing fluid formed by said nozzle means will wash from said interior wall surfaces concrete deteriorating acid introduced by any means including acid forming bacteria thereby prolonging the useful life of said concrete sewer conduit.

5,009,716

BLANKET AND ROLLER WASH FOR PRINTING APPARATUS

David Gerson, Woodbridge, N.J., assignor to Printers' Service, Inc., Newark, N.J.

Filed May 16, 1989, Ser. No. 352,466
Int. Cl.[5] B08B *3/08*
U.S. Cl. 134—40 **6 Claims**

1. A method for removing paste ink from printing rollers and blankets, comprising:
(a) applying a blanket and roller wash to an inked surface of

a printing roller or blanket, wherein said wash consists essentially of at least 1% by volume of a nonionic surfactant having a hydrophilic/lipophilic balance of 8.5 to 17.5, 7–97.25% by volume of a monobasic fatty acid having 12 to 20 carbon atoms, and 0–92% by volume of a mineral oil selected from the group of saturated hydrocarbon oils that have a viscosity no higher than 165 SSU at 100° F. and a vapor pressure no higher than 0.1 mm Hg at 20° C.;

(b) allowing said wash to coat said surface and penetrate the ink thereon;

(c) removing material from said surface;

(d) applying additional portions of said wash to said surface until the material that is removed from said surface is substantially clear; and

(e) applying water to said surface until said surface is free of any oily residue.

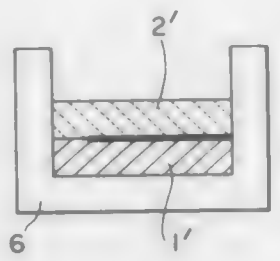
THERMOELECTRIC ELEMENT AND METHOD OF MANUFACTURING SAME



Masashi Komabayashi; Kunio Kuramochi, and Kenichi Hijikata, all of Ohmiya, Japan, assignors to Mitsubishi Metal Corporation, Tokyo, Japan

Filed Jul. 11, 1990, Ser. No. 550,879

Claims priority, application Japan, Jul. 18, 1989, 1-185767; Apr. 11, 1990, 2-95868; Apr. 25, 1990, 2-109802

Int. Cl.[5] H01L *35/34, 35/12*

U.S. Cl. 136—[illegible]1 7 Claims

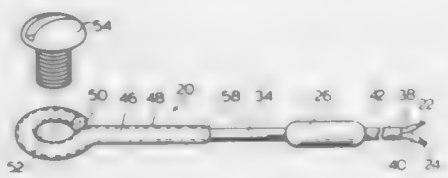
1. In a thermoelectric element comprising a first layer of a p-type iron silicide, a second layer of an n-type iron silicide, said first and second layers being joined together to form a pn junction therebetween, and an insulating layer of an oxide interposed between said first and second layers portions thereof other than said pn junction, the improvement wherein said oxide forming said insulating layer consists essentially of:

SiO_2: 38.0–50 % by weight;

B_2O_3: 0.1–10.0 % by weight; and

MgO and inevitable impurities: the balance.

5,009,718



THERMOCOUPLE CONSTRUCTION

Harald H. Schmidt, Georgetown, Canada, assignor to Mold-Masters Limited, Georgetown, Canada

Filed Dec. 22, 1988, Ser. No. 288,441

Int. Cl.[5] H01L *35/02*

U.S. Cl. 136—232 6 Claims

1. In a thermocouple assembly for measuring temperature adjacent the forward end thereof, the thermocouple assembly having a pair of wires formed of dissimilar metals extending through electrical insulating material in a thin metal sheath to a junction adjacent the forward end of the assembly, the improvement wherein:

a forward portion of the sheath is retainably received in a casing having a closed forward end, the casing and the enclosed portion of the sheath being bent to a shape suitable to receive connecting means therethrough in order to accurately secure the forward end of the thermocouple assembly within said bent portion and in a desired position during use.

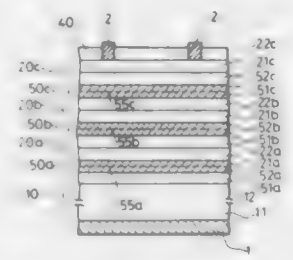
TANDEM SOLAR CELL



Susumu Yoshida, Hyogo, Japan, assignor to Mitsubishi Denki Kabushiki Kaisha, Japan

Filed Nov. 8, 1989, Ser. No. 433,278

Claims priority, application Japan, Feb. 17, 1989, 1-38691

Int. Cl.[5] H01L *31/068*

U.S. Cl. 136—249 9 Claims

1 A tandem solar cell including:

an upper solar cell for converting relatively short wavelength incident light into electricity, comprising a first crystalline semiconductor having a first lattice constant and first energy band gap;

an intermediate solar cell for converting relatively long wavelength incident light that has passed through said upper solar cell into electricity, comprising a second crystalline semiconductor having a second energy band gap smaller than the first energy band gap;

a lower solar cell for converting relatively long wavelength incident light that has passed through said intermediate solar cell into electricity, comprising a third crystalline semiconductor having a third energy band gap smaller than the second energy band gap; and

crystalline semiconductor buffer layers respectively disposed between said upper and intermediate solar cells and between said intermediate and lower solar cells, each buffer layer having an energy band gap larger than the first energy band gap and a lattice constant approximately the same as the first lattice constant and including a tunneling junction within each of said buffer layers.

5,009,720

SOLAR CELL

Shigeru Hokuyo; Takao Oda, and Hideo Matsumoto, all of Itami, Japan, assignors to Mitsubishi Denki Kabushiki Kaisha, Japan

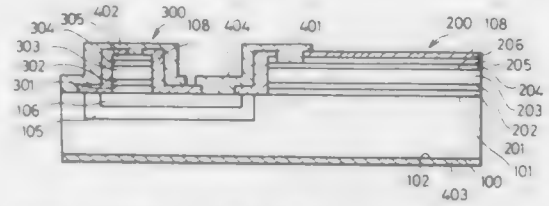
Filed Nov. 9, 1989, Ser. No. 437,981

Claims priority, application Japan, Nov. 16, 1988, 63-290990; Aug. 19, 1989, 1-213628

Int. Cl.[5] H01L *31/06, 31/18*

U.S. Cl. 136—255 15 Claims

1. A solar cell comprising:



a semiconductor substrate of a first conductivity type having opposed first and second major surfaces;

a first region of a second conductivity type extending from a portion of said first major surface into said substrate;

a second region of the first conductivity type disposed within said first region and including said first major surface;

a photovoltaic section disposed on said first major surface and spaced from said first region including a first compound semiconductor layer of the first conductivity type and a second compound semiconductor layer of the second conductivity type disposed on said first compound semiconductor layer;

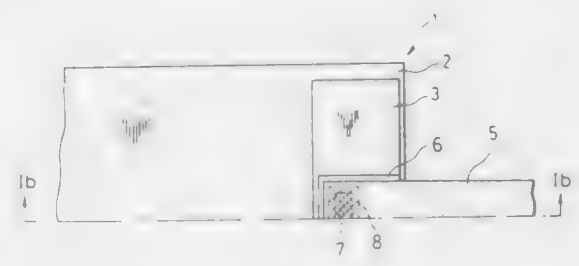
a diode section disposed within said second region of first conductivity type and including diode regions of first and second conductivity type;

a first electrode connecting said second compound semiconductor layer in reverse polarity to said diode section through said second region of first conductivity type; and

a second electrode disposed on said first major surface of said substrate whereby said diode region of second conductivity type is electrically connected to said first conductivity type substrate.

5,009,721

SOLAR CELL



Hideo Matsumoto, Kobe, and Shigeru Hokuyo, Itami, both of Japan, assignors to Mitsubishi Denki Kabushiki Kaisha, Japan

Filed Aug. 2, 1989, Ser. No. 388,381

Claims priority, application Japan, Aug. 26, 1988, 63-212905

Int. Cl.[5] H01L *31/05*

U.S. Cl. 136—256 7 Claims

1. A solar cell for use in a device in which a plurality of solar cell elements are interconnected, comprising:

a solar cell element for converting light into electricity, including a photoresponsive junction in a semiconductor body and first and second electrodes disposed on said body, an interconnector for interconnecting said solar cell elements to another solar cell element, joined to said first electrode, and a metal film disposed between and welded to said first electrode and said interconnector, wherein the welded area between said metal film and said first electrode is about three times the welded area between said metal film and said interconnector.

5,009,722

PROCESS FOR PRODUCING BASE MATERIAL FOR AN ALUMINUM OFFSET PRINTING PLATE

Gerhard Sprintschnik, Taunusstein; Walter Niederstaetter, Eltville; Kurt Reiss, Wiesbaden; Wolfgang von Asten, Pulheim; Gunther Scharf, Boon, and Barbara Grzembra, Bonn, all of Fed. Rep. of Germany, assignors to Hoechst AG, Frankfurt am Main and Vereinigte-Aluminum Werke A.G., Bonn, both of, Fed. Rep. of Germany

Division of Ser. No. 186,152, Apr. 26, 1988, Pat. No. 4,945,004. This application May 23, 1990, Ser. No. 527,567

Claims priority, application Fed. Rep. of Germany, Apr. 28, 1987, 3714059

Int. Cl.[5] C22F *1/04*

U.S. Cl. 148—2 10 Claims

1. A process for producing a base material for aluminum offset printing sheets which base material comprises an aluminum alloy consisting of from about 0.2 to about 0.6% by weight of iron, less than about 0.25% by weight silicon and copper combined, from about 0.1 to about 0.3% by weight manganese and the remainder being aluminum and trace production impurities, said base material further characterized as containing secondary precipitates in the form of phases of Al Mn Si: Al Fe: Al Mn which bear a ratio to one another of from about 1:1:2 to about 1:1:3, the mean particle size of said phases being from about 0.05 to about 0.10 micron with a maximum particle size of less than about 0.3 micron and further containing a precipitation structure with a degree of dispersion of less than about 50 phases per cubic micron, said process comprising:

(a) casting an ingot of the aluminum alloy;

(b) homogenizing said ingot at a metal temperature within the range of about 550° to about 600° C. for a soaking period of at least about 4 hours;

(c) hot rolling said ingot at a metal temperature of from about 460° to about 550° C. to form a sheet;

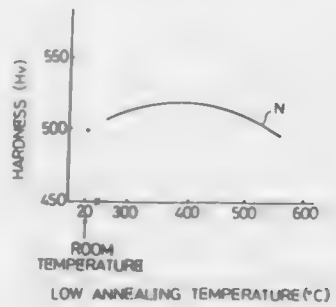
(d) hot strip rolling said sheet at a temperature of from about 300° to about 330° C. until the sheet thickness ranges from about 2.5 to about 3.5 mm;

(e) cooling said sheet to below about 30° C.; and

(f) subjecting said sheet to a cold rolling process until a final sheet thickness ranging from about 0.5 to about 1.0 mm is obtained.

5,009,723

METHOD FOR MANUFACTURING HIGH STRENGTH NON-MAGNETIC STAINLESS STEEL



Yoshinobu Honkura, Kounan; Toru Matsuo, and Kouji Murata, both of Tokai, all of Japan, assignors to Aichi Steel Works, Ltd, Aichi, Japan

Division of Ser. No. 222,382, Jul. 19, 1988, abandoned, which is a continuation of Ser. No. 6,241, Jan. 20, 1987, abandoned, which is a continuation of Ser. No. 714,044, Mar. 18, 1985, abandoned. This application Jul. 5, 1989, Ser. No. 375,460

Claims priority, application Japan, Mar. 20, 1984, 59-53695

Int. Cl.[5] C21D *8/00*

U.S. Cl. 148—12 E 7 Claims

1. A method for manufacturing a high strength non-magnetic stainless steel comprising the steps of preparing a steel

composed of, by weight, not more than 0.20% carbon, not more than 1.00% silicon, 14–16% manganese, not more than 0.003% sulfur, 0.2–1.0% nickel, 15–19% chromium, 0.30–0.40% nitrogen, the remainder being iron together with impurities said carbon and said nitrogen constituting 0.40–0.55% and the manganese equivalent being 30–33 and drawing said steel at a reduction of area in a range of 50–70%.

5,009,724

SOLDERING FLUX AND METHOD OF ITS USE IN FABRICATING AND ASSEMBLING CIRCUIT BOARDS

Courtney V. Dodd, Oklahoma City, Okla., and Gregory C. Munie, Naperville, Ill., assignors to AT&T Bell Laboratories, Murray Hill, N.J.

Filed Jul. 2, 1990, Ser. No. 546,646
Int. Cl.[5] B23K *35/34*
U.S. Cl. 148—23 18 Claims

1. A water-soluble soldering flux, which, when applied to a circuit board, does not degrade the surface insulation resistance of the board following the soldering and subsequent cleaning thereof, comprising:

a water-soluble vehicle;

an activator; and

a hydrophobic surfactant which is preferentially adsorbed by the surface of the circuit board over the vehicle and the activator to render the surface substantially hydrophobic.

5,009,725

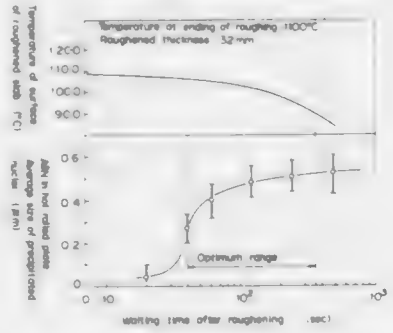
FLUXING AGENTS COMPRISING β-DIKETONE AND β-KETOIMINE LIGANDS AND A PROCESS FOR USING THE SAME

Thomas L. Ellison, San Jose; David A. Roberts, Carlsbad, both of Calif.; John C. Ivankovits, Northampton, and John A. T. Norman, Whitehall, both of Pa., assignors to Air Products and Chemicals, Inc., Allentown, Pa.

Filed Mar. 30, 1990, Ser. No. 502,209
Int. Cl.[5] B23K *35/34*
U.S. Cl. 148—23 20 Claims

1. A process for fluxing an article having at least a portion of a surface coated with a metal species comprising contacting the portion of the article to be fluxed with an effective amount of a β-diketone or β-ketoimine ligand at at temperature sufficient to form a metal-ligand complex on the surface of the article to be fluxed and removing the resultant metal-ligand complex from the surface of the article by sublimation rendering the surface of the article substantially free of the surface coating.

5,009,726



METHOD OF MAKING NON-ORIENTED SILICON STEEL SHEETS HAVING EXCELLENT MAGNETIC PROPERTIES

Akihiko Nishimoto; Yoshihiro Hosoya; Kunikazu Tomita; Toshiaki Urabe, and Masaharu Jitsukawa, all of Tokyo, Japan, assignors to NKK Corporation, Tokyo, Japan

PCT No. PCT/JP89/00232, § 371 Date Oct. 12, 1989, § 102(e) Date Oct. 12, 1989, PCT Pub. No. WO89/08151, PCT Pub. Date Sep. 8, 1989
PCT Filed Mar. 3, 1989, Ser. No. 427,128
Claims priority, application Japan, Mar. 4, 1988, 63-49576
Int. Cl.[5] H01F *1/047*
U.S. Cl. 148—111 3 Claims

1. A method of making non-oriented silicon steel sheets having excellent magnetic properties, comprising roughing a slab so as to form a bar immediately after continuously casting thereof to thickness of more than 20 mm at reduction rate of more than 10% without maintaining the heat or heating at specified temperature range, said slab containing C: not more than 0.005 wt %, Si: 1.0 to 4.0 wt %, Mn: 0.1 to 1.0 wt %, P: not more than 0.1 wt %, S: not more than 0.005 wt %, Al: 0.1 to 2.0 wt %, balance being Fe and inavoidable impurities; having a time interval of more than 40 sec at temperature range where the surface temperature of the roughed bar is more than 900° C till a following finish rolling; performing a final rolling and coiling so as to form a coiled plate at temperature of not more than 650° C., annealing the hot rolled plate by soaking it at the temperature of 800° to 950° C. for a time satisfying

$$\exp(-0.022T + 21.6) \leqq t \leqq \exp(-0.030T + 31.0)$$

wherein,

T: soaking temperature (° C.)

T: soaking time (min), carrying out a cold rolling of once or old rollings of more than twice interposing an intermediate annealing and a final continuous annealing at range of temperature between 850° and 1100° C.

5,009,728

CASTABLE, INSENSITIVE ENERGETIC COMPOSITIONS

May L. Chan, and Alan D. Turner, both of Ridgecrest, Calif., assignors to The United States of America as represented by the Secretary of the Navy, Washington, D.C.

Filed Jan. 12, 1990, Ser. No. 464,076
Int. Cl.[5] C06B *45/10*
U.S. Cl. 149—19.1 16 Claims

1. A castable, insensitive energetic composition consisting essentially of a homogenous solution of 65 to 85% by weight of energetic oxidizer solids of a polynitroalkyl substituted compound in which each poltnitroalkyl contains from 1–5 carbon atoms in a plasticized thermoplastic elastomer, the said plasticizer thereof being a C_1 to C_{10} alkyl ester of an organic acid, said thermoplastic elastomer being a block copolymer containing both oleophilic hydrocarbon polymer segments and polar, oxygen containing polymer segments.

5,009,729

MATCH HEAD COMPOSITION AND METHOD OF MAKING SAME

Stanley J. Radkowski, 7 Katie Dr., Wilbraham, Mass. 01095

Filed Oct. 22, 1990, Ser. No. 600,742
Int. Cl.[5] D03D *23/00*
U.S. Cl. 149—109.4 14 Claims

1. A match head composition comprising a pyrotechnic mixture of an igniting agent, combustibles, oxidizers, fillers and an animal glue or colored gelatin binder, the improvement which comprises the addition of sodium dithionite and a cross-linking agent selected from the group consisting of dichromates, dialdehydes or a mixture of both to said mixture.

5,009,730

SYSTEM OF RESTORING ROUGH TOOL HANDLES

Michel C. Tozier, P.O. Box 858, Durham, Calif. 95938

Continuation-in-part of Ser. No. 279,970, Dec. 5, 1988, abandoned. This application Oct. 2, 1989, Ser. No. 416,036
Int. Cl.[5] B32B *31/26*
U.S. Cl. 156—85 8 Claims

1. A system of restoring a smoother, splinter free gripping surface to a wooden tool handle having become roughened with defects, wherein the defects are utilized to create a textured, non-slip said gripping surface on the tool handle, said system comprising in combination:

utilizing a heat shrinkable tubing of a thin walled nature and having a recovery temperature range between about 180 and 240 degrees fahrenheit;

said heat shrinkable tubing further having a generally larger expanded internal diameter than the external diameter of the tool handle to allow slipping of said tubing over the tool handle;

said heat shrinkable tubing further having a shrinkage ratio and expanded internal diameter allowing a recovered internal diameter of said tubing to less than the external diameter of the tool handle;

said heat shrinkable tubing further being of sufficient length to cover at least a hand placement area of the tool handle;

said heat shrinkable tubing further being of sufficient strength to generally resist puncture by the defects on the tool handle;

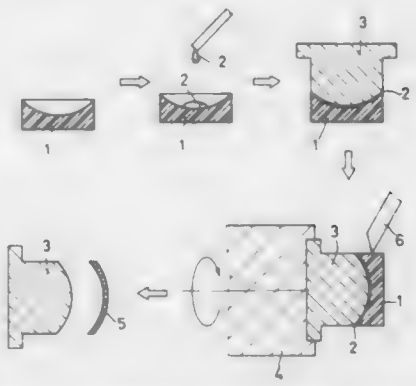
said heat shrinkable tubing further being of a sufficient said thin walled nature and of sufficient pliability during heating thereof to conform to the tool handle and the defects thereof;

said heat shrinkable tubing further being of a sufficient rigidity after heating to fixedly adhere to the tool handle;

said system further including inserting the tool handle into said heat shrinkable tubing, placing said heat shrinkable tubing over the hand placement area of the tool handle, heating said heat shrinkable tubing with heat;

said heat being supplied from a common household handheld hair dryer having a universally fitting auxiliary air concentration nozzle removably attached thereto, said air concentration nozzle being conically shaped having a larger end thereof fitted over an air discharge barrel of said hair dryer, a narrow end of said air concentration nozzle being smaller in diameter than said barrel of said hair dryer, said narrow end of said air concentration nozzle having means to concentrate heat ejected from said barrel of said hair dryer to cause recovery of said heat shrinkable tubing onto the handle;

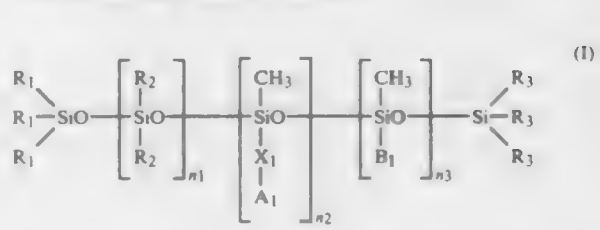
application of said heat from said hair dryer with attached said air concentration nozzle for a sufficient period of time to reduce said internal diameter of said heat shrinkable tubing to said recovered diameter;



said thin walled nature and pliability providing means to allow said heat shrinkable tubing to conform to the tool handle during said heating as to allow the defects of the tool handle to extend into said heat shrinkable tubing creating said textured non-slip gripping surface on the tool handle in the area of the heat shrinkable tubing.

5,009,731

ULTRAVIOLET-HARDENABLE ADHESIVE AND BONDING METHOD EMPLOYING SAME



Toshiharu Yoshikawa, Nagoya, and Shozou Sagiura, Toyoake, both of Japan, assignors to Menicon Co., Ltd., Aichi, Japan

Filed Oct. 25, 1989, Ser. No. 426,199
Int. Cl.[5] B32B *31/00*
U.S. Cl. 156—154 14 Claims

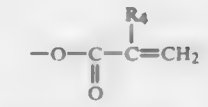
1. A method of bonding a water-swellable, ophthalmic-lens blank to a support member so as to subject the ophthalmic-lens blank to working and/or treatment, in producing a water-swellable ophthalmic lens, comprising the steps of:

preparing an ultraviolet-hardenable adhesive comprising at least one photo-hardenable silicone oil and at least one photoinitiator, said at least one silicone oil being selected from the group consisting of polysiloxanes represented by the following general formula (I):

(I)

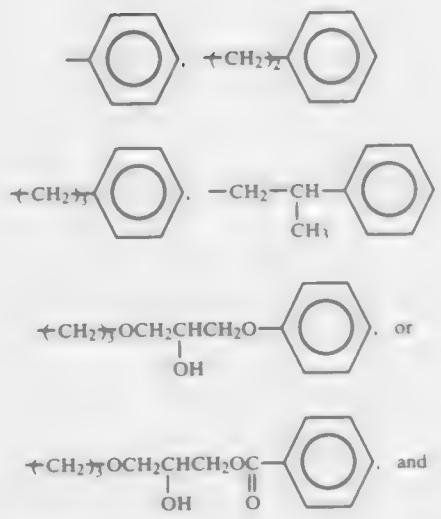
, wherein each of R_1 to R_3 is methyl or ethyl; n_1, n_2 and n_3 are positive integers, respectively, which satisfy the following formulas:

$$40 \leqq n_1 + n_2 + n_3 \leqq 1500$$



$$0.04 \leqq \frac{n_2}{n_1 + n_2 + n_3} \leqq 0.6$$

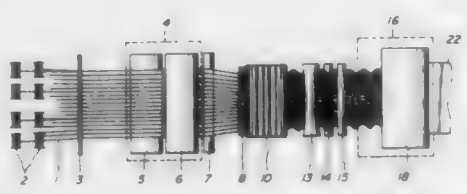
$$0.002 \leqq \frac{n_3}{n_1 + n_2 + n_3} \leqq 0.2,$$



X_1 is

A_1 is

, wherein R_4 is hydrogen or methyl; and B_1 is



bonding said ophthalmic-lens blank to said support member with said ultraviolet-hardenable adhesive.

5,009,732

METHOD OF MANUFACTURING MEMBER FOR USE IN TIRE INCLUDING ENGAGING WIRES BETWEEN GEARS

Kazunari Ikeda, and Koichi Sanada, both of Tokyo, Japan, assignors to Bridgestone Corporation, Tokyo, Japan

Filed Apr. 28, 1989, Ser. No. 344,647
Int. Cl.[5] B29C *65/00*
U.S. Cl. 156—177 **10 Claims**

1. A method of manufacturing a member for use in a tire, comprising steps of arranging wires in a predetermined spaced relationship one to the others by means of a guide plate, extending the wires about rolls of a winding brake unit, aligning the wires by passing them through a comb roll, engaging the wires between a pair of gears arranged immediately downstream of the comb roll and driven at equal speeds to set said wires in wave-shapes, arranging the wires in a belt-shape in an appropriate width as a whole by passing the wires about a concaved roll, extending the wires about flat rolls such that the wave-shapes of the wires fall onto a common plane and do not touch each other, and then coating the wires with rubber.

5,009,733

PROCESS FOR FABRICATING A CIRCULAR FRAME

Mieko Sakai, 12-8, Shinbashi 6-chome, Minato-ku, Tokyo, Japan

Filed Jun. 28, 1989, Ser. No. 373,307
Claims priority, application Japan, Jul. 11, 1988, 63-173423
Int. Cl.[5] B27H *1/00*
U.S. Cl. 156—184 **2 Claims**

1. A process for bending and pressing a multi-layer circular frame from flat strips of wooden boards using a machine which includes:

a cylindrical forming shell removably mounted to a support rotation about an axis of the cylindrical shell;

a plurality of pressing rolls disposed opposite said forming shell and spaced circumferentially around said forming shell, said pressing rolls being movable between a position spaced radially outward of said forming shell to a position adjacent said forming shell;

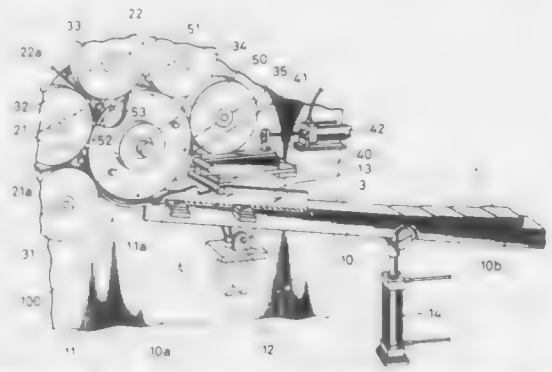
a first free roller movable radially toward and away from said cylindrical shell and located between a first pressing roll and an adjacent second pressing roll;

a second free roller located between said second pressing roll and a next adjacent third pressing roll, said second free roller being movable radially toward and away from said cylindrical shell;

an elongate feeder having one end disposed for delivering one end of a flat strip of wooden board toward said first free roller, said one end of said elongate feeder having a first reed fixed thereto and being movable toward and away from said cylindrical shell, and

a second reed movable toward and away from a circumferential portion of said cylindrical shell between a last one of said pressing rolls and said one end of said elongate feeder.

comprising the steps of:



mounting a cylindrical forming shell to said support;

moving said first reed, said first and second free rollers and said plurality of pressing rolls to positions spaced radially outward from said cylindrical shell while moving said second reed toward said cylindrical shell;

providing a single flat strip of wooden board free of adhesive material to said elongate feeder;

moving said one end of said elongate feeder away from said cylindrical shell;

moving a forward end of said flat strip over said first reed and beyond said first free roller;

moving said first and second free rollers toward said cylindrical shell to clamp said forward end of said flat strip between said first free roller and said cylindrical shell;

moving said one end of said elongate feeder toward said cylindrical shell to press a portion of said flat strip to said cylindrical shell with said first reed;

moving said plurality of pressing rolls to their respective positions adjacent said forming shell;

rotating said cylindrical forming shell and said plurality of pressing rolls to wrap said flat strip of wooden board around said cylindrical forming shell;

providing a layered strip of wooden board to said elongate feeder, said layered strip of wooden board having adhesive applied thereto,

continuing rotation of said cylindrical forming shell and said plurality of pressing rolls and feeding the layered strip toward the first reed and then advancing the layered strip through contact with said first and second reeds, said first and second free rollers and said plurality of pressing rolls to wrap said layered around said wrapped wooden board;

moving said first and second reeds, said first and second free rollers and said plurality of pressing rolls to their respective positions spaced radially outward from said cylindrical forming shell; and

withdrawing said cylindrical forming shell and said wrapped, multi-layer wooden circular frame from said support.

2. Apparatus for bending and pressing a multi-layer circular frame from flat strips of wooden source material comprising:

a cylindrical forming shell removably mounted to a support for rotation about an axis of the cylindrical shell,

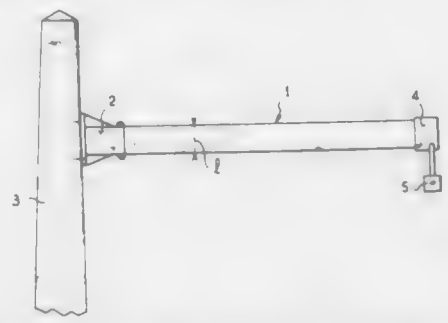
a plurality of pressing rolls disposed opposite said forming shell and circumferentially spaced around said forming shell, said pressing rolls being movable between a position spaced radially outward of said forming shell to a position adjacent said forming shell;

a first free roller movable radially toward and away from said cylindrical shell and located between a first pressing roll and an adjacent second pressing roll;

a second free roller located between said second pressing roll and a next adjacent third pressing roll, said second free roller being movable radially toward and away from said cylindrical shell;

an elongate feeder having one end disposed for delivering one end of a flat strip of wooden source material toward said first free roller, said one end of said elongate feeder having a first reed fixed thereto and being movable toward and away from said cylindrical forming shell; and,

a second reed located between a last one of said plurality of pressing rolls and said one end of said elongate feeder, said second reed being mounted for movement toward and away from a circumferential portion of said cylindrical forming shell;



whereby one end of a strip of source material is fed between said first pressing roll and said cylindrical shell to contact said first free roller, said first free roller is moved to move said one end of said source material toward said cylindrical forming shell to initiate a bending and lapping movement of said one end of said source material on said cylindrical shell and second free roller, said pressing rolls and said second reed are moved to contact and press an outer surface of said strip of source material radially inward against said cylindrical forming shell as said strip of source material is wrapped around said cylindrical forming shell.

5,009,734

METHOD OF MAKING AN INSULATING SUPPORT ARM FOR AN ELECTRIC LINE POLE

Michel Thérond, Cahors, France, assignor to Manufacture d'Appareillage Electrique de Cahors, France

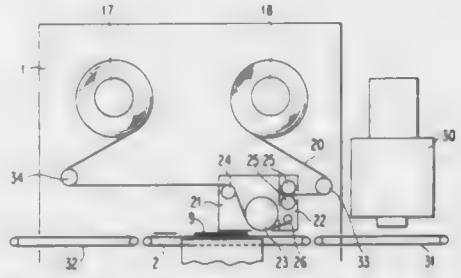
Division of Ser. No. 168,510, Mar. 15, 1988, Pat. No. 4,867,399.
This application Jun. 29, 1989, Ser. No. 373,162
Claims priority, application France, Mar. 20, 1987, 87 03885
Int. Cl.[5] B27N *3/00*
U.S. Cl. 156—184 **4 Claims**

1. A method for making an elongated insulating support arm having a preselected length dimension, a preselected constant width dimension, and a preselected maximum thickness dimension substantially less than the width dimension, for cantilevered mounted on an electric pole to support an electric line extending substantially parallel to the thickness dimension of the arm, the method comprising the steps of:

providing an at least two-ply sheet having a first dimension equal to the desired length of the support arm and a second dimension perpendicular to the first dimension, the sheet being composed of a first ply of continuous fibers extending parallel to the first dimension and a second ply of randomly-oriented short fibers impregnated with a polymerizable resin;

winding the sheet onto itself parallel to the first dimension to form a flattened roll having length, width, and thickness dimensions approximately equal to the respective preselected length, width, and thickness dimensions of the support arm;

preheating the wound roll to a temperature lower than the polymerization temperature of the impregnating resin; and



curing the preheated wound roll in a mold under pressure at a temperature above the polymerization temperature of the resin to obtain an elongated composite fiber-reinforced support arm having length, width, and thickness dimensions equal to said respective preselected length, width, and thickness dimensions, with a first end of the arm being adapted for cantilevered mounting on an electric pole with the width dimension of the arm vertical and a second end being adapted to support an electric line extending substantially parallel to the thickness dimension of the arm, the thickness dimension being made up of successive layers of the two-ply sheet bonded together by the cured resin, with the continuous fibers of the first plies extending parallel to the length dimension of the arm.

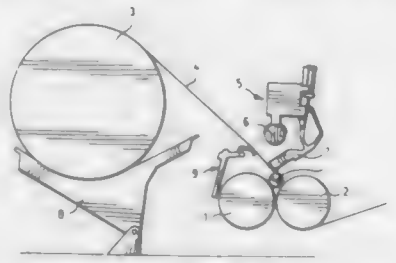
PROCESS FOR PEELING PROTECTIVE FILM OFF A WAFER

Minoru Ametani; Keigo Funakoshi; Akihiko Kira; Takao Matsushita, and Keizo Shirakura, all of Osaka, Japan, assignors to Nitto Denko Corporation, Osaka, Japan

Filed Nov. 28, 1988, Ser. No. 276,587
Claims priority, application Japan, Nov. 28, 1987, 62-300621; Nov. 10, 1988, 63-285480
Int. Cl.[5] B32B *31/18*
U.S. Cl. 156—241 **7 Claims**

1. A process for peeling a protective film stuck to an upper side of a wafer, comprising feeding a wafer with a protective film stuck thereon to a table and holding the wafer in position on the table, adhering an adhesive tape to an upper side of a rear end of said protective film stuck on the wafer by means of a press roller, lifting the press roller, so that the press roller no longer presses against said protective film, and moving said press roller forward, moving a peeling unit forward to peel the adhesive tape together with the protective film stuck thereto, and then carrying away the wafer form the table.

5,009,736



METHOD OF AND AN ARRANGEMENT FOR GLUING A WEB TO A CORE IN A REELING DEVICE

Jorma Lehto, Inkeroinen, Finland, assignor to Oy Tampella AB, Tampere, Finland

Filed Nov. 6, 1989, Ser. No. 431,789
Claims priority, application Finland, Nov. 18, 1988, 885355
Int. Cl.[5] B32B *31/18*
U.S. Cl. 156—250 **4 Claims**

1. A method of fastening a web (4) to a core (10) in a reeling device, comprising transferring a reeled web reel (3) from support rolls (1, 2) into a lowering bucket (8); transferring a

new core (10) in a core chute (9) on to the support rolls (1, 2) from between the lowering bucket (8) and the support rolls (1, 2) before the web (4) is cut off between the reeled web reel (3) and a new reel to be reeled, the web (4) between the reeled web reel (3) and the support rolls (1, 2) passing above the core (10); cutting off the web (4) between the core (10) and the reeled

web reel (3); and fastening the web to the core (10), characterized in that before the web is cut off, glue is spread between the core (10) and the web (4) from above the core (10), the web (4) being pressed against the core (10) so that it adheres to it and the web (4) being cut off only after it has adhered to the core (10).

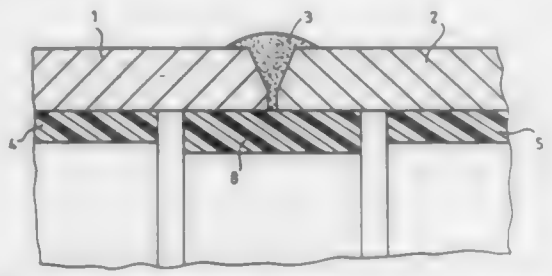
METHOD OF JOINING PIPES AT THEIR ENDS TO FORM A PIPELINE



Pierre L. Lescant, Bernay, France, assignor to Atochem, Puteaux, France

Continuation of Ser. No. 182,215, Apr. 15, 1988, abandoned. This application Jun. 1, 1989, Ser. No. 360,155

Claims priority, application France, Apr. 16, 1987, 87 05446

Int. Cl.[5] **B29C** *63/30*

U.S. Cl. 156—264 **10 Claims**

1. A method of producing a pipeline arrangement, comprising the steps of:

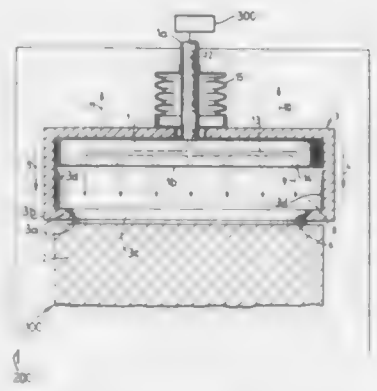
positioning first and second metal pipe sections in end-to-end relationship, each having a radially inner wall and an axial end, said radially inner walls having heat-sensitive coverings of substantially equal diameter, at least one of said coverings terminating axially inwardly of said axial end of its respective pipe section to define an uncovered inner wall section situated between adjacent longitudinal ends of said coverings,

welding said ends together,

introducing a strip of fusible material radially inside of said uncovered inner wall section, said strip having a longitudinal width of 0.60 to 0.90 times that of said uncovered inner wall section and a radial thickness of 1.10 to 1.65 times that of said heat-sensitive coverings, and heating said strip while applying radially outwardly directed pressure to a radially inner surface of said strip to push said strip against said uncovered inner wall section for reducing said radial thickness and increasing said longitudinal width of said strip to cause said strip to contact said adjacent longitudinal ends of said coverings and completely cover said uncovered inner wall section.

5,009,738

APPARATUS FOR PLASMA ETCHING



Heinrich Gruenwald, Gomaringen; Hans Ramisch, Frankfurt, and Anton Pawlakowitsch, Alzenau, all of Fed. Rep. of Germany, assignors to Leybold Aktiengesellschaft, Fed. Rep. of Germany

Filed Dec. 1, 1989, Ser. No. 444,293

Claims priority, application Fed. Rep. of Germany, Apr. 28, 1989, 3914065

Int. Cl.[5] **C23F** *1/02*

U.S. Cl. 156—345 **25 Claims**

1. An apparatus for plasma etching of a substrate comprising:

a process chamber wherein said substrate is etched, said process chamber having a gas conducting connection for receiving a process gas therein from an outside source, said process chamber comprising an enclosure having a bottom plate with a central etching window therethrough;

a first electrode, facing the interior of said chamber for facing a first face of said substrate;

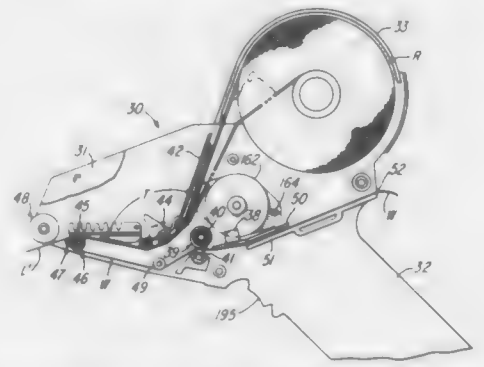
a second electrode facing the interior of said chamber for facing a second face of said substrate, said second electrode maintained at an electric potential different from said first electrode, said second electrode in heat transfer with an external source, said second electrode positioned so as to support said substrate against said bottom plate, and provide a central etching area of said substrate exposed to an interior of said chamber through said central etching window of said bottom plate; and

the weight of said process chamber being such so as to press said bottom place down upon a continuous periphery of said substrate, and press said substrate against said second electrode.

5,009,739

HAND-HELD LABELER

Brent E. Goodwin, Middletown; Donald L. Karn, Springboro, and John D. Mistyurik, Tipp City, all of Ohio, assignors to Monarch Marking Systems, Inc., Dayton, Ohio



Continuation of Ser. No. 209,759, Jun. 22, 1988, Pat. No. 4,956,045. This application Apr. 10, 1990, Ser. No. 507,077

Int. Cl.[5] **B65C** *11/02*

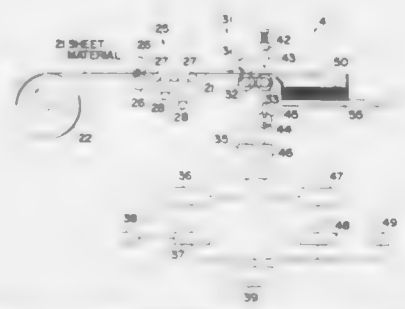
U.S. Cl. 156—384 **9 Claims**

1. A hand-held labeler for printing and applying labels releasably secured to a carrier web of a composite label web, comprising: a housing having a handle, means on the housing for supporting a supply roll of a composite label web, a thermal print head, a platen roll cooperable with the print head for effecting printing on the labels, means for providing a path for the composite label web from the supply roll to between the print head and the platen roll, means for delaminating printed labels from the carrier web, means for applying printed labels, means for advancing the carrier web to effect delamination of a printed label and to advance the printed label into label applying relationship with the label applying means, means for

applying braking force to the platen roll to prevent movement of the carrier web except essentially when the carrier web is being advance by the advancing means, wherein the means for providing a path includes two rollers, the rollers being arranged to contact and guide the advancing composite label

web between the supply roll and the platen roll, and a wiper disposed in a space between the rollers and projecting through a flat plane between the peripheries of the rollers so that the labels wipe against the wiper during the advance of the composite label web.

5,009,740



BAG MAKING MACHINE

Takeo Yanai, Koshiga Ya-C, Japan, assignor to Nippon Flute Co., Ltd., Irumagun, Japan

Filed Aug. 9, 1989, Ser. No. 391,259

Int. Cl.[5] **B32B** *31/00;* **B26D** *5/20*

U.S. Cl. 156—353 **8 Claims**

1. A bag making machine operable to produce thermoplastic resin film bags, said bag making machine comprising:

feed means for intermittently advancing a flat tubular web of thermoplastic resin film to be formed into a thermoplastic bag, said feed means including,

a feed roller positioned below and extending transversely across the tubular web of thermoplastic resin film such that rotation of said feed roller advances the tubular web,

a pressure roller positioned above said feed roller and mutually extending transversely across the tubular web of thermoplastic resin film so that when the tubular web lies therebetween, said pressure roller passively rotates with said feed roller to advance the tubular web;

sealing means for applying heat to and transversely sealing together two opposing layers of a tubular web of thermoplastic resin film, said sealing means including,

at least one lower surface positioned beneath and extending transversely across an intended path of travel of a tubular web of thermoplastic resin film,

at least one upper seal bar positioned above, mutually opposite to and in vertical alignment with said lower surface, wherein a tubular web of thermoplastic resin film may be operably fed between and subsequently come into contact with said at least one upper seal bar and said lower surface of said bag making machine,

means for heating said upper seal bar to thereby induce a sealing weld bead to be formed transversely across a tubular web of thermoplastic resin film when said upper seal bar is lowered into a posture juxtaposed to but spaced from said lower stationary surface with a tubular web of thermoplastic resin film therebetween;

slitting means including a cutting edge for transversely severing a tubular web of thermoplastic resin film adjacent to and substantially parallel with a weld bead thereby dividing the tubular web of thermoplastic resin film into two portions and forming a bag of a predetermined length with a transverse seal at one end;

first drive means for controllably driving said roller means so that the tubular web of thermoplastic resin film may be advanced to a positioned suitable for sealing and slitting, said first drive means comprising a first servo motor;

second drive means for driving said sealing means and said slitting means vertically toward and away from the tubular web of thermoplastic resin film so that sealing and severing may occur, said second drive means comprising a second servo motor;

control means for controlling the operation and interaction of the components of said bag making machine so that machine operation may be optimized, said control means including,

a first servo driver operable to control actuation of said first servo motor,

a second servo driver operable to control actuation of said second servo motor,

a first digital pack connected to said first servo driver which drives said first servo motor via said first servo driver,

a second digital pack connected to said second servo driver which drives said second servo motor via said second servo driver,

a sequencer connected to both said first digital pack and said second digital pack for controlling the operation of said first and said second servo motors so that when the tubular web of thermoplastic resin film is being advanced to a position suitable for the sealing and severing operation, said sealing and said cutting means are withdrawn from a position adjacent the web, and when the feed means ceases advancement of the tubular web of thermoplastic resin film, the sealing and severing operations commence,

digital dimension setting means connected to said first digital pack for operably permitting variable user control of a desired length of a bag made from the flat web of thermoplastic resin film by controlling the length of the web advanced by said feed means,

said timer being connected to both said second digital pack and said sequencer to control the amount of time said sealing means is engaged with said lower stationary surface, the time being a function of the thickness of the tubular web of thermoplastic resin film, so that a weld bead will be effected thereon and further the speed of web advance may be maintained,

a first proximity switch for detecting an upper stop position of said sealing means and producing a signal which actuates said second servo motor so that the tubular web of thermoplastic resin film may be advanced to a position suitable for sealing and slitting while said sealing means are vertically recessed from the tubular web of thermoplastic resin film, and

a second proximity switch for detecting a lower stop position of said sealing means and producing a start signal to said timer such that said sealing means will be juxtaposed with said tubular web of thermoplastic resin film the amount of time as controlled by said timer.

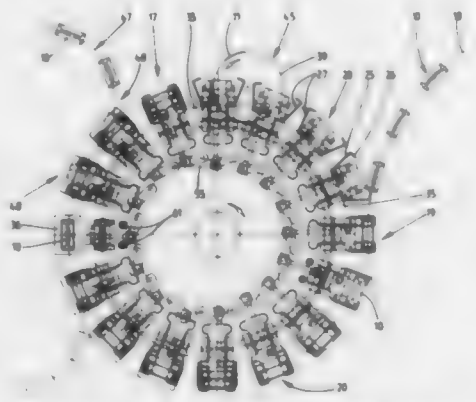
METHOD AND DEVICE FOR THE APPLICATION OF REVENUE STAMPS TO PACKS



Heinz Focke, Verden, and Hans-Jürgen Bretthauer, Bremen, both of Fed. Rep. of Germany, assignors to Focke & Co. (GmbH & Co.), Verden, Fed. Rep. of Germany

Filed Oct. 12, 1989, Ser. No. 420,489

Claims priority, application Fed. Rep. of Germany, Oct. 15, 1988, 3835290

Int. Cl.[5] B65C *3/00*

U.S. Cl. 156—483 7 Claims

1. A mechanism for individually applying labels, such as revenue stamps, to faces of rectangularly shaped packs, said labels extending onto adjoining faces of the packs, comprising:

an endless label conveyor, provided with multiple pack transport sections, for continuously conveying said packs between processing stations of said mechanism, wherein said label conveyor has at least one axis around which the conveyor rotates, said axis being oriented perpendicular to a direction of rotation of said conveyor, each of said transport stations comprising:

a slide for moving each corresponding pack in a direction parallel to said axis, from a pack reception point to a pack transfer point, and

a label holder, with a mouth piece, said label holder arranged to hold the label against said mouth piece, and in a plane transverse to said axis,

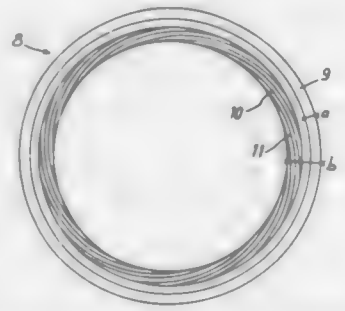
said slide moving said pack through the mouth piece, and through the plane of said label, thereby causing said label to contact and stick to said pack,

wherein each label is adhered to each pack as said label conveyor rotates between processing stations.

5,009,742

METHOD AND APPARATUS FOR MAKING SEALING RINGS OF THE RADIAL TYPE WITH SEALING LIP OF FLUOROPLASTIC

Michel Saxod, Bourg, 52200 Langres, and Fabrice Fougerolle, Montlandon, 52600 Chalindrey, both of France



Division of Ser. No. 311,791, Feb. 17, 1989, abandoned. This application Feb. 6, 1990, Ser. No. 475,873

Claims priority, application France, Feb. 18, 1988, 88 01929

Int. Cl.[5] B44C *1/22*; B29C *37/00*; C03C *15/00, 25/06*

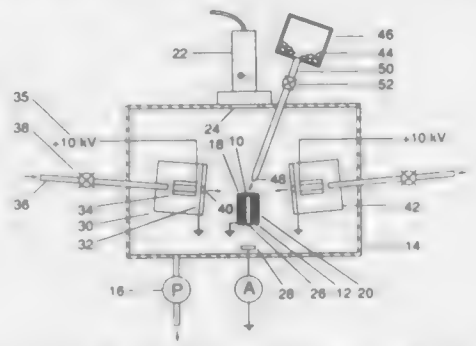
U.S. Cl. 156—633 4 Claims

1. A method of making a sealing ring of the radial type, having a reinforced elastomeric body and an annular sealing ring in the form of an annular fluoroplastic washer adhered to a mating surface on the elastomeric body, comprising steps of subjecting only an outer peripheral portion, corresponding in size to said mating surface, of the annular ring to chemical attack, while protecting an inner peripheral portion thereof from attack, to reduce the antiadhesive properties

of the washer only over said outer peripheral portion, and then

adhering said washer to the mating surface of said body.

5,009,743



CHEMICALLY-ASSISTED ION BEAM MILLING SYSTEM FOR THE PREPARATION OF TRANSMISSION ELECTRON MICROSCOPE SPECIMENS

Peter R. Swann, Diablo, Calif., assignor to Gatan Incorporated, Pleasanton, Calif.

Filed Nov. 6, 1989, Ser. No. 431,401

Int. Cl.[5] H01L *21/306*; B44C *1/22*; C03C *15/00, 25/06*

U.S. Cl. 156—643 10 Claims

1. A method for the preparation of high quality specimens free from artefacts and suitable for high resolution transmission electron microscopy comprising the steps of:

(i) mounting a specimen in a vacuum chamber,

(ii) directing at the specimen an energetic, unfocused beam of ions neutrals, and

(iii) simultaneously directing at the specimen a separate, independent low energy molecular beam, said specimen being positioned such that the angle between the specimen surface and said energetic ion beam is between 0° and 10°, whereby said specimens may be thinned to electron transparency without the production of thinning artefacts.

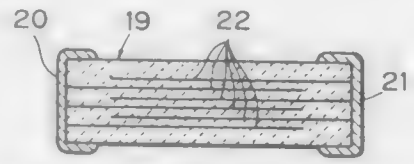
5,009,744

METHOD OF MANUFACTURING LAMINATED CERAMIC ELECTRONIC COMPONENT

Harufumi Mandai; Yukio Tanaka; Shinichi Takakura, and Takuji Nakagawa, all of Kyoto, Japan, assignors to Murata Manufacturing Co., Ltd., Japan

Filed Feb. 15, 1989, Ser. No. 311,097

Int. Cl.[5] C23F *1/00*



U.S. Cl. 156—656 4 Claims

1. A method of manufacturing a laminated ceramic electronic component having internal electrodes formed in a pattern, comprising the steps of:

forming a metal film on a back film by a thin film forming method;

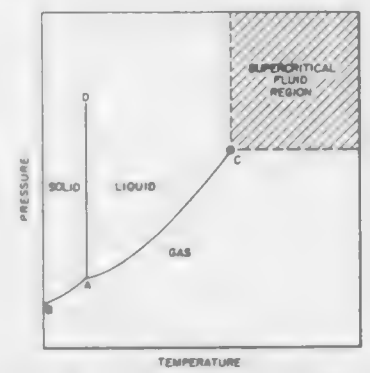
removing part of said metal film from said back film to leave only specific parts of said metal film on said back film, said specific parts being arranged on said back film in an arrangement which corresponds to said internal electrode pattern to be formed on said ceramic green sheet; and

providing a ceramic green sheet for receiving said metal film;

transferring said metal film parts onto said ceramic green sheet from said back film to form said internal electrodes by contacting the green sheet with the back film/metal film component such that the metal film is transferred to the green sheet;

stacking a plurality of said ceramic green sheets on which respective said internal electrodes have been formed to thereby form said laminated ceramic electronic component having internal electrodes formed in a pattern.

5,009,745



METHOD FOR REMOVING POLYCHLORINATED DIBENZODIOXINS AND POLYCHLORINATED DIBENZOFURANS FROM SECONDARY FIBERS USING SUPERCRITICAL CO_2 EXTRACTION

Shafi U. Hossain, Menasha, Wis., and Carol A. Blaney, Roswell, Ga., assignors to Kimberly-Clark Corporation, Neenah, Wis.

Filed Oct. 12, 1990, Ser. No. 596,807

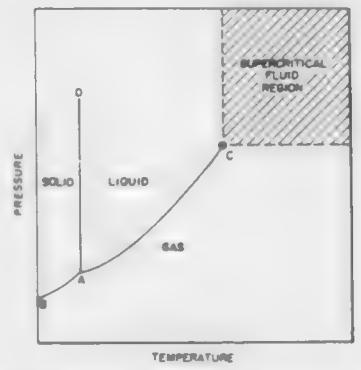
Int. Cl.[5] D21C *5/02*

U.S. Cl. 162—5 14 Claims

1. A method for treating cellulose-containing secondary fibers with a content of polychlorinated dibenzo-p-dioxin and-/or polychlorinated dibenzofuran comprising contacting the fibers with carbon dioxide under pressure and temperature conditions such that the carbon dioxide is a supercritical or near supercritical fluid and for a time sufficient to reduce the content of the polychlorinated dibenzo-p-dioxin and/or polychlorinated dibenzofuran.

5,009,746

METHOD FOR REMOVING STICKIES FROM SECONDARY FIBERS USING SUPERCRITICAL CO_2 SOLVENT EXTRACTION



Shafi U. Hossain, Menasha, Wis., and Carol A. Blaney, Roswell, Ga., assignors to Kimberly-Clark Corporation, Neenah, Wis.

Filed Oct. 12, 1990, Ser. No. 596,819

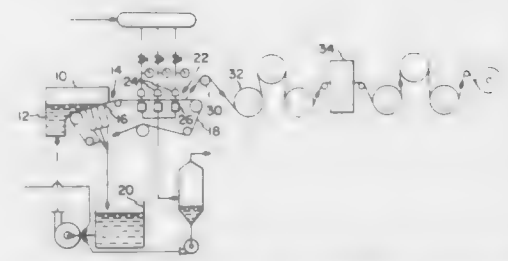
Int. Cl.[5] D21C *9/08, 5/02*

U.S. Cl. 162—5 15 Claims

1. A method for reducing the level of sticky contaminants in cellulose-containing secondary fibers containing sticky contaminants comprising contacting the fibers with carbon dioxide under pressure and temperature conditions such that the carbon dioxide is a supercritical or near supercritical fluid and for

a period of time sufficient to reduce the level of sticky contaminants associated with the fibers.

5,009,747



WATER ENTANGLEMENT PROCESS AND PRODUCT

Helen Viazmensky, South Windsor; Carl E. Richard, Enfield, and James E. Williamson, Suffield, all of Conn., assignors to The Dexter Corporation, Windsor Locks, Conn.

Filed Jun. 30, 1989, Ser. No. 374,482

Int. Cl.[5] D21H *27/02*

U.S. Cl. 162—115 16 Claims

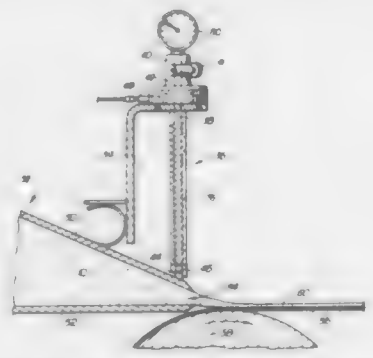
1. A method of producing a fiber entangled nonwoven web material comprising the steps of forming a dilute homogeneous fiber furnish of papermaking fibers and more than about 30 percent by weight of long synthetic fibers suited for being dispersed in an aqueous media; depositing the fibers from the furnish on a paper forming wire at the wet end of a paper-making machine to provide a fluidized homogeneously dispersed fibrous base web material having a liquid content of about 75% by weight or more; subjecting the fibrous base web having said liquid content to direct impingement of a series of entangling liquid jets to provide a total energy input of up to about 0.2 hp-hr/lb web to very lightly entangle the fibers in said base web; drying the entangled web and treating the web with a binder in an amount sufficient to provide a binder pickup of less than about 20% by weight based on the weight of the treated material.

5,009,748

PROCESS AND SYSTEM FOR CONTROLLING THE BASIS WEIGHT OF A SHEET MATERIAL

Ramesh Balakrishnan, Stanford, and Mathew G. Boissevain, Los Altos, both of Calif., assignors to Measurex Corporation, Cupertino, Calif.

Filed May 23, 1988, Ser. No. 197,752



Int. Cl.[5] D21F *11/00*

U.S. Cl. 162—198 5 Claims

1. A process for controlling the shape of a slice lip of a paper making machine headbox used in the production of a paper sheet, comprising the steps of:

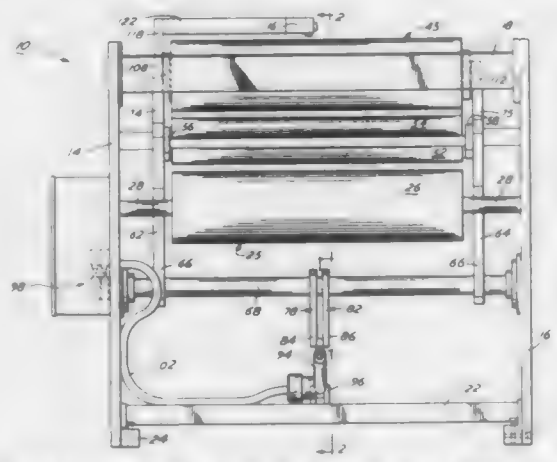
measuring the force of a plurality of slice rods against the slice lip at a plurality of locations along the span of the slice lip across the sheet;

computing the forces of the slice rods against the slice lip at

each location which are required to achieve a desired sheet basis weight profile;

adjusting the forces of the slice rods against the slice lip so that the measured forces substantially equal the computer forces.

5,009,749



WEB DECURLER

Roger Cederholm, Roscoe, Ill., and Christopher J. Plude, Beloit, Wis., assignors to Martin Automatic, Inc., Rockford, Ill.

Filed Aug. 9, 1990, Ser. No. 564,855

Int. Cl.[5] B65H *23/34*

U.S. Cl. 162—271 **18 Claims**

1. An improved web decurler for selectively removing different degrees of curl from a running web, while maintaining web registration, as the running web passes along a web path that is defined in and through the web decurler, with the running web coming to the web decurler from a first webprocessing operation that is located upstream of the web decurler and proceeding from the web decurler to a second web-processing operation that is located downstream from the web decurler and that requires, for proper operation, web registration to exist between the second web processing operation and the running web upstream of the web decurler, the improved web decurler comprising:

a first roller assembly having a first, relatively large diameter, rotatable roller that has a central longitudinal axis and an outer peripheral surface, that is disposed adjacent to a first part of the web path in the web decurler so that the running web may wrap about a portion of its peripheral surface as the running web passes through the first part of the web path, and whose central longitudinal axis is fixed, relative to the web decurler;

a second roller assembly having a second, relatively large diameter, rotatable roller that has a central longitudinal axis and an outer peripheral surface, that is disposed adjacent to a second part of the web path in the web decurler so that the running web may wrap about a portion of its peripheral surface as the running web passes through the second part of the web path, and whose central longitudinal axis is fixed relative to the web decurler;

a third roller assembly having a third, relatively large diameter, rotatable roller that has a central longitudinal axis and an outer peripheral surface, that is disposed adjacent to a third part of the running web path in the web decurler so that the running web may wrap about a portion of its peripheral surface as the running web passes through the third part of the web path, that is disposed between the first and second rollers along the web path, and having means for maintaining the central longitudinal axis of said third roller a fixed predetermined distance from the central longitudinal axis of one of the first and second roller and means for moving said third roller about the central longitudinal axis of said one roller;

a fourth roller assembly having a fourth, relatively small diameter, rotatable roller that has a central longitudinal axis and an outer peripheral surface, that is disposed adjacent to a fourth part of the web path so that the running web may pass about a portion of its peripheral surface as the running web passes through the fourth part of the web path, that is disposed between the third roller and the other of the first and second rollers along the web path, and whose central longitudinal axis is spaced from and movable about a preselected axis which, in turn, is spaced from the central longitudinal axes of the first, second and third rollers;

means for supporting the first, second, third and fourth roller assemblies so that the first, second, third and fourth rollers may rotate about their respective central longitudinal axes; and

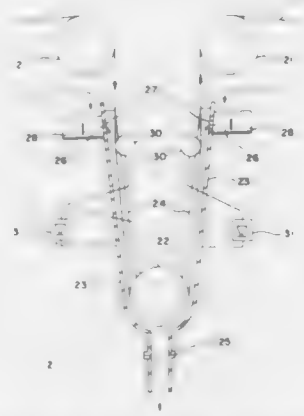
means for adjustably positioning the third roller and the fourth roller with respect to each other, to the web path, and to the first and second rollers which are structured and arranged so that the length of the web path of the running web in the web decurler remains constant regardless of the adjusted positions of the third roller and the fourth roller and so as to control the wrap of the running web about the outer peripheral surfaces of the first, second, third and fourth rollers and to thus control the degree of curl removed from the running web, whereby the running web, although processed as a web, will lie flat, when cut and delivered as free sheets, downstream of the second web processing operation.

5,009,750

PROCESS AND APPARATUS FOR THE MANUFACTURE OF A METAL FOIL

Emil Hula, Giesshübl, and Gerald Maresch, Mödling, both of Austria, assignors to Maschinenfabrik Andritz Actiengesellschaft, Graz-Andritz, Austria

Filed Nov. 15, 1989, Ser. No. 436,638



Claims priority, application Austria, Nov. 15, 1988, 2801/88; Sep. 28, 1989, 2263/89

Int. Cl.[5] C25D *1/04*

U.S. Cl. 204—13 **9 Claims**

1. A process for the manufacture of a metal foil by deposition of an electrolyte on an endless carrier belt, said process including the steps of: providing at least one vertically extending wall defining a vertically extending anode element, providing the belt with an upper deflecting roll adjacent an upper portion of said wall and a lower deflecting roll adjacent a lower portion of said wall, said rolls being positioned to provide a vertically extending run of the belt adjacent the anode element, said run of the belt and the anode element defining therebetween a vertically extending passage for electrolyte, providing lateral sealing elements to enclose said passage,

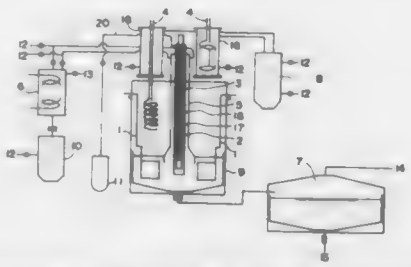
providing a flow becalming vessel for electrolyte adjacent an upper end of said wall, said vessel having an overflow leading into an upper end of said passage, providing an adjustable cross-section drainage aperture at a lower end of said wall for draining electrolyte from said passage, supplying electrolyte to

said passage from said vessel, adjusting the cross-sectional area of said drainage aperture to control the electrolyte flow through said passage, causing the belt to traverse said run, and providing electric current flow between the anode element and said run of the belt at a varying current density along the length of said run to deposit metal on the belt and form a foil.

5,009,751

PROCESS FOR SEPARATION OF HAFNIUM TETRACHLORIDE FROM ZIRCONIUM TETRACHLORIDE

Tomoo Kirihara; Ippei Nakagawa, both of Aichi; Yoshinobu Seki, Tokai; Yutaka Honda, Saraki, and Yasuo Ichihara, Saraki, all of Japan, assignors to Mitsubishi Nuclear Fuel Company, Ltd., Tokyo, Japan



Filed Jan. 5, 1989, Ser. No. 293,791

Claims priority, application Japan, Jan. 12, 1988, 63-4416

The portion of the term of this patent subsequent to May 15, 2007, has been disclaimed.

Int. Cl.[5] C01G *25/04, 27/04;* C25B *1/00*

U.S. Cl. 204—61 **6 Claims**

1. A process for a separation of hafnium tetrachloride from zirconium tetrachloride comprising the following steps of:

(a) introducing zirconium tetrachloride containing about 2–4 wt % of hafnium tetrachloride into an electrolytic cell equipped with a pair of first and second cathodes, and a third electrode and filled with a molten salt;

(b) dissolving the zirconium tetrachloride of step (a) in the molten salt of step (a) to make an electrolytic bath;

(c) running a first phase electrolysis, i.e. electrolytic reduction of the dissolved zirconium tetrachloride under maintenance of an initial concentration of the zirconium tetrachloride by supplying zirconium tetrachloride of step (a) to the electrolytic bath;

(d) producing zirconium trichloride containing a lower hafnium content than that of the dissolved zirconium tetrachloride of steps (b) and (c) at a first cathode;

(e) running a second phase electrolysis using the pair of first and second cathodes, but switching the first cathode to become an anode, and using the second cathode;

(f) supplying the zirconium tetrachloride to the second cathode side of step (e);

(g) producing the zirconium trichloride of a lower hafnium content than that of the dissolved zirconium tetrachloride at the second cathode and evolving gaseous zirconium tetrachloride at the anode by electrolytic oxidation of the zirconium trichloride produced in the first phase electrolysis;

(h) recovering the evolved zirconium tetrachloride as zirconium tetrachloride with a lower hafnium content than that of the dissolved zirconium tetrachloride and the zirconium trichloride produced at the second cathode in step (g);

(i) subsequently continuing the second phase electrolysis as set forth in steps (e), (f), (g) and (h) by changing over polarities of the second cathode and the anode, when a concentration of zirconium trichloride at the anode decreases;

(j) ceasing the supply of zirconium tetrachloride of step (f) when the vapor pressure value of hafnium tetrachloride, which has become concentrated in the electrolytic bath reaches about 1/10 of that of the dissolved zirconium tetrachloride, and continuing the second phase electrolysis until most of the zirconium trichloride produced at the second cathode is oxidized and evolved;

(k) transferring the electrolytic bath to a separate vessel; and

(l) separating the concentrated hafnium tetrachloride from the molten salt by raising the temperature of the transferred electrolytic bath to about 850° C.

1. A process for separating uranium and plutonium from chopped spent metal-clad fuel pins comprising the steps of:

providing an electrolyte cell having a cadmium pool, an electrolyte pool, an improved anode basket assembly, cathode means, means for flushing said improved anode

basket assembly, and means for providing electrical power to said improved anode basket assembly and wherein said improved anode basket assembly comprises a metal shaft having a top end and a bottom end, said top end connected to means for rotation capable of imparting rotation to said shaft, a plurality of perforated metal boxes having means for attaching said plurality of perforated metal boxes around the periphery of the bottom end of said shaft and extending radially outward therefrom, means for lowering and raising said metal boxes into said electrolyte pool and means for carrying an electric current from said electrical power means to said plurality of perforated metal boxes;

loading chopped spent fuel pins having a metal cladding comprising an alloy of uranium and plutonium into said improved anode basket assembly until said chopped spent fuel pins form a tightly packet configuration;

lowering said improved anode basket assembly containing said chopped spent fuel pins to a first position in said electrolyte pool;

providing an electric current from said electrical power means to said improved anode basket assembly and said cathode means at a voltage sufficient to form uranium cations and plutonium cations, and by creating a flushing action of said electrolyte pool through said chopped spent fuel pins by using said means for flushing;

raising said improved anode basket assembly out of said electrolyte pool to a second position and creating a drying action to remove any of said electrolyte pool by using said means for flushing; and

recovering said metal cladding from said improved anode basket assembly.

PREPARATION OF DIHYDROXYDIONES

Dieter Hermeling, Neustadt; Rainer Becker, Bad Durkheim, and Walter Dobler, Heidelberg, all of Fed. Rep. of Germany, assignors to BASF Aktiengesellschaft, Ludwigshafen, Fed. Rep. of Germany

Filed Oct. 18, 1989, Ser. No. 423,224

Claims priority, application Fed. Rep. of Germany, Nov. 9, 1988, 3837954

Int. Cl.[5] C25B *3/00*

U.S. Cl. 204—75 **8 Claims**

1. A process for the preparation of a dihydroxydione of the formula

R—CO—CH(OH)—CH(OH)—CO—R I

where R is alkyl, which comprises:

subjecting an aldehyde of the formula

II

where R has the abovementioned meaning, to electrolysis in a water-containing electrolyte which has a pH of about 4 to 5 while using a cathode selected from the group consisting of graphite, lead, iron, nickel and steel.

5,009,754

CONSUMPTION OF HYPOCHLORITE VALUES CONTAINED IN PERCHLORATE SOLUTIONS OF ELECTROLYSIS

Christian Pralus, Saint-Cyr-Au-Mont-d'Or, France, assignor to Atochem, Puteaux, France

Filed Feb. 22, 1990, Ser. No. 482,920

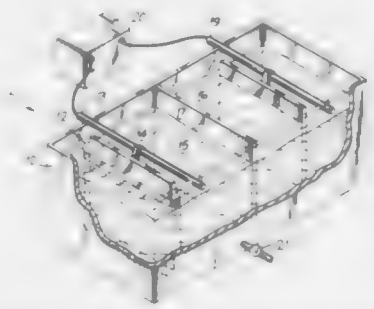
Claims priority, application France, Feb. 22, 1989, 89 02536

Int. Cl.[5] C25B *1/28*

U.S. Cl. 204—82 **6 Claims**

1. A process for the consumption of the hypochlorite values, ClO^- ions, contained in a solution of an alkali metal perchlorate produced by electrolysis of an aqueous solution of a chlorate of said alkali metal, without adversely affecting the valence state of hexavalent chromium values also contained therein, comprising intimately contacting such perchlorate solution with an effective amount of hydrogen peroxide such that the molar ratio of available hydrogen peroxide/hypochlorites is at least one.

5,009,755



REFINING METHOD

Peter S. Shor, 230 East 15th St., New York, N.Y. 10003

Filed Jan. 22, 1990, Ser. No. 468,369

Int. Cl.[5] C25C *1/20, 7/00*

U.S. Cl. 204—111 **9 Claims**

1. In a halide-electrolyte for electrolyzing gold-containing anodes for gold recovery, wherein said electrolyte consists essentially of an aqueous halide-ion source containing initially an impregnating agent for modifying the electropotential of the metallic gold upon application of electrolysis current and forming a pregnant electrolyte for continuously electrolyzing and dissolving the gold, said impregnating agent being a nascent oxygen source present by volume in said electrolyte in an amount of at least one part per million; the improvement wherein said halide ion source as electrolyte is essentially an aqueous solution of ammonium chloride, to provide sufficient ammonium ions to complex with and to form electrolyte-soluble silver and copper ammonium complexes with any silver and/or copper in said anodes.

5,009,756

CHEMICAL METHOD OF AVOIDING A RAINBOW EFFECT CAUSED BY THE LAYER OF OXIDE PRODUCED UPON THE BRIGHTENING OF PARTS OF ALUMINUM OR ALUMINUM ALLOYS

Klaus-Dieter Bartkowski, Krefeld, and Peter Venn, Wuppertal, both of Fed. Rep. of Germany, assignors to Gebr. Happich GmbH, Fed. Rep. of Germany

Filed May 23, 1990, Ser. No. 527,587

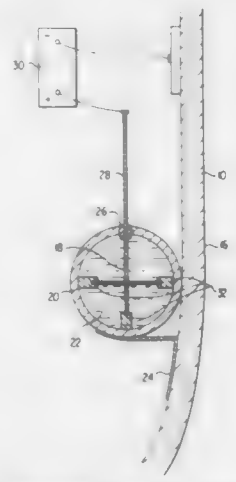
Claims priority, application Fed. Rep. of Germany, May 26, 1989, 3917186

Int. Cl.[5] C25D *11/24;* **C25F** *3/20*

U.S. Cl. 204—129.35 **3 Claims**

1. A method for avoiding a rainbow effect which is caused by the layer of oxide produced in the electrolytic-alkaline brightening of aluminum or aluminum alloy parts, comprising, after said brightening, subjecting said parts to a further treatment in which the parts are first washed in water and then exposed in a chromic acid solution and finally washed in a sodium hydrosulfite solution.

5,009,757



ELECTROCHEMICAL SYSTEM FOR THE PREVENTION OF FOULING ON STEEL STRUCTURES IN SEAWATER

William J. Riffe, and Jack D. Carter, Jr., both of Morehead City, N.C., assignors to Marine Environmental Research, Inc., Morehead City, N.C.

Continuation of Ser. No. 145,275, Jan. 19, 1988. This application Jul. 5, 1990, Ser. No. 548,214

Int. Cl.[5] C23F *13/00*

U.S. Cl. 204—147 **22 Claims**

1. A system for preventing fouling or corrosion of a surface or surfaces of a marine structure in contact with a water environment, said marine structure having an interior surface and an exterior surface, said system comprising:

(a) a conductive zinc coating in conductive contact with at least part of said exterior surface, wherein when said marine structure is in contact with said water environment, said conductive zinc coating forms an interfacial layer between said exterior surface and said water environment; and

(b) means for inducing and maintaining a negative capacitive charge on said conductive zinc coating sufficient to prevent fouling or corrosion of said exterior surface when said exterior surface is in contact with said water environment, said means comprising a power supply having a terminal of a first polarity conductively connected to said exterior surface and a terminal of opposite polarity capacitively connected to said exterior surface, said power supply and said capacitive connection means being both protected from contact by said water environment.

5,009,758

CLOSED NONCONTINUOUS ELECTRODEPOSITION PAINTING SYSTEM

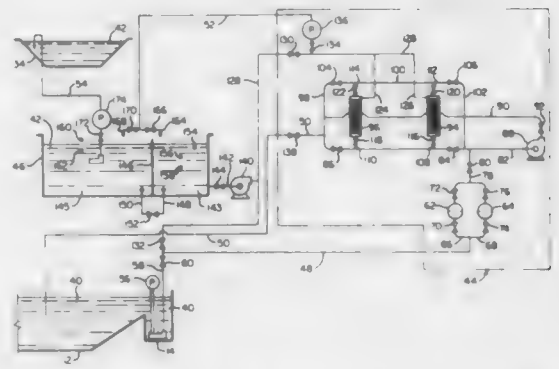
Kenji Okada, Riverview, and Hiroshi Ueno, Grosse Ile, both of Mich., assignors to Mazda Motor Manufacturing (USA) Corp., Flat Rock, Mich.

Filed Aug. 16, 1988, Ser. No. 233,180

Int. Cl.[5] G25D *13/24;* **B05C** *11/10*

U.S. Cl. 204—180.8 **24 Claims**

18. A closed, noncontinuous process for separating and filtering paint into paint rich and solvent rich components by using paint holding means, solvent holding means and filtration means, said process comprising the steps of:



(a) sensing a first level of solvent in said solvent holding means and conveying paint from said paint holding means to said filtration means and filtering said paint to separate it into paint rich and solvent rich components;

(b) conveying said paint rich components to said paint holding means and conveying said solvent rich components to said solvent holding means;

(c) sensing a second level of solvent in said solvent holding means higher than said first level of solvent and stopping the flow of paint through said filtration means and conveying solvent from said solvent holding means to said filtration means, through said filtration mean sand to said paint holding means;

(d) sensing a third level of solvent in said solvent holding means lower than said second level of solvent and stopping the flow of solvent from said solvent holding means to said filtration means and from said filtration means to said paint holding means;

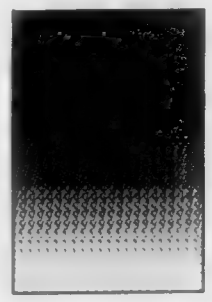
(e) sensing a fourth level of solvent in said solvent holding mean slower than said second level of solvent and higher than said third level of solvent and reversing the flow of

solvent through said filtration means and conveying said solvent through said filtration means and to said paint holding means; and

(f) sensing a fifth level of solvent in said solvent holding means lower than said fourth level of solvent and higher than said third level of solvent and stopping the flow of solvent from said filtration means to said paint holding means;

wherein steps (a)–(f) are performed in response to signals generated from sensors located in said solvent holding means which sense the level of solvent in said solvent holding means wherein steps (e) and (f) are performed prior to step (d).

5,009,759



METHODS FOR PRODUCING AGAROSE GELS HAVING VARIABLE PORE SIZES

Phillip Serwer, and Gary A. Griess, both of San Antonio, Tex., assignors to Board of Regents, The University of Texas System, Austin, Tex.

Filed Sep. 22, 1989, Ser. No. 411,373

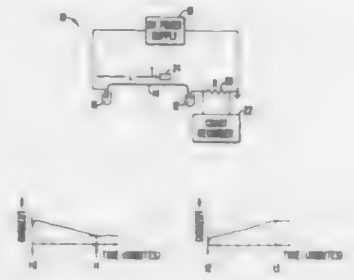
Int. Cl.[5] G01N *27/26;* **B01D** *57/02*

U.S. Cl. 204—182.8 **59 Claims**

1. A method for controlling the pore size of an agarose gel, the method including the steps of:

(a) preparing an aqueous solution of agarose; and

(b) adding said aqueous solution of agarose to a mold with a concentration gradient of at least one of a salt or buffer; and



(c) gelling the agarose, said concentration gradient determining pore size of subsequently gelled agarose.

5,009,760

SYSTEM FOR MEASURING ELECTROKINETIC PROPERTIES AND FOR CHARACTERIZING ELECTROKINETIC SEPARATIONS BY MONITORING CURRENT IN ELECTROPHORESIS

Richard N. Zare, Stanford; Xiaohua Huang, Mountain View, and Jack I. Ohms, Palo Alto, all of Calif., assignors to Board of Trustees of the Leland Stanford Junior University, Stanford, Calif.

Continuation-in-part of Ser. No. 386,991, Jul. 28, 1989, abandoned. This application Dec. 29, 1989, Ser. No. 456,594
Int. Cl.[5] G01N *27/26*; B01D *57/02*
U.S. Cl. 204—183.3 13 Claims

1. A method for determining the electrokinetic properties of an electrolyte in an electrokinetic separation by means of an elongated capillary tube having an inlet end and an outlet end, said method comprising:

introducing a first electrolyte into the tube at its inlet end;

introducing a second electrolyte into the capillary tube at its inlet end, wherein said second electrolyte has an electrical resistivity which differs from that of the first electrolyte but substantially the same chemical properties as the first electrolyte;

applying a voltage to and current through the electrolyte to cause electroosmotic flow of the electrolytes towards the outlet end and to cause the second electrolyte to replace the first electrolyte continuously;

measuring the current through the electrolytes as a function of time; and

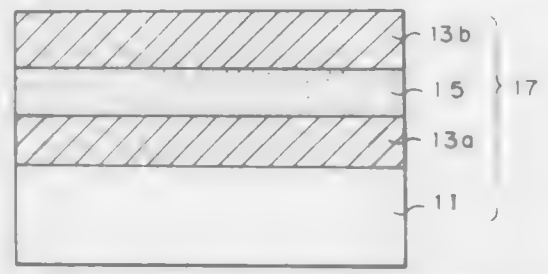
determining the electroosmotic velocity of the first or second electrolyte.

5,009,761

METHOD OF PRODUCING AN OPTICAL COMPONENT, AND COMPONENTS FORMED THEREBY

Dennis W. Robinson, Bradford on Avon, England, assignor to Spafax Holdings Plc., United Kingdom

Filed Sep. 24, 1984, Ser. No. 654,210
Int. Cl.[5] C23C *14/34*
U.S. Cl. 204—192.14 14 Claims



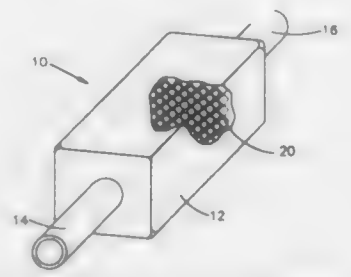
1. A method of making an optical component having an abrasion resistant specular reflective finish on a plastics material comprising subjecting the plastics material to a degreasing operation by vapor degreasing in a fluorocarbon solvent and then transferring the plastics material to an ultrasonically vibrated heated solution of the same solvent, performing a molecular cleaning operation on the plastics material, applying a layer to the plastics material, said layer comprising a material selected from the group consisting of glass and metal oxides of the metal to be used as the specular reflective material, said layer being applied in a vacuum vessel in an atmosphere of oxygen and argon, and being applied to a thickness of between about 0.5 and about 1.0 microns, and subsequently applying a coating of specular reflective material to the layer, said coating being between about 0.5 and about 5.0 microns thick thereby producing said abrasion resistant specular reflective finish on said plastics material.

5,009,762

MAGNETO-OPTICAL RECORDING MEDIUM HAVING PROTECTIVE FILM WITH INCREASED KERR EFFECT AND IMPROVED PROTECTION CHARACTERISTIC AND MANUFACTURING METHOD OF THE SAME

Yoshinori Maeno; Masanobu Kobayashi, and Kayoko Oishi, all of Tokyo, Japan, assignors to Oki Electric Industry Co., Ltd., Tokyo, Japan

Division of Ser. No. 376,591, Jul. 7, 1989, Pat. No. 4,950,947. This application Jan. 18, 1990, Ser. No. 466,947
Claims priority, application Japan, Jul. 8, 1988, 63-170567; Mar. 2, 1989, 1-50467
Int. Cl.[5] C23C *14/34*
U.S. Cl. 204—192.16 5 Claims



1. In a method of manufacturing a magneto-optical recording medium including at least one protective film and a magnetic film respectively formed on a substrate by depositing said films on said substrate, the improvement wherein said protective film is deposited by simultaneously sputtering onto said substrate a protective film formed from a film forming target including at least one compound selected from the group consisting of strontium titanate ($SrTiO_3$) or barium titanate ($BaTiO_3$) and a composition adjusting target constituted with titanium (Ti) or titanium oxide (TiO_y), where y is a positive number.

5,009,763

HONEYCOMB SOLID OXIDE ELECTROLYTIC CELL ASSEMBLY AND METHOD

Ralph E. Hise, Shaker Heights, Ohio, assignor to Advanced Technologies Management, Inc., Shaker Heights, Ohio

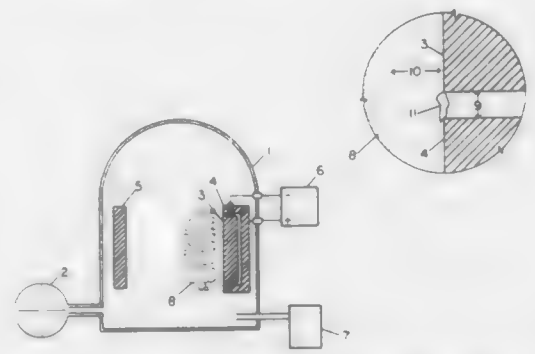
Filed Apr. 24, 1989, Ser. No. 341,869
Int. Cl.[5] C25B *9/00, 15/08, 11/03, 11/04*
U.S. Cl. 204—255 20 Claims

1. An apparatus for the reduction and oxidation of constituents of a fluid, said apparatus comprising:

an ion conducting ceramic structure;

a passage extending through said structure;

a first porous electrode at least partially lining the passage, and



a second and a third porous electrode on the structure external to the passage, said second and third electrodes being oppositely disposed about the first electrode and being adapted for the application of an electrical potential difference between said second and third electrodes, whereby reduction and oxidation reactions may be made to occur concurrently about the first porous electrode.

5,009,764

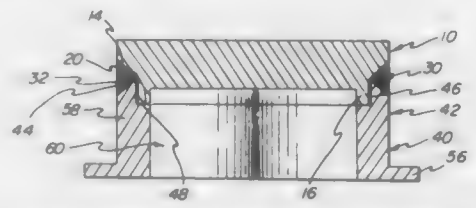
APPARATUS FOR REMOVAL OF ELECTRICAL SHORTS IN A SPUTTERING SYSTEM

Jerry D. Siefkes, Fort Collins; John G. Harpold, Bellvue, and Douglas S. Schatz, Fort Collins, all of Colo., assignors to Advanced Energy Industries, Inc., Fort Collins, Colo.

Continuation of Ser. No. 297,707, Jan. 13, 1989. This application Mar. 16, 1990, Ser. No. 494,554
The portion of the term of this patent subsequent to Jun. 26, 2007, has been disclaimed.
Int. Cl.[5] C23C *14/54*
U.S. Cl. 204—298.08 20 Claims

1. An apparatus for removing an electrical short caused by a flake in a sputtering system having a power supply comprising:

a. a sensor for detecting the presence of an electrical short caused by a flake across said power supply; and



b. a means for automatically removing said flake by manipulating said power supply in a manner which melts said flake.

5,009,765

SPUTTER TARGET DESIGN

Sohail S. Qamar, Hilliard; Harry W. Conard, and Lowell E. Hamilton, both of Orient, all of Ohio, assignors to Tosoh SMD, Inc., Grove City, Ohio

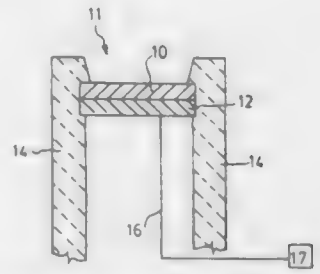
Filed May 17, 1990, Ser. No. 525,361
Int. Cl.[5] C23C *14/34*
U.S. Cl. 204—298.12 20 Claims

1. A sputter target assembly of the type wherein a cooling medium is to be provided in heat exchange relation with said target, comprising:

a sputter target having an upper surface carrying the material to be sputtered, an outer, peripheral surface and a cooling surface;

backing means comprising an upper mounting section positioned adjacent to the sputter target and having an outer peripheral surface, wherein the backing means and the target cooling surface, together, define a chamber adapted for reception of the cooling medium with the peripheral surfaces of the target member and the backing means nested adjacent each other to define an interface,

recess means formed at the interface of the sputter target and the backing means along adjacent peripheral surfaces of the sputter target and the backing means, and



metal bonding means disposed in the recess means for fixedly retaining the backing means and the sputter target together.

5,009,766

METAL OXIDE ELECTRODES

Imants R. Lauks, Morrisville, Pa., assignor to I-Stat Corporation, Princeton, N.J.

Continuation of Ser. No. 153,189, Feb. 8, 1988, which is a continuation of Ser. No. 390,445, Aug. 2, 1988, which is a continuation of Ser. No. 489,851, Mar. 2, 1990. This application Oct. 30, 1990, Ser. No. 608,601
Int. Cl.[5] G01N *27/46*
U.S. Cl. 204—419 20 Claims

1. A metal oxide electrode sensitive to hydrogen ions comprising:

a mixture of at least one insulating material having a density of binding sites sufficiently large to be sensitive to hydrogen ions, and at least one conductive metal oxide selected from the Group VIIIB metal oxides,

wherein the size of the particles of conductive metal oxide in said mixture is sufficiently small as to not exhibit bulk conductive properties, thereby reducing the susceptibility of said mixture to redox interference, while the molar ratio of said conductive metal oxide to said insulating material is sufficiently large than the resistivity of said mixture is in the range of 10^{10} to 10^{14} ohm-cm, whereby the electrode, as a whole, has sufficient conductivity to operate in a Faradaic configuration.

5,009,767

RECYCLE OF OILY REFINERY WASTES

Mark P. Bartilucci, S. Melbourne, Australia; Grant G. Karsner, Voorhees Township, and William J. Tracy, III, Sewell, both of N.J., assignors to Mobil Oil Corporation, Fairfax, Va.

Continuation-in-part of Ser. No. 151,380, Feb. 2, 1988, Pat. No. 4,874,505. This application Sep. 21, 1989, Ser. No. 410,434
The portion of the term of this patent subsequent to Oct. 17, 2006, has been disclaimed.
Int. Cl.[5] C10G *55/04*
U.S. Cl. 208—85 24 Claims

1. A process for disposing of petroleum containing sludge comprising:

(i) segregating waste oil-containing sludges into a first sludge and a second sludge, the first sludge being of high oil content relative to the second sludge and the second sludge being of high water content relative to the first sludge;

(ii) dewatering the first, high oil content sludge;

(iii) introducing the dewatered sludge into a delayed coking drum under delayed coking conditions in the presence of a liquid coker hydrocarbon feedstock to form coke;

(iv) introducing the second, high water content sludge into a delayed coking drum to quench the coke formed in the coking drum.

5,009,768

HYDROCRACKING HIGH RESIDUAL CONTAINED IN VACUUM GAS OIL

Roberto Galiasso; Alfredo Morales, and Jose A. Salazar, all of Caracas, Venezuela, assignors to Intevep, S.A., Caracas, Venezuela

Filed Dec. 19, 1989, Ser. No. 452,389
Int. Cl.[5] C10G *69/04*
U.S. Cl. 208—89 20 Claims

1. A hydrocatalytic process for producing diesel and gasoline from high-residual vacuum gas oil, which comprises:

(a) contacting high-residual vacuum gas oil feedstock with a fixed bed hydrodemetallization (HDM) catalyst composed of elements selected from Groups VIb and VIII of the Periodic Table in the presence of hydrogen and under moderate operating conditions to achieve at least 80% by weight of metal removal;

(b) conveying product from step (a) together with light cycle oil (LCO), heavy cycle oil (HCO) or a mixture thereof from fluid catalytic cracking (FCC) to a second catalyst bed, which is composed of a combination of catalysts, consisting of elements selected from Groups VIb, VIII and Va of the Periodic Table, and wherein said catalysts are present in proportions ranging from 0 to 70% by volume at the top and from 30 to 100% by volume at the bottom of the second catalyst bed, and passing said product through said second catalyst bed in the presence of hydrogen and under operating conditions substantially the same as those in step (a);

(b') transmitting product from step (b) through a third catalyst bed consisting of an element selected from Groups VIb and VIII of the Periodic Table supported on a silica-alumina base, and where said catalysts are present in an amount which varies from 30 to 50% of total catalyst volume, and passing said product through the third catalyst bed in the presence of hydrogen and under substantially the same or different operating conditions from those of step (a); and

(c) separating diesel fuel and naphthas from the product from step (b) or from step (b'), recovering the diesel fuel and then subjecting the resulting product to catalytic cracking (FCC).

5,009,769

PROCESS FOR CATALYTIC CRACKING OF HYDROCARBONS

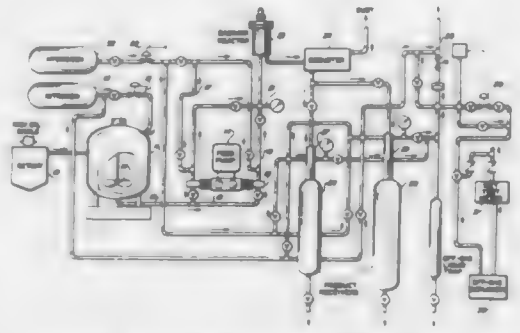
Alan R. Goelzer, Atkinson, N.H., assignor to Stone & Webster Engineering Corporation, Boston, Mass.

Continuation of Ser. No. 307,329, Feb. 6, 1989, abandoned. This application Mar. 19, 1990, Ser. No. 496,164
Int. Cl.[5] C10G *11/18, 51/06*
U.S. Cl. 208—113 5 Claims

1. In a fluidized catalytic cracking-regeneration process for cracking hydrocarbon feedstocks or the vapors thereof with a cracking catalyst consisting of separate first and second catalyst regeneration zones, wherein said catalyst is regenerated in said first and second regeneration zones, successively, by combusting hydrocarbonaceous deposits on the catalyst in the presence of an oxygen-containing gas under conditions effective to produce a first regeneration zone flue gas rich in carbons monoxide and a second regeneration zone flue gas rich in carbon dioxide, wherein temperatures in the first regeneration zone range from about 1100° F. to about 1300° F., and temperatures in the second regeneration zone range from about 1300° F. to about 1800° F., wherein the improvement consists of:

(a) cracking a first hydrocarbon feed comprising gas oil, residual oil boiling range material or mixtures thereof in a first elongated riser reactor in the presence of regenerated cracking catalyst supplied from the second catalyst regeneration zone at a temperature of at least 1300° F., a catalyst-to-oil ratio of from 5 to 10, and residence time of from 1 to 4 seconds and where coke is deposited on said catalyst in an amount less than 1.2 weight percent thereof, to obtain vaporous conversion products of the first hydrocarbon feed comprising a heavy naphtha fraction and materials lower boiling than said heavy naphtha fraction, a light cycle oil, a heavy cycle oil, and materials higher boiling than said heavy cycle oil, while simultaneously

(b) cracking a second hydrocarbon feed comprising virgin naphtha, intermediate and heavy cracked naphtha boiling range material or mixtures thereof, having a boiling point to about 450° F., in a second elongated riser reactor in the presence of regenerated cracking catalyst supplied from the second catalyst regeneration zone at a temperature of at least 1300° F., a catalyst-to-oil ratio of from 3 to 12, and residence time of from 1 to 5 seconds, and where coke is deposited on said catalyst in an amount less than 0.5 weight percent thereof, to obtain vaporous conversion products of the second hydrocarbon feed comprising gasoline boiling range material having a high aromatic content and octane number and lighter hydrocarbon material from a light cycle oil material, and



(c) combining the vaporous conversion products from the first and second elongated riser reactors in a common disengaging zone therein separating entrained catalyst particles from vaporous product material and passing the combined conversion products to a fractional distillation zone to recover at least a gasoline boiling range material fraction and lighter gaseous hydrocarbon material fraction, a light cycle oil boiling range material fraction and a heavy naphtha boiling range material fraction including slurry oil and higher boiling material fractions.

5,009,770

SIMULTANEOUS UPGRADING AND DEDUSTING OF LIQUID HYDROCARBON FEEDSTOCKS

Jeffrey T. Miller, Naperville, Ill., and Albert L. Hensley, Jr., Munster, Ind., assignors to Amoco Corporation, Chicago, Ill.

Filed Aug. 31, 1988, Ser. No. 238,929
Int. Cl.[5] C10G *13/02, 23/00*
U.S. Cl. 208—209 10 Claims

1. A process for simultaneously upgrading and dedusting liquid hydrocarbon feedstocks comprising the steps of:

(a) injecting dust particulate-containing raw retort effluent product stream from a feed line into a catalytic hydrotreater capable of agitating the product stream during hydrotreatment;

(b) agitating the product stream with a hydrotreating gas upstream of said hydrotreater to substantially prevent settling of particulate matter in the feed line;

(c) agglomerating said particulates to enhance solid-liquid separation and removing at least 90% of sulfur and nitrogen contaminants to produce synthetic crude oil by hydrotreating said product stream in the presence of a hydroprocessing catalyst at a temperature of from about 760° to about 825° F., under a hydroprocessing gas pressure of from about 1500 to about 2500 psi and at a space velocity of from about 0.1 to about 6.0 hr^{-1}; and

(d) substantially separating the agglomerated particulates from the hydrotreated oil.

5,009,771

HYDROCONVERSION PROCESS USING MIXED CATALYST SYSTEM

Frederick T. Clark, Wheaton, Ill.; Albert L. Hensley, Jr., Munster, Ind.; David Lyzinski, Wheaton, Ill., and Lawrence B. Peck, Houston, Tex., assignors to Amoco Corporation, Chicago, Ill.

Filed Mar. 30, 1990, Ser. No. 502,297
Int. Cl.[5] C10G *45/04*
U.S. Cl. 208—216 PP 16 Claims

1. A process for the hydrodemetallization, hydrodesulfurization, hydrodenitrogenation, and hydroconversion of a hydrocarbon feedstock containing asphaltenes, metals, and Shell hot filtration solids precursors which comprises contacting said feedstock with hydrogen under conversion conditions in the presence of a catalyst mixture comprising a first catalyst composition comprising a porous refractory inorganic oxide wherein said first catalyst composition possesses a pore volume of less than about 0.10 cc/g in pores having a diameter greater than about 200 Angstroms, a pore volume of less than about 0.02 cc/g in pores having a diameter greater than about 800 Angstroms, and a maximum average mesopore diameter of about 130 Angstroms; and a second catalyst composition comprising a porous refractory inorganic oxide wherein said second composition possesses a pore volume of greater than about 0.07 cc/g in pores having a diameter greater than about 800 Angstroms.

5,009,772

SOLVENT EXTRACTION PROCESS

Stephen R. Nelson, and Richard L. Hood, both of Edmond, Okla., assignors to Kerr-McGee Corporation, Oklahoma City, Okla.

Filed Feb. 27, 1989, Ser. No. 315,489
Int. Cl.[5] C10C *3/08*
U.S. Cl. 208—309 8 Claims

1. A continuous solvent deasphalating process for separating a heavy hydrocarbon material feedstock containing both solvent soluble lower molecular weight hydrocarbon components and solvent insoluble higher molecular weight hydrocarbon components, Conradson carbon precursors and heavy metals comprising:

contacting said feedstock with an extraction solvent in an extraction zone, said zone containing a high pressure compartment, a pressure reduction compartment and a low pressure compartment and whereby said contact is initially effected in said high pressure compartment, to continuously form an extraction mixture comprised of said feedstock as a dispersed phase and said extraction solvent as a continuous phase, said contact being carried out in said high pressure compartment of said extraction zone in a countercurrent flow relationship at an elevated temperature ranging from about 5° C. to about 20° C. or more below said extraction solvent's critical temperature and under a superatmospheric pressure of about about the equilibrium vapor pressure of said extraction solvent at the elevated temperature employed;

maintaining said extraction mixture in said high pressure compartment of said extraction zone at said elevated temperature and under said superatmospheric pressure, whereby a first light extract phase rich in said solvent soluble lower molecular weight hydrocarbon components and a first heavy raffinate phase rich in said solvent insoluble higher molecular weight hydrocarbon components, Conradson carbon precursors and heavy metals form and separate individually from said extraction mixture within said high pressure compartment of said extraction zone;

maintaining said extraction mixture and said first heavy raffinate phase in such high pressure compartment of said extraction zone at said elevated temperature and under said superatmospheric pressures while withdrawing said first light extract phase from said high pressure compartment and introducing said first light extract phase into said pressure reduction compartment of said extraction zone;

reducing the pressure upon said first light extract phase within said pressure reduction compartment of said extraction zone, while maintaining said extract phase at said elevated temperature, by an amount sufficient to effect within said low pressure compartment of said extraction zone a separation of said first light extract phase into a second light extract phase enriched in said solvent soluble lower molecular weight hydrocarbon components and a second heavy raffinate phase rich in said solvent insoluble higher molecular weight hydrocarbon components, Conradson carbon precursors and heavy metals;

withdrawing said reduced pressure first light extract phase from said pressure reduction compartment of said extraction one and introducing said reduced pressure first light extract phase into said lower pressure compartment of said extraction zone wherein said separation is effected and recovering individually from said lower pressure compartment of said extraction zone said second light extract phase and said second heavy raffinate phase; and

repressurizing at least a portion of said second heavy raffinate phase recovered from said low pressures compartment of said extraction zone to said superatmospheric pressure being maintained upon said extraction mixture and said first light extract phase and said first heavy raffinate phase being formed within said high pressure compartment of said extraction zone and recycling said repressurized portion back to said high pressure compartment of said extraction zone to provide reflux for said first light extract phase and said extraction mixture contained therein.

5,009,773

MONITORING SURFACTANT CONTENT TO CONTROL HOT WATER PROCESS FOR TAR SAND

Laurier L. Schramm, and Russell G. Smith, both of Edmonton, Canada, assignors to Alberta Energy Company Ltd.; Canadian Occidental Petroleum Ltd.; Esso Resources Canada Limited, all of Alberta, part interest to each; Gulf Canada Limited, Ontario; Her Majesty the Queen in right of the Province of Alberta, Alberta; HBOG-Oil Sands Limited Partnership, Alberta; PanCanadian Petroleum Limited, Alberta and Petro-Canada Inc., Alberta, all of, Canada

Filed Jan. 7, 1987, Ser. No. 1,258
Int. Cl.[5] C10E *1/04*
U.S. Cl. 208—391 1 Claim

1. In the hot water process for extracting bitumen from tar sand of varying nature in an extraction circuit, said process comprising conditioning the tar sand by slurrying it with hot water and alkaline process aid and agitating it, diluting the conditioned slurry with additional hot water, and retaining the diluted slurry in a primary separation vessel to produce an underflow of solids and an overflow of primary bitumen froth, the improvement comprising:

(a) determining for the circuit involved a measure of the

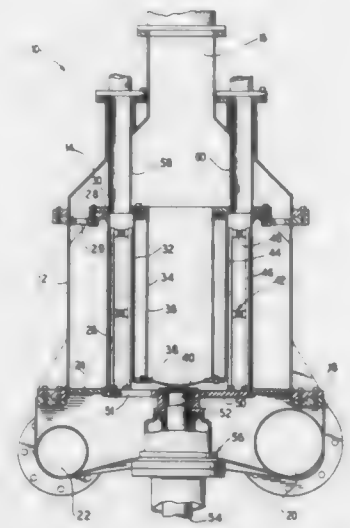
critical equilibrium free carboxylate-type surfactant concentration ("C_{CS}^{o}"), in the process water, at which maximum primary froth recovery occurs;

(b) determining for the circuit involved a measure of the critical equilibrium free sulfonate-type surfactant concentration ("C_{SS}^{o}") in the process water, at which maximum primary froth recovery occurs;

(c) determining whether the diluted slurry undergoing processing is one from which recovery of primary froth is first predominantly influenced by the concentration in the process water of free carboxylate-type surfactants or free sulfonate-type surfactants;

(d) in the case where the carboxylate-type surfactants first dominate, adjusting process aid addition to the process to bring the equilibrium free carboxylate-type surfactant concentration in the process water toward C_{CS}^{o};

(e) in the case where the sulfonate-type surfactants first dominate, adjusting process aid addition to the process to bring the equilibrium free sulfonate-type surfactant concentration in the process water toward C_{SS}^{o};



and repeating steps (c), (d) and (e) on an on-going basis to establish a control method for maximizing primary froth recovery.

PULSELESS SCREEN

Peter E. LeBlanc, Worthington, Mass., assignor to Beloit Corporation, Beloit, Wis.

Filed Oct. 30, 1989, Ser. No. 429,874
Int. Cl.[5] B07B *1/20*
U.S. Cl. 209—273 **22 Claims**

1. A screening apparatus for separating accepts and rejects of a slurry fed to the apparatus, said apparatus comprising:

a closed hollow housing including at least one side wall, first and second ends, and a slurry inlet at said first end, said housing having a longitudinal axis;

cylindrical screen means fixedly mounted in said housing, a first side of said screen means being in communication with said slurry inlet;

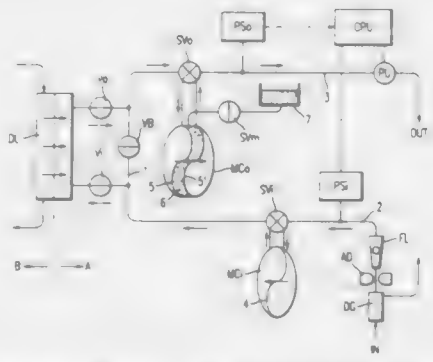
said screen means being disposed about said axis and extending generally axially in said housing from near said first end to near said second end;

a rotatable drive shaft extending into and journaled to said housing;

pulsing means connected to said drive shaft for rotation in a path of rotation adjacent said screen means on said first side of said screen means for inducing flow of slurry through said screen means;

a rejects outlet in flow communication with said first side of said screen means and in communication with the path of rotation of said pulsing means;

and an accepts outlet in flow communication with a second side of said screen means, said accepts outlet being located at one end of said screen means axially aligned with said screen means;



whereby the accepts are discharged axially from said housing generally along said axis of said housing of said screening apparatus.

5,009,775

METHOD OF CONTROLLING AMOUNT OF REMOVED WATER BY ULTRAFILTRATION AND CONTROL DEVICE FOR CONTROLLING AMOUNT OF REMOVED WATER BY ULTRAFILTRATION IN HEMODIALYSIS

Tsuyoshi Tsuji, Saitama; Masaaki Satoh, Tokyo, and Masayuki Yunoki, Saitama, all of Japan, assignors to Med-Tech Inc., Tokyo, Japan

Continuation of Ser. No. 180,952, Apr. 13, 1988. This application Jun. 1, 1990, Ser. No. 531,767
Int. Cl.[5] B01D *61/28, 61/34*
U.S. Cl. 210—85 **2 Claims**

1. A device for controlling the amount of removed water in a hemodialysis, comprising:

a dialyzer;

a supply circuit of dialysate and a drainage circuit of said dialysate, the supply circuit and the drainage circuit being respectively open circuit;

a plurality of electromagnetic valves for controlling flow of dialysate to said dialyzer;

means defining a first dialysate scaling chamber having a right and left partition separated by a diaphragm on the supply circuit of said dialyzer;

means defining a second dialysate scaling chamber including a right and left partition provided independently and sectioned by second diaphragm wherein said second scaling chamber is provided on the drainage circuit of said dialyzer;

first and second changeover valves respectively provided in association with said first and second scaling chambers wherein said right and left sectioned partitions of each of said chambers are changed alternately between an inlet side and an outlet side by said first and second changeover valves provided at each inlet and outlet;

a suction pump provided down stream of said second scaling chamber;

a bypass circuit provided by said plurality of electromagnetic valves to stop communication of dialysate to said dialyzer when said bypass circuit is formed;

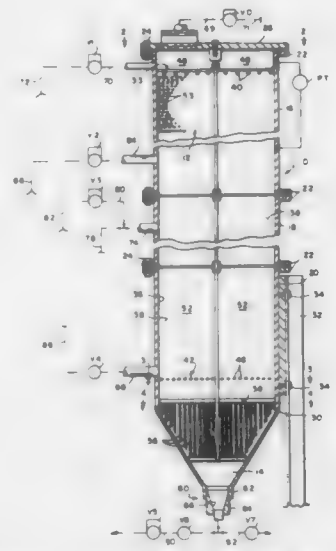
a first and second pressure detector means provided at the supply circuit and the drainage circuit respectively of the dialyzer; and

a central control unit for changing over said changeover valves at the outlet and inlet of said respective scaling chambers by means of said central control unit on the basis of input information from said pressure detectors,

means for calculating a differential value of signals obtained from said pressure detectors,

means for operating the changeover valves when said differential value is in a fixed range,

means for calculating a difference of periods at the fluid supply side and the drainage side by detecting the period of each of said changeover valves,



means for calculating an amount of removed water by the difference between the periods measured and means for controlling said suction pump so that a predetermined amount of water is maintained.

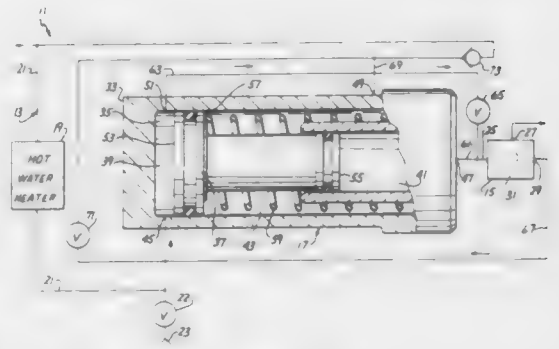
FILTER SYSTEM

James V. Banks, Brockton, Mass., assignor to Control Fluidics, Inc., Greenwich, Conn.

Continuation of Ser. No. 97,285, Sep. 11, 1987, abandoned, which is a continuation of Ser. No. 755,466, Jul. 16, 1985, abandoned. This application Aug. 14, 1989, Ser. No. 394,307
The portion of the term of this patent subsequent to Dec. 5, 2006, has been disclaimed.
Int. Cl.[5] B01D *24/46*
U.S. Cl. 210—108 **7 Claims**



1. Apparatus for removing by filtering particulate solids from a liquid, comprising a vessel, means dividing the vessel into three vertically-disposed filter chambers closed at the top and open at the bottom, means for delivering the liquid containing the solids to be filtered therefrom into each filter chamber, a first grid disposed in each filter chamber adjacent but spaced downwardly from the top defining, in conjunction with the top, a fluid discharge chamber at the top of each filter chamber, said first grid comprising spaced, parallel bars of triangular cross section disposed with their apices facing upwardly, a second grid disposed at the lower end of each filter chamber above the lower end of the vessel such as to define in conjunction with the lower end of the vessel a solids discharge chamber below the second grids common to the lower ends of said filter chambers, said second grids comprising spaced, parallel bars of circular cross section, a fluid discharge conductor connected to each of said fluid discharge chambers at the top above the first grid, each of said fluid conductors containing a fluid discharge valve, a solids discharge conductor connected to the lower end of the vessel below the second grids containing a solids discharge valve, an inlet conductor connected to each filter chamber through which the liquid containing solids therein to be filtered can be introduced into each filter chamber, each inlet conductor containing an inlet valve, a bed of buoyant, particulate filter material disposed in each filter chamber between the grids, said buoyant particulate filter material being of a size such as to inhibit the passage of said buoyant particulate material between the bars of the grids, hence, to maintain the bed intact, pressure-sensitive means for sensing the pressure differential of the fluid in said filter chambers above and below the upper grid bars, first means operable when the pressure differential in any one of the filter chambers reaches a predetermined level to close said fluid discharge valve in the discharge conductor of that chamber, and second means for introducing air pressure into the top of that chamber to displace the bed of buoyant particulate filter material downwardly therein to thus disperse the particulate filter material and, hence, to cause the solids contained in the liquid to gravitate to the bottom for a period sufficient to clear the bed of solids, said second means being operable when the pressure differential is restored to disable the means for introducing air at the top and reopening the liquid discharge valve.

5,009,777

REVERSE OSMOSIS AND HOT WATER SYSTEM

Donald F. Solomon, 45640 Denizen Heights Rd., Hemet, Calif. 92344

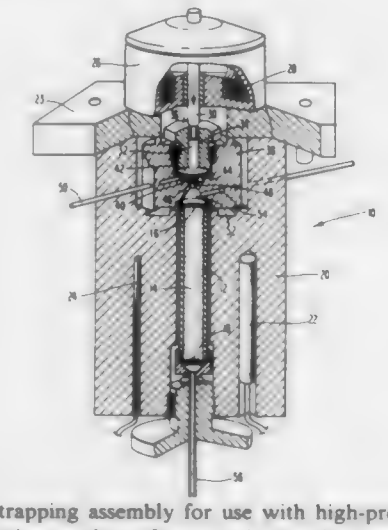
Continuation-in-part of Ser. No. 350,521, May 11, 1989, which is a continuation-in-part of Ser. No. 111,697, Oct. 21, 1987, Pat. No. 4,836,924. This application Feb. 20, 1990, Ser. No. 481,515
Int. Cl.[5] B01D *61/10*
U.S. Cl. 210—134 **17 Claims**

1. A water system comprising:

a hot water system including a hot water heater and conduit means coupled to feedwater under pressure for conducting water to and from the hot water heater;

a reverse osmosis module having an inlet port, a product water port for filtered product water and a brine outlet port for brine;

an injector pump coupled to the feedwater under pressure and having a water port coupled to the inlet port of the reverse osmosis module and a brine port coupled to the brine outlet port of the reverse osmosis module and the conduit means; and



the injector pump including means for providing water to said water port of the injector pump for supplying to the inlet port of the reverse osmosis module and means for increasing the pressure of the brine at the brine port of the injector pump to greater than the pressure of the feedwater whereby the brine can be injected into said hot water system.

5,009,778

AXIALLY-DRIVEN VALVE CONTROLLED FLUID TRAPPING ASSEMBLY

Mark A. Nickerson; John S. Poole, and Lenore G. R. Frank, all of Landenberg, Pa., assignors to Hewlett-Packard Company, Palo Alto, Calif.

Continuation-in-part of Ser. No. 316,383, Feb. 27, 1989, abandoned. This application Aug. 31, 1989, Ser. No. 403,024
Int. Cl.[5] B01D *15/08*
U.S. Cl. 210—198.2 15 Claims

7. In a trapping assembly for use with high-pressure fluid systems having a column for removing a solute component of said fluid, said assembly comprising:

inlet means for introducing said fluid under high pressure into said assembly,

axially driven valve means for controlling the fluid through said inlet means,

an annular orifice expansion nozzle with a conical diverging section leading from said valve means directly into said column,

said valve means comprising: an axially-moving, solenoid-driven pin, a diaphragm for directing the flow of said fluid from said inlet means into said column, and a valve seat, said valve seat located at the narrow end of said orifice expansion nozzle, and axial movement of said pin being adapted to restrict the flow through and to close said orifice expansion nozzle.

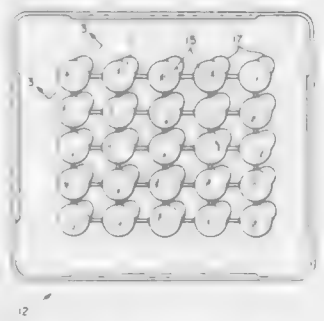
MAGNETIC ELEMENT WITH MAGNESIUM COIL FOR FILTER

Alfred M. Hebert, P.O. Box 706, Pleasant Valley, N.Y. 12569

Filed Dec. 11, 1989, Ser. No. 448,533
Int. Cl.[5] B01D *35/06*; B03C *1/30*
U.S. Cl. 210—223 2 Claims

1. An element for spin-on filters for removing metallic fines from a medium being filtered and for neutralizing sulphuric acids therein, comprising a base element having a lower recess therein for a magnet and an upper recess larger than said lower recess, extender elements stackable on said base element, an upper container within which are placed magnets spaced apart by flux spacer elements, said container nesting in the uppermost extender element, and a magnesium coil on the exterior of said container.



5,009,780

MULTI-WELL FILTRATION APPARATUS

Michael J. Sarrasin, Nashua, N.H., assignor to Millipore Corporation, Bedford, Mass.

Filed Jul. 20, 1989, Ser. No. 383,127
Int. Cl.[5] B01D *69/00*
U.S. Cl. 210—238 5 Claims

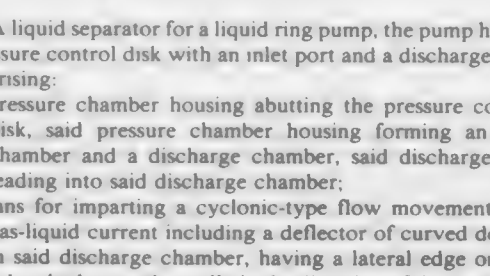
1. A filtration apparatus comprising:

a plate having at least one well, having a first open end for introducing liquid into said well, a second end and an outside peripheral surface about said second end,

a filter membrane having a center section and a tab section, said center section being bonded to said peripheral surface, said tab section being formed with said center section and extending away from said peripheral surface, said tab section and said center section forming an exposed planar surface, and said tab section having a size and shape which permits removing said membrane from said peripheral surface while avoiding rupture of said membrane.

5,009,781

CROSS-FLOW FILTRATION DEVICE WITH FILTRATE NETWORK AND METHOD OF FORMING SAME



Robert L. Goldsmith, Belmont, Mass., assignor to CeraMem Corporation, Waltham, Mass.

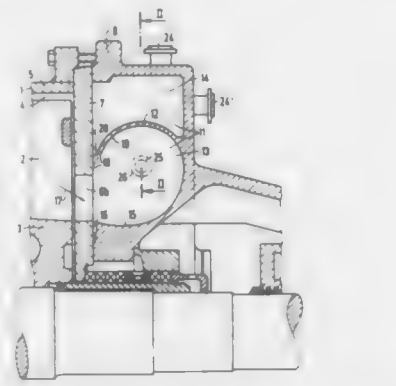
Continuation-in-part of Ser. No. 33,572, Apr. 2, 1987, Pat. No. 4,781,831. This application Oct. 5, 1988, Ser. No. 254,280
Int. Cl.[5] B01D *61/08*
U.S. Cl. 210—247 24 Claims

1. A cross-flow filtration device for receiving a feed stock at a feed end face and for separating the feed stock into filtrate and retentate, comprising:

a monolith of porous material defining a plurality of passageways extending longitudinally from the feed end face to a retentate end face of the monolith through which the feed stock flows to pass retentate from the device, the surface area of the passageways being at least 100 square feet per cubic foot of monolith;

at least one filtrate network including a plurality of longitudinal filtrate chambers, at least one filtrate channel, and at least one filtrate duct, the filtrate channel transecting the filtrate chambers and communicating with the filtrate duct

to discharge filtrate from the filtrate chambers through the filtrate duct from at least one end face of the monolith; and



the filtrate chambers being isolated from both end faces of the monolith and being distributed among the passageways to provide low pressure drop flow paths for filtrate flow through the porous material from the passageways to nearby filtrate chambers.

5,009,782

LIQUID SEPARATOR INTEGRATED INTO A PRESSURE CHAMBER HOUSING ABUTTING A LIQUID RING PUMP

Peter Trimborn, Nuremberg, Fed. Rep. of Germany, assignor to Siemens Aktiengesellschaft, Berlin & Munich, Fed. Rep. of Germany

Filed Mar. 27, 1990, Ser. No. 500,085
Claims priority, application European Pat. Off., Apr. 11, 1989, 89106359.6
Int. Cl.[5] B01D *45/14*
U.S. Cl. 210—360.1 12 Claims

1. A liquid separator for a liquid ring pump, the pump having a pressure control disk with an inlet port and a discharge port, comprising:

a pressure chamber housing abutting the pressure control disk, said pressure chamber housing forming an inlet chamber and a discharge chamber, said discharge port leading into said discharge chamber;

means for imparting a cyclonic-type flow movement to a gas-liquid current including a deflector of curved design, in said discharge chamber, having a lateral edge on one side which extends axially in the direction of the gas-liquid current emerging from the discharge port, said deflector abutting the pressure control disk; and a liquid outlet and gas outlet on the abutting pressure chamber housing, with at least the gas outlet being disposed in the approximate center of the region defined by the curved deflector.

5,009,783

SEPARATION OF COMPOSITIONS CONTAINING WATER AND ORGANIC OXYGENATES

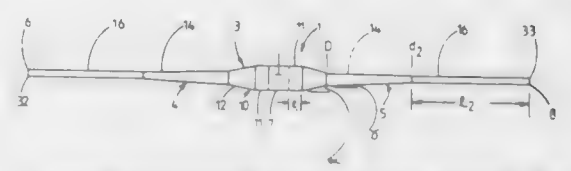
Craig R. Bartels, Wappinger Falls, N.Y., assignor to Texaco Inc., White Plains, N.Y.

Division of Ser. No. 456,619, Jan. 2, 1990. This application Jun. 4, 1990, Ser. No. 533,223
Int. Cl.[5] B01D *69/00*
U.S. Cl. 210—500.41 4 Claims

4. A composition comprising as a composite at least having properties for enabling pervaporation of a charge aqueous composition containing organic oxygenate selected from the group consisting of alcohols, glycols and weak acids, including:

(i) a polysulfone membrane as a porous support layer; and

(ii) mounted thereon, as a separating layer, a membrane of a blend of polyvinyl alcohol and polyacrylic acid;



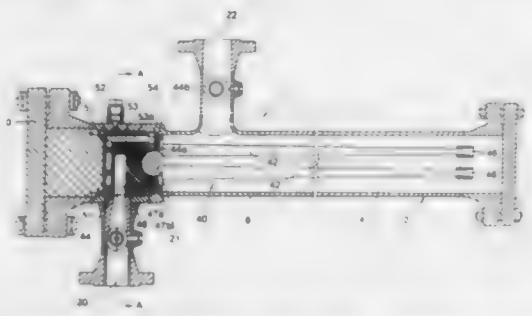
said blend being characterized by a weight ratio of polyvinyl alcohol to polyacrylic acid of 0.1-10 and having been cured at 125° C.-225° for 1-30 minutes.

5,009,784

CYCLONE SEPARATOR WITH OPPOSITELY DIRECTED SEPARATING CHAMBERS

Neville Clarke, Naree Warren, and Reimer Z. Hansen, Mount Eliza, both of Australia, assignors to Conoco Specialty Products Inc., Houston, Tex.

PCT No. PCT/AU87/00336, § 371 Date Jun. 1, 1989, § 102(e) Date Jun. 1, 1989, PCT Pub. No. WO88/02280, PCT Pub. Date Apr. 7, 1988
PCT Filed Oct. 2, 1987, Ser. No. 343,178
Claims priority, application Australia, Oct. 3, 1986, PH8333
Int. Cl.[5] B01D *17/038*
U.S. Cl. 210—512.1 9 Claims



1. A cyclone separator comprising elements designed, sized and arranged for treating a mixture of liquids including oil and water phases, for separating at least in part a more dense liquid component of the mixture from a less dense liquid component thereof, the cyclone separator being characterized by a stationary separating chamber having a central axis of symmetry between opposite first and second ends, the separating chamber including two tapered parts and an intermediate portion which is intermediate said ends between said tapered parts, the intermediate portion being of greater cross sectional dimension than either of the opposed ends, each said part comprises a primary portion adjacent said intermediate portion a conical section a secondary portion of generally conical shape and of a smaller angle of conicity than said conical section and a tertiary portion of generally cylindrical shape, the separating chamber having first outlet means for discharging the more dense liquid component of the separated phases and second outlet means for discharging the less dense liquid component of the separated phases, the separator further including feed inlet means proximate to the intermediate portion.

5,009,785

SYSTEM AND APPARATUS FOR THE SEPARATION OF MULTI-PHASE MIXTURE

David A. Webb, Northcote, Australia, assignor to Conoco Specialty Products Inc., Houston, Tex.

Continuation-in-part of Ser. No. 6,558, Feb. 20, 1987, abandoned. This application Feb. 13, 1989, Ser. No. 310,279
Claims priority, applicaiton Australia, Apr. 23, 1985, PH0274; Apr. 23, 1988, PCT/AU86/00111
Int. Cl.[5] B04C 7/00
U.S. Cl. 210—512.2 16 Claims

1. Apparatus for separating multi-phase mixtures or at least partially separating a more dense component of a mixture from a less dense component thereof, the apparatus comprising, an outer casing defining a cavity therein, an intake port through which the mixture is fed to the apparatus, a first outlet port from which a more dense component can be discharged from the apparatus and a second outlet port from which a less dense component can be discharged from the apparatus, the apparatus further including a cyclone separating means locatable within said cavity and which comprises a plurality of longitudinal separating chambers, each chamber having a portion which has a greater cross-sectional dimension at one end than at its other end, each chamber further comprising inlet means and at least two outlets; a head portion integrally connected to each of said separating chambers and having a first outlet passage formed within the head portion and transverse to said longitudinal separating chambers in fluid communication with one outlet of each of said separating chambers and a second outlet passage within said head portion which is parallel with said longitudinal separating chambers; and means for communicating said first and second outlet passages with said second outlet port, the other of said outlets of each separating chamber being in communication with said first outlet port, at least a portion of one of said outlet passages being located at a position between said intake port and said first outlet port

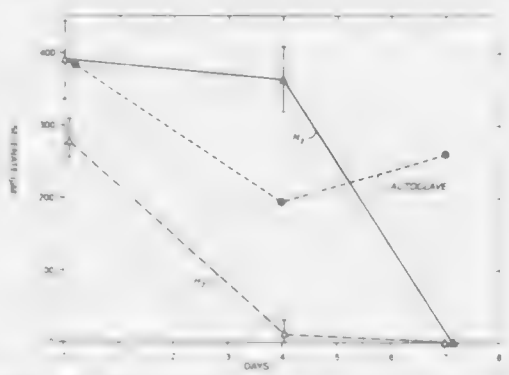
5,009,786

SELENATE REMOVAL FROM WASTE WATER

Ronald S. Oremland, San Francisco, Calif., assignor to The United States of America as represented by the Secretary of the Interior, Washington, D.C.



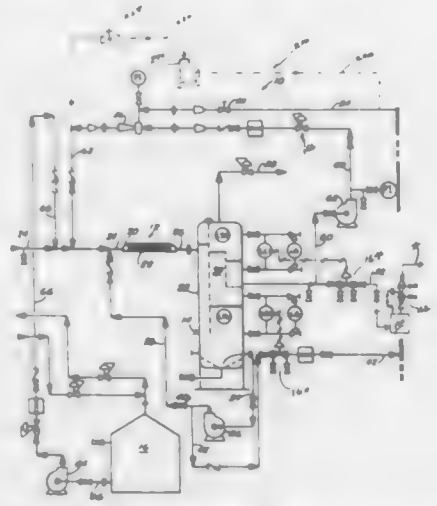
Filed Oct. 30, 1989, Ser. No. 428,699
Int. Cl.[5] C02F 3/30
U.S. Cl. 210—602 13 Claims

1. A method for the removal of selenium from agricultural waste waters wherein said agricultural waste waters comprise selenium and nitrate, comprising the steps of

providing a first treatment zone, said first treatment zone comprising biological organisms capable of removing said nitrate from said waste water and assimilating said nitrate into biomass,

treating said agricultural waste water in said first treatment zone under aerobic conditions until the concentration of nitrate in effluent from said first treatment zone is substantially reduced in a range about 1 to 0.1 mM.

providing a second treatment zone, said second treatment zone removed from said first treatment zone, said second treatment zone comprising substantially anoxic conditions and biological organisms enriched for biological organisms that respire selenate under substantially anoxic conditions



treating the effluent from said first treatment zone in said second treatment zone until the concentration of selenate in effluent from said second treatment zone is substantially reduced in a range about 0.01 to 0.001 mg/l.

5,009,787

LIQUID-TO-LIQUID OIL ABSORPTION METHOD

Paul C. Broussard, Sr., P.O. Box 32504, Lafayette, La. 70503

Continuation of Ser. No. 160,864, Feb. 26, 1988, Pat. No. 4,839,043, which is a continuation-in-part of Ser. No. 938,397, Dec. 5, 1986, Pat. No. 4,728,428. This application Dec. 19, 1988, Ser. No. 286,234
The portion of the term of this patent subsequent to Mar. 1, 2005, has been disclaimed.
Int. Cl.[5] B01D 12/00
U.S. Cl. 210—634 5 Claims

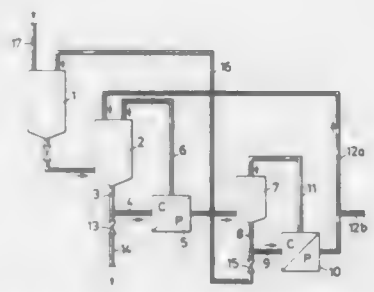
1. A method for degreasing water, which comprises contacting contaminated produced-water with a volatile non-water-soluble liquid fluorocarbon to dissolve both dissolved and suspended contaminants from said produced-water; separating the spent fluorocarbon from the degreased water; and, recycling separated spent fluorocarbon to the contacting step by means of an eductor jet pump driven by said degreased water.

5,009,788

METHOD FOR REMOVING ORGANIC AND TUNGSTEN FROM SODIUM SULFATE SOLUTION

Tai K. Kim, and Clarence D. Vanderpool, both of Towanda, Pa., assignors to GTE Products Corporation, Stamford, Conn.

Filed Apr. 4, 1990, Ser. No. 504,478
Int. Cl.[5] B01D 11/04
U.S. Cl. 210—639 1 Claim



1. A method for removing organic and tungsten from sodium sulfate solutions to render said solutions suitable for ion membrane processing, said method comprising contacting said solution wherein the pH said solution is no greater than about 7, with activated carbon to remove essentially all of said organic and said tungsten therefrom and form a purified sodium sulfate solution, said solution being suitable for ion membrane processing.

5,009,789

METHOD AND PLANT FOR SEPARATION OF SYNTHETIC WATER SOLUBLE POLYMERS

Ulla K. E. Helmer, Sollentuna, and Karl-Erland M. Stensiö, Järfälla, both of Sweden, assignors to EKA Nobel, Surte, Sweden

PCT No. PCT/SE87/00637, § 371 Date Jun. 22, 1989, § 102(e) Date Jun. 22, 1989, PCT Pub. No. WO88/05444, PCT Pub. Date Jul. 28, 1988
PCT Filed Dec. 29, 1987, Ser. No. 375,015
Claims priority, application Sweden, Jan. 19, 1987, 8700187
Int. Cl.[5] B01D 61/20
U.S. Cl. 210—641 16 Claims

1. A method for the separation and reuse of synthetic water-soluble resins of different molecular weight produced in a polymerization zone, said water-soluble resins being selected from the group consisting of urea-formaldehyde resins, melamine-formaldehyde resins and polyamidoamine-epichlorohydrin resins, which method comprises

(1) charging an aqueous solution of said water-soluble synthetic resin to an ultrafiltration unit,

(2) in said ultrafiltration unit effecting separation of said solution into

(a) a concentrate solution which mainly comprises polymers of high molecular weight, and

(b) an aqueous permeate solution which mainly comprises polymers of low molecular weight, monomers and byproducts,

(3) the separation according to step (2) being carried out so that at least 5 percent by weight of the original dry resin content is separated off in said permeate solution, and

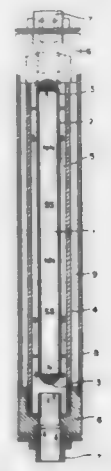
(4) recirculating said separated permeate solution to the polymerization zone for further polymerization.

5,009,790

METHOD FOR ABSORBING LIQUIDS USING DEALGINATE KELP

Michael R. Bustamante, Chula Vista; John J. Renaker, Jr., Valley Center, and Donald A. Magley, Chula Vista, all of Calif., assignors to Damcosur S.A. De C.V., Chula Vista, Calif.

Filed Aug. 20, 1990, Ser. No. 569,633
Int. Cl.[5] C02F 1/28; B01J 20/22
U.S. Cl. 210—689 12 Claims



1. A method for the absorption of a liquid which comprises applying to a body of said liquid an absorbent composition which comprises dealginated, partially dewatered kelp residue.

5,009,791

MAGNETIC TREATMENT OF WATER USED FOR AGRICULTURAL PURPOSES

Israel J. Lin, Post Hof Hacarmel, Kerem Maharal, Israel 30840, and Jacob Yotvat, 31 Harisbonim Street, Kiriat Haim, Israel 26302

Filed Aug. 18, 1989, Ser. No. 395,897
Claims priority, application Israel, Jul. 17, 1989, 091014
Int. Cl.[5] C02F 1/48; B01D 35/02; A01K 7/02
U.S. Cl. 210—695 4 Claims

1. A method of magnetically treating water for watering of livestock, comprising the steps of:

(a) mechanically cleaning the water so as to remove ferromagnetic particles and other suspended matter therefrom;

(b) causing the water to pass through a magnetic field of alternating polarity wherein

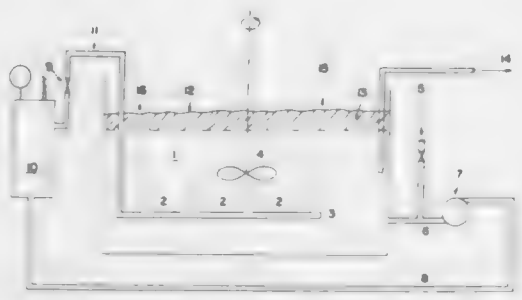
said magnetic field is of an intensity of between 600 and 6500 gauss, and has a field gradient of between 0.2 and 6.0 kgauss/cm;

said water passing through said magnetic field flows in a

direction which is substantially perpendicular to the magnetic field vector of said magnetic field;

said water flow through said magnetic field is substantially laminar, at a velocity of between 0.5 and 2.4 m/s; and

said laminar water flow is at a velocity for causing each water molecule of said laminar water flow to pass through said magnetic field of alternating polarity at a frequency of not less than 2 and not more than 60 polarity changes per second; and



(c) recirculating water not consumed by said livestock by pumping the unconsumed water through said magnetic field at said velocity of between 0.5 and 2.4 m/s, to be magnetically retreated.

5,009,792

METHOD FOR CLARIFYING AQUEOUS SALT SOLUTIONS

Jarl M. Pettersen, Larvik; Arild Nilsson, Skien, both of Norway, and Robert M. Millaway, Hayward, Calif., assignors to Norsk Hydro a.s., Oslo, Norway

Filed Oct. 24, 1989, Ser. No. 425,977
Int. Cl.[5] B03D *1/02*
U.S. Cl. 210—705 4 Claims

1. A method of clarifying an aqueous salt solution containing inorganic insolubles, comprising:

providing a vessel for the aqueous salt solution;

providing a recirculating system for the aqueous salt solution in said vessel circulating aqueous salt solution therefrom and thereto;

introducing air into said recirculating system;

pressurizing said air in said recirculating system;

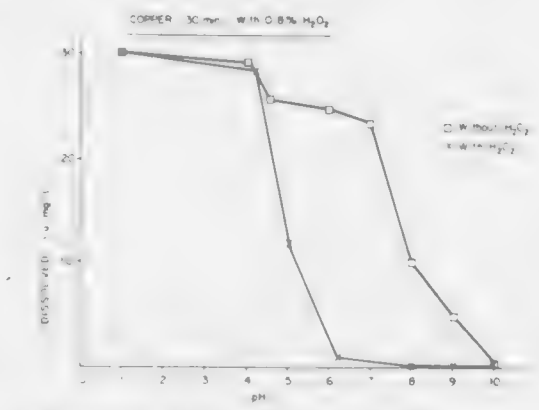
releasing said air into said aqueous salt solution such that said air forms microbubbles in said aqueous salt solution;

adding flocculants to said aqueous salt solution;

ensuring the presence of sufficient foam forming organic components in said aqueous salt solution to form a stable foamy sludge, wherein said air, said flocculants and said organic components form the stable foamy sludge on said aqueous salt solution, flotating said inorganic insolubles out of said aqueous salt solution;

interrupting the release of said air into said aqueous salt solution;

back-mixing a portion of said stable foamy sludge into said aqueous salt solution; and



restarting the release of said air into said aqueous salt solution for the flotation of remaining said inorganic solubles to obtain a clarified aqueous salt solution.

5,009,793

PROCESS FOR THE SEPARATION OF HEAVY METALS FROM WASTE MATERIALS

German Muller, Bammental, Fed. Rep. of Germany, assignor to Industrie Automation Sondertechnik GmbH & Co., Heidelberg, Fed. Rep. of Germany

Filed Jan. 9, 1990, Ser. No. 462,580
Claims priority, application European Pat. Off., Jan. 13, 1989, 89100518.3
Int. Cl.[5] C02F *1/52, 1/72*
U.S. Cl. 210—710 21 Claims

1. A process for the removal of heavy-metals from a contaminated waste material including lead and having at least a first heavy-metal and a second heavy-metal comprising the steps of:

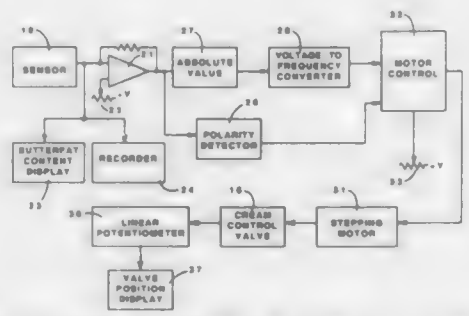
treating the waste material with an acid to dissolve the heavy metals as water-soluble salts;

treating the water-soluble salts with an oxidizing agent;

forming a hydroxide of at least the first heavy-metal;

precipitating at least a portion of the first heavy-metal as a hydroxide at a first pH of below about 5;

adjusting the pH to a second pH which is different from the first pH; and



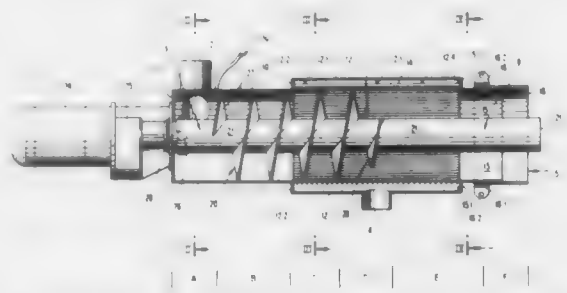
precipitating at least a portion of the second heavy-metal as a hydroxide at the second pH.

5,009,794

SYSTEM AND METHOD FOR CONTROLLING BUTTERFAT CONTENT IN STANDARDIZED MILK PRODUCT

William H. Wynn, San Carlos, Calif., assignor to Wedgewood Technology, Inc., San Carlos, Calif.

Filed May 16, 1989, Ser. No. 352,259
Int. Cl.[5] A23C *9/00*
U.S. Cl. 210—739 21 Claims



14. In a method of controlling fat content in a standardized milk product produced by combining high fat milk and low fat milk, the steps of: setting a desired fat content for the milk product and providing a reference signal corresponding thereto, continuously monitoring the milk product with an optical density sensor and providing a signal corresponding to the actual fat content in said product, monitoring the reference signal and the sensor signal to provide an error voltage having a magnitude which decreases as the difference between the actual fat content and the desired fat content decreases, applying the error signal to a voltage to frequency converter to produce a control signal containing pulses occurring at a rate which as the difference between the actual fat content and the desired fat content decreases, advancing a stepping motor by one step on response to each pulse in the control signal, and driving a control valve with the stepping motor to adjust the relative amounts of high fat milk and low fat milk which are combined to produce the standardized product at a rate which decreases as the actual fat content approaches the desired fat content.

PROCESS FOR THE DEWATERING OF SOLIDS SUSPENDED IN WATER AND SCREW PRESS SEPARATOR THEREFOR

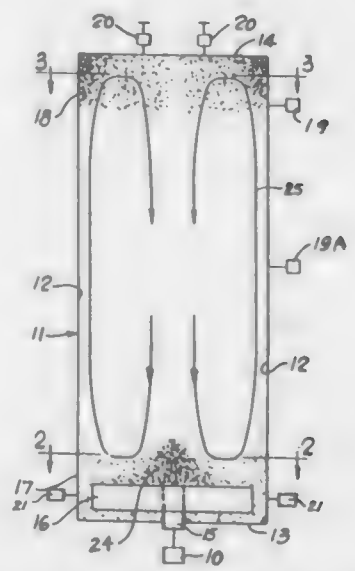
Dietrich Eichler, Groskarolinenfeld, Fed. Rep. of Germany, assignor to Fan Engineering GmbH, Sunninghausen, Fed. Rep. of Germany

Filed Nov. 3, 1989, Ser. No. 431,073
Claims priority, application Fed. Rep. of Germany, Nov. 3, 1988, 3837331; Mar. 4, 1989, 3907046; Sep. 1, 1989, 3929090
Int. Cl.[5] C02F *1/00*
U.S. Cl. 210—744 28 Claims

1. A process for separating and dewatering solids contained in waste water in a concentration therein of less than about ten percent, comprising the steps of:

introducing said waste water into a space defined by a housing, a cylindrical strainer basket aligned with an outlet end of said housing, and cylindrical tube means aligned with an outlet end of said strainer basket, said strainer basket being apertured for the passage of waste, said tube means defining a solids discharge opening at a terminal end thereof, said tube means comprising a cylindrical mouthpiece and a cylindrical mouthpiece extension telescopingly adjustably connected to said mouthpiece, said waste water being introduced into a portion of said space defined by said housing,

rotating a screw disposed in said space and having a discharge end terminating short of said outlet end of said strainer basket, to advance said waste water into said strainer basket whereby water separated from said solids passes laterally through said strainer basket, and a solid slug is formed which extends from said discharge end of said screw to said solids discharge laterally against an inner surface of said cylindrical strainer basket while being advanced therethrough, and



adjusting said mouthpiece extension relative to said mouthpiece to vary the length of said tube means for varying the resistance to travel of said slug, said mouthpiece extension being adjusted such that from five to thirty percent of said slug is disposed in said tube means.

METHODS AND APPARATUS FOR TREATING A MIXTURE OF PARTICLES AND FLUIDS

Michael A. Petrik, Highland Heights, Ohio; Robert J. Adler, 3068 Van Aken Blvd., Cleveland, Ohio 44120, and Jonathan D. Wineland, Madison, Ind., assignors to Robert Adler, Cleveland, Ohio

Filed Mar. 24, 1986, Ser. No. 843,055
Int. Cl.[5] B04C *7/00*
U.S. Cl. 210—787 28 Claims

1. Apparatus for the treatment of particles, comprising

a container having an axis and a sidewall surrounding said axis;

impeller means located in said container at a first position along said axis and rotatable upon said axis; and

barrier means located in said container at a second position along said axis, to interrupt flow parallel to said axis of fluids flowing within said container;

said sidewall having generally circular cross-section at first and second positions, and all intermediate positions, along said axis and with said axis at the circular center, and said sidewall cross-section surrounding said axis at said second position having a diameter no less than one-quarter of the diameter of said sidewall cross-section surrounding said axis at said first position; and

said container lacking baffle means, and said impeller means and barrier means being sufficiently separated with respect to each other, that rotation of said impeller generates in said fluid a circulating current, said current having a positive component of rotational flow about said axis everywhere oriented in the direction of said rotation of said impeller, and having a positive component of axial flow toward said impeller in the vicinity of said axis and a positive component of axial flow away from said impeller in the vicinity of said sidewall, and that for at least one combination of a particle, fluid and impeller speed, when said particle and said fluid are put in said container and said impeller means is rotated at said impeller speed, said current will carry said particle to the vicinity of said barrier means, where said particle will separate from said current and remain in said vicinity of said barrier means; and further comprising

first port means for the introduction into said container of fluids and particles, and second port means for the a withdrawal from said container of fluids and particles, said second port means being located upon said sidewall.

5,009,797

METHOD OF SUPPORTING FRACTURES IN GEOLOGIC FORMATIONS AND HYDRAULIC FLUID COMPOSITION FOR SAME

Glenn S. Penny, Duncan, Okla.; Robert S. Stephens, Auburn, and Alan R. Winslow, Tacoma, both of Wash., assignors to Weyerhaeuser Company, Tacoma, Wash.

Filed Dec. 13, 1989, Ser. No. 450,360
Int. Cl.[5] E21B *43/26*
U.S. Cl. 252—8.551 19 Claims

1. A method of preparing a hydraulic fracturing fluid composition which comprises:

providing an aqueous transport medium;

increasing the viscosity of the medium by dispersing sufficient amounts of a gellant and a bacterial cellulose in said medium, said bacterial cellulose being produced by a cellulose generating strain of the genus Acetobacter grown in an agitated culture; and then

suspending a sufficient amount of proppant particles in said medium whereby said bacterial cellulose decreases the settling rate of the proppant particles prior to and during transport into a drill hole and fractured geologic formation.

10. A hydraulic fracturing fluid composition comprising:

an aqueous transport medium;

a gellant and a bacterial cellulose dispersed in said medium to raise the viscosity thereof, said bacterial cellulose being produced by a cellulose generating strain of the genus Acetobacter in an agitated culture; and

a sufficient amount of proppant particles suspended in said medium whereby said bacterial cellulose decreases the settling rate of the proppant particles prior to and during transport into a drill hole and fractured geologic formation.

LOW FLUID LOSS HEAVY BRINES CONTAINING HYDROXYETHYL CELLULOSE

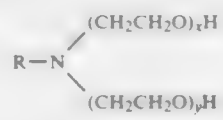
Roy F. House, Houston, and Lonnie D. Hoover, Chappell Hill, both of Tex., assignors to Baroid Technology, Inc., Houston, Tex.

Continuation of Ser. No. 80,203, Jul. 29, 1987, abandoned, which is a continuation of Ser. No. 357,308, Mar. 11, 1982, abandoned, which is a continuation-in-part of Ser. No. 161,444, Jun. 20, 1980, Pat. No. 4,420,406. This application Apr. 10, 1989, Ser. No. 336,592
The portion of the term of this patent subsequent to Dec. 13, 2000, has been disclaimed.
Int. Cl.[5] E21B *43/00*
U.S. Cl. 252—8.551 8 Claims

1. A method of decreasing the fluid loss of heavy brines containing zinc bromide and at least one soluble salt selected from the group consisting of calcium chloride and calcium bromide, which comprises sequentially carrying out the steps of adjusting the concentration of zinc bromide in said brine to the range from about 16% to about 20% by weight, and mixing with said brine a fluid loss reducing amount of hydroxyethyl cellulose which has been activated by admixing said hydroxyethyl cellulose with an aqueous liquid having a pH of greater than 7 and a water-soluble polar organic liquid which when uniformly mixed with hydroxyethyl cellulose in a weight ratio of hydroxyethyl cellulose to polar organic liquid of 1:2 produces a mixture with free liquid present after remaining quiescent for one week at ambient temperature in a sealed container, said hydroxyethyl cellulose being incompletely solubilized in said brine whereby a portion of said hydroxyethyl cellulose acts as a bridging agent.

5,009,799

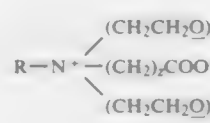
INORGANIC ACID SOLUTION VISCOSIFIER AND CORROSION INHIBITOR AND METHOD



Allen R. Syrinek, Richmond; Ralph N. Buggs, Missouri City, and Robert K. Gabel, Houston, all of Tex., assignors to Nalco Chemical Company, Naperville, Ill.

Filed Feb. 16, 1988, Ser. No. 155,861
Int. Cl.[5] E21B *43/27*
U.S. Cl. 252—8.553 16 Claims

1. A viscosifier for aqueous inorganic acid solutions comprising:



a mixture of ethoxylated fatty amines and betaine inner salts of said ethoxylated fatty amines,

wherein said ethoxylated fatty amines are of the formula

wherein R is selected from saturated and unsaturated alkyl groups having from 8 to 24 carbon atoms and mixtures thereof, and x and y separately are integers and together have an average value of from 1.00 to 2.5,

wherein said betaine inner salts of said ethoxylated fatty amines are of the formula

wherein R, x, and y are as defined above and z in an integer of from 1 to 3 and mixtures thereof,

and wherein said ethoxylated fatty amines comprise from 70 to 95 mole percent of said mixture and said betaine inner salts of said ethoxylated fatty amines comprise from 5 to 30 mole percent of said mixture;

further including an organic alcohol of the formula

wherein R' is an unsaturated alkyne group having from 3 to 10 carbon atoms, wherein said organic alcohol is present in said viscosifier in the amount of at least 0.5 weight percent based on total mixture of said ethoxylated fatty amines and said betaine inner salts of said ethoxylated fatty amines; and

an alkyl pyridine quaternary ammonium salt, wherein the alkyl substituents on pyridine are selected from saturated and unsaturated alkyl groups having separately from 1 to 8 carbon atoms and together on a single pyridine moiety have no more than 10 carbon atoms, and mixtures thereof, wherein said alkyl pyridine quaternary ammonium salt is present in said viscosifier in the amount of at least 0.5 weight percent based on total mixture of said ethoxylated fatty amines and said betaine inner salts of ethoxylated fatty amines.

7. A viscosified inorganic acid solution comprising:

an inorganic acid;

water; and

an effective amount of a viscosifier as defined in claim 1.

12. In a method of treating hydrocarbon-producing rock formations with acid by introducing an acid fluid into contact with the formation, the improvement comprising the use of an acid fluid comprising:

an inorganic acid;

water; and

an effective amount of a viscosifier as defined in claim 1.

NIOBIUM-ACTIVATED YTTRIUM TANTALATE X-RAY PHOSPHOR WITH IMPROVED BRIGHTNESS AND METHOD OF MAKING SAME

V. Butchi Reddy, Sayre, Pa., assignor to GTE Products Corporation, Stamford, Conn.

Continuation-in-part of Ser. No. 459,891, Jan. 2, 1990, Pat. No. 4,970,024. This application Aug. 6, 1990, Ser. No. 563,133

The portion of the term of this patent subsequent to Nov. 13, 2007, has been disclaimed.

Int. Cl.[5] C09K *11/78*

U.S. Cl. 252—301.4 H **5 Claims**

1. A niobium-activated yttrium tantalate x-ray phosphor containing rubidium halide or cesium halide, strontium halide or barium halide and, optionally, gallium oxide or aluminum oxide incorporated therein, made by forming a uniform mixture of the following ingredients in the following proportions:

one mole of yttrium oxide;

0.995 mole of tantalum oxide;

0.005 mole of niobium oxide;

from 0.001 mole to 0.01 mole of rubidium halide or cesium halide;

from 0.01 mole to 0.10 mole of strontium halide or barium halide;

and, optionally, from 0.01 mole to 0.04 mole of gallium oxide or aluminum oxide;

blending said mixture with a lithium chloride-lithium sulfate eutectic flux composition;

firing said mixture at about 1200°-1300° C. for about 10–12 hours to form said phosphor;

washing said phosphor in deionized water to remove said flux; and

filtering, drying and classifying said phosphor, said phosphor exhibiting a higher brightness than the phosphor prepared as above absent rubidium halide, cesium halide, strontium halide, barium halide, gallium oxide and aluminum oxide.

PROCESS FOR PRODUCING ELECTROLUMINESCENT YELLOW ZINC SULFIDE PHOSPHORS

Kenneth T. Reilly; Richard G. W. Gingerich, and Christopher S. Poss, all of Towanda, Pa., assignors to GTE Products Corporation, Stamford, Conn.

Continuation of Ser. No. 289,882, Dec. 27, 1988, abandoned. This application Jan. 11, 1990, Ser. No. 462,922

Int. Cl.[4] C09K *11/56*

U.S. Cl. 252—301.60 S **1 Claim**

1. A process for producing an electroluminescent phosphor consisting essentially of:

(a) blending a chloride flux, a copper source, and zinc sulfide to form a relatively uniform admixture;

(b) heating the resulting admixture at a temperature of from about 1000° C. to about 1300° C. for about 2 to about 8 hours to convert at least a portion of the admixture to a crystalline material containing zinc sulfide of a hexagonal crystal structure, at least some chloride ions and copper ions;

(c) washing the resulting material with sufficient water to remove at least a major portion of the water soluble material from the crystalline material;

(d) drying the washed material to produce a relatively moisture-free material;

(e) subjecting the moisture-free material to low intensity milling for a sufficient time to change the crystallographic structure of at least a portion of the moisture-free material from a hexagonal to a cubic structure;

(f) blending the cooled material, which material is essentially nonelectroluminescent, with copper sulfate and zinc sulfate and sufficient manganese carbonate to achieve a manganese concentration of from about 2.0% to about 3.6% by weight of manganese based on the amount of zinc sulfide to form a second admixture;

(g) heating the second admixture at a temperature of from about 750° C. to about 850° C. for about 1.5 to about 3 hours to form an activated material containing from about 0.7% to about 1.3% by weight of manganese;

(h) washing the activated material with acetic acid, hydrochloric acid and potassium cyanide aqueous solutions to remove residual fluxes and excess activator materials; and

(i) drying the washed material to form an electroluminescent phosphor having increased brightness wherein the electroluminescent emission of the phosphor has an x color coordinate value of from about 0.522 to about 0.532 and a y color coordinate value of from about 0.460 to about 0.470 and the phosphor has an efficiency of greater than about 5.6 lumens per watt at 115 V/400 Hz and a particle size of from about 25 to about 30 micrometers.

BROAD LIQUID LEVEL GAS-LIQUID MIXING OPERATIONS

Mark K. Weise, North Haledon, N.J.; Jeffery P. Kingsley, Newburgh, and Lawrence M. Litz, Pleasantville, both of N.Y., assignors to Union Carbide Industrial Gases Technology Corporation, Danbury, Conn.

Filed Apr. 26, 1990, Ser. No. 514,937

Int. Cl.[5] B01F *3/04*

U.S. Cl. 261—21 12 Claims

1. An improved process for mixing a gas and a liquid in a mixing vessel under circumstances in which the depth of said liquid changes over the course of the mixing operation comprising:

(a) introducing feed gas to the overhead gas space in a mixing vessel having two or more impeller-draft tube assemblies stacked vertically therein, each such assembly comprising a hollow draft tube with axial flow, down-pumping impeller means positioned therein for vortex development and the ingestion of gas from said overhead gas space into a body of liquid present in said mixing vessel, the lowest positioned impeller-draft tube assembly being positioned below the lowest liquid level encountered during the gas-liquid mixing operation, the highest positioned impeller-draft tube assembly being positioned below the highest liquid level encountered during said mixing operation, each next lower draft tube being positioned sufficiently below the draft tube above it so as to create a flow space between the draft tubes to allow the flow of liquid to said next lower impeller-draft tube assembly;

(b) rotating said impeller means to create a circulation of liquid downward in the lowest impeller-draft tube assembly, and in higher assemblies as the level of liquid rises in the mixing vessel, said liquid being discharged from the lowest assembly for passage upward in the annular space between said assemblies and the wall of the mixing vessel, thereby creating a vortex development and resulting ingestion of gas from the overhead gas space into the body of recirculating liquid; and

(c) controlling the flow of liquid to facilitate the passage of liquid from said annular space into the flow space between adjacent draft tubes and to preclude the radial expulsion of liquid being discharged from a higher draft tube away from the inlet to the next lower draft tube, the discharge flow from an upper draft tube thus serving as the feed to the next lower draft tube, whereby gas ingestion occurs by vortex entrainment at the inlet of the lowest draft tube when the liquid level is at its lowest point, with liquid pumping, gas dispersion and mixing being accomplished with the impeller means in said lowest draft tube, with said

stacked impeller-draft tube assemblies enabling said gas ingestion, gas dispersion, liquid pumping and mixing to be accomplished effectively as the liquid level changes during said gas-liquid operation.

URANIUM DIOXIDE PRODUCTION

Graham Hodgson, Blackpool, United Kingdom, assignor to British Nuclear Fuels plc, Warrington, England

Filed Jul. 11, 1989, Ser. No. 378,983

Claims priority, application United Kingdom, Sep. 9, 1988, 8821192

Int. Cl.[5] G21C *21/00;* **C01G** *43/02*

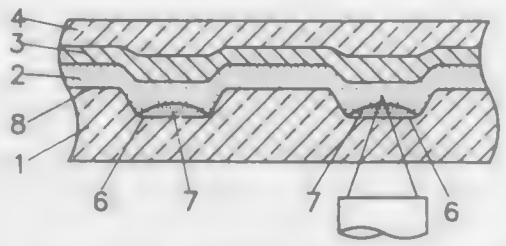
U.S. Cl. 264—0.5 **12 Claims**

1. A process for the production of a ceramic material comprising sinterable uranium dioxide, the process comprising initially oxidizing uranium metal in a flowing steam/inert gas environment at a temperature between 250° C. and 500° C. to produce substantially uranium dioxide, the proportions of the steam and the inert gas in said environment and the flow rate thereof being arranged so that the formation of U_3O_8 is inhibited, then further oxidizing the steam-oxidized metal in an oxygen-containing environment at a temperature not exceeding 700° C. to produce U_3O_8, and subsequently reducing the U_3O_8 in a reducing environment at a temperature not exceeding 600° C. to produce a ceramic material comprising sinterable uranium dioxide.

9. A process as claimed in claim 1 including subsequently sintering the uranium dioxide to produce nuclear fuel pellets.

5,009,818

METHOD OF MANUFACTURING AN OPTICAL INFORMATION RECORDED DISC



Yuji Arai; Yuaki Shin; Takashi Ishiguro, and Emiko Hamada, all of Tokyo, Japan, assignors to Taiyo Yuden Co., Ltd., Tokyo, Japan

Filed Nov. 7, 1989, Ser. No. 433,675

Claims priority, application Japan, Dec. 30, 1988, 63-335344

Int. Cl.[5] B29C *39/20, 45/16*

U.S. Cl. 264—1.003 **21 Claims**

16. A method for manufacturing an optical information recorded disc having an information stored therein and reproducible by an optical means, the method comprising the steps of:

(a) preparing a discoidal light-transmitting substrate having tracking guide means on one surface;

(b) forming a light-absorbing layer on the surface of the light-transmitting substrate, wherein an optical parameter represented by $\rho = n_{abs}d_{abs}\lambda$, where n_{abs} is the real part of the complex refractive index of the light-absorbing layer, d_{abs} is the thickness of the light-absorbing layer and λ is the wavelength of a reading laser beam, is $0.05 \geqq \rho \geqq 0.6$, and the imaginary k_{abs} of the complex refractive index of the light absorbing layer is at most 0.3;

(c) forming a light-reflecting layer on the light-absorbing layer;

(d) forming a protective layer on the light-reflecting layer; and

(e) irradiating the light-absorbing layer through the light-transmitting substrate and along the tracking guide means with a laser.

5,009,819

TASTE MODERATING COMPOSITION

Mircea C. Popescu, Plainsboro, and Edgar T. Mertz, Princeton, both of N.J., assignors to The Liposome Company, Inc., Princeton, N.J.

Filed Nov. 12, 1987, Ser. No. 119,667

Int. Cl.[5] B01J *13/02, 13/04*

U.S. Cl. 264—4.1 **1 Claim**

1. A method of making palatable an unpalatable hydrophobic therapeutic agent for oral administration which comprises:

forming liposomes in the presence of said hydrophobic agent, a solvent and a hydrophilic flavoring agent, to encapsulate a portion of said hydrophobic agent

separating said liposomes from unencapsulated agent and solvent by multiple washing and centrifuging steps that remove exogenous flavoring agent from said liposomes but do not reduce the stability of the liposomes and

adding a pharmaceutical carrier to said liposomes for oral administration.

5,009,820

PROCESS OF MAKING ACICULAR PARA-ARAMIDE PARTICLES

Don M. Coates, Midlothian, Va., and Patrick H. Young, Circleville, Ohio, assignors to E. I. Du Pont de Nemours and Company, Wilmington, Del.

Filed Mar. 5, 1990, Ser. No. 489,274

Int. Cl.[5] B29B *9/00;* **C08G** *69/32*

U.S. Cl. 264—13 **2 Claims**

1. A process for preparing para-aramide particles by the steps of:

forming a solution medium of about 5 to 10% by weight poly(paraphenylene terephthalamide), about 15 to 25% by weight carbon dioxide, and about 70 to 85% by weight water at a temperature in the range of about 275° to 325° C. and under a pressure of about 1,000 to 3,000 psi, and

passing the solution medium through an orifice into a region of lower temperature and much lower pressure to precipitate the particles.

MOLDING METHOD FOR ELIMINATING FIBER READOUT

William R. Weaver, Toledo, Ohio, assignor to Libbey-Owens-Ford Co., Toledo, Ohio

Filed Feb. 23, 1989, Ser. No. 314,767

Int. Cl.[5] B29C *45/14*

U.S. Cl. 264—22 **22 Claims**

1. A process for preparing a fiber reinforced molded plastic article, comprising the steps of:

(A) providing a mold, including at least two cooperating mold sections, having a cavity therein for forming the fiber reinforced molded plastic article, wherein at least a portion of the mold cavity defines a mold cavity surface adjacent which a finished surface of the plastic article is to be molded;

(B) disposing a surface finishing film across the mold cavity surface;

(C) conforming the surface finishing film to substantially the configuration of the mold cavity surface;

(D) positioning a fiber preform into the mold cavity having the surface finishing film conformed to the surface thereof, the fiber preform having substantially the same configuration as the mold cavity;

(E) closing the mold;

(F) injecting polymeric precursor materials into the mold cavity behind the surface finishing film, wherein the polymeric precursor materials fill the mold cavity and simultaneously:

(i) impregnate the fiber preform to form a molded fiber preform; and

(ii) deform the surface finishing film into intimate contact with the mold cavity surface; and

(G) curing the polymeric materials inside the mold, thus allowing the surface finishing film to maintain intimate contact with the mold surface while bonding the surface finishing film of the molded fiber preform;

whereby the surface finishing film provides a finished surface, whose outside shape matches the inside of the mold surface, and is free from fiber readout, on the fiber reinforced molded plastic article.

ALUMINA-OR ALUMINA/ZIRCONIA-SILICON CARBIDE WHISKER CERAMIC COMPOSITES AND METHODS OF MANUFACTURE

Michael D. Sacks, and Hae-Weon Lee, both of Gainesville, Fla., assignors to University of Florida, Gainesville, Fla.

Filed Jul. 17, 1989, Ser. No. 380,285

Int. Cl.[5] C04B *33/34*

U.S. Cl. 264—23 **17 Claims**

1. A method for fabricating a ceramic article comprising SiC whiskers uniformly dispersed in a matrix consisting of Al_2O_3 or a homogeneous mixture of Al_2O_3 and ZrO_2, said article containing from about 5 to 27 vol. % of SiC whiskers and having no less than about 93% of theoretical density, said method consisting of the steps:

(a) subjecting SiC whiskers to an acid- and/or base-washing step for a period of time sufficient to remove leachable impurities therefrom and to improve the dispersibility thereof in water, followed by washing with water to remove said acid and/or base therefrom,

(b) subjecting powdered Al_2O_3, or powdered Al_2O_3 and powdered ZrO_2, and SiC whiskers to fluid classification to remove coarse particles and agglomerates of said powdered Al_2O_3, or powdered Al_2O_3 and powdered ZrO_2i and SiC whiskers and provide powdered Al_2O_3 or powdered Al_2O_3 and powdered ZrO_2, having a specific surface area of at least about 8 m^2/g and having more than about 98% of the particles with equivalent Stokes diameters less than about 1.0 μm and SiC whiskers having a specific surface area of at least about 3 m^2/g and an average aspect ratio of from about 14 to about 21,

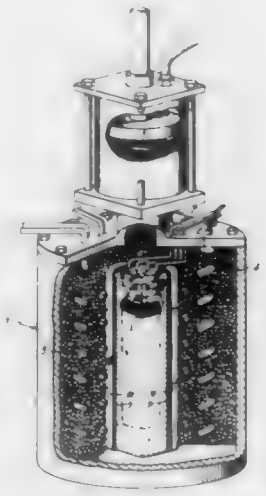
(c) forming a suspension of said powdered Al_2O_3, or powdered Al_2O_3 and powdered ZrO_2, and said SiC whiskers produced in step (b) in water at a pH of between about 3.5 and about 4.5 to provide zeta potentials therein of from about 40–70 mV and a solution conductivity from about 0.5–5 millimhos/cm employing a dispersing agent, said suspension having a solids concentration ≧ about 40 vol. %,

(d) consolidating said suspension produced in step (c) to form a green compact comprising a uniform dispersion of SiC whiskers in a homogenous microstructure comprising Al_2O_3 or a mixture of Al_2O_3 and ZrO_2, said green compact having a high relative packing density of from about 66 to about 71% and uniform pores and channels having median pore channel radii ≦about 50 nm,

(e) infiltrating said green compact produced in step (d) with an aluminum compound which is a precursor to Al_2O_3 and which forms α-Al_2O_3 under the conditions of sintering in step (f), and

(f) pressureless sintering said infiltrated green compact at a temperature in the range of from about 1250° to about 1800° C. in an inert atmosphere for a period of time sufficient to produce said ceramic article.

5,009,823



METHOD OF MOLDING A CARBON-CARBON COMPOSITE

Robert V. Kromrey, Campbell, Calif., assignor to United Technologies Corporation, Hartford, Conn.

Continuation of Ser. No. 907,942, Sep. 10, 1986, abandoned. This application Aug. 27, 1990, Ser. No. 574,554

Int. Cl.[5] B29C *43/10*

U.S. Cl. 264—29.7 **6 Claims**

1. A method for making a carbon-carbon composite comprising:

(a) disposing a resin impregnated carbon fiber reinforced prepreg in a pressure vessel;

(b) substantially filling said pressure vessel with a solid flowable particulate polymer;

(c) exposing said prepreg to temperatures and pressures sufficient to cure said prepreg to form a carbon-carbon precursor;

(d) exposing said carbon-carbon precursor to temperatures and pressures sufficient to post-cure said carbon-carbon precursor; and

(e) exposing said post-cured carbon-carbon precursor to temperatures and pressures sufficient to carbonize said post-cured carbon-carbon precursor to form a carbon-carbon composite;

wherein said curing, postcuring, and carbonization is a continuous process and said carbon-carbon composite has high strength.

5,009,824

PROCESS FOR PREPARING AN ASYMMETRICAL MACROPOROUS MEMBRANE POLYMER

Axel Walch, Frankfurt am Main; Juergen Wildhardt, Huenstetten, and Dieter Beissel, Wiesbaden, all of Fed. Rep. of Germany, assignors to Hoechst Aktiengesellschaft, Frankfurt am Main, Fed. Rep. of Germany

Continuation of Ser. No. 111,700, Oct. 23, 1987, abandoned, which is a division of Ser. No. 448,764, Dec. 10, 1982, Pat. No. 4,720,343. This application Oct. 23, 1989, Ser. No. 425,446

Claims priority, application Fed. Rep. of Germany, Dec. 17, 1981, 3149976

Int. Cl.[5] B01D *71/68, 69/12*

U.S. Cl. 264—45.1 12 Claims

1. A process for preparing an asymmetrical macroporous membrane, comprising the steps of:

(A) forming a macroporous asymmetrical membrane from a polymer solution by action of a coagulating liquid, said polymer solution comprising as the dissolved fraction a polymeric mixture comprised of about 5-70% by weight of polyvinylpyrrolidone having a molecular weight of ≧100,000 Dalton and about 95-30% by weight of a polymer selected from the group consisting of a polysulfone, a polyether sulfone, and an aromatic or araliphatic polyamide, said weight being relative to the total weight of the dissolved polymeric fraction, wherein coagulation is effected under conditions such that skin formation, asymmetrical pore formation and retention of said polyvinylpyrrolidone are achieved and

(B) recovering the resultant asymmetrical macroporous membrane comprising said polymeric mixture.

PRODUCTION OF EXTRUDED ROUND ROD

Mark Lurie, 3115 Embassy Dr., West Palm Beach, Fla. 33401

Filed Jun. 30, 1989, Ser. No. 375,149

Int. Cl.[5] B29C *47/90*

U.S. Cl. 264—148 16 Claims

1. In a method of producing a round rod formed of thermoplastic material by extrusion in a conventional extruder, the improvement which comprises the steps in sequence of:

A. cooling the extruded rod as it is expressed from the extruder;

B. cutting the extruded rod to a predetermined length;

C. heating the cut extruded rod from step B to a temperature above the glass transition temperature of the rod while rotating the rod fully supported on roller means; and

D. cooling the heated rod from step C at a controlled rate while rotating the rod fully supported on said roller means.

9. Apparatus for producing round rod formed of thermoplastic material, comprising an extruder for forming a round rod, and a post-extrusion heat treating means comprising an oven containing a plurality of rollers having axis parallel to one another for rotating and fully supporting said rod with the axis of the rod parallel to the axis of said rollers for a predetermined period of time.

METHOD OF MOLDING A COMPOSITE DRILL COLLAR

John H. Walker, Bartlesville, Okla., assignor to Phillips Petroleum Company, Bartlesville, Okla.

Division of Ser. No. 90,287, Aug. 28, 1987, Pat. No. 4,832,137, which is a division of Ser. No. 868,409, May 9, 1986, Pat. No. 4,708,203. This application May 1, 1989, Ser. No. 345,914

Int. Cl.[5] B29C *43/04*

U.S. Cl. 264—154 2 Claims

1. A method for molding a collar for use on a drill string which comprises:

heating a sheet of thermoplastic material, containing long fiber reinforcement, to the softening point;

rolling the reinforced thermoplastic sheet into a roll having a cylindrical shape;

placing the roll in an open cylindrical mold having a longitudinal axis so that the longitudinal axis of the roll is approximately coaxial with the longitudinal axis of the open cylindrical mold;

inserting a mold core having a longitudinal axis into the mold in alignment with the longitudinal axis of the open cylindrical mold to form a mold cavity wherein the core is inserted with force sufficient to close the mold and deform the material to fill the mold cavity defined between the mold core and the cylindrical mold when the mold is closed;

wherein the lower end of the mold core is beveled to form one surface of a generally radially inwardly extending rib, the rib being completed during the machining operation;

the mold cavity having a shape which at least partially determines the inner surface and outer surface of a collar precursor, and wherein the precursor is formed with an end closure;

cooling the thus formed collar precursor;

opening the mold;

removing the collar precursor from the mold; and

machining the end surfaces of the collar precursor in a machining operation to remove the end closure and form the collar which is suitable for use on a drill string.

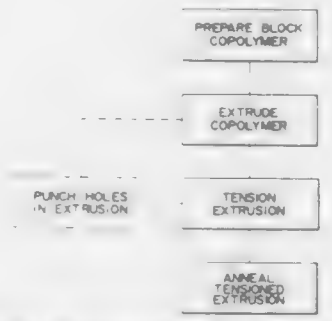
5,009,827

PROCESS FOR FORMING AN ELASTOMERIC MEMBRANE

Ismat A. Abu-Isa, Rochester; Elio Eusebi, Troy; Craig B. Jaynes, Bloomfield Hills; Susan C. Moran, Ann Arbor, and Michael A. Roy, Troy, all of Mich., assignors to General Motors Corporation, Detroit, Mich.

Division of Ser. No. 119,965, Nov. 13, 1987, Pat. No. 4,842,257. This application Nov. 14, 1988, Ser. No. 271,461

Int. Cl.[5] B29D *7/01*



U.S. Cl. 264—156 4 Claims

1. A process for forming a vehicle seat suspension component comprising the steps of:

extruding a quantity of unoriented block copolymer material of polytetramethylene terephthalate polyester and polytetramethylene ether into a membrane;

tensioning said membrane to orient molecules therein with respect to the extrusion direction of the membrane;

annealing the membrane to set the orientation of the molecules so that the membrane has a first modulus of elasticity in a first range of elongation of the copolymer material

and a second modulus of elasticity greater than the first modulus in a second range of elongation which is greater than the first range of elongation.

METHOD OF FORMING A RECLOSABLE CONTAINER WITH GRIP STRIP

John O. McCree, Midland, Mich., assignor to The Dow Chemical Company, Midland, Mich.

Continuation of Ser. No. 781,125, Sep. 26, 1985, abandoned. This application Oct. 11, 1989, Ser. No. 419,975

Int. Cl.[5] B29C *47/12*

U.S. Cl. 264—177.1 7 Claims

1. A method of forming a reclosable container with gripping ridges formed in a grip strip on opposed lips of the container, said method comprising the steps of

forming three or more cut-away sections on an extrusion die adapted to form ridges on film coextruded adjacent said ridges, said cut-away sections spaced a distance so that there are at least seven ridges per lineal inch in the width of said grip strip, said cut-away sections shaped so as to present a gripping edge on said ridges,

extruding said ridges through said extrusion die onto a plastic film to form said grip strip, and

drawing down said grip strip so as to maintain generally said gripping edge and said at least seven ridges per lineal inch of said grip strip.

5,009,829

PROCESS FOR MANUFACTURING YARNS BY MELTSPINNING POLYETHYLENE TEREPHTHALATE

Antonius Roos, Veenendaal, Netherlands, assignor to Akzo N.V., Arnhem, Netherlands

Continuation-in-part of Ser. No. 169,222, Mar. 16, 1988, abandoned. This application Jun. 29, 1989, Ser. No. 372,763

Claims priority, application Netherlands, Mar. 16, 1987, 8700617

Int. Cl.[5] D01F *6/62*

U.S. Cl. 264—210.6 8 Claims

1. A process for manufacturing industrial yarns by melt-spinning polyethylene terephthalate (PETP), comprising, in one operation, melting solid PETP, extruding the molten PETP through spinning orifices and solidifying the extruded PETP into a spun product which is drawn into a yarn, wherein:

(a) the solid PETP has a relative viscosity in the range of 1.8 to 2.1;

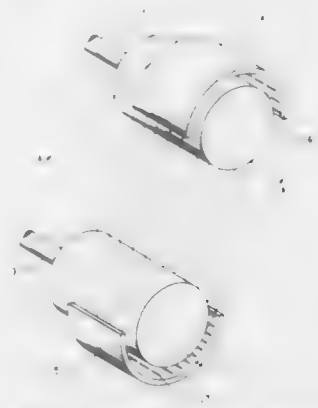
(b) before extruding, the PETP is mixed with 0.1-0.8% by weight of a bis-(ketenimine);

(c) the molten PETP is drawn off from the spinning orifices at a speed in the range of 1500 to 4000 m/min; and

(d) the spun product formed is drawn without intermediate winding at a draw ratio of 1.5 to 4.0, the draw ration being selected such that the final speed of the yarn is not higher than 6000 m/min;

thereby producing industrial yarn at a speed not higher than 6000 m/min having an elongation at break of from about 9% to about 18%.

5,009,830



ON-LINE FIBER HEAT TREATMENT

Terry S. Chern, Richmond, Va., assignor to E. I. du Pont de Nemours and Company, Wilmington, Del.

Filed Mar. 20, 1989, Ser. No. 326,553

Int. Cl.[5] D01F *6/60;* D01D *10/02*

U.S. Cl. 264—290.5 9 Claims

1. A process for simultaneously drying and heat treating under tension wet spun fibers comprising:

(a) supplying continuously by means of a pair of fiber carrying rolls to a heated zone fibers of greater than 20 percent water based on weight of dry fiber material;

(b) conducting the fibers in the heated zone in multiple wraps around the pair of rolls;

(c) maintaining a tension of 0.2 to 6 grams per denier to the fibers at the beginning of the zone;

(d) directing turbulent gas at a temperature of 200 to 600° C. by means of gas jets extending around each of the rolls for about 45 to 180° against the fibers under tension in the zone until the residual moisture in the fibers is from 0.5 to 10 percent water based on weight of dry fiber material;

(e) removing continuously the fibers from the heated zone.

5,009,831

EXTRUSION COATED SUBSTRATES WITH SEPARABLE AND REMOVABLE LAYERS

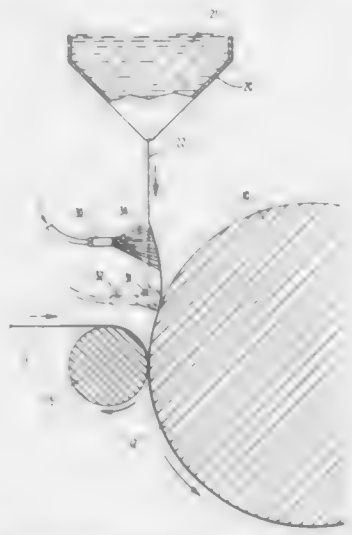
Eran Turi, Springfield, Mass., assignor to Union Camp Corporation, Wayne, N.J.

Filed Jun. 9, 1989, Ser. No. 363,828

Int. Cl.[5] B29C *47/06*

U.S. Cl. 264—510 15 Claims

1. A process for extrusion coating a substrate with a thermoplastic layer which is separable from said substrate, comprising:



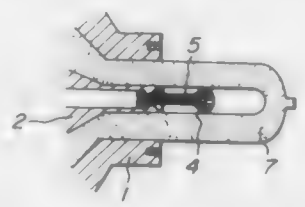
(a) directing said substrate between two pressure roll means, a first of said pressure roll means having a temperature of less than the melting point of said thermoplastic;

(b) providing a molten curtain of said thermoplastic;

(c) directing said molten curtain of said thermoplastic with a current of a fluid medium so as to cause at least a first

portion of said molten curtain to contact said first pressure roll means for a time sufficient to substantially solidify said first portion to form a thermoplastic sheet; and

(d) combining at least said thermoplastic sheet with said



substrate between said two pressure roll means so as to form an extrusion coated substrate having a first thermoplastic layer portion which is separable from said substrate said first thermoplastic layer portion comprising said solidified first portion of said molten curtain.

CLOSED END SLEEVE PRODUCING METHOD AND CORE STRUCTURE USED IN THE METHOD

Shinji Oshima, Ama, and Hidenobu Misawa, Nagoya, both of Japan, assignors to NGK Insulators, Ltd., Aichi, Japan

Filed Feb. 8, 1989, Ser. No. 307,497
Claims priority, application Japan, Mar. 4, 1988, 63-51218
Int. Cl.[5] B29C *69/00*
U.S. Cl. 264—571 7 Claims

5. A method for producing a sleeve having a closed end by extruding a forming material from a mouthpiece, sequentially comprising the steps of:

arranging a core member at a position in said mouthpiece, said core member having at its outer end a tip die made of a porous body for forming an inner configuration of said closed end;

arranging an outer die made of a porous body at the outer end of said mouthpiece for forming an outer configuration of said closed end, thereby providing an annular space defined by the mouthpiece, the core member and the outer die;

supplying said forming material into the annular space and extruding the material therefrom, while simultaneously applying suction to said outer die made of the porous body from an outside portion thereof, thereby forming the closed end of said sleeve;

removing said outer die from the mouthpiece by blowing air through the outer die from its outside portion and against the formed closed end of said sleeve; and

supplying air through said tip die into a volume between the formed closed end of said sleeve and said tip die, while simultaneously further supplying said forming material into said annular space to extrude the material from said mouthpiece

EXPERT SYSTEM FOR SURVEILLANCE, DIAGNOSIS AND PROGNOSIS OF PLANT OPERATION

Kenji Takeuchi, Murrysville; Andre F. Gagnon, Monroeville; Augustine C. Cheung, Murrysville, and Philip E. Meyer, Penn Hills, all of Pa., assignors to Westinghouse Electric Corp., Pittsburgh, Pa.

Filed Jan. 11, 1989, Ser. No. 295,698
Int. Cl.[5] G21C *7/36*
U.S. Cl. 376—217 14 Claims

1. A method for analyzing operating conditions in a plant, comprising the steps of:

(a) obtaining plant condition data indicative of the operating conditions in the plant;

(b) evaluating the plant condition data using an expert system rule base to determine probabilities of existence of abnormal circumstances;

(c) predicting effects of the abnormal circumstances in dependence upon the plant condition data

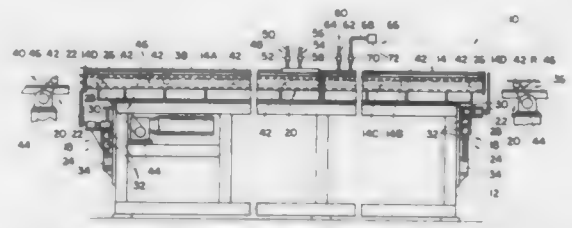
CURVILINEAR TRANSLATING LATCH AND LINKAGE ARRANGEMENT IN A CONTROL ROD DRIVE MECHANISM OF A NUCLEAR REACTOR

John E. Tessaro, Manor Boro, Pa., assignor to Westinghouse Electric Corp., Pittsburgh, Pa.

Filed Aug. 14, 1990, Ser. No. 567,026
Int. Cl.[5] G21C *7/12*
U.S. Cl. 376—232 10 Claims

1. A latch and linkage arrangement in a control rod drive mechanism of a nuclear reactor, said arrangement comprising:

(a) at least one latch including an elongated body having a pair of opposite ends and a pair of opposite side edges, and a plurality of latch teeth defined along one of said side edges of said body between said opposite ends thereof; and



(b) a plurality of links, a first of said links pivotally connected to said latch body adjacent one of said ends thereof and pivotally connectable to a member for applying a motive force longitudinally of said body between said opposite ends thereof, second and third of said links pivotally connected to said latch body and connectable to a support member in parallel relation to one another so as to define a parallelogram therewith such that when the motive force is applied to said body via said first link said latch body and thereby said latch teeth undergo curvilinear movement toward and away from a latching position.

5,009,835

NUCLEAR FUEL ROD HELIUM LEAK INSPECTION APPARATUS AND METHOD

Hassan J. Ahmed, Irmo, S.C., assignor to Westinghouse Electric Corp., Pittsburgh, Pa.

Filed Jan. 25, 1989, Ser. No. 301,414
Int. Cl.[5] G21C *17/00*
U.S. Cl. 376—251 21 Claims

1. An inspection apparatus for testing nuclear fuel rods for helium leaks, comprising:

(a) a test chamber being openable and closable for receiving at least one nuclear fuel rod;

(b) means separate from the fuel rod for supplying helium and constantly leaking helium at a predetermined known positive value into said test chamber to constantly provide an atmosphere of helium at said predetermined known positive value in said test chamber; and

(c) means for sampling the atmosphere within said chamber and measuring the helium in the atmosphere such that a measured helium value (i) below a preset minimum helium value substantially equal to said predetermined known positive value of said atmosphere of helium being constantly provided in said test chamber indicates a malfunction in said inspection apparatus, (ii) above a preset maximum helium value greater than said predetermined known positive in said test chamber indicates the existence of a helium leak from the fuel rod, or (iii) between said preset minimum and maximum helium values indicates the absence of a helium leak from the fuel rod.

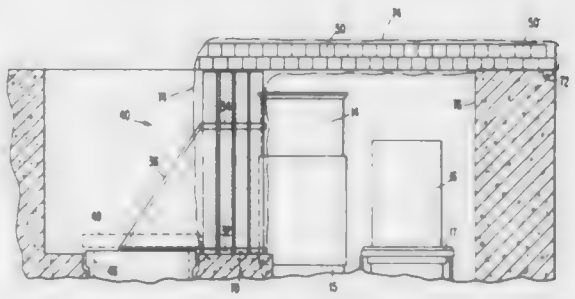
5,009,836

METHOD FOR TEMPORARY SHIELDING OF REACTOR VESSEL INTERNALS

Noel P. Grimm, Monroeville, and James Sejvar, Murrysville, both of Pa., assignors to Westinghouse Electric Corp., Pittsburgh, Pa.

Filed Jun. 19, 1989, Ser. No. 368,433
Int. Cl.[5] G21C *19/00, 11/00*
U.S. Cl. 376—260 6 Claims

3. A method for shielding stored internals for reactor vessel annealing, comprising the steps of:



(a) removing nuclear fuel from the reactor vessel containment building;

(b) removing and storing upper and lower core internals under water in a refueling canal storage area;

(c) assembling a support structure in the refueling canal between the reactor vessel and the stored internals;

(d) introducing a plurality of vertical shielding tanks individually through a hatch in the containment building and positioning each into the support structure;

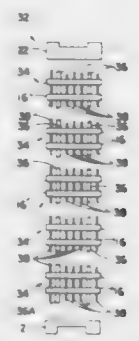
(e) introducing a plurality of horizontal shielding tanks individually through a hatch in the containment building and

positioning each above the stored internals and plurality of vertical tanks;

(f) draining water from the refueling canal to the level of a flange of the reactor vessel;

(g) placing an annealing apparatus in the reactor vessel;

(h) pumping the remaining water from the reactor vessel; and



(i) annealing the reactor vessel.

5,009,837

AXIALLY MODULAR FUEL ASSEMBLY AND ROD FOR OPTIMAL FUEL UTILIZATION

Tho Q. Nguyen, Penn Township, Westmoreland County, and Alberto L. Casadei, Monroeville, both of Pa., assignors to Westinghouse Electric Corp., Pittsburgh, Pa.

Filed Nov. 3, 1989, Ser. No. 431,355
Int. Cl.[5] G21C *3/32*
U.S. Cl. 376—261 24 Claims

1. A modular fuel assembly, comprising:

(a) a plurality of axially stacked end-to-end adjacent subassemblies;

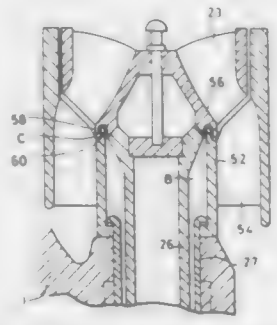
(b) each of said subassemblies including a plurality of elongated structural segments, a plurality of fuel rod segments and at least one support grid mounted to said structural segments and supporting said fuel rod segments; and

(c) means defined on opposite ends of said structural segments for releasably connecting together in axially aligned end-to-end relation said structural segments of said respective adjacent subassemblies to form a plurality of elongated structural support members for providing a structural skeleton of said modular fuel assembly with said support grids of said respective adjacent subassemblies disposed in axially spaced relation relative to one another along said structural support members and said fuel rod segments of said respective adjacent subassemblies dis-

posed in axially aligned end-to-end relation with each other.

5,009,838

INTERNAL PUMP FOR NUCLEAR REACTOR



Tsutomu Shioyama, Yokohama; Ko Minakami, Kawasaki; Takao Fujii, Yokohama, and Koichi Ohtomi, Kawasaki, all of Japan, assignors to Kabushiki Kaisha Toshiba, Kawasaki, Japan

Filed Jan. 18, 1989, Ser. No. 298,596

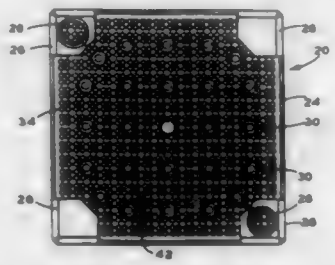
Claims priority, application Japan, Jan. 18, 1988, 63-6816; Feb. 29, 1988, 63-44267; Mar. 28, 1988, 63-72061; Mar. 29, 1988, 63-73320

Int. Cl.[5] G21C *19/42*

U.S. Cl. 376—310 **22 Claims**

1. A nuclear reactor internal pump comprising:
a pump shaft connected to a motor and rotatably passing through the bottom of a nuclear reactor pressure vessel;
an impeller fitted to a front end portion of the pump shaft;
a diffuser disposed on the downstream side of the impeller and having an inner cylinder fixed to the bottom of the reactor pressure vessel to surround the pump shaft;
a purge water passage defined between the pump shaft and the inner cylinder to communicate with the inside of the reactor pressure vessel;
a purge water supply means for supplying purge water to the reactor pressure vessel through the purge water passage; and
a clad dropping preventive means, located inside the reactor pressure vessel, for preventing clad from entering the pressure while allowing the purge water to pass through the passage.

5,009,839



NUCLEAR FUEL ASSEMBLY BOTTOM NOZZLE PLATE

Raymond A. King, Lynchburg, Va., assignor to B&W Fuel Company, Lynchburg, Va.

Filed Sep. 4, 1990, Ser. No. 577,384

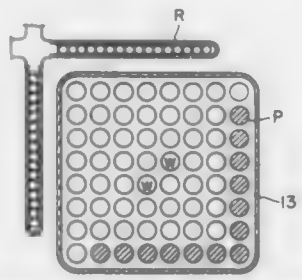
Int. Cl.[5] G21C *19/30, 3/30, 15/00*

U.S. Cl. 376—352 **4 Claims**

1. In a fuel assembly for a nuclear reactor, a bottom nozzle plate having legs adapted to be positioned on the lower core plate of the reactor for supporting the fuel assembly above coolant inlet openings in the core plate, said bottom nozzle plate comprising:
a. a rigid substantially square plate; and
b. said square plate having a plurality of first coolant flow holes therethrough where each of said first flow holes is circular in cross section and 0.180±0.005 inch in diameter with the majority of said first flow holes grouped in clusters of four to define a square pattern relative to the sides of said square plate such that the width of the sections of said square plate between said first flow holes in said square pattern is less than the width of the sections of said square plate between said clusters of four holes and said square plate having a plurality of second coolant flow holes therethrough positioned so as to be above the coolant inlet openings in the core plate when said bottom nozzle plate is installed in the reactor, with each of said second flow holes being of an irregular pattern to define a substantially clover leaf shape.

5,009,840

FUEL ASSEMBLY FOR NUCLEAR REACTOR



Makoto Ueda; Yoshihira Ando; Shungo Sakurai, and Ritsuo Yoshioka, all of Yokohama, Japan, assignors to Kabushiki Kaisha Toshiba, Kawasaki, Japan

Filed Jan. 19, 1989, Ser. No. 299,238

Claims priority, application Japan, Jan. 23, 1988, 63-11872; Mar. 22, 1988, 63-65735; Apr. 1, 1988, 63-78080

Int. Cl.[5] G71C *3/32*

U.S. Cl. 376—435 **11 Claims**

1. A fuel assembly for a nuclear reactor having a number of fuel rods arranged in a channel box surrounded by a water gap, comprising:
a plurality of first fuel rods arranged in a peripheral portion of said channel box which faces a water gap through which a control blade is not inserted or drawn out; and
a plurality of second fuel rods arranged in portions of the channel box other than said peripheral portion and each containing a fissionable material having an atomic number density larger than that of a fissionable material contained in each of said first fuel rods.

5,009,841

PROCESS FOR DEWAXING INJECTION MOLDED METAL PIECES AND FOR IMPROVING THE PROPERTIES THEREOF

Martin Bloemacher, Meckenheim; Reinhold Schlegel, Hassloch, and Dieter Weinand, St. Martin, all of Fed. Rep. of Germany, assignors to BASF Aktiengesellschaft, Fed. Rep. of Germany

Filed Apr. 12, 1990, Ser. No. 508,190

Claims priority, application Fed. Rep. of Germany, Apr. 14, 1989, 3912298

Int. Cl.[5] B22F *100*

U.S. Cl. 419—23 **5 Claims**

1. A process for preparing injection molded metal pieces, which process comprises: mixing finely divided iron and from 2 to 30% by weight of a finely divided oxide of iron to produce a iron/iron oxide mixture; adding an organic binder with heating to the iron/iron oxide mixture to produce a iron/iron oxide binding mixture having a pasty consistency; cooling and granulating the iron/iron oxide/binder mixture to produce granules of the iron/iron oxide/binder; subjecting the granules to injection molding to form molded pieces of the iron/iron oxide/binder mixture; and heating the molded pieces under a reducing atmosphere to produce a molded piece containing iron free of iron oxide and free of binder.

5,009,842

METHOD OF MAKING HIGH STRENGTH ARTICLES FROM FORGED POWDER STEEL ALLOYS

Alfred A. Hendrickson, Lake Leelanau, and Darrell W. Smith, Chassell, both of Mich., assignors to Board of Control of Michigan Technological University, Houghton, Mich.

Filed Jun. 8, 1990, Ser. No. 535,379

Int. Cl.[5] B22F *3/24*

U.S. Cl. 419—28 **15 Claims**

1. A method for producing a high strength article from forged powder steel alloys comprising the steps of:
(a) compacting said powder into a coherent preform;
(b) heating said preform in a sintering means in a substantially dry, highly-reducing atmosphere and at a temperature of at least 1150° C. to sinter said preform and allowing said sintered preform to cool;
(c) preheating said sintered preform in a preheating means in the presence of a substantially dry, highly reducing atmosphere to a preheating temperature of at least 1000° C.; and
(d) transferring said preheated, sintered preform from the preheating means to an impact forging device and impacting said preform therein at a peak average forging pressure of at least about 1000 MPa to obtain a forged article, the time period between removing said preheated, sintered preform from the preheating means and the first forging impact being no more than about 8 seconds.

5,009,843

SPRING STEEL HAVING GOOD DURABILITY AND SAG-RESISTANCE

Atsushi Sugimoto; Osamu Nakano; Shigeru Yasuda; Chikatoshi Maeda; Toshio Ozone, and Makoto Kawagoe, all of Aichi, Japan, assignors to Aichi Steel Works, Ltd., Tokai; Toyota Jidosha Kabushiki Kaisha, Toyota and Chuo Hatsujo Kabushiki Kaisha, Nagoya, all of, Japan

Filed May 22, 1990, Ser. No. 526,893

Claims priority, application Japan, May 29, 1989, 1-135631

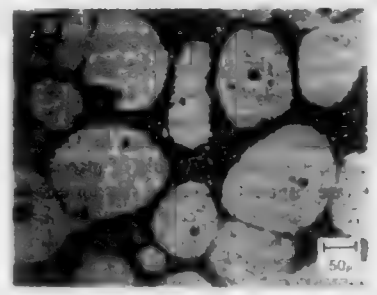
Int. Cl.[5] C22C *38/40*

U.S. Cl. 420—112 **4 Claims**

1. A spring steel having a good durability and a good sag-resistance consisting essentially of by weight 0.35–0.55% carbon, 1.80–3.00% silicon, 0.50–1.50% manganese, 0.50–3.00% nickel, 0.10–1.50% chromium, 0.01–0.05% aluminum and 0.010–0.025% nitrogen, the remainder being iron and inevitable impurities.

5,009,844

PROCESS FOR MANUFACTURING SPHEROIDAL HYPOEUTECTIC ALUMINUM ALLOY



Venkatasubramanian Laxmanan, Troy, Mich., assignor to General Motors Corporation, Detroit, Mich.

Filed Dec. 1, 1989, Ser. No. 444,652

Int. Cl.[5] C22C *1/00, 1/02*

U.S. Cl. 420—548 **4 Claims**

1. A semi-solid metal-forming process for producing an article of a hypoeutectic aluminum-silicon alloy comprising between about 5 and 12 weight percent silicon, said process comprising heating a body of hypoeutectic aluminum-silicon alloy to a temperature between the liquidus temperature and the solidus temperature to initiate partial melting of the alloy and thereby to form a semi-solid body composed of a spheroidal phase dispersed in a liquid phase, said heating being carried

out at a rate not greater than 30° C. per minute and effective to inhibit formation of free silicon particles within said alloy.

5,009,845

CHEMICAL AGENT DETECTORS FOR CHEMICAL NERVE AGENTS

Dominique Thoraval, Candiac, and John W. Bovenkamp, Kanata, both of Canada, assignors to Her Majesty the Queen in right of Canada, as represented by the Minister of National Defence, Ontario, Canada

Continuation-in-part of Ser. No. 263,186, Oct. 27, 1988, abandoned. This application Dec. 5, 1989, Ser. No. 446,569

Claims priority, application Canada, Mar. 25, 1988, 562507

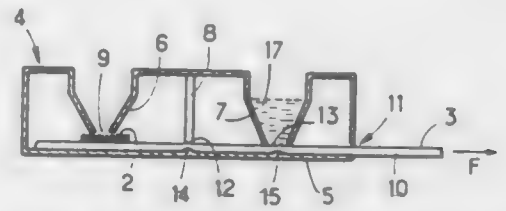
Int. Cl.[5] G01N *31/22*

U.S. Cl. 422—56 **18 Claims**

1. A chemical agent detector comprising a paper base including, impregnated in said base, a mixture of the dye 3',3'', 5',5''-tetrabromophenolphthalein ethyl ester (TBPE) and at least one dye selected from the group consisting of 4-[(phenylazo)phenyl)axo]-phenol (Disper Yellow 23) and p-ethoxyphenyl-azo-α-hydroxynaphthoic acid (PEN).

5,009,846

ONE-USE DEVICE FOR BIOLOGICAL TESTS



Louis Gavet, Lyon; Roger Chatelin, Lissieu Par; Michel Sotton, St Cyr Au Mont D'Or; Robert Guigal, Lyons, and Philippe Laurent, Oullins, all of France, assignors to Centre Technique Industriel dit: Institut Textile de France and Probiotec (SARL), both of, France

Filed Sep. 28, 1989, Ser. No. 413,857

Claims priority, application France, Oct. 11, 1988, 88 13668

Int. Cl.[5] G01N *21/00, 31/22*

U.S. Cl. 422—56 **13 Claims**

1. A unitary, one-use device for biological tests comprising:
(a) at least one element for immobilizing specific molecules contained in a liquid medium to be tested, wherein said immobilizing element is in the form of a hydrophilic material;
(b) a planar hydrophobic material on a surface of which is fixed said immobilizing element;
(c) a bottom plate supporting the planar hydrophobic material;
(d) at least one cavity for a liquid medium to be tested, said cavity having an outlet orifice situated above the planar hydrophobic material, and

(e) a scraping means situated above said planar hydrophobic material;

whereby said immobilizing element, said planar hydrophobic material, said bottom plate, said cavity for a liquid medium to be tested, and said scraping means are capable of interacting in the unitary device so that when liquid medium is introduced into the cavity, it exits the cavity through the outlet orifice to contact the hydrophilic material of the immobilizing element, and so that the planar hydrophobic material is capable of moving relative to the bottom plate support to cause the immobilizing element to pass from under the cavity and under the scraping means so that any liquid in or on the immobilizing element is extracted mechanically and moved over the surface of the planar hydrophobic material.

5,009,847

KIT FOR DETERMINING BLOOD PLATELET STRESS

Clive C. Solomons, 164 S. Fairfax, Denver, Colo. 80222

Division of Ser. No. 623,579, Jun. 22, 1984, Pat. No. 4,600,696. This application Mar. 27, 1986, Ser. No. 844,890

Int. Cl.[5] C12Q *1/56*; G01N *33/48*

U.S. Cl. 422—61 **10 Claims**

1. A kit for determining physical or chemical stress on blood platelets by measuring the relative concentration of adenosine tryphosphate, adenosine diphosphate, adenosine monophosphate and hypoxanthine in a sample of platelet-rich plasma containing an anticoagulant selected from the group consisting of heparin and a heparin salt which comprises:

at least one standard container containing known concentrations of at least one of adenosine triphosphate, adenosine diphosphate, adenosine monophosphate and hypoxanthine,

a second container containing a known concentration of an internal standard nucleotide and at least two sample containers coated with a composition that minimizes or prevents chemical or physical stress in blood platelets

a third container for a blood sample coated with an anticoagulant selected from the group consisting of heparin and a heparin salt, and nomogram shown in the Figure and defined by the algorithm

$$R = \frac{ATP + ADP}{AMP + HYPX}$$

5,009,848

ON BOARD AUTOMATIC DIESEL ENGINE COOLING WATER CHEMICAL TREATMENT DISPENSING SYSTEM

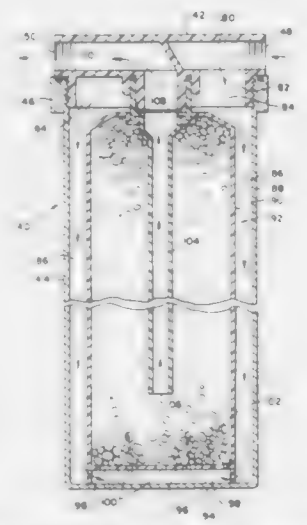
James M. Secretarski, 6910 Dorn Rd., Hartland, Wis. 53029, and Terry M. Crowell, W320 S8409 Bevilah Rd., Mukwonago, Wis. 53149

Filed May 2, 1988, Ser. No. 189,373

Int. Cl.[5] G01N *27/06*

U.S. Cl. 422—62 **13 Claims**

1. A vehicle, comprising:



an engine having a cooling system circulating a coolant; and

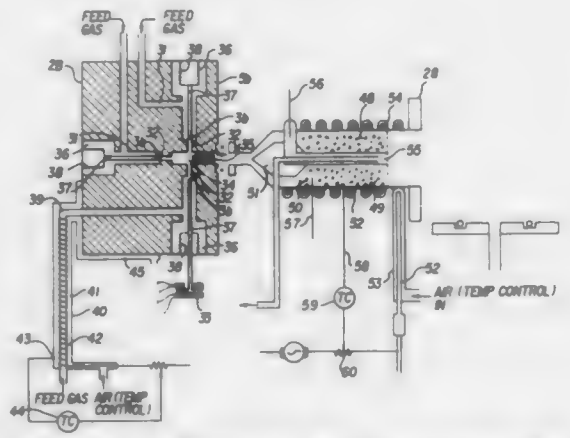
an apparatus for maintaining a predetermined level of concentration of chemicals in the coolant, comprising:

sensing means for monitoring the level of concentration of chemicals in the coolant;

flow through chemical dispensing means interconnected with said cooling system; and

flow control means responsive to said sensing means for preventing the flow of coolant through said dispensing means when the level of concentration of chemicals is at or above said predetermined level, and for allowing coolant to circulate through said dispensing means and back into said cooling system when the level of concentration of chemicals in said system falls below said predetermined level, so as to raise the level of concentration of chemicals in said system to said predetermined level, whereafter said flow control means discontinues circulation of coolant through said dispensing means in response to detection of said predetermined level of concentration of chemicals by said sensing means.

5,009,849



APPARATUS FOR CARRYING OUT CATALYZED CHEMICAL REACTIONS AND FOR STUDYING CATALYSIS

Jerry R. Ebner, and John T. Gleaves, both of St. Louis, Mo., assignors to Monsanto Company, St. Louis, Mo.

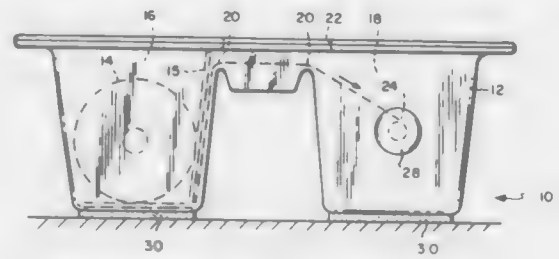
Continuation of Ser. No. 923,890, Oct. 28, 1986, abandoned, which is a continuation-in-part of Ser. No. 682,028, Dec. 14, 1984, Pat. No. 4,626,412. This application Jun. 28, 1989, Ser. No. 372,095

Int. Cl.[5] G01N *1/22*

U.S. Cl. 422—83 **21 Claims**

1. An apparatus capable of use for Temporal Analysis of Products comprising a gas processing system including means which are capable of use for Temporal Analysis of Products and a manifold for introduction of a plurality of gas streams into said gas processing system, the manifold comprising a plurality of inlet channels through which gas may flow toward said system, and a mixing chamber having inlet means in communication with said plurality of channels and a chamber outlet in communication with said system, at least one of said channels having a rapidly operable gas feed valve at the terminus of the channel at which the channel communicates with said chamber inlet means, said mixing chamber having a void volume that is small relative to the working volume of the gas processing system so that the residence time of the process gases in said chamber is short compared to the residence time in said gas processing system.

5,009,850



BLOOD CONTAINMENT DEVICE

Craig J. Bell, Winchester, N.H., assignor to Smiths Industries Medical Systems, Inc., Keene, N.H.

Continuation of Ser. No. 190,498, May 5, 1988, abandoned. This application May 4, 1990, Ser. No. 518,311

Int. Cl.[5] B01L *11/00*

U.S. Cl. 422—99 **6 Claims**

1. A blood containment device comprising:

a housing having means defining an opening;

a roll of absorbent material stored within said housing;

a tension plate, non-integral with said housing, located within said housing to help maintain said absorbent material taut beneath said opening; and

a take-up reel arranged within said housing so that said reel may be used to pull said absorbent material past the opening in said housing as said material is rolled onto said reel.

5,009,851

INTEGRATED CATALYTIC REACTOR SYSTEM WITH LIGHT OLEFIN UPGRADING

Amos A. Avidan, Yardley, and Sergei Yurchak, Media, both of Pa., assignors to Mobil Oil Corporation, New York, N.Y.

Continuation-in-part of Ser. No. 200,109, May 31, 1988, Pat. No. 4,966,680. This application Feb. 21, 1989, Ser. No. 312,272

Int. Cl.[5] B01J *8/18*

U.S. Cl. 422—141 **2 Claims**

1. An improved reactor system for fluidized bed catalytic cracking comprising:

a primary vertical riser cracking reactor operatively connected to receive hot regenerated catalyst at a bottom riser portion for upward passage through said vertical riser;

regenerator means connected in a regeneration loop for receiving catalyst from said primary cracking reactor;

first conduit means for feeding liquid oil under pressure to the bottom riser portion of the primary reactor;

second conduit means for feeding lift gas to the primary reactor below said first conduit means;

mixing means adapted for receiving and combining catalyst form the regeneration loop with the liquid oil and the lift gas;

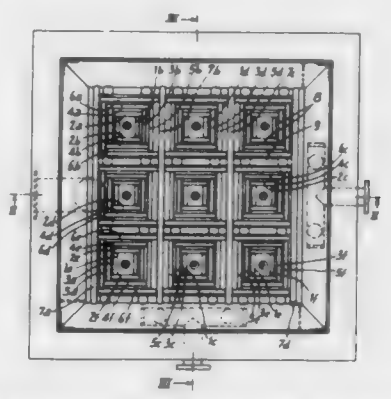
fractionation means for recovering liquid cracking products and olefinic light crackate gas form the primary reactor;

secondary catalytic reactor means for contacting at least a portion of the olefinic light crackage gas with olefin upgrading catalyst to produce gasoline range liquid product and byproduct light hydrocarbon gas; and

means for recovering and recycling at least a portion of the byproduct light gas to the primary reactor as lift gas.

5,009,852

COOLED FLUIDIZATION GRID



Jean-Claude Kita, Vermelles; Roger M. Puff, Lens; Alexandre Petrovic, Chatou, and Marcel Chretien, Morsang-sur-Orge, all of France, assignors to Charbonnages de France, Malmaison Cedex, France

Filed Dec. 8, 1988, Ser. No. 281,157

Claims priority, application France, Dec. 11, 1987, 87 17314

Int. Cl.[5] B01J *8/44*

U.S. Cl. 422—143 **6 Claims**

1. A grid for fluidizing a mass of finely divided material in a fluidized bed exothermal reactor, comprising:

a top face and a bottom face and a plurality of openings defined therethrough from said bottom face to said top face for admitting a gas for sustaining the material which is disposed over the top face of the grid,

said openings having walls diverging in the direction of the mass of material to be fluidized,

the walls of each opening being defined at least in part by tubular members for conveying a cooling fluid, and

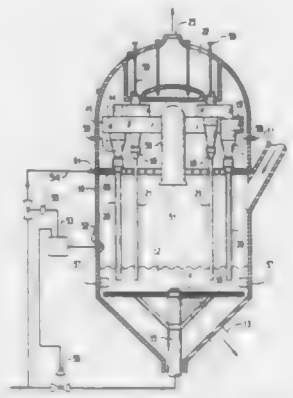
superposed layers of parallel pairs of tubular members,

the tubular members in each layer crossing the tubular members of a next adjacent layer,

a spacing between pairs of tubular members in each layer increasing from said bottom face toward said top face,

the tubular members of each layer defining a portion of opposing walls of at least one said opening.

5,009,853



FLUID CATALYTIC CRACKING REGENERATION WITH REDUCTION OF NITROGEN OXIDE

Richard C. Kovacs, Mantua; Frederick J. Krambeck, Cherry Hill, and Michael S. Sarli, Haddonfield, all of N.J., assignors to Mobil Oil Corporation, Fairfax, Va.

Continuation of Ser. No. 285,574, Dec. 16, 1988, abandoned, which is a division of Ser. No. 71,247, Jul. 9, 1987, abandoned. This application Apr. 18, 1990, Ser. No. 512,637

Int. Cl.[5] F27B *15/12, 15/08*

U.S. Cl. 422—144 8 Claims

1. In a fluid catalytic cracking unit having a cracking zone including a reactor vessel and a regeneration zone including a catalyst regenerator wherein the improvement comprises:

(i) a regeneration vessel comprising a vessel having a side inlet connected to the reactor for admitting spent cracking catalyst from the reactor to a single dense, fluidized bed of catalyst in which regeneration of the catalyst takes place,

(ii) an outlet for regenerated catalyst at the bottom of the regeneration vessel for withdrawing regenerated catalyst from the dense, fluidized bed of catalyst,

(iii) a gas inlet for injecting oxygen-containing regeneration gas into the dense, fluidized bed of catalyst maintained in the lower portion of the regeneration vessel to regenerate the catalyst,

(iv) a plurality of cyclone separators inside the regeneration vessel for separating entrained catalyst from regeneration effluent gases and returning the separated catalyst to the dense bed in the regenerator, the cyclone separators having inlets above the spent catalyst inlet, disposed to collect regeneration effluent gases from the regeneration vessel at a common collection region so that mixing of the regeneration effluent gases from different points in the regeneration vessel takes place prior to the regeneration gases entering the cyclone separators,

(v) a cyclone separator inlet manifold having a central hub with at least one inlet at the common collection region, and

(vi) outwardly-extending conduits extending from the central hub to the inlets of the cyclone separators connecting the hub to the cyclone inlets.

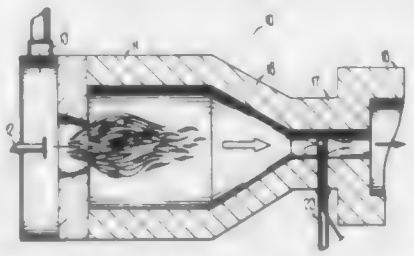
5,009,854

AXIAL REACTOR WITH COAXIAL OIL INJECTION

William R. Jones, Jr., Monroe, La., assignor to Columbian Chemicals Company, Atlanta, Ga.

Filed Aug. 31, 1988, Ser. No. 238,588

Int. Cl.[5] C09C *1/00*



U.S. Cl. 422—150 9 Claims

1. Apparatus for producing carbon black, comprising:

a source of hot gas;

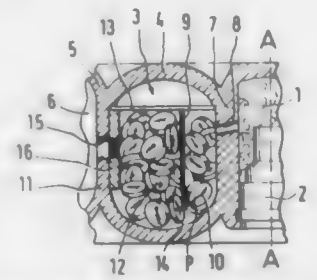
a reaction chamber having an inlet receiving a flow of the hot gas and having an outlet opening through which the hot gas flows to leave the reaction chamber; and

means for introducing a hydrocarbon spray into the reaction chamber in a direction substantially parallel and countercurrent to the flow of hot gas, thereby increasing the

dispersion speed of the hydrocarbon spray in the gas flow and narrowing the particle size distribution of the resulting carbon black particles produced.

5,009,855

GAS GENERATOR FOR INFLATING A SAFETY BAG



Karl E. Nilsson, Ottobrunn, Fed. Rep. of Germany, assignor to Bayern-Chemie Gesellschaft fuer flugchemische Antriebe mbH, Aschau, Fed. Rep. of Germany

Filed Oct. 17, 1989, Ser. No. 422,649

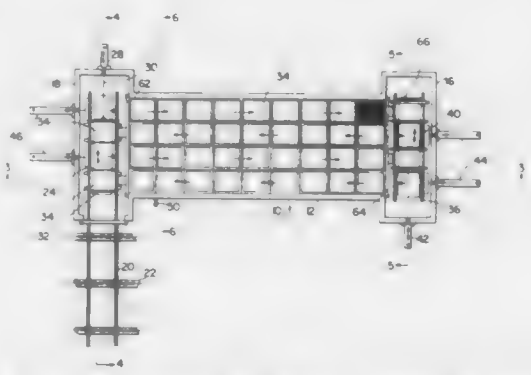
Claims priority, application Fed. Rep. of Germany, Oct. 17, 1988, 3835356

Int. Cl.[5] B60R *21/26, 21/32*

U.S. Cl. 422—164 6 Claims

1. A gas generator for inflating a safety bag, comprising a combustion chamber, fuel in said combustion chamber, ignition means including at least one ignition opening between said ignition means and said combustion chamber, whereby said combustion chamber communicates with said ignition means through said at least one ignition opening for igniting said fuel, at least one gas exit opening communicating with said combustion chamber for permitting gas generated in said combustion chamber to exit from said combustion chamber, a sheet metal insert in said combustion chamber for separating said combustion chamber into a first smaller combustion chamber section communicating with said at least one ignition opening and a second larger combustion chamber section communicating with said exit opening and with said first combustion chamber section, said sheet metal insert being positioned in said combustion chamber for separating said fuel into two portions for a sequential combustion in said second combustion chamber section after combustion in said first combustion chamber section, said sheet metal insert being further positioned to provide a gas flow passage (14, 23, 36) between said first smaller and said second larger combustion chamber sections, said sheet metal insert being spaced from said at least one ignition opening thus providing a continuous flow communication between said first and second combustion chamber sections, wherein said second combustion chamber section holds a quantity of fuel larger than is held in said first combustion chamber section, wherein said quantity of fuel in said first combustion chamber section is ignited and combusted first and wherein said quantity of fuel in said second combustion chamber section is ignited by combusted gas flowing from said first combustion chamber section into said second combustion chamber section, whereby said sequential combustion is achieved by a single ignition of said ignition means for generating a gentle initial inflating pressure by the combustion of said quantity of fuel in said first combustion chamber section followed by a rapid pressure increase by the combustion of said quantity of fuel in said second combustion chamber section for a complete inflation of said safety bag.

5,009,856



RECYCLING CATALYST BED FOR FLUE GAS TREATMENT

Michael L. Fenger, McMurray, and Francis R. Vargo, Munhall, both of Pa., assignors to Consolidation Coal Company, Pittsburgh, Pa.

Filed Dec. 5, 1988, Ser. No. 279,738

Int. Cl.[5] B01J *19/22*

U.S. Cl. 422—178 3 Claims

1. A recycling catalyst bed having a plurality of catalyst blocks adapted to be positioned in and transported through a flue duct for treating the flue gas and recycling the blocks comprising:

(a) a flue duct having an open interior surface;

(b) a support mechanism for positioning the blocks in the flue duct, said support mechanism having opposed ends adjacent said duct interior surface;

(c) block shifting enclosures exterior of the flue duct adjacent each end of said support mechanism, at least one of said block shifting enclosures having means for cleaning the blocks;

(d) means in each of said block shifting enclosures to support the blocks for shifting movement transverse to said support mechanism;

(e) block pusher mechanisms adjacent to each of said block shifting enclosures to transport the blocks through and into and out of said support mechanism; and,

(f) said support mechanism including an air manifold supplying air to the underside of the blocks to raise the blocks while being transported through said support mechanism to provide friction free movement of the blocks through said support mechanism.

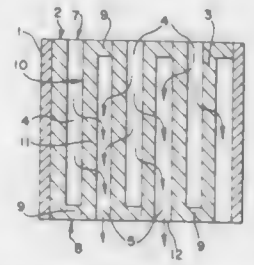
FILTER FOR GASES

Hans A. Haerle, Bopfingen, Fed. Rep. of Germany, assignor to Schwaebische Huettenwerke GmbH, Fed. Rep. of Germany

Filed Feb. 10, 1989, Ser. No. 309,323



Claims priority, application Fed. Rep. of Germany, Mar. 10, 1988, 3807917; May 30, 1988, 3818281

The portion of the term of this patent subsequent to Nov. 20, 2007, has been disclaimed.

Int. Cl.[5] B01D *53/36, 39/10*

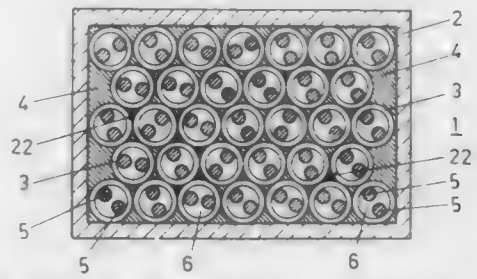
U.S. Cl. 422—180 13 Claims

1. A gas filter, suitable for removing soot from a combustion exhaust gas stream, which comprises a plurality of identically sized and shaped gas-permeable formed metal plates, each plate having a front face and a back face, each front face containing a plurality of longitudinal channels positioned between longitudinal channel-separating pieces, each channel having an open end and a closed end provided by a transverse closing cross-piece, with adjacent plates of said plurality of plates being positioned with front faces against back faces and with

adjacent plates being rotated 180° with respect to each other to provide a head-to-toe arrangement of adjacent plates for providing rows of inlet channels alternating with rows of outlet channels within said gas filter.

5,009,858

DEVICE FOR GENERATING OZONE



Günter Mechtersheimer, Nussbaumen, Switzerland, assignor to Asea Brown Boveri Limited, Baden, Switzerland

Filed Mar. 2, 1990, Ser. No. 487,439

Claims priority, application Switzerland, Mar. 7, 1989, 845/89

Int. Cl.[5] B01J *19/08*

U.S. Cl. 422—186.19 9 Claims

1. A device for generating ozone from oxygen or a gas containing oxygen by silent electric discharge in a discharge space through which the oxygen or gas flows, comprising:

a plurality of tubes made of a dielectric material arranged in a cluster and disposed within a housing;

internal electrodes respectively arranged inside each of said tubes and forming a nonhomogenous discharge gap; and p1 an external electrode surrounding each of said tubes formed by at least one of metalization of external surfaces of each of said tubes and surrounding each of said tubes with an electrically conductive material;

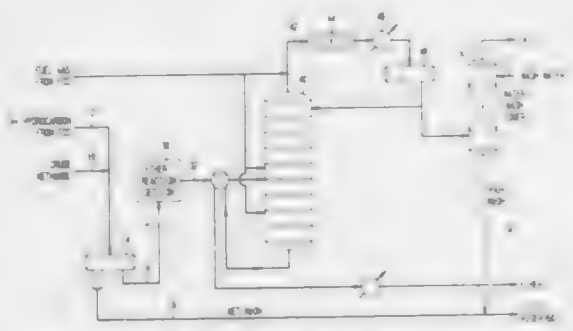
wherein said internal electrodes pass through the entire length of each of said tubes, have a cross section substantially smaller than a cross section of said tubes, and are electrically connected to each other at least at one end of one of said tubes.

5,009,859

EXTRACTION AND REACTOR SYSTEM

Mohsen N. Harandi, Lawrenceville, and Hartley Owen, Belle Mead, both of N.J., assignors to Mobil Oil Corporation, Fairfax, Va.

Continuation-in-part of Ser. No. 179,725, Apr. 11, 1988, Pat. No. 4,827,045. This application Feb. 9, 1989, Ser. No. 308,072



Int. Cl.[5] B01J *8/04*

U.S. Cl. 422—189 4 Claims

1. A continuous feedstock separation and etherification reactor system for converting crude methanol feedstock to methyl tert-alkyl ether comprising:

extractor means for contacting crude feedstock liquid containing a minor amount of water with a liquid hydrocarbon extraction stream under extraction conditions favorable to selective extraction of methanol, thereby providing an extract liquid stream rich in methanol and an aqueous raffinate stream lean in methanol;

first catalytic reactor means operatively connected for contacting the extract stream in a catalytic reaction zone with acid etherification catalyst in an etherification reaction

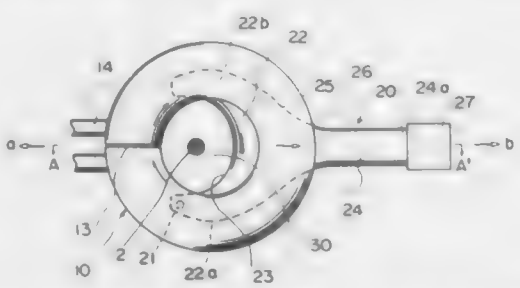
zone under process conditions to convert a major portion of methanol to ether;

second catalytic reactor means for contacting said raffinate stream with methanol conversion catalyst in the presence of hydrocarbon to produce a liquid hydrocarbon stream, and

means for charging at least a portion of said liquid hydrocarbon stream from said second reactor means to said extractor means as said extraction stream.

5,009,860

SEMICONDUCTOR ROD ZONE MELTING APPARATUS



Yasuhiro Ikeda, Annaka, Japan, assignor to Shin-Etsu Handotai Co., Ltd., Tokyo, Japan

Filed Apr. 20, 1988, Ser. No. 184,419

Claims priority, application Japan, May 25, 1987, 62-125804

Int. Cl.[5] **C30B** *35/00, 13/30*

U.S. Cl. 422—250 **7 Claims**

1. A semiconductor rod zone melting apparatus comprising:

a main induction heating coil surrounding a floating molten zone of a semiconductor rod, said main coil being single-turn flat coil having an inner diameter defining a central opening;

a single flat metal plate member comprising a pair of arcuate arm members which define an open arcuate portion having a U-shaped inner edge on one side facing said central opening, said inner edge of said open arcuate portion of said metal member having an opening width at least equal to said inner diameter of said main coil;

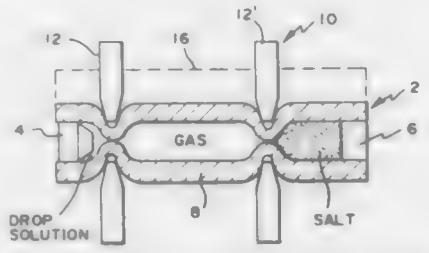
an electrically insulating member mounted on said metal member between said metal member and said main coil;

said metal member being disposed in adjacent contact with an upper or lower surface of said main coil, whereby said insulating member contacts said main coil; and

said main coil and said metal member being relatively movable with respect to each other perpendicular to an axis defined by said central opening while maintaining contact between said metal member and said main coil, whereby said main coil and said metal member define an opening of variable width in which a concentrated magnetic field is formed upon energizing said main coil.

5,009,861

CRYSTALLIZATION APPARATUS



Andreas Plaas-Link, Hanover, Fed. Rep. of Germany, assignor to Intospace GmbH, Hanover, Fed. Rep. of Germany

Filed Aug. 9, 1988, Ser. No. 229,950

Claims priority, application Fed. Rep. of Germany, Aug. 12, 1987, 3726765; Nov. 16, 1987, 3738840

Int. Cl.[5] **B01D** *9/00;* **G01N** *21/00;* **B01L** *11/00;* **C30B** *30/08*

U.S. Cl. 422—245 **31 Claims**

1 An apparatus for crystallizing proteins at zero gravity, comprising:

(a) a crystallization cell formed on an elastic tube having ends adapted to be sealed;

(b) said tube defining a cavity therein;

(c) clamp means having open and closed positions for reversibly dividing said cavity into a plurality of cells for receiving various solutions;

(d) said clamp means comprising a compression clamp;

(e) means for opening and closing said clamp means;

(f) first mechanical means for applying a first external pressure only to a peripheral portion of said tube;

(g) said first mechanical pressure applying means being positioned in tight engagement on a first external side portion thereof;

(h) second mechanical means for applying a second external pressure to another peripheral portion of said tube; and

(i) said second mechanical pressure applying means being positioned in tight engagement on a second external side portion of said tube lying generally opposite to said first external side portion thereof;

(j) wherein when said clamp means is switched from a closed to an open position for allowing intermixing of any solutions contained in said cells, said first external pressure applying means prevents formation of any partial vacuum in said tube to thereby prevent any gas losses.

5,009,862

APPARATUS AND PROCESS FOR GROWING CRYSTALS OF SEMICONDUCTOR MATERIALS

Michio Kida, Urawa; Yoshiaki Arai, Ohmiya, and Kensho Sahira, Yono, all of Japan, assignors to Mitsubishi Kinzoku Kabushiki Kaisha, Tokyo, Japan

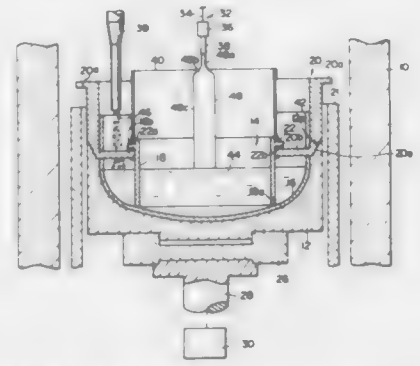
Division of Ser. No. 201,018, Jun. 1, 1988, Pat. No. 4,936,949. This application May 23, 1990, Ser. No. 527,887

Claims priority, application Japan, Jun. 1, 1987, 62-137985; Sep. 24, 1987, 62-239880

Int. Cl.[5] **C30B** *15/12*

U.S. Cl. 422—249 **13 Claims**

1. An apparatus for melting a semiconductor material and growing a semiconductor crystal from the melted material, comprising:



(a) a susceptor having a peripheral rim;

(b) a crucible assembly made of quartz for receiving the semiconductor material therein, said crucible assembly including an outer crucible housed in and supported by said susceptor and an inner crucible adapted to be so placed within said outer crucible as to define a multi-wall structure;

(c) fluid passage means for permitting the melted material to flow between said inner and outer crucibles when the multi-wall structure is defined by said inner and outer crucibles;

(d) holding means for holding said inner crucible;

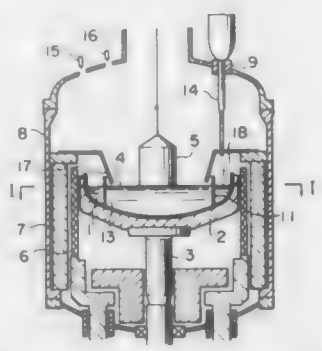
(e) drive means operable to move at least one of said holding

means and said susceptor vertically between a coupled position where said holding means is supported by said susceptor in such a manner that said inner crucible is so placed within said outer crucible as to define the multi-wall structure and a released position where said holding means is disengaged from said susceptor in such a manner that said inner crucible is released from said outer crucible; and

(f) heating means disposed so as to surround said susceptor for heating the semiconductor material contained in said crucible assembly.

5,009,863

APPARATUS FOR MANUFACTURING SILICON SINGLE CRYSTALS



Yoshinobu Shima, Yokohama, and Hiroshi Kamio, Tokyo, both of Japan, assignors to NKK Corporation, Tokyo, Japan

Continuation-in-part of Ser. No. 433,596, Nov. 8, 1989. This application Jun. 19, 1990, Ser. No. 540,647

Claims priority, application Japan, Nov. 11, 1988, 63-284017

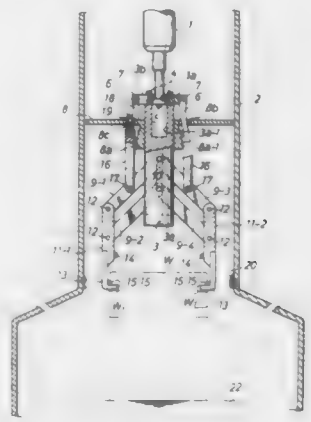
Int. Cl.[5] **C30B** *35/00, 15/12*

U.S. Cl. 422—249 **4 Claims**

1. In a silicon single crystal manufacturing apparatus comprising a rotation-type cellular quartz crucible containing molten silicon, an electric resistance heater for heating said quartz crucible from the side thereof, a quartz partition member arranged to divide said molten silicon into a single crystal growing section and a starting material melting section within said quartz crucible, said partition member being formed with at least one hole for passing molten silicon therethrough, a heat keeping cover arranged to cover an inner side of said partition member and above said starting material melting section, and starting material feeding means for continuously feeding starting material silicon to said starting material melting section whereby manufacturing silicon single crystals of not less than 12 cm and not greater than 30 cm in diameter, the improvement wherein said partition member is made from cellular silica glass having a cell content, in volume percent, ranging from 0.01% to 15%, and wherein the cell content of the quartz crucible is over 1.3 times greater than the cell content of the partition member, whereby the radiant heat dissipation through said partition member is reduced to a range from 5/1000 to 40/100 times the radiant heat dissipation of non-cellular silica glass.

5,009,864

RECHARGING DEVICE FOR CZOCHRALSKI METHOD



Hiroyuki Ibe, and Toshiharu Uesugi, both of Fukui, Japan, assignors to Shin-Etsu Handotai Company Limited, Tokyo, Japan

Filed Oct. 25, 1989, Ser. No. 426,293

Claims priority, application Japan, Oct. 27, 1988, 63-269576

Int. Cl.[5] **C30B** *35/00, 15/02;* **B66C** *1/66*

U.S. Cl. 422—249 **7 Claims**

1. A recharging apparatus suitable for use in forming monocrystal ingots by the Czochralski method, comprising:

a vertical conduit having disposed therein a recharging device comprising a shaft means capable of being vertically suspended from a pulling means of a Czochralski-type monocrystal ingot pulling apparatus for providing movable support therein;

slider means for providing support while freely sliding along the shaft means and slidably guided within said vertical conduit;

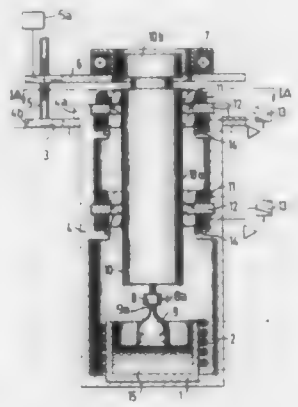
a pair of hook means pivotably connected to the shaft means below the slider means and capable of assuming hooking and unhooking positions for selectively supporting an element of a replenishment material;

a pair of rod means having respective upper ends flexibly connected to the slider means and having respective lower ends pivotably connected to the respective hook means such that when the slider means slides upward relative to the shaft means the hook means are caused to assume said unhooking position, and when the slider slides downward relative to the shaft means the hook means are caused to assume said hooking position; and

stopper means provided in said vertical conduit for stopping a downward movement of the slider means when the slider means makes contact with the stopper means.

5,009,865

BAR AND CRUCIBLE MAGNETIC SUSPENSION FOR A CRYSTAL-GROWING APPARATUS



Karl Boden, Jülich; Harald Ibach, Aachen-Verlautenheide, and Udo Linke, Düen, all of Fed. Rep. of Germany, assignors to Kernforschungsanlage Jülich GmbH, Jülich, Fed. Rep. of Germany

Filed Sep. 4, 1985, Ser. No. 772,557

Claims priority, application Fed. Rep. of Germany, Sep. 4, 1984, 3432467

Int. Cl.[5] C30B *35/00, 15/30*

U.S. Cl. 422—249 20 Claims

1. In an apparatus for growing a crystal member in the form of a bar along a crystal growth axis from molten material from a source member, the improvement which comprises in combination:

an elongated magnetizable core connected to one of said members and extending generally along said axis;

an axial stabilization magnet magnetically coupled to said core for effecting axial positioned of said core; and

at least one radial stabilizer for said core, said stabilizer comprising:

a plurality of electromagnets radially juxtaposed with said core, spaced therefrom and angularly spaced around said core,

an electric control unit connected to said electromagnets for automatically adjusting the fields of the electromagnets to precisely position the core with concentricity with respect to said electromagnets, and

position sensing means responsive to the radial spacing of said core from said electromagnets and connected to said electric control unit for inducing changes in said fields of said electromagnets to maintain said core radially in position during the crystal growing of said bar and independently of the operation of said axial stabilization magnet for effecting axial positioning of said core.

5,009,866

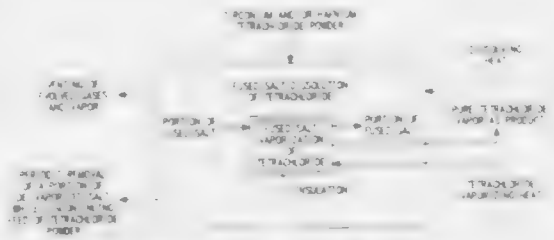
FUSED SALT PROCESS FOR PURIFYING ZIRCONIUM AND/OR HAFNIUM TETRACHLORIDES

Ernest D. Lee, Ogden, Utah, assignor to Westinghouse Electric Corp., Pittsburgh, Pa.

Filed Nov. 16, 1989, Ser. No. 437,152

Int. Cl.[5] C01G *25/04, 27/04*

U.S. Cl. 423—73 10 Claims



1. A fused salt process for continuously purifying zirconium and/or hafnium tetrachloride dissolved in a molten bath in a vessel, comprising the steps of:

maintaining a mass of a suitable mixture of salts, including zirconium and/or hafnium tetrachloride;

heating said mixture of salts to a temperature at or immediately below the vaporization temperature of the zirconium and/or hafnium tetrachloride at which temperature said mixture of salts is fused to form a molten, tetrachloride-dissolving bath;

continuously introducing into said dissolving bath a zirconium and/or hafnium tetrachloride powder;

heating a portion of said dissolving bath in situ to a temperature higher than the vaporization temperature of the zirconium and/or hafnium tetrachloride so as to vaporize the tetrachloride.

internally circulating said dissolving bath whereby the portion of said dissolving bath at the higher temperature circulates with the bath at the lower temperature;

venting gases and vapors evolved from said dissolving bath at the lower temperature; and

recovering the tetrachloride vapors vaporized at the higher temperature separately from the gases and the vapors evolved at the lower temperature.

C-GEL COMPOSITE PIZZA SNACK KIT

John F. Kratochvil, Oakbrook, Ill., assignor to Kraft General Foods, Inc., Glenview, Ill.

Division of Ser. No. 307,089, Feb. 6, 1989, which is a continuation-in-part of Ser. No. 658,618, Oct. 9, 1984, Pat. No. 4,684,533, which is a continuation-in-part of Ser. No. 81,115, Aug. 3, 1987, abandoned. This application Jan. 25, 1990, Ser. No. 470,153

Int. Cl.[5] A23L *1/04;* A23C *20/02*

U.S. Cl. 426—128 6 Claims

1. A pizza snack kit for preparation of a heated pizza snack, comprising:

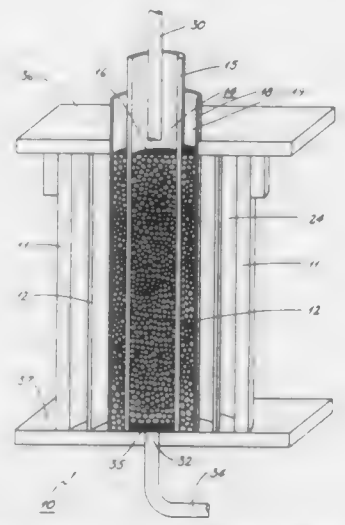
at least one slice of a thermoreversible C-gel pizza sauce composite product which may be readily melted when heated, comprising a structurally firm, continuous phase gelatin-carrageenan matrix comprising at least about 0.5 weight percent kappa carrageenan, at least about 1.0 weight percent gelatin having a bloom strength of at least about 125, at least about 20 weight percent of pizza sauce components, and from about 30 to about 80 weight percent of water, based on total product weight, said carrageenan and said gelatin being present in a continuous carrageenangelatin phase which is structurally firm at refrigeration temperature and which is mobile at a temperature of 160° F., with said pizza sauce components being dispersed in said continuous carrageenan-gelatin phase,

a prepackaged cheese topping; and

at least one prepackaged baked pizza crust, such that a consumer may place said at least one structurally firm C-gel pizza sauce slice product on said baked pizza crust and said cheese topping on said structurally firm C-gel slice and heat the crust, slice and cheese topping in an oven to produce a heated pizza snack.

5,009,868

PROCESS FOR THE EXTENDED USE OF STRIP ACID EMPLOYED IN THE RECLAMATION OF BATTERY ACID FLUID FROM EXPANDED LEAD-ACID BATTERIES



Robert A. Spitz, Holbrook, Mass., and Mark Bricker, Kutztown, Pa., assignors to East Penn Manufacturing Co., Inc., Lyon Station, Pa.

Continuation-in-part of Ser. No. 312,429, Feb. 2, 1989, Pat. No. 4,971,780, which is a continuation-in-part of Ser. No. 133,132, Dec. 14, 1987, abandoned. This application Dec. 21, 1989, Ser. No. 454,770

The portion of the term of this patent subsequent to Nov. 20, 2007, has been disclaimed.

Int. Cl.[5] C01B *17/90*

U.S. Cl. 423—139 9 Claims

1. In a method for recycling contaminated sulfuric acid from lead acid batteries to reclaimed sulfuric acid for reuse in said batteries by removing contaminating iron impurities, the steps which comprise:

(a) diluting the contaminated sulfuric acid to a concentration between 150 and 230 grams per liter;

(b) filtering the sulfuric acid through a first filter means to remove solid impurities;

(c) oxidizing the sulfuric acid to assure that the iron contaminants are substantially in a ferric form;

(d) removing the iron contaminants from the sulfuric acid through liquid-liquid extracting using an extraction agent comprising mixture of a mono- or di-alkyl phosphoric acid and a metal chelation collector selected from the group consisting of a 8-hydroxyquinoline substituted in the No. 7 position with a long chain aliphatic hydrocarbon radical and an oil-soluble 2-hydroxy benzophenoneoxime, a modifier which maintains solubility of the phosphoric acid and the metal chelation collector and enhances phase disengagement, and a water immiscible carrier, the molar ratio of the 8-hydroxyquinoline and the phosphoric acid being between 1:1::1:4, respectively; wherein the ratio of extraction agent to water immiscible carrier is greater than 10:90; said extraction performed at a volumetric ratio between said sulfuric acid and said extraction agent of between 4:1::1:4, and repeated until the contaminating iron impurities are substantially reduced;

(e) filtering the product of step (d) to remove residual extraction agent;

(f) adding concentrated sulfuric acid to return the sulfuric acid concentration of the product of step (e) to a sulfuric acid concentration for use in new lead acid batteries, the final concentration of iron in the sulfuric acid being no more than 20 parts per million; and

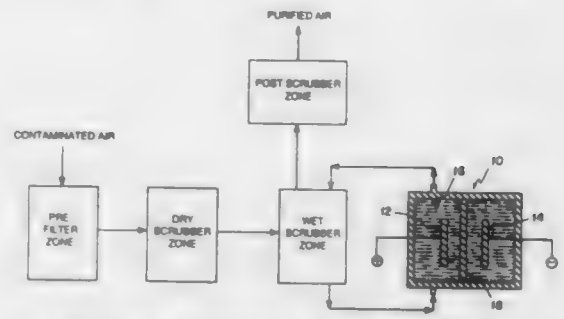
(g) removing the contaminating elements from the extraction agent by contacting said extraction agent with a strip acid with an acid concentration of between 30 and 50%, the improvement which comprises:

(h) reusing the extraction agent to perform further extractions of ferric iron from contaminated sulfuric acid solution;

(i) treating the strip acid with means to reduce a portion of the removed ferric iron to ferrous iron;

(j) reusing the strip acid product of step (i), containing reduced iron, in step (g) to remove contaminating ferric iron from extraction agent.

5,009,869



METHODS FOR PURIFICATION OF AIR

Norman L. Weinberg, Amherst; John D. Genders, Lancaster, and Alfred O. Minklei, Grand Island, all of N.Y., assignors to Electrocinerator Technologies, Inc., East Amherst, N.Y.

Filed Dec. 28, 1987, Ser. No. 138,441

Int. Cl.[5] B01D *47/00;* B01J *8/00;* C01B *17/16, 31/20*

U.S. Cl. 423—210 9 Claims

1. A method for purification of air and destruction of pollutants therein, which comprises the steps of cleaning polluted air in a scrubber zone by sorbing the pollutants with a scrubber liquid comprising an electrochemically regeneratable degradant comprising pollutant destruction rate potentiating combinations of redox couples selected from the group consisting of Cr^{+6}/Cr^{+3} and Ce^{+4}/Ce^{+3}; Cr^{+6}/Cr^{+3} and Br_2/Br^-; Ce^{+4}/Ce^{+3} and Br_2/Br^-; and Cr^{+6}/Cr^{+3}, Ce^{+4}/Ce^{+3} and Br_2/Br^-; converting the pollutants in said scrubber liquid to a substance of lesser toxicity or hazard; reactivating the spent degradant combination in said scrubber liquid to an active state while also degrading any residual pollutant by oxidizing in an electrolyzer zone, and returning said reactivated scrubber liquid to said scrubber zone for further cleaning of polluted air.

5,009,870

METHOD FOR REMOVING SULPHUR AND NITROGEN COMPOUNDS FROM GAS

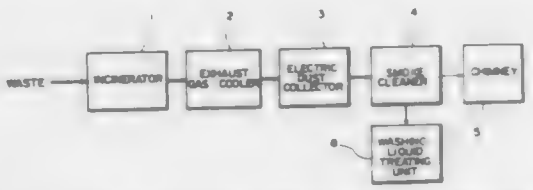
Seppo O. Heimala; Olli V. J. Hyvärinen, both of Pori, and Maija-Leena Metsärinta, Ulvila, all of Finland, assignors to Outokumpu Oy, Helsinki, Finland

PCT No. PCT/FI89/00077, § 371 Date Dec. 12, 1989, § 102(e) Date Dec. 12, 1989, PCT Pub. No. WO89/10181, PCT Pub. Date Nov. 2, 1989

PCT Filed Apr. 26, 1989, Ser. No. 438,450

Int. Cl.[5] B01J *8/00;* C01B *17/00, 21/00*

U.S. Cl. 423—239 17 Claims



1. A method for removing sulphur and nitrogen compounds from gases, comprising reducing sulphur dioxide, hydrogen sulphide and nitric oxides from gases by contacting the gases with long-chained sulphur compounds selected from the group consisting of polysulphides and polythionates containing 3-20 sulphur atoms per molecule, at a pH within the range of 0-4, while using an electroconductive solid material as a carrier for said long-chained sulphur compounds.

5,009,871

METHOD OF REMOVING MERCURY IN EXHAUST GASES FROM A WASTER INCINERATOR

Nariyoshi Higuchi, Kanagawa; Miki Yamagishi, Tokyo, and Tsuneharu Miyachi, Kanagawa, all of Japan, assignors to Nippon Kokan Kabushiki Kaisha, Tokyo, Japan

Continuation of Ser. No. 832,410, Feb. 24, 1986, abandoned.
This application Jan. 13, 1988, Ser. No. 144,695
Claims priority, application Japan, Aug. 31, 1984, 59-180698
Int. Cl.[5] B01D *53/34;* C25B *11/04*
U.S. Cl. 423—240 3 Claims

1. A method of removing mercuric chloride contained in exhaust gases emitted from a waste incinerator comprising the steps of:

(a) providing smoke cleaning means for washing the exhaust gases emitted from said waste incinerator by contacting the same with a washing liquid which is an alkaline solution;

(b) measuring at least one of an oxidation-reduction potential, COD value, chlorine concentration, and oxidizing agent concentration of said washing liquid before said washing, or a chlorine concentration in said exhaust gases after said washing;

(c) adding an oxidizing agent to said washing liquid to such extent that mercuric chloride and mercury forming complex ions with chlorine dissolved into said washing liquid by the washing of said exhaust gases are no longer reduced by reducing substances contained in said washing liquid, said oxidizing agent being suitable for oxidizing reducing substances formed in the washing liquid by the washing of the exhaust gases, whereby mercury in the form of mercuric chloride and mercury forming complex ions with chlorine is prevented from being reduced;

(d) determining a value at which at least one of an oxidation-reduction potential, COD value, chlorine concentration, and oxidizing a sent concentration of said washing liquid, or a chlorine concentration in said exhaust gases, prevents said mercuric chloride and mercury forming complex ions with chlorine from being reduced; and

(e) washing said exhaust gases with said washing liquid in which an amount of said oxidizing agent is controlled in order to maintain the value determined in step (d) so that the mercuric chloride and mercury forming complex ions with chlorine in said washing liquid are prevented from being reduced and so that excessive amounts of the oxidizing agent are prevented from being added to said washing liquid, thus preventing the occurrence of any corrosion of the waste incinerator.

5,009,872

METHOD OF OXIDIZING GASEOUS SUBSTANCES

Karl T. Chuang, Edmonton, Canada; James B. McMonagle, Birdhill, Ireland; Robert J. Quaiattini, Calgary, Canada; William A. Seddon, Deep River, Canada, and David E. Clegg, Pembroke, Canada, assignors to Atomic Energy of Canada Ltd., Ontario, Canada

Continuation-in-part of Ser. No. 166,742, Mar. 2, 1988, abandoned, which is a continuation of Ser. No. 46,541, Jun. 5, 1987, abandoned. This application Nov. 23, 1988, Ser. No. 275,188
Claims priority, application Canada, May 12, 1986, 508959
Int. Cl.[5] B01D *53/36*
U.S. Cl. 423—245.3 15 Claims

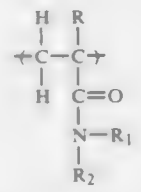
1. A method of oxidizing a gaseous substance selected from the group consisting of carbon monoxide, ethanol, methanol, 2-propanone and formaldehyde in a feed gas, which process comprises passing such gaseous substance and oxygen at an input temperature of −50° to 150° C., in which the gaseous substance is present as less than 2% of the feed gas, and the balance of the feed gas is oxygen and gases which do not inhibit oxidation of the said gaseous substance under the reaction conditions; into contact with

(a) a hydrophobic, porous catalyst having a specific surface area of from 200 to 600 m^2/g support, formed of porous copolymerized styrene divinylbenzene, and

(b) a catalytically active metal on the support, the catalytically active metal being selected from the group consisting of chromium, molybdenum, tungsten, manganese, rhenium, iron, ruthenium, osmium, cobalt, rhodium, iridium, nickel, palladium, platinum, copper and silver, the amount of catalytically active metal being in the range of 0–1 to 22 wt % of the total weight of the support and catalytically active metal.

5,009,873

CRYSTAL MODIFICATION IN WET PROCESS PHOSPHORIC ACID PRODUCTION



E. Michael Kerr, Naperville; Lawrence J. Connelly, Oak Lawn, both of Ill.; William J. Roe, Roswell, Ga., and Robert M. Vallowe, Brandon, Fla., assignors to Nalco Chemical Company, Naperville, Ill.

Filed Jan. 29, 1990, Ser. No. 471,778
Int. Cl.[5] G01B *25/16;* C01F *11/46*
U.S. Cl. 423—320 19 Claims

1. A wet process phosphoric acid production process comprising the steps of digesting phosphate rock in a slurry containing sulfuric acid, whereby phosphoric acid is released and calcium sulfate crystals are formed, and then separating the phosphoric acid from the calcium sulfate crystals, the improvement comprising:

adding to said slurry, in an amount effective for calcium sulfate crystal formation improvement, a polymer containing monomer units of Formula I,

Formula I

wherein R is hydrogen or methyl and R_1 and R_2 are independently hydrogen, alkyl or sulfoalkyl substituents;

wherein said polymer is comprised of monomer units of said Formula I wherein both of R_1 and R_2 are hydrogen and monomer units of said Formula I wherein one of said R_1 and R_2 is a sulfoalkyl substituents;

wherein said polymer is present at the calcium sulfate crystal nucleation phase of said digestion step; and

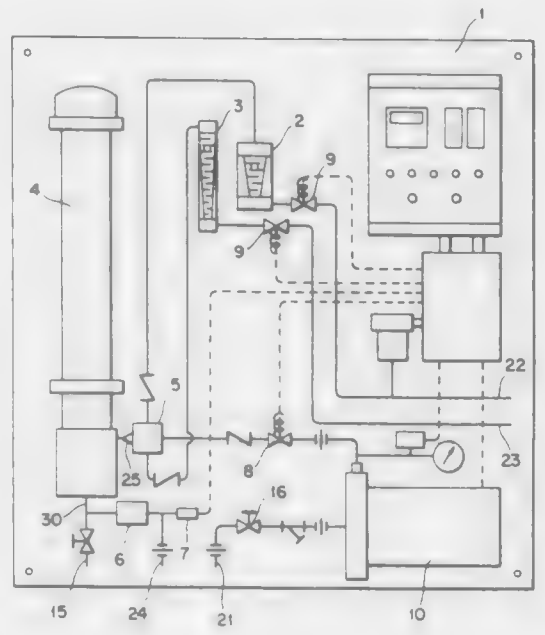
wherein said polymer is added in a water-soluble salt form.

5,009,874

HYDROPHOBIC PRECIPITATED SILICA GRANULES

Francois Parmentier, Lyons, and Jacques Persello, Montluel, both of France, assignors to Rhone-Poulenc Chimie, Courbevoie, France

Filed Apr. 13, 1988, Ser. No. 181,312
Claims priority, application France, Apr. 13, 1987, 87 05199
Int. Cl.[5] C01B *33/14*
U.S. Cl. 423—335 9 Claims



1. Hydrophobic, essentially spheroidal precipitated silica granules having a median particle size of at least 0.08 mm, a density of at least 0.15, a water wettability of at least 20%, and a maximum water uptake of 5%.

5,009,875

PROCESS OF PREPARING CLORINE DIOXIDE AND APPARATUS THEREFOR

Joseph M. Kelley, Westfield, N.J.; Donald C. Kucher, Quakertown, Pa., and George Mayurnik, Franklin Lakes, N.J., assignors to International Dioxcide, Inc., Clark, N.J.

Filed Aug. 3, 1988, Ser. No. 227,634
Int. Cl.[5] C01B *11/02;* G05D *7/00*
U.S. Cl. 423—477 11 Claims

1. A system for the generation of chlorine dioxide which comprises

(a) supply means for a water stream and means for delivering the water stream to a reaction zone;

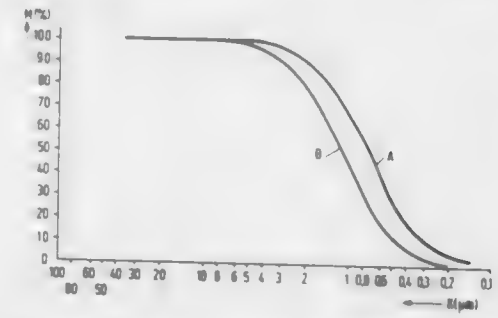
(b) supply means for reactant compounds, which when reacted together yield chlorine dioxide, and feed lines for separately feeding the reactant compounds to the water stream for reaction in the reaction zone;

(c) mixing means for insuring complete mixing of the compounds after feeding the reacting compounds to the water stream;

(d) means for transferring the reaction product from the reaction zone;

(e) shutoff valves in the feed lines of the reactant compounds;

(f) a monitoring system for monitoring the supply of water and reactant compounds through the feed lines, with the monitoring system being in cooperation with the shutoff valves such that the shutoff vales are closed to restrict any further flow through the feed lines of the reactant compounds when the monitoring system detects a loss in the supply of the reactant compounds or water, whereby the activation of the shutoff valves in the feed lines results in a continued flow of the water stream to purge the feed lines of any reactant compounds or chlorine dioxide; and



(g) a pH meter downstream of the reaction zone, with the pH meter monitoring the pH of the chlorine dioxide reaction product solution being transferred from the reaction zone, and the pH meter being in cooperation with the shutoff valves in the feed lines such that the shutoff valves are closed to restrict any further flow through the feed lines when a pH outside the range of from about 2.7 to about 3.5 is detected.

METHOD OF MANUFACTURING BARIUM TITANATE $BATIO_3$

Detlev F. K. Hennings, and Herbert J. Schreinemacher, both of Aachen, Fed. Rep. of Germany, assignors to U.S. Philips Corp., New York, N.Y.

Continuation of Ser. No. 105,066, Oct. 5, 1987, abandoned. This application Feb. 10, 1989, Ser. No. 309,467
Claims priority, application Fed. Rep. of Germany, Oct. 16, 1986, 3635532
Int. Cl.[5] C01G *23/00*
U.S. Cl. 423—598 13 Claims

1. A method of manufacturing barium titanate by pyrolysis of barium titanyl oxalate which consists essentially of adding an aqueous solution of barium chloride to an aqueous solution comprising a mixture of oxalic acid and titanium oxychloride at a temperature in the range from 20° C. to 60° C., with agitation, to produce a precipitate of barium titanyl oxalate having a barium to titanium ratio in the range of 1:1.015 to 1:1.025; and calcining the resultant precipitate at a temperature in the range of 900° to 1300° C. for a time period effective to form barium titanate, said barium titanate having improved grindability, increased sinterability and comprising primary particles having a smaller grain size when compared to barium titanate obtained when aqueous solutions of barium chloride, titanium chloride and oxalic acid are reacted and the barium to titanium ratio is not within said 1:1.015 to 1:1.025 range.

5,009,877

STABILIZATION OF ACICULAR FERROMAGNETIC CHROMIUM DIOXIDE

Werner Steck; Laszlo Marosi, both of Ludwigshafen; Herbert Haberkorn, Gruenstadt; Rainer Feser, Hessheim; Werner Huebner, and Helmut Jakusch, both of Frankenthal, all of Fed. Rep. of Germany, assignors to BASF Aktiengesellschaft, Fed. Rep. of Germany

Continuation of Ser. No. 917,611, Oct. 10, 1986, abandoned. This application Feb. 20, 1990, Ser. No. 481,777
Claims priority, application Fed. Rep. of Germany, Oct. 10, 1985, 3536116
Int. Cl.[5] C01G *37/02*
U.S. Cl. 423—607 3 Claims

1. A process for stabilizing acicular ferromagnetic chromium dioxide which consists essentially of heating the chromium dioxide in an aqueous suspension which contains sufficient alkali metal hydroxide to adjust the pH of the suspension to greater than 9 and at from 35° C. to the boiling point of the suspension for not less than 20 minutes to form chromium dioxide particles consisting of a CrO_2 core and at least a partial nonmagnetic Cr OOH— containing shell wherein the chromium dioxide possesses orthorhombic Cr OOH at least on part of its surface.

5,009,878

ZIRCONIUM DIOXIDE POWDER, PROCESSES FOR ITS PREPARATION AND ITS USE FOR THE PRODUCTION OF SINTERED ARTICLES

Helmut Scharf, Aurich, Fed. Rep. of Germany, assignor to Huels Aktiengesellschaft, Marl, Fed. Rep. of Germany

Filed May 31, 1990, Ser. No. 531,412

Claims priority, application Fed. Rep. of Germany, Jun. 2, 1989, 3918013

Int. Cl.[5] **C01G** *25/00*

U.S. Cl. 423—608 **11 Claims**

1. A process for the preparation of zirconium dioxide powder, comprising melting zirconyl chloride in the presence of a diol of the formula HO-Z-OH, wherein X is a saturated hydrocarbon radical of 2–5 carbon atoms, and recovering the product.

5,009,879

TITANIUM DIOXIDE, A PROCESS FOR ITS PRODUCTION AND ITS USE

René De Cleyn, Brasschaat, Belgium; Peter Thometzek, and Jakob Rademachers, both of Krefeld, Fed. Rep. of Germany, assignors to Bayer Aktiengesellschaft, Leverkusen, Fed. Rep. of Germany

Filed Nov. 20, 1989, Ser. No. 438,315

Claims priority, application Fed. Rep. of Germany, Nov. 29, 1988, 3840196

Int. Cl.[5] **C01G** *23/047*

U.S. Cl. 423—610 **4 Claims**

1. A titanium dioxide composition comprising TiO_2 predominantly in the form of isometric primary particles from 0.5 to 5.0 μm in size, which are aggregated by calcination to predominantly spherical particles 1 to 100 μm in diameter, with a BET surface area of 1 to 4.5 m^2/g and an apparent density of 0.2 to 1.3 kg/l.

5,009,880

COMPOSITION AND PROCESS FOR THE TREATMENT OF KERATIN MATERIALS WITH POLYMERS

Jean-Francois Grollier, Paris; Claire Fiquet, Paris; Chantal Fourcadier, Paris; Claude Dubief, Versailles, and Daniele Cauwet, Crosne, all of France, assignors to L'Oreal, Paris, France

Continuation of Ser. No. 749,440, Jun. 27, 1985, Pat. No. 4,719,099, which is a continuation of Ser. No. 587,008, Mar. 7, 1984, abandoned, which is a continuation of Ser. No. 180,443, Aug. 22, 1980, Pat. No. 4,445,521, which is a continuation of Ser. No. 886,554, Mar. 14, 1978, Pat. No. 4,240,450. This application Nov. 4, 1987, Ser. No. 116,667

Claims priority, application Luxembourg, Mar. 15, 1977, 76955

The portion of the term of this patent subsequent to Dec. 23, 1997, has been disclaimed.

Int. Cl.[5] **A61K** *7/06, 7/08, 9/12*

U.S. Cl. 424—047 **14 Claims**

1. A composition for the cosmetic treatment of hair, skin or nails comprising an anionic polymer possessing sulfonic acid grouping having a molecular weight of 500 to 5 million and a cationic polymer containing primary, secondary, tertiary or quaternary amino groups, having a molecular weight of 500 to 5 million, said cationic polymer being characterized by a low substantivity in a solvent medium, said anionic and cationic polymers being present each in an amount from about 0.01 to 10% by weight.

5,009,881

ORAL HYGIENE GELS

Ira D. Hill, Clay Ct., Locust, N.J. 07760, and Robert D. White, 65 Glen Grey Rd., Oakland, N.J. 07436

Continuation-in-part of Ser. No. 927,752, Nov. 6, 1986, and Ser. No. 927,805, Nov. 6, 1986, Pat. No. 4,950,479. This application Jun. 8, 1990, Ser. No. 535,499

Int. Cl.[5] **A61K** *7/16*

U.S. Cl. 424—49 **11 Claims**

1. An oral hygiene method for cleaning, massaging and conditioning gums of edentulous persons and babies and infants prior to teething, and up through the time the child itself can effectively control plaque formation, by regular brushing, comprising the steps of removing and disrupting plaque-like films on said gums with a gel suitable for cleaning, massaging and conditioning gums of babies and endentulous persons, wherein:

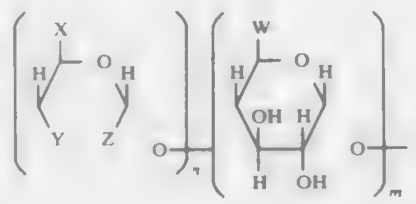
A. said gel is free from:
1. abrasive,
2. analgesic, and
3. substances that alter the microflora balance of the oral cavity;

B. said gel comprises.
1. a nonionic surfactant,
2. a coating substance insoluble in said surfactant, wherein the weight ratio of said nonionic surfactant to said coating substance is from between about 50:1 and about 1:1 and;
3. a viscosifier; and

C. said gel is characterized as being:
1. stable,
2. ingestible,
3. non-foaming,
4. substantive to the gums of babies and endentulous persons,
5. disruptive towards the formation of plaque-like films on the gums of babies and endentulous persons, and having a
6. pH of from between about 3.0 and about 8.5.

5,009,882

USE OF A CARBOXY STARCH POLYMER TO INHIBIT PLAQUE WITHOUT TOOTH STAINING



Charles R. Degenhardt, and Barbara A. Kozikowski, both of Cincinnati, Ohio, assignors to The Proctor & Gamble Company, Cincinnati, Ohio

Filed May 21, 1990, Ser. No. 526,930

Int. Cl.[5] **A61K** *7/16, 7/18, 9/68*

U.S. Cl. 424—52 **26 Claims**

1. An oral composition comprising: (a) a safe and effective amount of a plaque-inhibiting starch polymer comprising the formula

wherein W and X are independently selected from CH_2OH, CHO and CO_2H, or the neutralized carboxylic acid salts thereof, Y and Z are independently selected from CHO and CO_2H, or the neutralized carboxylic acid salts thereof, n is in the range of from about 5 to about 2500, m is in the range of from 0 to about 2500, provided that the sum of n and m ranges from about 5 to about 2500, and the degree of carboxylation of said polymer ranges from about 1 to about 3; and (b) a pharmaceutically acceptable carrier.

5,009,883

AQUEOUS STANNOUS FLUORIDE NON-ABRASIVE HOME TREATMENT GEL COMPOSITIONS

Christopher H. Suhonen, San Jose, Calif., assignor to Gillette Canada Inc., Montreal, Canada

Division of Ser. No. 437,467, Nov. 15, 1989, Pat. No. 4,960,586. This application Jul. 25, 1990, Ser. No. 557,882

Int. Cl.[5] **A61K** *7/18, 33/16*

U.S. Cl. 424—52 **3 Claims**

1. An aqueous non-abrasive home treatment gel composition consisting essentially of water-unstable stannous fluoride and a lower alkyl vinyl ether and maleic anhydride copolymer as the essential stannous ion chelate forming stabilizer in an amount sufficient to effectively stabilize the stannous fluoride concentration against stannous oxide precipitation by providing oxidation protection to the stannous ion, the composition being substantially free from soluble pyrophosphates, silica containing compounds, and aldehyde containing flavoring agents.

5,009,884

STABILIZED AQUEOUS STANNOUS FLUORIDE MOUTHWASH

Christopher H. Suhonen, San Jose, Calif., assignor to Gillette Canada Inc., Montreal, Canada

Division of Ser. No. 437,469, Nov. 15, 1989, Pat. No. 4,970,065. This application Jul. 25, 1990, Ser. No. 557,881

Int. Cl.[5] **A61K** *7/18, 33/16*

U.S. Cl. 424—52 **3 Claims**

1. An aqueous mouthwash composition consisting essentially of water-unstable stannous fluoride and a lower alkyl vinyl ether and maleic anhydride copolymer as the essential stannous ion chelate forming stabilizer in an amount sufficient to effectively stabilize the stannous fluoride concentration against stannous oxide precipitation by providing oxidation protection to the stannous ion, the composition being substantially free from soluble pyrophosphates and aldehyde containing flavoring agents.

5,009,885

METHOD OF PROTECTING THE MUCOUS MEMBRANES OF THE MOUTH WHILE TREATING TEETH

David K. Yarborough, 3705 Northcote Dr., Birmingham, Ala. 35223

Division of Ser. No. 406,418, Sep. 11, 1989, Pat. No. 4,983,380. This application Nov. 19, 1990, Ser. No. 600,683

Int. Cl.[5] **A61K** *7/18, 7/20, 33/40*

U.S. Cl. 424—53 **3 Claims**

1. A method of protecting the mucous membranes of the mouth while using a hydrogen peroxide solution to whiten the teeth comprising the steps of:

(a) forming a reusable mold of the teeth and adjacent gingival area of a patient's mouth;

(b) combining an aqueous hydrogen peroxide solution with a gelatinous mucoprotectant water soluble sodium stearate gel to form an emulsion;

(c) placing said emulsion in said mold in a quantity sufficient to coat the teeth when placed thereabout; and

(d) positioning said teeth in said mold for a predetermined period of time.

5,009,886

DENTIFRICE

Mohammad R. Ahmad, Glenview, and Oscar A. Barke, Skokie, both of Ill., assignors to Floss Products Corporation, Morton Grove, Ill.

Filed Oct. 2, 1989, Ser. No. 416,101

Int. Cl.[5] **A61K** *7/26, 35/78*

U.S. Cl. 424—58 **2 Claims**

1. In a gel dentifrice for caring for one's teeth and gums, the combination of 20–60 mesh or less natural form micro-sized particles or microfibers of the branches or roots of trees botanically known as the azadirachta or salvadora persica, the micro-sized particles or microfibers being formed by mechanically grinding and/or chopping the branches or roots of the trees to very fine particles, dry-filtering these particles through very fine screens, of the order of 20–60 mesh, to yield 20–60 mesh or less micro-sized particles or microfibers, the improvement consisting of the steps of mixing the yielded micro-sized particles or microfibers in a bath of deionized water and a minute quantity of methylparaben and heating the composite liquid to 70–95 degrees Centigrade for 10–40 minutes, and filtering the composite liquid with only minimal pressure differential through a very fine cloth bag filter of the order of 20–60 mesh to yield a filtered liquid having 20–60 mesh or less micro-sized particles or microfibers suspended therein; mixing artificial sugarless sweetener, a flavor enhancer, a vitamin supplement, a gum healer, and a gelling thickener, with the filtered liquid having the micro-sized particles or microfibers suspended therein, thereby providing in the gel dentifrice a natural astringent for acting on the gums and other soft tissue of the mouth and a soft nondamaging abrasive for cleaning and whitening the teeth and otherwise being void of any and all mineral abrasives commonly used in dentifrice; and the gel dentifrice by weight being comprised of 10–20% deionized water; 30–60% sorbitol; 5–15% extract liquid; 5–15% liquid vegetable glycerine solvent; 1–3% carrageenan; 0.1–2.0% titanium dioxide coloring; 0.1–0.5% sodium lauryl sulfate surfactant; and 0.5–2% mint flavor.

5,009,887

DEODORANT COMPOSITION IN THE FORM OF A GEL

Takashi Iwahashi, Sagamihara, Japan, assignor to Aikoh Co., Ltd., Tokyo, Japan

Continuation-in-part of Ser. No. 256,561, Oct. 12, 1988, abandoned. This application Jul. 31, 1989, Ser. No. 388,023

Int. Cl.[5] **A61K** *31/78*

U.S. Cl. 424—76.1 **3 Claims**

1. A deodorant composition in the form of a gel, which comprises 2% to 30% by weight of sodium polyacrylate or ammonium polyacrylate having a molecular weight of from 40,000 to 300.000, 1% to 10% by weight of diglycidyl ether or polyglycidyl ether, 5% to 40% by weight of deodorizer containing as active ingredients ethanaminium N-(carboxymethyl)-2-hydroxy-N,N,bis(2-hydroxyethyl) chloride, diethanolamine, triethanolamine, glyoxal, sodium citrate and sodium dihydrogen phosphate, and the remainder of water.

5,009,888

THERAPEUTIC ENZYME-ANTIBODY COMPLEXES

Joseph T. Dunn, Holliston, Mass., assignor to Genzyme Corporation, Cambridge, Mass.

Filed Apr. 13, 1987, Ser. No. 37,862

Int. Cl.[5] **A61K** *37/54, 39/395;* **C12N** *9/96*

U.S. Cl. 424—94.3 **2 Claims**

1. A pharmaceutical composition comprising a suitable carrier and a complex of the enzyme human tissue plasminogen activator and a monoclonal antibody specific for said enzyme, said antibody being bound to said enzyme by immunoaffinity, the K_D of said antibody/enzyme complex being at least 10^{-11}M, said antibody being bound to said enzyme at a site on said enzyme which does not substantially interfere with the activity of said enzyme and which increases the in vivo half-life of said enzyme.

2. A pharmaceutical composition comprising a suitable carrier and a complex of the enzyme human tissue plasminogen activator and a monoclonal antibody specific for said protein, said antibody being covalently bonded to said enzyme at a site on said enzyme which does not substantially interfere with the activity of said enzyme and which increases the in vivo half-life of said enzyme.

5,009,889

TREATMENT OF DYSFUNCTIONAL VASCULAR ENDOTHELIUM USING ACTIVATED PROTEIN C

Fletcher B. Taylor, Jr., and Charles T. Esmon, both of Oklahoma City, Okla., assignors to Oklahoma Medical Research Foundation, Oklahoma City, Okla.

Filed Dec. 31, 1987, Ser. No. 139,922
Int. Cl.[5] A61K *37/547, 37/02*
U.S. Cl. 424—94.64 20 Claims

1. A pharmaceutical composition comprising:
an effective amount of a polypeptide characterized by activated protein C activity to inhibit inflammatory stimuli disrupting cell permeability and normal coagulation processes in a patient suffering from a dysfunction of endothelial cells; and
a pharmaceutically acceptable carrier.

5,009,890

BURN TREATMENT PRODUCT

Ascanio G. DiPippo, Middletown, R.I., assignor to Trilling Medical Technologies, Inc., Carlstadt, N.J.

Continuation of Ser. No. 83,395, Aug. 10, 1987, abandoned, which is a continuation-in-part of Ser. No. 32,268, Mar. 31, 1987, abandoned. This application Apr. 11, 1990, Ser. No. 512,621
Int. Cl.[5] A61K *35/78;* A61L *15/44*
U.S. Cl. 424—195.1 48 Claims

1. A burn treatment product in the form of a gel comprising:
an effective amount of water for permitting formation of a gel and for reducing the amount of heat in the burned are; between about 0.1 and 20% Tea Tree Blend; and
a gel forming amount of at least one gum.

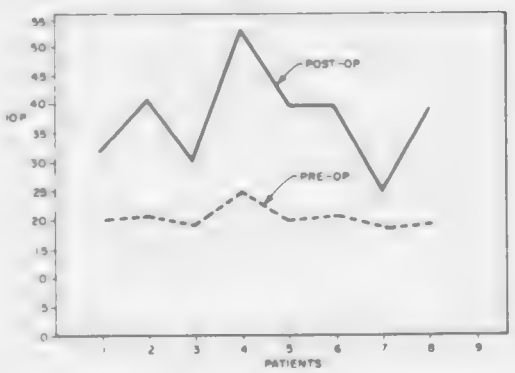
5,009,891

ANTIOXIDANT COMPOSITION OF NATURAL PRODUCTS AND PRODUCING METHOD THEREOF

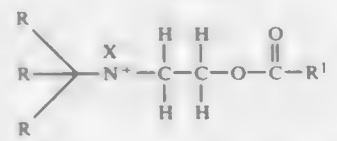
Kozo Niwa, 4-4, Asahi-machi, Toda-Shimizu, Kochi, and Shimesu Motoyama, Asaka, both of Japan, assignors to Kozo Niwa, Kochi, Japan

Filed Sep. 23, 1987, Ser. No. 100,166
Claims priority, application Japan, Sep. 25, 1986, 61-224791
Int. Cl.[5] A61K *35/78*
U.S. Cl. 424—195.100 13 Claims

1. An antioxidant composition, which comprises; the product obtained by steps consisting of
(a) heating a material selected from the group consisting of plant seeds, vegetable grains and germs thereof, or rice bran to a temperature within the range of from 50° to 150° C. for a period of time sufficient to release low-molecular weight antioxidant compounds from bonds or repeating sub-units of polymers binding the compounds to other components or each other;
(b) brewing the heated material; and
(c) adding to the brew, an oil, obtained from a plant heated to a temperature within the range of from 50° to 150° C. for a period of time sufficient to release low-molecular weight antioxidant compounds from bonds or repeating sub-units of polymers binding the compounds to other components or each other.

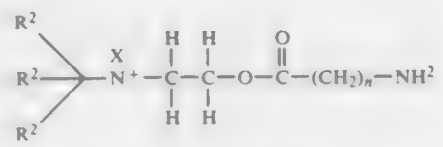


5,009,892



RAPID MIOSIS WITH CONTROL OF INTRAOCULAR PRESSURE

James W. McKinzie, 3124 Solimar Beach Dr., Ventura, Calif. 93001

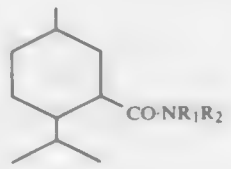


Filed Mar. 3, 1989, Ser. No. 318,753
Int. Cl.[5] A61K *9/00*
U.S. Cl. 424—422 22 Claims

1. A method of inducing quick miosis while controlling intraocular pressure in a mammal during ocular surgery comprising the steps of:
applying to the eye of the mammal during ocular surgery an aqueous solution containing from 0.1 to 5% by weight of a first miotic agent dissolved in a pharmacologically acceptable aqueous carrier, said first agent being selected from compounds of the formula:

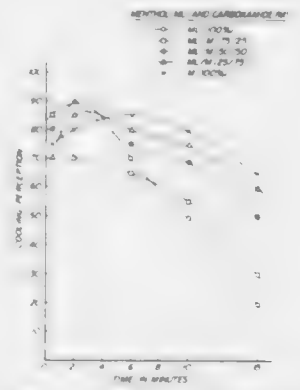
where R and R^1 are lower alkyl groups containing 1 to 5 carbon atoms and X^- is an anion; and
applying to the eye during said surgery an aqueous saline solution containing 0.001 to 1.0 percent by weight of a second miotic agent dissolved in pharmacologically acceptable aqueous carrier selected from compounds of the formula:

where R^2 is a lower alkyl group of 1–5 carbon atoms, n is an integer from 0–3 and X^- is an anion.



5,009,893

BREATH-FRESHENING EDIBLE COMPOSITIONS OF METHOL AND A CARBOXAMIDE

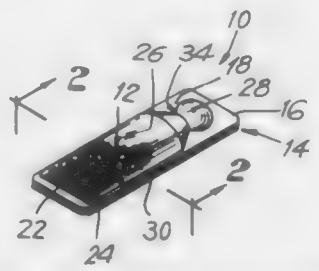


Subraman R. Cherukuri, Towaco; Krishna Raman, Randolph, both of N.J.; Gul Mansukhani, Staten Island, N.Y.; Ralph Cifrese, Wharton, N.J., and Lucy L. Wong, Jackson Heights, N.Y., assignors to Warner-Lambert Company, Morris Plains, N.J.

Filed Jul. 17, 1989, Ser. No. 381,218
Int. Cl.[5] A61K *7/16, 9/68*
U.S. Cl. 424—440 30 Claims

1. A chewing gum composition capable of providing long-lasting, breath freshening perception without bitterness comprising a gum base, a sweetener and a cooling composition comprising menthol and an N-substituted-p-menthane carboxamide of the formula:

wherein R_1, when taken separately, is selected from the group consisting of hydrogen, and an aliphatic radical containing up to 25 carbon atoms;
R_2, when taken separately is selected from the group consisting of a hydroxy radical, and an aliphatic radical containing up to 25 carbon atoms, with the proviso that when R_1 is hydrogen R_2 may also be an aryl radical of up to 10 carbon atoms and selected from substituted phenyl, phenalkyl, naphthyl and substituted naphthyl, and pridyl; and
R_1 and R_2 when taken together, represent a cyclic or heterocyclic group of up to 25 carbon atoms.



5,009,894

ARRANGEMENT FOR AND METHOD OF ADMINISTERING A PHARMACEUTICAL PREPARATION

Charles Hsiao, Copper City, Fla., assignor to Baker Cummins Pharmaceuticals, Inc., Miami, Fla.

PCT No. PCT/US88/00868, § 371 Date May 11, 1988, § 102(e) Date May 11, 1988
PCT Filed Mar. 7, 1988, Ser. No. 227,904
Int. Cl.[5] A61K *9/52*
U.S. Cl. 424—451 21 Claims

1. An arrangement for administering a pharmaceutical preparation, comprising:
a multitude of pellets containing a pharmaceutical preparation and having non-tacky coatings; and
a breakable packet including a backing sheet having opposite major planar surfaces, and a covering member overlying the backing sheet, and extending outwardly of, and having a flange portion sealed to one of said major surfaces, said covering member bounding with the backing sheet a compartment in which the pellets are contained, said covering member including a hollow main portion having a predetermined half-cylindrical cross-section and extending along a longitudinal direction, a neck portion having a half-frusto-conical cross-section less than said predetermined cross-section and tapered walls which converge toward each other along the longitudinal direction to a waist, and a head portion having a half-spherical cross-section and tapered walls which diverge apart along the longitudinal direction away from the waist, said covering member having its smallest dimension, as considered along a transverse direction generally perpendicular to the longitudinal direction, at the waist, said packet having across the waist a frangible zone which, when broken, forms the neck portion as a tapered pouring spout through which the pellets are poured from the compartment.

5,009,895

SUSTAINED RELEASE WITH HIGH AND LOW VISCOSITY HPMC

Chung Y. Lui, Lansdale, Pa., assignor to Merck & Co., Inc., Rahway, N.J.

Filed Feb. 2, 1990, Ser. No. 473,801
Int. Cl.[5] A61K *9/20*
U.S. Cl. 424—465 11 Claims

1. A carrier base material combined with a therapeutically active medicament and shaped and compressed to a solid sustained release pharmaceutical dosage form having a zero order release profile upon administration, carrier base material comprising:
(a) a high viscosity HPMC; having a molecular weight of 60,000 or greater; and
(b) a low viscosity HPMC, having a molecular weight of 50,000 or less, wherein the high and low viscosity HPMC are in a ratio yielding a zero order release profile.

5,009,896

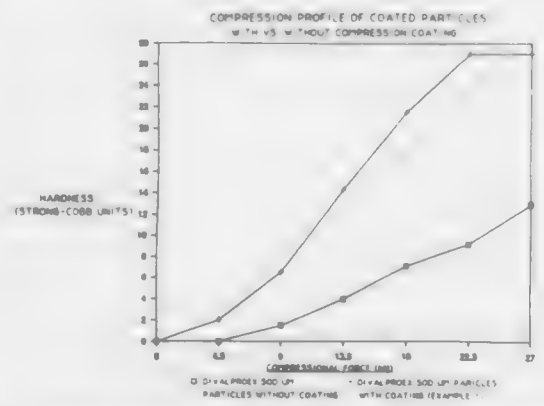
MULTI-FRACTIONABLE TABLET STRUCTURE

John W. Becker, Littleton, Colo., assignor to Akzo N.V., Arnhem, Netherlands

Filed Oct. 4, 1989, Ser. No. 416,902
Int. Cl.[5] A61K *9/44*
U.S. Cl. 424—467 7 Claims

1. A pharmaceutical tablet that is readily divisible into subdosage units of two or three equal parts, said tablet comprising (i) an equilateral or isosceles triangle shape, (ii) two opposite triangular planar surfaces each having scoremarkings thereon, (iii) the scoremarkings on one surface consisting of a first scoremarking extended perpendicularly from the midpoint of one edge of the triangle and a second scoremarking positioned perpendicular to the first scoremarking at its distal end, wherein the length of the first scoremarking is selected such that the two perpendicular scoremarkings divide the tablet into three equal parts and (iv) a single scoremarking on the second surface dividing the tablet into two equal parts, wherein the scoremarking on the second surface is located to extend from an angle adjacent to the edge from which the first scoremarking on the opposite side extended or located to extend from the midpoint of the same edge, from which the first scoremarking, on the opposite side extended to the midpoint of the opposite angle.

5,009,897



PHARMACEUTICAL GRANULES AND TABLETS MADE THEREFROM

Dale R. Brinker, Antioch, and Thomas L. Reiland, Gages Lake, both of Ill., assignors to Abbott Laboratories, Abbott Park, Ill.

Continuation of Ser. No. 353,809, May 22, 1989, abandoned, which is a continuation-in-part of Ser. No. 211,495, Jun. 24, 1988, abandoned. This application Jul. 12, 1990, Ser. No. 552,377

Int. Cl.[5] A61K *9/16, 9/26, 9/28*

U.S. Cl. 424—469 11 Claims

1. A granule for compression into tablets having a hardness sufficient to produce a cohesive tablet that will not fracture during tablet coating, comprising a core of active drug and a surface coating comprising a polymer selected from povidone, hydroxypropyl cellulose and hydroxypropyl methylcellulose and microcrystalline cellulose, the polymer:microcrystalline cellulose ratio being from about 1:15 to about 2:1 by weight.

5,009,898

ANTIMICROBIAL HYDROXYAPATITE POWDERS AND METHODS FOR PREPARING THEM

Shuji Sakuma; Kiminori Atsumi, and Keijiro Fujita, all of Tokyo, Japan, assignors to Kabushiki Kaisha Sangi, Tokyo, Japan

Filed Sep. 19, 1989, Ser. No. 409,076

Claims priority, application Japan, Sep. 29, 1988, 63-242389; Apr. 14, 1989, 1-92999; May 18, 1989, 63-122958

Int. Cl.[5] A61K *33/38, 33/30, 33/34*

U.S. Cl. 424—618 4 Claims

1. An antimicrobial hydroxyapatite powder comprising hydroxyapatite powder having absorbed therein silver ions.

5,009,899

WHEY PERMEATE-DERIVED SWEETENER

Bill L. Miller, Fort Dodge; H. Bruce Perry, Webster City, and Robert DeGregorio, Fort Dodge, all of Iowa, assignors to Land O'Lakes, Inc., Arden Hills, Minn.

Continuation-in-part of Ser. No. 116,978, Nov. 5, 1987, abandoned. This application May 10, 1989, Ser. No. 350,121

Int. Cl.[5] A23K *1/08*

U.S. Cl. 426—2 16 Claims

1. A method of feeding animals comprising:

providing a whey permeate sweetener including fibrous carrier and a condensed whey permeate in an amount sufficient to coat the fibrous carrier the whey permeate having at least 10% caramelized lactose and having a protein level of less than approximately 8% and a lactose level of at least approximately 79%, on a dry matter basis by weight applied to the fibrous carrier; and

feeding the sweetener to animals.

5,009,900

GLASSY MATRICES CONTAINING VOLATILE AND/OR LABILE COMPONENTS, AND PROCESSES FOR PREPARATION AND USE THEREOF

Harry Levine; Louise Slade, both of Morris Plains; Bernhard Van Lengerich, Ringwood, and John G. Pickup, Randolph, all of N.J., assignors to Nabisco Brands, Inc., East Hanover, N.J.

Filed Oct. 2, 1989, Ser. No. 415,867

Int. Cl.[5] A23L *1/22*

U.S. Cl. 426—96 54 Claims

1. A process for encapsulation of a composition containing at least one volatile and/or labile component, which process comprises forming a mixture of said composition with:

(a) from about 40 to 80 percent by weight of a water-soluble, chemically-modified starch having a dextrose equivalent not greater than about 2;

(b) from about 10 to 40 percent by weight of a maltodextrin having a dextrose equivalent in the range of from about 5 to about 15;

(c) from about 5 to about 20 percent by weight of corn syrup solids or a polydextrose having a dextrose equivalent in the range of from about 21 to about 42; and

(d) from about 5 to about 20 percent by weight of a mono- or disaccharide,

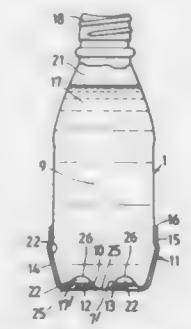
all of said percentages being based upon the total weight of said components (a), (b), (c) and (d);

and extruding the mixture to form a glassy matrix having a glass transition temperature of at least 40° C. wherein the composition containing at least one volatile and/or labile component is encapsulated.

25. A glassy matrix produced by a process according to claim 1.

5,009,901

METHOD OF PACKAGING A BEVERAGE AND A BEVERAGE PACKAGE



William J. Byrne, Mount Merrion, Ireland, assignor to Arthur Guinness Son & Company (Dublin) Limited, Dublin, Ireland

Filed Apr. 28, 1989, Ser. No. 345,639

Claims priority, application United Kingdom, Sep. 12, 1988, 8821265

Int. Cl.[5] B65D *85/72;* B65B *31/00, 81/20*

U.S. Cl. 426—112 12 Claims

1. A beverage package comprising a container body having an operable top that communicates with a sealed primary chamber in the container body which is charged with beverage containing gas in solution to provide a primary headspace therein, said headspace having a pressure greater than atmospheric; a bottom wall portion of the container body which has a restricted orifice therein; a closure wall sealed to the exterior of the container body to form therewith a sealed secondary chamber that is in constant communication with the primary chamber through said restricted orifice; said secondary chamber being charged with beverage derived from the primary chamber by way of the restricted orifice to provide a secondary headspace in the secondary chamber which secondary headspace has a pressure greater than atmospheric when the contents of the package are at equilibrium so that when the beverage package is opened at said openable top, the primary headspace reduces to atmospheric pressure and pressure in the secondary chamber to be ejected by way of the restricted orifice into the beverage in the primary chamber for forming a head of froth on said beverage in the primary chamber.

5,009,902

CONICAL TACO SHELL

Carlos A. Mercenari, Toltecas 39 0900, Mexico

Continuation-in-part of Ser. No. 840,518, Mar. 17, 1986. This application Jul. 7, 1988, Ser. No. 216,345

Int. Cl.[5] A21D *13/00*

U.S. Cl. 426—138 6 Claims

1. Process of manufacturing cone-taco-shells which comprises the steps of rolling cooked heart shaped tortilla to form a cylinder placing said cylinder in a cone shaped sheet metal envelope; inserting a solid and heavy metallic cone into the sheet metal envelope containing the tortilla to hold the tortilla between said outside metal sheet and the solid metal cone; submerging the whole assembly in which cooking oil preheated to a temperature effective to fry the tortilla in a few seconds and removing the assembly from the oil and allowing it to cool.

5,009,903

METHOD OF MAKING FRIED PIE

Mario P. deFigueiredo, Chesterfield, Mo., and Richard L. Brady, Belleville, Ill., assignors to DCA Food Industries, Inc., New York, N.Y.

Filed Feb. 2, 1988, Ser. No. 151,405

Int. Cl.[5] A21D *8/00*

U.S. Cl. 426—243 14 Claims

1. A process for preparing a fried pie in the nature of a microwavable, pre-fried, batter-coated dough-enrobed foodstuff comprising the steps of:

(a) providing a foodstuff enrobed with uncooked dough and providing an aqueous batter slurry formed by mixing an effective amount of water with a farinaceous-based batter mix comprising a farinaceous material selected from the group consisting of starch, flour, and mixtures thereof;

(b) applying said batter slurry to the uncooked dough of the dough-enrobed foodstuff to coat the same; and

(c) partially cooking the batter-coated dough-enrobed foodstuff in hot fat or cooking oil to pre-fry the same;

said pre-fried batter-coated dough-enrobed foodstuff being characterized by an acceptable level of crispness after being subjected to microwave cooking.

5,009,904

METHOD FOR FRYING COMESTIBLES IN A MICROWAVE OVEN

Irving M. Saslaw, Woodcliff Lake, N.J.; Harry H. Topalian, Weston, Conn., and Joseph M. Rispoli, Massapequa Park, N.Y., assignors to Saslaw & Topalian Associates, Inc., Port Chester, N.Y.

Division of Ser. No. 440,800, Nov. 24, 1989. This application Oct. 1, 1990, Ser. No. 590,963

Int. Cl.[5] A23L *1/00*

U.S. Cl. 426—243 28 Claims

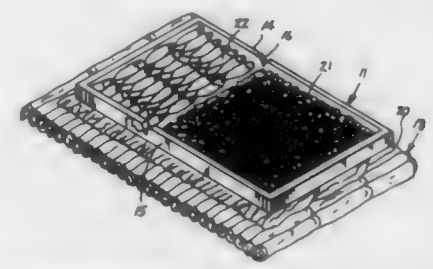
1. A method for frying comestibles in a microwave oven comprising the steps of:

(a) contacting said comestible with a microwave cooking composition comprising from about 30 to 95 percent by weight of a frying oil or fat, up to about 30 percent by weight of a water- or oil-soluble food gum, and from about 0.05 to 2.5 percent by weight of an emulsifier; and

(b) applying microwave energy to said comestible while in contact with said cooking composition,

with the proviso that said food gum is present in said cooking composition in an amount sufficient to enhance the formation of a foam during the application of said microwave energy while stabilizing the thus-formed foam, whereby a fried comestible is obtained.

5,009,905



SUSHI FORMING METHOD

Takeo Ikeda, 1687-A Kalawi Dr., Wailuku, Hi. 96793

Filed Feb. 28, 1990, Ser. No. 486,290

Int. Cl.[5] A23L *1/00*

U.S. Cl. 426—297 2 Claims

1. A method of gauging and forming sushi comprising the steps of:

a. providing a bamboo mat defined by a predetermined upper surface and positioning the mat on a support surface, and

b. placing a flexible seaweed sheet on said bamboo mat, said flexible seaweed sheet defined by a further surface less than that of the predetermined surface of the bamboo mat, and

c. providing a frame member and positioning the frame member onto an upper surface of the seaweed sheet, and

d. forming a layer of rice within the frame member, and

e. forming a layer of seafood overlying the layer of rice to completely fill the frame member, and

f. removing the frame member, and

g. rolling the bamboo mat, the seaweed sheet, rice and seafood in unison to form a sushi roll.

5,009,906

METHOD AND COMPOSITION FOR FILTERING BEER, ALE OR MALT LIQUOR TO REDUCE MULTIVALENT METAL CATIONS

Timothy R. Smith, Santa Barbara, Calif., assignor to Manville Corporation, Denver, Colo.

Filed Jun. 19, 1990, Ser. No. 540,097

Int. Cl.[5] C12H *1/04*

U.S. Cl. 426—330.4 13 Claims

1. A method of reducing multivalent metal cations from beer, ale or malt liquor comprising the steps of:

providing an alkali metal silicate-treated finely divided diatomaceous earth (DTE), and

contacting the beer, ale or malt liquor with the silicate-treated DTE by filtering the beer through the silicate-treated DTE thereby reducing the multivalent metal cation content of the beer, ale or malt liquor.

5,009,907

METHOD FOR TREATING FOOD TO CONTROL THE GROWTH OF YEASTS

Masahiro Fujii, Tokyo; Masakazu Hatakeyama, Minamatashi, and Jun Hiraki, Yokohamashi, all of Japan, assignors to Chisso Corporation, Japan

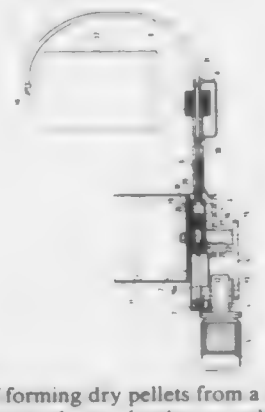
Filed Jun. 26, 1989, Ser. No. 371,008

Claims priority, application Japan, Jul. 7, 1988, 63-169233

Int. Cl.[5] A23L *3/3463*

U.S. Cl. 426—335 12 Claims

1. A method of treating food to control the growth of yeasts comprising adding ethanol preparations to food, wherein the ethanol preparations comprise a solution of ε-polylsine in etha-



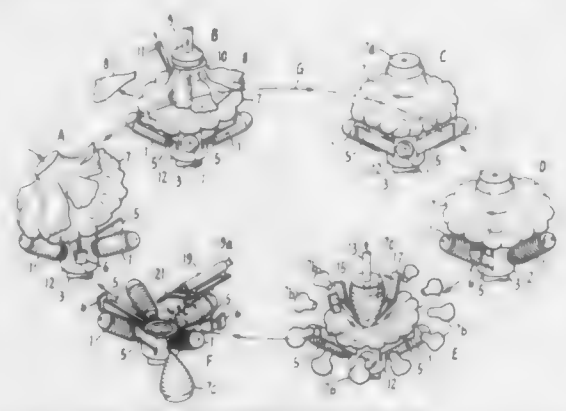
nol having an ethanol concentration of 30% by weight or higher.

5,009,908

METHOD OF PELLETING DRY PELLETS FROM A MIXTURE CONTAINING THERMO-HARDENED INGREDIENTS, PARTICULARLY FOR USE AS FISH FEED, AND THE MACHINE FOR CARRYING OUT THE PROCESS

Ole Molaug, Bryne, and Steinar Risa, Undheim, both of Norway, assignors to Akva A/S, Bryne, Norway

Filed Nov. 2, 1989, Ser. No. 431,553
Claims priority, application Norway, Nov. 7, 1988, 884953
Int. Cl.[5] A23B *4/03*
U.S. Cl. 426—454 **24 Claims**



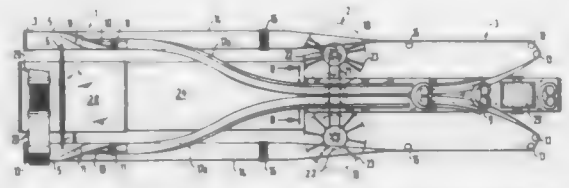
1. A method of forming dry pellets from a mass, including a dry mass, containing thermo-hardening substances, particularly for use as fish feed, comprising the steps of:
first compressing the mass;
next heating the compressed mass to a thermo-hardening temperature;
draining off the by-product of heating, such as fat, other liquids and gas before performing said cooling step;
finally cooling the thermo-hardened mass and bringing the drained by-products into contact with the thermo-hardened mass after the latter has been cooled off in said cooling step.

5,009,909

CORING METHOD

Thomas W. Hirtle, San Ramon; Frederick J. Cimperman, Castro Valley, and Klaus Silbermann, Sunol, all of Calif., assignors to Ashlock Company, San Leandro, Calif.

Filed Aug. 5, 1988, Ser. No. 229,160
Int. Cl.[5] A23N *3/00*
U.S. Cl. 426—481 **11 Claims**



1. A coring method, including the steps of:
(a) loading an article onto a holder at a loading station;
(b) translating the holder, with the article thereon, along a process path from the loading station to a coring station; and
(c) at the coring station, translating a pivot arm assembly, and a coring knife attached to the pivot arm assembly, along a first axis to translate the coring knife into engagement with the article, while rotating the pivot arm assembly about the first axis and pivoting the pivot arm assembly about a second axis, to translate the coring knife along a generally helical coring path with varying radius as the coring knife penetrates the article, thereby severing fragments of the article from a one-piece core of the article.

5,009,910

METHOD OF FORMING PRETZELS FROM STRANDS OF DOUGH

Horst Zwicker, Grabenstrasse 22, 7320 Göppingen, Fed. Rep. of Germany

Filed Feb. 7, 1990, Ser. No. 477,344
Claims priority, application Fed. Rep. of Germany, Feb. 8, 1989, 3903701
Int. Cl.[5] A21D *3/08*
U.S. Cl. 426—499 **7 Claims**

1. A method of forming pretzels from strands of dough, comprising the steps of:
grasping an oncoming dough strand in a receiving station at its ends;
moving the ends of each dough strand toward each other during transport of the dough strand from the receiving station to a knot forming station, whereby the remaining portion between the ends is lowered below the ends to define a bow-shaped loop with a central portion and opposing side portions;
turning the bow-shaped loop in the knot forming station about a vertical axis relative to the ends by 360° to form a knot;
upwardly folding the bow-shaped loop about a horizontal axis below the knot into a horizontal position below the ends during transport of the dough strand from the knot forming a station to a release station; and
releasing the ends of the dough strand in the release station to allow the ends to sink onto the side portions by virtue of their own weight,
wherein the dough strands are continuously advanced in conveying direction at arbitrary distance from each other between the receiving station, the knot forming station and the release station, without stoppage during said turning step in the knot forming station.

5,009,911

FOODSTUFF CONTAINING AEWX STARCH

David J. Mauro, Dolton, Ill.; Susan L. Furcsik, Lake Station; Frances R. Katz, Crown Point, both of Ind.; Eugene J. Faron, II, Valpargiso, Ind.; David J. Gottneid, Griffith, Ind., and Frank J. Pustek, Munster, Ind., assignors to American Maize-Products Company, Hammond, Ind.

Filed Aug. 18, 1989, Ser. No. 395,761
Int. Cl.[5] A23L *1/0522*
U.S. Cl. 426—578 **19 Claims**

1. A thickened acid foodstuff comprising a foodstuff, water, and a starch extracted from a starch-bearing plant having an amylose extender waxy genotype, said acid foodstuff having a pH of about 5.0 and below, said amylose extender waxy starch being present in an amount effective to provide thickening characteristics to said acid foodstuff after said acid foodstuff is retorted, and wherein said thickened acid foodstuff exhibits substantially similar viscosity characteristics as a thickened foodstuff made using an effective amount of a crosslinked waxy starch extracted from the same type of starch-bearing plant from which said amylose extender waxy starch is extracted, said crosslinked waxy starch also being present in an amount effective to provide thickening characteristics to a thickened acid foodstuff made with the crosslinked starch, and said viscosity being measured by a Brabender amylogram.

5,009,912

METHOD OF MAKING A MILK FORMULATION

Floyd K. Nixon, 516 Ellis Dr., Paris, Tenn. 38242

Continuation-in-part of Ser. No. 369,628, Jun. 20, 1989, abandoned. This application May 21, 1990, Ser. No. 525,695
Int. Cl.[5] A23C *9/137*
U.S. Cl. 426—580 **2 Claims**

2. A milk composition that approaches the taste, mouth-feel and appearance of whole milk which consists essentially of a mixture of skim milk or low fat milk and
(A) 0.18–0.80% by weight base on the weight of the milk of a colloidal grade of microcrystalline cellulose or peptized microcrystalline cellulose which consists of a mixture of
(a) 88–89% by weight of microcrystalline cellulose and
(b) 11–12% by weight of carboxy-methyl cellulose and
(B) 0.1–1.0% by weight based on the weight of the milk of gum arabic.

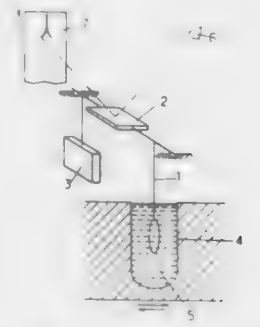
5,009,913

CHEESE-LIKE SPREAD COMPOSITION AND METHOD OF MAKING

Salah H. Ahmed, Elk Grove Village, and Anthony J. Luksas, Downers Grove, both of Ill., assignors to Dairy Research, Inc., Rosemont, Ill.

Filed Aug. 30, 1989, Ser. No. 400,391
The portion of the term of this patent subsequent to Sep. 6, 2005, has been disclaimed.
Int. Cl.[5] A23C *19/09, 15/06*
U.S. Cl. 426—581 **17 Claims**

1. A cheese-like spread composition which has the taste, texture and mouth feel of a cheese food composition, comprising a homogenized concentrated mixture of (a) at least one water-in-oil emulsion of a liquid dairy product, (b) at least one oil-in-water emulsion of a liquid dairy product, and (c) at least one cheese composition, wherein the ratio of (a) to (b) is at least 6:4 but is less than 9:1, the ratio of (a) and (b) to (c) is between 9:1 and 1:4, and the total fat content of the composition is at least 40% and wherein the starting liquid dairy product is primarily an oil-in-water emulsion in the natural state.



5,009,914

PROCESS FOR CONFERRING CHEESE MAKING PROPERTIES ON OVERHEATED MILKS FOR THE MANUFACTURE OF RENNETED CHEESES

Michel Serpelloni, Beuvry les Bethune, France, assignor to Roquette Freres, Lestrem, France

Filed Jun. 14, 1989, Ser. No. 365,571
Claims priority, application France, Jun. 14, 1988, 88 07932
Int. Cl.[5] A23C *19/04*
U.S. Cl. 426—582 **5 Claims**

1. In a process for making cheese from milk, wherein curd is formed under the action of rennet on the milk, the said process comprising heat treating the milk at a temperature from 78°to 110° C., the improvement comprising incorporating into the milk an amount of from 0.03 to 5 g per liter of milk of an acidogenic agent selected from the group consisting of

gluconolactones and glucoheptonolactones whereby cheese making properties are conferred on the milk.

5,009,915

METHOD FOR PREPARING KONJAK CHIP

Ikuzo Ogawa, Kanagawa, Japan, assignor to Kabushiki Kaisha Maruzen Shokuhin, Kanagawa, Japan

Filed May 25, 1989, Ser. No. 356,987
Claims priority, application Japan, Mar. 6, 1989, 1-052119
Int. Cl.[5] A23L *1/00*
U.S. Cl. 426—615 **1 Claim**

1. A process for making a konjak chip comprising the steps of:
(a) pulverizing konjak between vertically oriented revolving whetstones to about 1–50 mm in length and 0.5–3 mm in width;
(b) deodorizing the pulverized konjak by steaming or boiling; and
(c) dehydrating the deodorized konjak to about 10–60 % of its original weight.

5,009,916

PSYLLIUM MUCILLOID FIBER FOOD PRODUCTS

John A. Colliopoulos, Evanston, Ill., assignor to The Procter & Gamble Company, Cincinnati, Ohio

Continuation-in-part of Ser. No. 677,623, Dec. 3, 1984, abandoned, which is a continuation-in-part of Ser. No. 542,450, Oct. 17, 1983, abandoned, which is a continuation-in-part of Ser. No. 560,720, Dec. 12, 1983, abandoned. This application Aug. 7, 1985, Ser. No. 763,118
Int. Cl.[5] A23L *1/526, 1/308;* A23P *1/14*
U.S. Cl. 426—615 **10 Claims**

1. An expanded high fiber bar or puff made by aqueous extrusion comprising about 5 to 80 weight percent of psyllium mucilloid, water, about 0 to 30 weight percent expander, and a total dietary fiber of from about 4 to 80 weight percent wherein the psyllium mucilloid may be a part of the dietary fiber, and wherein further said high fiber bar or puff comprises one or more dietary fibers selected from cereal brans.

5,009,917

METHOD FOR PRODUCING DEEP RED AND BLACK COCOA

Matthew J. Wiant, Dover; William R. Lynch, Milford, both of Del., and Robert C. LeFreniere, Bethel, Conn., assignors to Kraft General Foods, Inc., Glenview, Ill.

Filed Dec. 18, 1989, Ser. No. 452,188
Int. Cl.[5] A23L *1/272, 2/38*
U.S. Cl. 426—631 **22 Claims**

1. A method for producing a colored, powdered-dutched cocoa comprising the steps of:
(a) subdividing cocoa press cake to obtain particles which will pass through a No. 4 U.S. Standard Sieve;
(b) adding the subdivided cocoa and an aqueous alkali solu-

tion to a reactor, said solution being present in an amount effective to provide an initial moisture content within the reactor of from 5 to 60% by weight and a level of alkali, selected from the group consisting of carbonate, bicarbonate, hydroxide and combinations thereof, of from 1 to 12% based upon the weight of cocoa;

(c) mixing the contents of the reactor for between about 5 and 180 minutes while maintaining the reactor contents at a temperature between about 150° and 300° F. and at a pressure between about 10 and 200 p.s.i., said pressure being effected by means of an oxygen-containing gas;

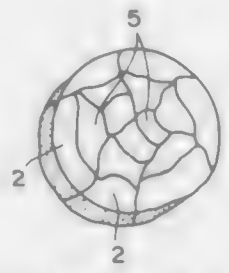
(d) venting the reactor and feeding oxygen-containing gas to the reactor during the reaction period in order to effect headspace changes in the reactor at the rate of at least 3 per hour; thereafter,

(e) releasing the pressure within the reactor; and then,

(f) drying the colored, dutched cocoa.

5,009,918

REFORMED FISH PRODUCTS



Noël Clairouin, Coudette; Alain Gueroult, Lamartine, both of France, and Remi Lemoyne, Vevey, Switzerland, assignors to Nestec S.A., Vevey, Switzerland

Division of Ser. No. 399,817, Aug. 29, 1989, Pat. No. 4,948,620. This application Apr. 27, 1990, Ser. No. 516,052

Claims priority, application European Pat. Off., Sep. 14, 1988, 88114994.2

Int. Cl.[5] A23L *1/325*

U.S. Cl. 426—643 **6 Claims**

1. A frozen reformed fish product in the form of a sausage comprising a plurality of compressed raw boneless fish fillets with skin which encompass a plurality of raw boneless fish fillets without skin such that the skin of the fillets with skin forms substantially all of the exterior surface of the product.

5,009,919

FINGER-PRINTING SYSTEMS & METHOD

Anthony E. Vassiliades, 8738 Tanager Woods Dr., Cincinnati, Ohio 45249

Continuation of Ser. No. 938,260, Dec. 5, 1986. This application Mar. 8, 1989, Ser. No. 320,808

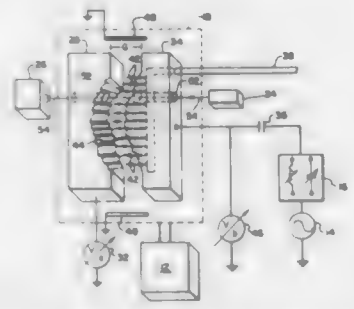
Int. Cl.[5] A61B *5/117*

U.S. Cl. 427—1 **10 Claims**

1. A fingerprinting system comprising means capable of releasably retaining a liquid and a liquid composition releasably retained in said means, said liquid composition consisting essentially of a leuco chromogenic compound and an oleophilic solvent therefor, a substrate for receiving fingerprints associated therewith, said substrate being coated on at least a portion of one surface thereof with a color-developing substance capable of reacting with said chromogenic compound to produce a colored reaction product; and polyvalent metallic ions in said liquid composition or on said substrate with said color-developing substance.

6. The method of fingerprinting comprising applying to a member to be fingerprinted a liquid composition consisting essentially of a leuco chromogenic compound and an oleophilic solvent therefor and applying the member to be fingerprinted to a substrate coated at least in the portion thereof to which the member is applied with a color-developing substance capable of reacting with said leuco chromogenic compound to produce a colored reaction product which is a print of the member; and polyvalent metallic ions in said liquid composition or on said substrate with said color-developing substance.

5,009,920



METHOD FOR APPLYING OPTICAL INTERFERENCE COATING

James C. Lee, Plymouth, Minn., assignor to Honeywell Inc., Minneapolis, Minn.

Filed Mar. 30, 1990, Ser. No. 502,348

Int. Cl.[5] B05D *3/06*

U.S. Cl. 427—9 **13 Claims**

1. A method for applying high performance multilayer optical interference coatings to a substrate of complex curved topography comprising:

positioning a substrate to be coated in a reaction zone located between first and second electrodes which are shaped to match the contour of said substrate, said reaction zone and said electrodes being within a chamber;

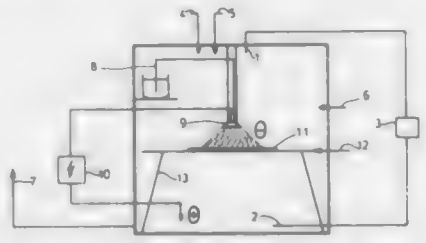
pumping gas components out of said chamber; applying power to said first and second electrodes, resulting in an electromagnetic field between said first and second electrodes;

maintaining a particular pressure within said chamber; and

feeding a substance into said reaction zone through a plurality of orifices in said second electrode, said substance reacting into a plasma of said substance, which in turn results in a plasma enhanced chemical vapor deposition in the form of a thin film upon said substrate.

5,009,921

PROCESS FOR FINISHING LEATHER



Harro Träubel; Heinrich Strenger, both of Leverkusen; Karl A. Weber, Betzweiler; Hans-Werner Müller, Cologne; Horst Zäpfel, Karlsruhe, and Axel Hummel, Neuffen, all of Fed. Rep. of Germany, assignors to Bayer Aktiengesellschaft, Leverkusen, Fed. Rep. of Germany

Filed Sep. 12, 1989, Ser. No. 405,911

Claims priority, application Fed. Rep. of Germany, Oct. 1, 1988, 3833384

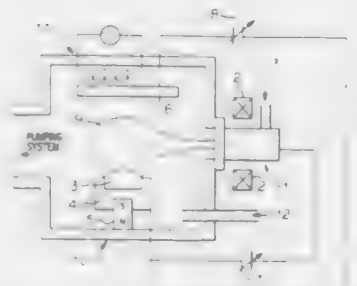
Int. Cl.[5] B05D *1/04, 3/04, 3/10*

U.S. Cl. 427—31 **3 Claims**

1. A process for finishing leather comprising spraying onto leather in an electrostatic field a finishing liquor having a viscosity at the operating temperature of 500–5,000 cP, the finishing liquor being a spray dispersed from the start in a solvent atmosphere which contains an organic solvent and optionally water and which has a solvent content of 15–90% of the saturation concentration and which has a residual oxygen content of less than 10% by volume.

5,009,922

METHOD OF FORMING A TRANSPARENT CONDUCTIVE FILM



Takeshi Harano; Satoru Takaki; Yuzo Shigesato; Koichi Suzuki; Naoki Hashimoto, all of Yokohama; Hiroyasu Kojima, Ebina, and Takuji Oyama, Yokohama, all of Japan, assignors to Ashahi Glass Company, Ltd., Tokyo, Japan

Filed Mar. 1, 1990, Ser. No. 486,841

Claims priority, application Japan, Mar. 2, 1989, 1-48571; Mar. 14, 1989, 1-59573; Mar. 28, 1989, 1-73955

Int. Cl.[5] B05D *3/06*

U.S. Cl. 427—37 **9 Claims**

1. A method of forming a transparent conductive film characterized in that an arc discharge type plasma produced by arc discharging is generated in an atmosphere wherein the pressure of an atmospheric gas is 3.0×10^{-4} Torr or higher; the plasma is converged onto a vapor deposition material for forming a transparent conductive film to thereby evaporate the vapor deposition material, whereby said transparent conductive film is formed on a substrate located above said vapor deposition material.

5,009,923

METHOD OF FORMING DIAMOND FILM

Kiyoshi Ogata; Yasunori Ando, and Eiji Kamijo, all of Kyoto, Japan, assignors to Nissin Electric Co., Ltd., Kyoto, Japan

Continuation of Ser. No. 274,690, Nov. 22, 1988, abandoned, which is a continuation of Ser. No. 43,517, Apr. 28, 1987, abandoned. This application Jun. 27, 1990, Ser. No. 544,800

Claims priority, application Japan, Apr. 28, 1986, 61-98888; Feb. 19, 1987, 62-37576; Apr. 8, 1987, 62-87624

Int. Cl.[5] B05D *3/06*

U.S. Cl. 427—38 **8 Claims**

1. A method of forming a diamond film on a substrate, comprising the steps of:

depositing carbon from an evaporation source onto said substrate in vacuum by vapor deposition to provide a carbon film on the substrate; and

irradiating accelerated ions having an energy of less than 40 KeV onto said substrate, said ions being obtained by ionizing a gas composed of at least one of a hydrogen gas, inert gases, and silicon base gases.

5,009,924

PROCESS TO PERMIT IMPROVEMENT OF FUNCTIONAL PROPERTIES OF POLYOLEFIN ARTICLES BY ELECTRON-BEAM INITIATED POLYMERIZATION

John E. Wyman, Westford, Mass., assignor to Energy Sciences Inc., Wilmington, a part interest and Marjorie T. Wyman, Westford, both of, Mass.

Division of Ser. No. 254,817, Oct. 7, 1988, abandoned, which is a division of Ser. No. 110,472, Oct. 19, 1987, Pat. No. 4,803,126. This application Oct. 27, 1989, Ser. No. 427,372

Int. Cl.[5] B05D *3/06, 3/00*

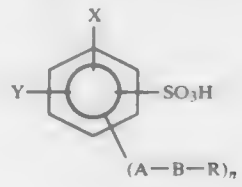
U.S. Cl. 427—44 **1 Claim**

1. A process for modifying the surface of a polyolefin film that comprises, hydrolyzing an organofunctional silane; coating the surface of a polyolefin film with the hydrolyzed silane and drying the same; and electron-beam irradiating the coated surface to initiate the further polymerization of the silane-to-silane structure in the hydrolyzed silane layer and also to graft the same to the polyolefin surface.

5,009,925

PROCESS FOR THE PRODUCTION OF MAGNETIC RECORDING CARRIERS

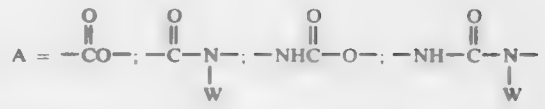
Ernst Grigat, Leverkusen; Walter Meckel, Neuss-Uedesheim, and Burkhard Nippe, Munich, all of Fed. Rep. of Germany, assignors to Agfa Gevaert Aktiengesellschaft, Leverkusen, Fed. Rep. of Germany



Continuation of Ser. No. 86,851, Aug. 19, 1987, abandoned. This application Oct. 5, 1988, Ser. No. 256,131

Claims priority, application Fed. Rep. of Germany, Aug. 30, 1986, 3629606

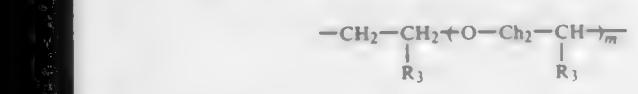
Int. Cl.[5] B05D *3/00;* **G11B** *23/00*



U.S. Cl. 427—48 **5 Claims**

1. A process for the production of magnetic recording carriers by the preparation of a dispersion consisting essentially of finely divided magnetic pigments, a dispersing agent and a solution of a polymeric binder in an organic solvent and an isocyanate-compound as cross-linking agent for the polymeric binder and application of the dispersion to a non-magnetizable layer support followed by orientation of the magnetic pigment by means of a magnetic field and drying of the applied layer, wherein the dispersing agent used consists of at least one compound containing one reactive group which produces a firm bond to the magnetic pigment and at least one other group reactive to the NCO-groups of a difunctional or higher functional isocyanate consisting of a compound corresponding to the general formula

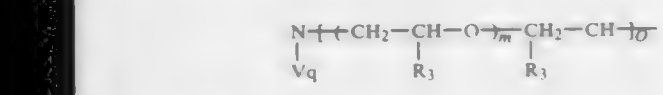
4



wherein

n = 1 or 2

W=H or an optionally branched alkyl group having 1 to 30 carbon atoms,

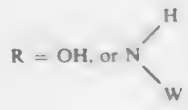


B=a straight chained, optionally branched alkyl group optionally containing hetero atoms, a cycloaliphatic group, or a cycloaliphatic-aromatic group,

wherein

m=1-20,

R_3=H, or CH_3, or



wherein

V=alkyl with 1-30 carbon atoms,

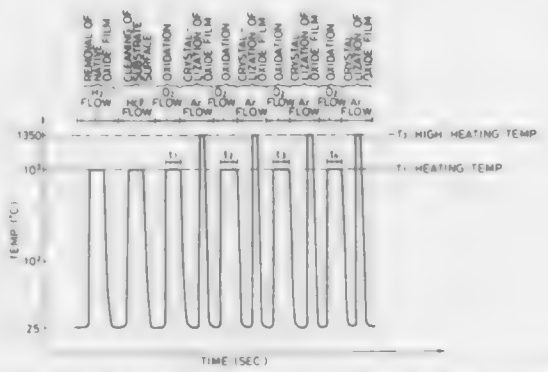
METHOD OF FORMING AN INSULATING FILM



Hisashi Fukuda, Tokyo, Japan, assignor to Oki Electric Industry Co., Ltd., Tokyo, Japan

Filed May 11, 1990, Ser. No. 522,126

Claims priority, application Japan, May 18, 1989, 1-125420

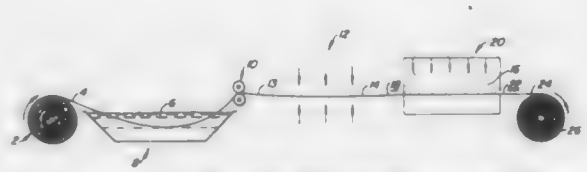
Int. Cl.[5] B05D *3/06*

U.S. Cl. 427—55 **22 Claims**

1. A method of forming an insulating film on a substrate wherein a substrate is cleaned by heating it in an atmosphere of a reducing gas, and heating it in an oxidizing gas, and then heating it in an atmosphere of a gas used to form the film in the same reaction chamber,

characterized by repeating a cycle comprising a heat treatment to grow the insulating film on the substrate, a process wherein the substrate is subsequently cooled to room temperature, and a high temperature heat treament wherein it is then heated to a higher temperature than that used when growing the film in order to crystallize said insulating film, in the same reaction chamber.

5,009,927



METHOD FOR COATING FABRIC SURFACE WITH ELECTRICALLY CONDUCTIVE FILM

Willard C. Cloyd, Fountain Hills, and Robert M. Nelson, Phoenix, both of Ariz., assignors to Hexcel Corporation, Dublin, Calif.

Filed Nov. 29, 1988, Ser. No. 277,105

Int. Cl.[5] B05D *5/12, 3/00;* **C23C** *14/34*

U.S. Cl. 427—121 **5 Claims**

1. A method for coating the outer surface of a fabric with an electrically conductive film, the fabric of the type having fibers at its outer surface, comprising the following steps:

selecting a polymer solution compatible with the fabric;

coating the fabric with the polymer solution thereby creating a substantially continuous polymer surface;

selecting an electrically conductive material compatible with the polymer surface;

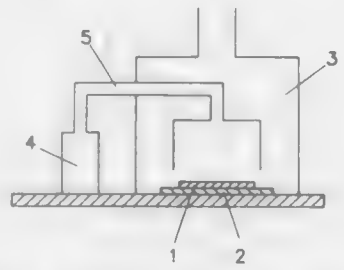
placing the electrically conductive material into a vapor form;

depositing a continuous film of the vapor form of the electrically conductive material onto the polymer surface to create an electrically conductive fabric;

controlling the selecting steps, the coating step and the depositing step to keep the fabric in a flexible condition.

5,009,928

METHOD FOR FORMING A TRANSPARENT CONDUCTIVE METAL OXIDE FILM



Yutaka Hayashi, Ibaraki; Atuo Itoh, Tokyo; Mizuho Imai, Tokyo, and Hideyo Iida, Tokyo, all of Japan, assignors to Japan as represented by general director of Agency of Industrial Science and Technology; Taiyo Yuden Co., Ltd. and Research Development Corporation of Japan, all of Tokyo, Japan

Filed Mar. 23, 1990, Ser. No. 498,038

Claims priority, application Japan, Mar. 31, 1989, 1-80956

Int. Cl.[5] B05D *5/12;* **C03C** *17/23*

U.S. Cl. 427—126.3 **11 Claims**

1. A method of forming a transparent conductive metal oxide film with a textured surface on a substrate comprising the steps of contacting a heated substrate at a first temperature with an atomized or gasified metal-containing coating composition to form a coated substrate with a first metal oxide film deposited thereon; heating said coated substrate to a second temperature higher than said first temperature so that a second metal oxide film having a degree of crystal orientation in conformity with that of the first metal oxide film can be formed thereon; and contacting said coated substrate with the atomized or gasified metal-containing coating composition to deposit the second metal oxide film thereon, said second metal oxide film being of the same composition as said first metal oxide film.

5,009,929

PROCESS FOR THE PREPARATION OF MAGNETIC RECORDING MEDIUM

Shinobu Iida; Masaaki Fujiyama, and Keisuke Yamada, all of Kanagawa, Japan, assignors to Fuji Photo Film Co., Ltd., Kanagawa, Japan

Continuation of Ser. No. 181,937, Apr. 15, 1988, abandoned. This application Mar. 26, 1990, Ser. No. 533,991

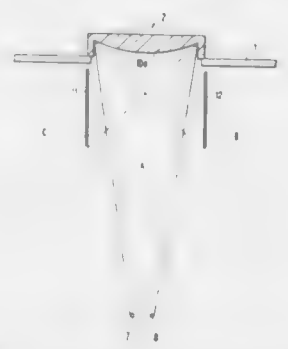
Claims priority, application Japan, Apr. 16, 1987, 62-94740

Int. Cl.[5] B05D *5/12*

U.S. Cl. 427—130 **7 Claims**

1. A process for the preparation of a magnetic recording medium which comprises the steps of first supercalendering a magnetic recording layer coated on a non-magnetic support, said magnetic recording layer comprising a ferromagnetic powder dispersed in a binder, next abrading the treated surface of said magnetic recording layer by means of an abrasive tape containing an abrasive selected from the group consisting of α-Al_2O_3, SiO_2, Cr_2O_3, α-Fe_2O_3, diamond, ZnO_2, TiO_2, and then wiping the abraded surface of the magnetic recording layer using a nonwoven fabric.

5,009,930



METHOD FOR FORMING A DEPOSITED LAYER ON A SKIRTED SUBSTRATE

Matthew S. Brennesholtz, Waterloo, N.Y., assignor to North American Philips Corporation, New York, N.Y.

Filed Dec. 8, 1989, Ser. No. 448,033

Int. Cl.[5] B05D *7/22;* **C23C** *16/04*

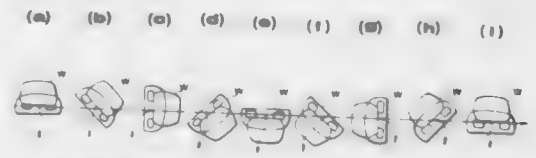
U.S. Cl. 427—236 **8 Claims**

1. A method for reducing the shadowing effect of the skirt of a skirted substrate on the thickness uniformity of a deposited layer on the substrate, said skirt extending in the direction of a primary source of deposited material, the method comprising:

providing at least one shield between the primary source of the deposited material and the substrate to at least partially shield the substrate from secondary indirect sources of deposited material located outside the area of direct flux of the particles from the primary source to the substrate, during deposition.

5,009,931

COATING METHOD



Takakazu Yamane; Yoshio Tanimoto, and Tadamitsu Nakahama, all of Hiroshima, Japan, assignors to Mazda Motor Corporation, Hiroshima, Japan

Filed Aug. 8, 1989, Ser. No. 390,546

Claims priority, application Japan, Aug. 9, 1988, 63-197038

Int. Cl.[5] B05D *3/12*

U.S. Cl. 427—195 **68 Claims**

1. A coating method in a coating line for coating a substrate with a paint in a film thickness thicker than a thickness at which the paint sags to form a highly reflective surface coating on the substrate, comprising:

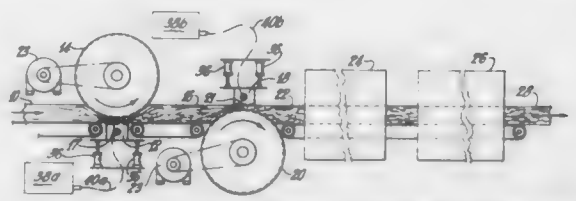
a spraying step in which the paint is sprayed to form a coat in a film thickness thicker than a thickness at which the paint sags on a surface extending at least upwardly and downwardly; and

a drying step in which the substrate is rotated about its horizontal axis until the paint sprayed thereon achieves a substantially sagless state, the rotation of the substrate being carried out at a speed which is high enough to rotate the substrate from a vertical position to a horizontal position before the paint coated thereon substantially sags due to gravity yet which is low enough so as to cause no sagging as a result of centrifugal force;

wherein a surface at an edge portion of the substrate to be coated is lower than another portion thereof before the paint is sprayed in the spraying step in a film thickness thicker than the thickness at which the paint sags.

5,009,932

METHOD AND APPARATUS FOR IMPREGNATING A POROUS SUBSTRATE WITH FOAM



Paul A. Klett, Newark; Shiv K. Bakhshi, Columbus, and Steven B. Stahl, Granville, all of Ohio, assignors to Owens-Corning Fiberglas Corporation, Toledo, Ohio

Filed Jun. 14, 1982, Ser. No. 388,284

The portion of the term of this patent subsequent to Apr. 16, 2008, has been disclaimed.

Int. Cl.[5] B05D *1/26, 3/06;* **B05C** *3/00, 3/18*

U.S. Cl. 427—243 **10 Claims**

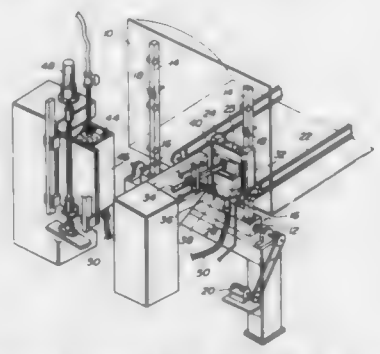
1. Apparatus for impregnating a porous substrate with a foam comprising a foam discharge head having a surface plate adapted with one or more discharge openings for the discharge of foam therethrough, a foraminous surface positioned opposite said discharge openings to define a nip region, said foraminous surface being adapted t transport the porous substrate through said nip region, means for supplying foam to said foam discharge head with pressure sufficient to discharge foam through said dischharge openings to impregnate the porous

substrate, and means for urging said foam discharge head toward said foraminous surface to apply a force to the porous substrate to urge the porous substrate into sealed relation with said surface plate so that foam is substantially prevented from accumulating at the interface of said foam discharge head and the porous substrate as the porous substrate is transported through said nip region, said foam discharge head being mounted to a hinged plate to enable the urging of said foam dischharge head toward said foraminous surface.

7. A method for impregnating a porous substrate with a foam comprising transporting the porous substrate through a nip region defined by a foraminous surface and a foam discharge head, said foam dischharge head comprising a surface plate adapted with one or more dischharge openings, where the transport of the porous substrate through said nip region causes the porous substrate to be compressed as it passes said discharge openings, said foam discharge head being mounted to a hinged plate to enable urging of said foam discharge head toward said foraminous surface, supplying foam to said discharge head with pressure sufficient to discharge foam though said discharge openings to impregnate the porous substrate, and urging said foam discharge head toward said foraminous surface to apply a force to the porous substrate to urge the porous substrate into sealed relation with said surface plate to substantially prevent foam from accumulating at the interface between said foam discharge head and the porous substrate as the porous substrate is transported through said nip region.

5,009,933

METHOD AND APPARATUS FOR COATING THIN LIQUID FILM ON PLATE SURFACE



Naohiko Matsuda, Matsusaka, and Kensuke Makita, Mie, both of Japan, assignors to Central Glass Company, Limited, Ube, Japan

Filed Aug. 23, 1989, Ser. No. 397,672

Claims priority, application Japan, Aug. 26, 1988, 63-211677; Aug. 29, 1988, 63-214068

Int. Cl.[5] B05D *5/00, 1/26;* **B05C** *3/18*

U.S. Cl. 427—287 **16 Claims**

1. A method of coating a thin liquid film on a surface of a substrate over a predetermined area of the surface, comprising the steps of:

(a) bringing the substrate and an incomplete tank, which has an opening of a shape similar to the shape of said surface of the substrate on one side thereof, into tight contact with each other such that said opening is closed by said surface of the substrate thereby completing the tank;

(b) introducing a coating liquid into said tank until the liquid level in the tank reaches a predetermined level which corresponds to the upper boundary of said area of the substrate surface; and

(c) while keeping both said tank and the substrate stationary, extracting the coating liquid from said tank through a flow streamlining channel so as to lower the liquid level in the tank at a predetermined rate without producing a turbulent flow of the coating liquid to thereby leave a film of the coating liquid on said surface of the substrate, said streamlining channel communicating with a lower section of said tank by an aperture in a wall of said tank and extending downward from the level of said aperture.

8. An apparatus for coating a thin liquid film on a surface of a substrate over a predetermined area of the surface, the apparatus comprising:

means for holding the substrate;

an incomplete liquid tank having an opening of a shape similar to the shape of said surface of the substrate on one side thereof;

means for defining a flow streamlining channel which communicates with said tank by an aperture formed in a lower section of said tank and extends downward from the level of said aperture;

means for bringing the substrate and said incomplete tank into tight contact with each other such that said opening of said tank is closed by the substrate thereby completing the tank and keeping the tank and the substrate stationary in the tightly contacting state;

means for introducing a coating liquid into said tank kept stationary and in contact with the substrate; and

means for extracting the coating liquid from said tank kept stationary and in contact with the substrate at a predetermined rate through said streamlining channel without producing a turbulent flow of the coating liquid to thereby leave a film of the coating liquid on the substrate surface.

5,009,934

PROCESS FOR PREPARING POLY-(IMIDESILOXANES)

Guido Wenski, Munich; Ludwig Maier, Eggenfelden, and Franz-Heinrich Kreuzer, Martinsried, all of Fed. Rep. of Germany, assignors to Wacker-Chemie GmbH, Munich, Fed. Rep. of Germany

Filed Jul. 6, 1990, Ser. No. 549,586

Claims priority, application Fed. Rep. of Germany, Jul. 28, 1989, 3925099

Int. Cl.[5] B05D *3/02*

U.S. Cl. 427—387 **13 Claims**

1. A process for preparing poly-(imidesiloxanes) which comprises reacting an N,N'-dialkenyldiimide with an organosilicon compound containing two Si-bonded hydrogen atoms in the presence of a catalyst which promotes the addition of Si-bonded hydrogen to an aliphatic multiple bond.

5,009,935

PROTECTING METALLIC LAYERS ON SUBSTRATES

Keith J. Waddington, Essex, and Peter W. Johnson, Chingford, both of England, assignors to MacPherson plc, Suffolk, England

Filed Sep. 12, 1989, Ser. No. 406,076

Claims priority, application United Kingdom, Sep. 14, 1988, 8821503

Int. Cl.[5] C23C *26/00*

U.S. Cl. 428—457 **10 Claims**

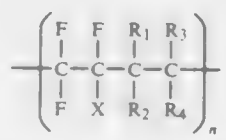
1. A method of producing an article comprising applying a non-ferrous metal layer on a substrate and protecting the metal layer by applying thereto a compound having a nitrogen atom which is linked to the remainder of the compound by three single bonds and which has an accessible electron lone pair, such that the electron lone pair bonds to the metal to form a complex which is insoluble or substantially insoluble in water and which protects the metal layer.

10. An article made according to the method of claim 1.

5,009,936

METHOD FOR FORMING TRANSPARENT MULTILAYERS

Masahiko Yamanaka, Kanagawa; Motoyoshi Hasaoka; Hiroaki Konse, both of Tokyo; Haruhisa Shigeno, Saitama, all of Japan, and Masakatsu Kinoshita, Rocky River, Ohio, assignors to Nissan Motor Co., Ltd., Kanagawa and Nippon Paint Co. Ltd., Osaka, both of, Japan



Filed Sep. 5, 1989, Ser. No. 402,718

Claims priority, application Japan, Sep. 2, 1988, 63-219668

Int. Cl.[5] B05D *1/36, 7/00*

U.S. Cl. 427—407.1 **8 Claims**

1. A method for forming a transparent multilayer wherein first a transparent paint A comprising a film forming amount of an acrylic copolymer, wherein monomers incorporated to form the acrylic copolymer have an average molecular weight of from 5,000 to 30,000, a hydroxyl value per gram of solid content of from 30 to 100, and an acid value of from 5 to 20, and then a film forming amount of a transparent paint B, which is dissolved in organic solvent, of fluorine containing polymer comprising the formula

wherein X represents a fluorine or chlorine atom, and R_1, R_2, R_3, and R_4 each represents a hydrogen atom, hydroxyalkyl group, or carboxyalkyl group,

are applied on a conventional finish coating with a wet-on-wet process.

5,009,937

SAPSTAIN CONTROL COMPOSITION AND METHOD

Michael H. West, Senatobia, Miss., and Gregg Overman, Memphis, Tenn., assignors to Chapman Chemical Company, Memphis, Tenn.

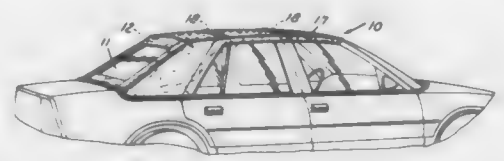
Filed Sep. 7, 1989, Ser. No. 403,924

Int. Cl.[5] B05D *7/06*

U.S. Cl. 427—440 **6 Claims**

1. A method for controlling sapstain and mold on wood having 20% or more of moisture which consists of contacting wood with an aqueous solution containing (a) at least 0.05% by weight of chlorothalonil and (b) borax in a quantity between 3 and 9 times greater than the weight of the chlorothalonil.

5,009,938



CUSTOMIZED AUTOMOBILE

Joseph T. Raj, Riverview, Mich., assignor to Evans Automotive, Division of Evans Industries, Inc., Wayne, Mich.

Filed Feb. 5, 1990, Ser. No. 475,356

Int. Cl.[5] B62D *25/06*

U.S. Cl. 428—31 **4 Claims**

1. For use in customizing an automobile having a front window, a rear window and a top,

a plastic cap including a rear window portion and a top portion adapted to overlie the rear window portion and the top of the automobile respectively,

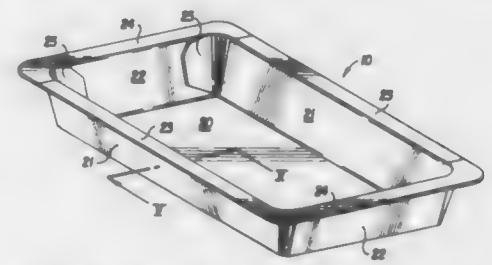
at least one separate section adapted to be provided in partially overlapping relation to the top portion of the cap,

said plastic cap and said at least one separate section having forward and rearward transverse free edges,

said rearward transverse free edge of said at least one separate section being in overlying relation to said forward transverse free edge of said plastic cap, and

wherein said at least one separate section extends in a longitudinal direction away from said read window toward said front window increasing the length of said top portion to further cover said top.

5,009,939



COMPOSITE PAPERBOARD AND POLYMER PACKAGE

Barry A. Goldberg, Highland Park, Ill., assignor to Westvaco Corporation, New York, N.Y.

Filed Sep. 22, 1989, Ser. No. 411,038

Int. Cl.[5] B65D *5/56*

U.S. Cl. 428—34.2 **12 Claims**

1. A blow molded composite material fluid container comprising a paperboard exterior substrate having a thickness of 0.007 to 0.035 inches formed to a fluid containment configuration having an interior vessel surface area, said formed paperboard substrate having a seamless, creaseless and unlapped fluid barrier coating of blow molded polymer integrally bonded to substantially the entire vessel surface area thereof, said barrier coating having an average thickness about half of said paperboard thickness.

5,009,940

CUP FOR DYEING EGGS

James E. McShane, Memphis, Tenn., assignor to Plough, Inc., Memphis, Tenn.

Division of Ser. No. 97,038, Sep. 16, 1987, Pat. No. 4,853,240. This application May 24, 1989, Ser. No. 356,811

Int. Cl.[5] B65D *25/14;* **A23L** *1/275*

U.S. Cl. 428—35.7 **7 Claims**

1. A cup having formed on the inside surface thereof a water-soluble dyeing composition comprising a water-soluble dye carrier, a water-soluble dye and a water-soluble dye plasticizer in the ratio of about 10–20 parts by weight of said carrier to about 4–15 parts by weight of water-soluble dye to about 0.5–7 parts by weight of said plasticizer.

5,009,941

TUBE OR PIPE FORMED A THERMOPLASTIC POWDER IMPREGNATED FIBERGLASS ROVING

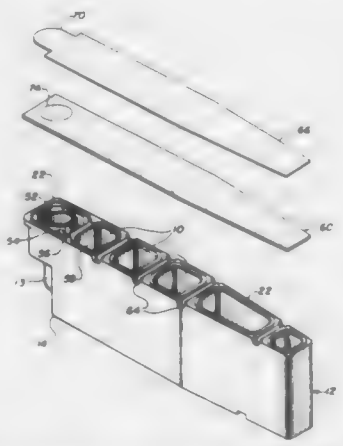
Jean-Claude Pollet, Granville; Gary L. Williams; Gordon P. Armstrong, both of Newark, and David G. Miller, Pataskala, all of Ohio, assignors to Owens-Corning Fiberglas Corporation, Toledo, Ohio

Continuation of Ser. No. 24,949, Mar. 12, 1987, abandoned. This application Nov. 9, 1988, Ser. No. 269,029

Int. Cl.[5] B32B *1/08;* **B29D** *22/00*

U.S. Cl. 428—36.3 **4 Claims**

1. A pipe or tube formed from a yarn or strand consisting essentially of a plurality of glass filaments, at least a portion of the filaments' surfaces coated with a coating formed from the residue produced by evaporating water from an aqueous composition for the glass filaments comprising, in weight percent, an organosilane coupling agent in the range of about 0.05 to



about 5.0%, by weight, a polyethylene oxide binder or film former material in the range of about 0.5 to about 5.0%, by weight, and a polypropylene thermoplastic polymer resin powder in the range of about 30–50%, by weight, and having an average particle size between about 5 to about 50 microns, the balance being water.

5,009,942

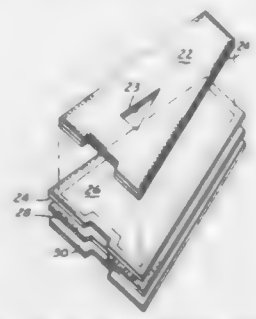
VORTEXING LIQUID CONTAINER

Joshua Benin, Newark, Del.; William G. Di Maio, Brookhaven, Pa.; Carl F. Morin, Brandywood, Del., and James A. Lawler, Rio Piedras, P.R., assignors to E. I. Du Pont de Nemours and Company, Wilmington, Del.

Filed Aug. 26, 1988, Ser. No. 237,589
Int. Cl.[5] B01C *3/00*
U.S. Cl. 428—36.6 **9 Claims**

1. A housing encasing an elongated vessel, said vessel having a bottom, a side wall and a longitudinal axis, the vessel being plastic and having a peripheral mounting surface, the housing comprising:

a flexible, fingerlike hinge connecting the housing to a side wall of the vessel and integral with both the housing and vessel, whereby the vessel bottom is capable of nutational movement about the axis, and



a laminate, providing a gas and vapor seal, connected to the mounting surface.

5,009,943

PRE-SEWN LETTER AND METHOD

Ted Stahl, Mt. Clemens, Mich., assignor to Stahls' Inc., St. Clair Shores, Mich.

PCT No. PCT/US88/03700, § 371 Date Jan. 18, 1990, § 102(e) Date Jan. 18, 1990
PCT Filed Oct. 21, 1988, Ser. No. 459,727
Int. Cl.[5] B32B *31/00*
U.S. Cl. 428—40 **8 Claims**

1. A method for producing a laminated embroidered emblem which may be bonded to a fabric comprising the steps of providing a first woven material blank, providing a barrier layer of a thermoplastic material, laminating with the application of heat and pressure the barrier layer onto one side of the first material blank, cutting the material blank with barrier layer to the configuration of the emblem to be produced, sewing a thread about the periphery of the cut first material blank and barrier layer to produce an embroidered appearance, providing a second woven material blank having a different color than the first material blank, providing a similar barrier layer of a thermoplastic material, laminating with the application of heat and pressure the barrier layer onto one side of the second material blank, cutting the second material blank and barrier layer to a configuration complimentary with the cut first material blank, yet larger in proportion to supply a background, sewing a thread about the periphery of the cut second material blank to produce an embroidered appearance, positioning the cut first material blank over the second material blank and heat sealing both cut material blanks together to form a two color fabric laminate having a foreground and background color, and applying an adhesive layer of an uncured linear saturated polyester in combination with a heat activated curing agent, having a paper carrier, to the exposed barrier layer, the adhesive layer having a lower melting temperature than the exposed barrier layer whereby the adhesive layer being unable to pass through the barrier layer, the adhesive layer allowing, after the paper carrier is removed, the emblem to be heat sealed to difficult to adhere to materials from the group consisting of siliconized nylon, Gortex, polypropylene, tri-acetate and Lycra yet appear as if the emblem is embroidered onto the material.

8. A laminated embroidered emblem for bonding to a fabric comprising.

a first woven material layer of preselected design;

a first barrier layer of a thermoplastic material overlying one face of the first woven material layer;

embroidery stitching about the periphery of the first woven material layer and extending through the first barrier layer;

a second woven material layer larger than the first woven material layer and of a contrasting color and complementary shape;

a second barrier layer of a thermoplastic material overlying one but not the opposite face of the second woven material layer;

embroidery stitching about the periphery of the second woven material layer and extending through the second barrier layer;

said first and second woven material layers being heat sealed together with the first barrier layer fused to the opposite face of the second woven material layer opposite; and

an adhesive layer of an uncured linear saturated polyester in combination with a heat activated curing agent and having a lower melting temperature than the second barrier layer and lightly adhered to the second barrier layer on the second woven material layer and adapted for heat sealing and cross linking application to difficult-to-adhere-to materials from the group consisting of siliconized nylon, Gortex, polypropolene, tri-acetate and Lycra.

LIGHTSAFE MASKING FILM

Hiroshi Maruyama, Misato; Naohiko Kiryu, Urawa; Etsuko Minezaki, Misato; Susumu Tagashira, Koshigaya, and Hisashi Shimokawahara, Chiba, all of Japan, assignors to Somar Corporation, Japan

Filed Jul. 18, 1989, Ser. No. 381,181
Claims priority, application Japan, Jul. 20, 1988, 63-182464; Jan. 31, 1989, 1-21911
Int. Cl.[5] B32B *7/06, 7/12*
U.S. Cl. 428—40 **18 Claims**

1. A lightsafe masking film, comprising a substrate, a pressure sensitive adhesive layer formed on said substrate, and a lightsafe, peelable layer formed on said adhesive layer and including a dialkyl phthalate, nitrocellulose, and a lightsafe colorant, said dialkyl phthalate being 10–50% of the total weight of said dialkyl phthalate and said nitrocellulose.

5,009,945

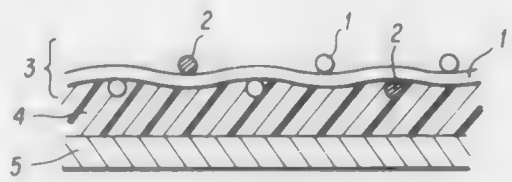
TRANSPARENT FILM AND COLOR IMAGE FORMING METHOD

Tatsuo Takeuchi, Kawasaki, and Koji Amemiya, Tokyo, both of Japan, assignors to Canon Kabushiki Kaisha, Tokyo, Japan

Filed Jun. 22, 1989, Ser. No. 369,851
Claims priority, application Japan, Jun. 29, 1988, 63-163107; Dec. 23, 1988, 63-326521; Jun. 15, 1989, 1-154193
Int. Cl.[5] B32B *3/02*
U.S. Cl. 428—76 **33 Claims**

1. A transparent laminate film adapted to receive a color toner image from a toner comprising at least a binder resin and a chromatic colorant and useful in an overhead projector, comprising: at least a first transparent resin layer comprising a heat-resistant first transparent resin, and a second transparent resin layer disposed thereon comprising a second transparent resin; said second transparent resin of the second transparent resin layer being compatible with said binder resin of said toner to be fixed thereon, and having a larger elasticity than that of the binder resin of the toner at a fixing temperature of the toner;

wherein (i) said first transparent resin of said first transparent resin layer has a heat distortion temperature of a minimum of 145° C.; and



(ii) said second transparent resin of said second transparent resin layer has a storage elasticity modulus of 100–10,000 dyne/cm^2 at 160° C.

5,009,946

COMPOSITE SHEET FOR AUTOMOTIVE USE

Isamu Hatomoto, Nishinomiya, and Yoshiteru Matsuo, Kurashiki, both of Japan, assignors to Kuraray Company Limited, Kurashiki and Honda Giken Kogyo Kabushiki Kaisha, Tokyo, both of, Japan

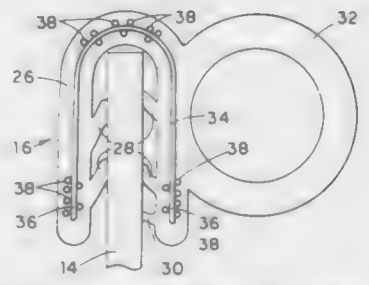
Continuation-in-part of Ser. No. 161,103, Feb. 26, 1988, abandoned. This application Dec. 15, 1989, Ser. No. 449,419
Claims priority, application Japan, Mar. 3, 1987, 62-49862
Int. Cl.[5] B32B *5/24, 5/30, 7/02, 33/00*
U.S. Cl. 428—87 **3 Claims**

1. A composite automotive upholstery sheet having antistatic and static-eliminating properties which comprises a textile layer containing an electrically conductive fiber with an electric resistance of 10^5 to 10^9 ohms/cm and a backing semiconductive layer with a surface resistivity of 10^7 to 10^{10} ohms integral and in contact with said textile layer;

said textile layer being:

a woven or knitted fabric originally having substantially no vertical hair on the surface thereof, comprising as part of its constituting yarns a chenille yarn containing said conductive fiber as at least part of the effect yarn of said chenille yarn, said chenille yarn being present on said fabric at spaced intervals not exceeding 30 mm; or

a woven or knitted fabric having vertical hair, comprising said conductive fiber as groups of 4 to 18 pieces of vertical conductive filaments distributed on the fabric surface in spots, at least one such spot being present in any hypothetical circular area having a diameter of 30 mm drawn on the fabric surface; and



said conductive fiber being a sheath-core composite fiber comprising as the core component a resin composition which comprises a resin and a conductive powder comprising titanium dioxide particles coated on the surface thereof with a conductive metal oxide and as the sheath component a polyester.

5,009,947

ELASTOMERIC STRIP AND METHOD OF MANUFACTURE

Michael J. McManus; David H. Berry, and Harold P. Dover, all of Maryville, Tenn., assignors to Schlegel Corporation, Rochester, N.Y.

Filed Apr. 28, 1989, Ser. No. 345,612
Int. Cl.[5] E06B *7/16*
U.S. Cl. 428—122 **5 Claims**

1. An elastomeric strip of substantially U-shaped cross section of a finite length and a finite width for mounting on a flange having longitudinally-spaced curved sections, comprising:

a support frame having longitudinally displaceable frame portions;

longitudinally extending degradable reinforcing materials secured to the frame portions for reinforcing the frame portions to inhibit longitudinal displacement of the frame portions during the coating operation;

a coating of elastomeric material on at least one surface of a reinforced support frame; and

a plurality of longitudinally-spaced degraded regions of the degradable reinforcing material of the strip in which all of the reinforcing material is degraded, such that the degraded regions of the strip are substantially unrestricted longitudinally by the reinforcing material and correspond to the longitudinally-spaced curve sections of the flange, whereby the degraded regions more faithfully follow the curved sections of the flange when the elastomeric strip is mounted thereon.

RESIN COMPOSITION AND ELECTRICAL LAMINATE OBTAINED THEREFROM

Kazuyuki Tanaka; Etsuji Iwami; Jun Matsuzawa; Yoshiyuki Mukoyama; Norihiko Shibata, all of Hitachi; Akinori Hanawa, Shimotsuma, and Mitsuo Yokota, Yuki, all of Japan, assignors to Hitachi Chemical Company, Ltd., Tokyo, Japan

Filed May 17, 1988, Ser. No. 194,918

Claims priority, application Japan, May 21, 1987, 62-124950; Dec. 22, 1987, 62-324571; Dec. 29, 1987, 62-334220; Apr. 1, 1988, 63-82072

Int. Cl.[5] B32B *7/00*

U.S. Cl. 428—260 **12 Claims**

1. A laminate for electrical use obtained by impregnating one or more substrates with a resin composition comprising

(A) 80 to 20 parts by weight of a copolymer having carbon-carbon unsaturated bonds in its side chains and obtained by reacting (i) a copolymer obtained by copolymerizing 0 to 50% by mole of an alkyl acrylate or alkyl methacrylate, 10 to 50% by mole of a hydroxyalkyl acrylate or a hydroxyalkyl methacrylate, and 0 to 90% by mole of an ethylenically unsaturated monomer, a total being 100% by mole, with (ii) an unsaturated carboxylic acid or an anhydride thereof, and

(B) 20 to 80 parts by weight of a monomer copolymerizable with (A), a total of (A) and (B) being 100 parts by weight, and

curing the resin impregnated substrates.

COMPOSITE STRUCTURES

Joachim Wagner, Cologne; Karl Peltzer, Leichlingen, and Werner Rasshofer, Cologne, all of Fed. Rep. of Germany, assignors to Bayer Aktiengesellschaft, Bayerwerk, Fed. Rep. of Germany

Filed Mar. 14, 1989, Ser. No. 323,454

Claims priority, application Fed. Rep. of Germany, Mar. 22, 1988, 3809524

Int. Cl.[5] C08G *18/00;* **B32B** *5/02, 5/26, 5/28*

U.S. Cl. 428—290 **8 Claims**

1. A composite structure comprising at least two different flat, thermoplastically formable plastic materials which is prepared by a process which comprises placing said materials in layers one above the other and thermoplastically molding said materials under sufficient conditions of temperature and pressure that molding is accompanied by intimate union of individual layers of the structure, wherein at least one of said materials is based on a polyisocyanate polyaddition product containing at least one group selected from the group consisting of urea and urethane groups, having a density of at least 0.8 g/cm^3 and prepared by reacting at an isocyanate index of about 60 to 140

(a) an aromatic polyisocyanate with

(b) a compound having a molecular weight of about 1800 to 12,000 and containing an average of at least 2.5 isocyanate reactive groups and

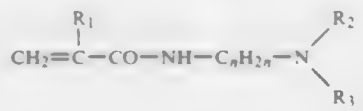
(c) at least 5% by weight, based on the weight of component (b), of a member selected from the group consisting of diamines having a molecular weight of 108 to 400 and containing two primary aromatically bound amino groups, diamines having a molecular weight of 108 to 400 and containing two secondary aromatically bound amino groups, diamines having a molecular weight of 108 to 400 and containing one primary aromatically bound amino group and one secondary aromatically bound amino group,

aliphatic polyols having a molecular weight of 60 to 1799, cycloaliphatic polyols having a molecular weight of 60 to 1799, aliphatic polyamines having a molecular weight of 60 to 1799 and cycloaliphatic polyamines having a molecular weight of 60 to 1799.

5,009,951

CONJUGATE FIBERS AND NONWOVEN MOLDING THEREOF

Tadayuki Ohmae; Tadashi Sakurai, and Kouichiro Asao, all of Chiba, Japan, assignors to Sumitomo Chemical Co., Ltd., Osaka, Japan



Division of Ser. No. 189,439, May 2, 1988, Pat. No. 4,840,847. This application Apr. 13, 1989, Ser. No. 337,602

Claims priority, application Japan, Feb. 4, 1988, 63-25466

Int. Cl.[5] B32B *27/02, 27/32;* **D02G** *3/02*

U.S. Cl. 428—294 **4 Claims**

1. A nonwoven molding obtained by melt spinning (A) a crystalline poly-α-olefin and (B) an ethylene copolymer containing from 40 to 95% by weight of an ethylene unit and from 5 to 60% by weight of at least one dialkylaminoalkylacrylamide comonomer unit represented by formula (I):

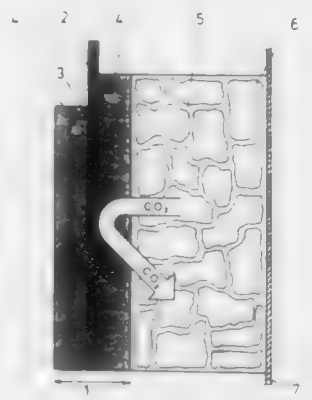
(I)

wherein R_1 represents a hydrogen atom or methyl group; R_2 and R_3 each represents an alkyl group having from 1 to 4 carbon atoms; and n represents an integer of from 2 to 5, said ethylene copolymer having a melt index of from 10 to 1000 g/10 min as measured according to JIS K-6760, either by aligning the components (A) and (B) in parallel or by aligning the component (A) as a core and the component (B) as a sheath to prepare conjugate fibers, and then thermally adhering the resulting conjugate fibers at a temperature no lower than the melting point of the component (B) and no higher than the melting point of the component (A).

5,009,952

INSULATING WALL FOR REFRIGERATOR DEVICES

Wilhelm Klepsch, and Dietmar Plöbst, both of Kaprun, Austria, assignors to Senoplast Klepsch & Co., Kaprun, Austria



Filed Aug. 23, 1990, Ser. No. 572,056

Int. Cl.[5] F25D *23/08;* **B32B** *5/20, 7/04*

U.S. Cl. 428—319.1 **2 Claims**

1. An insulating wall for refrigerator devices, wherein a polyurethane is foamed between an exterior metal sheet and a deep-drawn plastics material plate selected from a member of the group of polystyrole or acrylonitrile-butadiene-styrene, characterized in that the cell-gas of the polyurethane foam is carbon dioxide and that the plastics material plate comprises

in its interior a blocking layer of 0.03–0.6 mm thickness formed of a copolymer of polyethylene and vinyl alcohol where the

molar percent of polyethylene in the copolymer is in the range of 32–44.

5,009,953

NON-DUSTING WINDOW ENVELOPE FILM UTILIZING A PARTICULATE ANTI-FLECKING AGENT

Stephen I. Foster, Bexley; Jeffrey J. Stimler, Newark, and Gail S. Nonnemacher, Reynoldsburg, all of Ohio, assignors to The Dow Chemical Company, Midland, Mich.

Continuation-in-part of Ser. No. 220,296, Jul. 18, 1988, abandoned, and Ser. No. 393,057, Aug. 10, 1989, abandoned. This application Oct. 17, 1989, Ser. No. 422,846

Int. Cl.[5] B32B *5/16;* **B29C** *51/02*

U.S. Cl. 428—327 **25 Claims**

1. A window envelope having a non-opaque plastic window patch formed of a film comprising polystyrene and from about 0.1 to about 3.0 percent by weight of one or more particulate anti-flecking agents having from about a 0.1 to about 10.0 micron number average particle size, the one or more particulate anti-flecking agents each having a melting point greater than the polystyrene of the window envelope film and being substantially non-compatibilized and chemically inert with and substantially insoluble in the window envelope film.

5,009,954

SHEATH CORE FIBER AND ITS METHOD OF MANUFACTURE

John R. Collier, and Billie J. Collier, both of Athens, Ohio, assignors to Ohio University, Athens, Ohio

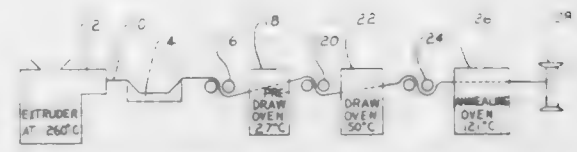
Continuation of Ser. No. 161,293, Feb. 29, 1988, abandoned, which is a continuation-in-part of Ser. No. 754,327, Jul. 12, 1985, abandoned. This application Apr. 4, 1990, Ser. No. 506,495

Int. Cl.[5] D02G *3/00*

U.S. Cl. 428—400 **5 Claims**

1. A sheath core fiber comprising an inner continuous core of an oriented thermoplastic material completely surrounded by a continuous adherent organic polymeric sheath which is formed from a polymer sheath forming material in liquid form, is not readily removable from said core, is retained on said core during ultimate usage of said fiber, and is made of a nonthermoplastic material, said sheath having minimal orientation and characterized by microscopic surface dimpling resulting in an enhanced surface area for higher sorptivity and greater dyeability.

5,009,955



DUAL MODULUS ORIENTED ELASTOMERIC FILAMENTS

Ismat A. Abu-Isa, Rochester Hills, Mich., assignor to General Motors Corporation, Detroit, Mich.

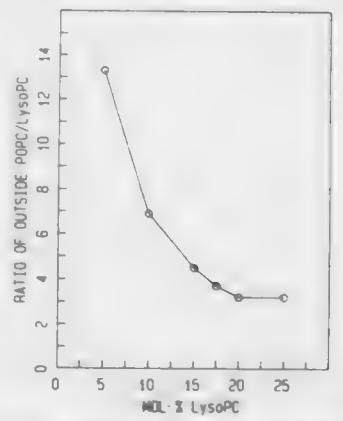
Filed Mar. 6, 1989, Ser. No. 318,998

Int. Cl.[5] D02G *3/00*

U.S. Cl. 428—401 **2 Claims**

1. An oriented elastomeric filament spun from a thermoplastic elastomeric material selected from the group consisting of a block copolymer of polybutylene terephthalate and polytetramethylene glycol, a block copolymer of polybutylene terephthalate/polybutylene isophthalate and polyethylene glycol/-polypropylene glycol, a block copolymer of polybutylene terephthalate/polyhexene terephthalate and polytetramethylene glycol, and a block copolymer of polyurethane and polytetramethylene glycol, the mole fraction of said polybutylene terephthalate, polybutylene terephthalate/polybutylene isophthalate and polybutylene terephthalate/polyhexane terephthalate in said block copolymers being less than 0.5, said elastomeric filament being further oriented after said spinning by stretching at temperatures between 20° C. to 120° C. to a draw ratio between 500 percent to 700 percent elongation such that said oriented filament having a diameter between 0.33 to 0.51 millimeters and exhibits an ultimate strain no larger than 140 percent when tested in accordance with ASTM D-638 tensile test.

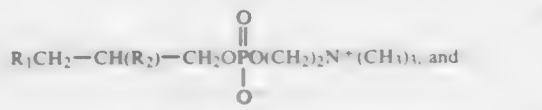
5,009,956



PHOSPHOLIPASE A_2-RESISTANT LIPOSOMES

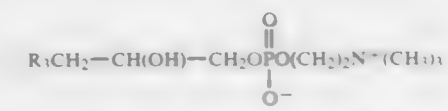
Wolfgang J. Baumann, Austin, Minn., assignor to Regents of the University of Minnesota, Minneapolis, Minn.

Continuation of Ser. No. 17,369, Feb. 24, 1987, abandoned. This application Mar. 31, 1989, Ser. No. 333,829



Int. Cl.[5] A61K *9/133, 37/22;* **B01J** *131/04*

U.S. Cl. 428—402.2 **11 Claims**



1. A method of stabilizing a liposome membrane comprising forming a unilamellar liposome having a single bilayer membrane having an outer layer and an inner layer including:

(a) between about 70–80 mol-% of a phospholipid (PL) of the formula:

(b) between about 20–30 mol-% of lysophospholipid (LPL) of the formula:

wherein R_1, R_2, and R_3 are individually (C_{10}–C_{30})alkanoyloxy groups including from about 0–4 double bonds, and wherein at least one of R_1, R_2, and R_3 include at least one double bond, by combining (a) and (b) so that the ratio of LPL to PL in the outer layer is about 0.275–0.35:1.0.

5. A stable liposome made by the process of claim 1.

5,009,957

MICROENCAPSULATED PLATINUM-GROUP METALS AND COMPOUNDS THEREOF

Chi-Long Lee, and Robin L. Willis, Jr., both of Midland, Mich., assignors to Dow Corning Corporation, Midland, Mich.

Division of Ser. No. 75,789, Jul. 20, 1987, Pat. No. 4,874,667. This application Mar. 23, 1989, Ser. No. 327,652

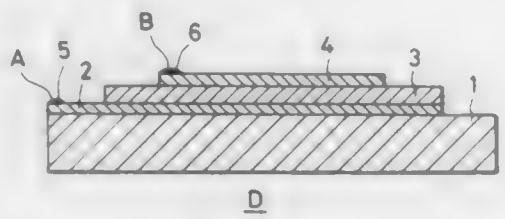
Int. Cl.[5] B32B *27/00, 9/04, 25/00*

U.S. Cl. 428—402.22 **8 Claims**

1. A microencapsulated platinum-group metal or a compound thereof, in the form of a free flowing powder consisting essentially of microcapsules that, in turn, comprise said metal or compound as finely divided particles or droplets that are completely enveloped within one or an inner layer and an outer layer formed from thermoplastic organic polymers, the average diameter of said microcapsules is less than 500 microns, said thermoplastic organic polymers constitute at least 50 percent of the weight of said microcapsules, and said catalyst composition comprises a metal from the platinum group of the periodic table or a compound thereof.

5,009,958

FUNCTIONAL DEVICES COMPRISING A CHARGE TRANSFER COMPLEX LAYER



Akio Yamashita, Kanagawa; Susumu Yoshimura, Yokohama, and Sohji Tsuchiya, Kanagawa, all of Japan, assignors to Matsushita Electric Industrial Co., Ltd., Japan

Filed Mar. 4, 1988, Ser. No. 170,025

Claims priority, application Japan, Mar. 6, 1987, 62-52537; Mar. 6, 1987, 62-52538; May 14, 1987, 62-117353

Int. Cl.[5] B32B *9/04*

U.S. Cl. 428—411.1 **12 Claims**

1. A functional device which comprises a substrate, an electrode layer formed on one side of the substrate, at least one layer of a charge transfer complex formed on the electrode layer and capable of undergoing a neutral-ionic phase transition and a variation in charge transferability by application of external energy, and another electrode layer formed on the complex layer, said charge transfer complex consisting essentially of an electron donor and an electron acceptor, at least one of which is an organic compound with a long-chain alkyl substituent having from 10 to 22 carbon atoms

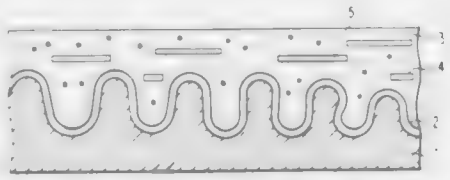
FLUORINE RESIN COATED ARTICLE



Nobutaka Matsushita; Hiroshi Okazaki; Shosuke Yamanouchi; Yoshitaka Osawa, and Isao Tsujigaito, all of Osaka, Japan, assignors to Sumitomo Electric Industries Ltd., Osaka, Japan

Filed May 22, 1989, Ser. No. 354,563

Claims priority, application Japan, May 20, 1988, 63-124466

Int. Cl.[5] B32B *17/06, 15/08*

U.S. Cl. 428—419 **10 Claims**

1. A fluorine resin coated article comprising a metal substrate coated with a composition comprising a fluorine resing containing (a) a polyamideimide resin, a polyimide resin, a polyphenylene sulfide resin, a polyethersulfone resin or a mixture thereof in an amount of from 0.5 to 10 wt % based on the amount of said fluorine resin, and mica in an amount of from 0.5 to 10 wt % based on the amount of said fluorine resin.

5,009,960

MAGNETIC RECORDING MEDIUM PREPARED WITH POLYURETHANE RESIN MODIFIED IIY A BICYCLIC AMIDE ACETAL

Takeshi Yatsuka; Hiroshi Murata; Yutaka Mizumura, and Nobukazu Kotera, all of Ohtsu, Japan, assignors to Ashland Oil, Inc., Russell, Ky.

Filed Nov. 6, 1989, Ser. No. 432,555

Claims priority, application Japan, Nov. 8, 1988, 63-282269

Int. Cl.[5] G11B *23/00*

U.S. Cl. 428—423.1 **4 Claims**

1. A magnetic recording medium comprising a non-magnetic support and a magnetic coating layer formed thereon, said magnetic coating layer being formed by applying a magnetic coating composition comprising a resinous binder and magnetic particles dispersed therein, wherein said coating composition contains, as a resinous binder, a modified polyurethane resin obtained by reacting a polyurethane resin (A) with a bicyclic amide acetal (B), said polyurethane resin (A) having carboxyl groups in an amount of 50 to 2,000 equivalents 10^6 g and the equivalent ratio of said bicyclic amide acetal (B) to the carboxyl groups of the polyurethane resin (A) being within the range of 0.5 to 2.0.

5,009,961

PRECERAMIC COMPOSITIONS AND CERAMIC PRODUCTS

Leonard M. Niebylski, Birmingham, Mich., assignor to Ethyl Corporation, Richmood, Va.

Filed Jun. 30, 1989, Ser. No. 374,063

Int. Cl.[5] B32B *9/04*

U.S. Cl. 428—446 **13 Claims**

1. A dispersion of about 0.25–2.0 parts by weight of silicon metal, about 0.25–2.0 parts weight of silicon tetraboride, about 0.25–2.0 parts by weight of silicon hexaboride, and about 0.2 parts by weight of silicon carbide in the product obtained by intimately dispersing about 0.1–1.0 part by weight of a Group IVA compound selected from salts and organometallic compounds of Group IVA metals in an organic solvent solution containing one part by weight of a polysilazane.

5,009,962

SURFACE TREATMENT CHEMICAL AND BATH FOR FORMING HYDROPHILIC COATINGS AND METHOD OF SURFACE-TREATING ALUMINUM MEMBERS

Katsuyoshi Yamasoe, Yotsukaidou, Japan, assignor to Nippon Paint Co., Ltd., Osaka, Japan

Division of Ser. No. 293,290, Jan. 4, 1989, Pat. No. 4,973,359. This application Jun. 15, 1990, Ser. No. 538,807

Int. Cl.[5] B32B *15/04;* **C23C** *22/00*

U.S. Cl. 428—470 **4 Claims**

1. An aluminum member provided with a hydrophilic coating comprising, on a solid basis, 5–25 parts by weight of a sodium salt and/or a potassium salt of a carboxymethylcellulose, 25–50 parts by weight of an ammonium salt of carboxymethylcellulose, and 25–70 parts by weight of N-methylol acrylamide.

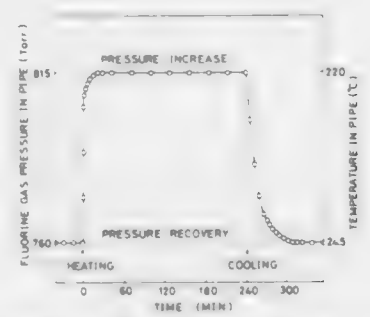
METAL MATERIAL WITH FILM PASSIVATED BY FLUORINATION AND APPARATUS COMPOSED OF THE METAL MATERIAL



Tadahiro Ohmi, 2-1-17-302, Komegafukuro, Sendai-shi, Miyagiken; Masahiro Miki, 23-14-521, Tezukayama 1-Chome, Abeno-ku, Osaka; Hirohisa Kikuyama, 7-13, 3-Cho, Ayameike Kita, Nara-shi, Nara-ken, and Matagoro Maeno, 2-42-6, Komyodai, Izumi-shi, Osaka, all of Japan

Filed Jul. 19, 1989, Ser. No. 381,914

Claims priority, application Japan, Jul. 20, 1988, 63-181225; Jan. 13, 1989, 1-6892

Int. Cl.[5] C23F *20/06*

U.S. Cl. 428—472.2 **6 Claims**

1. A metal material comprising a metal substrate, and a passivated film formed on at least a portion of the surface of the metal substrate by fluorination of the metal substrate, said film being composed mainly of a metal fluoride in which the proportion of metal to fluorine is substantially in stoichiometric relationship, wherein said metal substrate is baked prior to fluorination in an inert atmosphere and said fluorinated metal substrate is heat-treated to form said stoichiometric relationship.

5,009,964

COMPOSITION AND PROCESS FOR IMPARTING FIRE RETARDANT PROPERTIES AND IMPROVED THERMAL STABILITY TO CELLULOSIC MATERIALS

Robert M. Leach, Grand Island, and Michael J. Richards, Williamsville, both of N.Y., assignors to Osmose Wood Preserving, Inc., Buffalo, N.Y.

Filed Jul. 11, 1989, Ser. No. 378,408

Int. Cl.[5] B32B *27/42*

U.S. Cl. 428—526 **22 Claims**

1. A process for forming a fire retardant composition useful for treating cellulosic materials to impart both fire retardant properties and improved thermal stability under high temperature and humidity conditions which comprises:

(a) reacting a solution of water, an oxy acid of phosphorus and a nitrogen containing compound selected from the group consisting of urea, melamine, mono, di and trimethylamine, mono, di, and triethylamine, dicyandiamide, hexamethylenetetramine and other equivalent nitrogen containing compounds in a weight ratio of about 0.1 to about 15 oxy acid per part nitrogen compound for a time of about 15 minutes to about 3 hours at a temperature from about 25° C. to about 90° C.;

(b) adjusting the pH of said solution from about 6.0 to about 9.0 with a water soluble alkaline compound selected from the group consisting of ammonia, ammonium hydroxide, mono, di and trimethylamine, mono, di and triethylamine and ethanolamine or other equivalent nitrogen containing alkaline compounds;

(c) reacting said solution with an aldehyde compound selected from the group consisting of formaldehyde, acetaldehyde, and glyoxal in a weight ratio of about 1.0 to about 56 total initial oxy acid per part aldehyde compound for a time of about 5 minutes to about 1.5 hours at a temperature from about 25° C. to about 90° C.; and

(d) adjusting the final pH of said solution from about 7.0 to about 8.5 with a water soluble alkaline compound selected from the group consisting of ammonia, ammonium hydroxide, mono, di and trimethylamine, mono, di and triethylamine and ethanolamine or other equivalent nitrogen containing alkaline compounds.

20. A cellulosic material impregnated with a fire retardant amount of the fire retardant composition made in accordance with the process of claim 1.

5,009,965

COLLOIDAL COMPOSITIONS FOR ELECTROLESS DEPOSITION

Nathan Feldstein, 63 Hemlock Cir., Princeton, N.J. 08540

Continuation of Ser. No. 171,333, Mar. 21, 1988, abandoned, which is a continuation of Ser. No. 948,089, Dec. 31, 1986, abandoned, which is a continuation of Ser. No. 878,865, Jun. 26, 1986, abandoned, which is a continuation-in-part of Ser. No. 264,214, May 15, 1981, abandoned, which is a division of Ser. No. 137,447, Apr. 4, 1980, abandoned, which is a division of Ser. No. 938,890, Aug. 31, 1978, Pat. No. 4,265,942. This application Sep. 26, 1988, Ser. No. 251,024

Int. Cl.[5] C23C *3/02*

U.S. Cl. 428—546 **2 Claims**

1. A colloidal composition useful in the metallization of an electrically non-conductive substrate wherein said colloidal composition is the reaction product resulting from the admixture in a liquid medium comprising at least one primary metal and at least one secondary metal, said metals being in positive oxidation states, and wherein said primary metal is selected from the group consisting of copper, nickel, iron, and cobalt and mixtures thereof and wherein said secondary metal is selected from the group consisting of aluminum, gallium, indium, germanium, lead, antimony, bismuth, chromium, tin, thallium, and mixtures thereof, and further wherein said primary metal and said secondary metal in said resultant colloidal

composition are in a reduced oxidation state derived through the chemical reduction in the admixture of both the primary and secondary metals both metals having been initially introduced in a higher oxidation state than their oxidation states in the resultant colloidal composition.

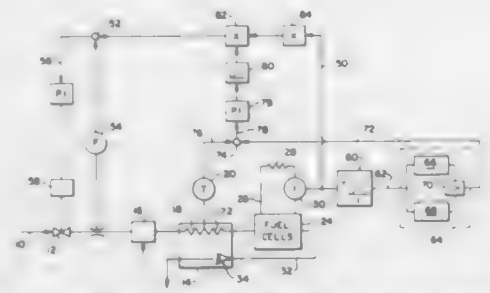
HARD OUTER COATINGS DEPOSITED ON TITANIUM OR TITANIUM ALLOYS

Diwakar Garg, 2815 Whitemarsh Pl., Macungie, Pa. 18062; Carl F. Mueller, 1221 Tatamy Rd., Easton, Pa. 18042; Leslie E. Schaffer, 244 W. Chestnut St., Macungie, Pa. 18062, and Paul N. Dyer, 3920 Pleasant Ave., Allentown, Pa. 18103

Division of Ser. No. 139,891, Dec. 31, 1987, Pat. No. 4,902,535. This application Sep. 19, 1989, Ser. No. 409,541
Int. Cl.[5] B32B *15/04*
U.S. Cl. 428—627 14 Claims



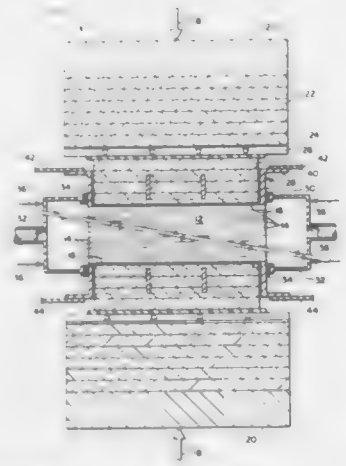
1. A coated substrate product comprised of
(1) a substrate selected from the group consisting of titanium and titanium alloy, which substrate has been treated with a mild abrasive to remove oxides from its surface,
(2) a thin, non-reactive noble metal interlayer deposited by an electroless plating technique after the treatment with said mild abrasive, said noble metal coated substrate is then subjected to a heat treatment by heating the substrate and the noble metal interlayer to a temperature in the range of about 200° to about 300° C. in the presence of air or a temperature in the range of about 200° to about 475° C. in the presence of an inert gas selected from the group consisting of argon, helium and mixtures thereof, and
(3) a hard outer coating selected from the group consisting of a ceramic, a hard metal, a hard metal compound and a carbon having a hardness of greater than 1,000 Vickers.

5,009,967

FUEL CELL POWER PLANT FUEL CONTROL

Glenn W. Scheffler, Tolland, Conn., assignor to International Fuel Cells Corporation, South Windsor, Conn.

Filed Oct. 24, 1989, Ser. No. 427,223
Int. Cl.[5] H01M *8/04*
U.S. Cl. 429—23 4 Claims



1. In a fuel cell power plant having, fuel supply means for supplying a flow of fuel, a reformer receiving and reforming said flow of fuel, a fuel stack receiving fuel from said reformer, a conduit for conveying fuel cell exhaust containing excess hydrogen to said reformer, a burner for burning said exhaust and said reformer in heat exchange relationship with the fuel supply passing through said reformer; a control system comprising:
a current sensor for sensing the electrical load on said fuel cell stack and establishing a current sensed signal;
a fuel flow summation point;
means for conducting said current sensed signal to said fuel flow summation point as a nominal desired fuel flow signal;
a temperature sensor for sensing the temperature of the reformed fuel at said reformer and establishing a temperature sensed signal;
a first function generator for setting a nominal desired reformer fuel temperature set point representing the steady state desired temperature as a function of the sensed current;
a dynamic compensator for modifying said desired reformer fuel temperature set point to obtain a transient temperature set point comprising, a first lead/lag compensator, a second lead/lag, compensator, one of said lead/lag compensators generating a predominantly lead characteristic signal and the other generating a predominantly lag characteristic signal, and a high select component for selecting and passing the higher signal of said lead characteristic signal and said lag characteristic signal;
error means for comparing said higher signal with said sensed temperature signal and establishing a temperature error signal;
means for modifying said nominal desired fuel flow signal as a function of by said temperature error signal and establishing a transient desired fuel flow set point signal to said fuel flow summation point;
fuel flow sensing means for establishing a fuel flow sensed signal;
means for conveying said fuel flow sensed signal to said fuel flow summation point and establishing a fuel flow error signal; and
fuel flow control means responsive to said fuel flow error signal for controlling said fuel flow.

5,009,968

FUEL CELL END PLATE STRUCTURE

Robin J. Guthrie, East Hartford; Murray Katz, Newington, and Craig R. Schroll, Glastonbury, all of Conn., assignors to International Fuel Cells Corporation, South Windsor, Conn.

Filed Sep. 8, 1989, Ser. No. 405,251
Int. Cl.[5] H01M *8/02, 8/24*
U.S. Cl. 429—26 14 Claims

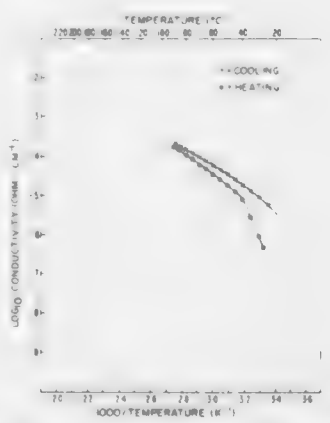
1. A fuel cell assembly comprising:
a fuel cell stack formed of a large number of fuel cells having electrodes and stacked in electrical series relationship;
an electrically conducting flexible membrane at each end of said stack, each membrane in electrical contact with an electrode at multiple spaced locations in a plane parallel to the planes of said fuel cells;
a pressure pad at each end of said fuel cell stack including a substantially planar surface in contact with the respective membrane;
compression means for exerting a compressive force on said pressure pads towards said fuel cell stack;
said membranes being sufficiently thin, that the compressive force maintains the membranes in intimate electrical contact with said electrodes at multiple locations;
each membrane integral with a box-like wall structure of a thickness greater than that of said membrane, and extending axially of said fuel cell stack at the outer periphery of said membrane; and
an electric power bus bar connected to said box-like wall structure.

5,009,969

DUAL ACTION SUNSCREEN COMPOSITION

Gary A. Miller, Monroe, N.Y., assignor to Hi-Tek Polymers, Inc., Jeffersontown, Ky.

Filed May 26, 1989, Ser. No. 357,985
Int. Cl.[5] A61K *7/40, 7/42, 7/44, 7/46*
U.S. Cl. 424—59 8 Claims



1. A dual action sunscreen composition comprising:
(A) about 0.2 to about 2 weight percent of hydroxypropyltrimethyl ammonium chloride guar having a DS of about 0.1 to about 0.2 and a viscosity of 1000–2000 cps as measured at 25° C. at 2 percent concentration in water,
(B) about 0.1 to about 2 weight percent of poly(methacrylamidopropyl trimethyl ammonium chloride) having a viscosity at 33 percent solids in water of about 2,000 to about 14,000 cps at 25° C.; and
(C) an ultraviolet absorbing sunscreen agent in the amount of about 0.1 to about 2 weight percent, wherein A, B and C are dispersed or dissolved in a cosmetically and dermatologically acceptable carrier which contains about 70 to about 85 weight percent water wherein said weight percents are based on the weight of the composition, wherein said composition when applied to the human skin provides sunburn protection and moisturizing effect.

Claims priority, application United Kingdom, Jul. 28, 1987, 8717799
Int. Cl.[5] C08J *3/28;* C08K *3/24;* C08L *71/02;* H01M *6/18*
U.S. Cl. 429—192 2 Claims

1. A method of making a solid polymer electrolyte suitable for use as the electrolyte of a solid-state electrochemical cell, comprising the steps of irradiating with gamma radiation or an electron beam an aqueous solution of a polymer electrolyte comprising a complex of a polymer and an alkali metal salt, the polymer comprising poly(ethene oxide), which polymer is capable of forming donor-acceptor type bonds with alkali metal ions, the conditions of irradiation being such as to cause the said polymer itself to cross-link and to form a hydrogel thereby to inhibit transformation of the polymer from an amorphous form to a crystalline form, and drying the hydrogel to form a solid polymer electrolyte with adequate electrical conductivity for use as the electrolyte of a solid-state electrochemical cell.

IMAGE FORMING METHOD AND IMAGE FORMING APPARATUS

Satoshi Yoshida, Kawasaki; Toshiaki Nakahara, Tokyo; Hirohide Tanikawa, Yokohama, and Kiichiro Sakashita, Inagi, all of Japan, assignors to Canon Kabushiki Kaisha, Tokyo, Japan

Filed Feb. 28, 1989, Ser. No. 317,182
Claims priority, application Japan, Feb. 29, 1988, 63-46890
Int. Cl.[5] G03G *13/01, 13/09, 15/01, 15/09*
U.S. Cl. 430—45 99 Claims

34. An image forming method, comprising:

developing an electrostatic latent image on an electrostatic image-bearing member with a developer comprising a non-magnetic color tonerr having a volume-average particle size of 4 to 15 microns to form a non-magnetic color toner image;

transferring the non-magnetic color toner image on the electrostatic image-bearing member to a transfer-receiving material;

cleaning the electrostatic image-bearing member after the transfer with a cleaning blade;

forming an electrostatic image on the electrostatic image-bearing member after the cleaning;

developing the electrostatic latent image on the electrostatic image-bearing member with a developer comprising a magnetic toner to form a magnetic toner image, wherein the magnetic toner contains 17 to 60% by number of magnetic toner particles having a particle size of 5 microns or smaller, 1–23% by number of magnetic toner particles having a particle size of 8.0–12.7 microns and 2.0% by volume or less of magnetic toner particles having a size of 16 microns or larger, wherein the magnetic toner has a volume-average particle size of 4–9 microns and a degree of aggregation of 50–95%; and wherein the magnetic toner has a particle size distribution satisfying the following formula:

$$N/V = -0.04N + k,$$

where N denotes the value of % by number of magnetic particles having a size of 5 microns or smaller, namely a positive number of 17 to 60, V denotes the value of % by volume of magnetic particles having a size of 5 microns or smaller, and k is a positive number of from 4.5 to 6.5;

transferring the magnetic toner image on the electrostatic image-bearing member to the transfer-receiving material; and

cleaning the electrostatic image-bearing member after the transfer with a cleaning blade.

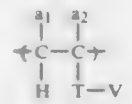
ELECTROPHOTOGRAPHIC PHOTORECEPTOR

Eiichi Kato, and Kazuo Ishii, both of Shizuoka, Japan, assignors to Fuji Photo Film Co., Ltd., Kanagawa, Japan

Filed Oct. 4, 1989, Ser. No. 417,105
Claims priority, application Japan, Oct. 4, 1988, 63-248949; Nov. 17, 1988, 63-288972
Int. Cl.[5] G03G *5/08*
U.S. Cl. 430—96 9 Claims



1. An electrophotographic photoreceptor comprising a support having thereon at least one photoconductive layer containing at least an inorganic photoconductive material and a binder resin, wherein the binder resin contains

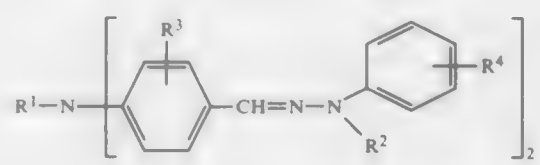
(A) at least one resin having a weight average molecular weight of from 1×10^3 to 3×10^4 with at least one substituent selected from the group consisting of $-PO_3H_2$, $-SO_3H$, $-COOH$,

wherein R represents a hydrocarbon group having from 1 to 10 carbon atoms or $-OR'$, wherein R' represents a hydrocarbon group having from 1 to 10 carbon atoms, and a cyclic acid anhydride-containing group, being bonded to one of the terminals of the polymer main chain thereof, and

(B) at least one resin having a weight average molecular weight of 5×10^4 or more and containing, as a polymerization component, at least a repeating unit represented by formula (b-i):

(b-i)

wherein T represents $-COO-$, $-OCO-$, $-CH_2OCO-$, $-CH_2COO-$, $-O-$ or $-SO_2-$; V represents a hydrocarbon group having from 1 to 22 carbon atoms; and a_1 and a_2, which may the same or different, each represents a hydrogen atom, a halogen atom, a cyano group, a hydrocarbon group having from 1 to 8 carbon atoms, —COO—Z, or —COO—Z bonded via a hydrocarbon group having from 1 to 8 carbon atoms, wherein Z represents a hydrocarbon group having from 1 to 18 carbon atoms; and wherein said Resin (B) is partially crosslinked.



5,009,976

ELECTROPHOTOGRAPHIC PHOTORECEPTOR

Akira Itoh, and Kozo Haino, both of Tsukuba, Japan, assignors to Mitsubishi Paper Mills Limited, Tokyo, Japan

Filed Feb. 26, 1990, Ser. No. 484,836
Claims priority, application Japan, Feb. 27, 1989, 1-048298
Int. Cl.[5] G03G *5/14*
U.S. Cl. 430—59 6 Claims

1. An electrophotographic photoreceptor which comprises an electroconductive support and, provided thereon, a photosensitive layer which comprises a carrier generation layer containing a carrier generation material and a carrier transport layer containing at least one hydrazone compound as a carrier transport material represented by the following formula (I):

(I)

wherein R^1 and R^2 each represent an alkyl, alkenyl, aralkyl, aryl or heterocyclic group which may be substituted, and at least one of R^1 and R^2 is an alkenyl group and R^3 and R^4 each represents a hydrogen atom, an alkyl group, an alkoxy group or a halogen atom.

1. A photosensitive member for electrophotography comprising a conductive substrate and a photoconductive layer comprising an amorphous silicon containing 40–60 atomic % of a member selected from the group consisting of hydrogen, halogen and mixtures thereof, and at least one chemical modifier selected from the group consisting of carbon at 5–40 atomic %, nitrogen at 0.01–28 atomic %, and oxygen at 5–25 atomic %, each based on silicon, with said amorphous silicon being deposited utilizing an electron resonance method.

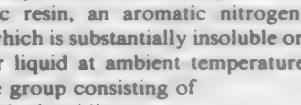
5,009,978

PREPARATION PROCESS FOR TONER POLYMER

Keiji Yoshida; Ryo Funato; Syuji Takahiro, all of Nagoya; Shinji Kubo, Toyohashi, and Notoshi Inagaki, Nogoya, all of Japan, assignors to Mitsubishi Rayon Co., Ltd., Tokyo, Japan

Filed Dec. 8, 1989, Ser. No. 447,854
Claims priority, application Japan, Dec. 12, 1988, 311989
Int. Cl.[5] G03G *9/00, 5/00*
U.S. Cl. 430—109 7 Claims

1. A process for the preparation of a toner polymer comprising the steps of: carrying out suspension polymerization of a monomer having a polymerizable vinyl group in the presence of polyvinyl alcohol as a dispersant; and conducting oxidative decomposition of said polyvinyl alcohol anchored to polymer particles obtained by said suspension polymerization.



5,009,979

ELECTROSTATOGRAPHIC PARTICULATE TONER AND DEVELOPER COMPOSITIONS

Galina P. Buxton, Tenafly, N.J., and Kuo-Chang Tang, Cheshire, Conn., assignors to Olin Hunt Specialty Products Inc., West Paterson, N.J.

Filed Oct. 23, 1989, Ser. No. 425,546
Int. Cl.[5] G03G *9/00, 5/00*
U.S. Cl. 430—110 18 Claims

1. A toner composition comprised of resin particles, colorant material and an effective charge controlling amount of at least one charge enhancing additive of the formula:

wherein R_1 and R_2 are lower alkyl groups having 1 to 4 carbon atoms; R_3 is a straight-chain alkylene group having from 1 to about 8 carbon atoms; and R_4 is an alkyl group having from about 7 to about 24 carbon atoms.

5,009,980

AROMATIC NITROGEN-CONTAINING COMPOUNDS AS ADJUVANTS FOR ELECTROSTATIC LIQUID DEVELOPERS

Lyla M. El-Sayed, West Chester, Pa., and Torence J. Trout, Yorklyn, Del., assignors to E. I. du Pont de Nemours and Company, Wilmington, Del.

Filed Dec. 30, 1988, Ser. No. 292,192
Int. Cl.[5] G03G *9/12*
U.S. Cl. 430—114 54 Claims

1. An improved electrostatic liquid developer having improved charging characteristics consisting essentially of

(A) a nonpolar liquid having a Kauri-butanol value of less than 30, present in a major amount,

(B) thermoplastic resin particles having an average by area particle size of less than 10 μm having dispersed therein an aromatic nitrogen-containing compound which is substantially insoluble or immiscible in the nonpolar liquid at ambient temperatures and is selected from the group consisting of

(1) polyvinylpyridines,

(2) polyaminostyrenes,

(3) copolymers of vinyl pyridine, and

(4) compounds of the general formula:

wherein Y is pyridine, substituted pyridine, bipyridine, aniline, or substituted aniline; R is alkyl of 1 to 30 carbon atoms, substituted alkyl of 1 to 30 carbon atoms, aryl of 6 to 30 carbon atoms, substituted aryl of 6 to 30 carbon atoms, or NH; Z is one of Y; n is 0 or 1; and fused ring compounds can be formed when R is aryl or substituted aryl of n is 0, and

(C) a nonpolar liquid soluble ionic or zwitterionic charge director compound.

27. A process for preparing a liquid electrostatic developer for electrostatic imaging comprising

(A) dispersing at an elevated temperature in a vessel a thermoplastic resin, an aromatic nitrogen-containing compound which is substantially insoluble or immiscible in the nonpolar liquid at ambient temperatures and is selected from the group consisting of

(1) polyvinylpyridines,

(2) polyaminostyrenes,

(3) copolymers of vinyl pyridine, and

(4) compounds of the general formula:

$$Y-(R)_n-Z$$

wherein Y is pyridine, substituted pyridine, bipyridine, aniline, or substituted aniline; R is alkyl of 1 to 30 carbon atoms, substituted alkyl of 1 to 30 carbon atoms, aryl of 6 to 30 carbon atoms, substituted aryl of 6 to 30 carbon atoms, or NH; Z is one of Y; n is 0 to 1; and fused ring compounds can be formed when R is aryl or substituted aryl or n is 0, and a dispersant nonpolar liquid having a Kauri-butanol value of less than 30, while maintaining the temperature in the vessel at a temperature sufficient to plasticize and liquify the resin and below that at which the dispersant nonpolar liquid degrades and the resin decomposes,

(B) cooling the dispersion, either

(1) without stirring to form a gel or solid mass, followed by shredding the gel or solid mass and grinding by means of particulate media with or without the presence of additional liquid;

(2) with stirring to form a viscous mixture and grinding by means of particulate with or without the presence of additional liquid; or

(3) while grinding by means of particulate media to prevent the formation of a gel or solid mass with or without the presence of additional liquid;

(C) separating the dispersion of thermoplastic toner particles having an average by area particle size of less than 10 μm from the particulate media, and

(D) adding to the dispersion during or subsequent to Step (A) a nonpolar liquid soluble ionic or zwitterionic charge director compound.

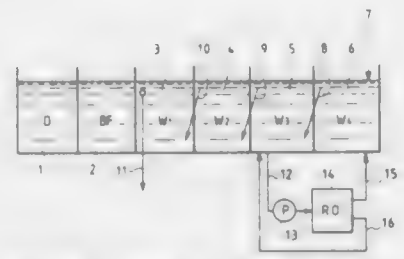
METHOD FOR PROCESSING SILVER HALIDE PHOTOSENSITIVE MATERIALS



Akira Abe, Kanagawa, Japan, assignor to Fuji Photo Film Co., Ltd., Kanagawa, Japan

Filed Jul. 12, 1990, Ser. No. 551,822

Claims priority, application Japan, Jul. 14, 1989, 1-180591

Int. Cl.[5] G03C *7/40*

U.S. Cl. 430—372 **20 Claims**

1. A method for processing silver halide photosensitive materials comprising processing an imagewise-exposed silver halide photosensitive material in a bath which has a fixing ability and then at least one of washing and stabilizing the photosensitive material in a multi-stage counter-flow system, wherein liquid from at least one of a water washing tank and a stabilizing tank is treated using a reverse osmosis membrane and the treated liquid is recycled to at least one of the water washing tank and stabilizing tank, and at least a tank at the stage at which the liquid is removed for the reverse osmosis membrane treatment has an open fraction of not more than 0.03.

5,009,984

METHOD FOR PROCESSING A PHOTOGRAPHIC SILVER HALIDE EMULSION MATERIAL

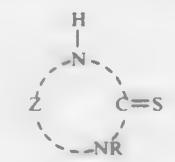
Gino L. De Rycke, Mortsel; Antonius A. Rutges, Boechout, and Jozef P. De Prijcker, Hamme, all of Belgium, assignors to Agfa-Gevaert, N.V., Mortsel, Belgium

Filed Jun. 29, 1989, Ser. No. 372,856

Claims priority, application Belgium, Aug. 9, 1988, 88201706.4

Int. Cl.[5] G03C *5/26, 5/38*

U.S. Cl. 430—404 **11 Claims**



1. A method of processing an imagewise exposed photographic silver halide emulsion material which method comprises the steps of:

(A) developing an image-wise exposed silver halide emulsion layer by means of at least one diffusible developing agent in at least the substantial absence of a silver halide complexing agent, the development taking place with an aqueous alkaline liquid,

(B) bringing the thus developed photographic material while being still wet with the liquid from step (A) with its silver halide emulsion layer side in intimate contact with a water-absorbing layer of a receptor element that contains in an organic hydrophilic colloid binder a silver halide complexing agent and in dispersed colloidal form a metal sulphide capable of a conversion reaction with complexed silver halide to form silver sulphide,

(C) maintaining said photographic material and receptor element in contact to allow the transfer of dissolved complexed silver compound into said receptor element and conversion into silver sulphide until the undeveloped silver halide in the exposed silver halide emulsion layer is substantially completely so transferred and converted, and

(D) separating the photographic material from the receptor element, wherein said water-absorbing layer of said receptor element contains (i) said silver complexing agent at a coverage per m2 of silver halide in the unexposed photographic material, (ii) said metal sulphide at a sulphide ion coverage per m2 at least stoichiometrically equivalent with the silver ion coverage present in the photographic material in unexposed and undeveloped state, and (iii) a diffusible silver image stabilizing agent at a coverage of at least 0.01 g/m2, said stabilizing agent is a cyclic thiourea compound corresponding to the following formula or a tautomeric form thereof:

wherein:

R represent hydrogen or a hydrocarbon group including said group in substituted form, and

Z represents a bivalent saturated hydrocarbon group including said group in substituted form to complete a 5- or 6-membered heterocyclic ring.

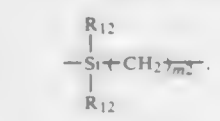
1. A naphthalocyanine based compound expressed by the following formula (I)

(I)

wherein

X represents a group selected from a group consisting of

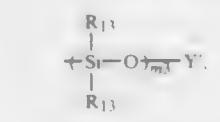
—CN, and —CH=CH_2; in which R^{10} represents hydrogen atom or methyl group;



Y groups, which may be the same or different, each represent a divalent group selected from the group consisting of

(1) a saturated aliphatic hydrocarbon group having 2–20 carbon atoms, saturated alicyclic hydrocarbon group having 5–6 carbon atoms, aromatic hydrocarbon group having 6–10 carbon atoms and hydrocarbon group formed by binding the above mentioned groups with each other and having 2–20 total carbon atoms, each optionally substituted with a Group selected from a halogen atom and lower alkyloxy group; which may be substituted with 1 or 2 substituents of X;

(2) a group expressed by the formula $-R_{11}-O-R_{1\text{-}1}-_{m1}-$ or the group $-R_{11}-O-R_{11}-_{m1}-$ which is



further bound with the saturated alicyclic hydrocarbon group or the aromatic hydrocarbon group defined in above (1); in which R_{11} represents straight chain or branched alkylene group having 2–4 carbon atoms and m1 is an integer of 1–20;

(3) a group expressed by the formula

in which R_{12} represents hydrocarbon group having 1–6 carbon atoms; m2 represents an integer of 1–20; and

(4) a group expressed by the formula

in which R_{13} represents the same as defined for R_{12}, m3 represents the same as defined for m_1; Y' represents a group selected from a group consisting of (1), (2) and (3) defined above for Y; provided that Y represents phenylene group when X represents $-CH=CH_2$;

R_1, R_2, R_3 and R_4 are identical or different and represent hydrogen atom, each straight chain or branched alkyl group, alkoxy group or alkylsilyl group; each having 1–18 carbon atoms; and n represent an integer of 1–4.

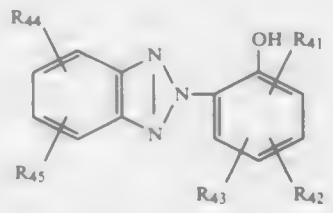
1. A silver halide photographic material which contains, on a support, at least one cyan dye-forming coupler represented by the following formula (I), and at least one compound selected from among those represented by the following formulae (II) and (III):

(I)



(II)

(III)

wherein R_1 represents an aliphatic group, an aromatic group or a heterocyclic group; R_2 represents an ethyl group, Z represents a hydrogen atom, or a group or an atom capable of splitting off upon coupling with a developing agent; L_1 and L_2 each represents a divalent aliphatic group; R_3 and R_4 each represents an aliphatic group; n and m each represents an integer of 2, and the n R_3's and m R_4's, respectively, may be the same of different, L_2 excludes cyclohexylene group; wherein the total number of carbon atoms in the compound represented by formula (II) is from 12 to 60 and the total number of carbon atoms in the compound represented by formula (III) is from 12 to 60, and wherein said compound represented by formula (I) and said at least one compound represented by formula (II) or (III) are present in the same layer.

7. A silver halide photographic material as in claim 1, further comprising an ultraviolet absorbent represented by formula (XI):

(XI)

wherein R_{41}, R_{42}, R_{43}, R_{44} and R_{45}, which may be the same or different, each being a hydrogen atom or a substituent group; R_{44} and R_{45} may combine with each other to complete a 5- or 6-membered aromatic a carbon ring and these groups and this aromatic ring may further be substituted by a substituent group.

5,009,990

PHOTOGRAPHIC RECORDING MATERIAL

Rainer Scheerer, Cologne, and Franz Moll, Leverkusen, both of Fed. Rep. of Germany, assignors to Agfa-Gevaert Aktiengesellschaft, Leverkusen, Fed. Rep. of Germany

Continuation of Ser. No. 156,582, Feb. 16, 1988, abandoned. This application Nov. 20, 1989, Ser. No. 440,463

Claims priority, application Fed. Rep. of Germany, Feb. 26, 1987, 3706199

Int. Cl.[5] G03C *1/30, 1/34*

U.S. Cl. 430—539 **4 Claims**

1. Photographic black and white negative film having on a layer support at least one silver halide emulsion layer containing gelatine, at least one protective layer and at least one hardening layer, in which the protective layer is further removed from the layer support than any silver halide emulsion layer and the hardening layer is further removed from the layer support than any other layer and contains an effective quantity of at least one instant hardener, characterized in that the protective layer contains an effective quantity of 4-hydroxy-6-methyl-1,3,3a,7-tetraazaindene.

5,009,991

SILVER HALIDE EMULSIONS CONTAINING TWINNED SILVER HALIDE CRYSTALS

Clive W. Mowforth, Kingshill; James F. Bullock, Macclesfield; Trevor J. Maternaghan, Knutsford, and Karen N. Harvey, Warrington, all of United Kingdom, assignors to Ilford Limited, Cheshire, United Kingdom

Filed Aug. 31, 1989, Ser. No. 400,659

Int. Cl.[5] G03C *1/02*

U.S. Cl. 430—567 **22 Claims**

1. A method of preparing a silver halide emulsion wherein the silver halide crystals are of the twinned type which comprises the steps of

(a) providing in a colloid dispersing medium silver halide seed crystals containing at least 90% iodide and at least 80% of which are of hexagonal lattice structure with each displaying predominantly a single basal face,

(b) mixing in the dispersing medium containing the said silver halide seed crystals an aqueous solution of an alkali metal or ammonium bromide or chloride (or mixtures thereof) so forming twinned silver halide crystals containing iodide and the halide or halides being added, and

(c) continuing the addition of said silver halide until dissolution of said seed crystals is substantially complete.

5,009,992

PHOTOGRAPHIC SILVER HALIDE EMULSION

Wolfgang Friedrich, Rödermark, and Alfred Wörsching, Rodgau-Jügesheim, both of Fed. Rep. of Germany, assignors to E. I. DuPont de Nemours and Company, Wilmington, Del.

Filed Dec. 20, 1989, Ser. No. 453,833

Claims priority, application Fed. Rep. of Germany, Jan. 18, 1989, 3901268

Int. Cl.[5] G03C *1/02*

U.S. Cl. 430—573 **10 Claims**

1. Photographic silver halide emulsion consisting essentially of said emulsion containing therein a dye present in a sensitizing amount to sensitize the emulsion for the infrared spectral region, and an aromatic thiosulfonic acid or a salt of the acid in amount of from 0.1 to 5 millimoles per mole of silver halide.

5,009,993

DIRECT POSITIVE PHOTOGRAPHIC MATERIAL

Noriyuki Inoue, and Tatsuo Heki, both of Kanagawa, Japan, assignors to Fuji Photo Film Co., Ltd., Kanagawa, Japan

Division of Ser. No. 101,693, Sep. 28, 1987, Pat. No. 4,880,727. This application Oct. 16, 1989, Ser. No. 422,268

Claims priority, application Japan, Sep. 26, 1986, 61-226292; Sep. 26, 1986, 61-226295

Int. Cl.[5] G03C *1/09*

U.S. Cl. 430—605 **5 Claims**

1. A direct positive photographic material comprising a support having provided thereon one or more hydrophillic colloid containing layers, wherein at least oen of said hydrophillic colloid containing layers is an internal latent image type silver halide emulsion which has not been previously fogged and at least one of said emulsion layer or other hydrophillic colloid containing layer contains a colloidal metal selected from the group consisting of mercury, iron, lead, zinc, nickel, cadmium, tin, chromium, copper, cobalt, gold, platinum and palladium or a colloidal water-insoluble metallic sulfide, selenide or telluride selected from the group consising of sulfides, selenides, or tellurides of mercury, iron, lead, zinc, nickel, cadmium, tin, chromium, copper, cobalt, gold, platinum, palladium, alluminum, silver, antimony, bismuth, cerium or magnesium.

5,009,994

PARTICLES CONTAINING MANNITOL SUITABLE FOR TABLETTING INTO DIAGNOSTIC REAGENTS

John K. McGeehan, Woodbury, N.J., assignor to EM Diagnostic Systems, Inc., Gibbstown, N.J.

Division of Ser. No. 842,968, Mar. 24, 1986, Pat. No. 4,820,627. This application Jan. 12, 1989, Ser. No. 296,178

Int. Cl.[5] C12Q *1/00*

U.S. Cl. 435—4 **54 Claims**

1. A mass of particles suitable for the production of a diagnostic reagent, said particles consisting essentially of an inert, completely water-soluble, solid, particulate bulking agent comprising mannitol, said particulate bulking agent having a coating thereon, at lest in part, of a labile biochemical, said labile biochemical being useful as a diagnostic reagent, wherein said labile biochemical is substantially uniformly distributed on said mass of particles and said mass of particles is substantially free of non-easily breakable agglomerates.

5,009,995

MONOCLONAL ANTIBODIES TO MELANOMA CELLS

Anthony Albino, New York; Kenneth Lloyd, Bronx, both of N.Y.; Hisami Ikeda, Asahikawa, Japan, and Lloyd Old, New York, N.Y., assignors to Sloan-Kettering Institute for Cancer Research, New York, N.Y.

Continuation of Ser. No. 924,144, Oct. 27, 1986, which is a continuation of Ser. No. 481,378, Apr. 1, 1983, abandoned. This application Mar. 11, 1988, Ser. No. 166,660

Int. Cl.[5] **G01N** *33/535;* **C07K** *15/28;* **C12N** *5/18;* **A61K** *39/00*

U.S. Cl. 435—7.23 **7 Claims**

1. Monoclonal antibodies which specifically bind to the gp130 glycoprotein cell surface antigen of human melanoma cells, wherein said monoclonal antibodies are selected from the group consisting of monoclonal antibodies 829 and 986 produced by the hybridomas having the A.T.C.C. accesion numbers HB 8289 and HB 9721, respectively.

5,009,996

TWO SITE CROSS-REACTION IMMUNOMETRIC SANDWICH ASSAY METHOD

Vipin D. Shah, Saratoga, Calif.; Padmaker V. Kulkarni, Dallas, Tex., and Quirinus R. Miranda, San Jose, Calif., assignors to International Immunoassay Laboratories, Inc., Santa Clara, Calif.

Continuation of Ser. No. 165,001, Jun. 30, 1980, abandoned. This application Sep. 30, 1983, Ser. No. 537,947

The portion of the term of this patent subsequent to Apr. 23, 2008, has been disclaimed.

Int. Cl.[5] **G01N** *33/53;* **C12Q** *1/50*

U.S. Cl. 435—7 **11 Claims**

1. A two-site immunometric sandwich assay method for the detection and measurement of an analyte of interest in a test sample, said analyte of interest having at least two immunochemically differing binding sites, comprising:

(a) combining a first antibody, raised against a material other than said analyte of interest and capable of cross-reacting with one of said at least two binding sites of said analyte of interest, with a test sample suspected of containing said analyte of interest and a solid material capable of specifically binding to said first antibody, to form a first reaction medium, and simultaneously reacting the components of said first reaction medium to form a bound complex of said solid material to said first antibody, which first antibody is further bound with any other reactants in said test sample which are capable of immunochemically binding to said first antibody;

(b) separating the solid phase from the liquid phase of the reaction medium;

(c) reacting said solid phase, in a second reaction medium, with a second antibody, said second antibody having been raised against a material other than said analyte of interest and being capable of cross-reacting with another of said at least two binding sites of said analyte of interest, and said second antibody being tagged with a means for making said tagged antibody detectable;

(d) separating the solid phase portion of said second reaction medium from the liquid phase portion thereof; and

(e) testing said solid portion to detect the quantity of said second antibody therein as an indication of the presence of said analyte of interest,

wherein said analyte of interest and said materials other than said analyte of interest against which said first and second antibodies have been raised are three different but related molecules, wherein said other materials may be representationally depicted as AA and CC, wherein A and C are binding sites on the materials, and said analyte of interest is a hybrid AC of the other two materials, and wherein the molecular structure of the A binding sites in AA and AC, and the C binding sites in CC and AC are sufficiently similar to permit cross-reaction therebetween by antibodies raised against either material, said first and second antibodies being selected such that they will not both cross-react with any analyte in the test sample other than said analyte of interest.

5,009,997

TWO SITE CROSS-REACTION IMMUNOMETRIC SANDWICH ASSAY METHOD

Vipin D. Shah, 13568 Debbie La., Saratoga, Calif. 95070; Padmakar v. Kulkarni, 6914 Mill Falls Dr., Dallas, Tex. 75248, and Quirinus R. Miranda, 2097 Jonathan Ave., San Jose, Calif. 95125

Continuation of Ser. No. 165,001, Jun. 30, 1980, abandoned. This application Jan. 30, 1985, Ser. No. 896,353

The portion of the term of this patent subsequent to Apr. 23, 2008, has been disclaimed.

Int. Cl.[5] **G01N** *33/573*

U.S. Cl. 435—7.4 **13 Claims**

1. In a two-site immunometric sandwich assay method for the detection and measurement of an analyte of interest in a test sample, said analyte of interest having at least two immunochemically differing binding sites, comprising (a) immobilizing a first antibody capable of binding to one said at least two binding sites of said analyte of interest, by binding said first antibody to a solid material, (b) reacting said bound first antibody with a test sample suspected of containing said analyte of interest, to form a reaction medium comprising a liquid phase and a solid phase which medium includes a bound complex of said solid material to said first antibody and said first antibody to any reactants in said test sample which immunochemically bind thereto, (c) separating the solid phase from the liquid phase of the reaction medium, (d) reacting said solid phase, in a second reaction medium, with a second antibody capable of binding to another of said at least two binding sites of said analyte of interest, said second antibody being tagged with a means for making said tagged antibody detectable, (e) separating the solid phase portion of said second reaction medium from the liquid phase portion thereof, and (f) testing said solid portion to detect the quantity of said second antibody therein as an indication of the presence of said analyte of interest, the improvement wherein

each of said first and second antibodies have been raised against a material other than said analyte of interest and each is capable of cross-reacting with one of said binding sites of said analyte of interest, and

said analyte of interest and said materials other than said analyte of interest against which said first and second antibodies have been raised are three different but related molecules, wherein said other materials may be representationally depicted as AA and CC, where A and C are binding site on the materials, and said analyte of interest is a hybrid AC of the other two materials, and wherein the molecular structure of the A binding sites in AA and AC, and the C binding sites in CC and AC are sufficiently similar to permit cross reaction therebetween by antibodies raised against either material, said first and second antibodies being selected such that they will not both cross-react with any analyte in the test sample other than said analyte of interest.

5,009,998

METHOD FOR PERFORMING HETEROGENEOUS IMMUNOASSAY

Allan T. Chow, Wilmington, Del., and Michael A. G. Luddy, West Chester, Pa., assignors to E. I. Du Pont de Nemours and Company, Wilmington, Del.

Continuation-in-part of Ser. No. 66,583, Jun. 26, 1987, abandoned. This application Nov. 3, 1987, Ser. No. 115,506

The portion of the term of this patent subsequent to Nov. 20, 2007, has been disclaimed.

Int. Cl.[5] **G01N** *33/53, 33/543, 33/545;* **C12N** *11/00*

U.S. Cl. 435—7.92 **3 Claims**

1. A method of performing a heterogeneous immunoassay on a sample for the determination of a biological analyte, using a solid support defining a container capable of the reversible immobilization of binding partners of the analyte, comprising the steps of:

coating substantially all of the interior of the support with a binding partner of the analyte,

introducing the sample and an anti-analyte-label conjugate into the support,

capping the support,

agitating the support end-over-end in a controlled temperature environment for a controlled time to subject substantially all of the interior of the support to a thin layer of the sample and conjugate to form a labelled complex bound to such coating, thereby to reduce the diffusion time required for all portions of the sample and anti-analyte-label conjugate to come in contact with the support, separating non-reacted components of the sample and anti-analyte-label conjugate from the support,

releasing the label complex from the coating using salts or organic bases, and

measuring the activity of the label.

5,009,999

METHOD FOR BIODEGRADING PCBS

Lawrence H. Bopp, Scotia, N.Y., assignor to General Electric Company, Schenectady, N.Y.

Division of Ser. No. 866,501, May 23, 1986, Pat. No. 4,843,009. This application Mar. 20, 1989, Ser. No. 325,739

Int. Cl.[5] **C12Q** *1/02;* **C10G** *17/00, 45/00*

U.S. Cl. 435—29 **9 Claims**

1. An enrichment procedure for isolating microorganisms capable of biodegrading PCB cogeners which comprises,

(1) cogeners selected from the class of cogeners free of vicinal hydrogen atoms, cogeners having unchlorinated 2,3 positions, cogeners having unchlorinated 3,4 positions, and cogeners unchlorinated in both 2,3 and 3,4 positions,

(2) agitating under aerobic conditions for a period of at least 24 hours and at a temperature of from about 15° C. to 37° C. a mixture comprising

(a) a PCB contaminated environmental sample

(b) mineral salts medium,

(c) biphenyl, and

(d) a monochlorobiphenyl-containing PCB mixture having at least 15% by weight chlorine,

(3) making several serial dilutions of the mixture of (2) at concentrations of 10^{-2} to 10^{-6},

(4) plating aliquots of the dilutions on solid medium containing biphenyl as sole carbon and energy source, and

(5) selecting clones.

5,010,000

METHOD FOR THE PREPARATION OF A SELECTED PROTEIN OR A PART THEREOF IN BACILLUS STRAIN BACTERIA

Ilkka Palva, Helsinki, Finland, assignor to Genesit Oy and Oy Alko AB, both of Helsinki, Finland

Continuation of Ser. No. 520,036, Aug. 3, 1983, abandoned, which is a continuation-in-part of Ser. No. 336,405, Dec. 31, 1981, abandoned. This application Nov. 30, 1987, Ser. No. 129,356

Claims priority, application Finland, Dec. 31, 1980, 804081

Int. Cl.[5] **C12P** *21/00;* **C12N** *15/00, 1/20, 9/86*

U.S. Cl. 435—69.1 **8 Claims**

1. A method for the preparation of a selected protein or polypeptide in Bacillus strain bacteria by joining DNA coding for the selected protein or polypeptide to a bacterium gene, comprising the successive steps of:

(1) cleaving the *Bacillus amyloliquefaciens* gene for α-amylase at a location to the 3′ side of the excretion signal downstream from the regulation signal of the α-amylase gene or at a location downstream from a portion of the DNA sequence essential with respect to excretion of the α-amylase protein;

(2) joining the cleaved gene to a plasmid present in Bacillus strain bacteria;

(3) joining the DNA sequence coding for the selected protein or polypeptide to the cleavage site;

(4) transforming the Bacillus strain host bacteria with the recombinant DNA molecules so obtained; and

(5) cultivating the transformed host bacteria for producing the selected protein or polypeptide.

5,010,001

PREPARATION OF NATURAL OR MODIFIED INSECT TOXINS

Thomas J. Pollock, San Diego, Calif., assignor to Syntro Corporation, Lenexa, Kans.

Continuation-in-part of Ser. No. 573,535, Jan. 25, 1984, abandoned, which is a continuation-in-part of Ser. No. 466,744, Feb. 13, 1983, abandoned. This application Mar. 28, 1985, Ser. No. 717,043

Int. Cl.[5] **C12N** *1/21, 15/00, 15/32*

U.S. Cl. 435—69.1 **7 Claims**

1. A method for producing *B. thuringiensis* delta-endotoxin in enhanced amounts which comprises:

growing transformed *E. coli* in an appropriate nutrient medium, wherein said *E. coli* are transformed with an expression vector containing the intact structural gene encoding said delta-endotoxin and 3′ and 5′ flanking regions which do not extend beyond the proximal HincII sites; and

isolating the expressed delta-endotoxin.

5,010,002

HUMAN T-PA PRODUCTION USING VECTORS CODING DHFR PROTEIN

Arthur Levinson, Burlingame; Christian Simonsen, and Elizabeth M. Yelverton, both of San Jose, all of Calif., assignors to Genentech, Inc., San Francisco, Calif.

Continuation of Ser. No. 149,990, Jan. 27, 1988, abandoned, which is a continuation of Ser. No. 459,153, Jan. 19, 1983, abandoned. This application Mar. 22, 1990, Ser. No. 499,209

Int. Cl.[5] **C12N** *15/00, 5/16;* **C12P** *21/02*

U.S. Cl. 435—69.2 **11 Claims**

1. An expression vector which comprises:

a first DNA sequence encoding a DHFR protein; and

a second DNA sequence encoding human tPA;

wherein each of said first and second sequences is operably linked to a DNA sequence capable of effecting its expression.

5,010,003

USE OF YEAST HOMOLOGOUS SIGNALS TO SECRETE HETEROLOGOUS PROTEINS

Chung N. Chang, San Mateo; Ronald A. Hitzeman, Pacifica, and Mark D. Matteucci, San Francisco, all of Calif., assignors to Genentech, Inc., South San Francisco, Calif.

Continuation of Ser. No. 488,387, Apr. 25, 1983, abandoned. This application Jun. 20, 1990, Ser. No. 541,186

Int. Cl.[5] **C12P** *21/00, 21/02;* **C12N** *15/00*

U.S. Cl. 435—69.9 **11 Claims**

1. A yeast expression vehicle comprising the DNA sequence of a yeast promoter operably linked to a DNA sequence encoding a homologous yeast signal peptide, the final codon of the signal peptide being connected in translation reading frame to a DNA sequence encoding a protein heterologous to the yeast organism, provided that said homologous yeast signal peptide is sufficient, upon expression of a fusion protein containing said signal peptide and heterologous protein, to result in the processing and export of mature heterologous protein into the culture medium of yeast organisms transformed with said vehicle, said heterologous protein being completely processed to the mature form.

5,010,004

METHOD FOR CONTINUOUS REACTION WITH FLUIDIZED IMMOBILIZED LIPASE

Yoshitsuga Kosugi; Hideoki Tanaka, both of Tsukuba; Hideo Suzuki, Tokyo, and Masaru Shiraki, Tsukuba, all of Japan, assignors to Agency of Industrial Science & Technology and Ministry of International Trade & Industry, both of Tokyo, Japan

Filed Oct. 11, 1988, Ser. No. 255,599
Claims priority, application Japan, Oct. 9, 1987, 62-255057
Int. Cl.[5] C12P *7/64;* C12N *11/08, 9/20;* C12M *1/40*
U.S. Cl. 435—134 13 Claims

1. A method for continuous reaction of a water-soluble substrate and an oily substrate in the presence of fluidized immobilized lipase, which comprises:

(a) providing a reaction vessel having (i) vertically maintained apart upper and lower conically-shaped separation regions, respectively, for separation of a water-soluble product and an oily product, (ii) a plurality of lipase reaction zones each containing immobilized lipase capable of being fluidized and containing therein agitating means and (iii) a plurality of intermediate separation zones for separation of an oily substance and a water-soluble substance, said lipase reaction zones and said intermediate separation zones being disposed alternately between said upper and lower conically-shaped separation regions, and boundaries between said lipase reaction zones and intermediate separation zones being pervious to liquid but impervious to said immobilized lipase;

(b) feeding said water-soluble substrate into a lower part of the upper conically-shaped separation region and said oily substrate into an upper part of the lower conically-shaped separation region;

(c) passing said water-soluble substrate and said oily substrate in counterflow contact through said lipase reaction zones and said intermediate separation zones whereby said immobilized lipase in a fluidized contact with said oily substrate and said water-soluble substrate state comes into mutual; and

(d) recovering oily product-containing liquid from an upper part of said upper conically-shaped separation region and water-soluble product-containing liquid from a lower part of said lower conically-shaped separation region.

5,010,005

BIO-OXIDATION OF HIGH ALCOHOLS IN NON-AQUEOUS REACTION MEDIA

Sheldon J. B. Duff, 35 Merritt Ave., Ottawa, Ontario, Canada K1S 0J5 , and William D. Murray, 868 Champman Blvd., Ottawa, Ontario, Canada K1G 1V2

Filed Apr. 24, 1990, Ser. No. 513,765
Claims priority, application Canada, Apr. 28, 1989, 599191
Int. Cl.[5] C12R *1/84;* C12P *7/24*
U.S. Cl. 435—147 18 Claims

1. A method of oxidizing poorly water soluble aliphatic alcohols and aromatic alcohols to their corresponding aldehydes comprising contacting the alcohol with methanol-induced methylotrophic yeast alcohol oxidase in a biphasic reaction medium which comprises an organic phase component and an aqueous phase component such that the alcohol is partitioned between the phases and the aldehyde is partitioned in the organic phase, the volume of aqueous phase being small relative to the volume of organic phase.

5,010,006

LIPASE IMMDOILIZED BY CROSS-LINKING WITH INERT PROTEIN FOR GLYCERIDE SYNTHESIS

Francoise Ergan; Michael Trani, both of Montreal, and Gérald Andre, Ile Bizard, all of Canada, assignors to Her Majesty the Queen in Right of Canada as represented by the National Research Council of Canada, Ottawa, Canada

Filed Aug. 11, 1988, Ser. No. 231,221
Int. Cl.[5] C12N *11/02, 11/00;* C12P *7/64*
U.S. Cl. 435—177 16 Claims

1. A dry porous macromolecular matrix comprising a cross-linked mixture of 69.9 to 86.6% by weight of an inert protein and 0.4 to 10.2% by weight of a lipase enzyme and a cross-linking agent, the amount of cross-linking agent being about 11.7 to 23% by weight, said matrix being obtained by a process comprising:

(i) adding to a buffer solution about 50 to 440 μl lipase enzyme, about 5% inert protein and about 0.75 to 1.5% bifunctional cross-linking agent and allowing the resultant mixture to react;

(ii) freezing the resulting reacted mixture at a temperature ranging between −20° C. and −195° C.;

(iii) allowing the frozen mixture to thaw to a temperature ranging from 4° to 25° C.; and

(iv) rinsing and drying the resulting product at room temperature to produce said dry porous macromolecular matrix.

5,010,007

COMPOSITION FOR REMOVING OXYGEN IN FOODSTUFF AND DRINKS

Jean-Paul Prieels; Charles Maschelein, and Marc Heilporn, all of Brussels, Belgium, assignors to Synfina-Oleofina, Brussels, Belgium

Division of Ser. No. 863,269, May 14, 1986, Pat. No. 4,957,749. This application Mar. 12, 1990, Ser. No. 492,031
Int. Cl.[5] C12N *9/04, 9/08*
U.S. Cl. 435—190 3 Claims

1. An enzyme composition for removing molecular and free-radical oxygen from oxidizable foodstuff materials, comprising:

(a) from about 0.1 to about 1 ppm/l of medium of an oxidase,

(b) from about 0.05 to about 2%, based on the medium, of a substrate corresponding to the oxidase,

(c) from about 2,000 to about 20,000 units/l of medium of catalase, and

(d) from about 0.3 to about 1.5 ppm of superoxide dismutase.

5,010,008

STABLE LIQUID ENZYME CONCENTRATE AND PROCESS FOR ITS PRODUCTION

Phillip J. Brumm, Lake Zurich, Ill., assignor to Enzyme Bio-Systems Ltd., Englewood Cliffs, N.J.

Filed Dec. 12, 1988, Ser. No. 282,644
Int. Cl.[5] C12N *9/28*
U.S. Cl. 435—202 12 Claims

1. A process for producing a stable liquid enzyme concentrate containing the alpha-amylase from *Bacillus stearothermophilus* which consists essentially of the steps of:

(a) mixing an aqueous solution of *Bacillus stearothermophilus* alpha-amylase enzyme with granular starch to adsorb the alpha-amylase enzyme;

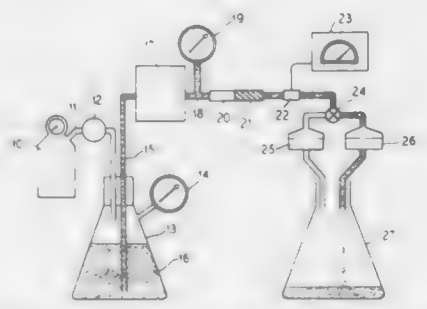
(b) separating the starch, containing adsorbed alpha-amylase enzyme, from the aqueous solution;

(c) washing the starch containing adsorbed alpha-amylase enzyme;

(d) forming a slurry of the starch containing adsorbed alpha-amylase enzyme in a buffer solution containing calcium ion;

(e) heating the slurry of Step (d) above the gelatinization temperature of the starch to form a solution of the alpha-amylase enzyme and starch hydrolyzate;

(f) separating the solution formed in Step (e) from any insoluble solid; and



(g) concentrating the solution obtained in Step (f).

5,010,009

MATERIAL FOR CELL ATTACHMENT AND GROWTH

John Steele, North Rocks; Oddvar Johansen, Mulgrave; Graham Johnson, Peakhurst, and Johnathon Hodgkin, Burwood, all of Australia, assignors to Commonwealth Scientific & Industrial Research Organisation & Telectronics Pty. Limited, Australia

PCT No. PCT/AU89/00356, § 371 Date May 9, 1990, § 102(e) Date May 9, 1990, PCT Pub. No. WO90/02145, PCT Pub. Date Mar. 8, 1990
PCT Filed Aug. 22, 1989, Ser. No. 477,884
Claims priority, application Australia, Aug. 22, 1988, PJ0020
Int. Cl.[5] C12N *5/02;* A61K *47/00*
U.S. Cl. 435—240.243 17 Claims

15. A method of promoting cell attachment and growth on a surface, said method comprising the steps of:

(a) preparing a surface by:

(i) grafting polyacrylic acid chains to a fluorocarbon polymer substrate so that the weight of the fluorocarbon polymer substrate increases by between 0.1% and 20%,

(ii) treating the fluorocarbon polymer surface produced by step (i) with concentrated sulphuric acid at a sufficiently high temperature and for a sufficient time to separately decarboxylate, aromatize and sulphonate an effective proportion of the grafted polyacrylic acid chains,

(iii) drying the surface produced by step (ii),

(iv) soaking the surface produced by step (iii) in a concentrated acid,

(v) neutralizing the surface produced by step (iv); and

(b) exposing said surface to cells.

5,010,010

PRODUCTION OF HUMAN PARATHYROID HORMONE FROM MICROORGANISMS

Kaare M. Gautvik, Oslo; Peter Alestrom, Sollihogda; Tordis B. Oven, and Odd S. Gabrielsen, both of Oslo, all of Norway, assignors to Selmer-Sande, A.S., Norway

Continuation of Ser. No. 921,684, Oct. 22, 1986, abandoned. This application Aug. 14, 1989, Ser. No. 393,851
Int. Cl.[5] C12P *21/00, 21/02;* C12N *1/20, 5/00*
U.S. Cl. 435—252.3 38 Claims

1. A DNA sequence encoding Saccharomyces mating factor alpha 1 operably linked to human parathyroid hormone wherein said DNA sequence can stably transform a yeast cell to express and secrete an intact human parathyroid hormone.

5,010,011

BOVINE PLACENTAL LACTOGEN GENE

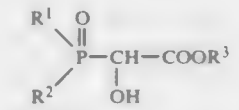
Linda A. Schuler, Madison; Jack Gorski, Middleton, both of Wis.; Walter L. Hurley, Urbana, Ill.; Robert D. Bremel, Madison, Wis., and Fritz M. Rottman, Pepper Pike, Ohio, assignors to Wisconsin Alumni Research Foundation, Madison, Wis.

Continuation-in-part of Ser. No. 717,078, Mar. 28, 1985, Pat. No. 4,767,711. This application Apr. 21, 1988, Ser. No. 184,901
The portion of the term of this patent subsequent to Aug. 30, 2005, has been disclaimed.
Int. Cl.[5] C12N *15/00, 15/16, 15/63*
U.S. Cl. 435—252.3 3 Claims

1. A recombinant vector, comprising:

a vector; and

a foreign cDNA sequence coding for bovine placental lactogen which has been inserted into said vector; wherein the bovine placental lactogen is one coded for by a bovine gene portion of pbPL1078.



5,010,012

PROCESS FOR THE ENZYMATIC PREPARATION OF OPTICALLY ACTIVE PHOSPHORUS CONTAINING FUNCTIONAL ACETIC ACID DERIVATIVES

Dieter Wullbrandt, Hofheim am Taunus; Reinhold Keller, Bad Soden am Taunus; Merten Schlingmann, Königstein/Taunus; Wolfgang Holla, Hofheim am Taunus, and Manfred Schneider, Wuppertal, all of Fed. Rep. of Germany, assignors to Hoechst Aktiengesellschaft, Frankfurt am Main, Fed. Rep. of Germany

Filed Aug. 12, 1988, Ser. No. 231,290
Int. Cl.[5] C12P *7/00*
U.S. Cl. 435—280 7 Claims

1. A process for resolving the racemate of a compound of the formula I

I

in which R^1 and R^2 are C_1 to C_4 alkyl, and

R^3 is C_1 to C_{18} alkyl,

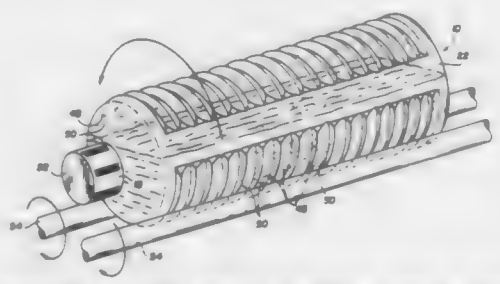
which comprises incubation of the said compound in aqueous or aqueous-organic medium with an esterase, lipase or esterase and lipase.

5,010,013

ROLLER BOTTLE FOR TISSUE CULTURE GROWTH

Jonathan M. Serkes, Oak View, and William L. Foschaar, Camarillo, all of Calif., assignors to In Vitro Scientific Products, Inc., Ventura, Calif.

Continuation-in-part of Ser. No. 130,740, Dec. 9, 1987, Pat. No. 4,824,787. This application Jun. 2, 1988, Ser. No. 201,429
The portion of the term of this patent subsequent to Apr. 25, 2006, has been disclaimed.
Int. Cl.[5] C12M *3/04*
U.S. Cl. 435—285 25 Claims



1. A roller bottle for tissue culture growth comprising in combination:

a substantially cylindrical wall section having a central axis and containing a pleated segment having an upper edge and a lower edge;

the pleated segment including at least one unpleated, axial panel for forming a drain channel for emptying the contents of the bottle, a plurality of unpleated, axial support ribs, each rib being narrower than said panel and a plurality of pleats disposed crosswise to the axis of the bottle, each of the pleats containing an outer rim disposed in a common cylindrical plane and forming a trough on the inside surface of the segment;

each of the panels being connected to said troughs, being disposed no nearer to said central axis than said common cylindrical plane and extending substantially from the upper edge to the lower edge of the cylindrical segment said panels and support ribs forming at least 5% of the circumference of cylindrical wall section;

said roller bottle having an inner surface area at least 110% the surface area of a roller bottle having an unpleated

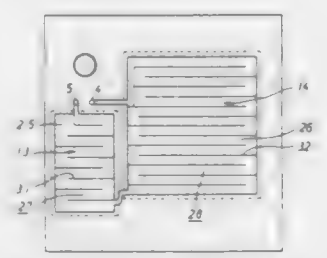
cylindrical segment having the same external diameter said roller bottle having an interior surface that has been radiation treated to be wettable for cell attachment and growth;

a top section of the bottle having a neck connected to the cylindrical wall section; and

a bottom section of the bottle connected to the cylindrical wall section.

5,010,014

PERIFUSION APPARATUS FOR CULTURING LIVING CELLS AND PERIFUSION CULTURING PROCESS



Rolf Gebhardt, Dornäckerweg 13,, 7400 Tübingen 7, Fed. Rep. of Germany

Continuation of Ser. No. 886, Jan. 6, 1987, abandoned. This application Nov. 21, 1989, Ser. No. 441,338

Claims priority, application Fed. Rep. of Germany, Jan. 10, 1986, 3600487

Int. Cl.[5] **C12M** *1/14*

U.S. Cl. 435—310 **5 Claims**

1. A perifusion culture apparatus comprising:

a horizontal assembly for vertical culturing modules each of flat rectangular configuration having opposite broad faces and comprising between said faces:

an oxygenation chamber subdivided by a gas permeable wall parallel to said faces into an oxygen compartment and a liquid culture medium compartment provided internally with means defining an upwardly extending meandering gas path and a downwardly extending meandering liquid path in counterflow to said gas path, respectively,

a culture chamber adjacent and coplanar with said oxygenation chamber and subdivided by a gas permeable wall parallel to said faces into a gas compartment and a culturing compartment, respectively,

a culture support removably received in said culturing compartment lying parallel to said faces and removable from said module with a culture thereon,

an inlet passage for an oxygen containing gas communicating with an upper part of said gas compartment, said gas compartment communicating at a bottom thereof with said oxygen compartment of said oxygenation chamber,

an outlet passage connected to an upper portion of said oxygen compartment of said oxygenation chamber,

a pump on said module connected to said liquid culture medium compartment of said oxygenation chamber for delivering a liquid culture medium to be oxygenated to said liquid culture medium compartment at an upper part thereof,

means in said module for connecting a lower portion of said liquid culture medium compartment with said culturing compartment and for distributing an oxygenated culture medium all across a bottom of said culturing compartment, whereby said oxygenated medium passes upwardly therein and completely fills said culturing compartment,

means for removing said culture medium communicating with said culturing compartment at a top thereof, and

passages for a thermal fluid formed in said module;

a respective thermal control device connected with said passages for said thermal fluid coextensive with each of said modules and lying along and in surface contact with one of said faces, thereby controlling temperature in said chambers of the respective module;

means including plug connections for detachably interconnecting said pumps of the stacked modules and the passages thereof for jointly feeding said modules with oxygen containing gas and with said thermal fluid and for removing gas and said thermal fluid from the stack, whereby individual modules of said stack are removable therefrom and replaceable thereon; and

a motor mounted on said stack for driving said pumps through the plug connections interconnecting said pumps.

5,010,015

RECOMBINANT DNA-MOLECULES AND METHOD FOR PROTEIN PRODUCTION

Ilkka Palva, Helsinki, Finland, assignor to Genesit Oy and Oy Alko AB, both of Helsinki, Finland

Continuation of Ser. No. 939,244, Dec. 5, 1986, abandoned, which is a continuation of Ser. No. 336,405, Dec. 31, 1981, abandoned. This application Nov. 30, 1987, Ser. No. 129,357

Claims priority, application France, Dec. 31, 1980, 804081

Int. Cl.[5] **C12P** *21/00;* **C12N** *15/00, 1/20, 9/86*

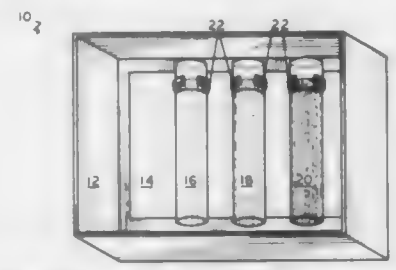
U.S. Cl. 435—320 **6 Claims**

1. A recombinant DNA molecule comprising a plasmid which is capable of multiplying in Bacillus strain bacteria, the regulation and secretion signal sequences of the α-amylase gene of *B. amyloliquefaciens*, and the DNA sequence encoding the amino acids of a desired protein or polypeptide, said DNA sequence being downstream of said secretion signal sequence, with the proviso that said desired protein is not α-amylase of *B. amyloliquefaciens*.

5,010,016

METHOD AND TEST KIT FOR THE DETERMINATION OF FETAL PULMONARY MATURITY STATUS

Anthony J. Sbarra, 54 Cypress Rd., Milton, Mass. 02186



Filed Aug. 9, 1989, Ser. No. 391,411

Int. Cl.[5] **B01L** *3/14;* **G01N** *21/76, 33/48, 33/92*

U.S. Cl. 436—63 **12 Claims**

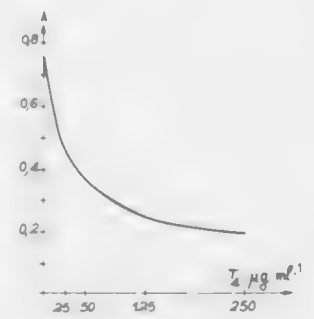
1. A method for the determination of fetal pulmonary maturity from an amniotic fluid test sample, which method comprises:

visually comparing a pigment-free amniotic fluid test sample from a patient to a positive control sample which mimics an optical density (OD) of about 0.80 at 650 nm which indicates fetal pulmonary maturity and a negative control sample which mimics an optical density (OD) of about 0.50 at 650 nm which indicates fetal pulmonary immatu-

rity and from said comparing providing an indication of the fetal pulmonary status of the fetus.

5,010,017

PROCESS FOR THE IMMUNOLOGICAL QUANTITATIVE DETERMINATION OF T_3 AND/OR T_4 THYROID HORMONES, USING THYROGLOBULIN



Bernard Ferrua, Nice, and Claude Moulin, Bagnols sur Ceze, both of France, assignors to Compagnie Oris Industrie S.A., France

Division of Ser. No. 48,060, May 11, 1989, Pat. No. 4,966,838. This application Aug. 17, 1990, Ser. No. 569,396

Claims priority, application France, May 12, 1986, 86 06763

Int. Cl.[5] **G01N** *33/53;* **C12Q** *1/00*

U.S. Cl. 436—500 **5 Claims**

1. A kit for the quantitative determination of T_4 thyroxine, which comprises:

a series of tubes each comprising a solid phase coated under the same conditions with thyroglobulin, wherein thyroglobulin is first fixed on a solid support,

a series of flasks containing standard samples of thyroxine, and

a flask containing a labelled anti-T_4 antibody.

5,010,018

METHOD FOR FORMING SCHOTTKY PHOTODIODES

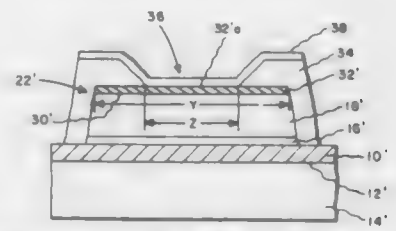
Kenneth J. Polasko, Latham, and Ivan L. Wemple, Schenectady, both of N.Y., assignors to General Electric Company, Schenectady, N.Y.

Division of Ser. No. 369,405, Jun. 21, 1989, Pat. No. 4,982,246. This application Sep. 24, 1990, Ser. No. 586,920

Int. Cl.[5] **H01L** *31/376*

U.S. Cl. 437—3 **11 Claims**

1. A method for fabricating a Schottky photodiode, comprising the steps of:



(a) depositing a first layer of conductive material on a principal substrate surface to form a base electrode;

(b) depositing a first layer of semiconductor material having a selected conductivity on the base electrode;

(c) depositing at leest a second layer of semiconductor material on the first semiconductor layer;

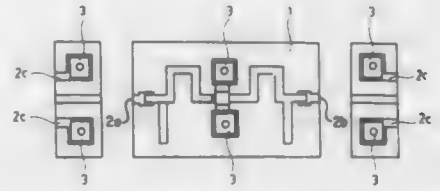
(d) depositing at least a second layer of conductive material on the second semiconductor layer;

(e) selectively patterning the second conductive layer and the first and second semiconductor layers with the same mask to form each of at least one Schottky photodiode island; and

(f) providing another electrode contacting the second conductive layer.

5,010,019

METHOD OF MAKING A SEMICONDUCTOR DEVICE OPERATING IN HIGH FREQUENCY RANGE



Takayuki Katoh, Hyogo, Japan, assignor to Mitsubishi Denki Kabushiki Kaisha, Tokyo, Japan

Division of Ser. No. 426,926, Oct. 26, 1989, which is a division of Ser. No. 81,709, Aug. 3, 1987, Pat. No. 4,926,234. This application Apr. 24, 1990, Ser. No. 513,642

Claims priority, application Japan, Aug. 6, 1986, 61-185715

Int. Cl.[5] **H01L** *21/60, 21/66*

U.S. Cl. 437—8 **8 Claims**

1. A method of manufacturing a semiconductor device operating in a high frequency range, said method comprising:

a step of preparing a semiconductor substrate (1) having a major surface and including integrated circuits;

a step of forming an input electrode pad (2*a*) on said major surface of said semiconductor substrate (1) to be connected with said integrated circuits;

a step of forming an output electrode pad (2*b*) on said major surface of said semiconductor substrate (1) to be connected with said integrated circuits;

a step of forming grounding electrode pads (2*c*) on said major surface of said semiconductor substrate (1) for grounding said semiconductor substrate (1) in a high frequency characteristic test; and

a step of removing parts of said semiconductor substrate (1) including parts of said input electrode pad (2*a*) and said output electrode pad (2*b*) and said grounding electrode pads (2*c*) after said high frequency characteristic test.

5,010,020

QUICK COLOR TEST TO DETECT LEAD RELEASE FROM GLAZE AND ENAMEL COATINGS

John H. Gould, Silver Spring, Md., assignor to The United States of America as represented by the Department of Health and Human Services, Washington, D.C.

Continuation-in-part of Ser. No. 264,041, Oct. 28, 1988, Pat. No. 4,873,197. This application Oct. 6, 1989, Ser. No. 418,283

Int. Cl.[5] **G01N** *31/22*

U.S. Cl. 436—77 **22 Claims**

1. A kit for detecting the presence of excessive lead in a glaze or enamel coating, the kit comprising:

precut pieces of an absorbent paper;

an aqueous solution of a suitable acid;

distilled or deionized water; and

a chromogen which visibly changes colors when excessive lead is present in said coating.

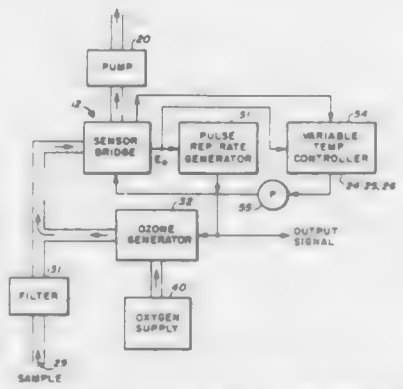
7. A method for determining the presence of excessive amounts of lead in a surface, which comprises:

extracting lead from said surface by contacting said surface with an absorbent material containing a solution of a material selected from the group consisting of formic acid, citric acid, and mixtures thereof;

spotting said absorbent material with a chromogen; and

detecting a change in colors of said absorbent material.

5,010,021



METHOD FOR RESTORING THE SENSING CAPACITY OF AN ELECTRICAL SENSOR

William E. Bell, and John J. McNerney, both of Jerome, Ariz., assignors to Arizona Instrument Corp., Tempe, Ariz.

Division of Ser. No. 735,484, May 20, 1985, Pat. No. 4,724,008, which is a continuation-in-part of Ser. No. 529,578, Sep. 6, 1983, abandoned. This application Jan. 21, 1988, Ser. No. 146,419

Int. Cl.[5] G01N *27/08*

U.S. Cl. 436—120 **4 Claims**

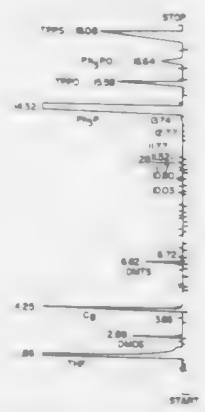
1. A method of detecting the presence of a reduced sulfur compound component in a fluid mixture which comprises selectively adsorbing the reduced sulfur compound from the mixture onto a thin layer of a metal having a chemical affinity for the sulfur component;

detecting the resistance of the layer consequent to the adsorption for detecting the presence of the selected sulfur component; and

oxidizing and evolving the sulfur component from the metal having the chemical affinity for the sulfur component in the presence of ozone to maintain the sensitivity of the metal to the adsorbed component.

5,010,022

METHOD FOR DETERMINING SULFUR LOADING IN ORGANIC POLYSULFIDES



Michael J. Lindstrom, Downingtown, Pa., assignor to Atochem North America, Inc., Philadelphia, Pa.

Filed Nov. 2, 1989, Ser. No. 430,757

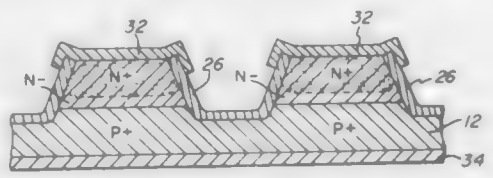
Int. Cl.[5] C01N *30/00*

U.S. Cl. 436—123 **16 Claims**

14. A method for determining the amount of sulfur contained in a dimethylpolysulfide composition having more than 5 sulfur atoms, comprising combining the dimethylpolysulfide composition with a treating solution comprising triphenylphosphine, tetrahydrofuran, octane and triphenylphosphate; allowing the combination to stand for a period of time sufficient to allow the dimethypolysulfide and the triphenylphosphine to react; and analyzing the combination by gas chromatography.

5,010,023

METHOD FOR FABRICATING A RECTIFYING SEMICONDUCTOR JUNCTION HAVING IMPROVED BREAKDOWN VOLTAGE CHARACTERISTICS



Willem G. Einthoven, Belle Mead, N.J., and Muni M. Mitchell, Huntington, N.Y., assignors to General Instrument Corporation, New York, N.Y.

Division of Ser. No. 142,737, Nov. 11, 1988, Pat. No. 4,891,685, which is a division of Ser. No. 784,451, Oct. 4, 1985, Pat. No. 4,740,477. This application Sep. 27, 1989, Ser. No. 404,604

The portion of the term of this patent subsequent to Apr. 26, 2005, has been disclaimed.

Int. Cl.[5] H01L *21/66, 21/22*

U.S. Cl. 437—8 **12 Claims**

1. A method for fabricating a rectifying semiconductor junction having improved breakdown voltage characteristics comprising the steps of:

forming a mesa shape in at least one layer of a rectifying semiconductor junction with the top of the mesa at the top surface of said layer and the side wall of the mesa sloping outwardly from the top of the mesa toward said junction,

forming a high concentration semiconductor region in the top surface of said layer, said region having the same conductivity type as said layer and covering an area sufficient to extend entirely across the top of said mesa to intersect the mesa side wall; and

driving said high concentration region from the top of said mesa deeper into said layer but not beyond the base of said mesa, relying on the outward slope of the mesa geometry to cause the high concentration region to take on a generally concave shape as it penetrates into the mesa, with the distance between the high concentration region and the junction being greater at the intersection of said region with the sloping walls of the mesa than in the central portion of said mesa.

5,010,024

PASSIVATION FOR INTEGRATED CIRCUIT STRUCTURES

Bert L. Allen, Los Altos; Peter S. Gwozdz, Cupertino, both of Calif., and Thomas R. Bowers, Austin, Tex., assignors to Advanced Micro Devices, Inc., Sunnyvale, Calif.

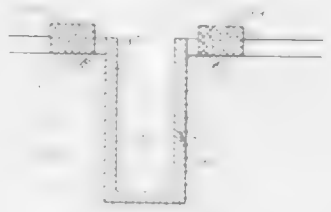
Division of Ser. No. 21,828, Mar. 4, 1987, abandoned. This application May 15, 1989, Ser. No. 353,169

Int. Cl.[5] H01L *21/425, 21/441*

U.S. Cl. 437—24 **30 Claims**

1. A method for producing an integrated circuit structure encapsulated in a layer of silicon nitride to provide resistance to penetration by moisture and ion contaminants and further characterized by a substantial absence of observable voids in an underlying metal layer which comprises a portion of said integrated circuit structure, said method comprising the step of: stress relieving the underlying metal layer from stresses induced by the compressive stress of said silicon nitride encapsulating layer by implanting the metal surface of said metal layer, before encapsulating said structure with said silicon nitride layer, with ions to change the grain structure adjacent the surface of said metal layer.

5,010,025



METHOD OF MAKING TRENCH JFET INTEGRATED CIRCUIT ELEMENTS

Allen L. Solomon, Fullerton, Calif., assignor to Grumman Aerospace Corporation, Bethpage, N.Y.

Filed Apr. 3, 1989, Ser. No. 331,952

Int. Cl.[5] H01L *21/265*

U.S. Cl. 437—29 **14 Claims**

1. A method of forming a trench gate JFET comprising:

forming a first trench in a semiconductor substrate of a first conductivity type;

forming a region of a semiconductor material of a second conductivity type within the substrate adjacent to the first trench;

forming a layer of semiconductor material of a first conductivity type within the first trench upon the surface of said semiconductor material of the second conductivity type, said layer of semiconductor material of the first conductivity type interfacing with said region of semiconductor material of the second conductivity type to form a p-n junction; and

forming source and drain regions within said substrate adjacent to said first trench, said gate and source regions being in contact with said region of semiconductor material of a second conductivity type.

5,010,026

PROCESS FOR MAKING BIPOLAR TRANSISTOR

Takayuki Gomi, Tokyo, Japan, assignor to Sony Corporation, Tokyo, Japan

Filed Aug. 10, 1989, Ser. No. 391,880

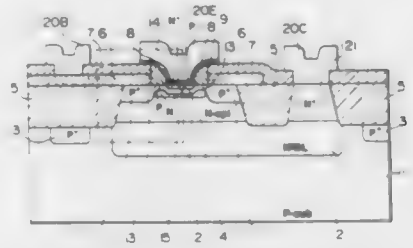
Claims priority, application Japan, Aug. 12, 1988, 63-201360

Int. Cl.[5] H01L *21/331*

U.S. Cl. 437—31 **3 Claims**

1. A process for fabricating a bipolar transistor comprising;

providing a semiconductor substrate of a first conductivity type,



forming an epitaxial layer on the surface said semiconductor substrate,

selectively oxidizing said epitaxial layer to form a field oxide layer surrounding a device forming region two-dimensionally,

forming a device forming region surrounded two-dimensionally by said field oxide film,

forming a base contact electrode layer confronted by said device forming region, said base contact electrode layer containing impurities and covered by an insulating layer,

opening said base contact electrode layer covered by said

insulating film to form an opening in said device forming region,

introducing impurities forming a linking base region and a diffusion suppressing region into said device forming region via said opening to a predetermined depth,

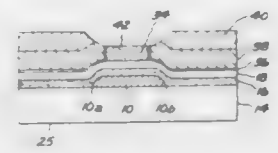
diffusing impurities from said base contact electrode layer by heat treatment to form a graft base region,

forming sidewall spacers on the side walls of said opening in said base contact electrode layer,

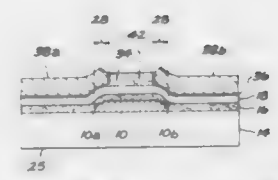
forming an intrinsic base region in contact with said linking base region and to a deeper diffusion depth than the diffusion depth of said linking base region, using said sidewall spacers as the mask, and

forming an emitter region in said intrinsic base region.

5,010,027



METHOD FOR FABRICATING A SELF-ALIGNED THIN-FILM TRANSISTOR UTILIZING PLANARIZATION AND BACK-SIDE PHOTORESIST EXPOSURE

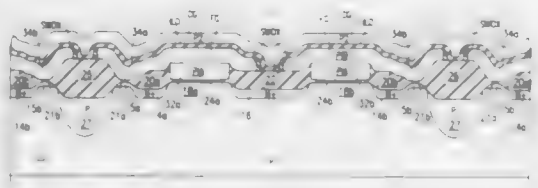


George E. Possin, and Wei Ching-Yeu, both of Schenectady, N.Y., assignors to General Electric Company, Schenectady, N.Y.

Filed Mar. 21, 1990, Ser. No. 499,733

Int. Cl.[5] H01L *29/78, 21/00*

U.S. Cl. 437—41 **23 Claims**



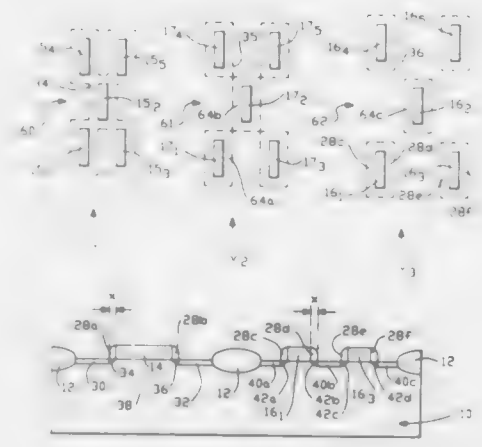
1. A method for fabricating a thin-film transistor, comprising the steps of:

(a) forming an opaque gate electrode on a principal surface of a transparent substrate;
(b) depositing a first layer of insulation material on the principal substrate surface over the gate electrode;
(c) depositing a layer of semiconductor material on the first insulation layer;
(d) depositing a second layer of insulation material on the semiconductor layer;
(e) selectively etching the second insulation layer to leave a remaining second insulation segment and to expose a portion of the semiconductor layer not covered by the remaining second insulation segment, the remaining second insulation segment being aligned with the gate electrode and being narrower than the gate electrode by a selected overlap distance on each side thereof;
(f) depositing a layer of doped semiconductor material on the exposed semiconductor portion and over the remaining second insulation segment;
(g) depositing a layer of conductive material on the doped semiconductor material; and
(h) selectively etching a portion of the conductive layer and a portion of the doped semiconductor layer to expose at least a top surface of the remaining second insulation segment and to form self-registered source and drain electrodes from the etched conductive layer which each overlap the gate electrode the selected overlap distance, said source and drain electrodes each terminating at said second insulation segment without overlap thereof.

5,010,028
METHOD OF MAKING HOT ELECTRON PROGRAMMABLE, TUNNEL ELECTRON ERASABLE CONTACTLESS EEPROM

Manzur Gill, Rosharon, and Sung-Wei Lin, Houston, both of Tex., assignors to Texas Instruments Incorporated, Dallas, Tex.

Filed Dec. 29, 1989, Ser. No. 458,936
Int. Cl.[5] H01L *21/265*
U.S. Cl. 437—43 **10 Claims**

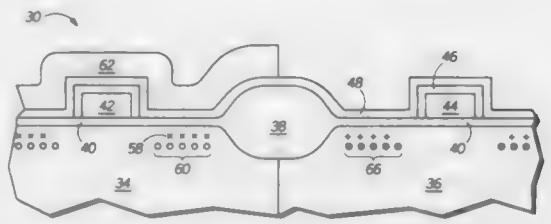


1. A method of fabricating an electrically erasable, electrically programmable read-only memory cell at the face of a semiconductor substrate of a first conductivity type, comprising the steps:
forming a first conductive layer and an underlying channel insulator layer over the face of the substrate;
selectively etching said first conductive layer and said channel insulator layer to define a plurality of parallel channel section columns;
using the channel section columns as an implant mask, selectively implanting a dopant of a second conductivity type opposite the first type to create a source and a drain bitline along respective sides of each channel section column, with respective source/drain bitline junctions substantially aligned with corresponding edges of a channel section column said source bitlines including tunnel window areas opposite said aligned source junction;
forming a thick insulator layer over said source and drain bitlines;
forming a thin tunnel window insulator layer over each tunnel window area;
forming a second conductive layer over the substrate face;
selectively etching said second conductive layer to define a plurality of parallel floating gate columns extending over said channel section column, said source bitline thick insulator layer and said tunnel window insulator layer, thereby defining floating gate conductors in the wordline row direction;
forming a thin interlevel insulator layer and a third conductive layer over the face of the substrate; and
stack etching said second and third conductive layers, and said interlevel insulator layer, to define parallel wordline rows, with each wordline row defining a row of memory cells;
such that each memory cell in a wordline row includes a control gate conductor formed by a corresponding portion of said third conductive layer, source and drain regions formed by corresponding portions of said source and drain bitlines underlying said control gate conductor, a tunnel window subregion formed by a corresponding portion of said tunnel window area underlying said control gate conductor, a floating gate conductor with a channel section formed by a corresponding portion of said channel section column and a tunnel window section formed by a corresponding portion of said second conductive layer overlying said tunnel window subregion.

5,010,029
METHOD OF DETECTING THE WIDTH OF SPACERS AND LIGHTLY DOPED DRAIN REGIONS

Yow-Juang (Bill) Liu, San Jose, and Zahra Hadjizadeh-Amini, Cupertino, both of Calif., assignors to Advanced Micro Devices, Inc., Sunnyvale, Calif.

Filed Feb. 22, 1989, Ser. No. 313,984
Int. Cl.[5] H01L *21/66*
U.S. Cl. 437—44 **11 Claims**

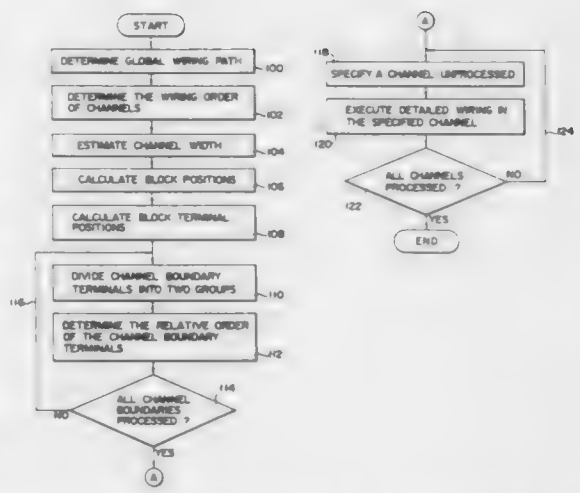


1. A process of fabricating, in a substrate, a field effect transistor having lightly-doped drain regions of a selected width, comprises the steps of:
(a) forming reference structures, separated by a known distance, overlying the substrate and forming a gate structure overlying the substrate;
(b) forming lightly-doped drain regions self-aligned with the ends of the gate structure in the substrate;
(c) forming a layer of spacer material overlying the substrate, the reference structures and the gate structure;
(d) etching the layer of spacer material to form spacers extending laterally from the ends of the gate structure and from the reference structures;
(e) determining when the spacers have the selected width by detecting when the spacer extending from each reference structure has a width approximately equal to approximately one-half of the distance between the reference structures; and
(f) forming source and drain regions self-aligned with the spacers in selected portions of the lightly-doped drain regions.

5,010,030
SEMICONDUCTOR PROCESS USING SELECTIVE DEPOSITION

James R. Pfiester, and James D. Hayden, both of Austin, Tex., assignors to Motorola, Inc., Schaumburg, Ill.

Filed Oct. 30, 1989, Ser. No. 428,721
Int. Cl.[5] H01L *21/265*
U.S. Cl. 437—192 **3 Claims**



1. A process for fabricating semiconductor devices comprising the steps of:
providing a semiconductor substrate having first and second surface areas of first and second conductivity type and having an insulator layer formed thereover;
forming first and second gate electrodes overlaying said first and second surface areas, respectively, and separated therefrom by said insulator layer;
forming a second insulator layer overlaying said first and second gate electrodes;
depositing a silicon layer overlaying said second insulator layer;
forming sidewall spacers at the edges of said first and second gate electrodes and overlaying said silicon surface;
forming a third insulator layer overlaying exposed portions of said silicon layer;
forming a mask overlaying said second surface region and exposing a portion of said third insulator overlaying said first surface region;
implanting ions of said second conductivity type into said first surface region using said first gate electrode, sidewall spacers, and mask as an implantation mask;
removing said sidewall spacers and said third insulator layer overlaying said first region;
implanting additional ions of said second conductivity type into said first surface region using said first gate electrode and said mask as an implantation mask;
removing said mask;
depositing a second masking material by selective deposition onto portions of said silicon layer not overlaid by said third insulator layer;
implanting ions of said first conductivity type into said second surface region using said sidewall spacers, said second gate electrode and said second masking material as implantation masks;
removing said third insulator and said sidewall spacers;
implanting additional ions of said second conductivity type into said second surface region using said second gate electrode and said second masking material as an etch mask; removing said masking material; and
removing said silicon layer.

5,010,031
AUTOMATIC WIRING METHOD FOR SEMICONDUCTOR INTEGRATED CIRCUIT DEVICES

Fumihiro Minami, Yokohama, Japan, assignor to Kabushiki Kaisha Toshiba, Kawasaki, Japan

Filed Jun. 29, 1989, Ser. No. 372,907
Claims priority, application Japan, Jun. 30, 1988, 63-160782
Int. Cl.[5] H01L *21/70*
U.S. Cl. 437—51 **9 Claims**

1. An automatic wiring method for a semiconductor integrated circuit device wherein function blocks selected to provide a desired logical function are arranged on a substrate, and channels are defined as a wiring region around the function blocks, said method comprising the steps of:
(a) providing tentative wirings between said function blocks in accordance with a connection requirement in said channels;
(b) detecting crossing points of corresponding wirings in each of boundary lines of said channels, the detected crossing points being defined as channel boundary terminals;
(c) specifying from said channels a certain pair of two neighboring channels which are coupled with each other so as to form a T-shaped crossing region, said two neighboring channels consisting of a first channel which is positioned between at least two corresponding function blocks and a second channel which is in contact at a boundary line with said first channel substantially at right angle thereby to form said T-shaped crossing region, said second channel extending in parallel with said channel boundary line;
(d) selecting channel boundary terminals belonging to first and second terminal groups from said channel boundary terminals defined on said boundary line, said first terminal group including terminals connected with wirings which tend to run along a first direction in said second channel, said second terminal group including terminals connected with wirings which tend to run along a second direction opposite to said first direction in said second channel;

(e) sequentially selecting channel boundary terminals from said first and second groups, respectively, to obtain a pair of channel boundary terminals; and

(f) assigning tracks to wirings associated with pairs of selected channel boundary terminals in said second channel in such a manner that each of said tracks is basically occupied with two wirings running thereon in the opposite directions to each other.

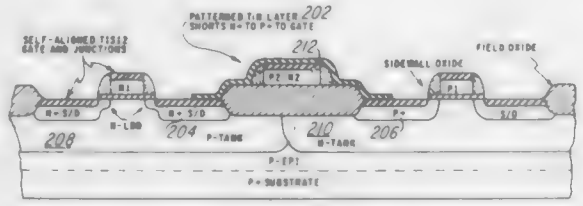
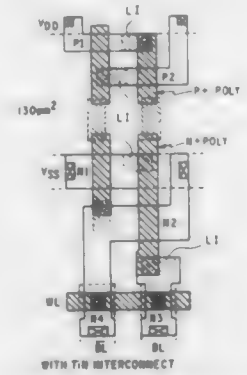
PROCESS FOR PRODUCING COMPOUND SEMICONDUCTOR USING AN AMORPHOUS NUCLEATION SITE



Hiroyuki Tokunaga, Kawasaki; Kenji Yamagata, and Takao Yonehara, both of Atsugi, all of Japan, assignors to Canon Kabushiki Kaisha, Tokyo, Japan

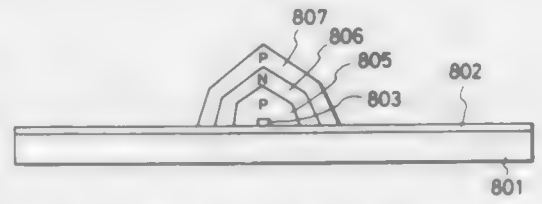


Continuation of Ser. No. 174,511, Mar. 28, 1988, abandoned. This application Apr. 30, 1990, Ser. No. 515,351

Claims priority, application Japan, Mar. 27, 1987, 62-73522; Mar. 27, 1987, 62-73523

Int. Cl.[5] H01L *21/20*

U.S. Cl. 437—83 **15 Claims**



11. A method for fabricating an integrated circuit at a silicon surface of a semiconductor body, comprising the steps of:

forming a device isolation structure at said surface to define first and second moat regions at said surface adjacent to said device isolation structure, said first moat region of a first conductivity type and said second moat region of a second conductivity type;

forming a first gate electrode comprising silicon doped to said second conductivity type overlying said first moat region, and a second gate electrode comprising silicon doped to said first conductivity type over said second moat region;

forming source and drain regions at the surface of said first and second moat regions adjacent said first and second gate electrodes, said source and drain regions in said first moat region of said second conductivity type, and said

1. A process for producing a compound semiconductor, which comprises applying a crystal forming treatment on a substrate having a free surface comprising a non-nucleation surface (S_{NDS}) with a smaller nucleation density and an amorphous nucleation surface (S_{NDL}) arranged adjacent thereto having a sufficiently small area so as to form a single nucleus from which a single crystal is grown and a larger nucleation density (ND_L) than the nucleation density (ND_S) of said non-nucleation surface (S_{NDS}) so as to form only a single nucleus from which a single crystal is grown, by exposing the substrate to either of the gas phases:

(a) gas phase (a) containing a starting material (II) for feeding the group II atoms of the periodic table and a starting material (VI) for feeding the group VI atoms of the periodic table; and

(b) gas phase (b) containing a starting material (III) for feeding the group III atoms of the periodic table and a starting material (V) for feeding the group V atoms of the periodic table, thereby forming a single nucleus on said nucleation surface (S_{NDL}) and permitting a monocrystal of the compound semiconductor to grow only from said single nucleus, characterized in that a semiconductor junction is formed in said monocrystal by feeding a starting material (Dn) for feeding a dopant for controlling to a first electroconduction type and a starting material (Dp) for feeding a dopant for controlling to a second electroconduction type opposite to said first electroconduction type with change-over to one another into said gas phase, during said crystal forming treatment.

CMOS AND BIPOLAR FABRICATION PROCESS USING SELECTIVE EPITAXIAL GROWTH SCALABLE TO BELOW 0.5 MICRON

Juliana Manoliu, Palo Alto, Calif., assignor to National Semiconductor Corporation, Santa Clara, Calif.

Filed Mar. 7, 1989, Ser. No. 320,011

Int. Cl.[5] H01L *21/20*

U.S. Cl. 437—89 **30 Claims**

1. A method of constructing a semiconductor structure comprising the steps of:

growing a layer of silicon dioxide on a silicon substrate;

etching a first opening in the silicon dioxide layer, the first opening exposing a first region of the substrate;

etching a second opening in the silicon dioxide layer in close proximity to the first opening and separated therefrom by a first wall, the second opening exposing a second region of the substrate;

implanting a first conductivity type impurity into the first and second regions of the substrate;

growing an epitaxial layer over the first and second regions of the substrate for forming corresponding first and second epitaxial regions; and

heating the substrate for causing the first conductivity type impurity in the first and second regions of the substrate to join beneath the first wall.

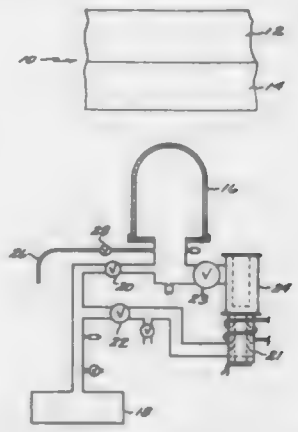
WAFER BASE FOR SILICON CARBIDE SEMICONDUCTOR DEVICE

Rointan F. Bunshah, Playa Del Rey; James D. Parsons, Newbury Park, and Oscar M. Stafsudd, Los Angeles, all of Calif., assignors to The Regents of the University of California, Berkeley, Calif.

Division of Ser. No. 737,367, May 23, 1985, Pat. No. 4,767,666. This application May 13, 1988, Ser. No. 197,582



Int. Cl.[5] H01L *21/20*

U.S. Cl. 437—100 **8 Claims**

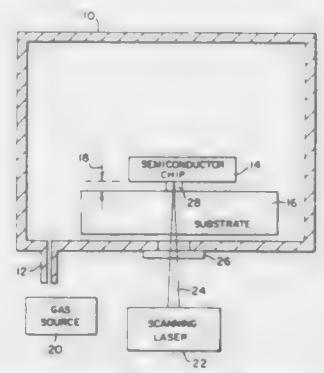
1. A process for preparing a semiconductor device wafer base, comprising the steps of:

furnishing a single crystal titanium carbide substrate; and

depositing an overlay layer of beta silicon carbide onto said substrate, said overlay layer being a single crystal, epitaxially related to said substrate, unpolytyped, uncracked,

without twins, and of integrated circuit quality surface morphology.

5,010,036



LOW TEMPERATURE SEMICONDUCTOR BONDING PROCESS WITH CHEMICAL VAPOR REACTION

Joseph A. Calviello, Kings Park, and Grayce A. Hickman, Hicksville, both of N.Y., assignors to Eaton Corporation, Cleveland, Ohio

Filed Apr. 20, 1990, Ser. No. 511,588

Int. Cl.[5] H01L *21/268, 21/58*

U.S. Cl. 437—173 **10 Claims**

1. A method for bonding a semiconductor chip to a substrate, comprising:

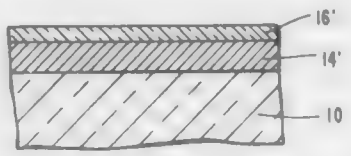
providing a semiconductor chip;

providing a substrate;

separating said chip and said substrate by a gap;

introducing a metal-bearing gas in said gap;

providing a thermal energy source having a focused energy beam;



directing said beam into said gap to thermally decompose said gas by chemical vapor reaction to deposit and grow metal to provide a metallic molecular bond interface filling said gap and bonding said chip to said substrate.

5,010,037

PINHOLE-FREE GROWTH OF EPITAXIAL $COSI_2$ FILM ON SI(111)

True-Lon Lin, Cerritos; Robert W. Fathauer, Sunland, and Paula J. Grunthaner, Glendale, all of Calif., assignors to California Institute of Technology, Pasadena, Calif.

Filed Oct. 14, 1988, Ser. No. 257,758
Int. Cl.[5] H01L *21/44*
U.S. Cl. 437—200 14 Claims

1. A process for epitaxially growing substantially pinhole-free crystalline films of $CoSi_2$ on silicon substrates comprising:

(a) codepositing at ambient temperature silicon and cobalt atoms in substantially stoichiometric ratio on a major surface of said substrate to form an amorphous film of Co/Si in a 1:2 mixture;

(b) depositing at ambient temperature a layer of amorphous silicon on said amorphous film to form a composite structure; and

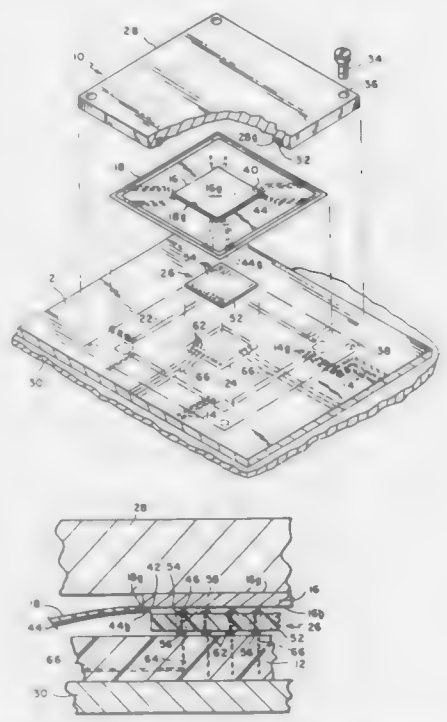
(c) annealing said composite structure at a temperature ranging from about 500° to 750° C. to form said crystalline film of $CoSi_2$ capped with crystalline silicon.

5,010,038

METHOD OF COOLING AND POWERING AN INTEGRATED CIRCUIT CHIP USING A COMPLIANT INTERPOSING PAD

Leslie R. Fox, Boxborough; Paul C. Wade, Shirley, and William L. Schmidt, Acton, all of Mass., assignors to Digital Equipment Corp., Maynard, Mass.

Division of Ser. No. 373,960, Jun. 29, 1989, Pat. No. 4,954,878.
This application Jul. 9, 1990, Ser. No. 549,611
Int. Cl.[5] H01L *21/60, 21/54, 21/58*
U.S. Cl. 437—215 10 Claims



1. The method of connecting and cooling an IC chip comprising the steps of:

forming a compliant pad with an array of electrical conductors embedded in said pad with the opposite ends of the conductors being exposed at opposite faces of the pad;

sandwiching the compliant pad between a chip and a substrate so that the exposed ends of the pad conductors engage exposed contacts on opposing faces of the chip and substrate, respectivelv;

engaging the opposite face of the chip with a thermal transfer member; and

bringing the thermal transfer member and substrate together so as to compress the pad thereby simultaneously establishing relatively low inductance electrical connections between the contacts on the chip and the contacts on the

substrate and good thermal contact between the chip and the thermal transfer member.

5,010,039

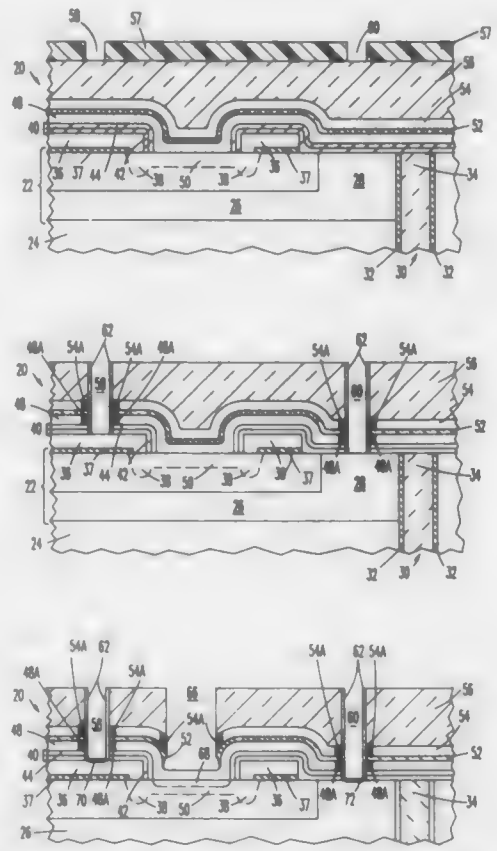
METHOD OF FORMING CONTACTS TO A SEMICONDUCTOR DEVICE

San-Mei Ku, 3 Carnelli Ct., Poughkeepsie, N.Y. 12603, and Kathleen A. Perry, 22120 Viscanio Rd., Woodland Hills, Calif. 91364

Filed May 15, 1989, Ser. No. 351,993
Int. Cl.[5] H01L *21/47*
U.S. Cl. 437—228 8 Claims

1. A method of forming electrical connections to a base contact, an emitter contact, and a subcollector reachthrough region of a bipolar transistor, comprising the steps of:

forming a layer of etch stop material having a first etch characteristic over said base contact, emitter contact, and subcollector reachthrough region;



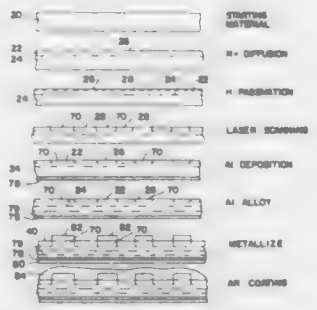
forming a layer of dielectric material having a second etch characteristic conformally over said layer of etch stop material;

simultaneously etching base contact and subcollector reachthrough vias through said layer of dielectric material using an etchant selective to said dielectric material so as to stop on said layer of etch stop material over said base contact and said subcollector reachthrough region;

extending said base contact and subcollector reachthrough vias through said layer of etch sto material so as to expose the surfaces of said base contact and said subcollector reachthrough region;

forming a mask over said base contact and subcollector reachthrough vias;

etching an emitter contact via through said layer of dielectric material using an etchant selective to said dielectric material so as to stop on said layer of etch stop material over said emitter contact;



extending said emitter contact via through said layer of etch stop material to the surface of said emitter contact; and removing said mask.

5,010,040

METHOD OF FABRICATING SOLAR CELLS

Zinovy Y. Vayman, Brookline, Mass., assignor to Mobil Solar Energy Corporation, Billerica, Mass.

Filed Dec. 30, 1988, Ser. No. 292,492
Int. Cl.[5] H01L *21/02*
U.S. Cl. 437—230 14 Claims

1. A method of forming metallization patterns on a silicon substrate that is to be used to form a photovoltaic cell comprising in sequence the steps of:

(a) exposing a first surface of said substrate to a hydrogen ion beam of an intensity and for a duration sufficient to hydrogen passivate the substrate and form a damaged surface layer to which metals deposited by immersion plating will only poorly adhere; and

(b) scanning selected portions of said first surface with a laser beam of an intensity and for a duration sufficient to anneal selected portions of said damaged layer so as to create a metallization pattern consisting of non-passivated areas of said first surface to which selected metals will securely adhere, said metallization pattern being created in an environment substantially free of chemical etching substances.

SINTERED GLASS BODY WITH OPAQUELY MOTTLED PATTERN AND METHOD OF PRODUCING SAME

Takayoshi Kandachi, Osaka, Japan, assignor to Central Glass Company, Limited, Ube, Japan

Filed Dec. 23, 1988, Ser. No. 288,965
Claims priority, application Japan, Dec. 26, 1987, 62-331335
Int. Cl.[5] C03C *1/06*
U.S. Cl. 501—32 7 Claims

1. A method of producing a substantially foamless sintered glass body with an opaquely mottled pattern, the method comprising the steps of:

(a) preparing a mixture of 100 parts by weight of a powder of a glass, selected from the group consisting essentially of alkali lime glass, boro-silicate glass and aluminosilicate glass; 0.2 to 10 parts by weight of a powder of at least one heat-resistant inorganic oxide, which is colorless or assumes a whitish color and has a refractive index different from the refractive index of said glass by at least 15%, selected from the group consisting of aluminum oxide, zirconium oxide, titanium oxide, stannic oxide, zinc oxide, zircon and spinel; and an inorganic pigment, selected from the group consisting of metals, metal oxides and other kinds of metal salts and which differs in color from the inorganic oxide;

(b) compressively granulating said mixture into granules not smaller than 1 mm in granule size;

(c) mixing said granules;

(d) firing the mixed granules at a temperature in the range from the softening point of said glass to the fluid point of said glass and applying a pressure to the fired material during or immediately after firing.

5,010,043

PRODUCTION OF DIAMOND COMPACTS CONSISTING ESSENTIALLY OF DIAMOND CRYSTALS BONDED BY SILICON CARBIDE

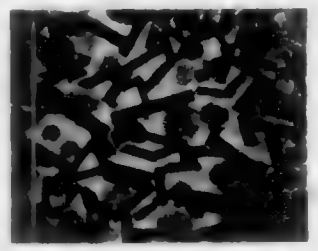
Alfred E. Ringwood, Redhill, Australia, assignor to The Australian National University, Australia

PCT No. PCT/AU88/00058, § 371 Date Nov. 15, 1988, § 102(e) Date Nov. 15, 1988, PCT Pub. No. WO88/07409, PCT Pub. Date Oct. 6, 1988
PCT Filed Mar. 2, 1988, Ser. No. 283,362
Claims priority, application Australia, Mar. 23, 1987, PI1024
Int. Cl.[5] C04B *35/56, 35/58;* B24D *3/00*
U.S. Cl. 501—90 19 Claims

1. A process for producing a diamond compact consisting essentially of diamond crystals bonded by silicon carbide, said process comprising the steps of:

(1) intimately mixing diamond crystals with silicon in the proportions of about 97 to 65 percent weight of diamond to about 3 to 35 percent by weight of silicon to produce an intimate mixture of the diamond crystals and silicon;

(2) confining said intimate mixture of diamond crystals and silicon in a pressure vessel together with one or more bodies of silicon in contact with or immediately adjacent to said intimate mixture within the pressure vessel; and



(3) subjecting said intimate mixture of diamond crystals and silicon and said one or more bodies of silicon within the pressure vessel to a temperature above the melting point of silicon in the range of about 1,100° to 1,800° C. and to pressure in the range of about 10 to 40 kilobars so as to cause melting of the silicon in said intimate mixture and melting of said one or more bodies of silicon and infiltration of silicon from said one or more bodies into the interstitial spaces between the diamond crystals and to cause most of the silicon between the diamond crystals to react with diamond to produce silicon carbide, said silicon carbide forming a bond between diamond crystals, the overall proportions of diamond and silicon being such as to produce a compact containing between about 50 and 85 volume percent of diamond with a density of at least 3.35 g/cm^3 and a compressive strength of at least 10 kilobars.

5,010,044

PROCESS FOR PREPARING SELF-SUPPORTING BODIES AND PRODUCTS PRODUCED THEREBY

Marc S. Newkirk, Newark, Del., assignor to Lanxide Technology Company, LP., Newark, Del.

Continuation of Ser. No. 296,773, Jan. 3, 1989, Pat. No. 4,885,131. This application Dec. 5, 1989, Ser. No. 446,321
The portion of the term of this patent subsequent to Dec. 5, 2006, has been disclaimed.
Int. Cl.[5] C04G *35/02*
U.S. Cl. 501—93 7 Claims

1. A method for producing a self-supporting body, comprising:

selecting a parent metal;

heating said parent metal in a substantially inert atmosphere to a temperature above its melting point to form a body of molten parent metal;

contacting said body of molten parent metal with a preform comprising a boron donor material and a carbon donor material;

maintaining said temperature for a time sufficient to permit infiltration of molten parent metal into said preform and to permit reaction of said molten parent metal with at least a portion of said preform; and

continuing said infiltration and reaction for a time sufficient to produce said self-supporting body.

5,010,045

LOW-LOSS BINDER FOR HOT PRESSING BORON NITRIDE

Leon Maya, Oak Ridge, Tenn., assignor to The United States of America as Represented by the United States Department of Energy, Washington, D.C.

Filed Jun. 2, 1989, Ser. No. 360,561
Int. Cl.[5] C04B *35/58*
U.S. Cl. 501—96 15 Claims

3. A polymeric borazine derivative useful as a binder in the formation of boron nitride ceramics, consisting essentially of the product of a reaction mixture of bistrimethylsilylacetylene and a chloroborazine in the presence of a Lewis acid and sufficient heat to cause a reaction.

15. A process for making boron nitride ceramic comprising: mixing the polymeric borazine derivative of claim 3 and boron nitride powder;

pressing said mixture and heating to drive off the volatiles, resulting in a pure boron nitride ceramic composition.

5,010,046

CHROMIA-MAGNESIA REFRACTORY BODY

Anthony K. Butkus, Worcester, and Scott D. Martin, Paxton, both of Mass., assignors to Norton Company, Worcester, Mass.

Continuation-in-part of Ser. No. 327,061, Mar. 22, 1989, abandoned. This application Mar. 5, 1990, Ser. No. 488,162
Int. Cl.[5] C04B *35/04, 35/10, 35/12*
U.S. Cl. 501—117 20 Claims

1. In a refractory product consisting essentially of grains of co-fused chromia and magnesia bonded with an in situ formed microcrystalline bond of chromia, the improvement consisting essentially of the substantial absence of said grains which can pass though a sieve opening of 150 microns.

5,010,047

RECOVERY OF DOUBLE METAL CYANIDE COMPLEX CATALYST FROM A POLYMER

Jonathan L. Schuchardt, Exton, Pa., assignor to Arco Chemical Technology, Inc., Wilmington, Del.

Filed Feb. 27, 1989, Ser. No. 315,662
Int. Cl.[5] B01J *27/32, 38/68;* C07C *41/03, 43/11*
U.S. Cl. 502—24 16 Claims

1. A process for recovering a double metal cyanide complex catalyst from a polymer product having a number average molecular weight of from about 500 to about 20,000 and selected from the group consisting of epoxide polymers, epoxide-/anhydride copolymers, and epoxide/carbon dioxide copolymers, in a form suitable for use as a polymerization catalyst which comprises the steps of:

(a) dissolving a double metal cyanide complex catalyst-containing polymer product in an amount of a non-polar solvent having a dielectric constant lower than the dielectric constant of the polymer product effective to precipitate the double metal cyanide complex catalyst; and

(b) filtering the resulting polymer solution in the presence of a filter aid which is suspended in the solution in an amount effective to accomplish separation of the precipitated double metal cyanide complex catalyst from the polymer product.

METHOD FOR THE PREPARATION OF SUPERCONDUCTING PRODUCTS

Keld Johansen, Frederikssund; Erik Pedersen, Hørsholm, and Haldor F. A. Topsøe, Vedbøk, all of Denmark, assignors to Haldor Topsoe A/S, Denmark

Filed Jul. 8, 1988, Ser. No. 216,895
Claims priority, application Denmark, Jul. 10, 1987, 3581/87
Int. Cl.[5] H01B *12/00;* H01L *39/00*
U.S. Cl. 505—1 10 Claims

1. In a method for the preparation of a superconducting product on the basis of superconducting compounds having the general formula $(Me^1)(Me^2)_qCu_3O_x$, where Me^1 is at least one metal selected from the group consisting of yttrium, scandium and the lanthanides, Me^2 is at least one of the metals barium and strontium, p is a number from 0.8 to 2.5, q is a number from 0.8 to 3 and x is a number from 6 to 8.5, in which process oxides of Me^1, Me^2 and Cu are reacted with each other at an elevated temperature,

wherein the improvement comprises

(i) employing an oxide of Me^2 at least partly as the Me^2 peroxide,

(ii) placing the oxides under an oxygen-free atmosphere in a reaction vessel having deformable walls,

(iii) closing the vessel hermetically and placing it with its contents in an autoclave suitable for hot isostatic pressing, gradually subjecting it to a pressure of 800 to 3000 bar, heating it to a temperature in the range of 800 to 1400° C. and then cooling it without opening it, and

(iv) shaping the vessel with its contents at any time from the beginning of the heating procedure to the end of the cooling in order to form a desired product having superconducting properties.

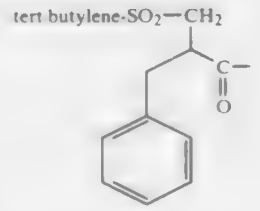
RENIN-INHIBITING PEPTIDES HAVING AN AMINOMETHYL SIDE CHAIN

Rolf Henning, Wuppertal; Günter Benz, Velbert; Johannes-Peter Stasch, Wuppertal; Andreas Knorr, Erkrath, and Wolfgang Bender, Wuppertal all of Fed. Rep. of Germany, assignors to Bayer Aktiengesellschaft, Leverkusen, Fed. Rep. of Germany

Filed Aug. 17, 1989, Ser. No. 395,392
Claims priority, application Fed. Rep. of Germany, Aug. 27, 1988, 3829086; Jan. 30, 1989, 3902615
Int. Cl.[5] A61K *37/02*
U.S. Cl. 514—018 11 Claims

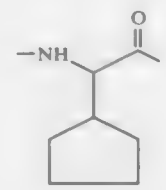
1. An aminomethyl peptide of the formula



(I)

in which

A is selected from the group consisting of BOC, hydrogen and C_2H_5—O—CO—,



B is selected from the group consisting of Pro and a direct bond,

D is Phe or is

when A is hydrogen and B is a direct bond,

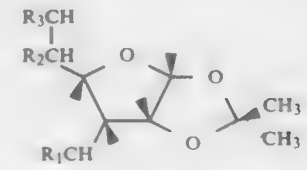
E is selected from the group consisting of His and

F is Ile,

R^1 is alkyl with 1 to 4 carbon atoms optionally substituted by cyclohexyl or phenyl,

R^2 and R^3 are each hydrogen and

R^4 is selected from the group consisting of lower alkoxy and NH-R^{11} wherein R^{11} represents lower alkyl optionally substituted by pyridyl.

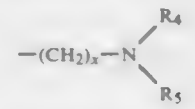


5,010,058

3,5,6-SUBSTITUTED DERIVATIVES OF 1,2-O-ISOPROPYLIDENE-α,D-GLUCOFURANOSE AND INTERMEDIATES FOR PREPARING THESE DERIVATIVES

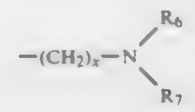
Bruce Ronsen, River Forest; Sudershan K. Arora, Westchester, and Albert V. Thomas, Niles, all of Ill., assignors to 501 Greenwich Pharmaceuticals Incorporated, Ft. Washington, Pa.

Filed Jun. 22, 1989, Ser. No. 369,932
Int. Cl.[5] A61K *31/70*
U.S. Cl. 514—23 104 Claims



1. A monosaccharide compound of the formula I

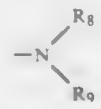
I



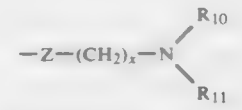
wherein

R_1 is a member selected from the group consisting of hydrogen, an alkoxyl radical containing from 4 to 11 carbon atoms, a hydroxyl residue, an aralkyl radical containing at least 7 carbon atoms, and a radical of the formula

in which x is a whole number up to 7 and R_4 and R_5 are each H, OH, or an alkoxy radical of up to 7 carbon atoms;



R_2 is a member selected from the group consisting of hydrogen, an alkoxy radical containing from 4 to 7 carbon atoms, a methylthio carbonyl, and a radical of the formula



in which x is a whole number up to 7 and R_6 and R_7 are each H,OH, or an alkoxyl radical of up to 7 carbon atoms;

R_1 and R_2 together can form an isopropylidene radical;

R_3 is a member selected from the group consisting of hydrogen, a halogen, an alkylene radical, an aralkyl radical containing at least 7 carbon atoms, a radical of the formula

in which R_8 is hydrogen and R_9 is an alkyl radical containing up to eleven carbon atoms and a radical of the formula

in which Z is thio or amino, x is a whole number up to 7 and R_{10} r and R_{11} are each H, OH or an alkoxyl radical of up to 7 carbon atoms; and

R_2 and R_3 together can form an isopropylidene radical.

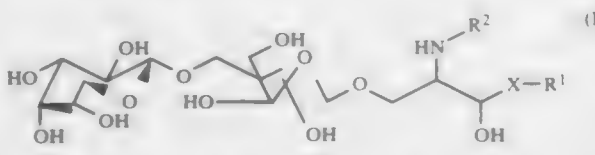
PHARMACEUTICAL PRODUCTS AND LACTOSYL COMPOUNDS

Richard R. Schmidt; Thomas Baer, both of Konstanz; Peter Zimmermann, Villingen, and Albrecht Wendel, Tübingen, all of Fed. Rep. of Germany, assignors to Solco Basel AG, Basel, Switzerland



Filed Jun. 24, 1988, Ser. No. 210,838

Claims priority, application Switzerland, Jun. 26, 1987, 2407/87

Int. Cl.[5] A61K *31/70;* **C07H** *15/00*

U.S. Cl. 514—25 **10 Claims**

10. A method of treating organ ischemia caused by narrowing of vessels in a subject, which comprises administering to the subject a therapeutically effective amount of a lactosyl compound of the formula I

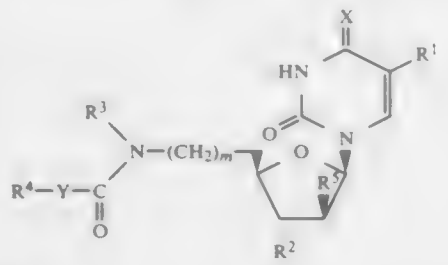
(I)

in which R^1 denotes an aliphatic radical which has 9 to 19 carbon atoms in a straight chain and which can have one or more double bonds, one or more branching methyl groups, or both one or more double bonds and one or more branching methyl groups, R^2 denotes an acyl radical of a saturated or singly or multiply unsaturated fatty acid having 14 to 24 carbon atoms, and X denotes a group of the formula $—CH_2—CH_2—$ or —CH=CH—.

5,010,060

METHOD OF TREATING HERPES SIMPLEX VIRAL INFECTION EMPLOYING PYRIMIDINE DERIVATIVES

Robert W. Lambert, Welwyn; Joseph A. Martin, Harpenden, and Gareth J. Thomas, Welwyn, all of England, assignors to Hoffmann-La Roche Inc., Nutley, N.J.



Division of Ser. No. 80,021, Jul. 31, 1987. This application Apr. 24, 1989, Ser. No. 342,277

Claims priority, application United Kingdom, Aug. 18, 1986, 8620070; May 14, 1987, 8711336

Int. Cl.[5] C07D *405/64;* **C07H** *19/06;* **A61K** *31/70*

U.S. Cl. 514—49 **11 Claims**

1. A method of treating herpes simplex viral infections which comprises administering an effective amount in the range of from about 1 mg to about 100 mg per day of a compound of the formula

wherein

R^1 is halogen, C_{1-4}-alkyl, halo-(C_{1-4}-alkyl) or C_{2-4}-alkanoyl,

R^2 is hydrogen, hydroxy, C_{1-4}-alkoxy, C_{1-4}-alkylthio or phenyl-(C_{1-4}-alkoxy) or, when X is O, also acyloxy,

R^3 is hydrogen or C_{1-4}-alkyl,

R^4 is a carbocyclic group or a heterocyclic group,

R^5 is hydrogen or fluorine,

m stands for zero, 1 or 2,

X is O or NH and Y is a direct bond, —CH=CH—, —C≡C— or a group of the formula of $(Z)_n$-A- (a) in which A is a C_{1-18}-alkylene group which is optionally substituted by one or two phenyl groups, Z is O, S, SO or SO_2 and n stands for zero or 1, with the proviso that R^1 is different from iodine, when R^2 is hydroxy or benzoyloxy, R^3 is hydrogen, R^4 is unsubstituted phenyl, R^5 is hydrogen, m stands for zero, X is O, and Y is a direct bond,

or a tautomer thereof.

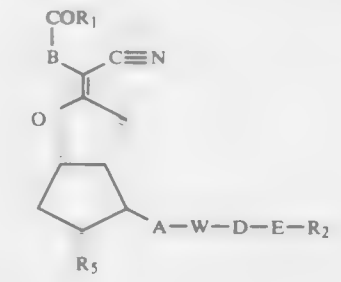
1. A compound obtained by complexing dipyridamole with beta-cyclodextrin in the molar ratio dipyridamole: cyclodextrin between 1:1 and 1:12 respectively.

5,010,065

CYCLODEXTRIN CLATHRATES OF 5-CYANOPROSTACYCLIN DERIVATIVES AND THEIR USE AS PHARMACEUTICAL AGENTS

Werner Skuballa; Helmut Dahl; Helmut Vorbrueggen; Olaf Loge, and Karl-Heinz Thierauch, all of Berlin, Fed. Rep. of Germany, assignors to Schering Aktiengesellschaft, Berlin and Bergkamen, Fed. Rep. of Germany



Filed Nov. 28, 1988, Ser. No. 276,754

Claims priority, application Fed. Rep. of Germany, Nov. 27, 1987, 3740838

Int. Cl.[5] A61K *31/335;* **C07D** *307/93*

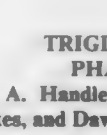
U.S. Cl. 514—58 **10 Claims**

1. A cyclodextrin clathrate of a 5-cyanoprostacyclin of the formula I

I

wherein

R_1 is OR_3 or NHR_4;



R_3 is hydrogen; C_{1-10}-alkyl; C_{1-10}-alkyl substituted by halo, C_{1-4}-alkoxy, C_{6-10}-aryl, C_{6-10} aryl substituted as defined below for R_2, mono- or di-(C_{1-4}-alkyl)-amino, or tri (C_{1-4}-alkyl)ammonium; C_{4-10}cycloalkyl; C_{4-10}-cycloalkyl substituted by C_{1-4}-alkyl; C_{6-10}-aryl; C_{6-10}-aryl substituted as defined for R_2 below; or an aromatic heterocycle of 5- or 6-members containing 1 or 2, O, S or N hetero atoms;

R_4 is an acyl group of a C_{1-15}-hydrocarbon carboxylic or sulfonic acid;

B is alkylene of 2-10 C atoms,

A is $—CH_2—CH_2—$, cis—CH=CH—, trans—CH=CH— or —C≡C;

W is RO-methylene or

the OR group being in the alpha or beta position;

R is H or C_{1-15}-acyl derived from a hydrocarbon carboxylic acid, or is tetrahydropyranyl, alpha-ethoxyethyl, tetrahydrofuranyl, trimethylsilyl, tribenzylsilyl, or dimethyl-tert-butylsilyl;

D and E together mean a direct bond; or

D is alkylene of 1-5 C atoms;

E is oxygen, sulfur or a direct bond;

R_2 is alkyl of 1-10 carbon atoms; alkenyl of 2-10 C-atoms; C_{1-10}-alkyl or C_{2-10}-alkenyl substituted by C_{6-10}-aryl or C_{6-10}-aryl substituted as defined for substituted C_{6-10}-aryl below; cycloalkyl of 4-10 carbon atoms; C_{4-10}-cycloalkyl substituted by C_{1-4}-alkyl; aryl of 6-10 carbon atoms; C_{6-10}-aryl substituted by 1-3 halogen atoms, a phenyl group, 1-3 alkyl groups each of 1-4 carbon atoms, or a chloromethyl, fluoromethyl, trifluoromethyl, carboxy, C_1-C_4-alkoxy or hydroxy group; or an aromatic heterocycle of 5- or 6-members containing 1 or 2 O, S, or N hetero atoms; and

R_5 is OR;

or when R_3 is hydrogen, a physiologically acceptable salt thereof with a base.

5,010,066

BIOCIDAL COMPOSITIONS AND USE THEREOF CONTAINING A SYNERGISTIC MIXTURE OF N-TRIBUTYL TETRADECYL PHOSPHONIUM CHLORIDE AND N-DODECYLGUANIDINE

Deborah K. Donofrio, The Woodlands, and Wilson K. Whitekettle, Conroe, both of Tex., assignors to Betz Laboratories, Inc., Trevose, Pa.

Filed Aug. 13, 1990, Ser. No. 566,958

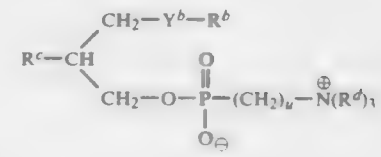
Int. Cl.[5] A01N *37/52, 57/00*

U.S. Cl. 514—75 **7 Claims**

1. A bacterial inhibiting composition comprising a synergistic mixture of (a) n-tributyl tetradecyl phosphonium chloride and (b) n-dodecylquanidine or a water soluble salt thereof wherein the weight ratio of (a):(b) is from about 28.5:1 to 2.85:1.

5,010,067

TRIGLYCERIDE-WATER EMULSION PHARMACEUTICAL VEHICLES



Dean A. Handley; William J. Houlihan, both of Mountain Lakes, and David B. Weinstein, Berkeley Heights, all of N.J., assignors to Sandoz Pharmaceuticals Corp., E. Hanover, N.J.

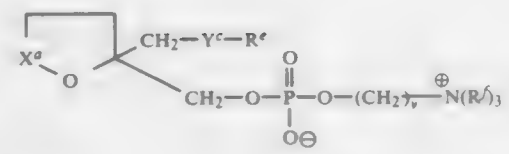
Filed Jul. 19, 1988, Ser. No. 221,054

Int. Cl.[5] A61K *31/66, 31/685, 31/445, 31/34*

U.S. Cl. 514—75 **25 Claims**

1. An injectable pharmaceutical composition useful in treating tumors and exhibiting reduced detergent effects at the injection site upon intravenous administration comprising: (1) an anti-tumor agent selected from a compound of formula IV:

IV



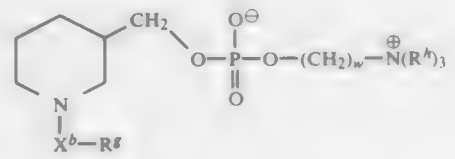
in which

R^b is C_{16-20} normal-alkyl;

R^c is o-methyl, o-ethyl, o-benzyl or CH_2OCH_3;

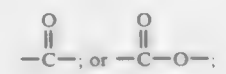
u is an integer of from 2 to 8;

R^d is methyl or ethyl; and
Y^b is -O- or -S- ,
a compound of formula V:



V

in which
X^a is $-CH_2-$ or

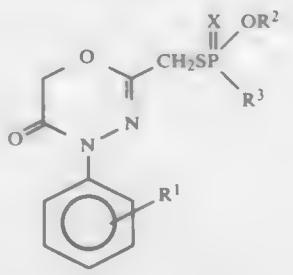


R^e is C_{16-20} normal-alkyl;
R^f is methyl or ethyl;
Y^c is $-CH_2-$ or -O- , and
v is an integer of from 2 to 8, and
a compound of formula VI:

VI

in which
X^b is

w is an integer of from 2 to 8;
R^g is C_{16-20} normal-alkyl; and
R^h is methyl or ethyl;
and (2) as a vehicle therefor, an emulsion comprising:
(a) about 5% to 25% fatty acid triglycerides;
(b) up to 1.2% egg phosphatides, purified;
(c) 2.5% of glycerine; and
the balance water, with sufficient sodium hydroxide added so that the pH of said emulsion is about 8.



5,010,068

OXADIAZINYL ORGANOPHOSPHORUS PESTICIDES

Mark A. Dekeyser, Waterloo, Canada, and Richard C. Moore, Wallingford, Conn., assignors to Uniroyal Chemical Company, Inc., Middlebury, Conn. and Uniroyal Chemical Ltd. Ltee., Don Mills, Canada

Filed Dec. 21, 1989, Ser. No. 454,668
Int. Cl.[5] C07D *273/04;* **A01N** *57/00*
U.S. Cl. 514—79 **25 Claims**

1. A compound having the formula:

wherein X is O or S;
R^1 is:
hydrogen,
C_1–C_{12} alkyl,
C_2–C_{13} alkoxy,
C_7–C_9 aralkyl,
C_1–C_4 alkylsulfonyl,
nitro,
phenyl or
trihalomethyl, wherein halo is fluorine, chlorine or bromine;
R^2 is C_1–C_4 alkyl; and
R^3 is C_1–C_4 alkyl
C_1–C_4 alkoxy, and
C_1–C_4 alkylthio.

15. An insecticidal, acaricidal or nematicidal method comprising applying a loci to be treated an effective amount of a compound according to claim **1**.

5,010,069

STABLE LIQUID FORM OF 5-AMINOSALICYLIC ACID

Carey B. Bottom, Overland Park, and Margaret N. Kwoka, Merriam, both of Kans., assignors to Marion Laboratories, Inc., Kansas City, Mo.

Filed May 15, 1989, Ser. No. 352,064
Int. Cl.[5] A61K *31/615, 31/34*
U.S. Cl. 514—166 **17 Claims**

1. A stabilized aqueous solution having a concentration of 0.1 to 10 g/100 ml of 5-aminosalicylic acid wherein a buffer consists essentially of an intrinsic, water soluble nontoxic alkali, alkali metal or alkaline earth metal salt of 5-aminosalicylic acid, said solution having a pH of 3 to 5.

5,010,070

GRADUATED ESTROGEN CONTRACEPTIVE

Roger M. Boissonneault, Long Valley, N.J., assignor to Warner-Lambert Company, Morris Plains, N.J.

Division of Ser. No. 340,974, Apr. 20, 1989, Pat. No. 4,962,098, which is a continuation-in-part of Ser. No. 61,646, Jun. 15, 1987, abandoned, which is a continuation-in-part of Ser. No. 659,144, Oct. 9, 1984, abandoned. This application May 22, 1990, Ser. No. 526,934
Int. Cl.[5] A61K *31/56*
U.S. Cl. 514—171 **12 Claims**

4. A multiphase combination and contraceptive kit comprising a package containing:
(1) about 4 to 7 dosages of a Phase I composition containing about 0.5–1.5 mg norethindrone acetate and about 10–30 mcg ethinyl estradiol; (2) about 5 to 8 dosages of a Phase II composition containing about 0.5–1.5 mg norethindrone acetate and about 20–40 mcg ethinyl estradiol, and (3) about 7 to 12 dosages of a Phase III composition containing about 0.5–1.5 mg norethindrone acetate and about 30–50 mcg ethinyl estradiol, wherein the amount of ethinyl estradiol is increased stepwise over the three compositions.

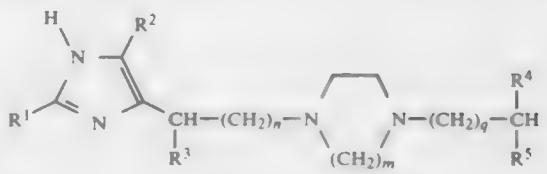
1. A 2,3,4,5-tetrahydro-1H-3-benzazepine selected from those of the formula I

(I)

wherein R^3 represents C_{1-3}-alkyl or C_{3-7}-cycloalkyl; R^4 represents hydrogen; R^7 represents hydroxy or lower alkoxy; one of R^{10}, R^{11}, R^{12} and R^{13} represents trifluromethyl and the others independently represent hydrogen or R^{11} together with either R^{10} or R^{12} represents a bridge chosen from among —O—CH-2—CH—, —O—CH_2—CH_2—CH_2—, —O—CH=CH—, —CH_2—CH_2—CH_2—, —CH_2—CH=CH— and —CH-2—CH_2—CH_2—CH_2—, and the remainder of R^{10}, R^{11}, R^{12} and R^{13} each represents hydrogen, and pharmaceutically-acceptable acid additional salts thereof.

14. A pharmaceutical composition useful for treating CNS ailments containing an effective amount of a benzazepine of claim **1** or a pharmaceutically-acceptable acid addition salt thereof together with a pharmaceutically-acceptable carrier or diluent.



5,010,075

SUBSTITUTED IMIDAZOLYL-ALKYL-PIPERAZINE AND -DIAZEPINE DERIVATIVES

Jean C. Pascal, Cachan, France; Chi-Ho Lee, Palo Alto, Calif.; Brian J. Alps, Linlithgow, Scotland; Henri Pinhas, Paris, France, and Roger L. Whiting, Los Altos, Calif., assignors to Syntex Pharmaceuticals Ltd., Berkshire, England

Division of Ser. No. 313,656, Feb. 21, 1989, Pat. No. 4,935,417, which is a division of Ser. No. 42,181, Apr. 24, 1987, Pat. No. 4,829,065. This application Apr. 6, 1990, Ser. No. 505,379
Int. Cl.[5] C07D *243/08, 403/06;* **A61K** *31/55*
U.S. Cl. 514—218 **13 Claims**

1. A compound having the structure represented by the formula:

wherein:
R^1 is aryl, lower alkyl, cycloalkyl or hydrogen;
R^2 is aryl, lower alkyl or hydrogen;
R^3 is lower alkyl, hydroxy, or hydrogen;
R^4 is aryl or hydrogen;

R^5 is aryl or hydrogen;
m is three;
n is zero, one or two, provided that when R^3 is hydroxy, n is one or two; and
q is zero, one, two, or three;
or a pharmaceutically acceptable salts thereof

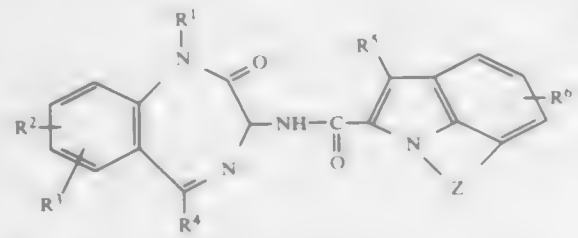
10. A pharmaceutical formulation comprising a compound of claim 1 and a pharmaceutically acceptable excipient.

5,010,076

1,7-FUSED 1H-INDOLE-2-CARBOXYLIC ACID-N-(1,4-BENZODIAZEPIN-3-YL)AMIDES

Harald Waldeck, Hanover; Werner Benson, Seelze; Horst Zeugner, Hanover; Klaus-Ullrich Wolf, Uetze; Peter-Colin Gregory, Hanover, all of Fed. Rep. of Germany; Derk Hamminga, Leusden, Netherlands, and Ineke van Wijngaarden, Oud-Turnhout, Belgium, assignors to Kali-Chemie Pharma GmbH, Hanover, Fed. Rep. of Germany

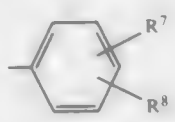
Filed Mar. 7, 1990, Ser. No. 489,502



Claims priority, application Fed. Rep. of Germany, Mar. 8, 1989, 3907389; Mar. 8, 1989, 3907390

Int. Cl.[5] **C07D** *521/00;* **A61K** *31/55*

U.S. Cl. 514—221 **10 Claims**



1. A compound corresponding to the formula I

(I)

wherein
R^1 represents hydrogen, lower alkyl or cycloalkylalkyl with 4–7 carbon atoms,
R^2 represents hydrogen, halogen, lower alkyl, lower alkoxy or trifluoromethyl, and
R^3 represents hydrogen, halogen, lower alkyl or lower alkoxy, or
R^2 and R^3 are bonded to two adjacent carbon atoms and together denote an alkylenedioxy group with 1–2 carbon atoms,
R^4 represents cycloalkyl with 5 to 6 carbon atoms, thiophene or an optionally substituted phenyl group a

(a)

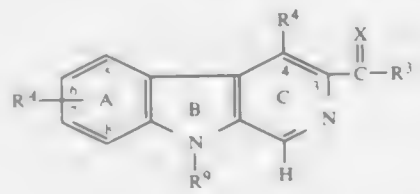
in which
R^7 represents hydrogen, halogen, lower alkyl, lower alkoxy or trifluoromethyl, and
R^8 represents hydrogen, halogen, lower alkyl or lower alkoxy,
R^5 represents hydrogen or halogen,
R^6 represents hydrogen, halogen, lower alkyl, lower alkoxy or trifluoromethyl, and
Z represents an alkylene chain with 2–4 carbon atoms, which can optionally be mono- or disubstituted by lower alkyl, or onto which a 5–6-membered carbocyclic ring can optionally be fused, or represents a $—X—CH_2—CH_2—$-chain in which X is bonded to the phenyl ring of the indole structure and represents oxygen or sulfur,
and the pharmaceutically acceptable acid addition salts thereof.

10. A pharmaceutical composition comprising an effective CCK antagonizing amount of a compound according to claim 1, and at least one conventional pharmaceutical adjuvant or carrier.

5,010,077

β-CARBOLIN-3-CARBOXYLIC ACID DERIVATIVES USEFUL FOR TREATING ANXIETY AND RELATED DISORDERS

Claus T. Braestrup, Gentofte; Mogens C. Nielsen, Roskilde; Joergen A. Christensen, Virum; Mogens Engelstoft, Vaerloese; Henning Schou, Copenhagen, all of Denmark; Ulrich Eder, Berlin, Fed. Rep. of Germany; Günter Neef, Berlin, Fed. Rep. of Germany; Andreas Huth, Berlin, Fed. Rep. of Germany; Dieter Rahtz, Berlin, Fed. Rep. of Germany, and Ralph Schmiechen, Berlin, Fed. Rep. of Germany, assignors to A/S Ferrosan, Soeborg, Denmark and Schering Aktiengesellschaft, Berlin and Bergkamen, Fed. Rep. of Germany



Continuation of Ser. No. 731,244, May 7, 1985, abandoned, which is a continuation of Ser. No. 433,308, Oct. 7, 1982, abandoned, which is a division of Ser. No. 182,244, Aug. 28, 1980, Pat. No. 4,731,536. This application Apr. 25, 1988, Ser. No. 188,145

Claims priority, application Denmark, Aug. 29, 1979, 3622/79; Feb. 29, 1980, 889/80; Fed. Rep. of Germany, Apr. 22, 1980, 3015816; Jun. 20, 1980, 3023567

Int. Cl.[5] **C07D** *471/04;* **A61K** *31/535*

U.S. Cl. 514—228.8 **15 Claims**

1. A β-carboline-3-carboxylic acid derivative of the formula

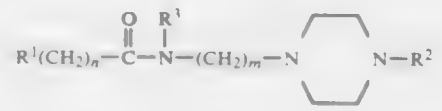
wherein:
X is oxygen, sulphur or NR^{10}, wherein R^{10} is hydrogen or alkyl;
R^3 is $NR^{11}R^{12}$, wherein R^{11} and R^{12} are the same or different and each is (i) hydrogen, (ii) hydroxy, (iii) C_{1-10}-alkyl, (iv) C_{3-7}-cycloalkyl, or each of groups (iii)–(iv) optionally substituted with hydroxy, carboxamido, or carboxy, or (v) amino optionally substituted with C_{1-10}-alkyl, or wherein R^{11} and R^{12} together with the connecting nitrogen atom form pyrrolidine, piperidine, 3-methoxycarbonyl-piperidine, 4-hydroxy-3-ethoxycarbonylpiperidine, or N-methyl-piperazine, with the proviso that R^{11} and R^{12} cannot both be hydroxy;
R^4 is hydrogen, C_{1-10}-alkyl, C_{3-7}-cycloalkyl, or phenyl;
$R^{4'}$ is R^{13}, F, Cl, Br, I, NO_2, $NR^{13}R^{14}$, $NHCOR^{13}$, CN, $COOR^{13}$, OR^{13}, SCH_3 or $SO_2NR^{11}R^{12}$, wherein R^{13} and R^{14} each is hydrogen or C_{1-6}-alkyl, and wherein there are 1–2 identical or different $R^{4'}$'s and wherein R^{11} and R^{12} can be the same or different and each is H or alkyl, or together R^{11} and R^{12} form a saturated heterocyclic group as defined for R^{11} and R^{12}; and
R^9 is H;
with the proviso that R^4 does not represent hydrogen when R^{11} and R^{12} are each hydrogen or C_{1-3} alkyl, when X is oxygen or sulfur and when R^4 is hydrogen, C_{1-5}-alkyl or phenyl.

6. A method of inducing a tranquilizing effect in a patient in need of such treatment which comprises administering to the patient an amount of a compound of claim 1 effective as a tranquilizer.

5,010,078

ARYL- AND HETEROARYL PIPERAZINYL CARBOXAMIDES HAVING CENTRAL NERVOUS SYSTEM ACTIVITY

Magid A. Abou-Gharbia, Glen Mills; John P. Yardley, Gulph Mills, and Wayne E. Childers, Jr., Yardley, all of Pa., assignors to American Home Products Corporation, New York, N.Y.



Continuation-in-part of Ser. No. 335,075, Apr. 7, 1989, abandoned, which is a continuation-in-part of Ser. No. 297,460, Jan. 13, 1989, abandoned, which is a continuation-in-part of Ser. No. 197,890, May 24, 1988, abandoned. This application Mar. 14, 1990, Ser. No. 493,179

Int. Cl.[5] **A61K** *31/505;* **C07D** *403/04, 403/14*

U.S. Cl. 514—252 **10 Claims**

1. A compound having the formula

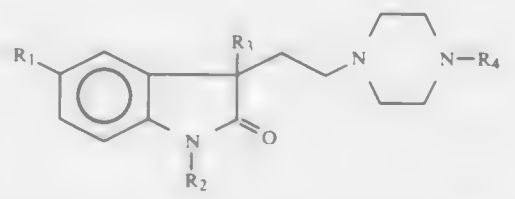
(I)

wherein R^1 is 1-adamantyl, 3-methyl-1-adamantyl, 3-noradamantyl, unsubstituted or substituted-2-indolyl, 3-indolyl, 2-benzofuranyl or 3-benzofuranyl wherein the substituents are selected from lower alkyl, lower alkoxy and halo; R^2 is unsubstituted or substituted pyrimidinyl, wherein the substituents are selected from lower alkyl, lower alkoxy, trifluoromethyl and halo; R^3 is H or lower alkyl of 1 to 3 carbon atoms; n is the integer 0 or 1; and m is the integer from 2 to 5; or the pharmaceutically acceptable salts thereof.

5,010,079

INDOLONE DERIVATIVES, THEIR PREPARATION AND THEIR APPLICATION IN THERAPY

Philippe Manoury, Verrieres le Buisson; Jean Binet, Breuillet; Daniel Obitz, Fontenay aux Roses; Gerard Defosse, Paris; Elisabeth Dewitte, Saint-Gratien, and Corinne Veronique, Villejuif, all of France, assignors to Synthelabo, Paris, France



Filed Aug. 2, 1989, Ser. No. 388,373

Claims priority, application France, Aug. 3, 1988, 8810482

Int. Cl.[5] **C07D** *401/06, 403/06;* **A61K** *31/47, 31/495*

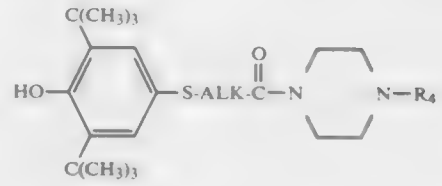
U.S. Cl. 514—253 **8 Claims**

1. An indolone derivative which is a compound of formula (I):

in which
R_1 is a hydrogen or halogen atom or a (C_{1-4})alkyl radical,
R_2 is a hydrogen atom or a (C_{1-4})alkyl radical,
R_3 is a hydrogen atom, a (C_{1-4})alkyl radical or an S-$(C_1$-4) alkyl radical; and
R_4 is a phenyl, chlorophenyl, naphthyl, 7-methoxy-1-naphthyl, 6-methoxy-1-indanyl, 2-methoxy-6-pyridyl, 3-methoxy-2-pyridyl, isoquinolyl, 7-methoxy-1-isoquinolyl, 7-methoxy-1,2,3,4-tetrahydro-1-naphthyl or 7-fluoro-1-naphthyl radical;
or a pharmaceutically acceptable acid addition salt thereof.

5,010,080

USE OF HETEROCYCLIC AMIDES TO INHIBIT TUMOR METASTASIS



George C. Fuller, Gross Point, Mich.; George R. Martin, Bethesda, Md.; Richard A. Mueller, Glencoe, Ill., and Reuven Reich, Silver Spring, Md., assignors to G. D. Searle & Co., Chicago, Ill. and The United States of America as represented by the Department of Health and Human Services, Washington, D.C.

Filed Dec. 2, 1988, Ser. No. 279,584

Int. Cl.[5] **A61L** *31/495*

U.S. Cl. 514—255 **6 Claims**

1. A method of inhibiting invasive activity and related metastasis of tumor cells in a mammal without treating the tumor cells comprising administering an amount of a compound of the formula

wherein Alk is straight or branched chain lower alkylene and R_4 is selected from the group consisting of hydrogen, lower alkyl, phenyl, or benzyl; or a pharmaceutically acceptable salt thereof, which is effective to inhibit tumor cell invasive activity and related metastasis to a mammal having tumor cells sensitive to said compound.

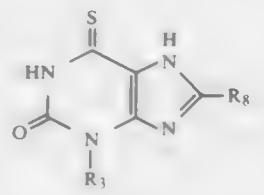
5,010,081

6-THIOXANTHINES

Peter Hofer, Liestal, Switzerland, assignor to Euroceltique, S.A., Luxembourg, Luxembourg

Continuation-in-part of Ser. No. 322,364, Mar. 13, 1989, abandoned, which is a continuation of Ser. No. 78,545, Jul. 28, 1987, Pat. No. 4,925,847, which is a continuation-in-part of Ser. No. 699,254, Feb. 7, 1985, Pat. No. 4,710,503. This application Oct. 2, 1989, Ser. No. 415,970

Claims priority, application United Kingdom, Aug. 2, 1986, 8618931



The portion of the term of this patent subsequent to Dec. 1, 2004, has been disclaimed.

Int. Cl.[5] **C07D** *473/38;* **A61K** *31/52*

1. A 6-thioxanthine of formula I or a pharmaceutically acceptable salt thereof

I

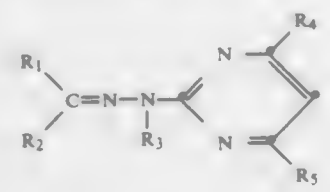
wherein R_3 is selected from a group consisting of ethyl, n-propyl, isopropyl, isobutyl, secondary butyl, cyclopropylmethyl, n-pentyl, 2-methylbutyl, 3-methylbutyl and 2,2-dimethylpropyl, and R_8 is selected from a group consisting of ethyl, isopropyl, cyclopropyl, n-butyl, isobutyl, t-butyl, cyclobutyl and n-pentyl, provided that
when R_3 is ethyl, R_8 is selected from isopropyl, cyclopropyl, isobutyl, t-butyl, cyclobutyl and n-pentyl.
when R_3 is n-propyl, R_8 is selected from isopropyl, isobutyl and t-butyl
when R_3 is isobutyl, R_8 is selected from ethyl, isopropyl, cyclopropyl, isobutyl, t-butyl, cyclobutyl and n-pentyl,
when R_3 is n-pentyl, 2-methylbutyl, 3-methylbutyl, or 2,2-

dimethylpropyl R_8 is selected from isopropyl, cyclopropyl, n-butyl, isobutyl, t-butyl, cyclobutyl and n-pentyl.

5,010,082

PESTICIDAL 2-HYDRAZINOPYRAMIDINE COMPOUNDS

Peter Riebli, Buckten, Switzerland, assignor to Ciba-Geigy Corporation, Ardsley, N.Y.



Filed Sep. 22, 1989, Ser. No. 411,337

Claims priority, application Switzerland, Sep. 28, 1988, 3595/88

Int. Cl.[5] **C07D** *239/46, 239/48;* **A01N** *43/54*

U.S. Cl. 514—272 **21 Claims**

1. A compound of formula I

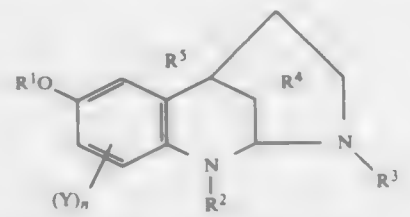
(I)

wherein R_1 is phenyl, naphthyl, phenyl substituted from one to five times by R_6, or naphthyl substituted from one to five times by R_6; R_2 is C_1–C_6alkyl, C_1–C_6alkyl substituted at least once by halogen, C_1–C_3alkoxy or by C_3–C_6cycloalkyl, C_3–C_6cycloalkyl, C_1–C_4alkoxycarbonyl, phenyl, phenyl mono- to trisubstituted by halogen, C_1–C_3alkoxy by C_1–C_3alkyl, benzyl, or benzyl mono- to tri-substituted by halogen, C_1–C_3alkoxy or by C_1–C_3alkyl; R_3 is hydrogen, C_1–C_6alkyl or the radical CO-R_7; R_4 is C_3–C_6cycloalkyl or C_3–C_6cycloalkyl mono- to trisubstituted by halogen or by methyl; R_5 is hydrogen, C_1–C_6alkyl, C_1–C_6alkyl substituted at least once by halogen, hydroxy, cyano or by C_1–C_3alkoxy, R_5 is also C_3–C_5alkenyl, halogen, hydroxy, C_1–C_3alkoxy, C_1–C_3haloalkoxy, C_3–C_6cycloalkyl or C_1–C_3alkylthio; R_6, independently of any other, is C_1–C_6alkyl, C_1–C_3alkyl substituted by C_1–C_3alkoxy, or C_1–C_4alkoxy, C_1–C_3haloalkyl, C_1–C_3haloalkoxy, halogen, cyano, nitro, hydroxy or the radical $S(O)_n$-C_1–C_4alkyl; R_7 is C_1–C_6alkyl, or C_1–C_6alkyl substituted at least once by halogen or by C_1–C_3alkoxy; and n is 0, 1 or 2; including the acid addition compounds and the metal salt complexes thereof.

17. A method of controlling or preventing attacks on cultivated plants by phytopathogenic microorganisms, which method comprises applying to the plant, parts of the plant or the locus thereof, as active ingredient, a compound of formula I according to claim 1.

5,010,083

2,6-METHANO-1,3-BENZODIAZOCINE COMPOUNDS WHICH HAVE USEFUL PHARMACEUTICAL UTILITY



Richard C. Allen, Flemington; Marc N. Agnew, Bridgewater, both of N.J., and David M. Fink, Doylestown, Pa., assignors to Hoechst-Roussel Pharmaceuticals, Inc., Somerville, N.J.

Continuation-in-part of Ser. No. 174,274, Mar. 28, 1988, abandoned. This application Dec. 6, 1989, Ser. No. 446,743

Int. Cl.[5] **A61K** *31/44;* **C07D** *471/06*

U.S. Cl. 514—292 **32 Claims**

1. A compound of the formula:

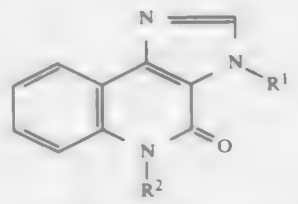
wherein R^1 is selected from the group consisting of hydrogen, loweralkyl, loweralkylcarbonyl, loweralkylaminocarbonyl, cycloalkylaminocarbonyl, arylalkylaminocarbonyl, loweralkoxycarbonyl, aryloxycarbonyl, and arylaminocarbonyl; R^2 and R^3 are independently selected from the group consisting of hydrogen, loweralkyl, cycloalkylloweralkyl, aryllowerakyl, and loweralkenyl; R^4 and R^5 are independently hydrogen or loweralkyl; Y is halogen, loweralkyl, nitro, amino, loweralkylcarbonylamino, arylcarbonylamino, formyl or loweralkylaminocarbonyl; the term aryl signifying a phenyl group optionally substituted by up to 3 substituents each of which is independently loweralkyl, loweralkoxy, halogen, trifluoromethyl, nitro or cyano; the term cycloalkyl signifying a cyclic hydrocarbon radical of the formula $-C_xH_{2x-1}$, wherein X is an integer having a value of 3 to 7, inclusive; and n is an integer having a value of zero or 1; or a geometrical isomer, optical antipode or a pharmaceutically acceptable acid addition salt thereof.

32. A method of alleviating in a patient a memory dysfunction characterized by decreased cholinergic function which comprises administering to the patient an effective amount of a compound as defined in claim 1.

5,010,084

IMIDAZOQUINOLONE DERIVATIVES

Fumio Suzuki, Mishima; Takeshi Kuroda; Yoshisuke Nakasato, both of Shizuoka; Kenji Ohmori, Mishima, and Haruhiko Manabe, Shizuoka, all of Japan, assignors to Kyowa Hakko Kogyo Co., Ltd., Tokyo, Japan



Filed Jul. 18, 1990, Ser. No. 553,551

Claims priority, application Japan, Jul. 18, 1989, 1-185087

Int. Cl.[5] **C07D** *471/02;* **A61K** *31/44*

U.S. Cl. 514—293 **4 Claims**

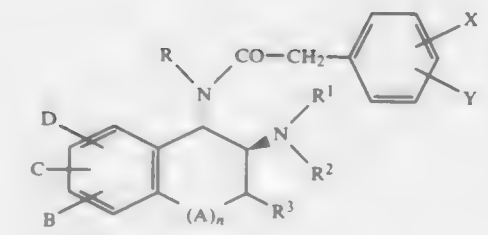
1. An imidazoquinolone compound represented by the formula

wherein R^1 represents lower alkyl or $-(CH_2)_mCO-R^3$ where R^3 represents hydrogen, lower alkyl, hydroxy or lower alkoxy; and m is an integer of 1 to 3; R^2 represents lower alkyl; or a pharmaceutically acceptable salt thereof.

5,010,085

BENZO-FUSED CYCLOALKANE AND OXA- AND THIA-CYCLOALKANE TRANS-1,2-DIAMINE DERIVATIVES

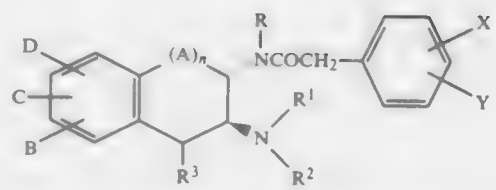
Penio Pennev, Chadds Ford, Pa.; Parthasarathi Rajagopalan, and Richard M. Scribner, both of Wilmington, Del., assignors to E. I. du Pont de Nemours and Company, Wilmington, Del.



Division of Ser. No. 362,681, Jun. 7, 1989, Pat. No. 4,929,627, which is a division of Ser. No. 71,028, Jul. 16, 1987, Pat. No. 4,876,269, which is a continuation-in-part of Ser. No. 905543, Sep. 10, 1986, abandoned. This application Dec. 21, 1989, Ser. No. 455,882

The portion of the term of this patent subsequent to May 29, 2007, has been disclaimed.

Int. Cl.[5] **A31K** *31/40;* **C07D** *221/22, 401/04, 403/04*



U.S. Cl. 514—299 **21 Claims**

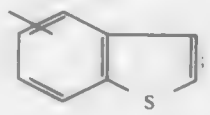
1. A compound having the formula:

(I)

or

(II)

wherein for the enantiomers and racemic mixtures



n is 1;

A is —O—, or —S—;

B, C and D independently selected from the group consisting of H, OH, $OCOR^5$, $OCH_2CH_2OR^5$, OR^6, R^6, CH_2OR^6, CH_2COR^7, Cl, F, Br, I, NH_2, NHR^8, NR^8R^9, SH, SR^6, CH_2SR^6 and $OC(S)N(CH_3)_2$;

X and Y independently are selected from the group consisting of H, OCH_3, Cl, F, Br, I, NO_2, CF_3, CN, SO_2R^{10}, and SO_2CF_3 or;

X and Y taken together with the benzene ring form

R is selected from the group consisting of H, and alkyl of 1 to 3 carbon atoms;

R^1 and R^2 are taken together with the nitrogen to which they are attached to be 1-pyrrolidinyl substituted at the 3-position by OH, alkyl of 1 to 3 atoms, alkoxy of 1 to 3 carbon atoms or alkanoyloxy of 1 to 3 carbon atoms; 2,5-dihydro-1H-pyrrol-1-pyrrol-1-yl; 3-azabicyclo[3.1.0-]hexan-3-yl; or 3 azabicyclo[3.2.0]heptan-3-yl;

R^3 is H;

R^5 is alkyl of 1 to 6 carbon atoms, phenyl, or mono-substituted phenyl;

R^6, R^8, R^9, R^{10} and R^{13} are independently an alkyl group of 1 to 3 carbon atoms; and

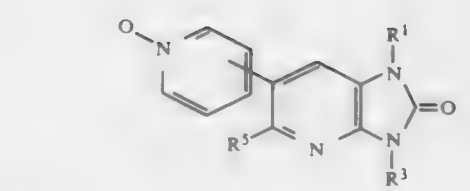
R^7 is selected from the group consisting of H, OH, OR^{13}, NHR^{13}, and NR_2^{13}; or

a stable N-oxide or a pharmaceutically acceptable salt thereof.

15. A method of treating pain in a mammal comprising administering to the mammal an analgesically effective amount of a compound of claim 1.

5,010,086

IMIDAZOPYRIDINES, COMPOSITIONS AND USE



George Y. Lesher, deceased, late of Schodack by Louise E. Lesher, executrix ; Edward R. Bacon, East Greenbush; Baldev Singh, East Greenbush, and Gee-Hong Kuo, East Greenbush, all of N.Y., assignors to Sterling Drug Inc., New York, N.Y.

Continuation-in-part of Ser. No. 486,637, Feb. 28, 1990, Pat. No. 4,963,561. This application Aug. 7, 1990, Ser. No. 564,011

Int. Cl.[5] **C07D** *471/04;* **A61K** *31/44*

U.S. Cl. 514—303 **5 Claims**

1. A compound of the formula

(I)

wherein

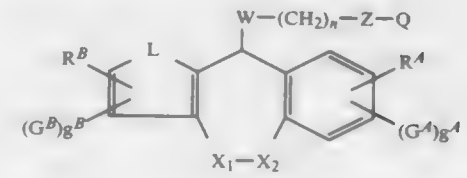
R_1 and R_3 are hydrogen or lower-alkyl;

R_5 is lower-alkyl or fluorinated lower-alkyl; and the pyridine-N-oxide is attached at the 4- or 3-position; or a pharmaceutically acceptable acid-addition salt thereof.

5,010,087

TRICYCLIC COMPOUNDS AND TXA_2 ANTAGONISTIC COMPOSITIONS THEREOF

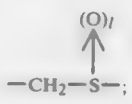
Etsuo Oshima, Shizuoka; Hiroyuki Obase, Mishima; Akira Karasawa; Kazuhiro Kubo, both of Shizuoka; Ichiro Miki, Tokyo, and Akio Ishii, Shizuoka, all of Japan, assignors to Kyowa Hakko Kogyo Co., Ltd., Tokyo, Japan



Division of Ser. No. 255,485, Oct. 11, 1988, Pat. No. 4,882,351. This application Jul. 18, 1989, Ser. No. 381,330

Claims priority, application Japan, Oct. 14, 1987, 62-259145

Int. Cl.[5] **A61K** *31/47, 31/44;* **C07D** *215/20, 217/26*



U.S. Cl. 514—307 **10 Claims**

1. A tricyclic compound of the formula:

wherein:

X_1—X_2 is selected from the group consisting of —CH_2—O— or

(wherein l represents 0, 1, or 2);

L is selected from the group consisting of —CH=CH— or —S—;

is a single or double bond;

W is selected from the group consisting of —S—, —O—, —NH—, —CH_2—, —NHCO— or =CH—, and the left side of each formula is bound to the tricyclic nucleus;

n is 0,1,2, or 3;

Z is selected from the group consisting of —NR^1CO—, —NR^1SO_2—, —NR^1CONH—, —NR^1CSNH—, —$NR^1NHCONH$—, —$NR^1NHCSNH$—, —NR^1COO— or —NR^1COS—, wherein R^1 is hydrogen or lower alkyl, and the right side of each formula is bound to Q;

Q is selected from the group consisting of optionally substituted, N-substituted or unsubstituted pyrrolyl, (wherein the N-substituent is lower alkyl, phenyl or benzyl), pyridyl, quinolyl or isoquinolyl wherein substitution means 1 to 3 substituents on the aromatic ring, independently selected from lower alkyl, phenyl, benzyl, halogen, triflouromethyl, nitro, OR^2 or SR^2, (wherein R^2 represents hydrogen, lower alkyl, phenyl or benzyl);

one of R^A and R^B is hydrogen and the other is —Y—M— wherein Y is selected from the group consisting of a single bond, $-CR^3R^4-(CH_2)_m-$ and $-CR^3{=}CR^4-(CH^2)_m-$ and each of R^3 and R^4 are independently hydrogen

or lower alkyl and m is 0, 1, 2, 3, or 4, wherein the left side of each formula is bound to the tricyclic nucleus; M is $-COOR^5$ and R^5 is hydrogen, lower alkyl or $-CONR^{5a}R^{5b}$ and each of R^{5a} and R^{5b} independently are hydrogen or lower alkyl; each of G^A and G^B are independently lower alkyl, halogen or OR^6 and R^6 represents hydrogen, lower alkyl, phenyl or benzyl;

each of g^A and g^B are independently 0, 1, 2 or 3; or a pharmaceutically acceptable salt thereof.

10. A pharmaceutical composition comprising a pharmaceutical carrier and, as an active ingredient, a therapeutically effective amount of a tricyclic compound defined in claim 1.

5,010,088

6-(4-HYDROXYPIPERIDINO) CARBOSLYRIL

Richard M. Welch, Raleigh; Alan R. Brown, Durham, and Arthur P. Phillips, Raleigh, all of N.C., assignors to Burroughs Wellcome Co., Research Triangle Park, N.C.

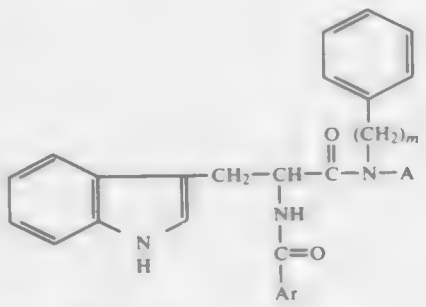
CCK ANTAGONISTS AND THEIR USE IN TREATING GASTROINTESTINAL DISORDERS



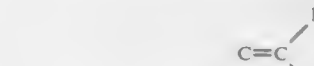
Sun H. Kim, Chestnut Hill, and Sylviane Moreau, Upton, both of Mass., assignors to Biomeasure, Inc., Hopkinton, Mass.

Continuation-in-part of Ser. No. 231,493, Aug. 12, 1988, abandoned, which is a continuation-in-part of Ser. No. 815,217, Dec. 31, 1985, Pat. No. 4,814,463. This application Aug. 21, 1989, Ser. No. 396,567

Int. Cl.[5] **C07D** *209/18, 403/12;* **A61K** *31/405, 31/47*

U.S. Cl. 514—314 **12 Claims**

1. A compound having the formula



or pharmaceutically acceptable salt thereof,

wherein Ar is an indolyl, quinolyl or naphthyl;

m is an integer between 0 and 2, inclusive; and

A is either

wherein n is an integer between 1 and 5, inclusive, and R^2 is hydroxy, an alkoxy group having 1–5, inclusive, carbon atoms, or aralkoxy.

11. A method for preventing a patient having excessive cholecystokinin from developing a gastrointestinal disorder comprising administering to the patient an effective amount of the compound of any of claim 1–10.

12. The method of claim 11 wherein said gastrointestinal disorder is a gastric motility disorder or a colon motility disorder.

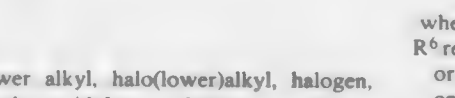
N-(BUTENYL SUBSTITUTED) AZAHETEROCYCLIC CARBOXYLIC ACIDS

Frederik C. Gronvald, Vedbaek, and Claus Braestrup, Roskilde, both of Denmark, assignors to Novo Nordisk A/S., Bagsvaerd, Denmark



Continuation-in-part of Ser. No. 33,084, Feb. 24, 1987, abandoned. This application Oct. 7, 1988, Ser. No. 254,557

Claims priority, application Denmark, Jun. 26, 1985, 2883/85; Jun. 26, 1986 [DK] Denmark PCT/DK86/00076

Int. Cl.[5] **C07D** *401/14*

U.S. Cl. 514—326 **10 Claims**

1. A compound of formula I

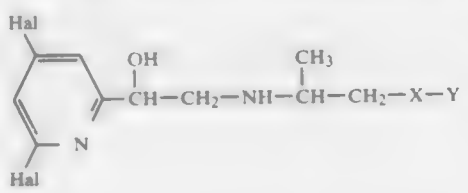
I

wherein R^1 and R^2 are the same or different and each represents a substituted or unsubstituted, thien-2-yl, thien-3-yl, pyrrol-2-yl or pyrrol-3-yl wherein the substitution is with at least one of C_{1-7} alkyl, bromo, chloro, or fluoro and at least one of said R^1 and R^2 is thien-2-yl substituted at least at the 3-position or pyrrol-2-yl substituted at least at the 1-position with C_{1-7}-alkyl, chloro, bromo, or fluoro, and wherein R^3 represents 3-carboxypiperidin-1-yl, 3-carboxy-1,2,5,6-tetrahydropyridin-1-yl or 3-carboxymethylpyrrolidin-1-yl, and pharmaceutically acceptable salts thereof.

5,010,091

2,4-DIHALOGENO-6-PYRIDYLETHANOLPHENYLISOPROPYLAMINES FOR SHIFTING THE PROTEIN-FAT RATIO OF ANIMALS IN FAVOR OF PROTEIN

Hans Lindel, Leverkusen; Werner Hallenbach, Monheim; Friedrich Berschauer, Wuppertal; Heinrich Greife, Langenfeld, and Gernot Klotz, Leichlingen, all of Fed. Rep. of Germany, assignors to Bayer Aktiengesellschaft, Leverkusen, Fed. Rep. of Germany



Filed Feb. 8, 1990, Ser. No. 477,272

Claims priority, application Fed. Rep. of Germany, Feb. 18, 1989, 3905028

Int. Cl.[5] **C07D** *213/61, 213/89;* **A61K** *31/44*

U.S. Cl. 514—357 **8 Claims**

1. A 2,4-dihalogeno-6-pyridyl-ethanolamine of the formula

(I)

in which

Hal are identical or different and represent fluorine, chlorine or bromine.

X represents a direct bond of $—CH_2—$ and

Y represents phenyl which is substituted by OH, C_{1-4}-alkoxy, C_{1-4}-alkoxy-C_{1-4}-alkoxy, carboxyl, aminocarbonyl, C_{1-4}-alkoxycarbonyl, hydroxy-C_{1-4}-alkoxy, amino-C_{14}-alkoxy, C_{1-4}-alkoxycarbonyl-C_{1-4}-alkoxy or phenyl-C_1-C_4-alkoxy,

or a physiologically tolerated salt or N-oxide thereof.

8. A method for shifting the protein-fat ratio of animals in favor of protein and for treating adiposity in humans and animals, comprising administering to said animals or humans an amount effective therefor of a compound according to claim 1.

5,010,092

PROTECTION AGAINST CHEMICALLY-INDUCED KIDNEY DAMAGE BY METHIMAZOLE

Adnan A. Elfarra, Madison, Wis., assignor to Wisconsin Alumni Research Foundation, Madison, Wis.

Filed Dec. 22, 1989, Ser. No. 454,884

Int. Cl.[5] **A01N** *43/64, 43/82, 43/78, 43/50*

U.S. Cl. 514—359 **7 Claims**

1. A method for reducing nephrotoxicity of an effective amount of compound A that is being administered to a live mammal in need thereof, where compound A is an antibiotic, the method comprising:

administering to the live mammal the effective amount of the antibiotic and an effective amount of a compound B so as to reduce the nephrotoxicity of the antibiotic;

wherein compound B is selected from the group of methimazole and carbimazole.

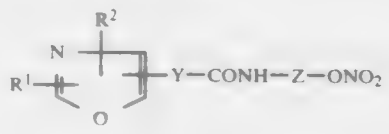
NITRIC ESTER DERIVATIVE

Youichi Shiokawa, Ibaraki; Koichi Takimoto, Takarazuka, and Kohei Takenaka, Sakai, all of Japan, assignors to Fujisawa Pharmaceutical Co., Ltd., Osaka, Japan



Division of Ser. No. 213,623, Jun. 30, 1988, Pat. No. 4,923,886. This application Mar. 16, 1990, Ser. No. 494,545

Claims priority, application United Kingdom, Jul. 20, 1987, 8717068

Int. Cl.[5] **C07D** *263/34, 263/32;* **A61K** *31/42*

U.S. Cl. 514—374 **7 Claims**

1. A compound of the formula:

wherein

R^1 is hydrogen, lower alkyl, halo(lower)alkyl, halogen, phenyl, nitrophenyl, pyridyl, morpholino, piperidino, amino, lower alkanoylamino, higher alkanoylamino, benzamido, lower alkoxycarbonylamino, N-lower alkylamino, N,N-di(lower)alkylamino, N-lower alkyl-N-lower alkanoylamino, 3-lower alkylureido or N,N-di(lower) alkylamino(lower)alkyl,

R^2 is hydrogen, lower alkyl or N-(nitroxy-(lower)alkyl) carbamoyl,

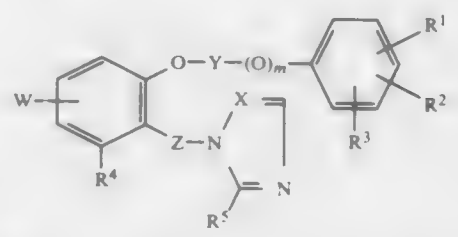
Y is a single bond, lower alkylene or lower alkenylene, and

Z is ethylene, trimethylene, tetramethylene, 1-methyl-nitroxymethylethylene, 1,1-bis(nitrooxymethyl)ethylene, 2-nitrooxytrimethylene or ethyleneoxyethylene, and pharmaceutically acceptable salts thereof.

5,010,094

IMIDAZOLYL COMPOUNDS AND THEIR USE AS FUNGICIDES

Gerold Schade, Cologne; Albrecht Marhold, Leverkusen, and Wilhelm Brandes, Leichlingen, all of Fed. Rep. of Germany, assignors to Bayer Aktiengesellschaft, Leverkusen, Fed. Rep. of Germany



Filed Jan. 18, 1990, Ser. No. 466,805

Claims priority, application Fed. Rep. of Germany, Jan. 21, 1989, 3901723

Int. Cl.[5] **C07D** *233/60;* **A01N** *43/50*

U.S. Cl. 514—399 **10 Claims**

1. An axolyl derivative of the formula

(I)

in which

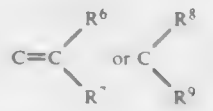
R^1 represents halogenoalkyl having 1 to 4 carbon atoms and 1 to 5 identical or different halogen atoms, or represents halogenoalkylthio having 1 to 4 carbon atoms and 1 to 5 identical or different halogen atoms,

R^2 represents hydrogen, fluorine, chlorine, bromine, cyano, optionally halogen-substituted alkyl having 1 to 6 carbon atoms, optionally halogen-substituted alkenyl having 2 to 6 carbon atoms, alkoxy having 1 to 4 carbon atoms, alkylthio having 1 to 4 carbon atoms, aryl having 6 to 10 carbon atoms or aryloxy having 6 to 10 carbon atoms,

R^3 represents hydrogen, fluorine, chlorine, bromine, cyano, optionally halogen-substituted alkyl having 1 to 6 carbon atoms, optionally halogen-substituted alkenyl having 2 to 6 carbon atoms, alkoxy having 1 to 4 carbon atoms, alkylthio having 1 to 4 carbon atoms, aryl having 6 to 10 carbon atoms or aryloxy having 6 to 10 carbon atoms,

R^4 represents hydrogen,

R^5 represents hydrogen or alkyl having 1 to 4 carbon atoms,

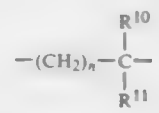


W represents hydrogen, fluorine, chlorine, or bromine,

X represents a CH group,

Y represents a straight-chain or branched alkylene chain having 1 to 6 carbon atoms,

m represents the number 0 or 1 and



Z represents the grouping

wherein

R^6 represents hydrogen or alkyl having 1 to 4 carbon atoms, or represents phenyl which is optionally substituted by one to three identical or different substituents from the group comprising alkyl having 1 to 4 carbon atoms, halogen and/or halogenoalkyl having 1 or 2 carbon atoms and 1 to 5 halogen atoms, or

R^6, together with R^4, represent the grouping

R^7 represents hydrogen or alkyl having 1 to 4 carbon atoms,

R^8 represents hydrogen or alkyl having 1 to 4 carbon atoms,

R^9 represents hydrogen or alkyl having 1 to 4 carbon atoms,
R^{10} represents hydrogen or alkyl having 1 to 4 carbon atoms,
R^{11} represents hydrogen or alkyl having 1 to 4 carbon atoms and
n represents the number 0, 1, or 2.

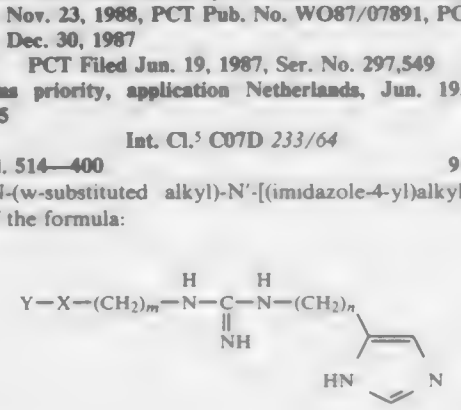
9. A method of combating fungi which comprises applying to such fungi or to a fungus habitat a fungicidally effective amount of a compound or addition product thereof according to claim 1.

5,010,095

N-(W-SUBSTITUTED ALKYL)-N'-(IMIDAZOL-4-YL)ALKYL) GUANIDINE

Geert J. Sterk, RN Utrecht; Henk Timmerman, VM Voorschoten, and Henk van der Goot, GW Hoofddorp, all of Netherlands, assignors to Cedona Pharmaceuticals B.V., Haarlem, Netherlands

PCT No. PCT/NL87/00013, § 371 Date Nov. 23, 1988, § 102(e) Date Nov. 23, 1988, PCT Pub. No. WO87/07891, PCT Pub. Date Dec. 30, 1987



PCT Filed Jun. 19, 1987, Ser. No. 297,549

Claims priority, application Netherlands, Jun. 19, 1986, 8601585

Int. Cl.[5] C07D *233/64*

U.S. Cl. 514—400 **9 Claims**

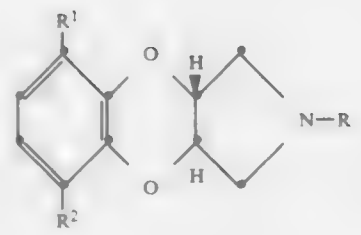
1. N-(w-substituted alkyl)-N'-[(imidazole-4-yl)alkyl]guanidine of the formula:

wherein
m is 1,2 or 3;
n is 2 or 3;
X is
(a) CH_2, and Y is an R substituted diphenylmethyl group, or X is:
(b) =CH—, and Y is an R-substituted diphenylmethylidene group,
R is a member selected from the group consisting of alkyl, alkoxy, halogen and trihalogen methyl, and the dotted line represents an optional bond, and the acid addition salts thereof.

5,010,096

METHOD OF PROTECTING MAMMALS AGAINST NEURONAL DAMAGE RESULTING FROM CEREBRAL ISCHEMIA

Ann G. Hayes, Potters Bar, and Phillip J. Birch, Biggleswade, both of England, assignors to Glaxo Group Limited, London, England



Filed Nov. 30, 1989, Ser. No. 443,189

Claims priority, application United Kingdom, Dec. 1, 1988, 8828032

Int. Cl.[5] A61K *31/40*

U.S. Cl. 514—411 **8 Claims**

1. A method of protecting against neuronal damage resulting from cerebral ischaemia in a mammal which comprises administering to a mammal in need of said protection an effective amount of a compound of formula (I) or a physiologically acceptable salt or hydrate thereof

(I)

wherein
R is a hydrogen atom or a group selected from C_1-C_6alkyl, C_1-C_6alkyl substituted by a C_3-C_7cycloalkyl), C_3-C_6alkenyl, C_3-C_6alkynyl, C_3-C_7cycloakyl aralkyl (in which the alkyl moiety contains 1 to 5 carbon atoms) and CHO;
R^1 is a halogen atom or a group selected from C_1-C_4alkyl, C_1-C_4alkoxy, hydroxyl, cyano, nitro and $—NR^3R^4$;
R^2 is a hydrogen atom, a halogen atom of a group selected from C_1-C_4alkyl C_1-C_4alkoxy, hydroxyl, cyano, nitro and $—NR^3R^4$;
R^3 is a hydrogen atom or a C_1-C_4alkyl group; and
R^4 is a hydrogen atom or a C_1-C_4alkyl group.

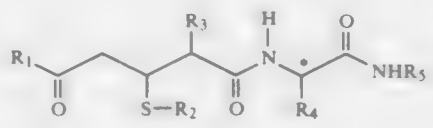
NOVEL COMPOUNDS

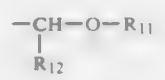
Roger E. Markwell; Stephen A. Smith; Ian Hughes, and Laramie M. Gaster, all of Harlow, England, assignors to Beecham Pharmaceuticals, Harlow, England



Filed Dec. 20, 1988, Ser. No. 287,453

Claims priority, application United Kingdom, Dec. 22, 1987, 8729804

Int. Cl.[5] A61K *31/16, 31/165;* **C07C** *323/41*



U.S. Cl. 514—419 **12 Claims**

1. A compound of formula (I) or a salt, solvate or hydrate thereof:

(I)

in which,
R_1 is hydrogen, alkyl, or optionally substituted aryl;
R_2 is hydrogen, or acyl;
R_3 is C_{3-6} alkyl;
R_4 is hydrogen, alkyl, $—CH_2$-R_{10} where R_{10} is optionally substituted phenyl or heteroaryl, or a group

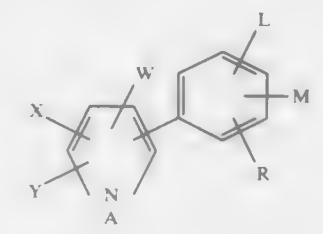
where
R_1 is hydrogen, alkyl, or $—CH_2—$Ph where Ph is optionally substituted phenyl, and R_{12} is hydrogen or alkyl; and
R_5 is hydrogen, alkyl, or a group

where
R_{13} is hydrogen, or alkyl, and R_{14} is hydroxy, alkoxy, or $—NR_6R_7$, where each of R_6 and R_7 is hydrogen or alkyl, or R_6 and R_7 together with the nitrogen atom to which they are bonded form a 5-, 6- or 7-membered ring with an optional oxygen or sulphur atom in the ring or an optional further nitrogen atom optionally substituted by alkyl.

12. A method of treating collagenolytic conditions in mammals which comprises administering an effective amount of a compound of formula (I) as defined in claim 1, or a pharmaceutically acceptable salt, solvate or hydrate thereof to a sufferer.

5,010,098

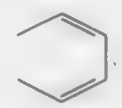
ARYLPYRROLE INSECTICIDAL ACARICIDAL AND NEMATICIDAL AGENTS AND METHODS FOR THE PREPARATION THEREOF



Dale G. Brown, Hunterdon; Jack K. Siddens, Princeton Junction; Robert E. Diehl, Lawrenceville, and Donald P. Wright, Jr., Pennington, all of N.J., assignors to American Cyanamid Company, Stamford, Conn.

Continuation-in-part of Ser. No. 79,545, Jul. 29, 1987, abandoned. This application Jun. 23, 1988, Ser. No. 208,841

Int. Cl.[5] A01N *43/36*



U.S. Cl. 514—426 **6 Claims**

1. A method for controlling insects, nematodes or acarina comprising: contacting said insects, nematodes or acarina, their infested breeding grounds, food supply or habitat with an insecticidally, nematicidally or acaricidally effective amount of a compound having the structure:

(I)

wherein X is H, F, Cl, Br, I, or CF_3; Y is F, Cl, Br, I, CF_3 or CN; W is CN or NO_2 and A is H; C_1-C_4 alkyl optionally substituted with from one to three halogen atoms, one hydroxy, one C_1-C_4 alkoxy, one C_1-C_4 alkylthio, one phenyl optionally substituted with C_1-C_3 alkyl, C_1-C_3 alkoxy or with one to three halogen atoms, one phenoxy optionally substituted with one to three halogen atoms or one benzyloxy optionally substituted with one halogen substituent; C_1-C_4 carbalkoxymethyl; C_3-C_4 alkenyl optionally substituted with from one to three halogen atoms; cyano; C_3-C_4 alkynyl optionally substituted with one halogen atom; di-(C_1-C_4 alkyl) aminocarbonyl; or C_4-C_6 cycloalkylaminocarbonyl; L is H, F, Cl or Br; and M and R are each independently H, C_1-C_3 alkyl, C_1-C_3 alkoxy, C_1-C_3 alkylthio, C_1-C_3 alkylsulfinyl, C_1-C_3 alkylsulfonyl, cyano, F, Cl, Br, I, nitro, CF_3, R_1CF_2Z, R_2CO or NR_3R_4, and when M and R are on adjacent positions and taken with the carbon atoms to which they are attached they may form a ring in which MR represents the structure:

$—OCH_2O—$, $—OCF_2O—$ or  .

Z is S(O)n or O; R_1 is H, F, CHF_2, CHFCl, or CF_3; R_2 is C_1-C_3 alkyl, C_1-C_3 alkoxy, or NR_3R_4; R_3 is H or C_1-C_3 alkyl; R_4 is H, C_1-C_3 alkyl, or R_5CO; R_5 is H or C_1-C_3 alkyl; and n is an integer of 0, 1 or 2.

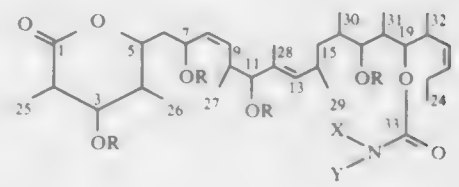
DISCODERMOLIDE COMPOUNDS, COMPOSITIONS CONTAINING SAME AND METHOD OF PREPARATION AND USE



Malika Gunasekera; Sarath P. Gunasekera; Ross E. Longley, all of Vero Beach, Fla., and Neal S. Burres, Highland Park, Ill., assignors to Harbor Branch Oceanographic Institution, Inc., Fort Pierce, Fla.

Division of Ser. No. 392,468, Aug. 11, 1989, Pat. No. 4,939,168. This application May 7, 1990, Ser. No. 519,605

Int. Cl.[5] A61K *31/365*

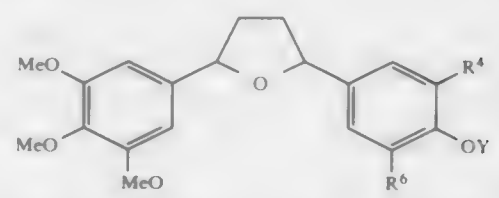
U.S. Cl. 514—459 **3 Claims**

1. A method for treating cancerous cachexia caused by the presence of a tumor in a host comprising treating the host with an effective antitumor amount of a compound of the formula:

wherein:
R = —H, —A, $—CH_2—Q$, —COA, or —COZ,
A = lower alkyl,
Z = phenyl, p-tolyl, m-tolyl, p-bromophenyl, p-chlorophenyl, 3-ethyl-4-bromophenyl, 2,4-diethylphenyl, 2-methyl-3-hydroxyphenyl, 2,4-dimethyl-3-chlorohenyl, 2-bromo-3-amino-4-methylphenyl, and 2-iodo-3-ethyl-5-aminophenyl,
Q = phenyl, tolyl, or xylyl,
X = —H, —A, —Z, or $—CH_2—Z$, and
Y = —H, —A, —Z, $—CH_2—Z$, —COA, —COZ, and acid addition salts thereof.

5,010,100

CERTAIN 2,5-DIARYL TETRAHYDROFURANS AND ANALOGS THEREOF AS PAF ANTAGONISTS



Tesfaye Biftu, Parlin; John C. Chabala, Westfield; Robert L. Bugianesi, Colonia; Mitree M. Ponpipom, Branchburg, and Soumya P. Sahoo, Edison, all of N.J., assignors to Merck & Co. Inc., Rahway, N.J.

Continuation-in-part of Ser. No. 135,862, Dec. 21, 1987, abandoned, which is a continuation-in-part of Ser. No. 852,607, Apr. 16, 1986, abandoned, which is a continuation-in-part of Ser. No. 725,687, Apr. 22, 1985, abandoned, which is a continuation-in-part of Ser. No. 551,666, Nov. 11, 1983, Pat. No. 4,539,332. This application Jun. 8, 1989, Ser. No. 362,919

Int. Cl.[5] C07D *307/04;* **A61K** *31/34*

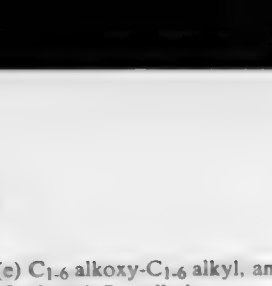
U.S. Cl. 514—461 **23 Claims**

2. A compound of the following structural formula:

(I)

or a pharmaceutically acceptable salt thereof wherein:
R^4 is $S(O)_nR^2$ in which n is 0, 1 or 2 and R^2 is selected from the group consisting of
(a) C_{1-6} alkyl,
(b) C_{2-6} alkenyl,
(c) C_{2-6} alkynyl,
(d) hydroxy-C_{1-6} alkyl,

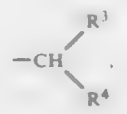
(e) C_{1-6} alkoxy-C_{1-6} alkyl, and
(f) phenyl-C_{1-6} alkyl;
Y is selected from the group consisting of
(a) C_{1-12} alkyl,
(b) C_{2-6} (halo)$_x$alkyl in which x is 1, 2, 3, 4 or 5,
(c) hydroxy-C_{1-6} alkyl,
(d) C_{1-6} alkoxy-C_{1-6} alkyl,
(e) C_{2-6} alkenyl,
(f) C_{2-6} alkynyl,
(g) phenyl-C_{1-6} alkyl, and
(h) amino-C_{1-6} alkyl;
R^6 is selected from the group consisting of
(a) C_{1-6} alkoxy,
(b) C_{1-6} alkoxyaminocarbonyloxy, and
(c) di-(C_{1-3} alkyl)amino-C_{1-6} alkyl;
wherein the relationship of the substituents at positions 2 and 5 of the tetrahydrofuran includes all stereo isomers, with the proviso that when R^4 and R^6 are both simultaneously sterically hindering groups, Y is methyl, ethyl or n-propyl.



18. A method of antagonising the effects of PAF in a subject in need thereof which comprises administering to said subject a nontoxic therapeutically effective amount of a compound according to claim 2.

5,010,101
PESTICIDAL AMINOMETHYLHETEROCYCLIC COMPOUNDS

Wolfgang Krämer, Burscheid; Joachim Weissmüller, Monheim; Dieter Berg, Wuppertal; Wilhelm Brandes, Leichlingen, and Stefan Dutzmann, Duesseldorf, all of Fed. Rep. of Germany, assignors to Bayer Aktiengesellschaft, Leverkusen, Fed. Rep. of Germany

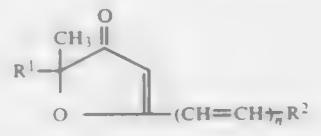


Filed Aug. 17, 1989, Ser. No. 395,391
Claims priority, application Fed. Rep. of Germany, Aug. 23, 1988, 3828545
Int. Cl.[5] **A01N** *43/30*; **C07D** *317/72*
U.S. Cl. 514—462 **13 Claims**

1. An aminomethylheterocyclic compound of the formula

(I)

wherein
R represents cycloalkyl having 3 to 7 carbon atoms, or represents aryl which has 6 to 10 carbon atoms and is optionally substituted by one or more identical or different straight-chain or branched alkyl radicals having 1 to 12 carbon atoms, or represents the radical



R^1 and R^2 independently of one another each represent hydrogen, or represent in each case straight-chain or branched alyyl having 1 to 12 carbon atoms, allkenyl having 3 to 8 carbon atoms, alkynyl having 3 to 8 carbon atoms, hydroxyalkyl having 2 to 6 carbon atoms, alkoxyalkyl or dialkoxyalky having in each case 1 to 6 carbon atoms or hydoxyalkoxyalkyl having 2 to 6 carbon atoms in the individual alkyl parts,or represent alkoxycarbonylalky having 1 to 6 carbon atoms per alkoxy and alkyl part, or represent in each case straight-chain or branched dioxolanylalkyl, dioxanylalkyl or oxolanylalkyl having in each case 1 to 4 carbon atoms int he alkyl part, or represent cycloalkyl or cycloalkylalkyl having in each case 3 to 7 carbon atoms in the cycloalkyl part and if appropriate 1 to 4 carbon atoms in the straight-chain or branched alkyl part and in each case optionally substituted in the cycloalkyl part by one or more identical or different substituents selected fromt eh group consisting of halogen and in each case straight-chain or branched alkyl, alkoxy, halogenoalkyl and halogenoalkoxy having in each case 1 to 4 carbon atoms and if appropriate 1 to 9 identical or different halogen atoms; or in additon represent arylalkyl, arylalkenyl or aryl having in each case 6 to 10 carbon atoms in the aryl part and if appropriate up to 6 carbon atoms in the straight-chain or branched alkyl or alkenyl part and in each case optionally substituted in the aryl part by one or more identical or differnt substituents selected from the group consisting of halogen, cyano, nitro and in each case straight-chain or branched alkyl, alkoxy, alkylthio, halogenoalkyl, halogenoalkoxy, halogenoalkylthio, alkoxycarbonyl and alkoximinoalkyl having in each case 1 to 4 carbon atoms in the individual alkyl parts and if approprite 1 to 9 identical or different halogen atoms
R^3 represents hydrogen, or represents straight-chain or branched alkyl having 1 to 12 carbon atoms, or represents aryl which has 6 to 10 carbon atoms and is optionally substitued by one or more identical or differnt straight-chain or branched alkyl radicals having 1 to 12 carbon atoms, and
R^4 represents straight-chain or branched alkyl having 1 to 12 carbon atoms, or represents cycloalkyl having 3 to 7 carbon atoms, or represents aryl which has 6 to 10 carbon atoms and is optionally substituted by one or more identical or different straight-chain or branched alkyl radicals having 1 to 12 carbon atoms,
but wherein R^3 and R^4 may not simultaneously represent methyl,
or an acid addition salt thereof.

TRICYCLIC COMPOUNDS

Etsuo Oshima, Shizuoka; Hiroyuki Obase, Mishima; Akira Karasawa; Kazuhiro Kubo, both of Shizuoka; Ichiro Miki, Tokyo, and Akio Ishii, Shizuoka, all of Japan, assignors to Kyowa Hakko Kogyo Co., Ltd., Tokyo, Japan

Division of Ser. No. 255,485, Oct. 11, 1988, Pat. No. 4,882,351.
This application Jun. 29, 1989, Ser. No. 272,771
Claims priority, application Japan, Oct. 14, 1987, 62-259145
Int. Cl.[5] **A61K** *31/235, 31/1*; **C07C** *69/616*
U.S. Cl. 514—510 **11 Claims**

1. A tricyclic compound represented by the formula:

wherein:
X_1-X_2 is selected from the group consisting of —CH$_2$—CH$_2$— or —CH=CH—;
L is —CH=CH—;
——— is a single or double bond;
W is selected from the group consisting of —S—, —CH$_2$—, or =CH—, and the left side of each formula is bound to the tricyclic nucleus;
n is 0,1,2 or 3;
Z is selected from the group consisting of —NR^{1}CO—, —NR^{1}SO$_2$— —NR^{1}CONH—, —NR^{1}CSNH—, —NR^{1}NHCONH—, —NR^{1}NHCSNH—, —NR^{1}COO— or —NR^{1}COS—, wherein R^1 *is hydrogen or lower alkyl, and the right side of each formula is bound to Q*;
Q is selected from the group consisting of straight of branched alkyl having 1 to 18 carbon atoms, alicyclic alkyl having 3 to 6 carbon atoms, lower alkenyl having 2 to 6 carbon atoms and optionally substituted carbocyclic

aryl, optionally substituted aralkyl, aralkenyl, furyl, thienyl, or coumarinyl wherein substitution means 1 to 3 substituents on the aromatic ring, independently selected from lower alkyl, phenyl, benzyl, halogen, triflouromethyl, nitro, OR^2 and SR^2, wherein R^2 represents hydrogen, lower alkyl, phenyl or benzyl;

one of R^A and R^B is hydrogen and the other is —Y—M— wherein Y is selected from the group consisting of single bond, $—CR^3R^4—(CH_2)_m—$ and $—CR^3=CR^4—(CH^2)_m)—$ and each of R^3 and R^4 are independently hydrogen or lower alkyl and m is 0, 1, 2, 3, or 4, wherein the left side of each formula is bond to the tricyclic nucleus; M is $—COOR^5$ and R^5 is hydrogen or lower alkyl;

each of G^A and G^B are independently lower alkyl, halogen or OR^6 and R^6 represents hydrogen, lower alkyl, phenyl or benzyl;

each of g^A and g^B are independently 0, 1, 2 or 3; or a pharmaceutically acceptable salt thereof.

11. A compound according to claim 1 which is selected from the group consisting of:

5-[2-[(phenylsulfonyl)amino]ethyl]thio-10,11-dihydro-5H-dibenzo[a,d]cyclohepten-3-carboxylic acid;

5-[2-[(styrylsulfonyl)amino]ethyl]thio-10,11-dihydro-5H-dibenzo[a,d]cyclohepten-3-carboxylic acid;

5-[2-[(phenylsulfonyl)amino]ethyl]thio-5H-dibenzo[a,d]cyclohepten-3-carboxylic acid and

5-[2-[(styrylsulfonyl)amino]ethyl]thio-5H-dibenzo[a,d]cyclohepten-3-carboxylic acid.

ANTIHYPERCHOLESTEROLEMIC COMPOUNDS

Ta J. Lee, Lansdale, Pa., assignor to Merck & Co., Inc., Rahway, N.J.

Filed May 9, 1990, Ser. No. 520,899
Continuation-in-part of Ser. No. 363,816, Jun. 9, 1989, Pat. No. 4,937,259
Int. Cl.[5] A61K *31/21*; C07C *67/02*
U.S. Cl. 514—510 **8 Claims**

1. A compound represented by the structural formulae (I) or (II):

(II)

A

wherein:

R_1 is:

(1) C_{1-10} alkyl;

(2) substituted C_{1-10} alkyl in which one or more substituent(s) is

(a) halogen,

(b) hydroxy,

(c) C_{1-10} alkoxy,

(d) C_{1-5} alkoxycarbonyl,

(e) C_{1-5} acyloxy,

(f) C_{3-8} cycloalkyl,

(g) phenyl,

(h) substituted phenyl in which the substituents are X and Y,

(i) C_{1-10} alkylS(O)$_n$,

(j) C_{3-8} cycloalkylS(O)$_n$,

(k) phenylS(O)$_n$,

(l) substituted phenylS(O)$_n$ in which the substituents are X and Y, and

(m) oxo;

(n) nitrile,

(o) NR_3R_4,

(p) $CONR_3R_4$;

(3) C_{1-10} alkoxy;

(4) C_{2-10} alkenyl;

(5) C_{3-8} cycloalkyl;

(6) substituted C_{3-8} cycloalkyl in which one substituent is

(a) C_{1-10} alkyl

(b) substituted C_{1-10} alkyl in which the substituent is

(i) halogen,

(ii) hydroxy,

(iii) C_{1-10} alkoxy,

(iv) C_{1-5} alkoxycarbonyl,

(v) C_{1-5} acyloxy,

(vi) phenyl,

(vii) substituted phenyl in which the substituents are X and Y

(viii) C_{1-10} alkylS(O)$_n$,

(ix) C_{3-8} cycloalkylS(O)$_n$,

(x) phenylS(O)$_n$,

(xi) substituted phenylS(O)$_n$ in which the substituents are X and Y, and

(xii) oxo,

(c) C_{1-10} alkylS(O)$_n$,

(d) C_{3-8} cycloalkylS(O)$_n$,

(e) phenylS(O)$_n$,

(f) substituted phenylS(O)$_n$ in which the substituents are X and Y,

(g) halogen,

(h) hydroxy,

(i) C_{1-10} alkoxy,

(j) C_{1-5} alkoxycarbonyl,

(k) C_{1-5} acyloxy,

(l) phenyl, and

(m) substituted phenyl in which the substituents are X and Y;

(7) phenyl;

(8) substituted phenyl in which the substituents are X and Y,

(9) amino;

(10) C_{1-5} alkylamino;

(11) di(C_{1-5} alkyl)amino;

(12) phenylamino;

(13) substituted phenylamino in which the substituents are X and Y;

(14) phenyl C_{1-10} alkylamino;

(15) substituted phenyl C_{1-10} alkylamino in which the substituents are X and Y;

(16) a member selected from the group consisting of:

(a) piperidinyl,

(b) pyrrolidinyl,

(c) piperazinyl,

R_2 is H or CH_3;

R_3 and R_4 are independently selected from:

(a) C_{1-5} alkyl;

(b) substituted phenyl in which the substituents are X and Y;

A is $—CH_2—$;

X and Y are independently selected from:

(a) OH,

(b) halogen,

(c) trifluoromethyl,

(d) C_{1-3}alkoxy,

(e) C_{1-3}alkylcarbonyloxy,

(f) phenylcarbonyloxy,

(g) C_{1-3}alkoxycarbonyl,

(h) phenyloxycarbonyl,

(i) hydrogen,

(j) C_{1-5}alkyl;

Z is selected from

(1) hydrogen;

(2) C_{1-5}alkyl;

(3) substituted C_{1-5} in which the substituent is selected from

(a) phenyl,

(b) dimethylamino, and

(c) acetylamino, and

(4) 2,3-dihydroxypropyl; halogen is Cl or F; n is 0, 1 or 2; or a pharmaceutically acceptable salt thereof.

N-CYCLOALKYLAMINOETHYLBENZAMIDE DERIVATIVES, THEIR SYNTHESIS AND PHARMACEUTICAL PREPARATIONS

Stefano Poli; Germano Coppi, and Lucio Del Corona, all of Milan, Italy, assignors to Poli Industria Chimica S.p.A., Milan, Italy

Filed Mar. 15, 1989, Ser. No. 324,596
Claims priority, application Italy, Mar. 17, 1988, 19814 A/88
Int. Cl.[5] C07C *237/44*; A61K *31/165*
U.S. Cl. 514—619 **7 Claims**

1. A N-cycloalkylaminoethylbenzamide derivative having the formula I

(I)

wherein

R_1 is selected from the group consisting of H and C_1–C_4 alkyl groups and

R_2 is cyclopropyl, or a pharmaceutically acceptable salt thereof.

4. A pharmaceutical composition for the treatment of gastritis, gastric trouble, digestion-related headache, digestive problems to menstruation and pregnancy, psychosomatic disturbance in anxious subjects, nausea and vomiting related to slow gastric elimination comprising an effective amount of an N-cycloalkylaminoethylbenzamide derivative selected from the group consisting of -benzamide and 2-methoxy -4-amino-5-chloro-N-2-methoxy-4-amino-5-chloro-N-(2-(cyclopropylamino)- ethyl)-benzamide and 2-methoxy-4-amino-5-chloro-N-(2-(methylcyclopropylamino)-ethyl)-benzamide as the active ingredient in hard and soft gelatin capsules, tablets, drops syrups and vials.

5,010,109

ANTIMICROBIAL AGENT COMPOSITION

Takeshi Inoi, Yokohamashi, Japan, assignor to Chisso Corporation, Japan

Filed May 4, 1989, Ser. No. 347,227
Claims priority, application Japan, Jun. 30, 1988, 63-162983
Int. Cl.[5] A01N *31/00*
U.S. Cl. 514—714 20 Claims

1. An antimicrobial agent composition comprising a zeolite carrier and a saturated monoterpene hydroperoxide as an active ingredient.

5,010,110

WATER ACTIVATED SOLID EMOLIENT PRODUCT AND PREPARATION THEREOF

James M. Wilmott, Kinnelon; William H. Koelle, Morris Plains, both of N.J., and Alexander P. Znaiden, Sloatsburg, N.Y., assignors to Avon Products, Inc., New York, N.Y.

Continuation of Ser. No. 224,194, Jul. 21, 1988, abandoned, which is a continuation of Ser. No. 913,585, Sep. 30, 1986, abandoned, which is a continuation of Ser. No. 774,173, Sep. 9, 1985, abandoned, which is a continuation of Ser. No. 634,853, Jul. 26, 1985, abandoned. This application Apr. 27, 1990, Ser. No. 517,547
Int. Cl.[5] A61K *47/00, 7/025*
U.S. Cl. 514—758 2 Claims

1. The method of forming a stable, self supporting solid bar useful as a cosmetic comprising the steps of:

(a) blending together the following ingredients at a temperature of about 190° F. to form a uniform liquid mixture with all percent weights being based upon the weight of the mixture unless otherwise indicated: about 45 to 65 percent by weight stearyl alcohol, said stearyl alcohol having a C_{18} content of no less than about 97.5% by weight based upon the weight of the stearyl alcohol component, about 1–12 percent by weight sodium stearate, about 15–25 percent by weight emollient comprising one or more alkyl esters selected from the group consisting of isopropyl palmitate, ethyhexyl palmitate, isopropyl isostearate, myristyl myristate, and cetyl lactate, and a solubilizing agent of about 2–12 percent by weight, said solubilizing agent comprising a combination of about 2–6 percent by weight propylene glycol and about 2–6 percent by weight water,

(b) allowing the mixture of step (a) to cool to a temperature in the range of about 160°–165° F.,

(c) pouring the cooled mixture of step (b) into molds to form individual bars,

(d) placing the molds in a cooling chamber maintained at a temperature of about 40° F. or less for a sufficient period of time until the interior temperature of the bars falls below about 95° F. without forming surface blemishes and,

(e) curing the bars for at least 7 days at a temperature of 80° F. or less to form bars characterized by a homogeneous, single phase, crystal/gel structure throughout.

FLAME RESISTANT, EXPANDABLE STYRENE POLYMERS AND FOAMS, AND FLAME RETARDANTS

Klaus Hahn, Kirchheim; Uwe Guhr, Gruenstadt; Hans Hintz, Ludwigshafen; Dietmar Wittenberg, Mannheim, and Peter Gleich, Ludwigshafen, all of Fed. Rep. of Germany, assignors to BASF Aktiengesellschaft, Ludwigshafen, Fed. Rep. of Germany

Filed Aug. 10, 1990, Ser. No. 565,100
Claims priority, application Fed. Rep. of Germany, Aug. 26, 1989, 3928284
Int. Cl.[5] C08J *9/20*
U.S. Cl. 521—56 4 Claims

1. A bead-form, flame-resistant, expandable styrene polymer containing

(a) polystyrene and/or a styrene copolymer containing 50% by weight or more of copolymerized styrene,

(b) from 0.4 to 6% by weight, based on (a), of hexabromocyclododecane having a mean particle size of from 1 to 50 μm, these particles being provided with a firm coating which has a thickness of from 1/100 to 1/10 of the particle diameter and is insoluble in water and in styrene,

(c) from 1 to 10% by weight, based on (a), of an aliphatic C_3- to C_6-hydrocarbon as blowing agent, and, if desired,

(d) customary additives in effective amounts.

5,010,112

METHOD AND APPARATUS FOR IMPROVING THE INSULATING PROPERTIES OF CLOSED CELL FOAM

Leon R. Glicksman, Lyanfield, and Arlene J. Lanciani, Sterling, both of Mass., assignors to Massachusetts Institute of Technology, Cambridge, Mass.

Filed Dec. 1, 1989, Ser. No. 444,673
Int. Cl.[5] C08J *9/00, 9/32*
U.S. Cl. 521—76 7 Claims

1. The method of forming a closed cell, rigid foam comprising the steps of:

(a) forming a polymer foam;

(b) forming a non-opaque, non-metallic foam filler dispersed in said polymer foam;

(c) coating said filler with opaque material.

5,010,113

FLAME-RETARDANT POLYURETHANE PRODUCTS

David H. Blount, 6728 Del Cerro Blvd., San Diego, Calif. 92120

Filed Jun. 1, 1989, Ser. No. 360,152
Int. Cl.[5] C08G *18/14*
U.S. Cl. 521—107 21 Claims

1. A flame-retardant polyurethane product which is formed from a mixture comprising:

(A) an amino salt of phosphorus acid selected from the group of compounds produced by reacting a phosphorus acid compound with an amino compound selected from the group consisting of urea, urea-formaldehyde condensate, melamine, melamine-formaldehyde condensate, cyanamide, dicyandiamide, biuret, guanidine, dimethylol urea, ammonium carbamate, urea derivatives, aminoguanidine and mixtures thereof;

(B) a polyol, selected from the group consisting of polyether polyols prepared by the polymerization of epoxides selected from the group consisting of propylene oxide, butylene oxide, tetrahydrofurane oxide, styrene oxide or epichlorohydrin, each with itself or by addition of these or by addition of these epoxides with starting components selected from the group consisting of water, propylene-1,3- or -1,2-glycol, trimethyol propane, 4,4-dihydroxydiphenyl propane, aniline, ammonia, ethanolamine, ethylenediamine and sucrose, polythioether polyols, polyacetals polyols, polycarbonate polyols, polyester amide polyols, hexane polyols, octane polyols, neopentyl polyols, pentaerythritol, quinitol, mannitol, sorbitol, methylglycoside, polybutadiene polyols, and polypropylene polyols modified with vinyl polymers;

(C) a compound which contains at least two isocyanate radicals.

5,010,114

MICROSUSPENSION POLYMERIZATION

Rong-Chang Liang, Centerville; Emerson K. Colyer, Kettering; Jing-Den Chen, Spring Valley; Karl A. Kintz, Kettering, and Chih-Her Suen, Spring Valley, all of Ohio, assignors to The Mead Corporation, Dayton, Ohio

Filed Jan. 16, 1990, Ser. No. 465,299
Int. Cl.[5] C08G *18/14*
U.S. Cl. 521—109.1 17 Claims

1. A method for polymerizing a monomer suspended in water which comprises:

preparing a polymerization mixture of a water immiscible, liquid, ethylenically unsaturated monomer, a polyisocyanate and an oil soluble free radical initiator, dispersing said mixture in a solution of water and a surfactant, and effecting polymerization of said monomer.

5,010,115

SILICONE FOAMS

Bernard F. Grisoni, El Toro, Calif., assignor to Dow Corning France S. A., Valbonne, France

Filed Oct. 16, 1990, Ser. No. 598,526
Claims priority, application France, Oct. 23, 1989, 89 13820
Int. Cl.[5] C08J *9/02*
U.S. Cl. 521—154 10 Claims

1. A foamable silicone composition in two or more parts comprising (A) one or more polysiloxanes having not less than , three alkylhydrogensiloxane units per molecule, (B) one or more polysiloxanes having hydroxyl groups, and (C) a platinum catalyst for promoting reaction between the components (A) and (B) wherein at least a major proportion of the polysiloxanes (B) is a polydiorganosiloxane having at least two siloxane units of the formula

$$R_aQ_bSiO_{\frac{(4-(a+b))}{2}}$$

in which R represents a monovalent hydrocarbon group containing 1 to 20 carbon atoms, Q represents a hydroxyl bearing alkylene or oxyalkylene chain, a has the value 0, 1 or 2 and b has the value 1 or 2.

5,010,116

WATER BLOWN FOAM

Ralph Colafati, 46 Knollwood Dr., Branford, Conn. 06405

Filed Jan. 29, 1990, Ser. No. 471,857
Int. Cl.[5] C08G *18/00*
U.S. Cl. 521—155 30 Claims

1. A composition useful for producing foam which comprises an oxyalkylated glycerine having hydroxyl number of from about 56 to about 300, an oxypropylated aromatic based mannich condensate, an organic surfactant, an amine catalyst, a polyisocyanate catalyst, and a quaternary ammonium salt or a triazine.

5,010,117

FLEXIBLE POLYURETHANE FOAMS PREPARED USING LOW UNSATURATION POLYETHER POLYOLS

Ronald M. Herrington, Brazoria; Robert B. Turner, Lake Jackson, both of Tex., and Rosey J. Matijega, Midland, Mich., assignors to Dow Chemical Company, Midland, Mich.

Filed Jun. 16, 1989, Ser. No. 367,279
Int. Cl.[5] C08G *18/14*
U.S. Cl. 521—159 15 Claims

1. A flexible molded or high resiliency slabstock foam which is the reaction product of a reaction mixture comprising a polyisocyanate, an effective amount of a blowing agent and a poly(propylene oxide) polymer having an average nominal functionality from about 2 to about 6, an equivalent weight from about 1000 to about 2000 and a monol content of about 0.04 meq/g or less.

5,010,118

UV CURABLE NON-TOXIC EPOXYSILICONE RELEASE COATING COMPOSITIONS

James L. Desorcie, and Michael J. O'Brien, both of Clifton Park, N.Y., assignors to General Electric Company, Schenectady, N.Y.

Filed Jun. 22, 1989, Ser. No. 369,798
Int. Cl.[5] C08F *2/46;* C08G *59/22;* C08J *3/28*
U.S. Cl. 522—31 8 Claims

1. UV curable substantially uniform epoxysilicone compositions convertible to nontoxic release coatings comprising by weight,

(A) 100 parts of epoxysilicone having from 5 to 12 mole percent epoxysiloxy units, based on the total moles of condensed diorganosiloxy units in the epoxysilicone,

(B) 1 to 25 parts of a compatibilizer in the form of a mixture of

(i) 1 to 25 parts of a $C_{(8-20)}$ alkylphenol and

(ii) 0 to 15 parts of a $C_{(4-12)}$ alkanediol, and

(C) an effective amount of a polyarylonium hexafluorometal, or metalloid salt, substituted with at least one nuclear bound alkoxy radical having at least 8 carbon atoms selected from the class consisting of diaryliodonium salts and triarylsulfonium salts.

5,010,119

TERNARY ADHESIVE COMPOSITIONS

Kenneth O. McElrath, Jr., 19515 Suncove La., Humble, Tex. 77346; Martha H. Robertson, Rte. 2, Box 169, Zachary, La. 70791, and Wai Yan Chow, St. Hubertusdreef, 33, Overijse 1900, Belgium

Continuation-in-part of Ser. No. 137,391, Dec. 23, 1981, Pat. No. 4,839,422. This application Nov. 25, 1988, Ser. No. 274,210
Int. Cl.[5] C09J *151/04*
U.S. Cl. 523—205 28 Claims

1. A curable adhesive composition having enhanced strength and high temperature resistance, comprising:

(a) a thermoplastic elastomer polymer having grafted thereto a C_3–C_{10} unsaturated mono- or polycarboxylic acid, anhydride or derivative thereof;

(b) a tackifying resin selected from hydrocarbon resins, polyterpene resins, and cyclopentadiene resins; and

(c) a crosslinking agent selected from di- or polyamine hydrocarbyl compounds having from 2 to about 20 carbon atoms, wherein said crosslinking agent is encapsulated with polymer containing maleic anhydride groups.

27. An encapsulated di- or polyamine wherein the encapsulating material is a polymer containing maleic anhydride groups.

5,010,120

SOLID ADHESIVE COMPOSITION

Koji Sugiura, Ichinomiya, Japan, assignor to Sakura Color Products Corporation, Osaka, Japan

Filed Jul. 5, 1990, Ser. No. 548,264
Claims priority, application Japan, Jul. 5, 1989, 1-173715
Int. Cl.[5] C08J *9/32*
U.S. Cl. 523—219 7 Claims

1. A solid adhesive composition useful for temporary and repeated fixation of an article on a surface which comprises about 5.0 to about 45 weight percent of an acrylic resin having a glass transition point of −10° C. or below, about 0.1 to about 2.0 weight percent of a polyacrylic acid-based thickening agent, about 5.0 to about 30 weight percent of a fatty acid soap, about 0.1 to about 2.0 weight percent of an alkali hydroxide, about 0.1 to about 10 weight percent of microspheres with an average grain size of about 10 to about 200 μm and about 2.0 to about 60 weight percent of water.

5,010,121

PRODUCTION OF AQUEOUS-BASED FLUOROPOLYMER COMPOSITIONS

Steven G. Yeates, Macclesfield, and John C. Padget, Frodsham, both of England, assignors to Imperial Chemical Industries PLC, London, England

Filed Dec. 7, 1988, Ser. No. 280,879
Claims priority, application United Kingdom, Dec. 10, 1987, 8728884
Int. Cl.[5] C08J *3/00*
U.S. Cl. 523—336 19 Claims

1. Process for the preparation of an aqueous-based composi-

tion comprising a fluoropolymer and a vinyl polymer which process comprises:

(1) preparing a non-aqueous solution of a fluoropolymer comprising repeat units A derived from at least one fluoroolefine and repeat units B bearing chain-pendant ionic and/or non-ionic disperser groups where such groups impart water-emulsifiability or water-solubility to the fluoropolymer;

(2) converting, by virtue of the effect of said emulsifying or solubilizing disperser groups, the non-aqueous solution of said fluoropolymer formed in step (1) into an aqueous-based emulsion or solution of said fluoropolymer, and

(3) polymerising at least one species of vinyl monomer to form a vinyl polymer in the presence of said aqueous-based emulsion of solution from step (2).

STABILIZER FOR CHLORINE-CONTAINING OLEFIN POLYMERS, A PROCESS FOR ITS PRODUCTION AND POLYMERS CONTAINING THE STABILIZER

Kurt Worschech, Loxstedt; Peter Wedl, Bremerhaven; Erwin Fleischer, Schiffdorf; Frido Loeffelholz, Bremerhaven-Surheide, and Manfred Jaeckel, Loxstedt, all of Fed. Rep. of Germany, assignors to Neynaber Chemie GmbH, Loxstedt, Fed. Rep. of Germany

Filed Apr. 4, 1989, Ser. No. 333,655

Claims priority, application Fed. Rep. of Germany, Apr. 6, 1988, 3811493

Int. Cl.[5] C08K *5/524, 5/10*

U.S. Cl. 524—114 **30 Claims**

1. A stabilizer for chlorine-containing olefin polymers which comprises: a stabilizing effective amount of;

(a) at least one Ca complex of a 1,3-diketone of the formula:

$$[R^1CO{-}CH{=}C(R^2){-}O{-}]_x\,Ca(OH)_y$$

wherein R^1 and R^2 may be the same or different and represent radicals selected from the group consisting of C_1–C_4 alkyl, phenyl and phenyl substituted in the p-position, x has a value of 1 to 2 and y has a value of 1 to 0 with the proviso that $x+y=2$,

(b) at least one hydrocarbon wax; and

(c) at least one ester selected from the group consisting of full esters of saturated, straight-chain C_{12}–C_{34} monocarboxylic acids of polyols containing at least 2 carbon atoms and at least 2 hydroxy groups and partial esters of saturated, straight-chain C_{12}–C_{34} monocarboxylic acids of polyols containing at least 2 carbon atoms and at least 2 hydroxy groups which, as a number average, contain at least one free hydroxyl group.

5,010,124

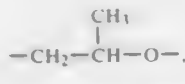
FLOWABILITY IMPROVING AGENT, PROCESS FOR THE PRODUCTION THEREOF AND USE THEREOF

Lars-Inge R. Olsson, Helsingborg, and Kent F. Hamacek, Perstorp, both of Sweden, assignors to Perstorp AB, Perstorp, Sweden

Filed Jan. 30, 1989, Ser. No. 302,941

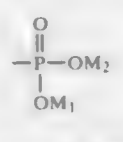
Claims priority, application Sweden, Jan. 29, 1988, 8800295

Int. Cl.[5] C08K *5/521;* **C08L** *73/00*



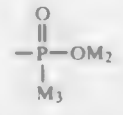
U.S. Cl. 524—141 **13 Claims**

1 A flowability improving agent, comprising a combination of (A) a member selected from the group consisting of a sulphonated melamine-formaldehyde resin, a sulphonated melamine-urea-formaldehyde resin and a sulphonated naphthalene-formaldehyde resin, and (B) a compound of the formula



$$Ar\,O{-}[R_1]_n{-}R_2$$

where



Ar is a benzene residue or naphthalene residue which may be substituted by a short chain alkyl, R_1 is oxyethylene; $-CH_2CH_2O-$ or oxypropylene;

an oxyethylene chain or an oxypropylene chain with up to fifteen oxyethylene groups or oxypropylene groups or a combination of oxyethylene groups and oxypropylene groups to a chain where the sum of these groups is at most fifteen, the mean value n for n is 1-15 and R_2 is hydrogen or a phosphonate group of the formula

where M_1 and M_2 are hydrogen or alkali metal or where R_2 is a group of the formula

where M_2 has the above meaning and M_3 is $-[R_1]_n-O$ Ar where R_1, n and Ar have the above meanings.

5,010,125

ROOM TEMPERATURE PLAIN PAPER INK

Jurgen M. Kruse, Clinton, and Donald B. Kimball, Jr., Guilford, both of Conn., assignors to XAAR Limited, Cambridge, England

Continuation-in-part of Ser. No. 379,595, Jul. 14, 1989. This application Sep. 20, 1989, Ser. No. 409,753

Int. Cl.[5] C08K *5/15*

U.S. Cl. 524—308 **18 Claims**

1. An ink jet ink composition comprising a colloidal suspension of:

(a) a non-aqueous solvent; and,

(b) dispersed particles which are suspendable in said solvent at room temperature, said dispersed particles comprising a dyestuff dissolved in or bound to a polymer or resin selected from the group consisting of synthetic polymers and natural resins, said polymer or resin being substantially insoluble in water but soluble in said solvent at room temperature, said dyestuff being soluble in or bindable to said polymer or resin at room temperature but substantially insoluble in said solvent at room temperature, and said polymer or resin being precipitable upon contact with the surface of plain paper, the respective proportions of said solvent, polymer or resin, and dyestuff being selected to provide a fluid ink composition at room temperature.

5,010,126

PROCESS FOR PRODUCING A PETROLEUM WAX COMPOSITION

Richard L. Jones, Ponca City, Okla., assignor to Conoco Inc., Ponca City, Okla.

Division of Ser. No. 278,911, Nov. 30, 1988, Pat. No. 4,965,305. This application Jun. 25, 1990, Ser. No. 543,608

Int. Cl.[5] C08L *91/08*

U.S. Cl. 524—349 **10 Claims**

1. A process for producing a wax composition which comprises:

(a) vacuum distilling a petroleum feed to prepare a 650 distillate heavy intermediate petroleum wax, having a melting point range of from about 155° F. to about 185° F.,

(b) subjecting the heavy intermediate petroleum wax from step (a) to furfural/duosol solvent extraction,

(c) dissolving and crystallizing the heavy intermediate petroleum wax from step (b) from a methyl ethyl ketone/toluene mixed solvent,

(d) dissolving and recrystallizing the heavy intermediate petroleum wax from step (c) from a methyl ethyl ketone/-toluene mixed solvent,

(e) percolating the recrystallized heavy intermediate petroleum wax from step (d) in the molten state through a clay bed; and

(f) blending the recrystallized heavy intermediate petroleum wax from step (e) at from about 50 weight percent to about 90 weight percent with from about 10 weight percent to about 30 weight percent of a polymeric compound selected from the group consisting of ethylene-vinyl acetate copolymer, ethylene-ethyl acrylate copolymer, polypropylene and mixtures there of and having a molecular weight of from about 2,000 to about 100,000 and a melt index of from about 1 to about 250° at 375° F.

5,010,127

ADDITIVE COMPOSITION FOR TREATING WATER USED TO FORM ICE AND METHODS

Michael J. Rzechula, Elizabethtown, Ill., assignor to Slcik Ice Limited, Elizabethtown, Ill.

Filed Sep. 27, 1989, Ser. No. 411,116

Int. Cl.[5] C08K *5/05*

U.S. Cl. 524—379 **17 Claims**

1. An additive for treating water used for forming ice comprising effective ice forming amounts of:

a polymer selected from the group consisting of water gelling starches and polymers of acrylic acid and sodium salt, commonly referred to as super absorbent polymers;

a primary alcohol; and

silicon dioxide.

5,010,128

COMPOSITES OF ETHERIC PHOSPHAZENE AND METAL OXIDES AND THE METHOD OF THEIR FORMATION

Bradley K. Coltrain; Wayne T. Ferrar, both of Fairport, and Christine J. Landry, Honeoye Falls, all of N.Y., assignors to Eastman Kodak Company, Rochester, N.Y.

Filed Mar. 27, 1989, Ser. No. 329,216

Int. Cl.[5] C08G *79/02;* **C08J** *3/21;* **C08K** *3/22, 3/34*

U.S. Cl. 524—405 **13 Claims**

1 A process of forming a blended composite comprising combining etheric phosphazene and a metal oxide precursor in a solvent solution, said metal oxide precursor comprises a silicic acid heteropolycondensate prepared by polycondensation of at least one silicon-functional silane of the formula SiX_4 wherein X is hydrogen, halogen, alkoxy, aryloxy, carboxy, or an $-NR_2$ group in which R is hydrogen and/or alkyl and/or aryl with the proviso that not all X are hydrogen, mixing until the etheric phosphazene and metal oxide precursor are dissolved, casting the dissolved materials and curing to recover a blended composite of etheric phosphazene and metal oxide that is not covalently cross-linked between the etheric phosphazene and metal oxide.

HIGH MELT VISCOSITY FLUOROPOLYMER PROCESS AID

George R. Chapman, Jr., Media, Pa.; Lee A. Gorthey, and Donnan E. Priester, both of Wilmington, Del., assignors to E. I. Du Pont de Nemours and Company, Wilmington, Del.

Filed May 15, 1990, Ser. No. 524,260

Int. Cl.[5] C08K *3/36, 3/00;* **C08L** *23/02, 27/16, 27/18*

U.S. Cl. 524—445 **72 Claims**

1. Improved polymer blend composition having improved processibility and comprising:

(a) a major portion of a difficultly melt-processible polymer, and

(b) a minor portion of:

(1) at least an effective amount, to improve processibility, of a fluorocarbon copolymer which at the melt-processing temperature of (a) is either in a melted form if crystalline, or is above its glass transition temperature if amorphous, and

(2) at least an effective amount, to improve processibility, of at least one tetrafluoroethylene homopolymer or copolymer of tetrafluoroethylene and at least one monomer copolymerizable therewith, wherein the mole ratio of fluorine to hydrogen is at least 1:1, and which is solid at the melt processing temperature of

(a), said composition further characterized in that it contains an abrasive inorganic filler that retards the processibility of (a) in the presence of (b)(1) and (b)(2), the improvement consisting of minimizing the retarding effect of the inorganic filler by employing (b)(1) having an apparent viscosity at 200 C of at least about 400 Pa.s measured at an apparent shear stress of 360 KPa.

5,010,131
BARRIER COATING
Steven D. Wagner, Loveland, Ohio, assignor to Texo Corporation, Cincinnati, Ohio
Filed Oct. 20, 1989, Ser. No. 424,426
Int. Cl.[5] C08K 3/18
U.S. Cl. 524—457 12 Claims

1. An aqueous solution for forming a thermally releasable coating on spray booth surfaces and equipment located in paint spray booths, said coating being easily removable with heated water, said solution comprising,
from about 20%–50% water,
from about 10%–40% filler, said filler being a pigment,
from about 5%–15% film former selected from the group consisting of vinyl acetate copolymer emulsions, sugar, soap, organic salts and polyvinyl alcohol,
from about 1%–10% alkaline source, selected such that said aqueous solution has a pH of greater than 8.0, and
from about 10%–40% blowing agent, said blowing agent comprising citric acid and sodium bicarbonate

WATER-BASE PAINT FOR COATING THE INSIDE SURFACE OF METALLIC CAN
Akio Morinaga, and Takeo Kigami, both of Ohtake, Japan, assignors to Mitsui Petrochemical Industries, Ltd., Tokyo, Japan
Filed Oct. 24, 1989, Ser. No. 425,953
Claims priority, application Japan, Oct. 31, 1988, 63-275494
Int. Cl.[5] C08L 67/02
U.S. Cl. 524—601 10 Claims

1. A water-base paint for coating the inside surface of a metallic can, said paint comprising fine particles of a polyester resin dispersed in an aqueous medium in the presence of a surface-active agent and being prepared by mixing a solution of the polyester resin in an organic solvent selected from the group consisting of halogenated hydrocarbons and anisole with an aqueous medium containing a surface-active agent with stirring at a high speed to disperse the polyester resin and removing the organic solvent, wherein
(A) the polyester resin comprises units derived from a dicarboxylic acid and units derived from a diol, the units derived from dicarboxylic acid containing units derived from terephthalic acid and units derived from isophthalic acid in a mole ratio of from 10:90 to 80:20, and at least 30 mole % of the units derived from the diol being derived from ethylene glycol,
(B) the surface-active agent is composed of at least one compound selected from the group consisting of alkylaryl sulfonic acid salts, alkylsulfonic acid salts, dialkylsulfosuccinic acid salts, alkylphosphoric acid salts, polyoxyethylene alkylarylether sulfonic acid salts and polyoxyethylene alkylether sulfonic acid salts, and
(C) the fine particles of the polyester resin have an average particle diameter of not more than 3 microns

5,010,133
POLYURETHANE MOLDING COMPOSITION, METHOD AND ARTICLE
Alan R. Seville, 6422 Watercrest Way, Indianapolis, Ind.
Filed Sep. 29, 1989, Ser. No. 415,499
Int. Cl.[5] C08L 75/04; C08K 3/36
U.S. Cl. 524—871 14 Claims

1. A polyurethane gum material produced by partially reacting a cross-linkable mixture of polyol, polyisocyanate, high activation temperature catalyst and a high surface area filler, the gum material being stable at low temperatures, hand-workable at room temperatures, and capable of being liquified and high pressure molded at elevated temperatures.

5,010,134
ACRYLATE/MALEIC ANHYDRIDE COPOLYMER GRAFTED POLYVINYL ALCOHOL GRAFT TERPOLYMERS
Wen-Yen Chiang, Taipei, and Chun-Min Hu, Keelung, both of Taiwan, assignors to National Science Council, Taipei, Taiwan
Continuation of Ser. No. 259,716, Oct. 19, 1988, abandoned.
This application Jul. 30, 1990, Ser. No. 559,094
Int. Cl.[5] C08G 81/02
U.S. Cl. 525—57 12 Claims

1. An acrylate/N-substituted maleimide co-polymer having polyvinyl alcohol units grafted thereto,
said acrylate/N-substituted maleimide co-polymer made by reacting an amine with a homogeneous random acrylate/-maleic anhydride co-polymer having polyvinyl alcohol units grafted to a portion of the maleic anhydride units to form an N-substituted maleamic acid intermediate and then converting the intermediate to form the acrylate/N-substituted maleimide co-polymer having polyvinyl alcohol units grafted thereto;
said acrylate/maleic anhydride co-polymer having polyvinyl alcohol units grafter thereto, comprising 70–30% by weight of polyvinyl alcohol and 30–70% by weight of substantially homogeneous random acrylate/maleic acid co-polymer;
said acrylate/maleic anhydride co-polymer having the following general structure

where R is hydrogen or methyl;
R′ is C_1–C_4 saturated alkyl group,
m is 30–90 mole percent; and
n is 70–10 mole percent,
said acrylate/maleic anhydride co-polymer having polyvinyl alcohol units grafter thereto, formed by grafting the acrylate/maleic acid co-polymer onto polyvinyl alcohol by a chain-opening esterification reaction between some of the anhydride groups of the maleic anhydride units and some of the hydroxyl groups of the polyvinyl alcohol,
whereby residual hydroxyl and maleic anhydride groups are present in an effective amount for subsequent cross-linking through the action of heat to form interchain ester chain linkages and residual maleic anhydride groups are present in an effective amount for subsequent reaction with the amine to form the acrylate/N-substituted maleimide co-polymer having polyvinyl alcohol units grafted thereto.

1. Thermoplastic moulding compositions comprising
A. from 5 to 98 parts by weight of fully aromatic polyester synthesized from aromatic C_8–C_{14} dicarboxylic acids and C_6–C_{30} diphenols or aromatic polyester carbonate synthesized from aromatic C_8–C_{14} dicarboxylic acids, C_6–C_{30} diphenols and phosgene,
B from 2 to 80 parts by weight of a thermoplastic vinyl polymer of
B 1 from 50 to 98 parts by weight of styrene, α-methylstyrene, vinyl toluene, 2,4-dimethyl styrene, methyl methacrylate or mixtures thereof and
B 2 from 50 to 2 parts by weight of acrylonitrile, methacrylonitrile, methyl methacrylate, maleic acid anhydride, N-substituted maleimide or mixtures thereof, and
C from 1 to 95 parts by weight of a graft polymer of
C 1 from 5 to 90 parts by weight of a monomer mixture of
C 1 1 from 50 to 98 parts by weight of styrene, α-methylstyrene, styrene substituted by halogen, vinyl toluene, 2,4-dimethyl styrene, methyl methacrylate or mixtures of these compounds and
C 1 2 from 2to 50 parts by weight of acrylonitrile, methacrylonitrile, methyl methacrylate, maleic acid anhydride, C_1–C_4-alkyl- or phenyl-N-substituted maleimide or mixtures of these compounds, grafted onto a substrate consisting of
C 2 from 10 to 95 parts by weight of silicone rubber having an average particle diameter of d_{50} of from 0.09 to 1 microns and a gel content of more than 50 percent by weight, based on C.2, derived from
(a) dihalogenated diorganosilane,
(b) from 0 to 10 mol-%, based on (a), of trihalogenated organosilane,
(c) from 0 to 3 mol-%, based on (a), of tetrahalogenated silane and
(d) from 0 to 0.5%, based on (a) of halogenated triorganosilane, in which the organyl groups of compounds (a), (b) and (d) is
(α) C_1–C_6-alkyl or cyclohexyl,
(β) C_6–C_{12}-aryl,
(γ) C_1–C_6-alkenyl and/or
(δ) mercapto-C_1–C_6-alkyl,
under the condition that the sum of (γ + δ) is from 2 to 10 mol-% based on all the organyl groups of compounds (a), (b) and (d), and the molar ration γ δ is from (3:1) to (1:3)

COPOLYMERS OF ETHYLENE OXIDE AS ANTISTATIC ADDITIVES

Simon H. P. Yu, Westlake, Ohio, assignor to The B. F. Goodrich Company, Akron, Ohio

Continuation of Ser. No. 7,039,258, Apr. 17, 1987, abandoned. This application Jun. 14, 1989, Ser. No. 366,330
Int. Cl.[5] C08K 5/15; C08L 9/02, 13/00, 69/00
U.S. Cl. 525—187 6 Claims

1. An antistatic polymeric composition comprising:

(a) at least one antistatic additive of an ethylene oxide copolymer in the range of from about 3 to about 30% by weight, said antistatic ethylene oxide copolymer being a solid, nonionic material having a dilution solution viscosity of greater than 0.;25 grams per milliliter as determined on a solution made up with 0.25 grams of the polymer in 100 grams of toluene according to ASTM D2857, said copolymer excluding epihalohydrin; and

(b) a polymeric material, excluding olefins, selected from the class consisting of: copolymers of styrene and acrylonitrile; terpolymers of styrene, acrylonitrile and diene rubber; copolymers of styrene and acrylonitrile modified with acrylate elastomers; copolymers of styrene and acrylonitrile modified with ethylene propylene diene monomer rubber; polystyrene; rubber modified impact polystyrene; polycarbonates; thermoplastic polyesters; polyurethane; polyphenylene oxide; polyacetals; polymethyl methacrylate; and mixtures thereof in the range of from about 70 to about 97% by weight,

wherein said ethylene oxide copolymer comprises

(i) ethylene oxide in the range of from about 5 to about 95% by weight; and

(ii) at least one cyclic comonomer represented by the formula:

containing up to 25 carbon atoms, wherein R_1, R_2, R_3, and R_4 are selected from the group consisting of hydrogen, saturated aliphatic and cycloaliphatic, monoolefinic aliphatic and cycloaliphatic, diolefinic (conjugated and non-conjugated) aliphatic and cycloaliphatic, aromatic, aralkyl, and alkaryl groups, and wherein at least one of R_1, R_2, R_3, and R_4 is not hydrogen; said cyclic comonomer in the range of from about 95 to about 5% by weight of the total weight of said ethylene oxide copolymer, said ethylene oxide copolymer having a weight average molecular weight of from about 20,000 to about 5,000,000.

PROCESS FOR PREPARING STABILIZED POLYMER DISPERSION

Joseph A. Antonelli, Riverton, N.J.; Christopher Scopazzi, Wilmington, Del., and Mark M. Doherty, Utica, Mich., assignors to E. I. Du Pont de Nemours and Company, Wilmington, Del.

Filed May 31, 1989, Ser. No. 363,272
Int. Cl.[5] C08F 2/14, 4/60, 265/06
U.S. Cl. 525—269 6 Claims

1. A process for preparing a stabilized polymer dispersion in an organic liquid in which the principal polymer comprises

(a) a plurality of stabilizer components which are polymers of one or more ethylenically unsaturated acrylic monomers, and

(b) a core component composed of acrylic polymers; substantially all of the stabilizer components being grafted to the core component at one of the stabilizer ends, the process comprising the following steps:

(a) preparing the stabilizer component by polymerizing one of more ethylenically unsaturated acrylic monomers at least one of said monomers containing a reactive functional group, using a catalytic chain transfer agent containing Co^{+2} to form a stabilizer component having an ethylenically unsaturated terminal group and at least one reactive functional group,

wherein the reactive functional group is selected from the group consisting of carboxyl, hydroxy, anhydride, isocyanate amine or silane, and then

(b) preparing the core component by polymerizing one or more acrylic monomers while they are in contact with stabilizer components,

steps (a) and (b) being conducted in an organic liquid which is a solvent for the stabilizer components but a non-solvent for the core component.

REACTIVE SILICONE AND/OR FLUORINE CONTAINING HYDROPHILIC PREPOLYMERS AND POLYMERS THEREOF

Karl F. Mueller, New York, N.Y., assignor to Ciba-Geigy Corporation, Ardsley, N.Y.

Continuation-in-part of Ser. No. 427,266, Oct. 25, 1989, Pat. No. 4,463,471. This application Apr. 18, 1990, Ser. No. 510,504
Int. Cl.[5] C08F 259/00, 18/20
U.S. Cl. 525—276 17 Claims

1. A hydrophilic prepolymer containing silicon or fluorine or both silicon and fluorine as well as ethylenically unsaturated groups, which is the reaction product of the random copolymer of, the weight percent amounts of components (A), (B), (C), (D) and (E) being based on the total amount of said components,

(A) 20 to 79.5% by weight of a silicon or fluorine containing vinyl monomer or mixtures thereof,

(B) 79.5 to 20% by weight of N N-dimethyl acrylamide N-vinyl pyrrolidone or N-vinylacetamide or mixtures thereof,

(C) 0.5 to 25% by weight of a vinyl monomer containing an active hydrogen atom or mixtures thereof,

(D) 0 to 30% by weight of an ethylenically unsaturated monomer or mixtures thereof other than a monomer of component (A), (B) or (C),

(E) 0 to 10 mol %, based on the total moles of components (A), (B), (C), (D) and (E) of a chain transfer agent, with

(M_n) 0.2 to 10 mol %, based o the total moles of components (A), (B), (C), (D) and (E), of an ethylenically unsaturated isocyanate.

5,010,142

RUBBER COMPOSITIONS FOR TIRE INNER LINERS

Haruhiro Takano, Odawara, Japan, assignor to The Yokohama Rubber Co., Ltd., Tokyo, Japan

Continuation of Ser. No. 152,823, Feb. 5, 1988, abandoned. This application Oct. 3, 1989, Ser. No. 418,734
Claims priority, application Japan, Feb. 10, 1987, 62-27141
Int. Cl.[5] C08C 19/20
U.S. Cl. 525—332.4 2 Claims

1. A rubber composition for use as an inner lining in automotive tires which comprises a sulfur vulcanizable starting rubber consisting essentially of a halogenated butyl rubber and not including a silicone rubber, and from 0.2 to 2.0 parts by weight per 100 parts of the starting rubber of an accelerator comprising 2-(4'morpholinodithio)benzothiazole.

5,010,143

METHOD FOR PREPARING BLOCK POLYPHENYLENE ETHER-POLYCARBONATES

Thomas L. Evans, Clifton Park; Carol B. Wasserman, Hartsdale; Timothy J. Shea, Schenectady, and John R. Campbell, Clifton Park, all of N.Y., assignors to General Electric Company, Schenectady, N.Y.

Filed Nov. 23, 1987, Ser. No. 124,127
Int. Cl.[5] C08G 65/48, 69/00, 71/12
U.S. Cl. 525—394 18 Claims

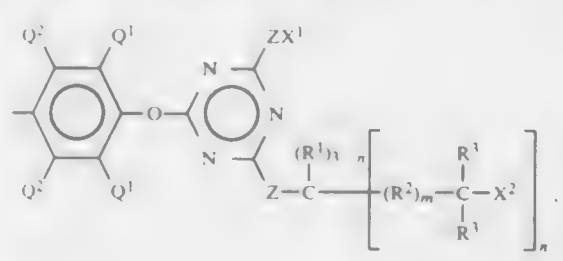
1. A method for preparing a block polyphenylene ether-polycarbonate which comprises preparing a mixture comprising:

(A) at least one cyclic polycarbonate oligomer,

(B) at least one polyphenylene ether wherein all phenolic end groups are in the free phenol form, and

(C) a catalyst for conversion of cyclic polycarbonates to linear polycarbonates, said catalyst being other than a salt of a polyphenylene ether;

and heating said mixture at a temperature in the range of about 175°-350° C.



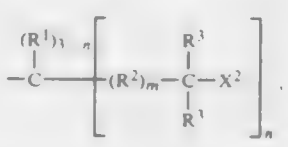
5,010,144

COPOLYMER-CONTAINING COMPOSITIONS FROM SUBSTITUTED TRIAZINE-CAPPED POLYPHENYLENE ETHERS

Ott Phanstiel, IV, Clifton Park, and Sterling B. Brown, Schenectady, both of N.Y., assignors to General Electric Company, Schenectady, N.Y.

Filed Jun. 7, 1990, Ser. No. 534,573
Int. Cl.[5] C08G 65/38; C08L 71/12, 67/00, 77/00
U.S. Cl. 525—397 21 Claims

1. A composition comprising copolymers prepared by the reaction of a polymer containing reactive groups with a substituted alkoxy- or alkylthio-triazine-capped polyphenylene ether having end groups of the formula



(I)

wherein:

each Q^1 is independently halogen, primary or secondary lower alkyl, phenyl, haloalkyl, aminoalkyl, hydrocarbonoxy, or halohydrocarbonoxy wherein at least two carbon atoms separate the halogen and oxygen atoms;

each Q^2 is independently hydrogen, halogen, primary or secondary lower alkyl, phenyl, haloalkyl, hydrocarbonoxy or halohydrocarbonoxy as defined for Q^1;

X^1 is an alkyl, cycloalkyl or aromatic radical or

(II)

X^2 is a group displaceable by nucleophilic aliphatic substitution;

each Z is independently oxygen or sulfur;

each R^1 is independently hydrogen, C_{1-4} primary or secondary alkyl or a non hydrocarbon substituent substantially inert to displacement by nucleophilic moieties;

R^2 is a C_{1-3} alkylene radical which is unsubstituted or is substituted with moieties selected from the group consisting of C_{1-4} primary or secondary alkyl radicals and non-hydrocarbon substituents as defined for R^1;

each R^3 is independently R^1 or X^2;

m is 0 or 1; and

n is 1 – 3.

5,010,145

POLYLACTIC ACID FIBER

Yoshito Ikada, and Shokyu Gen, both of Uji, Japan, assignors to Daicel Chemical Industries, Ltd., Sakai, Japan

Filed Apr. 15, 1988, Ser. No. 182,184
Claims priority, application Japan, Apr. 21, 1987, 62-98337
Int. Cl.[5] C08G 63/08; C08L 67/04
U.S. Cl. 525—415 11 Claims

1. A polyactic acid fiber consisting of a blend of from 99 to 1 percent by weight of poly-L-lactic acid and from 1 to 99 percent by weight of poly-D-lactic acid, said fiber being drawn at a temperature of from 100° to 220° C. and a draw ratio of 13 or greater to make the tensile strength of said fiber at least 70 kg/mm^2.

5,010,146

POLYESTER CARBONATE COPOLYMERS, PROCESSES FOR PREPARING SAME AND POLYESTER RESIN COMPOSITIONS CONTAINING SAID COPOLYMERS

Masaki Kohzaka; Izaburou Higashi; Yoshinori Akana; Mikio Hashimoto, and Tadao Yatsu, all of Yamaguchi, Japan, assignors to Mitsui Petrochemical Industries, Ltd., Tokyo, Japan

Filed Jun. 14, 1989, Ser. No. 365,687
Claims priority, application Japan, Jun. 16, 1988, 63-149129
Int. Cl.[5] C08L 69/00, 67/02
U.S. Cl. 525—439 2 Claims

1. A polyester resin composition comprising (i) 50–10 parts by weight of polyalkylene terephthalate, (ii) 50–90 parts by weight of polycarbonate (provided (i)+(ii)=100 parts by weight) and (iii) 3–50 parts by weight, based on 100 parts by weight of the sum total of (i) and (ii), of a polyester carbonate copolymer, said polyester carbonate copolymer (iii) being a polyester carbonate copolymer obtained by polymerization of a mixture of 20–80% by weight of an alkylene terephthalate oligomer [I] containing ethylene terephthalate as main structural units and having an intrinsic viscosity [η], as measured at 25° C. in o-chlorophenol, of less than 0.6 dl/g and 20–80% by weight of a carbonate oligomer [II] containing 2,2-bis(4-hydroxyphenyl)propane as main structural units and having an intrinsic viscosity [η], as measured at 25° C. in o-chlorophenol, of less than 0.6 dl/g, and said copolymer having an intrinsic viscosity [η], as measured at 25° C. in o-chlorophenol, of 0.4–1.2 dl/g and a glass transition temperature (Tg) of 80°–140° C. with a single peak.

5,010,147

HIGH-STRENGTH POLYCARBONATE MIXTURES

Uwe Westeppe, Remscheid; Günther Weymans, Leverkusen; Ulrich Grigo, Kempen; Karsten-Josef Idel, and Dieter Freitag, both of Krefeld, all of Fed. Rep. of Germany, assignors to Bayer Aktiengesellschaft, Leverkusen, Fed. Rep. of Germany

Filed Jan. 26, 1990, Ser. No. 471,183
Claims priority, application Fed. Rep. of Germany, Feb. 1, 1989, 3902916; Oct. 26, 1989, 3935639
Int. Cl.[5] C08L 69/00
U.S. Cl. 525—462 4 Claims

1. Mixtures containing

(a) 5 to 70% by weight polycarbonate based on 2-(4-hydroxyphenyl)-2-(3-hydroxyphenyl)-propane and

(b) 95 to 30% by weight polycarbonate based on bis-2,2-(4-hydroxy-3,5-dimethylphenyl)-propane,

the sum of the percentages by weight of components (a)+(b) being 100% by weight.

5,010,148

FLAME RETARDANT AROMATIC POLYCARBONATE COMPOSITIONS

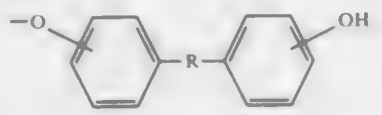
Larry N. Lewis, Scotia, N.Y., assignor to General Electric Company, Schenectady, N.Y.

Filed Aug. 28, 1989, Ser. No. 399,095
Int. Cl.[5] C08F *283/02*
U.S. Cl. 525—464 **4 Claims**

1. Flame retardant halogen-free aromatic polycarbonate composition comprising:

(A) an aromatic polycarbonate resin, and

(B) an amount of a silicate resin which is effective for imparting flame retardance to the halogen-free aromatic polycarbonate composition, where the silicate resin has from 1 to 2 moles of condensed triorganosiloxy units selected from the class consisting of trimethylsiloxy and dimethylphenylsiloxy units, and from 0.15 mole to 1 mole of condensed diorganosiloxy units selected from the class consisting of methylvinylsiloxy units divinylsiloxy units and dimethylsiloxy units, per mole of SiO_2 units.



5,010,149

CAN INTERIOR COATING COMPOSITION

Kaoru Morita, and Atsushi Shioda, both of Hiratsuka, Japan, assignors to Kansai Paint Co., Ltd., Amagasaki, Japan

Filed Nov. 6, 1989, Ser. No. 448,326
Claims priority, application Japan, Nov. 11, 1988, 63-283773
Int. Cl.[5] C08F *283/00;* **C08G** *8/28;* **C08L** *61/00, 61/06*
U.S. Cl. 525—481 **4 Claims**

1. A can interior coating composition which contains (A) a modified bisphenol based epoxy resin formed by introducing at least one of a functional group represented by the following formula.

where R is a bivalent aliphatic hydrocarbon group having 1 to 4 carbon atoms, into a molecular terminal of a bisphenol based epoxy resin having an epoxy equivalent of 180 to 7,000 and a number average molecular weight of 350 to 10,000, and (B) a resol phenol resin obtained by reacting the modified bisphenol based epoxy resin (A) with at least one formaldehyde in the presence of a basic catalyst.

5,010,150

CONTROLLING THE PARTICLE SIZE IN THE PREPARATION OF POLYMER POWDERS

Karl Hennig, Hemsheim; Heinrich Hartmann, Limburgerhof, and Hans-Juergen Raubenheimer, Ketsch, all of Fed. Rep. of Germany, assignors to BASF Aktiengesellschaft, Ludwigshafen, Fed. Rep. of Germany

Filed Nov. 13, 1989, Ser. No. 434,183
Claims priority, application Fed. Rep. of Germany, Dec. 15, 1988, 3842184
Int. Cl.[5] C08F *2/34;* **C08J** *3/12*
U.S. Cl. 526—88 **1 Claim**

1. A method for controlling the particle size in the preparation of hydrophilic polymer powders by polymerization of water-soluble monoethylenically unsaturated monomers in a powder bed in the presence of a polymerization initiator and an inert auxiliary liquid while maintaining the powder state, removing the heat of polymerization by distilling off the auxiliary liquid and circulating the reaction material, which comprises dividing a solution of the monomers in the inert auxiliary liquid into fine drops with the aid of a multimaterial nozzle which dips into the powder bed, and an inert gas stream, and regulating the particle size of the resulting polymer powder by varying the amount of inert gas in the range from 10 to 100 l per l of monomer solution.

5,010,151

METHOD FOR PREPARING ETHYLENE POLYMERS

Norio Tomotsu, Ichihara, Japan, assignor to Idemitsu Petrochemical Co., Ltd., Tokyo, Japan

Continuation of Ser. No. 314,173, Feb. 23, 1989, abandoned, which is a continuation of Ser. No. 130,020, Dec. 8, 1987, abandoned. This application Sep. 11, 1990, Ser. No. 581,196
Claims priority, application Japan, Dec. 10, 1986, 61-292462
Int. Cl.[5] C08F *4/24, 10/02*
U.S. Cl. 526—105 **16 Claims**

1. A method for preparing an ethylene polymer which comprises polymerizing ethylene, or ethylene and at least one α-olefin other than ethylene, at a temperature in the range of from 40° to 150° C., and at a pressure in the range of 1 to 100 kg/cm^2G, in the presence of a composite catalyst, which catalyst consists essentially of:

(A) a solid composition prepared by depositing at least one chromium compound and at least one magnesium compound onto silica and then calcining the resulting solid, the at least one chromium compound deposited onto the silica being an amount corresponding to a chromium content of from 0.05 to 5% by weight of the total chromium atoms based on the sum of the weight of the silica and that of the total chromium compound, the magnesium compound being selected from the group consisting of a magnesium halide, magnesium hydroxide and magnesium acetate, and the molar ratio of the at least one magnesium compound to the at least one chromium compound being from 0.1 to 10; and

(B) a mixture of an alkylmagnesium and an alkylborane each of which is being represented by the following general formula:

$$MR^1_aR^2_bR^3_c$$

wherein M is magnesium or boron and the R^1, R^2 and R^3 moieties are each independently hydrogen, an alkyl or cycloalkyl radical of C_1–C_{14} or an alkoxy radical of C_1–C_{14} with the proviso that the case that all the moieties are each equally hydrogen is excluded and the case that none of the moieties is an alkyl or cycloalkyl group of C_1–C_{14} is excluded; and a, b and c are each independently a real number of not less than zero, with the proviso that the sum of the numbers a, b and c is equal to 2 or 3, the molar ratio of the alkylmagnesium to the alkylborane being from 0.1 to 20, and the molar ratio of the mixture of alkylmagnesium and the alkylborane to the at least one chromium compound being from 2 to 200.

5,010,152

POLYMERIZATION PROCESS UTILIZING CHROMIUM ON AN ACID AGGLOMERATED REFRACTORY GEL

Max P. McDaniel; Emory W. Pitzer, both of Bartlesville, Okla., assignors to Phillips Petroleum Company, Bartlesville, Okla.

Continuation of Ser. No. 2,477, Jan. 8, 1987, abandoned, which is a division of Ser. No. 685,411, Dec. 24, 1984, Pat. No. 4,659,690, which is a continuation-in-part of Ser. No. 565,070, Dec. 23, 1983, abandoned. This application Oct. 12, 1989, Ser. No. 420,809
Int. Cl.[5] C08F *4/24, 10/00*
U.S. Cl. 526—106 **31 Claims**

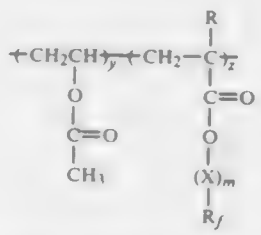
1. A polymerization process comprising contacting at least one mono-1-olefin having 2 to 8 carbon atoms per molecule with a catalyst produced by a method comprising:

(a) combining an acidic composition in a hydrophillic liquid polar organic compound with a precalcined, solid particulate refractory material to provide a workable mixture of liquid and solids, wherein said liquid polar organic compound is employed in an amount in the range of 0.1 to 2 times the total volume of the voids and pores in said refractory material;

(b) working said mixture until voids in the refractory material are reduced and agglomeration of the solid particles occurs; and

(c) drying the thus worked material,

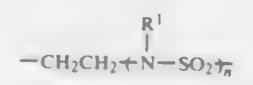
the resulting material having a catalytic amount of a chromium compound incorporated therewith.



5,010,153

COPOLYMERS OF VINYL ACETATE AND FLUORINE-CONTAINING ACRYLATE MONOMERS

Amir F. Famili, Schnecksville; F. Lennart Marten, Macungie, both of Pa., and Dillip K. Mohanty, Mount Pleasant, Mich., assignors to Air Products and Chemicals, Inc., Allentown, Pa.



Continuation-in-part of Ser. No. 202,618, Jun. 3, 1988, abandoned, which is a continuation of Ser. No. 68,866, Jul. 1, 1987, abandoned. This application Apr. 25, 1990, Ser. No. 514,484
Int. Cl.[5] C08F *12/30, 20/22*
U.S. Cl. 526—243 **17 Claims**

1. A vinyl acetate copolymer comprising the following general structure:

wherein R is hydrogen or methyl;

X is

wherein R^1 is a C_1–C_4 alkyl group and n is 0 or 1;

R_f is a perfluoroalkyl or perfluoro poly(alkyleneoxy) group;

m is 0 or 1;

y is 50–99.999 mole %; and

z is 0.001–50 mole %.

5,010,154

STABILIZED METAL DRIER

Christopher J. Hardiman, Belchertown, Mass., assignor to Monsanto Company, St. Louis, Mo.

Continuation-in-part of Ser. No. 88,915, Aug. 24, 1987, Pat. No. 4,839,325. This application Mar. 6, 1989, Ser. No. 318,992
Int. Cl.[5] C08F *4/26*
U.S. Cl. 526—135 **18 Claims**

1. A coating composition comprising

(a) a free-radical polymerizable compound and

(b) a fatty acid metal drier reversibly inhibited to catalyzing free radical polymerization by a compound selected from the group consisting of fluoro β-diketones and fluoro β-ketoesters.

5,010,155

VINYL-URETHANE SUBSTITUTED HYDROXYETHYL CELLULOSE

Karl F. Mueller, New York, N.Y., assignor to Ciba-Geigy Corporation, Ardsley, N.Y.

Continuation-in-part of Ser. No. 250,199, Sep. 28, 1988, abandoned. This application Mar. 9, 1990, Ser. No. 491,146
Int. Cl.[5] B05D *3/02, 3/12;* **B32B** *27/00, 27/40*
U.S. Cl. 527—301 **5 Claims**

1. Vinyl functional hydroxyethyl cellulose, HEC-V, which comprises hydroxyethyl cellulose, HEC, of at least 10000 MW, in which 0.5–5% of the hydroxy groups have been reacted with a vinyl functional isocyanate, V

5,010,156

ORGANOSOLV LIGNIN-MODIFIED PHENOLIC RESINS AND METHOD FOR THEIR PREPARATION

Phillip M. Cook, Kingsport, and Steven L. Hess, Mount Carmel, both of Tenn., assignors to Eastman Kodak Company, Rochester, N.Y.

Continuation-in-part of Ser. No. 197,783, May 23, 1988, abandoned. This application Mar. 12, 1990, Ser. No. 491,802
Int. Cl.[5] C08H *5/02*
U.S. Cl. 527—403 **14 Claims**

1. A method for forming an organosolv lignin-phenol-formaldehyde resin comprising:

(a) mixing particulate wood material, polar organic solvent, and an acid catalyst under heat and pressure to form a pulping liquor;

(b) reducing the concentration of the polar organic solvent in the pulping liquor so that an organosolv lignin precipitates from the pulping liquor and is recovered;

(c) reacting an aqueous alkaline solution of said organosolv lignin with either phenol or formaldehyde to form a reaction product of lignin and either phenol or formaldehyde; and

(d) then reacting the reaction product thus formed with either formaldehyde or phenol, whichever of these two was not used in reaction step (c), to form the organosolv lignin-phenol formaldehyde resin,

wherein the proportion of phenol to lignin in the reaction is from about 0.25:1 to about 3:1 by weight, and the proportion of the formaldehyde to phenol in the reaction is from about 0.25:1 to about 1.5:1 by weight.

5,010,157

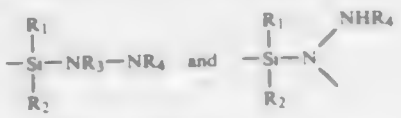
PROCESS FOR PREPARING ORGANOSILAZANES

Mannarsamy Balasubramanian, and Pranab Choudhury, both of Baton Rouge, La., assignors to Ethyl Corporation, Richmond, Va.

Filed Jun. 30, 1989, Ser. No. 374,665
Int. Cl.[5] C08G *77/06*
U.S. Cl. 528—14 **6 Claims**

1. A process which comprises heating at a temperature of at least about 40° C. in a dry atmosphere a composition consisting of an organosilazane solution which is the total reaction mixture resulting from the ammonolysis of an organohalosilane in an organic solvent, the heating being continued until the molecular weight of the organosilazane is increased.

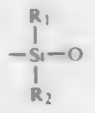
5,010,158



PROCESS FOR PREPARING POLYSILOXAZANE COMPOSITIONS AND THE PRODUCTS FORMED THEREBY

Christian Colombier, Lyon, and Jean-Pierre Cuer, Francheville le Haut, both of France, assignors to Atochem, Puteaux, France

Filed Dec. 23, 1988, Ser. No. 289,645
Claims priority, application France, Dec. 28, 1987, 87 18215
Int. Cl.[5] C08G *77/04*
U.S. Cl. 528—28 **21 Claims**



1. Polysiloxazane polymer compositions comprising:

(a) units selected from the group consisting of

(I)

and mixtures thereof, and
(b) units of formula

(II)

wherein R_1, R_2, R_3 and R_4, which may be identical or different is a radical selected from the group consisting of a hydrogen atom, a saturated aliphatic hydrocarbon radical, an alicyclic radical and mono- or polycyclic aryl, alkylaryl and arylalkyl radicals, wherein R_1 and R_2 do not simultaneously denote a hydrogen atom and wherein the molecular mass of said polysiloxazane is greater than 350.

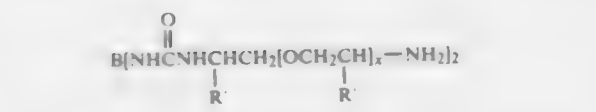
5,010,159

PROCESS FOR THE SYNTHESIS OF SOLUBLE, CONDENSED HYDRIDOSILICON RESINS CONTAINING LOW LEVELS OF SILANOL

Howard M. Bank, Freeland; Martin E. Cifuentes, and Theresa E. Martin, both of Midland, all of Mich., assignors to Dow Corning Corporation, Midland, Mich.

Filed Sep. 1, 1989, Ser. No. 401,726
Int. Cl.[5] C08G 77/06
U.S. Cl. 528—23 **38 Claims**

1. A method of hydrolyzing a silane of the formula H_aSiX_{4-a} where a is 1 or 2 and X is a hydrolyzable group, to produce polymers containing units of the formula $H_aSiO_{(4-a)/2}$, the method comprising:
forming a hydrolysis medium containing an arylsulfonic acid hydrate,
adding a the silane to the agitated hydrolysis medium,
facilitating hydrolysis of the silane in the hydrolysis medium to form the polymer,
settling the hydrolysis medium and polymer into immiscible layers comprising an acid layer and an organic layer where the organic layer contains the polymer,
separating the organic layer from the acid layer,
contacting the organic layer with a neutralizing agent sufficiently basic to neutralize the remaining acid species but insufficiently basic to catalyze rearrangement of the polymer or solvolysis of silicon hydrides, and
separating the organic layer from the neutralizing agent.



5,010,160

PROCESS FOR PREPARING NOVEL DIAMINES

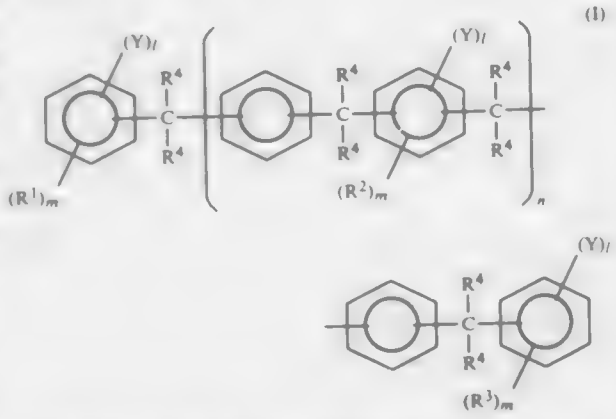
George P. Speranza, Austin; Jiang-Jen Lin, Round Rock, and Michael Cascurida, Austin, all of Tex., assignors to Texaco Inc., White Plains, N.Y.

Division of Ser. No. 78,309, Jul. 27, 1987, Pat. No. 4,906,774. This application Oct. 30, 1989, Ser. No. 430,686
Int. Cl.[5] C08G 18/80
U.S. Cl. 528—45 **2 Claims**

1. A flexible poly(urethane)(urea) coating prepared by reacting
(a) a urea-linked polyoxyalkylene diamine having the following general structure:

(I)

where B represents an alkyl nucleus structure from a diisocyanate from the group consisting of isophorone diisocyanate, 1-6-hexamethylene diisocyanate or tetramethylxylene diisocyanate, R' is hydrogen or methyl, and x is a number having an average value of about 1 to 60, with
(b) a blocked isocyanate prepolymer prepared from a polyol from the group consisting of trimethylolpropane, toluene diisocyanate and methyl ethyl ketone oxime, in the presence of an organic solvent and at an elevated temperature, the improvement comprising improved storage stability and compatibility of component (a) and (b).



5,010,161

POLYALDIMINE DERIVATIVES

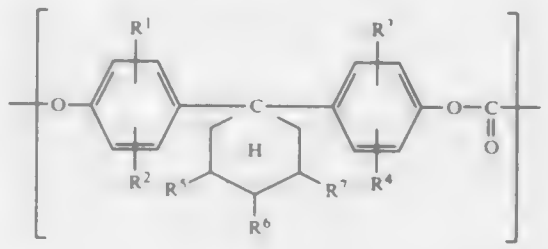
Masaaki Aoki, Zusi; Masayuki Kamiyama; Kiyotsugu Asai, both of Yokohama, and Akihiro Yamaguchi, Kamakura, all of Japan, assignors to Mitsui Toatsu Chemicals, Inc., Tokyo, Japan

Filed Dec. 19, 1989, Ser. No. 452,583
Claims priority, application Japan, Dec. 21, 1988, 63-320582; Dec. 21, 1988, 63-320584
Int. Cl.[5] C08G 18/10
U.S. Cl. 528—59 **25 Claims**

1. A poly(phenylenebisalkylene)poly(phenylaldimine) represented by the formula (I):

(I)

wherein R^1, R^2 and R^3 are a halogen atom, hydrogen atom, alkoxy group having 4 or less carbon atoms or an alkyl group having 5 or less carbon atoms, and may be the same or different; R^4 is a hydrogen atom or a methyl group; Y is —N=CH—C(R⁵)₃ or —N=CH—C(CH₃)₂—CH₂ —O—CO—R⁶ wherein R^5 is an alkyl group having 4 or less carbon atoms, R^6 is an alkyl group, anilino group, benzylamino group or an alkylamino group having 16 or less carbon atoms; and l is an integer of 1 or 2, m is an integer of 1 to 3, and n is an integer of 0 to 300.



5,010,162

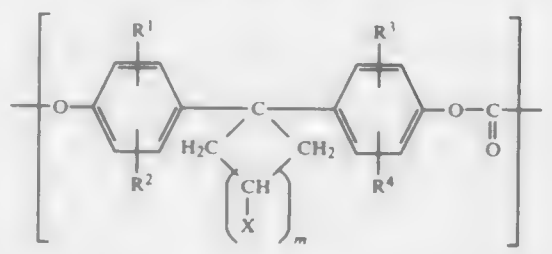
POLYCARBONATE OF ALKYL CYCLOHEXYLIDENE BISPHENOL

Volker Serini; Dieter Freitag, both of Krefeld; Uwe Westeppe, Mettmann; Karsten Idel, Krefeld; Ulrich Grigo, Kempen; Carl Casser, Cologne; Klaus-Christian Paetz, Burscheid, and Manfred Hajek, Leverkusen, all of Fed. Rep. of Germany, assignors to Bayer Aktiengesellschaft, Leverkusen, Fed. Rep. of Germany

Filed Dec. 19, 1989, Ser. No. 452,874
Claims priority, application Fed. Rep. of Germany, Dec. 23, 1988, 3843560; Aug. 12, 1989, 3926719
Int. Cl.[5] C08G 64/06
U.S. Cl. 528—196 **3 Claims**

1. A moulding composition comprising a thermoplastic aromatic polycarbonate resin having a weight average molecular weight of at least 10,000 comprising bifunctional carbonate structural units corresponding to

in which
R^1, R^2R^3 and R^4 independently of one another represent hydrogen, a C_1–C_{12} hydrocarbon radical, halogen and
R^5, R^6 and R^7 represent hydrogen, iso-C_3–C_5-alkyl, one of the substituents R^5, R^6 or R^7 being other than hydrogen, in quantities of from 100 to 1 mol-%, based on the total quantity of difunctional carbonate structural units in the polycarbonate.



5,010,163

POLYCARBONATE OF CYCLOALKYLIDENE BISPHENOL

Volker Serini; Dieter Freitag, both of Krefeld; Uwe Westeppe, Mettmann; Karsten Idel, Krefeld; Ulrich Grigo, Kempen; Carl Casser, Cologne; Klaus-Christian Paetz, Burscheid-Hilgen, and Manfred Hajek, Leverkusen, all of Fed. Rep. of Germany, assignors to Bayer Aktiengesellschaft, Bayerwerk, Fed. Rep. of Germany

Filed Dec. 13, 1989, Ser. No. 450,604
Claims priority, application Fed. Rep. of Germany, Dec. 21, 1988, 3842944; Aug. 12, 1989, 3926766
Int. Cl.[5] C08G 64/06
U.S. Cl. 528—196 **3 Claims**

1. A molding composition comprising a thermoplastic aromatic polycarbonate resin having a weight average molecular weight of at least 10,000 comprising bifunctional carbonate structural units corresponding to

in which
R^1, R^2, R^3, and R^4 independently of one another represent hydrogen, a C_1–C_{12} hydrocarbon radical, halogen,
m is 2 or 3 and
X is hydrogen or a C_6–C_{12} hydrocarbon radical, at least one substituent X being a C_6–C_{12} hydrocarbon radical,
in quantities of from 100 to 1 mol-%, based on the total quantity of difunctional carbonate structural units in the polycarbonate.

PROCESS FOR FORMING UREA-FORMALDEHYDE RESIN AND USE

Wolf D. Schollborn, Jakobstrasse 29, 6718 Grunstadt, Fed. Rep. of Germany

Continuation of Ser. No. 297,517, Dec. 5, 1988, abandoned. This application May 7, 1990, Ser. No. 519,751
Claims priority, application Fed. Rep. of Germany, Dec. 8, 1987, 37414380
Int. Cl.[5] C08G 4/00
U.S. Cl. 528—243 **14 Claims**

1. A process for making strongly exothermally setting urea-formaldehyde resin, obtained by condensation of urea with formaldehyde under alkaline, comprising the steps of:
(a) condensing, in a first condensation step, 0.2 to 0.7 moles of urea with 1.2 to 3 moles of formaldehyde in the form of solid paraformaldehyde, under exclusively alkaline conditions, at a spontaneously establishing initial pH of 8 to 12, in the presence of one of (i) 1 to 10 mmoles of NaOH and 10 to 80 mmoles of NH_3, and (ii) 2.5 to 50 mmoles of guanidine base and 0 to 80 mmoles of NH_3, per 1 mole of formaldehyde at a condensation temperature of 90 to 110° C., for a condensation time of 10 to 100 minutes; and
(b) adding, in a second condensation step, 0.2 to 0.7 moles of urea, at a condensation temperature pb 100 to 120° C., for a further condensation time of 1.5 to 5 hours.

5,010,165

DIMENSIONALLY STABLE POLYESTER MELT BLOWN WEB

Wayne P. Pruett; Max F. Meyer, Jr., and Kenneth E. Breeding, all of Kingsport, Tenn., assignors to Eastman Kodak Company, Rochester, N.Y.

Filed Jun. 2, 1989, Ser. No. 360,806
Int. Cl.[5] C08G 63/02
U.S. Cl. 528—272 **20 Claims**

1. A non-beat shrunk polyester melt blown web composition, comprising:
at least one polyester having an I.V. of about 0.4 to about 1.0 and comprising repeat units from
(a) at least one dibasic acid selected from terephthalic acid, isophthalic acid, aliphatic dicarboxylic acids having 3 to 20 carbon atoms and cycloaliphatic dicarboxylic acids having 8 to 10 carbon atoms,
(b) at least one glycol selected from aliphatic glycols having 2 to 10 carbon atoms and cycloaliphatic glycols having 6 to 10 carbon atoms, and
(c) wherein said web composition shrinks no more than 10% in both its longitudinal and cross dimensions upon exposure to a temperature up to its melting temperature.

5,010,166

PROCESS AND APPARATUS FOR PRODUCING POLYOL POLYMERS AND POLYOL POLYMERS SO PRODUCED

Kevin M. Scholsky, Citrus Heights, Calif.; Lisa M. Larsen, Little Lake, Mich., and Rodger C. Kruse, Racine, Wis., assignors to S. C. Johnson & Son, Inc., Racine, Wis.

Continuation-in-part of Ser. No. 356,647, May 19, 1989, Pat. No. 4,933,430, which is a continuation of Ser. No. 22,297, Mar. 5, 1987, abandoned. This application Feb. 16, 1990, Ser. No. 481,132

The portion of the term of this patent subsequent to Jun. 12, 2007, has been disclaimed.

Int. Cl.[5] **C08G** *69/14, 63/08, 67/02*

U.S. Cl. 528—323 **17 Claims**

1. A continuous polymerization process to produce a graft polymer having at least one main chain and a plurality of side chains attached thereto, the continuous polymerization process comprising the steps of:

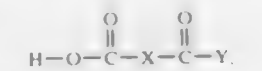
combining in a reaction zone an (1) addition-polymerizable monomer that is also a free-radical initiator together with an (2) ethylenically-unsaturated monomer having a nucleophilic or an electrophilic moiety at a reaction temperature that is effective for initiating addition copolymerization of the addition-polymerizable monomer with the ethylenically-unsaturated monomer, wherein propagation by the addition-copolymerization reaction forms the main chain of the graft polymer;

while also combining in the reaction zone a polymerizable, carbonyl carbon-containing ringed molecule at a superatmospheric pressure effective, at the elevated temperature, to cause the ring portion of the ringed molecule to open in the vicinity of the carbonyl carbon thereof in response to the presence of the nucleophilic or the electrophilic moiety of the ethylenically-unsaturated monomer, for initiating ionic-copolymerization of the polymerizable ringed molecule with the nucleophilic-containing or electrophilic-containing moiety of the ethylenically-unsaturated monomer, wherein propagation by the ionic-copolymerization reaction forms the side chains of the graft polymer; and

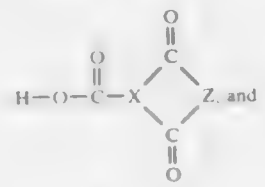
terminating both of the addition-copolymerization and the ionic-copolymerization reactions when the thus-produced graft polymer attains a predetermined number-average and/or weight-average molecule weight, the polymerization process being characterized in that each of the main-chain and side-chain propagations occurs substantially simultaneously, relative to the other, and wherein the polymerization process is further characterized in that the ionic-copolymerization reaction occurs expressly excluding utilization of a catalyst for the carbonyl carbon-containing ringed molecule.

5,010,167

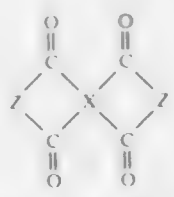
POLY(AMIDE-AND IMIDE-CO-ANHYDRIDE) FOR BIOLOGICAL APPLICATION



Eyal Ron, Lexington; Andrea Staubli, Belmont, and Robert S. Langer, Newton, all of Mass., assignors to Massachusetts Institute of Technology, Cambridge, Mass.



Filed Mar. 31, 1989, Ser. No. 331,432



Int. Cl.[5] **C08G** *69/10*

U.S. Cl. 528—328 **4 Claims**

1. A biocompatible, biodegradable polymer produced from monomers selected from the group consisting of

wherein X is an aliphatic or aromatic group of C_1–C_{20}, Y is a C-terminus peptide or proline, and Z is a C-terminus peptide or amino acid, and having a weight average molecular weight of greater than 10,000.

5,010,168

ARAMID POLYMER FROM AROMATIC DICARBOXYLIC ACID MIXTURE AND AROMATIC DIAMINE MIXTURE

Doetze J. Sikkema, An Ellecom, Netherlands, assignor to Akzo nv, Arnhem, Netherlands

Division of Ser. No. 245,231, Sep. 16, 1988, Pat. No. 4,908,264. This application Dec. 8, 1989, Ser. No. 447,735

Claims priority, application Netherlands, Sep. 17, 1987, 8702221

Int. Cl.[5] **C08G** *69/32*

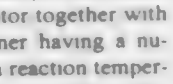
U.S. Cl. 528—338 **15 Claims**

1. A copolyamide, which expressed as the mole fraction of the total of amide bonds, comprises (1) 0.22–0.28 units derived from terephatalic acid; (2) 0.22–0.28 units derived from paraphenylene diamine; (3) 0.22–0.28 units derived from isophthalic acid; and (4) 0.22–0.28 units derived from a 3,3'- or a 4,4'-diamine of diphenyl methane, diphenylpropane-2,2, diphenyl cyclohexane-1,1, diphenyl ether, diphenyl sulfide, diphenyl sulphone, or benzophenone.

5,010,169

POLYARYLENE SULPHIDE CONTAINING PHOSPHINE GROUPS

Burkhard Köhler, and Rolf-Volker Meyer, both of Krefeld, Fed. Rep. of Germany, assignors to Bayer Aktiengesellschaft, Leverkusen-Bayerwerk, Fed. Rep. of Germany



Division of Ser. No. 336,716, Apr. 12, 1989, abandoned. This application Nov. 13, 1989, Ser. No. 436,127

Claims priority, application Fed. Rep. of Germany, Apr. 29, 1988, 3814533

Int. Cl.[5] **C08G** *75/16*

U.S. Cl. 528—388 **4 Claims**

1. Linear or branched phosphorous containing polyarylene sulphide prepared by the reaction of 0.1 to 10 mol-% of monomers corresponding to the following formula

(I)

wherein

P denotes phosphorous,

Ar denotes a C_6-C_{14} aromatic group or a C_5–C_{14} heteroaromatic group containing 1 to 3 halogen atoms,

R^1 is identical to Ar or denotes a C_1–C_{22}-alkyl, C_6–C_{15}-aralkyl or C_6–C_{14} - aryl group,

R^2 is identical to Ar or R^1,

from 90 to 99.9 mol-% of monomers corresponding to the formula II

(II)

wherein

Ph represents a para- or metaphenylene group or a 4,4'-diphenylene group and

Hal represents halogen and the sum of all the halogen atoms is at least 2,

and 1 to 2 equivalents of an alkali metal sulfide

5,010,170

POLYMERIZATION OF CARBON MONOXIDE/OLEFIN WITH AT LEAST ONE TETRA ARYL DIPHOSPHINE LIGAND

Gerrit G. Rosenbrand, Amsterdam, Netherlands, and Pui K. Wong, Katy, Tex., assignors to Shell Oil Company, Houston, Tex.

Filed Oct. 20, 1989, Ser. No. 424,650

Claims priority, application Netherlands, Oct. 24, 1988, 8802611

Int. Cl.[5] **C08G** *67/02*

U.S. Cl. 528—392 **12 Claims**

1. In the process of producing a linear alternating polymer of carbon monoxide and at least one ethylenically unsaturated hydrocarbon by contacting the carbon monoxide and unsaturated hydrocarbon under polymerization conditions in the presence of a catalyst composition formed from a palladium compound, the anion of a non-hydrohalogenic acid having a pKa below about 4 and at least one tetraaryl diphosphine ligand, the improvement wherein the ligand comprises a mixture of tetraaryl disphosphines wherein one diphosphine contains an ortho alkoxy substituent on each aryl group and one diphosphine is free of ortho alkoxy substituents on aryl groups

5,010,171

CARBON MONOXIDE/OLEFIN POLYMERIZATION WITH CATALYST COMPRISING P, BIDENTATE LIGAND HAVING NON-HYDROCARBYL SUBSTITUENT

Johannes A. M. van Broekhoven, and Wiebren A. Miedema, both of Amsterdam, Netherlands, assignors to Shell Oil Company, Houston, Tex.

Filed Sep. 15, 1989, Ser. No. 408,012

Claims priority, application Netherlands, Sep. 22, 1988, 8802347

Int. Cl.[5] **C08G** *67/02*

U.S. Cl. 528—392 **10 Claims**

1. In the process of producing linear alternating polymer by polymerizing carbon monoxide and at least one ethylenically unsaturated hydrocarbon in a series of polymerizations over time, each of the polymerizations being conducted under polymerization conditions in the presence of an alkanol reaction diluent and a catalyst composition, the improvement of employing in each polymerization a portion of a catalyst composition solution prepared by adding a bidentate ligand of phosphorus containing a non-hydrocarbyl substituent on at least one carbon atom and a palladium alkanoate to an aprotic, polar solvent and subsequently adding a halogenated aliphatic monocarboxylic acid having a pKa below 2, and recovering linear alternating polymer of carbon monoxide and at least one ethylenically unsaturated hydrocarbon of relatively uniform molecular weight from the series of polymerizations

5,010,172

POLYMERIZATION OF CARBON MONOXIDE/OLEFIN WITH TERTIARY MONOPHOSPHINE OR SECONDARY MONOPHOSPHINE OXIDE

Petrus W. N. M. Van Leeuwen, and Cornelis F. Roobeek, both of Amsterdam, Netherlands, assignors to Shell Oil Company, Houston, Tex.

Filed Dec. 28, 1989, Ser. No. 458,251

Claims priority, application Netherlands, Jan. 20, 1989, 8900139

Int. Cl.[5] **C08G** *67/02*

U.S. Cl. 528—392 **16 Claims**

1. A process for the production of linear alternating polymer of carbon monoxide and at least one ethylenically unsaturated hydrocarbon by contacting the carbon monoxide and ethylenically unsaturated hydrocarbon under polymerization conditions in the liquid phase in the presence a catalytic quantity of a catalyst composition formed from (a) a palladium salt of an acid having a pKa less than 2; (b) a bidentate ligand of phosphorus, and (c) a tertiary monophosphine or secondary monophosphine oxide provided in a quantity of from about 0.25 mol to about 2 mol per mol of palladium salt

5,010,173

FREE RADICAL STABILIZED ALKOXYLATES

Anthony J. O'Lenick, Jr., Lilburn, Ga.; John C. Miller, Hawthorn Woods, Ill., and J. Michael Clumpner, Delavan, Wis., assignors to LCE Partnership, Lake Geneva, Wis.

Continuation-in-part of Ser. No. 418,630, Oct. 10, 1918. This application Jun. 4, 1990, Ser. No. 532,856

Int. Cl.[5] **C08G** *65/10;* **C08L** *71/02*

U.S. Cl. 528—408 **18 Claims**

1. A polyoxyalkylene composition which is prepared by the reaction of;

(a) a dihydroxy compound, selected from ethylene glycol, propylene glycol, diethylene oxide, and dipropylene glycol said dihydroxy compound containing an effective inhibitory amount of a stable free radical compound, and

(b) an alkylene oxide selected from ethylene oxide, propylene oxide, butylene oxide, and mixtures thereof.

GENERAL METHOD FOR PRODUCING AND SELECTING PEPTIDES WITH SPECIFIC PROPERTIES

William J. Rutter, and Daniel V. Santi, both of San Francisco, Calif., assignors to The Regents of the University of California, Oakland, Calif.

Filed May 2, 1988, Ser. No. 189,318

Int. Cl.[5] **C07K** *1/00, 1/04*

U.S. Cl. 530—334 **42 Claims**

1. A method of preparing in the same reaction vessel a mixture of peptides of distinct, unique and different sequences which mixture contains each peptide in retrievable and analyzable amounts and in substantially equal molar amounts, comprising:

combining and reacting activated amino acids with an acceptor amino acid or peptide wherein said activated amino acids are provided in concentrations relative to each other based on the relative coupling constants so that the mixture of the peptides resulting from the reaction contains each of the peptides in predictable and defined amounts sufficient for each of the peptides to be retrieved and analyzed.

5,010,176

ANTIBODY-DRUG CONJUGATES

Russell L. Barton, Indianapolis, Ind., assignor to Eli Lilly and Company, Indianapolis, Ind.

Filed Nov. 10, 1988, Ser. No. 269,815

Int. Cl.[5] **C07K** *15/28, 17/06*

U.S. Cl. 530—388 **20 Claims**

1. A modified antibody or antibody fragment of the formula

$$[R^4—CH=\underset{\displaystyle COR^1}{\underset{|}{C}}—CO—Y—(CH_2)_n—CO]_mAb \qquad III$$

wherein

R^1 is a carboxylic acid protecting group;

R^4 is C_1-C_4 alkoxy,

Y is —O—, —NH—, —NCH_3— or —NC_2H_5—,

n is an integer from 1 to about 8;

m is an integer from 1 to about 10; and

Ab is an antibody or antigen-recognizing fragment thereof, which recognizes an antigen associated with a cell to which delivery of the drug is desirable.

5,010,177

PROCESS FOR THE PREPARATION OF AN AZONITRILE DICARBOXYLIC ACID INITIATOR IN ACETONE HAVING A LOW SALT AND LOW WATER CONTENT

John T. Lai, Broadview Heights, and Deborah S. Filla, Northfield, both of Ohio, assignors to The BFGoodrich Company, Akron, Ohio

Filed Dec. 26, 1989, Ser. No. 457,057

Int. Cl.[5] **C07C** *245/04;* **C08F** *4/04*

U.S. Cl. 534—586 **26 Claims**

1. A process for the preparation of an azonitrile initiator in acetone having a low salt, low water content, comprising, forming

$$HOOCR_2C—N=N—CR_2COOH. \qquad I$$
(CN; CN)

by reacting a keto acid of the formula

$$R_1CR_2COOH$$
(O)

with $M(CN)_x$ to form a cyanohydrin metal carboxylate of the formula

$$(R_1CR_2COO^-)_xM$$
(OH; CN)

and reacting the metal carboxylate with a hydrazine source and hydrochloric acid to obtain a hydrazo intermediate of the formula

$$(OOCR_2C—N(R_1,H)—N(H,R_1)—CR_2COO^-)_x2M^{x+}.$$
(CN; CN)

reacting said hydrazo intermediate with chlorine gas in the presence of acetone to oxidize the hydrazo intermediate to form the azonitrile initiator in a liquid medium, forming at least two liquid layers, discarding the bottom aqueous layer and adding solid calcium chloride or an aqueous saturated solution of calcium chloride to the upper layer to further remove additional water and $M(Cl)_x$ from the acetone layer containing the azonitrile initiator, wherein R_1 is an alkyl containing from about 1 to about 12 carbon atoms, R_2 is a direct bond or an alkylene containing from 1 to about 12 carbon atoms, or a cycloalkylene or alkyl cycloalkylene containing from about 3 to about 12 carbon atoms, and M is a metal selected from the class consisting of lithium, sodium, potassium, magnesium, or calcium.

5,010,178

PROCESS FOR THE PREPARATION OF MIXED AZONITRILE CARBOXYLIC ACID INITIATORS

John T. Lai, Broadview Heights, Ohio, assignor to The B. F. Goodrich Company, Akron, Ohio

Filed Dec. 26, 1989, Ser. No. 456,886

Int. Cl.[5] **C07C** *245/04;* **C08F** *4/04*

U.S. Cl. 534—586 **23 Claims**

1. A process for the preparation of mixed azonitrile initiators, comprising, forming

$$HOOCR_2C—N=N—CR_2COOH. \qquad I$$
(R1; R1; CN; CN)

$$R_3C—N=N—CR_4 \quad \text{and} \qquad II$$
(R4; R4; CN; CN)

$$R_3C—N=N—CR_2COOH \qquad III$$
(R4; R1; CN; CN)

by reacting a keto acid of the formula

$$R_1CR_2COOH$$
(O)

with $M(CN)_x$ and a catalytic amount of hydrochloric acid to form a cyanohydrin metal carboxylate of the formula

$$(R_1CR_2COO)_xM.$$
(OH; CN)

adding to the cyanohydrin metal carboxylate a cyanohydrin of the formula

$$R_3CR_4 \quad \text{and.}$$
(OH; CN)

reacting the mixture with a hydrazine source to obtain a mixture of hydrazo intermediates of the formulae

$$(OOCR_2C—N(R_1,H)—N(H,R_1)—CR_2COO^-)_x2M^{x+} \qquad IV$$
(CN; CN)

$$R_3C—N(R_4,H)—N(H,R_4)—CR_3 \quad \text{and} \qquad V$$
(CN; CN)

$$(R_3C—N(R_4,H)—N(H,R_1)—CR_2COO^-)_xM^{x+} \qquad VI$$
(CN; CN)

and reacting said mixture of hydrazo intermediates with chlorine gas in the presence of acetone solvent to oxidize the mixture of hydrazo intermediates and form the mixed azonitrile initiators wherein R_1 is an alkyl containing from about 1 to about 12 carbon atoms, R_2 is a direct bond or an alkylene containing from 1 to about 12 carbon atoms, or a cycloalkylene or alkyl cycloalkylene containing from about 3 to about 12 carbon atoms, R_3 and R_4, independently, are alkyls containing from 1 to about 12 carbon atoms, or one of R_3 and R_4 is an alkoxy containing from 1 to about 4 carbon atoms, and M is a metal selected from the class consisting of lithium, sodium, potassium, magnesium, or calcium.

5,010,179

PROCESS FOR THE PREPARATION OF MIXED, SYMMETRICAL AZONITRILE DICARBOXYLIC DICYANO ACIDS AND INITIATORS

John T. Lai, Broadview Heights, Ohio, assignor to The B. F. Goodrich Company, Akron, Ohio

Filed Dec. 26, 1989, Ser. No. 457,058

Int. Cl.[5] **C07C** *245/04;* **C08F** *4/04*

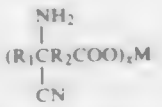
U.S. Cl. 534—586 **23 Claims**

1. A process for the preparation of mixed, symmetrical azonitrile initiators, comprising,

forming

$$HOOCR_2C—N=N—CR_2COOH \qquad I$$
(R1; R1; CN; CN)

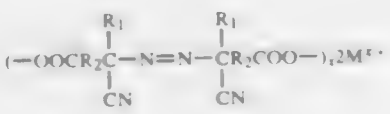
and



$$R_3C—N=N—CR_3 \qquad II$$
(R4; R4; CN; CN)

by reacting a keto acid of the formula

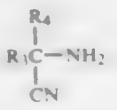
$$R_1CR_2COOH$$
(O)



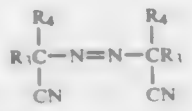
wherein R_1 is an alkyl containing from 1 to 12 carbon atoms and R_2 is a direct bond, or an alkylene containing from 1 to 12 carbon atoms or a cycloalkylene containing from about 3 to

about 12 carbon atoms, with from 1 to 2 equivalents of $M(CN)_x$ per mole of keto acid wherein M is a metal selected from the group consisting of lithium, sodium, potassium, magnesium, or calcium and x is the valence of M and an ammonia source in a molar ratio of keto acid: ammonia source of from about 1:1–4 in the presence of a solvent to form an aminonitrile metal carboxylate of the formula

removing excess ammonia source, removing methanol if used as a solvent,



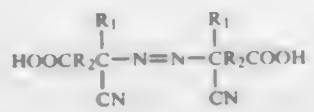
reacting said aminonitrile metal carboxylate with $M_1(OCl)_x$ in the presence of a surfactant wherein M_1 is a metal selected from the group consisting of sodium, potassium, or calcium and x is the valence of M to form an azonitrile metal carboxylate comprising



III

and also

reacting an aminonitrile of the formula



in the presence of a surfactant and $M_1(OCl)_x$ to form a symmetrical azonitrile initiator

II

wherein R_3 and R_4 are alkyl independently containing from 1 to about 12 carbon atoms or one of R_3 and R_4 is an alkoxy of from 1 to about 4 carbon atoms wherein the molar ratio of aminonitrile metal carboxylate:aminonitrile is from about 0.5–10:1, wherein the surfactant is from about 0.05 percent active to about 0.20 percent active by weight based on the total weight of aminonitrile metal carboxylate and aminonitrile, and wherein the equivalent weight ratio of the sum of the aminonitrile metal carboxylate and aminonitrile: $M_1(OCl)_x$ is from about 1:1.0–2.75, and

reducing excess $M_1(OCl)_x$ with a reducing agent and further neutralizing the metal azonitrile carboxylate to form

I

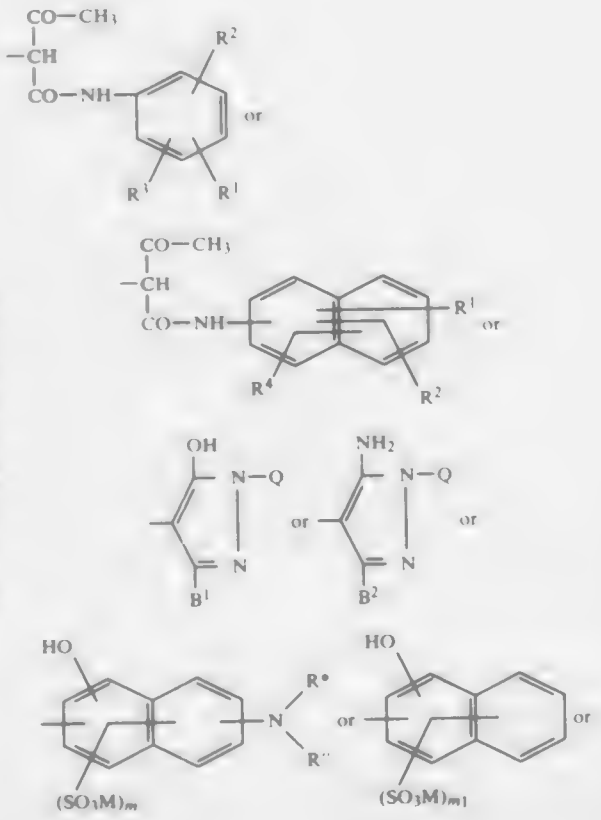
1. A water-soluble azo compound corresponding to the formula

in which

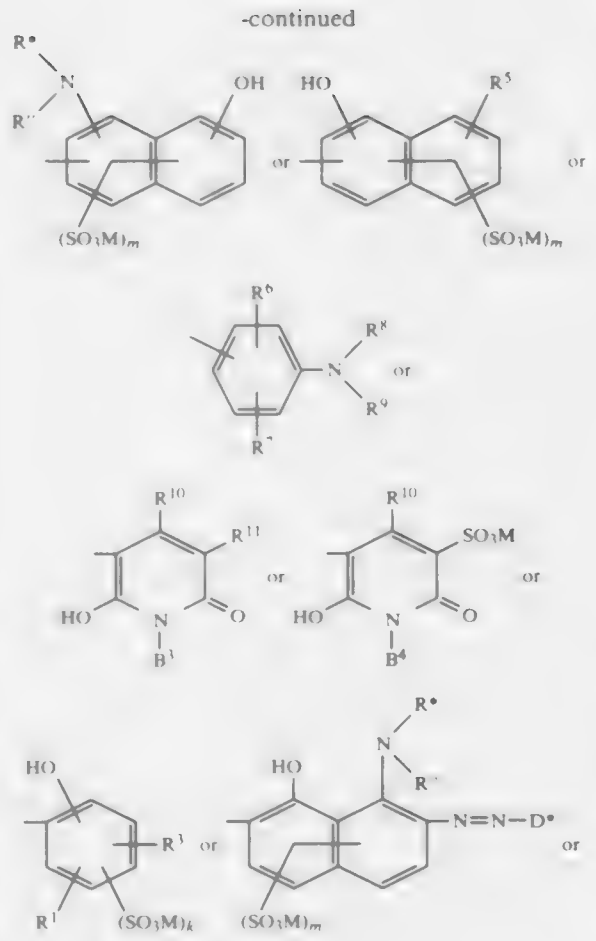
D is a group of the formula

in which,



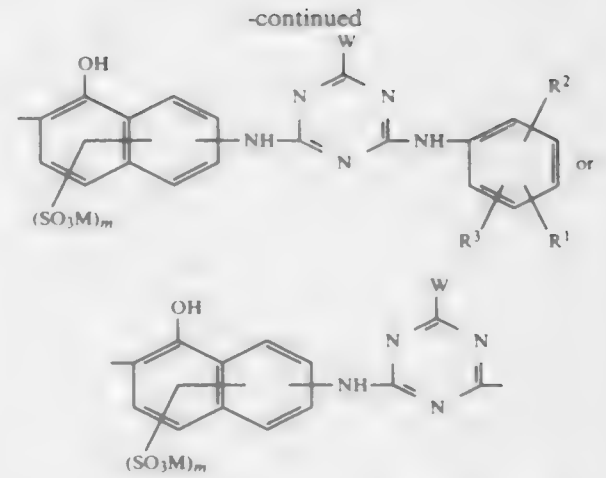
Y is vinyl or a group of the formula $-CH_2-CH_2-X$ in which X is a substituent which is eliminated by an alkali while forming the vinyl,

R is hydrogen, nitro, alkyl of 1 to 4 carbons, alkoxy of 1 to 4 carbons, carboxy, hydroxy or halogen,



n is zero or 1, and

M is hydrogen or an alkali-metal, and



K is a group of the formula

-continued

-continued

in which

R^1 is hydrogen, carboxy, sulfo, or a group of the formula $-SO_2-Y$;

R^2 is hydrogen, alkyl of 1 to 4 carbons, alkoxy of 1 to 4 carbons, chlorine, bromine, carboxy, sulfo, or nitro;

R^3 is hydrogen, alkyl of 1 to 4 carbons, alkoxy of 1 to 4 carbons, chlorine, or bromine;

R^4 is hydrogen, sulfo, or carboxy;

B^1 is alkyl of 1 to 4 carbons, carboxy, carbalkoxy of 2 to 5 carbons, $-CONH_2$, or phenyl, which is unsubstituted or substituted by substituents selected from sulfo, carboxy, methyl, ethyl, methoxy, ethoxy, and chlorine;

B^2 is alkyl of 1 to 4 carbons, carboxy, carbalkoxy of 2 to 5 carbons, $-CONH_2$, or phenyl, which is unsubstituted or substituted by 1 or 2 substituents selected from alkyl of 1 to 4 carbons, alkoxy of 1 to 4 carbons, chlorine, bromine, or sulfo;

Q is phenyl, which is unsubstituted or substituted by one, two, or three substituents selected from chlorine, bromine, methyl, ethyl, methoxy, ethoxy, carboxy, sulfo, acetylamino, and a group of the formula $-SO_2-Y$, or is a naphthyl, which is unsubstituted or substituted by one, two, or three sulfos, or by an alkyl of 1 to 4 carbons, an alkoxy of 1 to 4 carbons, a chlorine, or an alkanoylamino of 2 to 5 carbons, or by a group of the formula $-SO_2-Y$, or is naphthyl substituted by one, two or three sulfos and by a group selected from alkyl of 1 to 4 carbons, alkoxy of 1 to 4 carbons, chlorine, alkanoylamino of 2 to 5 carbons and a group of the formula $-SO_2-Y$;

R^* is hydrogen, or alkyl or 1 to 4 carbons, which is unsubstituted or substituted by a phenyl which is further unsubstituted or substituted by sulfo, or by $-SO_2-Y$, or by sulfo and $-SO_2-Y$

R'' is hydrogen, or alkyl or 1 to 4 carbons which is unsubstituted or substituted by phenyl, or by a group of the formula $-SO_2-Y$, or is phenyl which is unsubstituted or substituted by one or two substituents selected from alkyl of 1 to 4 carbons, alkoxy of 1 to 4 carbons, chlorine, bromine, sulfo, and $-SO_2-Y$;

R^5 is phenylureido wherein the phenyl is unsubstituted or substituted by a group of the formula $-SO_2-Y$, or is alkanoylamino of 2 to 5 carbons which is unsubstituted or substituted in the alkyl moiety by a group of the formula $-SO_2-Y$, or is alkenoylamino of 3 to 5 carbons or is benzoylamino which is unsubstituted or substituted by substituents selected from chlorine, methyl, methoxy,

nitro, sulfo, carboxy, and a group of the formula $-SO_2-Y$,

R^6 is hydrogen, alkyl of 1 to 4 carbons, alkoxy of 1 to 4 carbons, sulfo, carboxy, carbalkoxy of 2 to 5 carbons, halogen or alkoxy of 1 to 4 carbons substituted by hydroxy, acetoxy, carboxy, $-CONH_2$, cyano, or halogen;

R^7 is hydrogen, alkyl of 1 to 4 carbons, alkoxy of 1 to 4 carbons, halogen, cyano, trifluoromethyl or alkoxy of 1 to 4 carbons substituted by hydroxy, acetoxy, carboxy, $-CONH_2$, cyano, halogen, or a group of the formula $-SO_2-Y$, or is alkanoylamino of 2 to 5 carbons which is unsubstituted or substituted by chlorine, bromine, alkoxy of 1 to 4 carbons, phenoxy, phenyl, hydroxy, carboxy, sulfo, or a group of the formula $-SO_2-Y$, or is alkenoylamino of 3 to 5 carbons, which is unsubstituted or substituted by chlorine, bromine, carboxy or sulfo, or is benzoylamino which is unsubstituted or substituted in the benzene ring by substituents selected from chlorine, methyl, sulfo, and a group of the formula $-SO_2-Y$, or is alkylsulfonyl of 1 to 4 carbons or is phenylsulfonyl which is unsubstituted or substituted in the phenyl by substituents selected from chlorine, methyl, sulfo, and a group of the formula $-SO_2-Y$, or is alkylsulfonylamino of 1 to 4 carbons, which is unsubstituted or substituted by hydroxy, sulfato, chlorine, bromine, alkoxy of 1 to 4 carbons or a group of the formula $-SO_2-Y$, or is phenylsulfonylamino, which is unsubstituted or substituted in the phenyl by substituents selected from chlorine, methyl, sulfo, and a group of the formula $-SO_2-Y$, or is $-CONH_2$, which is unsubstituted or mono- or disubstituted on the nitrogen by one or two substituents selected from the group: alkyl of 1 to 4 carbons; alkyl of 1 to 4 carbons substituted by hydroxy, sulfo, carboxy, sulfato, phenyl, or a group of the formula $-SO_2-Y$; cycloalkyl of 5 to 8 carbons, phenyl, which is unsubstituted or substituted by substituents selected from chlorine, sulfo, methyl, methoxy, carboxy, and a group of the formula $-SO_2-Y$, or is sulfamoyl, which is unsubstituted or mono- or disubstituted on the nitrogen by one or two substituents selected from the group consisting of: alkyl of 1 to 4 carbons; alkyl of 1 to 4 carbons substituted by hydroxy, sulfo, carboxy, sulfato, phenyl, or a group of the formula $-SO_2-Y$, cycloalkyl of 5 to 8 carbons; phenyl, which is unsubstituted or substituted by substituents selected from chlorine, sulfo, methyl, methoxy, carboxy, and a group of the formula $-SO_2-Y$, or is ureido, which is unsubstituted or mono- or disubstituted on the terminal nitrogen by one or two substituents from the group consisting of alkyl or 1 to 4 carbons, alkyl of 1 to 4 carbons substituted by substituents selected from hydroxy, sulfo, carboxy, sulfato, phenyl, or a group of the formula $-SO_2-Y$, cycloalkyl of 5 to 8 carbons, phenyl, which is unsubstituted or substituted by substituents selected from the group consisting of chlorine, sulfo, methyl, methoxy, carboxy, and a group of the formula $-SO_2-Y$,

R^8 is hydrogen, alkyl of 1 to 4 carbons, or alkyl or 1 to 4 carbons substituted by hydroxy, sulfo, carboxy, sulfato, a group of the formula $-SO_2-Y$, or by phenyl, or is alkenyl of 2 to 4 carbons which is unsubstituted or substituted by carboxy, sulfo, chlorine or bromine, or is cycloalkyl or 5 to 8 carbons,

R^9 is hydrogen, or alkyl of 1 to 4 carbons or alkyl or 1 to 4 carbons which is unsubstituted or substituted by hydroxy, sulfo, carboxy, sulfato, phenyl, or a group of the formula $-SO_2-Y$, or is alkenyl of 2 to 5 carbons which is unsubstituted or substituted by carboxy, sulfo, a group of the formula $-SO_2-Y$, chlorine, or bromine, or is cycloalkyl of 5 to 8 carbons or phenyl, which is unsubstituted or substituted by substituents selected from chlorine, sulfo, methyl, methoxy, carboxy, and a group of the formula $-SO_2-Y$, or

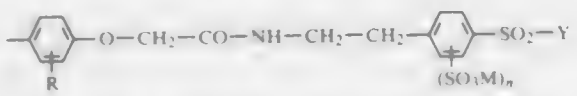
R^8 and R^9 represent together with the nitrogen piperidino, morpholino or piperazino;

R^{10} is hydrogen, or alkyl of 1 to 4 carbons which is unsubstituted or substituted by alkoxy of 1 to 4 carbons or by cyano,

R^{11} is hydrogen, sulfo, sulfoalkyl with an alkyl moiety or 2 to 5 carbons, cyano, or $-CONH_2$;

B^3 is hydrogen, or alkyl or 1 to 6 carbons which is unsubstituted or substituted by phenyl, sulfo, sulfophenyl, or a group of the formula $-SO_2-Y$;

B^4 is hydrogen, alkoxy of 1 to 4 carbons, alkyl or 1 to 4 carbons, which is unsubstituted or substituted by sulfo, carboxy, sulfato, acetylamino, benzoylamino, cyano, or a group of the formula SO_2-Y, or is alkenyl of 2 to 4 carbons, cyclohexyl, phenyl, which is unsubstituted or substituted by substituents selected from carboxy, sulfo, benzoylamino, acetylamino, a group of the formula $-SO2-Y$, and chlorine;

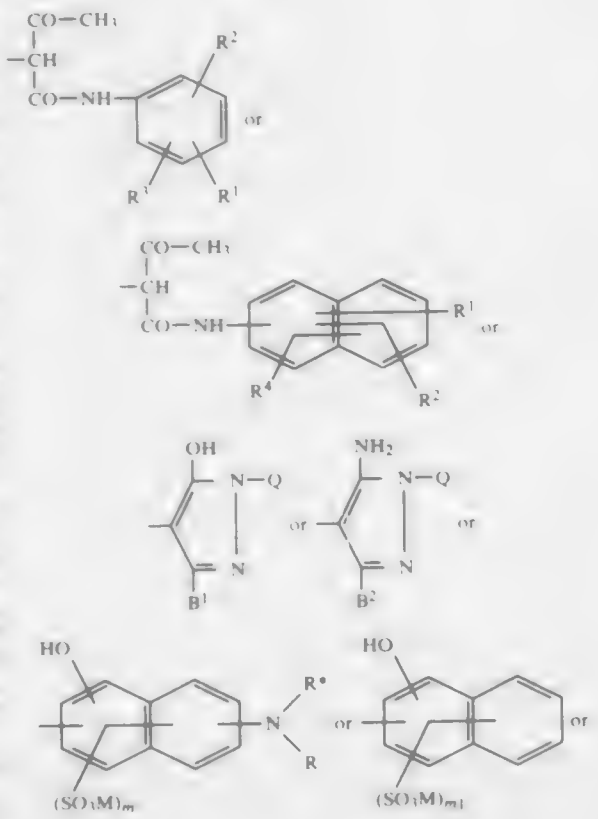


K is zero or 1 (and in the case where K is zero, this group is hydrogen);

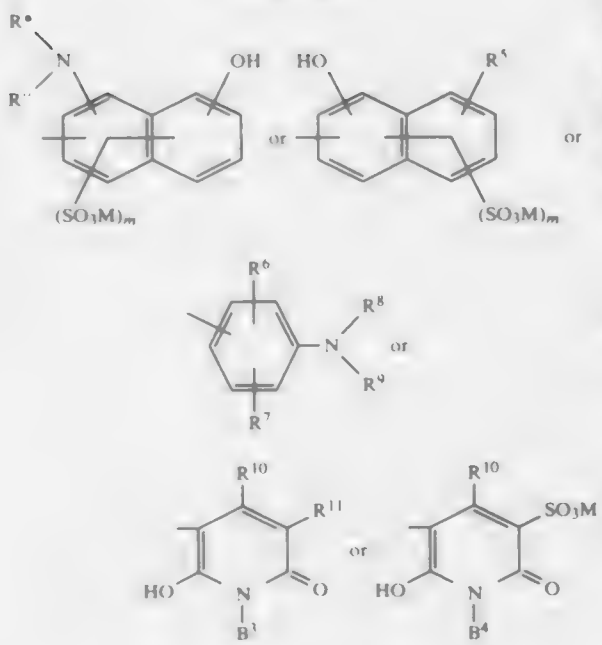
m is 1 or 2,

m_1 is 1, 2 or 3;

W is sulfo, alkylsulfonyl or 1 to 4 carbons, phenylsulfonyl, bromine, fluorine or chlorine,



D^* is a group of the formula



in which R, Y and M and n are as defined above, or

D^* is phenyl, which is unsubstituted or substituted by 1, 2, or 3 substituents selected from alkyl of 1 to 4 carbons, alkoxy of 1 to 4 carbons, chlorine, bromine, hydroxy, carboxy, sulfo, $-CONH_2$ and $-SO_2NH_2$, and alkanoylamino of 2 to 5 carbons, or a group of the formula $-SO_2-Y$, or by a combination of those substituents, or is naphthyl, which is unsubstituted or substituted by 1, 2 or 3 sulfos, or by 1 or 2 sulfos and 1 or 2 groups of the formula $-SO_2-Y$, or by one group $-SO_2-Y$,

K^* is a group of the formula

PARTIALLY TREATED SHELLFISH WASTE FOR REMOVAL OF HEAVY METALS FROM AQUEOUS SOLUTION

Robert W. Coughlin, The University of Connecticut, Dept. of Chemical Engineering, Box U-139, Room 204, 191 Auditorium Rd., Storrs, Conn. 06268

Filed Mar. 28, 1988, Ser. No. 174,357
Int. Cl.[4] C08B *37/08*
U.S. Cl. 536—20 **12 Claims**

1. A particle which removes heavy metal ions from aqueous solution, which comprises chitin having formed thereon a layer of chitosan, wherein said particle has a size of from 0.2 to 1.5 cm, and the chitosan layer on the surface thereof has a depth of from about 0.01 micrometers to about 10% of the particle diameter.

DNA CONSTRUCTS CONTAINING A KLUYVEROMYCES ALPHA FACTOR LEADER SEQUENCE FOR DIRECTING SECRETION OF HETEROLOGOUS POLYPEPTIDES

Anthony J. Brake, Berkeley, Calif., and Johan A. Van Den Berg, Ad Reeuwijk, Netherlands, assignors to Chiron Corporation, Emeryville, Calif. and Gist-Brocades NV, Delft, Netherlands

Filed Jul. 28, 1987, Ser. No. 78,551
Int. Cl.[5] C07H *15/12;* **C12P** *21/00;* **C12N** *15/00*
U.S. Cl. 536—27 **7 Claims**

1. A DNA construct encoding a protein having an amino acid sequence which comprises a secretion-directing Kluyveromyces α-factor leader sequence linked to a heterologous polypeptide sequence.

5,010,183

PROCESS FOR PURIFYING DNA AND RNA USING CATIONIC DETERGENTS

Donald E. Macfarlane, 943 Iowa Ave., Iowa City, Iowa 52240

Filed Jul. 7, 1989, Ser. No. 376,709
Int. Cl.[5] C07H *21/00, 21/02, 21/04*
U.S. Cl. 536—27 **24 Claims**

1. A process for the purification of DNA and RNA from a biological mixture consisting essentially of applying directly to said mixture without prior purification or extraction of the nucleic acids a selected quaternary amine cationic detergent capable of simultaneously solubilizing contaminants in said mixture and forming a hydrophobic complex with said DNA or RNA in said mixture.

3. A process for the purification of DNA and RNA from a biological mixture containing virus consisting essentially of applying directly to said mixture without prior purification or extraction of the nucleic acids of selected quaternary amine cationic detergent capable of simultaneously solubilizing contaminants in said mixture and forming a hydrophobic complex with said DNA or RNA in said mixture.

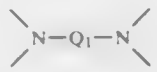
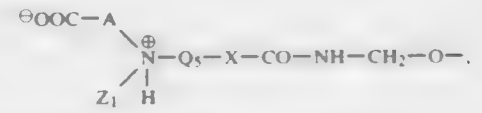
IONICALLY MODIFIED AGAROSE



Jürg Merz, Biel-Benken, Switzerland, assignor to Ciba-Geigy Corporation, Ardsley, N.Y.

Continuation of Ser. No. 38,418, Apr. 10, 1987, abandoned, which is a continuation of Ser. No. 745,550, Jun. 17, 1985, abandoned. This application Jun. 21, 1989, Ser. No. 371,669
Claims priority, application Switzerland, Jul. 6, 1984, 3287/84
Int. Cl.[4] C07H *5/04*
U.S. Cl. 536—55.1 **7 Claims**



1. An uncrosslinked or crosslinked agarose which contains basic radicals of the formula

wherein n is 1 or 2, each of R_1, R_2, R_3 and R_4 independently is hydrogen, C_1-C_4alkyl which is unsubstituted or substituted by hydroxy, nitrile, halogen or C_1-C_4alkoxy, cyclopentyl or cyclohexyl or C_1-C_4alkyl-substituted cyclopentyl or cyclohexyl, benzyl or phenyl, each unsubstituted or substituted by nitro or halogen, or R_1 and R_2, together with the nitrogen atom to which they are attached form a 5- or 6-membered heterocyclic ring, or R_3 and R_3, together with the grouping

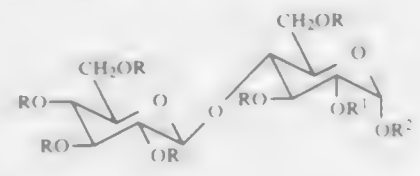
to which they are attached also form a 5- or 6-membered heterocyclic ring, and each of Q_1 and Q_2 independently is C_1-C_8alkylene, or zwitterionic radicals of the formula

wherein X is —O—, —S—,

or a direct bond, R_{11} is hydrogen or C_1-C_4alkyl, Q_5 is a C_1-C_8alkylene or phenylene radical, each of which is unsubstituted or substituted by C_1-C_4alkyl or phenyl, Z_1 is —B—$COO^{\ominus}$, C_1-C_4alkyl or hydrogen, and A and B are each independently of the other C_1-C_8alkylene which is unsubstituted or substituted by C_1-C_4alkyl, C_1-C_4alkoxy or phenyl, or acid radicals of the formula

$$\ominus Y_1-Q_5-CO-NH-CH_2-O-$$

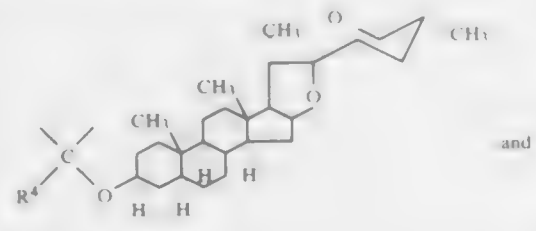
wherein $Y_1^{\ominus}$ is $-COO^{\ominus}$, $-SO_3^{\ominus}$ or $-P(OR_{11})O_2^{\ominus}$, R_{11} is hydrogen and Q_5 is a C_1-C_8alkylene or phenylene radical, each of which is unsubstituted or substituted by C_1-C_4alkyl or phenyl, which radicals are attached to said agarose through the ether oxygen of the $-CO-NH-CH_2-O-$ group of said radicals.



5,010,185

PROCESSES FOR TIGOGENIN BETA-CELLOBIOSIDE

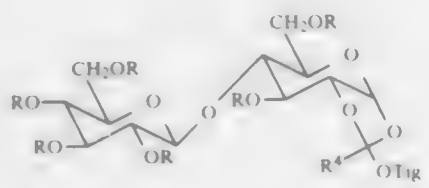
Frank J. Urban, Waterford, Conn., assignor to Pfizer Inc., New York, N.Y.



Filed Jun. 13, 1989, Ser. No. 365,588
Int. Cl.[5] C07J 53/00; C07H 15/24, 1/00
U.S. Cl. 536—6.1 14 Claims

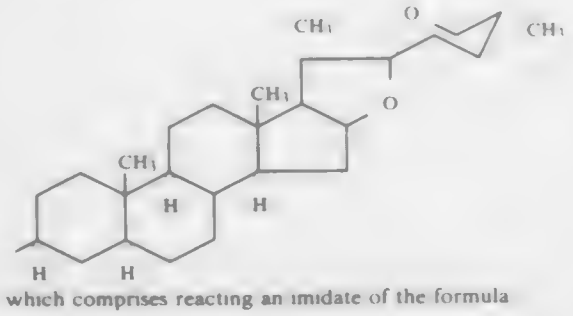
1 A compound of the formula

(I)



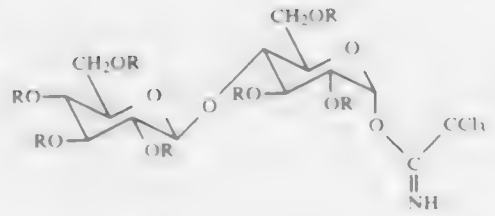
wherein
R is R^4CO,
R^1 and R^2 are taken together and are

and



R^4 is C_1-C_4)alkyl

7 A process for the synthesis of an orthoester of the formula



(IV)

wherein
R is R^4CO;
R^4 is (C_1-C_4)alkyl, and
Tig is

which comprises reacting an imidate of the formula

(III)

with tigogenin in the presence of zinc bromide or magnesium bromide etherate in a reaction-inert solvent at or about ambient temperature

ACID/HEAT MODIFIED POLYSACCHARIDE BIOPOLYMERS

Patrick Cros, and Robert Pipon, both of Melle, France, assignors to Rhone-Poulenc Specialties Chimiques, Courbevoie, France

Division of Ser. No. 896,282, Aug. 14, 1986, Pat. No. 4,873,323.
This application Sep. 13, 1989, Ser. No. 372,819
Claims priority, application France, Aug. 14, 1985, 85 12382
Int. Cl.[5] C07G 17/001, C08B 37/00; E21B 43/22
U.S. Cl. 536—114 10 Claims

1 The product of the process for the preparation of a modified polysaccharide biopolymer, comprising (i) acidifying an aqueous composition of a polysaccharide with nitric acid to a pH from about 2 to 0.1, (ii) heat-treating said acidified composition at a temperature of from about 50° C. to 100° C. for from about 5 to 60 minutes, and (iii) cooling said heat-treated composition and adjusting the pH thereof to a value of from about 5 to 7

5,010,187

PRODUCTION OF POLYETHER POLYOLS WITH REDUCED UNSATURATION

Albert J. Heuvelsland, Heikant, Netherlands, assignor to Dow Chemical Company, Midland, Mich.

Filed Nov. 18, 1988, Ser. No. 273,375
Int. Cl.[5] C07H 1/00; C08B 37/00
U.S. Cl. 536—120 10 Claims

1 A process for preparing a polyester polyol having an equivalent weight of from about 200 to about 5000 by reacting a monoepoxy compound comprising propylene oxide with an initiator containing at least two active hydrogens in the presence of a catalyst, wherein said catalyst is a substance selected from the group consisting of barium, strontium and their oxide, hydroxides, hydrated hydroxides or monohydroxide salts, or mixtures thereof and characterized in that the resulting polyol has a total unsaturation level of less than 0.080 milliequivalents/gram polyol

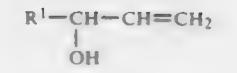
PROCESSES FOR THE PREPARATION OF 5-AMINO-4-HYDROXY-VALERIC ACID DERIVATIVES

Peter Herold, Basel, Switzerland, and Christof Angst, Summit, N.J., assignors to Ciba-Geigy Corporation, Ardsley, N.Y.

Division of Ser. No. 85,437, Aug. 13, 1987, Pat. No. 4,898,977.
This application Oct. 24, 1989, Ser. No. 426,927
Claims priority, application Switzerland, Aug. 13, 1986, 3248/86
Int. Cl.[5] C07C 57/03, 265/30
U.S. Cl. 544—174 2 Claims

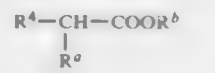
1. Process for the preparation of compounds of the formula



T.0720

in which

R^1 represents hydrogen, alkyl, hydroxyalkyl, etherified hydroxyalkyl, esterified hydroxyalkyl, haloalkyl, carboxyalkyl, esterified carboxyalkyl, amidated carboxyalkyl, cyanoalkyl, aminoalkyl, mono- or di-lower alkylaminoalkyl, pyrrolidinoalkyl, piperidinoalkyl, morpholinaoalkyl, oxoalkyl, cycloalkyl, cycloalkyl-lower alkyl, aryl, aryl-lower alkyl, 2- methylthioethyl, mercaptomethyl, 3-indolylmethyl, 4-imidazolylmethyl or 3-guanidinopropyl;



R^4 represents hydrogen, alkyl, hydroxyalkyl, etherified hydroxyalkyl, esterified hydroxyalkyl, haloalkyl, carboxyalkyl, esterified carboxyalkyl, amidated carboxyalkyl, cyanoalkyl, aminoalkyl, mono- or di-lower alkylaminoalkyl, pyrrolidinoalkyl, piperidinoalkyl, morpholinoalkyl, oxoalkyl, cycloalkyl, cycloalkyl-lower alkyl, aryl, aryl-lower alkyl, amino, mono- or di-lower alkylamino, aryl-lower alkylamino, lower alkyanoylamino, lower alkoxycarbonylamino, aryl-lower alkoxycarbonylamino, pyrrolidino, piperidino, morpholino, hydroxy, lower alkoxy, lower alkanoyloxy-lower alkoxy, lower alkoxycarbonyloxy-lower alkoxy, aryloxy, aryl-lower alkoxy, lower alkanoyloxy, cycloalkylcarbonyloxy, arylcarbonloxy, tri-lower alkylsilyloxy, mercapto, lower alkylthio, hydroxy-lower alkylthio, arylthio, aryl-lower alkylthio, lower alkanoylthio, lower alkylsulfinyl, hydroxy-lower alkylsulfinyl, arylsulfinyl, aryl-lower alkylsulfinyl, lower alkylsulfonyl, hydroxy-lower alkylsulfonyl, arylsulfonyl, aryl-lower alkylsulfonyl, 2-methylthioethyl, mercaptomethyl, 3-indolylmethyl, 4-imidazolylmethyl, 3-guanidinopropyl or halogen; and

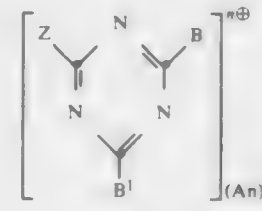
R^c represents hydrogen or lower alkyl, and of salts of these compounds, characterized in that an allyl alcohol of the formula

(II)

is reacted with a malonic acid ester of the formula

(III)

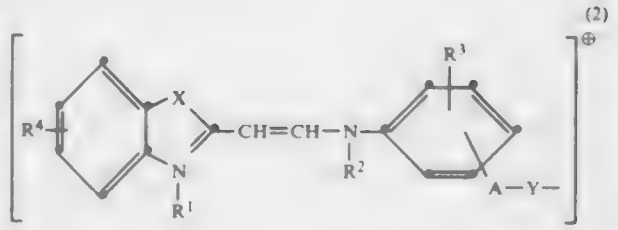
in which R^a represents a group $COOR^b$ and R^b represents lower alkyl, in the presence of a tetraalkoxy derivative of titanium or zirconium, at temperatures of from 150° to 250° C., and, if desired, the resulting compound of the formula IV in which R^c represents lower alkyl is hydrolyzed with an aqueous base.



5,010,190

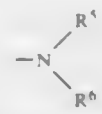
CATIONIC COMPOUNDS

Willy Stingelin, Reinach, Switzerland, assignor to Ciba-Geigy Corporation, Ardsley, N.Y.



Filed May 9, 1988, Ser. No. 192,316
Claims priority, application Switzerland, May 20, 1987, 1941/87
Int. Cl.[5] C07D 401/04, 403/04
U.S. Cl. 544—198 15 Claims

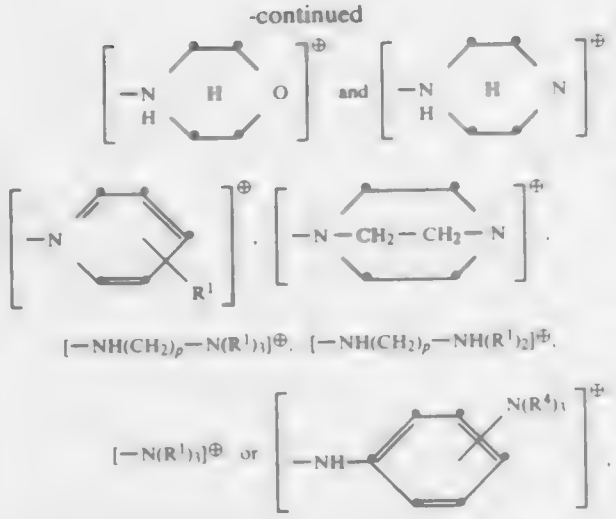
1. A cationic compound of formula



(1)

wherein
Z is a radical of formula

(2)



B and B^1 are each independently of the other a radical Z, a radical of the formula

or a cationic radical different from Z selected from the group consisting of

-continued

wherein R^1 and R^4 are as defined below and p is 2 or 3.

R^1 is unsubstituted C_1-C_6alkyl or C_3-C_4alkenyl,

R^2 is unsubstituted or substituted C_1-C_6alkyl, wherein the substituent is C_1-C_4alkoxy, CN, halogen, phenyl, alkylphenyl, alkoxyphenyl, $-CONH_2$, $-CO-NH-C_1$-C_4alkyl or $-CO-N(C_1$-$C_4alkyl)_2$,

R^3 and R^4 are each independently of the other (1) hydrogen, (2) unsubstituted or substituted C_1-C_4alkyl, wherein the substituent is C_1-C_4-alkoxy, CN, halogen, phenyl, alkylphenyl, alkoxyphenyl, $-COHN_2$, $-CO-NH-C_1$-C_4alkyl or $-CO-N(C_1$-$C_4alkyl)_2$, (3) unsubstituted or substituted C_1-C_4alkoxy, wherein the substituent is phenyl, (4) nitro, (5) unsubstituted or substituted benzoylamino or acetylamin, wherein the substitutent is halogen, $-NH_2$, $-NH-C_1$-C_4alkyl or $-N(C_1$-$C_4alkyl)_2$, (6) halogen or (7) —CN,

R^5 and R^6 are each independently of the other hydrogen, unsubstituted or substituted C_1-C_6alkyl, wherein the substituent is C_1-C_4alkoxy, CN, halogen, phenyl, alkylphenyl, alkoxyphenyl, $-CONH_2$, $-CO-NH-C_1$-C_4alkyl or $-CO-N(C_1$-$C_4alkyl)_2$, C_3-C_6alkenyl, phenyl or naphthyl or

R^5 and R^6, together with the linking nitrogen, are thiazole, imidazole, pyrazole, triazole, pyrrolidine, piperazine, piperidine or morpholine,

X is a sulfur atom or the group

wherein R^7 and R^8 are each independently of the other C_1-C_6alkyl or C_3-C_4alkenyl or can also be linked to each other to form a 5- or 6-membered carbocyclic ring,

A is a direct bond, $-NH-C_1$-C_4alkylene, $-O-C_1$-C_4alkylene, C_1-C_4alkylene, phenylene, —O—phenylene or —N—H—phenylene,

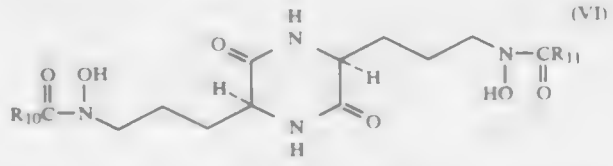
Y is —NH—, $-NR^1$, —O—or —S—,

n is 1, 2 or 3, and

$An^{\ominus}$ is an anion.

5,010,191

IMAGING AGENTS FOR IN VIVO MAGNETIC RESONANCE AND SCINTIGRAPHIC IMAGING



Barry L. Engelstad, Orinda; Kenneth N. Raymond, Berkeley; John P. Huberty, Corte Madera, and David L. White, Oakland, all of Calif., assignors to The Regents of the University of California, Oakland, Calif.

Filed Aug. 19, 1985, Ser. No. 767,214

Int. Cl.[5] **C07D** *241/08*

U.S. Cl. 544—225 **2 Claims**

1 A metal complex comprising a metal ion complexed with a ligand of the Formula VI:

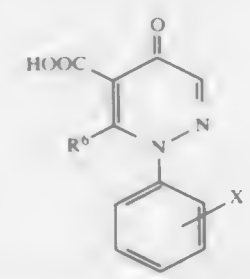
(VI)

wherein R_{10} and R_{11} are independently alkyl of 1-6 carbon atoms, aryl of 5 to 20 carbon atoms, or OR_{12}, wherein R_{12} is hydrogen or alkyl of 1-6 carbon atoms.

5,010,192

PYRIDAZINONE MANUFACTURE

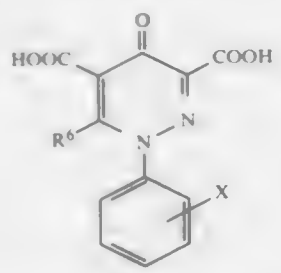
Michael Yelland, Rossendale, and John Conway, Manchester, both of England, assignors to Imperial Chemical Industries PLC, London, England



Filed Sep. 13, 1989, Ser. No. 406,338

Claims priority, application United Kingdom, Sep. 13, 1988, 8821449

Int. Cl.[5] **C07D** *237/24*



U.S. Cl. 544—239 **4 Claims**

1. Process for recovering a monocarboxylic acid of formula (V):

(V)

from a dicarboxylic acid of formula (IV):

(IV)

where R^6 is H, alkyl or halo, and X represents hydrogen or from one to three substituents (which may be the same or different) selected from alkyl, halo or nitro; which comprises heating the compound (IV) at a temperature in the range 160°-180° C. with 95-100% sulphuric acid for a time sufficient to bring about substantial monodecarboxylation, the weight ratio of (IV) to sulphuric acid used being in the range from about 1:4 to about 1:10.

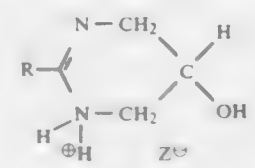
U.S. Cl. 544—243 **6 Claims**

1. A process for the preparation of a compound of the formula

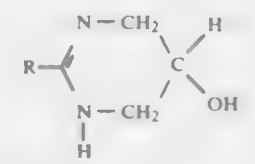


(V)

in which:

R represents hydrogen, alkoxy having 1 to 12 carbon atoms, alkylamino of dialkylamino each having 1 to 6 carbon atoms in each alkyl group, alkyl having 1 to 12 carbon atoms which is unsubstituted or substituted by alkoxy having 1 to 4 carbon atoms or alkylsulphonyl having 1 to 4 carbon atoms in the alkyl group, cycloalkyl having 3 to 8 carbon atoms which is unsubstituted or substituted by alkyl having 1 to 4 carbon atoms, or aryl having 6 to 10 carbon atoms or benzyl which are each unsubstituted or substituted by alkyl, alkoxy or alkylsulphonyl each having 1 to 4 carbon atoms in the alkyl group;

comprising oxidizing a 5-hydroxy-3,4,5,6-tetrahydropyrimidine salt of the formula



(IV)

in which

Z is chlorine or $R^5—CO_2$, and

R^5 represents alkoxy, alkylthio, alkylamino or dialkylamino each having 1 to 6 carbon atoms in the aklyl group, or phenyl each being unsubstituted or substituted by one or more substituents independently selected from the group consisting of alkyl, alkoxy, and alkylthio each having 1 to 4 carbon atoms, halogen, cyano, and nitro;

or the corresponding free 5-hydroxy-3,4,5,6-tetrahydropyrimidine of the formula

(IVa)

in the liquid phase in the presence of a solvent and a base at a temperature between about 0° C. and 300° C. using oxygen or an oxygen-containing gas.

5,010,194

METHOD FOR THE RESOLUTION OF FOLINIC ACID

Hans R. Mueller, Schaffhausen; Martin Ulmann, Dachsen; Josef Conti, Schaffhausen, all of Switzerland, and Guenter Muerdel, Tengen-Buesslingen, Fed. Rep. of Germany, assignors to Eprova AG, Schaffhausen, Switzerland

Filed Nov. 7, 1989, Ser. No. 432,819

Claims priority, application Switzerland, Nov. 11, 1988, 04182/88

Int. Cl.[5] **C07D** *475/04*

U.S. Cl. 544—258 **21 Claims**

1. A method of separating diastereomers of (6R,S)-folinates, comprising adding a sufficient amount of a water-soluble alkali metal or ammonium salt of an inorganic or organic acid to an aqueous starting solution of an alkali metal or alkaline earth metal salt of (6R,S)-folinic acid at a neutral pH to precipitate the (6R)-folinate, separating off the resultant (6R)-folinate precipitate and isolating the (6S)-folinate from the filtrate.

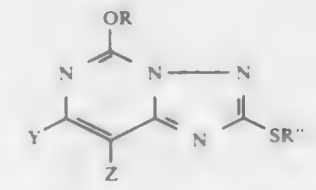
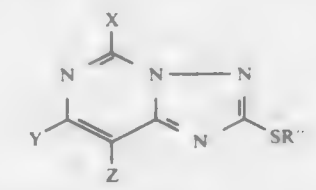
HERBICIDAL ALKOXY-1,2,4-TRIAZOLO(1,5-C)PRIMIDINE-2-SULFONAMIDES



John C. Van Heertum, Concord; Ben C. Gerwick, III, Clayton, and William A. Kleschick, Martinez, all of Calif., assignors to The Dow Chemical Company, Midland, Mich.

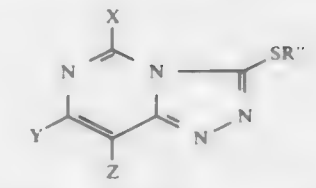
Continuation-in-part of Ser. No. 198,278, May 25, 1988, abandoned. This application May 3, 1989, Ser. No. 347,601

Int. Cl.[5] **C07D** *487/02*



U.S. Cl. 544—263 **7 Claims**

1. A method of preparing a 5-alkoxy-1,2,4-triazolo 1,5-c]pyrimidine product compound of the formula



wherein Y and Z each, independently represent OR, H, CH_3, CF_3, Cl, Br, or F; R represents C_1-C_3 alkyl; and R'' represents benzyl or C_2-C_4 alkyl

which comprises combining a starting compound of the first formula

or of the second formula

wherein X represent C_1-C_4 alkylthio; Y and Z each, independently represents OR, H, CH_3, CF_3, Cl, Br, or F; R represents C_1-C_3 alkyl; and R'' represents benzyl or C_2-C_4 alkyl

with a carbonyl or cyano substituted vinyl compound in which the carbonyl or cyano substituent is attached directly to the

vinyl group and that is reactive with C_1-C_4 alkylthiols and a catalytic amount of an alkali metal C_1-C_3 alkoxide in a medium containing the corresponding alcohol and under conditions conductive to the formation of said product compound

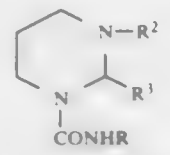
ACYLATED HEXAHYDROPYRIMIDINES

Robin G. Shepard, Windsor, England, assignor to John Wyeth and Brothers Limited, Maidenhead, England



Division of Ser. No. 544,452, Jun. 27, 1990. This application Oct. 2, 1990, Ser. No. 591,594

Claims priority, application United Kingdom, Jun. 30, 1989, 8915131.0

Int. Cl.[5] **C07D** *239/04*

U.S. Cl. 544—335 **2 Claims**

1. A compound of formula

where R is C_{1-6} alkyl or C_{6-10} aryl, wherein the alkyl or aryl group is optionally substituted with one or more groups selected from the group consisting of halogen, hydroxy, lower alkoxy, amino, lower alkylamino, diloweralkylamino, lower acylamino and trifluoromethyl, R^2 is lower alkyl and R^3 is hydrogen or lower alkyl

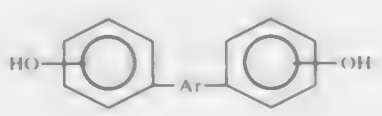
POLYPHENYLQUINOXALINES VIA AROMATIC NUCLEOPHILIC DISPLACEMENT

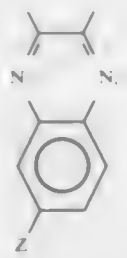


Paul M. Hergenrother, Yorktown, and John W. Connell, Newport News, both of Va., assignors to The United States of America as represented by the Administrator of the National Aeronautics and Space Administration, Washington, D.C.

Division of Ser. No. 250,661, Sep. 28, 1988, abandoned. Filed Dec. 22, 1989, Ser. No. 454,820

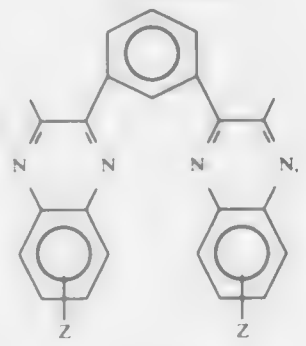
Int. Cl.[4] **C08G** *8/02*; **C07D** *241/36*

U.S. Cl. 544—353 **3 Claims**



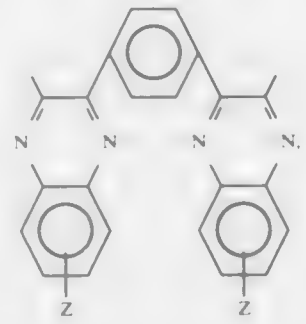
1. A di(hydroxyphenyl)quinoxaline having the general structure

wherein



Ar is a radical selected from the group consisting of

(A)



-continued

(B)

(C)

wherein

Z is a substituent selected from the group consisting of: H, F, Cl, Br, CH_3, CH_2CH_3, OCH_3, C_6H_5, and C_6H_5O.
